leave Italy. There is a postal union; why not a currency union? America, France, Italy, Germany, Russia, and Greece—I am not sure as to Portugal and Turkey—have a decimal currency; it would require but very little modification in the weight and value of coinage to make them all conform to one standard. The Italian lira and the French franc are now substantially if not exactly equivalent. One would think that the German mark and the American quarter might be changed in weight and value from twenty-five to twenty cents, so as to be equivalent to the franc, and the Russian rouble from fifty-four cents to fifty—two francs and a half—or, better yet, to forty cents, that is, two francs; with these changes the gold coin of any country would soon circulate freely in any other country, and the silver coinage would go without difficulty in all border towns. I suppose there is no hope that conservative England will ever substitute a decimal currency for her cumbrous pounds, shillings, and pence. It is, by the way, a significant fact that American greenbacks are quite generally taken in the larger cities—at least so I am told—at their face value in gold. This was not so formerly. I suppose it is a result of our adoption in America of the gold standard.

The changes in time are almost as interesting and quite as perplexing as the changes in currency. Of course our steamer time changes every day; a sharp blast on the whistle notifies us when it is twelve o'clock, and certain of the passengers set their watches accordingly every day. I have too much respect for my faithful friend to meddle with him to this extent, and I keep my watch unchanged and make my calculations by a mental comparison of my watch with the ship's time. But when we are in port we generally have three times—ship's time, local time, and railroad time, to which I must in my own case add my own time, which is quite frequently neither. In fact, I kept New York time till we reached Genoa; since then I have kept central Europe railroad time. Without changing my watch, I am getting back to that standard again, and expect to find myself quite accurate when we land in Naples. But it is in Turkey that the time problem becomes really complicated, very irritating to him who takes it seriously, very funny to him who enjoys a joke. To begin with, there are four years in Turkey—a Mohammedan civil year, a Mohammedan religious year, a Greek or Eastern year, and a European or Western year. Then in the year there are both lunar months depending on the changes of the moon, and months which, like ours, are certain artificial proportions of the solar year. Then the varieties of language in Turkey still further complicate the calendars in customary use. I brought away with me a page from the diary which stood on my friend's library table, and which is customarily sold in the Turkish shops to serve the purpose of a calendar; and I got from my friend the meaning of the hieroglyphics, which I record here as well as I can remember them. This page represents one day. Numbering the compartments in it from left to right, it reads as follows:

1. March, 1318 (Civil Year).
2. March, 1320 (Religious Year).
3. Thirty-one days (Civil Year).
4. Wednesday.
5. Thirty days (Religious Year).
6. 27 (March: Civil Year).
7. (March: Religious Year).
8. March, Wednesday (Armenian).
9. April, Wednesday (French).
10. March, Wednesday (Greek).
11. Ecclesiastical day (French R. C. Church).
12. March, Wednesday (Russian).
13. Month Day (Hebrew).
14. Month Day (Old Style).
15. Month Day (New Style).
16. Ecclesiastical day (Armenian).
17. Ecclesiastical day (Greek).
18. Midday, 5:35, 1902; Midday, 5:21.

I am not quite clear in my mind now as to the meaning of the last section, but

I think it is that noon according to European reckoning is eighteen minutes past five according to Turkish reckoning. For there is in Turkey, added to the complication of year, month, and day, a further complication as to hours. The Turks reckon, not from an artificial or conventional hour, but from sunrise, and their reckoning runs for twenty-four hours. Thus, when the sun rises at 6:30 our noon will be 5:30, Turkish time. The Turkish hours, therefore, change every day. The steamers on the Bosphorus run according to Turkish time, and one must first look in the time-table to see the hour and then calculate from sunrise of the day what time by his European clock the boat will start. My friends in Turkey had apparently gotten used to this complicated calendar, with its variable years and months and the constantly changing hours, and took it as a matter of course.

April 25.

My classical knowledge is like the ancient frescoes on remnants of walls Pompeian and others—very dim and very fragmentary. Among the few figures which possess some distinctness is that of Ulysses, and the clearness of his figure is due, not to any definite memory of college studies, but to recent reading and rereading of Professor Palmer's translation of the Odyssey. When I found that we were to pass between Scylla and Charybdis at daylight this morning, I asked my steward to see that I was called. When I went on deck, the sun had not risen; the shore loomed dark and indistinct on either side in the gray light, and the lights of a town of considerable size shone through the disappearing darkness, witness that its guardians did not think daylight was yet sufficiently advanced to trust to it. There were perhaps half a dozen passengers on deck, and one or two appeared later; I was the only one of our party with sufficient classical enthusiasm to fulfill the purpose of the night before. Here, however, was the young woman doctor, graduate of the Pennsylvania Medical College, and here Miss ——, one of the best types, I thought, of English girls, and here, to my surprise, the kindly-hearted cynic who disdained to be interested in anything, and here the retired New York dry-goods merchant, who I had supposed was interested only in the markets, and here the Massachusetts judge, who at seventy had retired from the bench, but was young enough to be up before daylight to see the famous Straits of Messina. I see my half-dozen is an underestimate; there must have been twice as many. One realized that Homer made full use of his imagination in depicting the feats of Ulysses, but the whirlpool was very evident on the one side, and the rock on which the giant stood when he plucked the sailors out of the boat was plain enough on the other. I could well understand, when I saw how crooked was our channel, the statement made to me by a fellow-passenger, that even now sailing vessels avoid the straits when the winds are uncertain, and the fact that our own steamer lay still an hour or so in the night to avoid passing the straits before daylight.

The day opened dark and lowering, with occasional dashes of rain, and we gave ourselves up to the disappointment of approaching Naples in a rain-storm. But after luncheon the clouds broke away, the sun came out, and at two o'clock we found ourselves approaching what is perhaps the most beautiful bay in all this beautiful world, in weather as peaceful as even Italy can give when Italy does her very best. For three hours or thereabouts we were in groups on the forward part of the deck, glasses in hand, looking, enjoying, those to whom all was new getting information and sometimes misinformation from those to whom all was measurably familiar, till our eyes ached and our heads swam. The long, bold, mountainous promontory; the famous Amalfi Road, plainly to be seen along the cliff even without the glasses; the villages scattered along the water's edge or climbing up steep declivities well toward the top; the island of Capri rising, precipitous, out of the sea; Sorrento charmingly situated on the green slope of the hill, but well above the sea, and saying to us as eloquently as golden silence can speak, Come over here and rest; Vesuvius, the smoke rising straight up into the clear evening air from her chimneyed summit; Naples in the ever-lessening distance; above us a blue sky, beneath and all about us a blue sea—in the presence of such a scene of beauty as this, all that painting, sculpture, and architecture can do to delight the

eye or inspire the heart seems small and tame. If I could have followed my inclination, I would have taken train next morning for Sorrento, found quarters there overlooking the sea, and spent a week wandering over the hills or sitting at the window and simply looking at the scene of beauty.

May 5.

Naples is built upon a segment of a great amphitheater. The stage is the blue sea; the scenery is Vesuvius and her companion mountains, with Sorrento at their feet at one side, the promontory of rocks jutting out into the sea on the other side, the island of Capri in the center and rear of the stage; the commercial part of the town occupies the floor or pit of the amphitheater, the residences, shops, and public buildings occupy the tiers of seats which rise in a somewhat precipitous slope from the floor; the Castle of St. Elmo and the Convent of San Martino are at the top, occupying the center of the "gallery of the gods." Our hotel was half-way up the slope; we occupied front rooms; it was an ideal resting-place: to sit here in our window, or stand in our balcony and simply look down on the city below us or off at the stage and the scenery perpetually changing in the ever-changing light, was employment enough for a party somewhat wearied with six weeks of travel and of constant change. One night—the night before we left—Vesuvius lighted her torch for our benefit. What else did we do? Not much. Naples is very interesting, but there is not much of interest in Naples: cathedrals, palaces, picture galleries, museums, are conspicuously absent. There is one museum which contains by far the best collection of Pompeian remains—frescoes, inscriptions, coins, curios—and a few fine pieces of sculpture, notably the Farnese Hercules and the Farnese Bull—perhaps more than a few; but only a few impressed themselves on me in my short visit and rapid view. There is an Aquarium, I believe the finest in the world It is sustained by international contributions; the United States shares with other nations in supporting it. I believe it contains only extraordinary specimens of sea life; certainly it contains some that are extraordinary. Among them I recall the wonderfully beautiful collection of coral and coraline forms; the curious fish that plays hide-and-seek, burying itself in the sand and using its flippers to cover itself over and conceal itself from view; the robber crabs carrying the castles of the tenants whom they have driven out, and other crabs in partnership with sea-anemones, which they carry on their back, the two hunting in couples; the winged fish whose fins look like wings and seem to play a similar part in the water to that played by the wings of a bird in the air; the enchanting devil-fish or octopus, who uses all his half-score or so of arms with a supple grace which suggests long practice under a Delsarte teacher, and who, when he looses his tentacles from the rock and swims straight toward me, as though he were about to enfold me with a dozen arms, as the serpents their victims in the Laocoön, gives me the most delightfully creepy sensation. There is the Corso by the bay, and the band, and the crowd of carriages, and the soldiers in uniform, and the nurses in far more gorgeous uniform, and the babies looking at me out of a cloud of fluffy material indescribable by masculine pen. There is old Naples, with its narrow streets, its unventilated shops, its people cooking, knitting, eating, washing, drying their clothes, in short, conducting all the operations of life, in the street, much as they used to in Pompeii eighteen or nineteen centuries ago; there are the unbitted horses, whose curious headstalls are simply fastened about the nose and who are guided and controlled as by a halter instead of a bit; there are the donkeys, gayly caparisoned, and dragging after them carts swarming with a family party—the Italian peasant's quiver is full of arrows; there are the cows driven through the streets by the Neapolitan milkmen to be milked at the door of the tenement, and the herds of goats driven up three or four flights of stairs to be milked at the doors of the rooms, a guarantee against dilution and adulteration: two or three times I have seen a woman from an upper story letting down a mug or pitcher to be filled from the udder of the cow which was standing in the street below; there is a drive on the top of the hill which half environs Naples, a hill hardly wide enough, at points, for the road, with a beautiful panorama of mountain, valley, bay, sea, and island on either side of us; there are winding streets composed

of stairs up ascents too steep for a carriage roadway—I counted three hundred steps one day in climbing up to the convent which is perched on the hill above us; there are donkeys saddled and waiting at the foot to take up the passenger who wishes to ride; there is Pompeii, which surprised me chiefly because everything seems on such a diminutive scale—streets, squares, temples, forum, as though they belonged to a play city for children; and, not least of all, there is always the view from our hotel window of the bay, with Vesuvius and Capri in the background, a view not less beautiful because continually changing with the changes of weather in a very fickle season.

Of all the cities I have yet been in, Naples is the best in which to rest. Its life is the antipodes of strenuous. It seems like a city at play. The people are not idle; they are industrious; but their industry is like that of the swallows whose play is work and whose work is play. With their unstrenuous spirit and their picturesque costumes goes, naturally enough, an accompaniment of perpetual music. Two boat-loads of singers met our steamer as we came into the bay and sang Italian airs—opera and other—and extemporized a contribution box by holding an umbrella upside down to catch the coppers thrown to them from the deck. From that day to our leaving, the hours have been filled with music. A street band plays or a street impresario sings before our hotel every evening, and generally there is another—or is it the same?—in the afternoon. There is a band of Italian musicians—young men with guitars, violins, and voices—who come after dinner into the hall of our hotel, where we take our coffee, and who interest us no less by their operatic costumes and their child-like gestures than by their music, which is very good. The motto of the hotel, painted in large letters above the door of this hall, interprets the spirit of Naples: *Sit nox cum sono, sit sine lite dies* (Let the night be with song; let the day be without strife). This music of Naples is not merely professional. The children go singing to their schools; the sound of song mingles in the crowded lanes of old Naples with the ceaseless rumble and hum of the great city; the first sound we hear in the morning is a duet, or trio, or chorus of workingmen going to their work and singing as they go; the soldiers, as they march by, sing, and keep step to their singing; the very street cries of the peddlers are all musical—a song, a chant, an intonation. This universal song fits in with an air of *bonhomie*, of kindly feeling, of good-fellowship, of sweet contentment, of serene and placid happiness, which seems to pervade the city. All the service at hotel and restaurant and shop has an air of uncommercial spontaneity. The cab-driver easily becomes one's friend if one will but let him be so, and plucks for us some of the flowers by the wayside, which are as abundant as the music. One readily falls into the spirit, and gives the *pour-boire*, not as an added price exacted, but as a sign of good fellowship. One of our party is a trifle ill; the terrible tragedy of a year ago at Naples makes us perhaps over-anxious; the extra service needed is smilingly rendered; and the English doctor whom we summon becomes at once our friend as well as our physician—he is presently going to England to the Coronation, and cordially invites us to call on him there and renew the acquaintance.

So passes the time, until the two or three days I had allotted to Naples have grown to ten, and even now I regret to leave. Its quaint customs and costumes, its artistic shops, its great arcade, to my thinking more imposing than the perhaps more famous one at Milan, its wonderfully beautiful scenic setting, the excellence of its hotel, the dramatic interest of its life, the naïve unreserve of its people, its physical climate, its social atmosphere, its happy-go-lucky spirit, and, above all, its general quality of good comradeship, make the memory of Naples a most attractive one. I forget the brief anxiety; I recall only the enforced rest. I remember that we took our sightseeing very easily; I forget the reason that compelled us to do so. Happy forgetting! It is Monday. May 5th; we have given good-by to the hotel; our baggage has been weighed and paid for and ticketed, and we are in an American Pullman sleeper, a section of which I have secured, and are started for Rome.

L. A.

A Glimpse at Venezuelan Politics

By James Barnes

Special Correspondent of The Outlook in Venezuela

PEOPLE, as a rule, are not given to talking politics here in Venezuela. It is certainly not fashionable of late, and under some circumstances it is scarcely safe. It did not take me long to ascertain this evident fact, for I found it hard to excite the slightest interest in the subject, although on many occasions I attempted to question people. But at last it was my pleasure to meet a Caracas merchant—a man, educator, and traveler—who, despite his pessimism, had all a Venezuelan's pride and affection for his country, and, strange to say, was not averse to talking.

I congratulated myself that I had brought up the subject with no little diplomacy and finesse. I had remarked upon the lack of concern in political questions among important people who held no government position, and expected him to agree with me that this was a sad mistake. I ended with a somewhat trite quotation from a well-known writer on American politics, which was in substance this: "Whenever we see iniquity in our American public life, and whenever scandal smirches the fair name of our institutions, the cause has been always the acquiescence in the mischief that comes from a citizenship which will not stir itself to assist in the government."

I thought this would stir him up—and it did, in an unexpected manner.

"No," he replied; "you will pardon me, but you have not got the idea. It is impossible to judge from the outside in my country. You cannot stay here three weeks and go away and explain why things are so and so. Already you suggest remedies. It is what you Americans always do. I tell you, your political remedies are no good in my country."

"Have you given them a trial?" I asked.

"It is impossible; they cannot be tried," he replied. "Stay here longer, you will believe me. Then you may hear some people talk who now will say nothing."

"I may be here some time longer," I replied. "You forget the blockade."

"Oh, yes, this foolish blockade, we forget it. How soon we get used to things!"

"But don't lose sight of our subject," I persisted. "Don't you think something can be done?"

"Quien sabe? tomorrow, perhaps, next month, next year, something will happen. Now we can do nothing."

A LAUGHING SKELETON

What Venezuelans think of Venezuela's political state is shown by this cartoon published in "La Prensa" of Caracas, with the following explanation: "Venezuela is a corpse—and is laughing. She is suffering and is a skeleton—but she has spirit and lives. Like the phœnix, she rises from her ashes; in this her force lies. Vainly do men try to humble her; she meets every emergency with sparkling vigor. Dying, she sings and dances. Her spirit will be her salvation."

It was rather pathetic. In fact, the keynote of affairs, politically speaking, in Venezuela is one of pathos, and yet the sympathy that may be enlisted is mingled, perforce, with a flavoring bordering on disgust, if not of a certain contempt.

The acceptance of the hopelessness of an omnipresent situation without an effort, an organized effort, to relieve it perma-

nently, revolts the average foreigner's mind. It is like seeing a man with plenty of water and brooms ready to hand, who will not clean his stable yard, or his front doorsteps, for that matter, apparently for the simple season that they soon will get dirty again. So he prefers to sit idle and watch a horde of mangy scavenger dogs—as he watches those canine pariahs that swarm the Caracas streets—and flocks of ill-omened birds, like those that ceaselessly circle the sky above the ill-smelling city—he prefers complacently to watch them live off his self-permitted disorder.

If the dogs should change to wolves and the vultures to birds of prey, one is led to believe, he would accept them both as part of the situation, and acquiesce in the resultant robbery as he acquiesced in the primary dirt. Should they grow strong enough to threaten, he might rob his family to appease their possible fury.

Now, to most casual observers the remedy is obvious: a cleaning up is necessary, to begin with. There is plenty of water and brooms. A fair proportion of the people are tired of the dirt and disorder; many would work manfully in the process, perhaps, if some one would start the fashion. The whole country is tired of the national curses—revolution and political corruption, political corruption and revolution; their struggles and exactions are sapping the dwindling strength of the nation.

Having formed these astute opinions in the course of the three weeks or more so slightingly referred to by my friend the merchant, I ventured to put them into the somewhat mixed metaphor above recorded. He seemed to understand it. He even acknowledged, to a certain extent, the justness of a few of the implications. When I came to the broom proposition, he demurred.

"You will have to use guns first," he stated, firmly.

"All right," I replied, "granted. Use all the guns you want."

"They would be very hard to get into the country," he replied, taking the question literally for a moment (for all I know, he spoke from personal experience). "And then," he went on, going back to [illegible]or again, "you must know that [illegible] dogs or hyenas or wolves, or [illegible] want to call them, might belong to respectable families; they have run so long with the others that you can hardly tell them apart; their families let them come into their houses at night. If you should shoot one of these"—he shrugged his shoulders—"well, the family might shoot at you, and then you would shoot at the family, and then"—he gave up in despair. "Just another revolution, that is all, no matter what good you want to bring about. And the wolves would get all the best places, trust them for that! And if they did not, they would start another revolution—that is the way they live."

"Their only visible means of support, eh?" I suggested.

"Exactly—the politicians. Some one has to feed them, or they will take what they can get—I mean they will take what they can take. When they lose this power or capacity, the change is sudden. I can show you three ex-generals sitting in rags in the Plaza Bolivar, one an ex-Minister. But," he added, "they have no right to complain; they have had their day."

"But couldn't all the people who have the liberty and welfare of the country at heart unite and go to the polls?"

"Unite! Go to the polls—the voting-places!—stay a little longer, Señor. Unite! and fight or go to prison! Some one would kindly give the government a list, and I can tell you the prisons would be crowded. Property would be confiscated. I do not care to lose my property or be separated from my family. The polls, you say. A few years ago we went to vote for a good man—at every place a crowd of strangers! Countrymen with arms and machetes—they belonged to the government. I went back home—played chess all day with my uncle."

"But wasn't there a revolution that time?" I asked.

"Oh, yes, there was a revolution all the time, but it was not ours. It soon followed, was defeated, and our candidate went to prison."

"But this state of affairs cannot continue," I exclaimed. "Are there not some honest patriots in the field, some people who would serve their country honestly?"

"Oh, yes, I dare to say in both the rank and the file. But they are not the most, and they would get all the poor places in the division—perhaps they would get nothing."

"But supposing a real patriot was at the head of a revolution?"

"If he succeeded, he would have to provide places for his friends who helped him—he would have pledges to redeem. But they all talk the same. See here, Señor, here is the latest bulletin from the Revolution, sent from Curaçoa. They have been sent to all prominent people; it is no crime to get one, but you must not boast of it! See! it quotes from a New York paper, to begin with, an article against the present Government. Now read this, or listen:

"'To all true Venezuelans!'"

It was an appeal couched in language that is generally known as "highfalutin." It called upon all who loved liberty, freedom, justice, and all the various virtues of good citizenship, to unite and drive the usurping dictator (the present President) and his crowd of corrupt hirelings (the Government officials) from power. It conjured all who valued the ties of hearth and home to gather under the standard of General Manuel A. Matos and prove themselves "true Venezuelans and patriots" by—well, to be short, by killing every one who did not share the same political allegiance.

"It sounds very fine," said I.

"It sounds," rejoined the merchant, "like all the rest. Now here is the speech of the President—this little gamecock of ours. I will read a translation. It is fine too. He made it after the battle at La Victoria a few weeks ago. So listen again to a translation as literal as it can be made.

"'Chiefs, officers, and soldiers! My words to you are not and cannot be merely congratulatory for the triumphs obtained; these are so brilliant, so consequent with the historical bravery of our people and the ardent aspirations of our patriotism at the present moment, that I hold it a sacred obligation of my conscience to offer the deep and sincere homage of admiration and gratitude to the greatness of your heroism! Yes, I respectfully bow before the distinguished defenders of the right and honor of the Republic. . . . Yesterday's rout was decisive. The principal group of that revolt, which was immoral, criminal, and worthy of condemnation, before God and our country, fled in terror before the points of our bayonets and eaten to the root by the red viper of anarchy. . . . Blood has flowed in impetuous currents—Venezuelan blood, always so generous on the altar of sacrifice! The two great semicircles of the lines of battle are marked by the sad and unheard-of number of badly dug graves and unburied remains, a sort of dolorous path that we hope will lead us in the road from to-day, not indeed to Calvary without Tabor, as those who are responsible for this way have desired, but to the resplendent Tabor, to the highest summit of our national illimitable perfection!'"

The merchant paused; I could say nothing. Yes, I thought; and there lie the unburied bodies now, torn apart by dogs and vultures. For days the badly wounded wandered in the dense bushes and deserted fields, uncared for and unsought, until death came and found them. As the victors danced and sang at the town of La Victoria, the groans of these poor fellows welled up from the hills and hollows a mile or two away.

I told him I had seen part of the battlefield and possessed some photographs of the horrible results of the really desperate fighting.

"But let us read a little more," said the merchant. "We skip a little and come to this:

"'Let our hearts be filled with the memory of our fallen comrades and the hour approaching of sad rejoicing for their widows and orphans; let us correspond with their self-denial and martyrdom with offerings of painful and affectionate gratitude.'

"You smile," said the merchant, "but here is the peroration:

"Thus united [by all that has gone before] in the ample bosom of national confraternity, the work will sprout and bloom, and the manifestations of our culture will shine eternally with its own light in Time and History.

"La Victoria, November 3, 1902.

"CIPRIANO CASTRO.

"Hoop la!" said the merchant, with amusing sarcasm. In all truth it was pathetic, and yet it could not be otherwise; it was amusing, but I abstained from comment, for it was needless.

"But, judging from my own short period of observation," I said at last, "the country seems ripe for a change of some sort."

"They are always *ready* for it," was the

reply; "they expect it even if it does not come. Let us see—since '98 we have had, first and last, great and small, eight revolutions. But the present one is not well led, nor is it popular. I speak, of course, from my personal standpoint and opinion. Many people fear that the old Guzman Blanco régime would return to power and that there would, besides, be a great fostering of German influence. We have had enough of the Blanco crowd—they have long been waiting their opportunity."

"But if Matos should succeed?"

"Then Castro would have to flee; an ex-President is a political refugee, but always wealthy, never less than three or four millions. But it would be the same thing over again—I suppose we would decorate our houses, some surely would, and all the soldiers left behind would turn out as a guard of honor and welcome the revolution."

"But tell me," I persisted, "is there no party that stands for peace and honest government? Is there no man the people trust who might lead them?"

"Yes," said the merchant, slowly. "There is such a party and there is such a man; he has behind him two-thirds of all the people. The *puello* [common people] love him. General José Manuel Hernández, the leader, the god I might say, of the Nationalists. He is the man I would have voted for."

"The day you played chess?" I suggested.

"Yes; but what chance had we then? What chance have we now? We have no arms, little money. Our leader is a man of peace now; all he wants to see is peace and to see Venezuela pulled out of all this mud abroad and trouble at home. We have little hope."

"But you could raise money, and money will—"

"Get arms! Ah, you see now you talk like a Venezuelan yourself. It would be risky; they put irons on you in prison, my friend! It would be a big revolution, though; but, you see, it is the same thing over again."

"But you believe that one honest election under the Constitution would solve matters?" I suggested.

"Ah!" The merchant's exclamation and the gesture conveyed much meaning.

"How will we get it? Will your Government lend us ten thousand troops for three months, sometime? It would mean six years of peace—perhaps always peace. There, now, is a practical remedy."

"No," I replied, "I am afraid my Government would not."

"Well, what are we to do?"

I confessed I could not tell, but I expressed a feeble hope that something might happen that might lead to better things. It was the least I could do.

"Quien sabe?" replied the merchant, and the subject changed, as subjects will when the limit of suggestion and explanation has been reached and no argument is needed on one side or another.

That is just the trouble. The political situation in Venezuela is an impossible one. Immediately you come to facts you meet several well-nigh insurmountable obstacles in the way of hopeful reasoning. The people have become used to it, and have surrendered to what they consider the inevitable. Placidly they submit, at times, to conditions and to impositions that no other people on the face of the earth, no king-ridden, Czar-governed people, would submit to for an instant, without rising for the right. They have accepted it for years, and yet in no land has the cry "To arms!" so often sounded, and nowhere has the catchword "liberty" been worn so threadbare. What, then, are the obstacles?

First, unquestionably, is the race, with its inheritance of national traits—the mixed blood, the religion such as it exists, and the lack of real religious belief which unquestionably is lacking, the division of the people into castes, the entire lack of national republican ideas, the dearth of education among the masses, and their intense conservatism.

Secondly, the existence of the professional semi-military politician—one day a guerrilla chief, the next a minister of affairs; a president or a dictator one moment, a political refugee the next. The rules that govern the reigning class are simple. There is an ingrained, popular, and accepted belief that a public office is a private opportunity, the political maxims being: To the victor belong the spoils; Every man for himself, and the devil take the hindmost.

Thirdly, the apathy, the almost cowardly apathy, of the best class of the people, who apparently have no political affiliations, and who submit to the grinding of the millstones with the resignation of a proud despair. Micawber-like, they are continually waiting for better times. They would accept almost anything. The prospect of a foreign invasion that failed to unite two warring political factions struggling for the mastery of the government control, *i. e.*, the budget and the emoluments of office, fails, with good reason, to excite in them any expression of patriotism. Many believe, and in all truth and justice they are right—deny it who may—that foreign control would be better for the country than the present state of things. Peace, continued peace, is what this blood-soaked, unhappy, long-robbed land is needing.

Fourthly, the rotten state of the courts of law, the judiciary who are but tools of the party that may be in power, and the press that must voice its sentiments or shut up shop, with the government seal on its doors and the editors in prison. There is no *habeas corpus*. A man may be thrown into confinement and his family given no explanation and hardly a chance to communicate with him by line or word.

These, then, are a few of the obstacles. Let us look at the present, the actual situation.

Here is a great country, a magnificently great country, with every possibility of wealth, health, and happiness, with a population less by many thousands than it had twenty years ago, utterly bankrupt, ruined, blockaded. No bread or flour in the city of Caracas, and yet the band plays in the plaza, the multi-colored population hang lazily about the corners. The Government levies forced loans to support its luxuries. It squeezes the last drop from the almost dry lemon of internal trade. The situation is well expressed in the cartoon in to-day's "La Prensa"—*Diario de la mañana*—"Venezuela is a corpse that laughs."

Caracas, Venezuela.

The Growth of Reciprocity Sentiment

By John Charlton, M.P.

MANY circumstances seem to warrant the belief that public sentiment in the United States is rapidly assuming a more liberal attitude towards the question of reciprocity with Canada. Reliable information as to the trade conditions existing between the two countries is being widely disseminated, and is producing such modification of views upon the reciprocity question as accurate information is calculated to develop. No respectable authority upon economic questions has ventured to assert that the conditions that for one hundred and twenty years have made free trade between all the States of the American Union a blessing to all concerned, do not apply to the question of trade between the United States and the Canadian Provinces; and we are yet to be shown why the area of free trade between kindred States inhabited by the same race, and with practically the same institutions, should not be extended.

The National Reciprocity Convention which met at Detroit December 10, 1902, was a notable gathering. Its resolution asking Congress to move in the direction of reconvening the Joint High Commission for the purpose of treating with Canada in the matter of trade arrangements, on the basis of reciprocity in natural products, reached the root of trade difficulties between the two countries. A little more than a month later substantially the same position was taken by the National Board of Trade at Washington, and concurrence in these views has been expressed by various branch Reciprocity Leagues, and by commercial organizations in various parts of the United States.

It is beginning to be realized by public men in the United States who are giving the question their attention that Canadian trade matters have reached a stage that renders delay in action inadvisable. Thirty-six years ago a treaty that was rapidly attaching Canada to the United States by the ties of mutual interest, and of dependence for market and outlets to markets, was abrogated, and Canadian efforts to secure renewal of the treaty,

with an enlarged free list that would have increased Canadian dependence and American ascendency, were denied. Eight years later Canadian persistence in the desire to get under the wing of the American eagle led to the negotiating of the Brown Draft Treaty of 1874, so called, which provided for reciprocity in natural products and the free admission of an extensive list of American manufactures, and which also provided for the construction of a canal from the St. Lawrence River, a few miles above Montreal, to Lake Champlain, of the same depth as the Welland Ship Canal, so that Canada might have increased facilities for reaching New York, then supposed to be her most desirable seaport. This treaty was refused ratification by the United States Senate. The animus of the Senate may have been hostility, it may have been the expectation that Canada would be forced to seek admission into the American Union, it may have been the mistaken belief that American interests would be promoted by a policy of repression. Whatever was the impelling motive, the practical outcome of the action certainly could not have been foreseen. No longer does Canada feel a sense of dependence upon American markets. New conditions have arisen. Unexpected results have been developed. Canada has overcome commercial difficulties that seemed insurmountable, has developed a vast trade in new lines, and now every nerve in the national organism tingles with a new-born sense of attainable independence, of difficulties overcome, and of commercial achievements and conquests realized. In this connection a statement showing the unexpected changes in the movements of Canadian farm products will be instructive.

CANADIAN EXPORTS OF FARM PRODUCTS

To the United States.	
1866	$25,041,000
1902	7,027,000
To Great Britain.	
1866	$3,544,000
1902	79,545,000

This most remarkable reversal of trade conditions as relates to farm products, amounting to over twenty-two-fold increase in the exports to Great Britain, and a diminution of over two-thirds in the exports to the United States, marks a change in conditions the effect of which upon Canadian interests and sentiments should not be passed over lightly. It proves conclusively that the Canadian farmer is no longer dependent upon the American market. He has entered the lists and become a keen competitor of the American farmer in foreign markets. A careful study of the tastes of his English customer has enabled him to distance the American farmer in various lines, and especially in cheese and bacon, while there looms up before his expectant gaze the rapid development of the great wheat belt of the Canadian Northwest, and the near approach of the command of the markets of the world for that cereal. He is not now a suppliant for free entry into a market the value of which is only a matter of history to him, and is content to push the trade with the mother land in the development of which he has secured such satisfactory results. Secure for him the coveted boon of preference for colonial food products in the home market, and he will be content to see his export of farm products to the United States sink from $7,000,000 to nothing.

For some years past the importation of farm products from the United States to Canada for consumption has greatly exceeded the export of farm products to the United States for the same purpose. Canada admits hides and skins, wool, broom corn, hemp undressed, Indian corn, flaxseed, tobacco leaf, and many minor articles free of duty. In 1902 the importation of farm products from the United States for consumption was $15,487,000. In 1901 it was $20,750,000. The largest item in the list of importation was corn, and the falling off in 1902 as compared with the previous year was chiefly due to the short corn crop of 1901 and resultant high range of prices. With the importation of two or three times as much farm products for consumption from the United States as the export of Canadian farm products to that country, under practically the same duties in each country, except in the case of the above enumerated articles upon the free list, it is probable that with free trade in natural products the import of farm products by Canada from the United States for consumption would nearly equal the export of Canada to the United States in the same line for consumption. In wheat, flour, and other articles of which both

countries have a surplus for export the movement to the United States would be heavy, provided that country could secure the carrying trade and the handling of these products as a middleman; but the more extensive the importation of such products, the more extensive would be the volume of American export trade, the greater the earnings of American transportation routes, the larger the profits of American factors and middlemen, and all without effect upon the prices of these articles in the American market.

TOTAL VALUE OF EXPORTS TO GREAT BRITAIN AND THE UNITED STATES

Great Britain, 1866	$16,826,000
Great Britain, 1902	117,320,000
United States, 1866, including estimated short returns	$44,143,000
United States, 1902, produce of Canada	66,567,000

Of the exports to the United States the lately revised tables show that $23,378,000 consisted of coin, bullion, gold dust, nuggets, and silver concentrates, leaving the exports aside from precious metals $43,189,000, which is nearly $1,000,000 less than in 1866.

TOTAL VALUE OF IMPORTS FOR CONSUMPTION FROM GREAT BRITAIN AND THE UNITED STATES

Great Britain, 1866	$40,062,000
Great Britain, 1902	49,206,000
United States, 1866	$28,572,000
United States, 1902	120,814,000

These returns show an increase of importations from Great Britain of but 23 per cent. since 1866, while the increase of importations from the United States is 422 per cent., or ten times greater, in the same period. Canada therefore finds herself confronted by the following conditions. Free access to the British markets and energetic development of trade on her own part have raised her exports to Great Britain from $16,826,000 in 1866 to $117,320,000 in 1902, while her imports from that country during the same period, notwithstanding the operation of preferential duties for four years of that time, have only carried up her imports from $40,062,000 in 1866 to $49,206,000 in 1902, leaving a balance of trade against Great Britain and in her favor in 1902 of $68,114,000; or, in other words, Canada last year sold to Great Britain nearly two and a half times more than the amount of her purchases from that country. In the case of the United States, eliminating precious metals from the volume of her exports to that country, her sales were $43,189,000, her purchases for consumption $120,814,000, or two and a half times more than her exports, and the actual balance of trade against her, not including precious metals exported, was, as per revised figures of trade returns, $77,625,000.

The amount of free and dutiable imports for the same years were as follows:

IMPORTS FROM GREAT BRITAIN, 1902

Free goods	$14,143,000
Dutiable goods	$35,069,000
Rate of duty on total imports	17.06
Rate of duty on dutiable imports	24.05

IMPORTS FROM UNITED STATES, 1902

Free goods	$60,632,000
Dutiable goods	$60,181,000
Rate of duty on total imports	12.54
Rate of duty on dutiable imports	25.18

The condition of trade relations between the two countries as thus set forth is one that the United States could well afford to allow to remain intact. It excites surprise, however, that Canada should have allowed these conditions to continue in operation so long, and at last a change is imminent, a change the character of which the United States will be permitted largely to decide. Either her own policy towards Canada will be made more liberal, and the Canadian will be permitted to exchange his own products for his enormous purchases in the United States, or the policy of Canada will be remodeled upon the present American lines, and liberal purchases from a foreign country will be treated as dangerous to domestic interests, and will be carefully minimized by repressive legislation.

The value of Canadian trade to the United States may be illustrated by a comparison with the trade of the United States with Latin America. Last year the excess of Canadian imports from the United States for consumption, over the exports of the United States to all of Latin America from the northern boundary of Mexico to Cape Horn, was $36 800,000, and over all of Latin America, including the West India Islands except Cuba and Porto Rico, was $19,796,000.

Canada is the largest customer for manufactures that the United States possesses. A table giving the imports from the United States for the last five years

will show the extent and the rapid growth of this branch of Canadian import trade:

CANADIAN IMPORTATION OF MANUFACTURES FROM THE UNITED STATES

1898	$41,510,000
1899	49,362,000
1900	60,473,000
1901	62,463,000
1902	69,536,000

In 1902 the Canadian import of manufactures from Great Britain was $41,675,000; excess from the United States, $27,861,000. Of the import of manufactures from the United States in 1902, $21,195,000 was on the free list, which included binder twine, fishing nets and twines, brass, copper, steel rails, mining machinery, steel and iron in various forms to the extent of over $3,000,000, tin, barbed wire, etc.

The need for a revision of the trade policy of the United States towards Canada must be apparent to any disinterested and candid man who will carefully weigh the facts. At last the great obstacle to the continuance and completion of the work of the Joint High Commission has been removed through the reference of the Alaskan boundary question to another tribunal. Provided this treaty is ratified, the way is now open for the Commission to resume its labors. Is it worth while for it to reassemble? Better, without doubt, not to do so than to have another fiasco. Considerable progress was made by the Commission with the trade question at its Washington session in 1899. Matters have to some extent changed since then. Concessions that were then offered by the American Government were at that time considered insufficient, and would clearly fall short of what would be found necessary now. With the great market for food in British Columbia and the Yukon region, which can be most readily furnished from Washington and Oregon; with the greater market for food in the Maritime Provinces of Nova Scotia, New Brunswick, and Prince Edward Island, for which supplies will naturally come from the seaboard cities of the United States; with the market for grain and meats which will be furnished by the lumbering and mining regions of Ontario and Quebec; with a free list of $60,632,000 of imports from the United States—more than ten times greater than the American free list of Canadian imports, and $21,000,000 of which is manufactures—and with a present importation of American farm products for consumption more than double the export of Canadian farm products to the United States, the present Canadian tariff, the rates under which are about half the rates imposed by the American tariff, and the present trade conditions, would seem to warrant the request for free trade in natural products, provided the British preference, so far as it affects the United States, was repealed.

The manufacturing interests of the United States are becoming fully alive to the importance of the Canadian market, and are nearly ready for a reciprocity treaty with fair and equitable conditions. The American farmer and lumberman, however, are troubled with fears that free natural products will depress prices in the United States. Canada desires free trade in lumber and farm products, not for the purpose of breaking prices in the United States markets, but for the purpose of securing higher prices in Canada through the addition of the duty to the price now received. The export to the United States of lumber and farm products for consumption bears an insignificant proportion to the amount of each produced in the United States for consumption. In lumber the importation does not amount to two per cent. of the total American production. The same conditions hold good in relation to farm products of the kind that both countries do not raise a surplus of for export; and with regard to products of which each country has a surplus, American and Canadian producers meet as competitors in foreign markets. One statement with regard to the egg trade will illustrate the groundlessness of American apprehension about reduction in prices of farm products resulting from free trade. Eggs at one time were free, and were one of the most important in value of the list of exports from Canada to the United States. A duty of five cents per dozen has practically excluded them from the American market for many years, and the Canadian producer has found a market for this article in Great Britain which is said to be as satisfactory as was the market formerly furnished by the United States. Last year the export of eggs from Canada was, to Great Britain, 11,397,000 dozen; to the United States, 237,000 dozen—a

total of 140,608,000 eggs, or less than two eggs annually for each inhabitant of the United States. With free trade in eggs the export to the United States, it is evident from the above statement, would bear so small a proportion to the production in that country for consumption that no appreciable effect upon prices could be produced; and the same thing would hold true, practically, with regard to the prices of all farm products imported into the United States from Canada for consumption.

Of late years a marked change has come over public sentiment in Canada regarding reciprocity with the United States, and the feeling of indifference which exists is increasing. The knowledge, as yet only partial, of the great resources of Canada and the boundless possibilities of the great Canadian Northwest has aroused aspirations for national development. The policy of fostering Canadian industries and interests is appealing more strongly day by day to the sympathies of the Canadian people, and the idea of a high protection tariff and the inauguration of a distinctively Canadian system is growing in favor, and will sweep the country at the next general elections if not headed off by a successful reciprocity movement. This feeling is closely allied to the Imperialistic sentiment which aspires to some form of organic union between Britain and her colonies, and indulges in day-dreams of Imperial trade preference for the colonies, or an Imperial Zollverein, coupled with a system of Imperial defense, in the cost of which the colonies are to bear a considerable share. All of these phases of Imperialism and extreme protection are the legitimate offspring of the selfishness of the American trade policy towards Canada, and will gradually disappear when a radical change of that policy takes place.

The Canadian economic and political forces opposed to reciprocity are, the manufactering interests, which have attained considerable development and stand resolutely for high protective duties against the United States and all other countries; the Imperialistic sentiment, which sees in reciprocity a deadly foe to its scheme for a united Empire and the destruction of colonial autonomy; the preferential trade policy, which looks for the enlargement of our British export trade through the application of preferential duties in favor of the colonies, and all the scattered elements, Tory in instinct and anti-republican in conviction, which look upon the expansion of the power of the great Republic as a menace to the divine right of kings and all the safeguards of conservative stability. In addition to these, the transportation interests centering in the St. Lawrence route look upon reciprocity with suspicion, if not with hostility, fearing that more liberal trade arrangements will tend, through the removal of custom restrictions, to draw trade to American canals and railways and to American seaports. Against these forces and influences we may set the lumberman, the mine-worker, and the fisherman, all of whom ardently desire reciprocity, and the farmer, whose views range from active desire down to passive realization that two markets must be better than one.

In Canada it is objected to reciprocity that it will lead to annexation to the United States. This objection would prove an argument in favor of the policy in the United States. Reciprocity thirty years ago would have been a working force in the direction of political union of the most powerful character. Since then conditions have materially changed, and it is useless to speculate as to whether increased intimacy in trade relations and the establishment of great mutual interests would have a commanding influence upon political relations. It may, however, be affirmed without the slightest hesitation that the continuance of the present trade relations between the two countries will have a powerful and ever-increasing tendency to render political union impossible.

The time to attend to the reciprocity issue is now. The Liberal Government now in power at Ottawa is favorable to the consummation of a reasonable treaty, and has the support in the Canadian House of Commons and Senate to secure its ratification. At the general election two or three years hence this Government may be succeeded by a Conservative, high protection government, and the failure to secure a reciprocity treaty before that time will go very far to secure the change. If this change should take place, all hope of securing a reciprocity treaty will be

gone. The opportunity will have departed, and the evils of a tariff war will be intensified through the adoption by Canada of a policy as distinctly wide of good sense and recognition of true economic principles as the one with which the United States in her dealings with Canada has for the last thirty years invited the scorn of future generations of economists.

John Redmond[1]

By Justin McCarthy

Author of "A History of Our Own Times," "The Story of Gladstone's Life," etc.

JOHN EDWARD REDMOND is one of the leading men in the House of Commons just now. He is one of the very few really eloquent speakers of whom the House can boast at the present time. His eloquence is, indeed, of a kind but rarely heard in either House of Parliament during recent years. The ordinary style of debate in the House of Commons is becoming more and more of the merely conversational order, and even when the speaker is very much in earnest, even when he is carried away by the fervor of debate, his emotion is apt to express itself rather in an elevation of the voice than in an exaltation of the style. Among members of the House who may be still regarded as having a career before them I do not think there are more than three or four who are capable of making a really eloquent speech—a speech which is worth hearing for its style and its language as well as for its information and its argument. John Redmond is one of these gifted few; Lloyd-George is another. I have heard some critics depreciate John Redmond's eloquence on the ground that it is rather old-fashioned. If it be old-fashioned to express one's meaning in polished and well-balanced sentences, in brilliant phrasing, and with melodious utterance, then I have to admit that John Redmond is not, in his style of eloquence, quite up to the present fashion, and I can only say that it is so much the worse for the present fashion. It is quite certain that Redmond is accepted by the House of Commons in general as one of its most eloquent speakers and one of its ablest party leaders.

Redmond has already been some twenty years in the House of Commons. He was a very young man when first chosen to represent an Irish constituency in the House. I have noticed that our biographical dictionaries of contemporary life do not agree as to the date of Redmond's birth. Some of the books set him down as born in 1851, while others give the year of his birth as 1856. I think I have good reason for knowing that the latter date is the correct one. Perhaps it ought to bring a sense of gratification to a public man when a dispute arises as to the date of his birth. It may give him a complacent reminder of the fact that certain cities disputed as to Homer's birthplace.

John Redmond comes of a good family, and his father was for a long time a member of the House of Commons. I can remember the elder Redmond very well, and he was a man of the most courteous bearing and polished manners, a man of education and capacity, who, whenever he spoke in debate, spoke well and to the point, and was highly esteemed by all parties in the House. John Redmond was educated at Trinity College, Dublin, studied for the law and was called to the bar, but did not practice in the profession. He was elected to the House of Commons in 1881, and became a member of that National party which had been formed not long before under the guidance of Charles Stewart Parnell. From the time when he first took part in a Parliamentary debate it was evident that John Redmond had inherited his father's graceful manner of speaking, and it was soon discovered that he possessed a faculty of genuine eloquence which had not been displayed by the elder Redmond. John Redmond had and still has a voice of remarkable strength, volume, and variety of intonation, and he was soon afforded

[1] This forms the tenth of a series of articles on living British statesmen. Subjects already treated are: Mr. Balfour, Lord Salisbury, Mr. John Morley, Mr. Henry Labouchere, Lord Aberdeen, Sir William Harcourt, Sir Henry Campbell-Bannerman. Other articles will have as subjects John Burns and Sir Michael Hicks-Beach.

ample opportunity of testing his capacity for public speech. It was a great part of Parnell's policy that there should be a powerful Home Rule organization extending itself over all parts of Great Britain, founding institutions in all the principal cities and towns, and addressing audiences indoors and out on the subject of Ireland's demand for domestic self-government. John Redmond soon became one of the most effective organizers of this new movement and one of the most powerful pleaders of the cause on public platforms. The first time I ever heard him make a speech in public was at a great open-air meeting held in Hyde Park. He had to address a vast crowd, and I felt naturally anxious to know what his success might be under such trying conditions for a young speaker. He had then but a slender frame, and his somewhat delicately molded features did not suggest the idea of great lung-power. After his first sentence I felt no further doubt as to his physical capacity. He had a magnificent voice, clear, resonant, and thrilling, which made itself heard all over the crowd without the slightest apparent effort on the part of the speaker. I could not help being struck at the time by the seeming contrast between the boyish, delicate figure and the easy strength of the resonant voice.

During his earlier sessions in the House of Commons Redmond did not speak very often, but when he did speak he made it clear that he had at his command a gift of genuine eloquence. He held office as one of the "whips" of the Irish National party—that is to say, as one of the chosen officials whose duty it is to look after the arrangements of the party, to see that its members are always in their places at the right time, to settle as to the speakers who are to take part in each debate, and to enter into any necessary communications with the whips of the other parties in the House. Redmond was a man admirably suited for such work. He had had an excellent education; he had the polished manners of good society; he belonged to what I may call the country gentleman order, and could ride to hounds with a horsemanship which must have won the respect of the Tory squires from the hunting counties; and he had an excellent capacity and memory for all matters of arrangement and detail. He attended to his duties as one of the party whips with unfailing regularity, and could exercise with equal skill the influence of persuasiveness and that of official command.

In the early days of the Parnell party there was not, to be sure, any great demand on the marshaling power of the whips over the rank and file of the little army. For a considerable time the whole Parnellite party did not consist of more than ten or a dozen members. These members, however, were compelled to do constant duty, and to maintain the great game of Parliamentary obstruction revived by Parnell at all hours of the day and the night. It was quite a common thing for a member of the party to deliver a dozen or fifteen speeches in the course of a single sitting, and John Redmond had all his work to do in endeavoring to keep exhausted colleagues up to their business and to see that they did not leave the precincts of the House until Mr. Speaker should have formally announced that the day's sitting was over. Redmond's services were of inestimable value during such a period of trial. As the days went on, the Irish constituencies became more and more aroused to the necessity of increasing as far as possible the number of thoroughgoing Parnellites in the House by getting rid, at every election, of the Irish members—Irish Whigs as they were called—who did not go in thoroughly, heart and soul, for the policy of Parnell. Under such conditions the influence and the eloquence of John Redmond were of the most substantial service to his party in the work of stirring up the national sentiment among the Irish populations in the cities and towns of England and Scotland. Before many years had passed, John Redmond was one of the whips of an Irish National party in the House of Commons which numbered nearly ninety members. The increase of official duties thus put upon him and his brother whips did not seem to trouble him in the slightest degree. He was always on duty in the House, unless when he had to be on duty at some public meeting outside its precincts; he was ever in good spirits; could always give his chief the fullest and most exact information as to the conditions of each debate, and the best methods of getting full use of the numbers

and the debating strength of the Irish party at any given moment.

During the greater part of this time he had not had much opportunity of cultivating his faculty as a debater, for the whip of a party is understood to be occupied rather in putting other men up to speak than in displaying eloquence of his own, and it was for several years not quite understood by the party that John Redmond was qualified to be and was destined to be one of its most commanding spokesmen. I ought to say that among other duties discharged by John Redmond was the trying and responsible task of traveling on more than one occasion over the United States and Canada and Australia to preach the Home Rule gospel to the Irish populations in those countries and to all others who would listen, and thus to obtain the utmost possible support for the great movement at home. For many sessions, however, John Redmond was regarded by his colleagues in the House as a speaker best heard to advantage on some great public platform outside the Parliamentary precincts, and very few of them indeed had yet formed the idea that he was also qualified to become one of the foremost orators in the representative chamber itself.

I may mention here that Mr. Redmond's intimate knowledge of the rules and practices of the House and his thorough acquaintance with its business ways were, in great measure, due to his having held for a time a place in one of the offices belonging to the House of Commons. He was appointed, before he became a member of the House, a clerk in the Vote Office, a department which has to do with the preparation of Parliamentary documents, the distribution of Parliamentary papers, and other such technical work. The clerkships in these offices are in the gift of the Speaker, are an avenue towards the highest promotions in the official staff of the House, and are usually given to young men who, in addition to high education and the promise of capacity, can bring some Parliamentary or family influence to bear on their behalf. John Redmond had some experience in this Vote Office, and it made him a thorough master of Parliamentary business. I had enjoyed his personal acquaintance for some time before he came into the House as a member, and I had been in the House myself some two years before his election. I remember often seeing him and exchanging a word with him as he stood within the House itself, just below the line which marks the place where the bar of the House is erected when there is occasion, for any public purpose, to admit a stranger thus far and no farther, in order that he may plead some cause before the House or present some petition. Officials employed in any of the offices belonging to the House are allowed the proud privilege of advancing up the floor of the chamber as far as the chair occupied by the Sergeant-at-Arms, the point at which the bar would be drawn across if occasion should require. Thus I had the opportunity of conversing with John Redmond on the floor of the House itself, before he had yet obtained the right of passing beyond the sacred line of the bar.

I am quite certain that Parnell himself did not, until the great crisis came in the Irish National party, fully appreciate the political capacity of John Redmond. Parnell always regarded him as both useful and ornamental—useful in managing the business of the party, and ornamental as a brilliant speaker on a public platform. But he did not appear to know, and had indeed no means of knowing, that Redmond had in himself the qualifications of a party leader and the debating power which could make him an influence in the House of Commons. The speeches which Redmond made, or rather was "put up" by his leader to make, in the House had often for their object merely to fill up time and keep a debate going until the moment arrived when Parnell thought a division ought to be taken. But when the great crisis came in the affairs of the party, then Redmond was soon able to prove himself made of stronger metal than even his leader had supposed. The crisis was, of course, when the Parnell divorce case came on, and Gladstone and the Liberal leaders generally became filled with the conviction that it would be impossible to carry a measure of Home Rule if Parnell were to retain the leadership of the Irish National party. I need not go over this old and painful story again; it is enough to say that the great majority of Parnell's own followers found themselves compelled to believe that it would

be better for Ireland if Parnell were to resign the leadership and retire into private life for a certain time. This Parnell refused to do, and, in opposition to the earnest wishes of the majority of his followers, he published a sort of manifesto in denunciation of Gladstone. Then came the famous meetings of the Irish party in Committee-Room No. 15—one of the committee-rooms belonging to the House of Commons—and, after long days of angry and sometimes even fierce debate, the great majority of the party declared that they could no longer follow the leadership of Parnell. The minority made up their minds to hold with Parnell for good or evil.

I am willing and always was willing to render full justice to the motives which inspired the action of the minority. They did not feel themselves called upon to justify every act of Parnell's private life, but they took up the position that his private life had nothing to do with his political career, and that they could not abandon the leader who had done such service to Ireland merely because his name had become associated with a public scandal. On the other hand, the majority of the party, of whom I was one, held that their first duty was to their country, and that if the continued leadership of Parnell rendered it impossible for Gladstone to carry his Home Rule measure, they had to think only of their country and its national cause. During all these debates in Committee-Room No. 15, John Redmond took the leading part on the side of the minority. He became the foremost champion of Parnell's leadership. This position seemed to come to him as if in the nature of things. I well remember the ability and eloquence which he displayed in these debates, and the telling manner in which he put his arguments and his appeals. The course he took was all the more to his credit because Parnell had never singled him out as an object of especial favor, and, indeed, in the opinion of many among us, had not done full justice to his services in the House of Commons. Then came the formal division of the party. The majority met together and reconstituted the party with a new Chairman, while the minority associated themselves with Parnell as their leader for the purpose of going over to Ireland and endeavoring to organize the country in his support. When the end of the fierce open controversy was brought about at last by Parnell's sudden death, John Redmond was made the leader of the minority, and from that time forth he began to give more and more distinct evidences of his capacity for a Parliamentary leader's position. He and his group of followers kept themselves in the House of Commons entirely apart from their former colleagues. John Redmond had often to take a part in the debates of the House, and every one could see that the serious responsibility imposed on him was developing in him qualities of leadership, and even of statesmanship, which very few indeed had previously believed to be among his gifts.

Meanwhile the state of things created in Ireland by the split and the setting up of two opposing parties was becoming intolerable. Every man of patriotic feeling on either side of the controversy was coming to see more keenly every day that the maintenance of such a division must be fatal to the cause, for at least another generation. Some efforts were made by leading men on both sides to bring about a process of reconciliation. John Dillon on the one side, and John Redmond on the other, lent every help they could to these patriotic efforts. John Dillon had by this time become leader of the more numerous party, having been chosen to that position when the leader elected after the severance from Parnell had been compelled by ill health to resign the place. Every reasonable man among the Irish Nationalists, inside and outside Parliament, was coming more and more to see that there was no longer any occasion whatever for further severance, and that the country demanded a return to the old principle of union in the National ranks. John Dillon became impressed with the conviction that it might tend to smooth matters and to open a better chance for reconciliation if he, as one of the most conspicuous anti-Parnellites, were to resign his position, and to invite the whole party to come together again and elect a leader. Dillon was strongly of opinion that, as all matter of controversy had been buried in the early grave of Parnell, it would be better for the cause of future union that the new leader should be

and the debating strength of the Irish party at any given moment.

During the greater part of this time he had not had much opportunity of cultivating his faculty as a debater, for the whip of a party is understood to be occupied rather in putting other men up to speak than in displaying eloquence of his own, and it was for several years not quite understood by the party that John Redmond was qualified to be and was destined to be one of its most commanding spokesmen. I ought to say that among other duties discharged by John Redmond was the trying and responsible task of traveling on more than one occasion over the United States and Canada and Australia to preach the Home Rule gospel to the Irish populations in those countries and to all others who would listen, and thus to obtain the utmost possible support for the great movement at home. For many sessions, however, John Redmond was regarded by his colleagues in the House as a speaker best heard to advantage on some great public platform outside the Parliamentary precincts, and very few of them indeed had yet formed the idea that he was also qualified to become one of the foremost orators in the representative chamber itself.

I may mention here that Mr. Redmond's intimate knowledge of the rules and practices of the House and his thorough acquaintance with its business ways were, in great measure, due to his having held for a time a place in one of the offices belonging to the House of Commons. He was appointed, before he became a member of the House, a clerk in the Vote Office, a department which has to do with the preparation of Parliamentary documents, the distribution of Parliamentary papers, and other such technical work. The clerkships in these offices are in the gift of the Speaker, are an avenue towards the highest promotions in the official staff of the House, and are usually given to young men who, in addition to high education and the promise of capacity, can bring some Parliamentary or family influence to bear on their behalf. John Redmond had some experience in this Vote Office, and it made him a thorough master of Parliamentary business. I had enjoyed his personal acquaintance for some time before he came into the House as a member, and I had been in the House myself some two years before his election. I remember often seeing him and exchanging a word with him as he stood within the House itself, just below the line which marks the place where the bar of the House is erected when there is occasion, for any public purpose, to admit a stranger thus far and no farther, in order that he may plead some cause before the House or present some petition. Officials employed in any of the offices belonging to the House are allowed the proud privilege of advancing up the floor of the chamber as far as the chair occupied by the Sergeant-at-Arms, the point at which the bar would be drawn across if occasion should require. Thus I had the opportunity of conversing with John Redmond on the floor of the House itself, before he had yet obtained the right of passing beyond the sacred line of the bar.

I am quite certain that Parnell himself did not, until the great crisis came in the Irish National party, fully appreciate the political capacity of John Redmond. Parnell always regarded him as both useful and ornamental—useful in managing the business of the party, and ornamental as a brilliant speaker on a public platform. But he did not appear to know, and had indeed no means of knowing, that Redmond had in himself the qualifications of a party leader and the debating power which could make him an influence in the House of Commons. The speeches which Redmond made, or rather was "put up" by his leader to make, in the House had often for their object merely to fill up time and keep a debate going until the moment arrived when Parnell thought a division ought to be taken. But when the great crisis came in the affairs of the party, then Redmond was soon able to prove himself made of stronger metal than even his leader had supposed. The crisis was, of course, when the Parnell divorce case came on, and Gladstone and the Liberal leaders generally became filled with the conviction that it would be impossible to carry a measure of Home Rule if Parnell were to retain the leadership of the Irish National party. I need not go over this old and painful story again; it is enough to say that the great majority of Parnell's own followers found themselves compelled to believe that it would

be better for Ireland if Parnell were to resign the leadership and retire into private life for a certain time. This Parnell refused to do, and, in opposition to the earnest wishes of the majority of his followers, he published a sort of manifesto in denunciation of Gladstone. Then came the famous meetings of the Irish party in Committee-Room No. 15—one of the committee-rooms belonging to the House of Commons—and, after long days of angry and sometimes even fierce debate, the great majority of the party declared that they could no longer follow the leadership of Parnell. The minority made up their minds to hold with Parnell for good or evil.

I am willing and always was willing to render full justice to the motives which inspired the action of the minority. They did not feel themselves called upon to justify every act of Parnell's private life, but they took up the position that his private life had nothing to do with his political career, and that they could not abandon the leader who had done such service to Ireland merely because his name had become associated with a public scandal. On the other hand, the majority of the party, of whom I was one, held that their first duty was to their country, and that if the continued leadership of Parnell rendered it impossible for Gladstone to carry his Home Rule measure, they had to think only of their country and its national cause. During all these debates in Committee-Room No. 15, John Redmond took the leading part on the side of the minority. He became the foremost champion of Parnell's leadership. This position seemed to come to him as if in the nature of things. I well remember the ability and eloquence which he displayed in these debates, and the telling manner in which he put his arguments and his appeals. The course he took was all the more to his credit because Parnell had never singled him out as an object of especial favor, and, indeed, in the opinion of many among us, had not done full justice to his services in the House of Commons. Then came the formal division of the party. The majority met together and reconstituted the party with a new Chairman, while the minority associated themselves with Parnell as their leader for the purpose of going over to Ireland and endeavoring to organize the country in his support. When the end of the fierce open controversy was brought about at last by Parnell's sudden death, John Redmond was made the leader of the minority, and from that time forth he began to give more and more distinct evidences of his capacity for a Parliamentary leader's position. He and his group of followers kept themselves in the House of Commons entirely apart from their former colleagues. John Redmond had often to take a part in the debates of the House, and every one could see that the serious responsibility imposed on him was developing in him qualities of leadership, and even of statesmanship, which very few indeed had previously believed to be among his gifts.

Meanwhile the state of things created in Ireland by the split and the setting up of two opposing parties was becoming intolerable. Every man of patriotic feeling on either side of the controversy was coming to see more keenly every day that the maintenance of such a division must be fatal to the cause, for at least another generation. Some efforts were made by leading men on both sides to bring about a process of reconciliation. John Dillon on the one side, and John Redmond on the other, lent every help they could to these patriotic efforts. John Dillon had by this time become leader of the more numerous party, having been chosen to that position when the leader elected after the severance from Parnell had been compelled by ill health to resign the place. Every reasonable man among the Irish Nationalists, inside and outside Parliament, was coming more and more to see that there was no longer any occasion whatever for further severance, and that the country demanded a return to the old principle of union in the National ranks. John Dillon became impressed with the conviction that it might tend to smooth matters and to open a better chance for reconciliation if he, as one of the most conspicuous anti-Parnellites, were to resign his position, and to invite the whole party to come together again and elect a leader. Dillon was strongly of opinion that, as all matter of controversy had been buried in the early grave of Parnell, it would be better for the cause of future union that the new leader should be

chosen from among the small number of men who had always adhered to Parnell's side. Dillon prevailed upon most of his friends to adopt his views on this subject. It was the custom of the Irish National party—indeed, of both the parties—to elect their leader at the opening of each session, and John Dillon had been re-elected more than once to the position of command in his own party. Accordingly, at the close of a session Dillon announced his intention to resign the place of leader, and he added to the announcement that he would not then accept re-election, even if it should be offered to him by a vote of his party. This patriotic course of action was most happy in its results. The Irish National members met together once again as a united party, and the leadership was conferred on John Redmond as an evidence alike of the confidence which was felt in his capacity and his sincerity, and a proof of the desire entertained by the majority for a thorough and cordial reunion of the whole party.

John Redmond was therefore the first leader of the whole party since the events of Committee-Room No. 15. John Dillon and his immediate predecessor had been only leaders of a majority, and now John Redmond was chosen as the leader of the whole party representing the Irish National cause in the House of Commons. He settled down at once to his new position with a temper and spirit admirably suited to the work he had to undertake. He seemed to have put away from his mind all memory of disunion in the party, and he became once more the friend as well as the leader of every member enrolled in its ranks. Many of those who formed the majority had in the first instance yielded to the persuasion of John Dillon and others in the election of Redmond as leader only because they believed that by such a course the interests of the cause could best be served just then. But I know that some of these men accepted with personal reluctance what seemed to be the necessity of the hour, and looked forward with anything but gratification to the prospect of having to serve under the new chief. John Redmond, while defending the cause of the still living Parnell, had shown in the service of his chief an energy and a passion which few of us could have expected of him, and was often utterly unsparing in his denunciation of the men who maintained the other side of the controversy. It was not unnatural that many of his former opponents should feel some doubt as to the possibility of working harmoniously under the leadership of a man who had been but lately so bitter an opponent. I had, at the time of the new leadership, been compelled by ill health to give up all active part in public life, but I talked with many members of the majority in the Irish party who told me frankly that they feared it would not be possible to get on under the leadership of John Redmond. Before long, however, these same men spontaneously assured me that they had changed their opinions on that subject, and were glad to find that they could work with Redmond in perfect harmony, and that his manner and bearing showed no sign whatever of any bitter memories belonging to the days of internal dispute. Redmond devoted himself absolutely to the House of Commons and the business of leadership, unless indeed when some pressing national interests compelled him to leave his place in St. Stephen's in order to see to the organization of the National cause in Ireland or in the United States. At the time when I am writing this article he has but lately returned from a visit of that kind to some of the great cities of the American Republic.

Fortunately for his country as well as for himself, John Redmond is a man of private means, is not compelled to earn a living, and can devote the whole of his time to the service of the National cause. He is always to be found at his post while the House of Commons is sitting, and I believe that his morning ride in Hyde Park with his wife every day is one of the few recreations in which he allows himself to indulge. I had not long ago a visit from a well-known member of the Irish Parliamentary party who holds one of its official positions and was at the time of the internal dispute an uncompromising opponent of Parnell's continued rule. This friend of mind I know was decidedly opposed at first to the election of John Redmond as leader, for the reason that he did not believe that such an arrangement could possibly work with smoothness and satisfaction to the party. But when I saw him lately, he assured me that he had

entirely changed his opinions and that he did not believe that any party could possibly have a better leader than John Redmond had already proved himself to be. He had nothing but praise for Redmond's bearing and ways, for the manner in which he appeared to have banished from his mind all memory of past disunion, and for the unremitting attention with which he devoted himself to the work of the party inside and outside the House of Commons.

Since then I have heard and read nothing but good accounts of the manner in which Redmond has reorganized the party. It has under his guidance become once again a powerful force in political life. The House of Commons, as a whole, has thoroughly recognized Redmond's position, influence, and capacity. The Prime Minister has given many proofs of the importance which he attaches to Redmond's decisions and movements. The new leader of the Irish party has won a much higher rank as a Parliamentary debater than he ever had attained to in the days before he had become invested with a really grave responsibility. The newspaper critics on all sides of political life are agreed in describing him as one of the foremost living debaters. Indeed, there are but three or four men in the House of Commons who could possibly be compared with him for eloquence and skill in debate, and there is a quality of grace and artistic form in his style of eloquence which often recalls the memories of brighter days, when the art of oratory was still cultivated in Parliament. The success with which he has conducted the movements of his party has compelled Ministerialists and Opposition alike to take serious account of Redmond and his followers when the chances of any great political measure are under consideration. Only quite lately, during the passage of the Education measure, he adopted a policy which at first greatly puzzled his opponents, and at the last moment succeeded in impressing the Government and the Ministerial party generally with the conviction that Redmond understands when and how to strike a decisive blow.

Of course we hear sometimes, and of late rather often, about differences in the Irish party itself, and about a threatened secession from John Redmond's leadership. The Tory papers in England, and even some of the journals which are professedly Liberal, made eager use of this supposed dissension, and endeavored to persuade themselves and their readers that Redmond has not a full hold over his followers and over the Irish people. I may tell my American readers that they will do well not to attach the slightest importance to these stories about a threatened secession from the lately reunited Irish National party. In the first place, I never heard of any political party which did not inclose in its ranks some men who could not always be reckoned on as amenable to the discipline which is found necessary in every political organization. There is a considerable number of Liberal members who cannot be counted on to follow at all times the guidance of Sir Henry Campbell-Bannerman. There are many Ministerialists, and some of them very clever men, who have lately been proving that at times they would just as soon vote against Arthur Balfour as with him. But in regard to the Irish party and the members who do not always fall in with the wish of its leader, the actual facts are peculiar. The only members of the party who have lately been showing a tendency to mutiny are, with one exception, men of no account whatever in Ireland's political life. I do not wish to name any names, but I can state with deliberation that almost every one of the mutinous members just now is a man who has not the slightest chance of ever again being sent to represent an Irish constituency in the House of Commons. These men had long since forfeited the confidence of their constituents and their fellow-countrymen. They are perfectly aware of this fact; they know quite well that the next general election will see them put out of Parliamentary life; and, in despair of re-election, they probably think that they might as well make the most of the opportunity for rendering themselves conspicuous or for indulging in eccentricities which now can do them no further harm. It may be taken for granted that at the next general election the National constituencies of Ireland will send to the House of Commons no men who are not prepared to work in complete union with the National party, and to recognize the authority of the leader who has the

confidence of his people. I do not care to waste many words on this subject, but I think it right to assure my American readers that they need not attach any serious importance to the doings of five or six men, most of whom are either mere "cranks" or are driven to desperation by disappointed personal ambition.

John Redmond has the confidence of his countrymen in England and Scotland, as well as in Ireland, and we have seen that within the last few months he has obtained full assurance that he enjoys the confidence of his countrymen in the United States, in Canada, and in Australasia. I feel all the more ready to bear my testimony to his merits and his success because of the fact that I was, during a crisis which lasted for some years, in direct opposition to the policy which he felt himself conscientiously bound to adopt. The change of events has released him from any obligation to adhere to such a policy, and I do him the justice to believe that he accepted with the sincerest and most disinterested good will the first genuine opportunity that offered itself for a complete reunion of Irish Nationalists. John Redmond is still young enough to have a career before him, and I feel the fullest confidence in his future.

The Public Library a Paying Investment

By F. M. Crunden

Librarian of the St. Louis Public Library

IN his introduction to a recent book Mr. Carnegie says: "The most imperative duty of the State is the universal education of the masses. No money which can be usefully spent for this indispensable end should be denied. Public sentiment should, on the contrary, approve the doctrine that the more that can be judiciously spent, the better for the country. There is no insurance of nations so cheap as the enlightenment of the people."

Now, there is no institution so intimately, so universally, so constantly connected with the life of the whole people as the free public library—no instrumentality that can do so much to civilize society. The public schools alone cannot accomplish the task of elevating mankind to even the most modest ideal of a well-ordered society. As to the grade of our present boasted civilization, Sutherland, in his "Origin and Growth of the Moral Instinct," divides mankind into nine grades: lower, middle, and upper savagery; lower, middle, and upper barbarism; and lower, middle, and upper civilization. He says that the most advanced nations of the world are now in the stage of lower civilization, and predicts the arrival of the middle stage in about five hundred years. Can any one with ideals behold throughout the world the hand of man against his brother and take issue with this view?

Our public schools have been the chief source of the greater general intelligence, and hence of the industrial superiority, of our citizens over those of other countries. "The initiative, alertness, and fertility of resource which the American is nowadays credited with displaying, though partly a climatic, is chiefly an educational, product." But the public schools cannot accomplish impossibilities. They are not to blame for the fact that they can reach the great majority during only six or eight years, or that only one and one-half per cent. of the children in the United States go through the high school. But wherever there is a public library, the teachers are to blame if they do not graduate all their pupils, at whatever age they may leave school, into the People's University.

The educational world is, as it has been at all times, divided on various questions relating to methods and curricula—whether or to what extent the classic languages should be taught, what is the value of mathematics, what is the best method of teaching history, composition, literature, as to the value of manual training, etc. The public library furnishes a common rallying-ground. No teacher or intelligent layman can fail to agree that all students should be led to this storehouse of all knowledge, this fountain source of all inspiration, the library. No improvement in public-school methods that has been made or can be

made can surpass in importance the recent introduction of literature into the regular work of the school. It is the application, in an elementary way, of university methods, and gives greater assurance of a continuous course of self-education than any other plan could offer. Every one will recall the noted dictum of Carlyle, "The university of these days is a collection of books." This view has been recently amplified and emphasized by President Harper. In an article published in the "North American Review" he says:

"The place occupied by libraries and laboratories in the educational work of to-day, as compared with that of the past, is one of commanding importance. Indeed, the library and the laboratory have already practically revolutionized the methods of higher education. In the really modern institution the chief building is the library. . . . It is the center of the institutional activity. . . . That factor of college work, the library, fifty years ago almost unknown, to-day already the center of the institution's intellectual activity, half a century hence, with its sister, the laboratory, almost equally unknown fifty years ago, will have absorbed all else, and will have become the institution itself."

The all-essential character of the library as an instrumentality of higher education is so obvious that no one nowadays would think of taking issue with Carlyle and Dr. Harper; but its equal necessity as a factor in elementary education is not yet universally accepted. I have not space to go into a detailed argument, but must rest my case on a quotation from Sully's Psychology, and on strong statements made by two of the highest educational authorities in the country, and on positive testimony from the experience of some twenty grammar-school principals in St. Louis.

Sully says: "The habitual narration of stories, description of places, and so on, is an essential ingredient in the rudimentary stages of education. The child that has been well drilled at home in following stories will, other things being equal, be the better learner at school. The early nurture of the imagination by means of good wholesome food has much to do with determining the degree of imaginative power, and, through this, of the range of intellectual activity ultimately reached."

In an address before the American Library Association in 1890 Dr. Harris said:

"What there is good in our American system points toward this preparation of the pupil for independent study of the book by himself. It points toward acquiring the ability of self-education by means of the library."

Space forbids more than a few samples of the replies returned by the principals above mentioned to three questions asked them regarding the results of the use of sets of books (thirty copies of the same book in each box) sent to the schools by the Public Library:

1. What value do you attach to literature and supplementary reading in connection with the school curriculum?

2. What effect has the general reading done by the pupils of your school had on their progress in their studies?

3. Do you find the books supplied by the library an aid to discipline?

I.

"The cultivation of a taste for good literature should be, it seems to me, one of the chief aims of the school curriculum. The development of a higher morality and a truer culture and refinement—which, after all, is the final aim of education—can best, and perhaps only, be accomplished by the encouragement of a closer and closer acquaintance with our best literature. I attach to well-directed general reading as high a value as to any subject taught in the schools.

"I consider supplementary reading as good in itself, and therefore cannot regard with favor the conscious use of it as a means for maintaining discipline. Nevertheless, like any subject which thoroughly interests the children, it leads them into voluntary application, and so assists in cultivating that spirit which, in the end, eliminates the problem of discipline."

II.

A principal of long experience in one of the poorest and most crowded districts writes:

"Of immense value to all our pupils, but especially to the poor child that can attend school but a very few years.

"Assists their progress in their studies,

awakens and deepens their interest in the subject, adds to thought and information, and changes dry studies into the exchange of ideas, the answering of aroused curiosity, and fixes facts more permanently in the memory.

"The books supplied by the library *are* an aid to discipline. They change the current of pupils' thoughts, and put them in a better and happier state of mind—more conducive to study and improvement."

III.

"The literature furnished by the library has put a life into the reading exercise that it did not have before. It has made reading the principal study in the course.

"Yes, an aid to discipline, decidedly."

IV.

Here is a brief extract from another letter:

"There can be no doubt of the helpfulness of the public library reading sets in the school. It is the universal experience with us that pupils who do most and best supplementary reading succeed best in all of their work."

V.

The head assistant in the Columbia School sums up by saying:

"Supplementary reading, especially in the lower grades, is worth all the rest of the school work."

The principal of the same school writes:

"We make no parade of 'literature work' or of supplementary reading. The latter term is a misnomer; it is misleading; what others term supplementary reading in my school is *the whole thing.*"

He adds that his experience has shown "that those who read most widely accomplish most in other forms of school work; that the effect upon conduct is most salutary, showing in no case a bad result from the reading habit; that the ordinary nature-study books do not appeal to children strongly enough to secure voluntary reading as wholes; that the 'classics' tend to supplant everything sensational or weak; that children who are natural make as few errors in selecting for themselves as their elders make in selecting for them; that the 'bad' books generally appear but once; that a book is, on the whole, good or bad as determined by the attitude of the mind toward it."

President Eliot sums up the subject in this paragraph:

"From the total training during childhood there should result in the child a taste for interesting and improving reading, which should direct and inspire its subsequent intellectual life. That schooling which results in this taste for good reading, however unsystematic and eccentric the schooling may have been, has achieved a main end of elementary education; and that schooling which does not result in implanting this permanent taste has failed."

The public-school education, except for the insignificant number who take the high-school course, is, without the library, a mere bread-and-butter course (for most children dry bread only). Without the library it makes merely breadwinners, not men. But, supplemented by the library, it starts its pupils on a lifelong course of self-instruction which will make them, men and women, worthy citizens of the Republic. How can a boy graduating from the grammar school at fourteen (and remember that the vast majority leave before that)—how can a boy who has merely finished the curriculum of the grammar school know anything about the lessons of history? What comprehension can he have of his rights and duties as a citizen? Even if from his earliest years he has been using the library he can know little; but through the library, he will have been started on the path of self-education, and that is the best that high school or college can do. What has the average boy who leaves school with a positive distaste for books, because he has known none but text-books—what has he to guide him in the discharge of his political duties? How is he to know logic from sophistry? What is to keep him from supporting policies that the past has tried and found wanting? How is he to distinguish the honest advocates of real reform from the artful demagogue? We cannot grow citizens on the husks and shells of arithmetic, spelling, geography, and grammar, with a few dry bones of history added for the few who can stay long enough in school to get them. The public library must be made to supplement the public school, and in such a way as to lead to a continued course in the library, no matter at what age the school

career is closed. In his farewell address, Washington gave to his countrymen this wise injunction, which has lost none of its importance:

"Promote, then, as an object of primary importance, the general diffusion of knowledge. In proportion as the structure of a government gives force to public opinion, it is essential that this should be enlightened."

"*Education!*" exclaims Mazzini; "and my whole doctrine is summed up in this grand word."

A man, or his family acting for him, does not stop to count the cost of what will save his life. Society should not count the cost of an agency necessary to its preservation and progress. If the public library cost ten times as much as it does, it would still be a profitable investment. Let me briefly recapitulate what it does for a community:

1. It doubles the value of the education the child receives in school, and, best of all, imparts a desire for knowledge which serves as an incentive to continue his education after leaving school; and, having furnished the *incentive*, it further supplies the *means* for a lifelong continuance of education.

2. It provides for the education of adults who have lacked, or failed to make use of, early opportunities.

3. It furnishes information to teachers, ministers, journalists, authors, physicians, legislators, all persons upon whose work depend the intellectual, moral, sanitary, and political welfare and advancement of the people.

4. It furnishes books and periodicals for the technical instruction and information of mechanics, artisans, manufacturers, engineers, and all others whose work requires technical knowledge—of all those persons upon whom depends the industrial progress of the city.

5. It is of incalculable benefit to the city by affording to thousands the highest and purest entertainment, by substituting the reading-room for the bar-room, and thus lessening crime and disorder.

6. It makes the city a more desirable place of residence, and thus retains the best citizens and attracts others of the same character.

7. More than any other one agency, it elevates the general standard of intelligence throughout the great body of the community, upon which its material prosperity, as well as its moral and political well-being, must depend.

Finally, the public library includes potentially all other means of social amelioration. A man who founds a hospital does a good act; yet the benefits of his beneficence reach comparatively few. An art museum is a very useful institution in a community; yet how limited is its influence compared with that of a public library! And, above all, the hospital is only a hospital; it is a definite, a limited good; it is a finished structure, a marble shaft; it cannot reproduce itself. A library, on the other hand, is a living organism, having within itself the capacity of infinite growth and reproduction. It may found a dozen hospitals and art museums and inspire to noble deeds of every kind, all the while imparting intelligence and inculcating industry, thrift, morality, public spirit, and all those qualities that constitute the wealth and well-being of a community.

With all this work to its credit, can the public library be other than a profitable investment? On the first item alone—and we have conclusive testimony that the statement is a just one—the public library might fairly claim an equal appropriation with the public schools. Too much can hardly be paid for doubling the value of the education given by the public schools. But the library, for that one item of its work, does not call for one-tenth of the public-school revenue. It is, indeed, well satisfied if it receive one-tenth of the public-school appropriation for *all* its work. It seldom, if ever, is allowed that much. That is one of the notable features of the public library, that it is so well balanced a machine, so well adapted to its purposes, that it supplies more force with less fuel than any other mechanism yet devised for the melioration of society. The service costs $25 or more a year for each child that attends the public school. Once matriculated in the public library, it costs the community but $1 a year. As Stanley Jevons says: "In omitting that small expenditure in a universal system of libraries which would enable young men or women to keep up the three R's and continue their education, we spend the £97, and stingily decline the £3 really needed to make the

rest of the £100 effective." It is as if a man should cheerfully pay $20 for an overcoat and refuse an additional half-dollar for buttons to make it thoroughly serviceable.

My argument has been mainly on the material side. I have sought to show that even in direct material returns the public library is a paying investment. The argument is so plain that it may be summed up in a syllogism, the major premise of which is a truism, and the minor premise an unquestionable fact:

General intelligence is the necessary foundation of prosperity and s cial order.

The public library is one of the chief agencies, if not the most potent and far-reaching agency, for pro..oting general intelligence.

Therefore, money devoted to the maintenance of a public library is money well invested by a community.

So much for the public library as a factor in material prosperity. But the moral problem is of greater importance and more arduous solution than the material. "The slow moral progress of this nation," says President Eliot, "is due to the reading of poor books by the children." Yes, and to reading no books at all. To put books into idle hands, and ideas and ideals into empty heads, to substitute good books for poor among children—this is the most important function of the public library. It can, however, be but imperfectly performed without the earnest co-operation of the teacher. I have cited convincing testimony to the value of literature in the regular instruction and discipline of the school. Still greater is the aid it gives to moral education.

"If I were king of the world," says Dr. Stanley Hall, "I should have an examination of teachers as to their ability to tell a good story. It is the one hypnotic influence that tends for morals."

Morals cannot be successfully taught dogmatically. The greatest teacher of morals is the power of example, the life of an individual lived under our eyes. It is the peculiar privilege of the literary artist, whether novelist or biographer, to give us this opportunity for observation as we can never enjoy it in our own circle of acquaintance; for here we cannot know the inner life, and through the impassive, or the smiling, countenance we get no glimpse of the dormant passions, the hidden sorrows, the inner trials and triumphs, which might profoundly interest and affect us. All this the novelist discloses to us; and that is what makes a great novel the most powerful of all teachers.

Besides the moral influence it exercises directly and indirectly through the reading of its books, the public library furnishes in itself, as well as through its books, an excellent school of manners, which have been defined as minor morals. These functions should be added to my brief list of the benefits of a public library.

Franklin was able, in a few years, to note the obvious effect of the subscription library movement started by him. "These libraries," he says, "have improved the general conversation of Americans, and made the common tradesmen and farmers as intelligent as most gentlemen in other countries."

The Ben Franklin of to-day—I think it will be generally admitted that for practical sagacity the country has not seen his equal since the death of Franklin—has shown beyond question his opinion of the supreme value of the public library. It is significant, and a strong argument for the utility of the library, that the two men who, in the history of this country, stand most eminent for shrewdness and practical wisdom, are the *first* founder of a library in America and the *greatest* founder of libraries the world has ever seen. I think most persons will agree that no one is a better judge of what constitutes a good investment than Andrew Carnegie.

We cannot go far in the discussion of any high theme without coming upon the original and fundamental question of the origin and destiny of man and the end and aim of his earthly activities. Individual men work with numerous different ends in view; the great mass, sad to say, with no other thought than physical existence. But the divinity that shapes our ends has, beyond doubt, a definite design. As we get glimpses of the undeveloped pattern in the loom of time, and as we view larger sections pictured in the visions of poets and prophets, we are led to believe that the design is a constant approximation to a perfected man in a perfected society. We may hasten this

process or we may retard it. It seems to be a phase of our destiny that we are at intervals seized with sudden accessions of madness; it seems to be a part of the plan of the Weaver to allow us, occasionally, to unravel the product of a toilsome quarter-century; but the work is resumed, and the fabric grows in length and breadth and beauty of design.

As I have said, we generally get what we really pray for. "It was the wise Goethe," quotes Mr. Henderson in his "Education and the Larger Life," "who said, 'Be careful what you pray for in your youth, lest you get too much of it in your old age.'

"If we pray for profit and wages and all sorts of messes of pottage, we shall get them. If we pray for outward conformity and stock education, we shall get them. If we pray for ugliness and squalor and sweatshops and the tenement-house of a hundred sorrows, we shall get them.

"But suppose that we changed our prayer. Suppose that we prayed for health and beauty and accomplishment and power and social fellowship, for that human wealth which will go all round, for the wealth of individual integrity and of social well-being. Surely as come the seed-time and the harvest, we should get these things too."

The purpose of all man's activities is the making, the improving, the uplifting of man himself; and that is the highest type of community that furnishes to every individual member the best environment, the most favorable opportunities, for this main end and purpose. As Channing says: "The glory and happiness of a community consists in vigorous efforts, springing from love sustained by faith, for the diffusion, through all classes, of intelligence, of self-respect, of self-control, of thirst for knowledge and for moral and religious growth. . . . It is a plain truth, and yet how little understood, that the greatest thing in a city is man himself. He is its end. We admire its palaces; but the mechanic who builds them is greater than the palaces. . . . You talk of the prosperity of your city. I know but one true prosperity. Does the human soul grow and prosper here?"

Or, as Ruskin tersely put it, "That is the richest community that nourishes the greatest number of noble and happy souls."

Books of the Week

This report of current literature is supplemented by fuller reviews of such books as in the judgment of the editors are of special importance to our readers. Any of these books will be sent by the publishers of The Outlook, postpaid, to any address on receipt of the published price, with postage added when the price is marked "net."

Anno 1870. By Detley von Liliencron. Edited by Dr. Wilhelm Bernhardt. D. C. Heath & Co., Boston. 138 pages.

Century of Sonnets (A). By S. B. Herrick. R. H. Russell, New York. 6×7¾ in. 109 pages. $2.60, net.

A very taking little quarto, bound in white vellum tastefully stamped in gilt, containing a selection of sonnets, beginning with Wordsworth and ending with William Watson and Philip Bourke Marston, prefaced by an introduction which defines the sonnet, describes it, and gives a brief historical résumé of the development and practice of the art.

Circle (The). By Katherine Cecil Thurston. Illustrated. Dodd, Mead & Co., New York. 5×7½ in. 340 pages. $1.50.

An English novel of singular character and some promise. It follows the life of the daughter of an exile in London, and carries her around the "circle" of solitude, ambition, activity under trying conditions, and a voluntary return for a time at least to the shadows of obscurity. It has one or two improbabilities, and is sometimes keyed a little too high. A love motive runs through and governs the story.

English Language (The): An Introduction to the Principles which Govern its Right Use. By Frederick Manley and W. N. Hailmann. C. C. Birchard & Co., Boston. 5×7⅜ in. 447 pages. 75c.

Irrigation Institutions: A Discussion of the Economic and Legal Questions Created by the Growth of Irrigated Agriculture in the West. By Elwood Mead, C.E., M.S. The Macmillan Co., New York. 5×7½ in. 492 pages. $1.25, net.

Reserved for later notice.

Jonathan: A Tragedy. By Thomas Ewing, Jr. The Funk & Wagnalls Co., New York. 5×7½ in. 148 pages. $1.

The author has imbued himself with the Bible narrative and other portions of the Hebrew literature. He has, however, happily, not attempted to reproduce archaic diction. His style is at once natural and dignified. The dramatic movement centers, not about the exaltation of David, but about the tragic career of Jonathan. It is not unlikely that many who read this tragedy will find their interest in the Biblical narrative decidedly

quickened by seeing its human traits from this new point of view.

Lady of the Lake (The). By Sir Walter Scott. Edited by George Rice Carpenter. (Longmans' English Classics.) Longmans, Green & Co., New York. 5×7½ in. 191 pages. 75c.

Little Green God (The). By Caroline Atwater Mason. (Second Edition.) Fleming H. Revell Co., New York. 5×7½ in. 146 pages. 75c.

A satire on the religious fads that are sometimes cultivated by "society people," even by those within "church circles." It is the story of a missionary from India, who, on a visit to the United States, is "wounded in the house of his friends," and returns to the missionary field where to him life is simpler and kindlier. There is not one thrust in this book that is too severe. Its great defect, however, is its choice of types for characters. The missionary is too shabby; the daughter and wife of his clerical host are too frivolous.

Making of Our Middle Schools: An Account of the Development of Secondary Education in the United States. By Elmer Ellsworth Brown, Ph.D. Longmans, Green & Co., New York. 5×8¼ in. 547 pages. $3.

Both the special student and the general reader who is at all interested in what is commonly called high-school education will find this both an attractive and a valuable work. Treating his subject historically, Professor Brown recognizes three distinct periods: the first, identical with that of our colonial history; the second, extending from the Revolutionary to the Civil War; the third, from then till the present time. In the first the general type of secondary education was that of the old "grammar," or "Latin," school derived from English models; in the second the academy and in the third the high school are the representative type. In the treatment of the problems, old and new, which the expanding field of secondary education presents, the history of its gradual development here presented is a desirable illuminant of the onward way. The glimpses given of the colonial grammar schools, and of their successors the academies, are sufficiently anecdotical for the curious and instructive for the thoughtful reader. We have improved upon their methods, but whether we have improved upon their product in point of fitness for a career is more open to question. The influence that the growth of democracy has had on the development of our educational system is large, and is amply recognized in these pages. What the whole movement has led up to, and is pointing to, is considered in the closing chapters. The bibliographical notes appended to successive chapters, and the multifarious information embodied in the appendices, round out the subject completely.

Master of Warlock (The): A Virginia War Story. By George Cary Eggleston. Illustrated. The Lothrop Publishing Co., Boston. 5×7¾ in. 433 pages. $1.50.

Mr. Eggleston's latest story, like its immediate predecessor, has value as showing the Confederate side of the Civil War. Even to the reader who does not care much about history, the fact that every page bears evidence the writer's first-hand knowledge is of value. The tale is not only charming because of exact local color, but is also lifelike as to the character-drawing.

Murillo. By George C. Williamson, Litt.D. (Bell's Miniature Series of Painters.) The Macmillan Co., New York. 4×6¼ in. 67 pages. 50c.

Reserved for later notice.

Mystery of Sleep (The). By John Bigelow, LL.D. (Second Edition, Rewritten and Enlarged.) Harper & Bros., New York. 5×7½ in. 216 pages. $1.50.

A second edition, rewritten and enlarged, of Mr. Bigelow's very suggestive and thoughtful discussion of the significance of sleep.

Negro in Africa and America (The). By Joseph Alexander Tillinghast, M.A. (Publications of the American Economic Association.) Published for the Society by the Macmillan Co., New York. 6×9½ in. 231 pages. $1.25.

A valuable pessimistic monograph. The author apparently does not believe that religion or education or political rights can lift American negroes above the level of the lowest whites, although among whites these forces have lifted to the very highest level of civilization families and races once as despised as the negroes. Negroes are to him a race apart, and he does not compare their achievements with those of whites having the poorest environment, but with the general achievements of our race, which also stands as a thing apart, as if all its members sustained its standards. For this reason his figures as to negro crime are utterly misleading, and his figures as to negro industrial progress are, if possible, worse. Indeed, he denies negro industrial progress since the overthrow of slavery, which institution, however, he somewhat inconsistently condemns as an anachronism. Nevertheless, despite the limitations due to want of human sympathy with the race investigated, the volume is a valuable contribution to the literature of the negro problem. Its spirit is scientific, and the facts which it presents, though partial, are true and significant, and ought to be known to the friends of the negro race, as they are already known to those who would abridge its rights.

New Boy at Dale (The). By Charles Edward Rich. Illustrated. Harper & Bros., New York. 4¾×7½ in. 294 pages. $1.25, net.

The story of a boy stolen from home who gets into circus life, then goes to school, has boyish sorrows and joys and exciting adventures, becomes an athlete, and finally takes part in an exciting boat race. There is vivacity in the telling. Few more interesting boys' books are published.

Notre Dame de Paris: A Short History and Description of the Cathedral. By Charles Hiatt. Illustrated. The Macmillan Co., New York. 5×7½ in. 107 pages. $1.

Mr. Charles Hiatt, who has already written interestingly and instructively of Westminster, Chester, and Beverley, has now published a capital account of Notre Dame at Paris. The work is commendable from every point of view; the architect and the student of architecture will find suggestion in it, and the stranger in Paris will gain from it what he cannot find in the ordinary guide-book. Lastly, the lover of Victor Hugo's "Notre Dame de

Paris" ought to have Mr. Hiatt's volume at hand during the next reading of what many consider Hugo's masterpiece. For, with Manzoni's "Promessi Sposi" and Scott's "Quentin Durward" and Thackeray's "Henry Esmond," the "Notre Dame de Paris" of Victor Hugo is a book which should be read and read and read again, even to the exclusion of present-day production of so-called historical novels.

Personal Reminiscences of Prince Bismarck. By Sidney Whitman. D. Appleton & Co., New York. 5×8½ in. 346 pages. $1.60, net. (Postage additional.)

To his "Imperial Germany," "Teuton Studies," "The Realm of the Hapsburgs," and "The King of Rumania," Mr. Sidney Whitman now adds a book which in appeal to all who are interested in the personal rather than in the political may find a greater welcome than that which has attended the publication of the other works. Mr. Whitman was one of the few persons who had frequent access to Prince Bismarck and who knew him well. This Boswell-like description of the Iron Chancellor, therefore, bears on every page the mark of first-hand knowledge. This is emphasized by the Introduction, which fits the reader to understand Mr. Whitman's train of thought and his standpoint as compared with the thought and standpoints of others who have written appreciations of the Iron Chancellor. It will take more than this book, however, completely to convince Americans that the Bismarckian ideal of politics was the loftiest. No matter how Titanic Bismarck's genius for centralization and organization, there was still in his character a latent element of uncouthness and boorishness. Compared with such statesmen and contemporaries as Gladstone, for instance, we seem somehow let down from the spiritual to the material. Yet, as we also learn from Mr. Whitman's pages (and as other biographers—Mr. Stearns, Mr. Jacks, Herr Busch, and M. Andler, for instance—have already shown), the task which Bismarck had to do needed a rough-and-ready "boss." Present-day tasks do not need so much roughness, although they need more readiness. That they are being accomplished, in some respects better than the old Chancellor would have accomplished them, cannot be doubted by those who have admired the notably strong actions of Chancellors Caprivi, Hohenlohe, and Bülow. If Bismarck laid only a rough foundation for the great German Empire which he unified, he did at least lay the foundations strong, so that they cannot be moved. His was not a builder's hand for the superstructure.

Pride of Tellfair (The). By Elmore Elliott Peake. Harper & Bros., New York. 5×7½ in. 400 pages. $1.50.

While there is a good deal that is rather trivial and crude here, while the construction is inchoate and the writing often careless, it remains true that the author gets very close to the people he is portraying; the characters are live human beings with real fun in them, people who seem natural because they have little faults and inconsistencies and attractions, as well as more serious qualities. There are many amusing side incidents and minor characters—the grumpy old squire and the jovial oldest inhabitant, for instance. The "hero" ("leading young man" would be a better phrase) is a shrewd, able, persuasive young country lawyer, and the "heroine" is a charming and sweet girl. The total result is a photographic picture of a typical small town of the Middle States, its oddities, amusements, gossip, and love affairs.

Report of the Librarian of Congress for the Fiscal Year ending June 30, 1902. The Government Printing-Office, Washington, D. C. 6×10 in. 229 pages.

Romance of Cinderella (The). Done in Rhyme by Ella N. Boult. Illustrated. R. H. Russell, New York. 6½×10 in. 146 pages.

This volume should find its place among the lavishly illustrated and superbly bound books for children, and yet there is in text and illustration a great deal which will appeal to the reader of larger growth. Both text and illustration are abundantly worthy of the publisher's superb setting.

San Francisco and Thereabout. By Charles Keeler. Illustrated. The California Promotion Committee, San Francisco. 6×9¼ in. 97 pages.

Short History and Description of the Church and Abbey of Mont S. Michel. By H. J. L. J. Massé, M.A. Illustrated. (Bell's Handbooks to Continental Churches.) The Macmillan Co., New York. 5×7½ in. 138 pages. $1.

This is the latest addition to Bell's "Handbooks to Continental Churches," and is the history and description of the Church and Abbey of Mont St. Michel, with a brief account of the town. The history is condensed, and the book is generously supplied with admirable illustrations.

Sir John Everett Millais. By A. L. Baldry. (Bell's Miniature Series of Painters.) The Macmillan Co., New York. 4×6¼ in. 64 pages. 50c.

Reserved for later notice.

Thirsting for the Springs. By J. H. Jowett, M.A. A. C. Armstrong & Son, New York. 4½×7½ in. 208 pages.

The Outlook has had occasion to speak warmly of the preceding volumes which have introduced Mr. Jowett to American readers. The present volume includes two dozen sermonettes, originally published in the "Examiner," on themes of every-day religion, devotional and practical, and here collected in response to many requests for their republication. The pulpit of Carrs Lane, Birmingham, has been filled for a century by men of power. These short sermons exhibit the qualities by which Mr. Jowett, the successor of the late Dr. Dale, maintains its attractiveness and influence unimpaired.

Watteau and His School. By Edgcumbe Staley, B A. The Macmillan Co., New York. 5×8 in. 160 pages. $1.75.

Reserved for later notice.

Works of Jane Austen (The). Hampshire Edition. In 5 vols. G. P. Putnam's Sons, New York. 4×6¾ in. $5.

An altogether desirable and pleasing small volume edition.

Correspondence

Gifts to Institutions

To the Editors of The Outlook:

The Outlook remarks anent the recent discussion of "Tainted Money" in its pages that "it apparently leaves President Bascom alone in his contention that trustees of benevolent institutions are to sit in judgment on the moral character of the transactions by which the money has been made which is offered to them for public use." You do not wish to devote more space to this discussion; but will you permit me to say how emphatically I indorse President Bascom's words, to express the opinion that were a free and full discussion possible, he would be found to be one of a great company, and to add that were this not true the future of the American church and college would, in my judgment, be black indeed. May I also say that I can find no such condemnation of President Bascom's position and indorsement of your own in President Pritchett's letter as your comment upon that letter implies. Surely President Pritchett does not mean to say that if Tweed, in the case supposed of the gift of a million dollars to Columbia for a school of politics, had said nothing about the school bearing his name, it would have been right to take it. His point, as I understand it, is that, while an institution cannot trace back each gift to its origin, and while the dishonestly earned million from a repentant sinner should certainly be accepted, the million from a notorious sinner still in the midst of his sinning cannot be accepted at all by an institution which would maintain moral leadership. That there may not be confusion left in this matter, the seriousness of which The Outlook surely recognizes as clearly as I and others do, will you kindly inform your readers whether we are correct in understanding you to hold that it would have been right for Columbia College to permit Tweed in the heyday of his career to found its school of politics, provided it did not bear his name, and that it would be decent for Delaware to-day similarly to accept from Mr. Addicks, whose "holding of a State" Mr. Kennan chances at moment to be exposing in your pages, a million dollars for a new school of politics or religion at Wilmington?

EDWIN D. MEAD.

Boston, February 7.

[We cannot better answer this question than by repeating the statement in our original editorial "If there is a reasonable suspicion that conditions exist in the mind of the donor which are not expressed, there may be occasions on which it would be legitimate for the board of trustees to avoid misunderstanding by some explicit statement." In the two cases to which our correspondent refers, it might be very proper for the trustees explicitly to declare to the donor their condemnation of his character and course, and, if he was still willing that the gift should stand, with this public condemnation coming from them, we see no reason why the money should not be taken and devoted to beneficent purposes. The objection to the doctrine that a board of trustees may constitute itself a counsel, prosecuting attorney, judge, and jury, and try, convict, and condemn a donor of money without a hearing, and punish him for his real or supposed offense by refusing to accept his gift, is clearly and well put by the "Evening Post" in the following paragraph: "If a college should refuse to accept their surplus wealth, an honest man should decline to buy their products, a Christian should scorn to receive their pay, a conscientious investor should see that no securities tainted by their management shall enter his strong box. In fine, no taint attaches to the beneficence of a wealthy ill-doer which does not infect all his other activities. The college president who accepts an endowment from him is technically no more *particeps criminis* than the clerk who draws his pay from him."—THE EDITORS.]

A Statesman's Valedictory

To the Editors of The Outlook:

At this time, when the unscrupulous portion of the press is endeavoring to embitter popular feeling against Germany, the farewell address of Ambassador White at the banquet tendered to him by the German-American Society in Berlin, last November, is not only wholesome but

desirable reading. In this address Dr. White made an extended review of German-American relations in education and politics, in peace and in war. One passage must be quoted here: "When some of my fellow-citizens have endeavored in these latter days to reproach Germany with anti-American feeling in a more recent military struggle between our country and another power, I have reminded them that this more recent estrangement is infinitely outweighed by the fact that, in that life-and-death struggle for the very existence of our Nation, Germany was the only great country in which all classes, from first to last, stood by us through evil report and good report."

This address, wisely quenching the coals of strife, deserves to be read throughout the land. The "Yale Alumni Weekly," New Haven, Conn., is, so far as I am aware, the only journal that has published it in full—some nine columns. It is given in the "Weekly" for January 14, and can be procured for ten cents.

W.

Country Schools

To the Editors of The Outlook:

Mr. Matson says (in The Outlook for December 27 last), "The methods used in the average country school are much the same as they were two or three decades ago." The rural school teachers know this to be a misstatement, an honest one, no doubt. The day has passed when the country school was "let out" to any little girl of fifteen who "stood high" in her class, provided she would run the school for the least money. To-day nearly all rural schools have college, normal, or training school graduates for teachers; these graduates, trained in the latest educational thought, are not likely to go backward, and to look up, at great cost, the grandmother methods.

Then, they are too independent to be tied to any precedent, and too well supervised not to go straight on toward the newest—a walk which their inclination usually approves. Western Massachusetts has made a special way to place her small schools in line with the large town schools, by offering to teachers of the former two dollars per week extra wages, the one condition being that the towns thus favored shall employ only well-graduated and naturally well-equipped teachers.

Throughout New England several small schools unite in choosing a superintendent in common for their twenty-five or thirty schools. At intervals of three weeks or less each school receives an official visit. The superintendent, often a former grammar or high school teacher, is alive, and he imparts life to the children in his charge; his teachers are required to fill in, from their own mental resources, a well-defined outline of study; if they fail in this, they are dismissed from the service.

In towns where there are both the one-grade and the multigrade schools the same course of study is strictly followed by the two classes of schools, so that a pupil studying in the fifth grade in his school, numbering eight, could step on any day into the fifth grammar grade of a town school.

We quote from authority: "The education of the children in the small rural schools is as carefully considered, the standards of work are as fixed, the supervision as thorough, the results as good, as in the grade schools of our large towns and cities."

A. C. S.

For the Boys

To the Editors of The Outlook:

The rallying-point of all the boys' clubs of one New York neighborhood is found in the block on East One Hundred and Fifteenth Street between First and Pleasant Avenues. Congregated in back rooms and in cellars, mostly under saloons, clubs of from twenty-five to thirty boys pass the evenings playing a few games, making some speeches, and doing a great deal in the way of boxing and amateur prize-rings.

The Home Garden recently purchased the house at 419 East One Hundred and Fifteenth Street, in the midst of this community of clubs. It was soon whispered abroad that there were games and warm, well-lighted rooms inside, and as a consequence many eyes were turned towards the comfortable-looking little red brick house.

Already many of the boys come in the afternoon to play games and read, and it only awaits volunteer workers or money to pay regular workers for the evenings to see a wholesale desertion of cellars and back rooms; for, as one boy expressed it,

"the clubs don't last long, for somebody swipes the money; then the club busts."

The managers of the Home Garden recently held their second anniversary, and all were enthusiastic over the progress of the work which had such small beginnings.

The Play-school is supported entirely by voluntary contributions, and stands in need of financial help in carrying on the work. All communications may be addressed to the Superintendent, Miss Anna C. Ruddy, The Home Garden, 419 East 115th Street, New York.

The Child and the Bible

A correspondent writes: "I am reading the Bible to a girl of twelve years. How can I explain the attitude of the Lord toward his chosen people, the Jews, in the first two books of the Old Testament? I do not believe the Lord gave such personal instructions as is assumed, or that he favored inhuman measures of any kind. I do not like the child to get the idea that these things really occurred, but I am at a loss how to satisfactorily explain it myself."

We counsel the utmost frankness. It is certainly not right to give children certain ideas of truth which they will in after years learn are false. On the other hand, there is almost equal danger in trying to deal with the mind of a child as if it were the mind of an adult. The questionings that come to you are not the questionings that come to a child; and till that questioning spirit arises, it is not well to arouse it. As soon, however, as the child begins to question whether really God did command certain cruel things to be done, the child ought to be treated with the same fairness with which you would treat yourself. Thus, for instance, the naïve belief in fairies and in sprites, which is so characteristic of young children, is something which we would not on any account drive out of them; but when the time comes in the child's life for that belief gradually to be dissipated, it belongs to the parent to see that true conceptions—conceptions in accordance with actual facts—are put in the place of such belief. So it is with regard to the Bible. It may be added, care should be taken that in this process too much emphasis be not placed upon the negative side, and greater attention, for that reason, should be given to the moral and spiritual teachings which underlie even those stories which repel us the most.

Fighting Tuberculosis

The New York City Charity Organization Society's Committee on the Prevention of Tuberculosis now has one hundred families in charge, in each of which there are one or more victims of the disease. Among these there are not less than twenty for whom care in sanatoria or board in private families in the country is regarded by their physicians as absolutely essential. All of the sanatoria are filled to overflowing, and most have waiting lists. The Committee is therefore obliged to accept the alternative of boarding these patients, who are in the early stages of the disease, in suitable private boarding-houses. There has been much difficulty in finding boarding-places in which a suitable and sufficient diet can be assured. For the remaining patients, who cannot be removed from their homes, special diet and other forms of relief are required in an amount which cannot easily be supplied from existing relief agencies.

Under these circumstances the Committee asks for an immediate special fund of five thousand dollars for the special relief of cases under its care. It is desired to rent, in a suitable location, a farm-house, and to equip and maintain a modest boarding-house, in which accommodations can be provided, under medical supervision, for from twelve to fifteen young women, whose removal from their present unfavorable surroundings is most imperative. A portion of this sum should also be available for paying board, pending the completion of the plan above suggested, and the remainder for relief of those who must remain at home.

For the expense of its general work the Committee last summer appealed for ten thousand dollars, in response to which appeal eight thousand dollars have been received. The remaining two thousand asked for will barely be sufficient to carry through the current year the important work which the Committee has undertaken. The Secretary of the Committee is Mr. Charles M. Johnson. Contributions may be sent to him at 104 West Twenty-second Street, New York.

BUFFALO LITHIA WATER

Offered to the Public Upon its Record of Results Accomplished. Nothing Save an Actual Test can be more Satisfactory to the Patient than the Testimony of Eminent Medical Men who have Repeatedly Tested its Merits in Bright's Disease, Albuminuria, Renal Calculi, Inflammation of the Bladder, Gout, Rheumatism, and Uric Acid Troubles.

Dr. Roberts Bartholow, *former Professor Materia Medica and General Therapeutics in Jefferson Medical College, Philadelphia, and author of "Bartholow's Materia Medica and Therapeutics" and other well-known medical works, says:* **"It is used with great advantage in Gouty, Rheumatic, and Renal Affections."**

Dr. G. A. Foote, *of Warrenton, N. C., ex-President Medical Society of North Carolina, formerly Member of the State Board of Medical Examiners, and also of the State Board of Health.* After reporting remarkable relief obtained from the use of this water in a case of **CHRONIC BRIGHT'S DISEASE** in his own person, Dr. Foote says: "From this experience in my own case, and observation of its action in similar cases in patients for whom I have prescribed the water, I have no hesitancy in expressing the opinion that **BUFFALO LITHIA WATER** is the **most powerful of known remedies in this distressing malady** so difficult of treatment."

Geo. Halsted Boyland, A.M., M.D., *of Paris, Doctor of Medicine of the Faculty of Paris,* says: **"There is NO REMEDY SO ABSOLUTELY SPECIFIC IN ALL FORMS OF ALBUMINURIA** and **BRIGHT'S DISEASE,** whether **acute** or **chronic,** as **BUFFALO LITHIA WATER** Spring **No. 2,** accompanied by a milk diet. In all cases of **Pregnancy** where **Albumin** is found in the urine as late as the last week before confinement, **if this water and a milk diet is prescribed, the Albumin disappears rapidly from the urine** and **the patient has a positive guarantee against Puerperal Convulsions. Used as a substitute for ordinary water during the period of Gestation it will be found invaluable as a preventive of Puerperal Convulsions** and other **disturbances** incident to this condition."

Voluminous medical testimony of the highest order showing the value of this water in the other diseases mentioned mailed to any address.

BUFFALO LITHIA WATER is for sale by dealers generally.

PROPRIETOR, BUFFALO LITHIA SPRINGS, VA.

RHEUMATISM

Tartarlithine

has been used in the treatment of Rheumatism with results that are little less than wonderful. An improvement is noticeable within twenty-four hours. It does not upset the stomach.

Prescribed and endorsed by the leading physicians of the country.

Ask your Doctor about it

Free Sample and our booklet on the cure of Rheumatism sent on request.

Royal Baking Powder

Makes The Food More Healthful

Royal Baking Powder possesses peculiar qualities not found in other leavening agents, which arise from the superior fitness, purity and healthfulness of its ingredients.

Royal Baking Powder leavens the food perfectly by its own inherent power without changing or impairing any of the elements of the flour.

Thus the hot-breads, hot-rolls and muffins, and the delicious hot griddle-cakes raised by the Royal Baking Powder are wholesome and digestible, and may be eaten without distress, even by persons of delicate digestion.

Alum baking powders are low priced, as alum costs but two cents a pound; but alum is a corrosive poison and it renders the baking powder dangerous to use in food.

BOOKS OF THE WEEK 590
CORRESPONDENCE 595

The Outlook is a Weekly Newspaper and an Illustrated Monthly Magazine in one. It is published every Saturday—fifty-two issues a year. The first issue in each month is an Illustrated Magazine Number, containing about twice as many pages as the regular weekly issue, and many pictures.

Price.—The subscription price is Three Dollars a year, payable in advance. Ten cents a copy.

Postage is Prepaid by the publishers for all subscriptions in the United States, Hawaiian Islands, Philippine Islands, Guam, Porto Rico, Tutuila Samoa, Canada, and Mexico. For all other countries in the Postal Union add $1.56 for postage.

Change of Address.—When a change of address is ordered, both the new and the old address must be given. The notice should be sent one week before the change is to take effect.

Discontinuances.—If a subscriber wishes his copy of the paper discontinued at the expiration of his subscription, notice to that effect should be sent. Otherwise it is assumed that a continuance of the subscription is desired.

How to Remit.—Remittances should be sent by Draft on New York, Express-Order, or Money-Order, payable to order of THE OUTLOOK COMPANY. Cash should be sent in Registered Letter.

Letters should be addressed:

THE OUTLOOK COMPANY

287 Fourth Avenue, New York

Copyright, 1903, by The Outlook Company. Entered as second-class matter in the New York Post-Office.

SOME have only themselves to keep clean, but the housekeeper has many and varied tasks of cleanliness. It is not, however, now necessary that she should have for these, several kinds of soap each fitted to clean only one thing. Ivory Soap is pure, and because of its purity it is at all times the soap to select when soap is needed. It drives away dirt with all its unpleasant consequences, and your confidence is increased every time you put it to a hard test.

IT FLOATS.

The Outlook

Vacation Experiences: Announcement of Prizes

The Editors of The Outlook have been very much gratified at the interest shown in the Prize Competition for the best account of vacation experiences written by subscribers or members of their families, and illustrated with original photographs, drawings, or sketches. Omitting a few articles which did not comply with the conditions of the contest as announced, there were received altogether one hundred and eighty articles. Manuscripts came from India, Persia, Germany, France, England, Hawaii, the Philippines, and Canada, and from nearly all the States and Territories of the United States. In deciding upon those which seemed most worthy of the prizes there was, naturally, some hesitation because of the necessity of judging upon the merits of both articles and pictures. In not a few cases pictures of very high merit accompanied distinctly inferior articles, and vice versa. The names of competitors were not known to the Committee. By the final decision reached, the First Prize of One Hundred Dollars is awarded to Miss Jane B. Reid, 227 East 18th Street, New York, for the article entitled "A Sketcher's Vacation in Shottery;" the Second Prize of Seventy-five Dollars is awarded to Mr. Isaac Ogden Rankin, Peekskill, N. Y., for the article entitled "The Lure of the Sea;" and the Third Prize of Fifty Dollars to Miss Vida D. Scudder, 350 Otis Street, West Newton, Mass., for the article entitled "Footprints of St. Francis."

The Committee also name as worthy of honorary mention, for the merits either of the article or the pictures, or both, those sent in by Mr. Norton Adams Kent, Yerkes Observatory, Williams Bay, Wis.; Mr. Willis Bardwell, 60 Cambridge Place, Brooklyn, N. Y.; Mrs. T. E. Stutson, Fountain Street, West Newton, Mass.; and Mr. Cullen Bryant Snell, 24 Chadwick Street, Bradford, Mass.

The President and the South

With the directness and frankness in meeting criticism which have always characterized him, President Roosevelt has written a letter to the editor of the "Atlanta Constitution," Mr. Clay Howell, in which the President's position in regard to Federal appointments of negroes in the South is fully stated. The position taken is that ascribed to him a few weeks ago in The Outlook, in an editorial entitled "The President and the South." Mr. Roosevelt declares that in making appointments he has always sought to consider the feelings of the people of each territory, so far as he could consistently do so without sacrificing liberty:

> The prime tests I have applied have been those of character, fitness, and ability, and when I have been dissatisfied with what has been offered me in my own party lines I have without hesitation gone to the opposite party.

And he adds:

> I certainly cannot treat mere color as a bar to holding office, any more than I could so treat creed or birthplace—always providing that in other respects the applicant or incumbent is a worthy and well-behaved American citizen. Just as little will I treat it as conferring a right to hold office.

Mr. Roosevelt emphatically denies that the recent appointments in Charleston and Savannah, or his action in upholding the law at Indianola, have anything whatever to do with such questions as the social equality of the negro, or "negro domination." As was shown in the editorial to which we have referred, Mr. Roosevelt has appointed white office-holders to succeed colored office-holders quite as often as he has done the reverse, and the number of his appointments of colored men is less than that under the administration of Mr. McKinley. In fact, as he tells us now, the proportion of colored men among the new appointees is only about one in a hundred. It is not surprising, in view of these facts, that the President declares himself to be surprised and somewhat pained at what seems to him the "incomprehensible outcry in the South about my actions," but he shows very plainly that his course in this method has been dictated throughout by what seem to him essential principles of justice, and he declares that he does not propose to swerve one hair's-breadth from this course in the future. We do not see how he can, if he is to be consistent with the essential principles of justice, with the repeatedly affirmed declarations of the Republican party, and with his own essential character and lifelong course.

The Statehood Bill Sidetracked

The Omnibus Statehood Bill was definitely defeated last week. While the bill commanded a numerical majority of the Senate, the opposition to it was more insistent than its support, and more ready to assume the responsibility of an extra session by keeping the bill before the Senate to the exclusion of other measures. Party discipline also aided the opposition. Nearly two-thirds of the present Senate is Republican, and the Republican party is manifestly responsible for legislation. The fact that about two-thirds of the Republican Senators opposed the Statehood Bill, therefore, made the Republican minority favoring it anxious to reach a compromise with their party colleagues. Such a compromise was reached last week. By its terms the Republican Senators at the next session of Congress are to bring in and pass a bill for the admission of two States instead of three—Arizona and New Mexico being joined together in a single State until the section now known as Arizona has a population of three hundred thousand and the people of both sections assent to division. To the Democrats this compromise was unacceptable for party reasons, as the present overwhelming Republican majority in New Mexico would overcome the small Democratic majority in Arizona and make the new State Republican. They also urged that the proposed single State would be of unwieldy size—joining districts as remote from each other as Maine and Indiana—and that the union of the two Territories was unsatisfactory to the people now resident in them. This Democratic opposition, of course, made impossible the immediate passage of the compromise Statehood Bill, and Senator Quay stood ready to pass his original measure as a rider on one of the appropriation bills. The Democratic Senators, however, after some consultation, decided not to lend their support to this objectionable method of securing legislation. On Saturday of last week three Democratic

Senators—Bacon, Martin, and Tillman—voted with thirty-nine Republicans to set aside the Statehood Bill in favor of the Aldrich Currency Bill. Only Senator Quay and seventeen Democrats voted against this disposition of the measure.

❁

The Currency Bills The Aldrich Currency Bill is thus given the right of way in the Senate. It may add in the neighborhood of one hundred million dollars to the currency of the country. This bill, it will be recalled, allows the National banks, with which Government money is deposited, to secure these deposits by means of State, county, city, and railroad bonds. By the present law the banks receiving these deposits must give Government bonds as security, and at the present time one hundred and twenty-five millions of Government bonds are now in the Treasury as security for these deposits. By allowing the banks to substitute other bonds they may use their Government bonds as the basis for issuing an additional one hundred and twenty-five millions of bank notes. The fact that the Aldrich bill requires the banks receiving Government deposits hereafter to pay one and one-half per cent. interest upon them, instead of receiving them without interest as at present, makes the bill exceptionally satisfactory to the Democrats—though Senator Bailey, of Texas, has broken with his party colleagues by championing the request of the bankers in various sections that no interest be required of them. The chief objection urged against the Aldrich bill is that it permits railroad bonds, as well as public bonds, to be used to secure deposits, and excludes the public bonds of new counties and small cities from such use. In the House of Representatives Chairman Fowler, of the Committee on Banking and Currency, has amended his bill so as to permit National banks to receive public deposits up to seventy-five per cent. of their capital without giving any security, and he would require the banks henceforth to pay two per cent. interest on their Government deposits. It is not likely, however, that his bill can be accepted, as the Republicans are not united for it and the Democrats will fight relentlessly against his original and main proposal to allow banks to issue currency based on their assets and unsecured by Government bonds. In this opposition The Outlook heartily agrees. No supposed advantage from a larger or a more flexible currency can countervail the disadvantages of a currency less secure, in all times of panic as well as of prosperity, than our present currency. The Aldrich bill provides for a great expansion of the currency without altering the basis of issue. All of our currency will still be guaranteed by the Government.

❁

Legislation Impeded in Both Houses Hardly was the Statehood Bill out of the way in the Senate before legislation was obstructed by a party wrangle in the House. The occasion of the House dispute was the attempt of the Republican majority to unseat in the last fortnight of the session a Democratic member from St. Louis, Mo., who had a majority of over three thousand votes on the face of the returns. Although there were evidences of corruption sufficient to vitiate the whole election, the Democrats denounced the attempt to seat the contesting Republican at the close of the session as a deliberate "theft" of ten thousand dollars from the public treasury, and left the chamber so as to break up a quorum. Undeterred by these tactics, the Republicans seated their man, apparently going somewhat further than Speaker Reed in their methods of counting a quorum. The Democrats thereupon began to carry out their threat to filibuster against further legislation if their member was unseated, and proceeded to make every dilatory motion permissible under the House rules. These, however, as a natural consequence, were further amended so as to enable the majority to do business, and the net outcome seems to be a further diminution of the already attenuated privileges of the minority in the House. The prospects, as we go to press, are that the appropriation bills will pass both houses of Congress at this session, and also the Immigration Restriction Bill, but little other legislation is probable. Even the Immigration Bill has been rendered practically worthless by the insistence of Senator Elkins and a few others that the educational test be dropped. Senator

Fairbanks, of Indiana, openly asserted that Senator Elkins's obstruction was due to his determination to get cheap labor of whatever quality for the mines and railroads of his State. The hope of passing the Panama Canal Treaty at this session is practically dead, as Senator Morgan is willing to take the responsibility of defeating it, and Senator Rawlins, of Utah, and Dubois, of Idaho, who are openly opposed to the construction of any canal to divert traffic from their States, are supporting him in prolonging the debate. The probabilities are that President Roosevelt will call an extra session of the Senate immediately upon the adjournment of Congress, to secure action upon both the Panama and Cuban treaties.

❀

The Anti-Lottery Decision

The Sepreme Court of the United States has decided that Congress has a right under the Constitution to prohibit the carriage of lottery tickets by express companies from one State to another. Congress first prohibited the use of the mails for this purpose. Then the express companies were used, and the lottery tickets continued to be sold and sent throughout the Union. Then Congress enacted a law prohibiting all sending of lottery tickets from one State to another. A Mr. Champion was in Chicago, representing what was known as the Pan-American Lottery of Paraguay. He was arrested on the charge of delivering a box of lottery tickets to the Wells-Fargo Express Company in Texas for shipment to California. He was arrested in Chicago to be taken to Texas, but sued out a writ of habeas corpus, which the Federal Circuit Court sitting in Chicago refused to grant. He appealed from that decision to the Supreme Court, and it is this appeal which has now been decided adversely to him. The case has been three times argued before the Court, the lottery and express companies being represented by ex-Senator George F. Edmunds, ex-Secretary John G. Carlisle, James C. Carter, and William D. Guthrie, of the New York bar. Assistant Attorney-General James M. Beck represented the Government. It cannot, therefore, be doubted that the question has been very thoroughly considered. It is conceded that under the Constitution Congress has no police power to prohibit lotteries in the States; the question was whether, under the clause of the Constitution giving Congress power over inter-State commerce, it had a right to prohibit such commerce in lottery tickets. The Court decided, by a vote of five to four, that it had such power. The opinion of the Court was presented by Mr. Justice Harlan; the dissenting opinion by Chief Justice Fuller.

❀

The Significance of This Decision

The direct importance of this decision is very considerable. It puts an end, probably forever, to all general lottery business, though it still leaves open the door to quasi-lotteries, such as gift enterprises and guessing contests. Its indirect importance is possibly even greater. It is thought in certain circles to sustain the contention of Attorney-General Knox that Congress can prohibit commerce in all trust-made articles, and can thus indirectly strike at monopolies which it cannot directly prohibit. No doubt it gives a basis of hope for such a decision to those who agree with Attorney-General Knox; but this is all that can be said. A decision of a court decides nothing beyond the principle *necessarily* involved in the case before the court. The line which divides the decision of a court from the opinion of the judge or judges delivering the decision has been thus defined by the Supreme Court itself: "It is a maxim not to be disregarded that general expressions in every opinion are to be taken in connection with the case in which those expressions are used. If they go beyond the case, they may be respected, but ought not to control the judgment in a subsequent case when the very point is presented." In this case the Court does not decide that Congress may determine, without qualification, for what purposes the instruments of inter-State commerce may be used; it simply decides that it may prohibit their use for purposes which it regards as immoral. The point decided is thus clearly and definitely stated by Mr. Justice Harlan:

> The whole subject is too important, and the questions suggested by its consideration are too difficult of solution, to justify any attempt

to lay down a rule for determining in advance the validity of every statute that may be enacted under the commerce clause. We decide nothing more in the present case than that lottery tickets are subjects of traffic among those who choose to sell or buy them; that the carriage of such tickets by independent carriers from one State to another is, therefore, inter-State commerce; that under its power to regulate commerce among the several States, Congress—subject to the limitations imposed by the Constitution upon the exercise of the powers granted—has plenary authority over such commerce, and may prohibit the carriage of such tickets from State to State; that legislation to that end and of that character is not inconsistent with any limitation or restriction imposed upon the exercise of the powers granted to Congress.

All, therefore, that can be said is that the decision looks in the direction of very large powers of Congress over the subject of inter-State commerce. It indicates a probability that the Supreme Court will decide, whenever the question is presented, that Congress may prohibit the use of inter-State commerce for any articles so controlled that the conditions of their sale are oppressive and work injustice to the people; but this has not been so decided as yet.

❀

Municipal Railways in G eat Britain

The National Convention on Municipal Ownership held in New York City last week under the auspices of the Reform Club had a good deal of the character of a national convention for municipal ownership. This was no part of the plan of the meeting, which provided for the bi-partisan discussion of each phase of municipal business activity under consideration; it was due to the fact that the audience which gathered and those speakers who were not definitely secured to oppose municipal ownership were remarkably favorable to its extension. At the first day's sessions the most interesting discussion was that upon the public ownership of street railways. The affirmative side of this question was presented by Mr. Charles R. Bellamy, the General Manager of the Municipal Street Railways of Liverpool, who had come to this country to attend the conference. In his introduction Mr. Bellamy said that the criticisms of English municipal enterprise came chiefly from Americans. In Liverpool, he said, results had demonstrated the wisdom of the change from the private to the public ownership of street railways. It had taken place in 1897, because of public dissatisfaction with the private company, whose lease had still several years to run. The city was compelled to pay nearly three million dollars for the horse traction plant, which it discarded, and it provided a new electric plant with a much greater mileage for six million dollars additional. It reduced fares nearly one-half—making the rate two cents within the old city and four cents if the ride extended to the suburbs. It increased the pay of the workmen, giving them a ten-hour day instead of a thirteen-hour day. The gain to the employees last year through the changes made in their favor was $200,000; the gain to the traveling public through lower fares was $1,600,000; and yet, despite these concessions, the municipal railway had gross profits equal to $855,000, or nine and one-half per cent. on the total investment. This not only provided for interest payments and sinking fund payments sufficient to extinguish the debt in twenty-five years, but left a balance of over $300,000, which was in part set aside as a general reserve fund and in part used to the relief of local taxes. This paper read by Mr. Bellamy was followed by one forwarded by Mr. Charles T. Yerkes, of Chicago, declaring municipal transportation a failure in England and urging in general terms that it was "ridiculous to think that a municipality could run a railroad economically or wisely," because the people as a whole know nothing about railroads. The argument was not suited to the temper of the audience, which evidently believed that in the management of public franchises, as well as of other public affairs, the people could select agents capable of rendering satisfactory service.

❀

Municipal Railways in Amcrica

In America the municipal operation of street railroads has had no important trial—except the highly successful one in connection with the Brooklyn Bridge—but municipal ownership is now on trial in the new subway system of New York, which is merely leased to the constructing and operating company. Mr. Edward M. Shepard, of the New York Rapid Transit Commission, gave the Con-

vention a most interesting account of the history of the leasing of the New York and Brooklyn routes. The New York statute, he recalled, forbade the city to furnish the money for the construction of the system unless a responsible private company would lease the roads for fifty years at a rental sufficient to pay the interest on the bonds issued and pay off their principal by the end of the term. When the Commission, he said, went to Mr. Vanderbilt, Mr. Whitney, Mr. Gould, and Mr. Clark (the President of the New Haven road), all of these railroad experts treated with the utmost contempt the suggestion that the subway could be made financially profitable. It was a distinct public triumph, therefore, when the Commission found a responsible contractor willing to accept the terms required by the statute. Yet so great has been the advance in the prestige of rapid transit enterprises during the past few years that when the Commission wished to construct the Brooklyn route, a responsible bidder was willing to do the work for less than one-fourth of the engineer's estimate in order to get a lease limited to thirty-five years. Mr. Shepard believed that in future contracts the term of the lease could be reduced ten or fifteen years more and still find acceptance by responsible contractors who would pay the interest on the bonds and hand the road over to the city free of debt at the end of the lease.

❀

Other Municipal Enterprises

After municipal transportation, municipal lighting was discussed, and this discussion brought out the statement of President Ingram, of the Detroit Electric Lighting Commission, that the initial success of the municipal plant had been exceeded with each succeeding year. Last year the average cost per street light (including a liberal estimate for loss of taxes through city ownership) was only $64, as against $132 in 1897 under the last contract with a private company. In the discussion of municipal telephones, Mr. Bethell, the General Manager of the Bell system in New York City, made a convincing statement as to the general superiority of privately owned telephone systems in America to the publicly owned systems of Europe, but Professor Parsons put in an equally conclusive way the general superiority of the publicly owned systems abroad to the privately owned systems abroad. As to this country, Professor Parsons's figures to show the possibilities of municipal ownership were based upon the remarkably low rates established in Rochester, N. Y., and many Western cities by companies competing with the Bell system. The one field in which there was no argument for private ownership was that of water supply. In some respects the most remarkable paper of the Convention was that of ex-President Hill, of the American Water Works Association, describing the recent substitution of a public system for a private system in Syracuse, N. Y., and the lower water rates, lower insurance rates, and lower death rates which have followed. Ex-President Hill's paper was the best answer given to the conservative aphorism of Mr. August Lewis, near the opening of the Convention, that if American municipalities would be "faithful over a few things," he was willing to make them "ruler over many things."

❀

Law Enforcement in West Virginia

The most serious of recent strike riots took place last week in the New River coal mining district of West Virginia. The strike in the district had practically failed, but the new men were the subjects of intimidation on the part of the strikers whose places they had taken. Saturday before last a Federal marshal who attempted to serve a blanket injunction against the strikers was ordered out of the district by armed miners, and the county sheriff, who attempted to make arrests for violations of State law, was treated in a similar way. Returning to Charleston, the Federal marshal was instructed to serve his processes at all hazards, and the sheriff met the resistance offered him in the same determined spirit. The two joined forces, and, with a hundred deputies at their command, surprised a camp of strikers. A conflict took place, in which three of the strikers were killed outright, two others mortally wounded, and sixty-three taken prisoners by the sheriff and ten more by the marshal. According to the reports, the State as well as the Federal authorities are determined to secure the speedy trial of

the arrested men, and the execution of the law upon all violators. The State of West Virginia is to be congratulated on having, apparently both in its State officers and its Federal officers, men of resolute purpose and unflinching courage. Whether the injunction issued by the Judge was right or wrong, just or unjust, it is wholly immaterial to inquire. This decision was the law of the land until it was reversed by peaceful proceedings. It was the duty of all good citizens to obey it. When men leagued themselves together to prevent obedience and to protect from arrest the men who had disobeyed, they became to that extent rebels against the Government of the State and of the United States. Every such act of rebellion ought to be put down with a strong hand. The country has been altogether too patient with or too indifferent toward such acts of rebellion. In a Republic like ours, it is the duty of every citizen to submit to the law until by peaceful process he can accomplish a change in the law. Violent resistance to law is justifiable only under conditions which justify a revolution—that is, the overthrow of the government. Does any reader ask, What, then, becomes of the doctrine of the Higher Law, of which so much was made in 1850–1860? The answer is very plain. If law inflicts on the individual injustice, he is to submit to the injustice; if it requires him to do an act of injustice, he is to refuse, and is to submit to the penalty. In either case he is to submit, and if he declines to do so voluntarily, then all the resources of the government must, if necessary, be called into requisition to compel his submission involuntarily. The sooner mob rioters learn this lesson the better, not only for the rest of the community, but also for the rioters themselves.

The National Guard and Trades-Unions

We are glad to report that in the case of William Potter, of Schenectady, the local Painters' Union has been persuaded by the officers of the International Painters' Union to reinstate Potter, who will remain a member of the militia also; the boycott against Potter's employers will be removed. But this is no reason for not pushing forward to a vote the bill pending in the Legislature of New York, providing imprisonment and fine for any person or association that shall discriminate against a member of the National Guard for the purpose of preventing him from securing employment. This bill has been opposed by some representatives of labor unions on the ground that the bill, if enacted, would make it possible for non-union laborers to join the National Guard and then compel union laborers to work with them. From the point of view of the general public, this is not a very serious objection to the bill. The right of union men to prohibit non-union men from working with them is very dubious. Still, a law ought not to attempt to secure by indirection what it does not attempt to secure directly, and if the Hughes bill is so framed that no member of the National Guard can be discharged from his Union or from employment, its phraseology ought to be changed. The fact that a man is a member of the National Guard is not of itself ground for keeping him either in a shop or a Union; but the State ought not to permit him to be discharged from the shop merely because he is a member of the Guard. The principles involved seem to us very clear and very simple, though there may be some difficulty in giving them adequate expression in legal enactment. They are as follows: Any Association has a right to determine the conditions of membership within the Association, providing those conditions are not immoral. A Quaker meeting has a right to excommunicate a man for joining the army; on the same principle the Union has a right to exclude a man for joining the National Guard. But no organization has a right to exclude, or endeavor to exclude, a man from employment because he has joined the National Guard and taken up arms for the protection of persons and property either from domestic violence or foreign foes. There is no evidence, so far as the public knows, that the Guard in this or in other States has been used for illegal purposes, or to aid capitalists or employers against labor unions, or to coerce men into work which they do not wish to undertake, or to shoot down unarmed and innocent persons. These charges, though made, seem to us so preposterous as not to require refutation. Certainly no [illegible] has been

given in support of them. The National Guard has simply been employed to protect persons and property against violence. This Legislature ought not to adjourn until it has done whatever may be necessary to protect the right of the State to have a militia, and the right of the militia to earn an honest livelihood.

❀

A Bad Bill

A bill has been introduced into the State Legislature by Senator Barnes, of Albany, and Assemblyman Morgan, of Brooklyn, providing for abolishing the State Reformatory for women at Bedford, N. Y., and the conversion of the buildings into a hospital for the insane. Prior to the establishment of this Reformatory the women were being constantly arrested and fined, or given short sentences in the district prison, jail, or workhouse, where they were associated with those older in years and crime. In these prisons no reformatory methods were in use, and upon dismissal they easily fell victims to the dive-keepers. It was to separate them from the older criminals, to place them in a different environment, to educate and train them in industries which would render them self-supporting in after life, that the plan of this Reformatory was conceived. It took nine years of unceasing effort to secure the passage of the bill, and nine more passed before the institution was ready for occupancy. It was finally opened in May of 1901, and now, after the expiration of twenty months, has a census of 197 women, a large proportion of whom give promise of becoming law-abiding citizens. A number are already out on parole, and thus far have proved themselves worthy to be trusted. Commissions sent from Connecticut and New Jersey to visit the various Reformatories of the Eastern States found the methods employed at Bedford superior to those elsewhere, and have taken it for their model. It is difficult for us to understand why Mr. Barnes should have introduced a bill to abolish this Reformatory, or why any Senator or Assemblyman should vote for it. We appeal to all members of the Legislature to refuse it their support until they have become acquainted with the history of the Reformatory; if they do become acquainted with its history and work, they will not consent to its abolition.

Tenement-House Reform in Manhattan and Brooklyn

Every week, since the introduction into the New York Legislature of the bills devised to weaken the present legal requirements concerning tenement-houses, has seen the protest against these bills become more vehement. This protest, too, is coming from those whose very lives will be imperiled by a relaxing of the present law. An organization of janitors on the East Side of Manhattan has unanimously declared that the present law has made it easier to keep the tenements clean and wholesome and that the proposed bills would, if enacted, undo the reform so far achieved. These janitors know what they speak of; they not only live in the tenements, but they know from the nature of their business the difficulties involved in tenement-house life. In Brooklyn, people who want this question decided on a basis not of mere dollars and cents have found in Dr. Newell Dwight Hillis an able and eloquent spokesman. His statement is the most cogent and pertinent we have seen concerning the bearing of these amendments upon Brooklyn. The following, which we quote from the address, puts the issue as it especially affects that borough:

> There is one provision in the proposed law that appeals to every citizen of Brooklyn. It is proposed to leave the law that safeguards the tenement-houses of New York, but to legalize the bad features of the tenement-house for Brooklyn. It is said that landlords will then be able to build tenement-houses that will rent for $7 a month. Rents in New York will be higher. The ignorant, the weak, sometimes the vicious, will come to Brooklyn as a consequence. London learned years ago what Brooklyn will learn if this new law passes. London permitted certain cheap tenement-houses in an exempt region, and it was the home of ignorance, filth, squalor, and vice. There are a hundred old houses near Fulton Ferry, in Furman Street, and on the edge of Brooklyn Heights, that the householders on the Heights could afford to burn down, in the certainty that their own property would be enhanced in value sufficiently to pay the cost and derive a higher gain. For one, I believe that those who have supported this new law have done so without the full realization of the risks that are involved.

Do the people of Brooklyn want a law which will allow brownstone fronts to be turned at the will of the landlord into five-family tenements, and the slums driven out of the Borough of Manhattan to be welcomed with open arms to the Borough

of Brooklyn? To this question they ought to give a prompt and explicit answer.

❀

The Typhoid Epidemic at Ithaca

The outbreak of typhoid fever during February at Ithaca, the seat of Cornell University, has been the subject of many sensational reports. Ithaca consists of plateau, slope, and flats, through which flow three streams into Cayuga Lake. They are named respectively Fall, Cascadilla, and Six Mile Creek, the latter supplying the city water-mains. There are no dormitories on the campus, and the male students board in the city. Hence it has been impossible for the University authorities to exercise hygienic control. The long-agitated question of securing sufficient and pure water was complicated by the question of private or municipal ownership of the works. Six Mile Creek drains a valley fringed with dwellings, but hitherto the inspectors of the city Board of Health had no control of the area of supply or the elements making for contamination, nor had the water been dangerous. Indeed, Ithaca was noted for its salubriousness. In October, however, the water company imported gangs of Italians and Huns to build a dam for water storage. Early in January it was reported that among these strangers, who were about leaving, typhoid fever had broken out. This attracted little or no attention, especially as the dam was abandoned and the laborers had left. Late in the same month, immediately after an inundation, a hundred cases of "low" fever were reported, and soon the typhoid epidemic was revealed. The University infirmary and the city hospital were at once crowded. For the most part those most poorly fed or least careful of themselves were struck down first, and all were drinkers of Six Mile Creek water; no case was known on the campus, fed from Fall Creek, or among those drinking well-water, or even boiled water from Six Mile Creek. In reality, as the five weeks' experience shows, those who have applied science and boiled their water have been immune. Science teaches that typhoid fever "enters by the mouth" only. Public-spirited men and women both inside and outside of the University summoned physicians and nurses, provided comfortable quarters, bored artesian wells to furnish free drinking-water, and pledged the boarding-house keepers to vigilance and care in using only boiled water. The masterful energy with which President Schurman and the trustees coped with the situation is worthy of all praise. A new filtration plant costing $150,000 to be built with money loaned by the University, and rigid inspection by the city Board of Health—now clothed with State powers—will secure a speedy and permanent supply of pure water. The outcome for the University will probably be seen before long in campus dormitories, securing hygienic supervision. The epidemic is now thought to be under control and abating, and the mortality is below the average. Of the eighty or more cases among the students, who relatively have suffered most, twelve have died. Surely this incident points not only the moral of hygiene, but also of social science. As a living commentary on the truth that "no man liveth unto himself," it could hardly be excelled. In a city famous for learning and beautiful for situation, even while the people were boastful of healthy conditions, the neglect of the stranger within the gates brought calamity.

The Methodist Mass-Meeting in New York

This year marks the bicentenary of the birth of John Wesley. Although the anniversary occurs on June 28, the Methodists of New York City have already celebrated the event by a great mass-meeting in Carnegie Hall. The day set, February 26, was chosen to suit the convenience of President Roosevelt, who was invited to make the principal address. Although the meeting was held under the auspices of the New York Thank-Offering Commission of the Methodists, having in charge the project of raising one million dollars with which to pay certain mortgages and debts and to endow certain philanthropic enterprises, no appeal for money was made at the meeting, unless a statement printed on the programme could be so termed. In its stead, eulogy of John Wesley and the interpretation of the religious movement which he inspired occupied the attention of the speakers and the audience. In introducing President Roosevelt the Chairman of the meeting asserted that the

Methodist Church, especially in the West, not only "converts men to the knowledge of the Saviour" and makes "good Methodists," but also is making "good Republicans." Though this is an undoubted fact—for the Methodist Church has not yet outgrown the traditions of anti-slavery times—President Roosevelt courteously but unmistakably protested that he came to address the people there assembled, not as representatives of a party, but as fellow-Americans; and this protest was greeted with a genuine burst of applause. The President's speech was a brief but illuminating statement of the historic force which Methodism has been in the development of America. He characteristically lauded the positive and aggressive virtues of the missionary preachers who gave impulse and guidance to the growth of the West. His address was thus not only a tribute to Methodism, but also a plea for the stalwart kind of Christianity which has made Methodism effective. Chancellor Day, of Syracuse University, who followed President Roosevelt, made a very significant address, the burden of which was the exaltation of the spirit of progress. The danger to Methodists, he declared, was "in trying to insist upon holding on to old forms." He applied this to scientific study and Biblical scholarship, to ecclesiastical methods, and to regulations of moral conduct. Bishop Andrews's historical survey, in the closing address, was in harmony with these principles. No intelligent hearer could have failed to perceive the bearing these two addresses had upon issues with which the Methodist Episcopal Church has recently been dealing.

Missionary Dangers in China

During the past month disquieting information has come from the province of Szechuan in western China, the provinces of Kansu and Shensi in the north, the province of Chekiang in the east, and the provinces of Kuangtung and Kuangsi in the south. In each of these provinces there has been a recrudescence of anti-Christian and anti-missionary feeling. In the far west Boxer emissaries have been leading a crusade against foreigners and [illegible]tians, calumniating them as [illegible]e the rebellion of 1900 by the same absurd stories of the desecration of graves and the killing of young children by missionaries. In the northwest General Tung is arming and drilling ten thousand soldiers and buying large quantities of grain and fodder for horses. The provincial military commander seems to be powerless to prevent this assembling of so large a force; indeed, his own army of four thousand men is said to have joined the insurgents. Rumors obtain that Tung is really acting under the authority of the Empress Dowager, although she refuses openly to countenance him. The feeling in Shensi, a province where the prejudices of centuries still survive in nearly all their original force, is so threatening that officials friendly to the foreign missionaries are advising them to leave at once before the trouble comes to a head. In Chekiang a secret society called the Pichu Chiao has made an armed demonstration against some of the Roman Catholic converts, and the provincial troops have been unable to control the situation. Reinforcements have been sent from Hangchau, the capital, to put down this quasi-religious propaganda of ignorant people, which has now developed into a general plundering expedition. The inhabitants of an entire prefecture have been indiscriminately pillaged, their houses as well as the churches, chapels, and houses of converts being ruthlessly burned. The roads leading to Hangchau have been full of men, women, and children fleeing thither for refuge. The insurgents, according to the North China "Daily News," muster about twenty thousand adults. In many places in the province anti-religious placards have been posted calling on the masses to rise and resist the insurgents. Along the Yangtse there is a growing bitterness, and the British Consul at Hankau has advised missionaries within his jurisdiction to leave their outlying stations and go into the city. Finally, in the south, the French-fomented insurrection has not been put down, although the Imperial forces have been able to keep it from making very notable progress during recent weeks. The nature of the risings in these widely separated parts of China would seem to point to some central disorganizing force. Attentive observers on the ground incline to the opinion that the revolts are being secretly directed by one

man, Jung-Lu, a prime favorite of the Empress. In view of the return of some danger to our missionaries, unusual attention will be paid to the announcement of the Conference of Foreign Mission Boards in the United States and Canada of a week of prayer for missions. The time selected is, appropriately enough, Holy Week. The period which ends with Easter Sunday is indeed a proper time for simultaneous prayer on behalf of missions.

❀

Mr. Balfour's Victory Last week Mr. Balfour, British Prime Minister, gained a notable parliamentary victory. His War Minister, Mr. Brodrick, had been severely criticised in Parliament, without respect to party affiliation, on account of his so-called "inept army scheme." By Mr. Brodrick's plan of army reform, as first proposed, at a cost of $5,000,000 extra to Great Britain and $4,000,000 to India, it was expected that fifty thousand recruits would be secured yearly; also a reserve of over one hundred and seventy thousand men. The scheme also embodied proposals for the formation of reserves of volunteers, yeomanry, and militia. Six army corps were planned, the result of which, in Mr. Brodrick's words, would be to make an army "for the first time in the memory of man above its supposed full strength in every branch except the infantry." Mr. Brodrick's critics in general, and Mr. Winston Churchill in particular, declared the army corps scheme to be a "sham" and only introduced with the object of militarizing England. Mr. Churchill, indeed, who resembles his late father, Lord Randolph Churchill, in an entire freedom from bashfulness, in a certain picturesqueness in expression, and in a decided independence of conduct, took his position largely on the ground of economy, an issue which reminds one of the issue which led to Lord Randolph's abandonment of office in one of Lord Salisbury's Cabinets. Mr. Brodrick's defense showed little art in covering the weak points of the reorganization scheme, but he made good use of the facts respecting the increase in recruiting and the militia and yeomanry reserves. The Prime Minister, in closing the debate, indicated that the success of the vote of censure would mean not only Mr. Brodrick's fall, but the Government's. Of course, said Mr. Balfour, the British fleet stood first as defense, but there were limits to the uses of a fleet. It was impossible to bring a war to an end with a fleet which could not even strike a heavy blow at most enemies with which Great Britain might be engaged without strong attacking forces of soldiers, and it would be folly to deprive the country of the means of offensive action in an emergency. Mr. Balfour then showed that the proposed army corps were necessary for work outside the Empire; and so effectively that, when the division was taken in an excited house, the amendment was rejected by a vote of 261 to 145. Once again Mr. Balfour has shown himself equal to the situation.

❀

The Tariff on Books The recent ruling of the Treasury Department changing the basis of the import duty on books has given rise to a great deal of discussion and protest, and Mr. George P. Brett, of the Macmillan Company, has made a forcible plea for the abolition of the duty on books. He says, in brief, that while a duty on books may have been needed in the early development of our country for the purposes of revenue, for the protection of certain trades, or to foster original work from native writers, the necessity for such duty no longer exists. So far as the question of revenue is concerned, the duty on books is so small in comparison with the cost of collection that, in Mr. Brett's opinion, if exact statistics were obtainable, it would be found that it exceeded the amount of the duty collected. So far as printing and other allied trades are concerned, there is no longer any necessity for protection, because these industries are so firmly established that they need no help. As a matter of fact, the great printing establishments in this country are now unable to meet the demands for work which are laid upon them. Least of all does our native literature stand in need of any artificial protection by the imposition of what has been called "a tax on knowledge." Under the beneficent operation of the International Copyright Act, American authors have profited much more than foreign authors; and American books are not only read far more widely than ever

before in the history of the country, but they are being exported in great and rapidly increasing numbers. The figures which Mr. Brett has collected with reference to the importation and exportation of books are extremely significant. The imports of books into the United States in 1899 were a little less than $1,500,000; in 1900, $1,600,000; in 1901, $1,700,000; while for the eleven months of the year 1902 ending with November they were a little over $1,600,000. The export of books from the United States in 1899 amounted to $2,700,000, and in 1902 they amounted to $4,364,000—an increase of nearly 150 per cent. Whether the Treasury ruling, which has materially advanced the duty on English books by changing their valuation, is wise or unwise, the time has evidently come for removing a tax for which there no longer exists any justification.

Compromise in Delaware

The Senatorial deadlock in Delaware was broken last Monday afternoon by the election to the United States Senate of J. Frank Allee, Addicks Republican, and Dr. L. H. Ball, anti-Addicks Republican. Senator Allee was elected for the long term, which runs until 1907, and Dr. Ball fills the short term, expiring in 1905. The compromise between the Addicks and the anti-Addicks forces which has resulted in this election was brought about largely through the influence of National Republican officials at Washington. Congressman Dick, Secretary of the Republican National Committee, personally visited Dover, and is believed to have urged the compromise under instructions from Senator Hanna, Chairman of the Republican National Committee.

For the moment Addicks has been beaten and has been compelled to yield to the force of public opinion in Delaware. Dr. Ball's election is a victory for those who have been so long and so courageously fighting Addicks and the powers at his command. On the other hand, the election of Senator Allee is only one step removed from that of Addicks himself. Senator Allee is reputed to have made money through his alliance with Addicks in speculative and corporate enterprises, and is known throughout the State as "Addicks's man." He will represent in the United States Senate, not the State of Delaware, but his employer. We do not think it probable that he will resign in order to give his place to Addicks by possible gubernatorial appointment; but since his election he has said, "I certainly regret that I have to fill the place that 'belongs' to Mr. Addicks." Addicks, already forgetting the futility of previous mandates and statements issued by him, is now saying that he proposes "to help elect a majority of the Legislature in 1904 favorable to my candidacy for the United States Senate." The methods that he will probably employ to accomplish this purpose are a matter of common notoriety, not only to Delaware, but to the country at large. In the meantime we congratulate the honest citizens of the State that they will have in Senator Ball a representative on whom we believe they can count for efficient aid in the fight which they must continue with renewed resolution and vigor against Addicks and his corrupt methods.

The Beecher Memorial

The movement initiated by Dr. Hillis, the pastor of Plymouth Church, Brooklyn, to erect a memorial to Henry Ward Beecher, in connection with that church, has reached such a stage that on next Sunday, March 8, the sixteenth anniversary of Mr. Beecher's death, a meeting is to be held in the Academy of Music, in Brooklyn, to present more fully the plans. This movement has already attracted National attention; to its indorsement and support a number of eminent men in different parts of the country have readily lent their names, including President Roosevelt and ex-President Cleveland; the popular response already made to Dr. Hillis's appeal is itself a gratifying evidence of the respect and affection in which Mr. Beecher's name is held throughout the country; we hope that the financial support may be equally general, and that funds may be forthcoming adequate for a worthy memorial to one who served the Church and the Nation with unquestionable genius, unselfish devotion, and unflinching courage; and who, in the purity of his character and the consecration of his life to God and humanity, was greater than the work he wrought.

Sufficient time has elapsed since Mr.

Beecher's death to make possible a just estimate of the man and his achievements. The present generation is not dazzled by the brilliance of his genius, nor is its vision of him obscured by the smoke of the battle in which he took so prominent a part. A statue has been erected by citizens of Brooklyn to commemorate him, and stands in City Hall Park facing the court-house where he faced the traducers who would fain have destroyed his good name, which he valued more than life, a perpetual monument to their failure. A Congregational church, erected through the labors of his lifelong and loyal friend and co-laborer in Plymouth Church, the Rev. S. B. Halliday, bears his name, and contains many personal tributes to his memory from various friends. But the church which he built, in which the forty most fruitful years of his life were passed, whose platform he made a National forum, whose doors became through his ministry an entrance into the divine life of faith and hope and love, directly or indirectly, for unnumbered thousands, remains as he left it. When it was built, few if any churches in America were better equipped for the varied work of a modern city church. Now many surpass it in equipment. It is high time that those who confess their indebtedness to Mr. Beecher for spiritual services received at his hands should co-operate in the endeavor to give improved equipment to the work which he initiated, which in some sense he still inspires, and which, so long as it lasts, will be identified with his name.

Mr. Beecher's greatness conceals his greatness. The more apparent but less substantial elements of his character have veiled from the public those qualities which give his influence its permanence. His elocutionary skill, his suppleness and power in gesture, his sometimes too exuberant rhetoric, his vivid pictorial imagination, his instinct for dramatic impersonation of any character he portrayed, his irrepressible humor, his emotional power, made men forget his accuracy of observation, his wideness of general knowledge, his grasp of great principles, his insight into and understanding of the hidden currents of life, and his forecast of coming events. Other men in that epoch (1847–1887) were as brave, as outspoken, and as devoted to liberty as he; other men surpassed him in particular qualities; but we doubt whether any man equaled him in distinctively prophetic gift. In 1850, when the compromise measure was first proposed in Congress, in that famous editorial in the New York "Independent" he laid down the fundamental principles for the solution of the slavery problem—loyalty to the Constitution and the Union, frank recognition of the rights of the States, coupled with firm resolve against the extension of slavery to new States and Territories—six years before the Republican party was formed to advocate those principles, and ten years before Abraham Lincoln was elected as their representative. In 1861, when war was threatened, and many men who voted for Mr. Lincoln were ready to retreat, and Union-savers were busy hunting for a basis of compromise, and radical abolitionists were counseling that the erring sisters should be allowed to depart in peace, he preached that ever-memorable sermon on the text, "Go Forward," pointing out that secession, if acquiesced in, meant perpetual war, and compromise, if effected, meant abandonment by the Nation of free labor, free schools, free speech, everything that made the Nation sacred and great. When men on this side of the Atlantic were, not unnaturally, hot with anger against England, whose Government had gone as far as it dared to go in sympathy with and aid for the Confederate States, he recognized the unrepresented common people of Great Britain, who were at that time without either a ballot or an organ; went across the sea; braving hostile mobs, spoke both to and for the silent constituency; enlisted democratic England against feudal England, the England of the Puritan against the England of the Cavalier, the England of the plain people against the England of the aristocracy; made English intervention in the American conflict impossible; and both foresaw, foretold, and prepared for that impalpable alliance between England and America which promises in the future to give justice and liberty to the whole world. Lincoln was a greater statesman, Seward a greater politician, Charles Francis Adams a greater diplomat, Charles Sumner a greater scholar; but no man of his time so nearly resembled the old

Hebrew prophets as Henry Ward Beecher; no one so truly foresaw coming events; no one had so great power to create by voice and pen the public sentiment which, in a democracy, must underlie all efficient public policies; no one had such power to give it efficient expression as he.

So true is this that to most men Mr. Beecher is known chiefly as a reformer. But he was not chiefly a reformer; he was chiefly a Christian minister, a preacher of the Glad Tidings of Jesus Christ. Under his ministry, Plymouth Church grew in those forty years from a membership of twenty-one to a membership of over twenty-five hundred. Under his ministry nearly or quite three thousand learned in that church of the love of God and pledged their lives in loyal service to him; how many received a new life indirectly through his printed sermons no census can ever disclose. For, great as was his direct influence, his indirect influence was far greater. Mr. Beecher was not a musician, yet no musician of his time did more than Mr. Beecher to change the character and habit of church music in America. He was not a theologian; yet no theologian of his time did more than he to change the current conception of God in the Puritan churches, from that of a Moral Governor to that of a Father. He was not an evangelist; yet, excepting Dwight L. Moody, no evangelist of his time brought more men than did he to a knowledge of God as the Father of men through a knowledge of Jesus Christ as the Friend of sinners. This was his great work; this his passion; to this he gave himself with an ever-consuming, an ever-unsatisfied, desire. All that he knew of art or literature or music or history or life was made tributary to this one end. All that he did in social reform, in temperance, in the anti-slavery cause, grew out of this one dominating purpose. He was not a preacher *and* a reformer; he was a reformer because he was a preacher. In the midst of the Civil War, as he was about to sail for Europe, where presently he was to undertake that ever-memorable English mission, when he bade farewell to his people, this is what he said to them:

> Among the earliest, the deepest, and the stro[ng]ses of my ministry was the [co]nviction that it should be a ministry of Christ. Nothing could be further from my heart than to make this pulpit the clustering point of a number of reforms. I never would have consented to serve in a church that was merely what is called a reformatory church. I felt in my soul that all power in moral reforms must spring from a yet deeper power; and for that I struck. And I remember how, in the very beginning, night and day, without varying, through all the early months of my ministry here, I had but one feeling—to preach Christ for the awakening of men for their conversion. My desire was that this should be a revival church—a church in which the Gospel should be preached primarily and mainly for the re-creation of man's moral nature, for the bringing of Christ as a living power upon the living souls of men. My profound conviction of the fruitlessness of man without God was such that it seemed to me gardening in the great Sahara to attempt to make moral reformation in a church which was not profoundly impressed with the great spiritual truths of Christ Jesus. I have no doubt that there are many in this land who would think it an extravagant thing to hear it said that the keynote of my ministry among you had been the evangelization of the soul or the awakening of men from their sinfulness, and their conversion to the Lord Jesus Christ. It has been; and if you had taken that out of my thoughts and feelings, you would have taken away the very central principle of my ministry. By far the largest number of my sermons and the most of my preaching has been aimed at the conviction and the conversion of men.

The monument to the reformer stands in City Hall Park. The monument to the preacher has yet to be erected. What shall it be?

Not a shrine; not a tomb. Mr. Beecher does not lie in Greenwood. Mr. Beecher cannot be removed to Orange Street. He is not coffined with his moldering bones. "Why seek ye the living among the dead?" To build a tomb adjoining Plymouth Church to hold his ashes would be to erect a monument to bear perpetual testimony against his lifelong teaching concerning death and immortality. It would be as if Plymouth Church itself should be draped in black on the anniversary of his death. It would be to tell all the world that Plymouth Church loves the man and repudiates his message. The day of sacred relics, of veneration for the bones of a saint, has passed—certainly for all Protestant Christendom, even more assuredly, if that were possible, for all who accept Mr. Beecher's faith in the continuity of life. Nor should that memorial be a mere decorative ornamentation of Plymouth Church. That church is a

New England meeting-house. It was made so with deliberate design. It cannot be converted into a cathedral. It cannot be made cathedralesque. Whatever beautifying the old meeting-house is capable of receiving it may well receive; but the changes should be designed and furnished by an architect who realizes the simplicity of Puritanism and knows how to preserve that simplicity. The memorial to Henry Ward Beecher should be the preservation and perpetuation and enlargement of his work—the work of bringing men to acquaintance with God through his Son Jesus Christ, and so into Christ-likeness of life and character. It should be a permanent endowment, or a better equipment, or both, for the work of saving men from sin and arming them for righteousness. It should be such an equipment as Mr. Beecher to-day might desire for carrying on the work of to-day. It should be such an equipment as he would counsel who wished to have the Bethel Mission furnished more royally than his own meeting-house, because the Bethel Mission was for the poor. It should be such an equipment as he would counsel who pleaded for coffee-rooms, and gymnasiums, and bowling-alleys for young men, when there were no coffee-rooms, few gymnasiums, and bowling-alleys were believed to belong to the devil. It should be an equipment for Christian service, and its motto might well be, "That your whole spirit and soul and body be preserved blameless unto the coming of our Lord Jesus Christ."

Beyond this, what it should be it is not for us, because it is not for the general public, to say. That question must be left to be answered by the present pastor of Plymouth Church, Dr. Newell Dwight Hillis, and by the officers and members of that church. They know, as the general public cannot know, what equipment is needed by Plymouth Church for the preservation and enlargement of its Christian work. When they have decided that question, if every one who has received some inspiration from Mr. Beecher to a better and larger life, and every one who recognizes what Mr. Beecher did to make larger and better the life of the Nation, contributes even a little, there should be no difficulty in erecting a memorial which will not only show that Mr. Beecher has not been forgotten by the community which he served so well, but which will also perpetuate his service in new forms, for future generations.

Lenten Meditations

The Living Vine

Is the Church of Christ decadent? Is is passing into the old age whose decrepitude is premonitory of a not distant death? Is it among the things to be shaken as of things that are made? Is it among the things that are seen and are temporal? Is the time of its usefulness drawing toward its close?

What Church? Which Church? The Roman? or the Anglican? or the Puritan? or the Methodist? If either one of these is the Church of Christ, it may be temporal, it may even now be losing its power and passing away. For the world lived before these churches were born, and would live were they dead. But neither of these is the Church of God.

I am the Vine; ye are the branches: He that abideth in me, and I in him, the same bringeth forth much fruit: for separated from me ye can do nothing. If one abide not in me, he is cast forth as a branch; and men gather them, and cast them int the fire, and they are burned.

To the Jews Israel was Jehovah's Vine, of which Jehovah was the life. Henceforth, says Christ, my Church is the Vine, of which I am the life. The Roman and Anglican and Puritan and Methodist Churches are not the Church; they are churches. They are not the Vine; they are branches. They may be among the things to be shaken as of things that are made. They may become fruitless and die, and may be cut off from the Church, and may be burned as with fire and reduced to ashes, and the Church be all the stronger for their destruction.

The Church of God began when Abraham built his altar to the unknown God and gathered his household about it for worship. It became the Jewish Church when Moses came down from the Mount with the Tables of the Law and brought to encamped Israel the promise that God would be their God and they should become a nation of priests. It became

the Christian Church when the disciples, after the crucifixion of their Lord, gathered in an Upper Chamber and waited for the revelation of the resurrection. The Church is as old as human history; as universal as the social order; as vital as religion. So long as God is God and man is man, so long men will unite to seek and serve their God; and this union of men with one another, because they are one with God, is the Church of the living God. The Church is the bride of Christ. Not until humanity is divorced from Christ, and has forgotten his love and has ceased to love him, will the Church cease to be. The Church is the body of Christ. Not till Christ has forgotten humanity, and ceased to live with men and no longer loves them, will the Church cease to be.

The Church is more than the creed on which it sometimes seems to depend; as a vine is more than the trellis to which it clings. The Church is more than the worship it employs to express its life; as the Vine is more than the blossoms which fill the air with their fragrance. The Church is more than all the churches; as the Vine is more than all its branches. The Church is Christ ministering to the life of men, through the life of men. It is the Republic of God. It is the visible organ of an invisible life. It is the corporate life of God on the earth. The Church of Christ has a divine origin: it was born in the resurrection of Jesus Christ. It has a divine message: it is the herald of a Healer and a Helper, who for us men and our salvation has come down to earth. It has a divine life: the life of God in the experiences of his children. It has a divine authority: the authority of the Divine Companion abiding in devout souls.

Religion is more than individualistic; it is also organic. As the tree is more than fibers of wood bound together, as the river is more than drops of water flowing together, so the Church is more than individual Christians uniting together in Christian work and worship. If religion is the life of God in the soul of man, then the Church is the organic life of God in human history. What unites these individuals and makes of them this organism is not the creed they believe, nor the ritual they use, nor the order under which they arrange themselves; it is the divine life of faith and hope and love which they share.

The greatest river in the world has no banks. No earthy bonds confine it; no mountain peaks give it birth; no drought lessens its flow; no floods increase its volume. It rises in the Gulf of Mexico, flows northward through the Atlantic Ocean, melts and converts into its own current the icebergs which venture into its warm embrace, and, spreading fan-like along the coast of Europe, blesses the lands it touches, and gives them the grape, the apricot, the peach. Such a river is the Church of God, bound together by the warmth of its own members; flowing through the centuries; bearing summer on its bosom; blessing and to bless.

A river whose waters make glad the city of God
And the most High in His habitation.
God is in the midst of her,
Therefore she shall not be moved.
God helps her, when the morning dawns.

Justice to the Philippines

In a brief message the President communicates to Congress the following cable despatch from Governor Taft:

Necessity for passage House tariff bill most urgent. The conditions of productive industry and business considerably worse than in November, the date of last report, and growing worse each month. Some revival in sugar and tobacco prices, due to expectation of tariff law. The interests of Filipinos in sugar and tobacco extensive, and failure of bill will be blow in face of those interests. Number of tobacco factories will have to close, and many sugar haciendas will be put up for sale at a sacrifice if the bill will not pass. Customs receipts have fallen off this month one-third, showing decrease of purchasing power of islands. General business stagnant. All political parties, including labor unions, most strenuous in petition for tariff bill. Effect of its failure very discouraging.

Very succinctly the President describes the calamities which have befallen the Philippine people: the devastation of war; an epidemic of rinderpest destroying the cattle; a peculiar Oriental horse epidemic; the destruction of the rice crop by locusts; and, as a result, "imminent danger of famine in the islands." He adds that—

the indispensable and pre-eminent need is the resurrection of productive industry from the prostration into which it has been thrown by the causes above enumerated. I ask action in

the tariff matter not merely from the standpoint of wise governmental policy, but as a measure of humanity in response to an appeal to which this great people should not close its ears. We have assumed responsibilities toward the Philippine Islands which we are in honor bound to fulfill. We have the specific duty of taking every measure in our power to see to their prosperity.

Senator Thomas M. Patterson, of Colorado, is the recognized leader of the opposition to the proposal for the reduction of the Philippine tariff. We have asked him to submit to our readers the grounds of this opposition, that they may have both sides of the question fully before them. He courteously complies with our request in the article which follows.

On Senator Patterson's own showing, no *immediate* damage is to be expected to American industry from lowering the tariff on Philippine products; but the *immediate* result to the Philippines of not lowering the tariff will be starvation to them, and consequent return to brigandage if not revolution. For when men are starving they steal; and when the government allows them to starve, they rise in revolt. On the conditions in the Philippines the testimony of Governor Taft and General Wright is conclusive as against Senator Patterson's opinions. Whether America *ought* to have assumed responsibility for the Philippines it is immaterial in this discussion to inquire. She *has* assumed that responsibility. For her to leave her wards to starvation, lest by opening her markets to them now she injure her own industries in the future, appears to us wholly unworthy of National honor. We cannot believe that the State of Colorado, which Senator Patterson represents, desires so ungenerous and unjust a policy to be pursued toward the people across the sea who are dependent on our action, not only for their peace and prosperity, but for life itself.

The Philippine Tariff

By Thomas M. Patterson

United States Senator for Colorado

ANSWERING your telegraphic note asking me to state the objections to Filipino tariff reduction, I beg leave to reply:

I have little or no objection to the measure except as it affects sugar and tobacco. Indeed, the measure is intended to affect only sugar and tobacco. Practically every other article reached by the measure is already on the free list, and the authority the bill confers upon the Philippine Commission to repeal export duties on articles products of the islands the Commission already possesses. The measure is cunningly devised as an entering wedge to ultimately place Philippine sugar and tobacco with all other Philippine products on the free list.

The reduction of sugar duties is intended to promote the cultivation of sugar in the Philippines. The land laws for the Philippines as enacted by Congress at its last session make it easy for a small group of men, by organizing themselves into as many different corporations as they can invent names for, to secure title to Philippine lands by the hundreds of thousands of acres, although nominally a corporation can purchase not more than 2,500 acres. Governor Luke Wright told me in the Senate committee-room that five or six million acres of the islands were well adapted to the raising of sugar. An expert in Philippine lands—one who visited the islands for a syndicate to investigate the land and sugar problems—told me that at least 8,000,000 acres were good sugar lands. I believe they do not overestimate their quantity.

Most of these lands are as productive for sugar as the sugar lands of Cuba or the Hawaiian Islands. The concurrence of expert opinion is that the average of Philippine lands will produce from two to three times as much of the products common to the islands and the United States as will the lands of the United States.

Corporations and syndicates are already formed, and continue to be formed, to exploit these islands. Within a few years they will have a monopoly of the best lands in the islands upon which to raise sugar and tobacco. The Sugar Trust is

not the least formidable of those who are already in the field. It is chiefly their work, this reduction of tariff on Philippine sugar and tobacco. It means millions and millions of dollars to them in the future. With one-fifth of the lands suitable for sugar culture in the islands put to raising sugar, more sugar would be annually produced than is now annually consumed in the United States. Within ten or fifteen years sugar-raising in the United States—both cane and beet—would be driven out, and the much cheaper Philippine sugar take its place.

Statistics demonstrate that the Philippine sugar, owing to the productiveness of the soil and peon labor, can be produced at a fraction above sixty-two cents per one hundred pounds. The American farmer is now paid for the sugar beets he raises a fraction over $2 per one hundred pounds for the sugar in them. This, with the cost of manufacturing the beet sugar, storage, insurance, transportation, etc., makes the cost of the American article well on to $3 per hundred. The distance that Philippine sugar must be transported is no protection to the American farmer—fifteen or twenty cents per hundred will cover transportation charges.

Considering the above data with active exploitation of the Philippines for sugar production, how long will it be, if our ports are thrown open or her present tariff reduced, before Philippine sugar will supplant American sugar in every American town and upon every American table?

The proposed tariff reduction for Philippine sugar is a broad, roaring farce if considered as a measure of relief from the present distressing conditions in the islands. The largest amount of sugar imported from the islands into the United States since 1890 was in 1896. It amounted to 145,075,343 pounds. The proposed tariff reduction of 25 per cent. would reduce the duties paid upon that amount less than $726,000. The next largest amount imported from the Philippines was in 1899. It amounted to 51,625,280 pounds. The saving in duties upon this quantity would be about $258,126. The smallest amount of sugar imported from the Philippines was in 1901. It amounted to 4,693,333 pounds. The saving in [illegible] his amount would be less [illegible] The reduction in amount of duties paid upon tobacco would be much less than upon sugar.

How intelligent men can preserve straight faces while they claim that the proposed measure will bring present appreciable relief to the islands is past understanding.

The moving spirit behind the Philippine tariff bill is not grief for the present sufferings of the Filipinos, but the spirit of greed—the same spirit that has proved so overpowering in Government circles in connection with Cuban sugar. It is the spirit of the modern sugar trust.

It is true that the measure would not appreciably affect the American sugar industry for a few years; but, unless a halt is called, and called now, within ten or fifteen years a great and growing American agricultural industry will be destroyed, and to this I am unalterably opposed.

I am not a modern protectionist. I believe the tariff needs revising and reducing, and needs it badly. When revision is undertaken, I am quite willing that sugar shall bear its proportionate reduction, but I am distinctly opposed to any trust or other organization of greed dictating upon what particular American industry the tariff shall be removed, that its gains may be increased at the expense of that industry.

It is a little singular that the Administration has lately focused its attention in two noted instances upon sugar and tobacco for tariff reduction. Of course New England and Pennsylvania and other States similarly situated heartily second the attacks. But if some iron or cotton or woolen industry were to be the sufferer, the White House would be made too hot for its present occupant.

I recognize the fact that the United States should succor the unfortunate Filipinos. We killed their best men, devastated their fields, created conditions that bred pestilence, left ruin in the tracks of our armies, in effecting their subjugation—a subjugation that is the outcome of as base a betrayal of National honor as history records. But don't destroy one of the most promising and at present one of the most prosperous of American agricultural industries in an effort at succor that in fact will bring no relief to those who need it.

COPYRIGHT, 1903, BY CLINEDINST, WASHINGTON

The New German Ambassador

Baron Speck von Sternburg arrived in Washington as the representative of the German Government just in time to be plunged into the Venezuelan controversy. It is understood that he is already exercising his great influence and power in the direction of bringing this controversy to a satisfactory conclusion. It is not his first official residence in this country, as he was formerly connected with the German legation and embassy at Washington. He also has an American wife. Before he reached this country, Baron von Sternburg remarked that he regarded the work of extending German friendship in the United States as delightful, and especially so because the policy of the present Administration was absolutely open-hearted and honest, and President Roosevelt was always open to argument.

THE FAMOUS FLATIRON BUILDING

The strong line of light at the left was made by the Broadway trolley cars; the fainter light turning off at Twenty-third Street was made by the Lexington Avenue cars; the two parallel lines in the foreground were made by an automobile, which came up Broadway and stopped in front of the Flatiron Building for one minute and then continued up Broadway.

WHEN THE LAMPS ARE LIGHTED

BY ARTHUR HEWITT

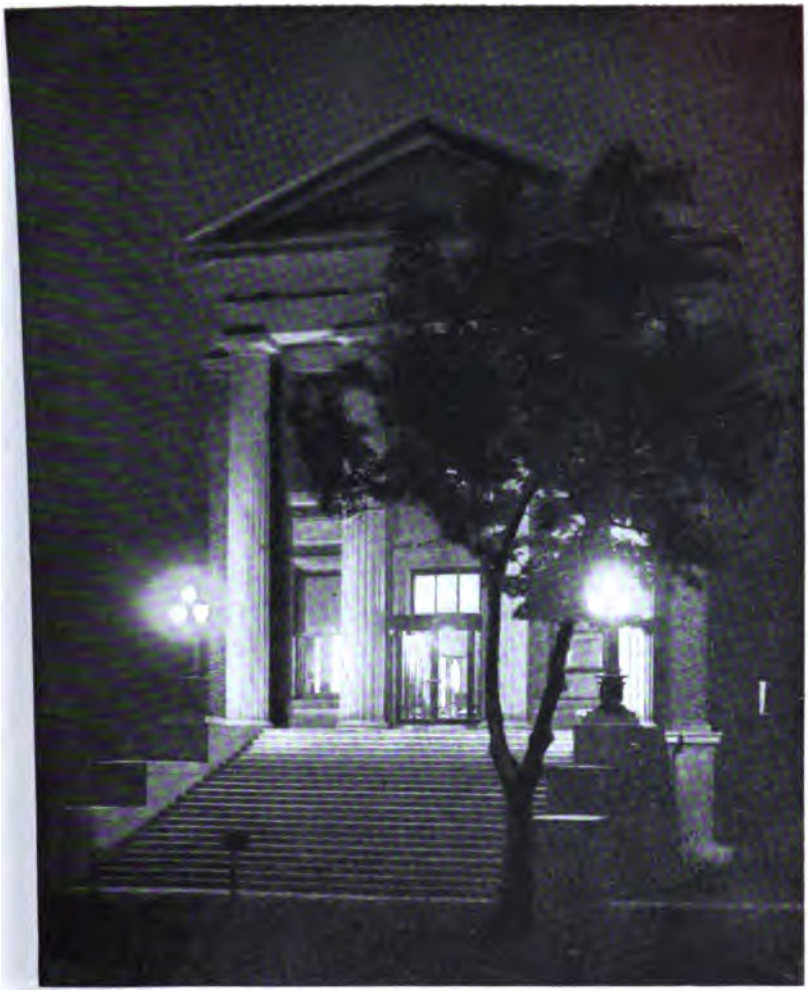
ILLUSTRATED WITH PHOTOGRAPHS BY THE AUTHOR

WHEN night falls on the city of New York, all the way from the hand of the Statue of Liberty to Harlem millions of lamps are lighted—lamps of all kinds, from the simple glimmer in the window of poverty to the radiant and almost painful brilliance of the street light; and then truly is a scene of beauty and enchantment created.

To see downtown New York at night, mount on the roof of a sky-scraper, as I did the other evening, when I made the accompanying photograph of Brooklyn Bridge, and a varied panorama is at once with you. In one direction huge buildings looked in the distance like illumined castles in some mystic fairyland. Another view showed me Broadway, City Hall Park, and the domed World Building; while the composition of the picture was completed with quaint old-fashioned chimney-pots in the foreground, standing out dark and black against the brightness of the street below.

Turning round and walking to the other side of my vantage-point, I saw Brooklyn Bridge sweeping across the East River, its massiveness somewhat dimmed by smoke and fog, yet curiously alive with the moving head-lights of a thousand cars ever crossing and recrossing.

Then there were other downtown scenes. Standing in City Hall Park about six o'clock, Newspaper Row is well worth studying, every window showing its light in each great structure—a semicircle of buildings ablaze. On Broadway, again, one saw the beautiful spire of Trinity, very dark and very black, yet plainly silhouetted against the well-lighted building beyond it.



After seven o'clock the office windows one by one grow dim, as the workers go home. Now is the time to go uptown, where all is aglow. There you will meet with still more varied scenes. Advertisers are busy there at night, and you will see their gigantic signs with the glare of a thousand hidden lights thrown on them until they look like giant colored transparencies. Then there are the immense name-plates set with electric lamps. These are away up on high, and blazon out their message in letters of gold against a black sky, to the throngs tramping the streets below. Here and there a sign is made more impressive by the fact that the illuminated words are constantly changing and interchanging by some mechanical device. Then here again is a sign in letters of red, another in some fantastic shape. Verily, everything is ablaze; there are illuminated clocks, street signs in purple, and even the outlines of the great department stores themselves are studded with lights.

Wander in Herald Square, and from there up or down town, east or west, and

BROOKLYN BRIDGE DURING THE EVENING RUSH HOUR

The picture, exposed for twenty-one minutes, was taken when the fog was so thick that the nearest pier of the bridge could not be seen. The strong white line was made by the trolley cars coming across the bridge from Brooklyn. The lights on the other track show that there was a blockade

AN EVENING VIEW AT COLUMBIA COLLEGE

all this will be apparent. Go to this part or that of the great city and you will ever see this universal illumination. Even the rivers are flanked with the names of the various railroads, each vying with the other, in these days of tremendous competition, by shouting long and loud through these advertisements of the night.

Conditions of weather and atmosphere have a very great deal to do with viewing lighted New York. If you are impressed with it on a clear night, doubly so will you be in the rain. For then reflected lights on the bepuddled streets will abound everywhere, deep in tone and rich in high lights, and edged with charming wavy lines, increasing the general illumination tenfold.

In a fog or in a blizzard totally different aspects are to be seen. Great lights appear to be clamoring to fight through the haze, and there are curious and weird effects. What was ablaze on another night now appears like some overhead vaporous ghost. In the snow, of course, everything changes. The trees in the parks cast dark, hard shadows, moving in rhythmic time with the swinging lamps which make them.

It is on just such nights of fog, rain, and snow that I have found that the most effective photographs are to be made. Take, for example, my snow scene at Fifty-ninth street. I took this after a recent snow-storm. Wet and clinging, it had charmingly decorated the trees, one of

LOOKING UP FIFTH AVENUE

The face of the clock shows that it took a three minutes' exposure to make this photograph. The white streaks at the right of the picture were made by the lights of passing cabs.

NEW YORK CITY HALL AT HALF-PAST SIX IN THE EVENING

This photograph was exposed for five minutes, during which time hundreds of people were passing through City Hall Park

which I chose for my foreground. The plate for this picture was exposed for a minute and a half. In night work all moving objects—people, cabs, etc.—have no effect on the plate. You will notice, however, in the picture that I have just been describing, two carriages are clearly seen at the hotel entrance, simply because they happened to remain stationary during the entire exposure.

Devotees of the camera who essay night work need patience, dogged perseverance, and a good deal of indifference to discomfort. Well I remember the taking of the picture of the famous Flatiron Building. I had previously arranged the night for a photograph with the owners of the building, as they had kindly consented to light up the entire structure. A strong and bitter wind was blowing when I set up my camera on the roof of a neighboring building. It required a stout heart and strong determination to go ahead with my work; for after a few moments (one cannot well work the mechanism of a camera with gloves) my hands were numb with cold. I recollect that the wind was so strong that it obliged me to hold my camera, to steady it, during the entire six minutes of the exposure; a movement would have spoiled everything, so I had to cling ruthlessly on, in spite of the bitter cold; and I cannot remember a longer six minutes in my life. To add to the general discomfort, I was standing on a mixture of loose boards and all sorts of electrical wires, and necessarily leaning against a newly painted advertising sign, which I found, on my arrival home, somewhat reflected on my overcoat.

Regarding this particular picture, you will notice the curious zigzag lines of light in the center of the streets; these are caused by the lights of the moving cars. On the left, again, of the picture, starting from the foreground, you will see two faintly traced parallel lines leading to two brighter spots close to the Broadway sidewalk, then again tracing themselves on into the distance. All this can be easily explained. An automobile had passed with its electric side lights, had halted a

A WET NIGHT IN MADISON SQUARE

This picture shows one of the illuminated advertising signs so familiar to New Yorkers.

moment, causing the brighter spots, and then gone on.

When I have been working with my camera in the city streets, I have been surprised at the attitude of passers-by. People seemed, as a rule, quite ignorant of night photography and its possibilities. There were some who asked many questions; others looked serious, tapping their foreheads and saying in a compassionate way to their companions something about a "crazy man;" others, again, stood motionless, stared for a few moments with a stolidity and perseverance that were astounding, and then passed on.

ONE OF NEW YORK'S FAMOUS CAFÉS AT TEN O'CLOCK IN THE EVENING

With regard to the history of night photography, I should like here to mention that it was Paul Martin, of London, who in 1896 first discovered its possibilities. His photographs of "London by Night" showed the picturesque beauties of the streets of a great city under electric light. "A Corner of Trafalgar Square" and "A Wet Night" were revelations as to the opportunities available. W. A. Fraser, of New York, shortly after made some superb street scenes here, in which he improved on Martin's work by introducing life into the pictures.

Returning to my illustrations, the Madison Square picture was taken, as will be readily seen, on a wet night. During the seven minutes' exposure I was careful to cover the lens each time a car passed up or down Broadway, otherwise there would have been a discordant streak of light in the wake of the headlights right across the picture, as was unavoidably shown on the Brooklyn Bridge and Flatiron Building photographs.

No rule can be given regarding the time of exposure; each subject requires special thought and a careful previous review of the light conditions. While I gave the bridge picture twenty-one minutes' exposure because there was fog and comparatively little illumination, the Broadway store had only one minute; so with every phase of this fascinating work, it is a matter of judgment rather than of rule,

AT THE ENTRANCE TO CENTRAL PARK

This picture was taken after one of the heavy snow-storms of the winter.

and experience will prove the best guide. If, for instance, you give a picture too long an exposure, you will find in your result that you have entirely lost the true night effect, and the result will appear in many particulars to have been made in daylight. Again, if the exposure is too short, you will get nothing but a great blackness studded here and there with ···ecks of light. All of the delicate detail in the shadows, so necessary to the pictorial value, will have been lost. I advise any one, before he goes out to attempt this kind of work, to study very thoroughly the conditions of light.

The ability to see is everything in photography—especially in night photography. If there is little illumination, there will be little good in making a picture. If, again, there is light from a variety of

sources, one should learn how to use it to the best advantage. I will make this clear by an example. In the Madison Square wet night scene, I carefully took my point of view, placing my camera so that the shapely tree in the foreground just obliterated one of those painfully bright clear-glass arc lights. Had I not done this, the general effect of the picture would have been destroyed by violent contrast and a d cordant note.

To encourage to further effort tho who have so far failed in this branch photography, let me say that it was n until after five nights of worthless tria that I made the picture used on the prece ing page, and perhaps some twenty nigh in all were required to secure the set.

A FINE WINDOW DISPLAY ON BROADWAY
This picture was taken at nine o'clock in the evening, when the sidewalk was crowded with passers-by.

The Path of Roses

By Priscilla Leonard

Before some happy feet
The roses blossom all along the way
In fragrance summer-sweet.
O careless path of joy!—yet happier they
Who, toiling on alone
Where never has the road been aught but rough,
And never rose has grown,
Find, even in their stumbling, strength enough
To plant with patient hand
The seeds of gladness, till behind them spring
Flowers in the desert land,
Roses more rich than careless joy can bring!

THE GRAY LOWERY DAY

Painted in 1877. In the Thomas B. Clarke sale of 1899 this picture was sold for $10,150.

PHOTOGRAPH BY EDWIN S. BENNETT, N. Y.

George Inness

By John C. Van Dyke

Professor of the History of Art in Rutgers College

A MAN of the business world, knowing nothing of the peculiar manifestations of the artistic temperament, would be very apt to wonder over the mental make-up of a George Inness. An artist's way of looking at things is never quite sensible to the man in the street. It is too temperamental, too impulsive; and Inness was super-temperamental even for an artist. When he expressed himself in paint, he was very sane; but when he argued and talked, his auditors thought him erratic. And not without some show of reason. He was easily stirred by controversy, and in the heat of discussion he often discoursed like a mad rhapsodist. His thin hands and cheeks, his black hair and piercing eyes, his dramatic action as he walked and talked, seemed to complete the picture of the perfervid visionary. He was always somewhat hectic. As a boy he was delicate and suffered from epilepsy. His physician had nothing to recommend but fresh air. As a man one of his hearers at table one day, after listening to his exposition of socialism or some allied theme, said: "Mr. Inness, what you need is fresh air." Inness himself used to tell this story with a little smile as though conscious of having appeared extravagant. As for "fresh air," he knew more about it than all his business acquaintances put together; but in the sense of its clearing the vision so that he could see things in a matter-of-fact light it was wholly unavailing. He was born with the nervous organization of the enthusiast. It is not the best temperament imaginable for a practical business man.

And yet Inness certainly thought that

his views about life, faith, government, and ethics were sound and applicable to all humanity. Art was only a part of the universal plan. In his theory of the unities everything in the scheme entire dropped into its appointed place. He could show this, to his own satisfaction at least, by the symbolism of numbers, just as he could prove immortality by the argument for continuity. All his life he was devoted to mystical speculations. He had his faith in divination, astrology, spiritualism, Swedenborgianism; and he was greatly stirred by all social questions. During the Rebellion he volunteered to fight for the freedom of the slave, but was rejected on physical examination; and later he became interested in labor problems, believed in Henry George and the single tax, and had views about a socialistic republic. He never changed. When nearly seventy years of age, he was still discoursing on Swedenborg, on love, on truth, on the unities, with unabated enthusiasm. To expect such a man to be "practical" would be little less than an absurdity; and to expect a practical man to understand him would be almost as absurd.

But the fever of intensity that burned in Inness and his visionary way of looking at things were the very qualities that made him great as an artist. There is something in the abnormal view—one hardly knows what—that makes for art. Certainly the "practical" work of the camera gives only a statement of fact, where the less accurate drawing of a Millet or a Corot gives us something that we call artistic. The lens of the camera records mechanically and coldly, which may account for the prosaic quality of photography; but the retina of the artist's eye records an impression enhanced by the imagination, which may account for the poetry of art. Whichever way it may be put, it is the human element that makes the art. The painter does not record the facts like a machine; he gives his impression of the facts. Inness, with his exalted way of seeing, was full of impressions and was always insisting upon their vital importance. "The true purpose of the painter," he says, "is simply to reproduce in other minds the impression which a scene has made upon him. A work of art is not to instruct, not to edify, but to awaken an emotion. Its real greatness consists in the quality and the force of this emotion." And he practiced this preaching. Such nervous manifestations as enthusiasm, emotion, and imagination, working together and producing an impression, were the means wherewith he constructed pictures in his mind. They made up his mental equipment, and without them we should have heard little of George Inness the painter.

It was no mean or stinted equipment. In fact, Inness had too many impressions, had too much imagination. His diversity of view often opposed singleness of aim. While he was trying to record one impression upon the canvas, half a dozen others would rush in. That is one reason why he was never satisfied with his work, why he was always altering and amending, why he painted pictures one on top of another until (it is recorded) one canvas contained twenty different landscapes. The late William H. Fuller used to tell a story of his buying a landscape in Inness's studio one afternoon, and the next day, when he went to fetch it, he found an entirely different picture on the canvas. To his protests Inness replied: "It is a good deal better picture than the other."

"Yes; but I liked the other better."

"Well, you needn't take it—needn't pay for it."

"Yes; but it is not a question of losing money; I have lost my picture; it is buried under that new one."

Even when he was not bothered by many impressions, Inness had difficulty in contenting himself with his work. It was never quite right. There was a certain fine sentiment or feeling that he had about nature and that he wished to express in his picture; but he found that when the sentiment was strong the picture looked weak in the drawing, had no solidity or substance; and when the solidity was put in with exact textures and precise lines, then the sentiment fared badly. Inness knew where the trouble lay. "Details in the picture must be elaborated only enough fully to reproduce the impression. When more is done, the impression is weakened and lost, and we see simply an array of external things which may be very cleverly painted and may look very real, but which do not make an artistic painting. The effort and the difficulty of an artist is to combine the two, namely,

MIDSUMMER

Painted in 1875. In the collection of James W. Ellsworth, Esq.

to make the thought clear and to preserve the unity of impression. Meissonier always makes his thought clear; he is most painstaking with details; but he sometimes loses in sentiment. Corot, on the contrary, is to some minds lacking in objective force. He tried for years to get more objective force, but he found that what he gained in that respect he lost in sentiment."

This is Inness's own statement of the case, and if we apply it we shall understand why many of his later canvases were vague, suggestive, indefinite, often vapory. He was seeking to give a sentiment or feeling rather than topographical facts. When

WINTER EVENING

Painted in 1857. Sold for $3,650 in the Thomas B. Clarke sale of 1899.

the canvas looked too weak, he tried to strengthen it here and there by bringing out lines and tones a little sharper, and with the result of making it look hard and cold. After several passings back and forth from strength to weakness, from sentiment to fact, the canvas began to show a kneaded and thumbed appearance. Its freshness was gone and its surface tortured. Inness was hardly ever free from this balancing of motives. It is a plague that bothers all painters, and no doubt many of them would agree with Inness in saying: "If a painter could unite Meissonier's careful reproduction of details with Corot's inspirational power, he would be the very god of art."

But Inness was more allied to Corot than to Meissonier. He never was the "perfect master of the brush" that we have heard him called, though he was an acceptable and often a very satisfactory technician. In his early days there were no art instructors in this country, and he was virtually self-taught. He had some instruction in engraving, and a few lessons from Gignoux in New York, but they amounted to little. In 1851 he went to Italy and spent several years, and there he first saw real pictures. He improved greatly by foreign study; and later on, when he came to know the work of the Fontainebleau-Barbizon men, he found himself in complete sympathy with it. Rousseau improved his *technique*, and Corot taught him the law of sacrifice; but he never became what one might call a perfect technician. He was frequently a little lame in drawing, and his pictures were often perplexing in their planes and lights. Nor was he always satisfactory in his textures and surfaces. Color was undoubtedly his strongest feature. He saw his landscapes as related masses of color rather than in linear extensions; and as he received the impression so he tried to place it upon canvas, holding the color patches together with air and illuminating the whole mass by light and shadow.

It was with color, light, and air that Inness scored his greatest successes. Almost all of his pictures will be found to hinge upon these primary features. He was very fond of moisture-laden air, rain effects, clouds clearing after rain, rainbows, mists, vapors, fogs, smokes, hazes—all phases of the atmosphere. In the same way he fancied dawns, dusks, twilights, moonlights, sunbursts, flying shadows, clouded lights—all phases of illumination. And again he loved sunset colors, cloud colors, sky colors, autumn tints, winter blues, spring grays, summer greens—all phases of color. And these not for themselves alone, but for the impression or effect that they produced. Did he paint a moonlight, it was with a great spread of silvery radiance, with a hushed effect, a still air, and the mystery of things half seen; did he paint an early spring morning, it was with vapor rising from the ground, dampness in the air, voyaging clouds and a warming blue in the sky; was it an Indian summer afternoon, there was a drowsy hum of Nature lost in dreamland, and with the indefinable regret of things passing away. His "Rainy Day, Montclair" has the bend and droop of foliage heavy with rain, the sense of saturation in earth and air, the suggestion of the very smell of rain; his "Delaware Water-Gap" shows the drive of a storm down the valley, with the sweep of the wind felt in the clouds, the trees, and the water; his "Niagara" is not topographical in any sense, but rather an impression of the clouds of mist and vapor boiling up from the great caldron, and struck into color-splendor by the sunlight.

Every feature of landscape had its peculiar sentiment for Inness. He said so often enough and with no uncertain voice. Here is one of his utterances about it: "Rivers, streams, the rippling brook, the hillside, the sky, clouds—all things that we see—can convey that sentiment if we are in the love of God and the desire of truth. Some persons suppose that landscape has no power of conveying human sentiment. But this is a great mistake. The civilized landscape peculiarly can; and therefore I love it more and think it more worthy of reproduction than that which is savage and untamed. It is more significant."

That last passage about the "civilized landscape" is well worth noting, because this was exactly the landscape that Inness painted. His subjects are related to human life, and possibly our interest in his pictures is due to the fact that he shows thoughts, emotions, and sensations comprehensible of humanity. He tells things that every one may have thought but no

Bought in 1899 for $8,100 by the Metropolitan Museum of Art, New York.

one before him so well expressed. In other words, he brings our own familiar landscape home to us with truth and beauty. This, it may be presumed, is the function of the poet and painter in any land. It was the quality that made Dante and Goethe great, and may account for the fame of Hobbema, Constable, Daubigny—yes, and Inness.

He was no follower of tradition in this. What he had to say was distinctly personal; and even his technique was largely of his own invention. When he was young, there were traditions of the Hudson River school in the air. The "mappy" landscapes of Cole and F. E. Church, with their crude color and theatrical composition, held the place of honor. Inness may have been overawed by their size at first, but he soon discovered their emptiness. They had no basis in nature, they were not the landscapes we see and know. The "Heart of the Andes" and the "Course of Empire" were only names for studio fabrications. The truly poetic landscape lay nearer home. Inness all his life painted it from his studio window or from his dooryard. This was what he called the "civilized landscape," the *paysage intime*, the familiar landscape—the one we all see and know because it has always been before us. Perhaps its very nearness has blinded us to its beauty. It is difficult for us to believe that the true poetry of the world lies close about us. We keep fancying that the romance of life is not in our native village, but in Rome or Venice or Cairo; and that the poetic landscape is not that of the wood-lot behind the house, but that of the snowy Andes or some Hesperidean Garden far removed from us. Emerson has noted that at sea every ship looks romantic but the one we sail in. Yes, but there is plenty of romance in our own ship if we have but the insight to see it; and there is abundance of poetry in the wood-lot if we have the intentness of purpose to study it out and understand it. Any one can admire the "view" from a mountain top, but it takes some imagination to see beauty in the quiet meadow. And after you have seen it, it takes a great deal of labor and skill to tell what you have seen. Wordsworth and Constable made more failures with it than successes. Just so with Inness. He shot wide of the mark innumerable times; but when he hit, it was with very decided effect.

The love for the familiar landscape was with Inness from his boyhood. To be sure, there was a period when he coquetted with the classic. When in Italy, he saw much of Claude, Poussin, and Salvator Rosa; but it is difficult to see any trace of them in his pictures. He was, possibly, impressed, but he did not wish to follow. In 1854, when he first saw the Fontainebleau-Barbizon pictures, he was decidedly enthusiastic. Millet he thought a demi-god, Daubigny and Rousseau were the perfect recorders of the impression, and Corot he believed the epitome of fine sentiment. How did it happen that Inness was so taken with these French painters? Because they were painters of the *paysage intime*; they had done in France just what he had sought to do in America; they had abandoned the grandiloquent classic landscape and put in its place the familiar landscape of Fontainebleau forest and the plain of Barbizon. Naturally enough, there was affinity between the American and the Frenchmen. They were striving for similar results. Had Inness been born in France, no doubt he would have been a member of the Rousseau-Dupré group.

But the point is worth emphasizing that he did not belong to that group, that he did not follow them or copy them in any way. The aim was a common one, in that they all opposed the spectacular landscape in favor of "the civilized landscape;" but Inness, for his part, did not work after the French formulas. His manner was not that of Rousseau or Corot or Daubigny, but of Inness. The theme, the work, and the worker were all original, all of the soil, and all sufficient unto the designed purpose.

We are now, perhaps, in a position to answer that oft-asked question, "What does Inness stand for in American art?" The answers to it have been many and various. Some painters, perhaps, think him great because he composed or handled in a certain way, or used certain colors or canvases or brushes; others may think he holds high rank because they have heard him called "the master," and fancy he was an exceptionally fine technician; but possibly those who come hereafter may think of him as a leader, the one man who painted and established the *paysage intime*, the familiar landscape, here in America. This was the supreme service that Rousseau, Dupré, and Daubigny did for France and French landscape. And as they are ranked there as the discoverers of Fontainebleau and a new world in landscape, so Inness must be ranked here as the discoverer of the American meadow and woodland—a new realm of beauty. It is possibly his most lasting title to fame.

And, in flat contradiction of theories about the cosmopolitan quality of modern art, all the Fontainebleau men were really provincial in what they produced. Corot painted Ville d'Avray, Rousseau and Diaz did Fontainebleau, and Daubigny the Seine and the Marne. None of their work will stand for the south or east of France, none of it will travel beyond France. It

SUMMER SILENCE

Painted in 1892. Now in the collection of James W. Ellsworth, Esq.

is localized about Paris. Just so with the work of Inness. It is emphatically American, but limited to the North Atlantic States. The moods and appearances of nature which he portrayed are peculiar to the region lying east of the Alleghanies. In his pictures the light and coloring, the forms and drifts of clouds, the appearances of air, mists, hazes, the trees and hills, the swamps and meadows, may be recognized as belonging to New Jersey or New York or New England; but none of them belongs to Minnesota or Louisiana or California. He pictured the American landscape more completely, perhaps, than any other painter before or since his time; but his *paysage intime* is, nevertheless, limited as regards its range of subject.

Nor would we have it otherwise. All the masters of art have been provincial so far as subject goes. Titian and Velasquez, Homer and Boccaccio, Burns and Wordsworth, never cared to go beyond their own bailiwicks for material. And Inness—though he may not rank with those just mentioned—found all the material he needed within fifty miles of New York. It was the original discovery of this material, his point of view regarding it, what he did with it, and what he made us see in it, that gives him high rank in the history of American art.

The Hand that Rules the World

By J. F. Farrell

NATURE was never a finical housekeeper; and when she was setting the continent in order for the family to move in, she forgot to clear up a great windrow of refuse swept aside by one of her brooms, which extended in a long ridge of boulders and gravelly drift from nobody knew where, across the Mason farm and into the Ten-Mile Woods farther than the three Mason boys had ever followed it.

All the gravel, clay, and small stones had been washed out where the ridge crossed the river, and only the large boulders remained tumbled together in the river-bed. The river talked pleasantly as it flowed among these rocks; and the Masons could tell just what kind of weather was coming by the sound of its voice, and ever so many other things. When the water was low in summer-time, it was easy enough for an active boy with a jumping-stick to cross the river on the boulders at the upper edge of the rapids; and who was going to walk a mile and a half down to the bridge and a mile and three-quarters back again on the other side when you could skip straight over in five minutes?

Of course it was dangerous; but it was not Mrs. Mason's way to worry about the boys and lay grievous commands on them that they would be cruelly tempted to disobey. Even if she had felt afraid of the shadow of imaginary dangers, she would not have engaged in a perpetual struggle to maintain her authority. But instead of an enemy the river appeared to her a valuable friend and ally. Before the boys could walk she tied them to the end of the clothes-line and threw them in the river every day, when the water was not freezing cold, and laughingly encouraged them to splash and paddle to their heart's content; and when they were old enough to stray away from the dooryard they were as much at home in the water as on the land.

It was the same with guns and shooting. Living on the edge of the Great North Woods, where all sorts of small game still abounded, the boys wanted guns long before it was safe for them to handle deadly weapons or to stray into the wilderness, where one could travel a hundred miles in some directions without seeing a house.

So she set up a target, and kept the score for them; and when Enoch Smith and Johnny Hill and Billy Thompson heard the Mason boys banging away against the face of the ridge, they would rush wildly for such firearms as they were allowed to use and come over on the run. If there were disputes, Mrs. Mason settled them so justly according to the law and the evidence that all six of the boys were satisfied, and this led to the establishment of a sort of primitive court of appeals.

"Well, I don't care what you say, I'm

going to ask Mrs. Mason," got to be the wind-up of nearly all the disputes among boys of twelve or under in the scattered neighborhood. And Mrs. Mason was never too busy to sit right down, wherever she was, and listen to the story. When she was in possession of all the facts, "Now let's see what the principle is that you are trying to set up, Jimmy," she would say; and when the principle was disentangled and clearly stated, her "Do you think that is right?" or "Would you want Enoch or Billy or my Benny to do that way by you?" settled the business on the spot. Generally the claim, when clearly stated and applied to something else, was so preposterous that everybody laughed; the aggressor shamefacedly protested that if he had seen it in that light he wouldn't have insisted on it, and the dispute evaporated. If a boy was stubborn after the others were all convinced that he was wrong, he simply was made to take his own medicine—the principle was applied to him in all possible ways—which speedily brought him to terms.

The farm was not very productive, and the father had always been obliged to follow other pursuits. He was a stonemason by trade, and in summer-time was employed at the quarries, twenty-five miles away, just over the line, and it was not convenient for him to come home, except to stay over Sunday once in five or six weeks. In the winter he "went into the woods" with all the other able-bodied men of the township; and his family saw him no more till the rafts came down in the spring. So the mother had to be father as well, and the boys very early in life had to learn to work, in order to help her with the chores. There were the cows and sheep and hens to feed, water to draw, wood to bring in, and fifty other tasks that they were ambitious to be doing as soon as they were big enough to walk steadily with a two-quart pail or reach around one or two sticks of wood. They helped her, and then she played with them at mending fences or weeding the garden. And, oh! what splendid days they had when the wild berries ripened and a harvest had to be gathered to dry for the whole year! Tramps had never been heard of, and it was safe to leave Grandma Mason alone several hours when there was no fire in the house.

She was almost blind; and the boys led her about the place for exercise every day. This was such an honor that they had to be assigned in routine for the duty, like little soldiers; else they fought behind the shed when one crowded into place at her side too often. Once there he was safe, for nobody would disturb Grandma by quarreling at her elbow. But vengeance waited for the selfish one who stole the other's turn too frequently. So the mother took the matter in hand, and appointed them regularly to serve in turn, and after that there was peace.

In the late autumn, after the flurry and excitement of the father's fitting out and departure for the lumber camps, they all fell to and battened up everything tight and snug for the long winter siege, for unless there was a thaw and a sudden freeze to form a snow-crust they were likely to be snowbound for two or three months.

Deacon Smith's house, where Enoch lived, was the only one in sight; and it was understood that if Mrs. Mason hung out a red flag from the gable that notched the drifts among the cedars and spruces over on the ridge, her neighbors were to break a road and bring the doctor forthwith; for Grandma Mason was old and feeble, and something might happen to her any day. Sickness for the rest of the family could scarcely be imagined.

But something else happened one winter. That was the year when there was a failure or embezzlement or some kind of rascality or bad management at the quarry, and the father lost nearly all of his summer's work. The provisions gave out in midwinter; and there was no money. Credit, of course, could have been asked, with no danger of refusal—for everybody knew Nathaniel Mason would pay his debts, if he sold himself into slavery—but how could he recover from the setback of his loss, if all he earned in the woods had to go for grocery bills in the spring?

There was corn in the crib, with a few bushels of beans, and Nat could fish through the ice successfully when he could get down to the river. The cows went dry. The hens stopped laying—all but one who knew Grandma *must* be provided for. Could they live on such rations for ten or twelve weeks and keep their health?

Mrs. Mason watched the boys anxiously; but one week, and two, and three, went by with nothing but bean-broth and bannocks, hulled corn, and an occasional baked fish; and they were as fat and healthy as little cubs. So her scruples vanished, and no signal for communication with the outside world was hung out at the attic window.

Mrs. Mason had foreseen how it would be; and she had saved a small quantity of fine white flour, a few pounds of meat, some sugar and tea, and a little jar of preserves; and Old Speckle's eggs were hoarded like diamonds. Grandma must not know. Spartan fare was not good for her, and she would have divided the last morsel of her goodies—would not have eaten a bit of them if she had supposed the others did not fare as well.

About the first of March Deacon Smith waded and wallowed through, somehow, and stood in the shed, caked and powdered with snow to the shoulders, while the boys brushed off the thickest of it with brooms. Then he went into the kitchen and solemnly unloaded the most amazing quantity of cookies, doughnuts, gingerbread, and *cake* with *raisins in it*, out of the many pockets of the two great coats that he wore. The boys looked. They almost forgot; for they had been weeks and weeks without sweets. Then they fled to the barn, and cuddled in a warm hay-nest till their mother called them in to take leave of their visitor. When he was gone Mrs. Mason divided the doughnuts, which were not good for Grandma, evenly between them, and ate her share honestly with the rest. With this welcome addition to their supplies they got through the time till the maple sap began to run, and one of the cows found a bossy-calf that generously divided his rations with his playmates, and the hens laid eggs enough to exchange for other things that were needed. And Grandma never knew a word about the hard times.

But of all the anecdotes that were passed on to me about Aunt Sophia Mason, as everybody called her, I think the one in regard to Benny's accident made the most vivid impression.

One summer the boys had to clear a certain piece of ground. The large timber had all been removed, and they could readily handle the saplings and underbrush that remained. But the clearing was some distance from the house, and there is always danger in chopping wood. So Mrs. Mason gave each of the boys a strong bandage rolled tightly around a wad of lint. Then she put them through a drill of make-believe accidents ever so many times before sending them out to work in the clearing.

Benny was needed to chop wood at the house one day, and when Nat and Rodney had shouldered their axes, with a fine manly air, and disappeared over the ridge, he fell to work at the woodpile before the shed. Perhaps he hurried too fast, for he wanted to finish the task his mother had set him as soon as possible, in order to work with his brothers; but axes will glance sometimes in the hands of veteran wood-choppers. Benny's ax glanced that morning, he never knew why or how, and laid open the side of his bare foot.

"Oh, mother, *mother!*" he screamed, bounding into the kitchen, "I've cut my foot! It's bleeding awful!" and, seizing her apron, he tried to drag it off to wind around his foot.

"There, there, Benny! Don't make such a fuss." The voice was exactly as usual. "It's lucky you did it here instead of out yonder in the clearing. Where's your bandage? Sit down and do it up the way I showed you."

Benny sat down obediently, and snatched the roll of bandage from his pocket.

"Quiet, Benny! Don't lose the pins."

He stuck the two large pins in a crack between the boards of the floor, for he had been told not to lay them down.

"Now the lint. Put it in the cut, Benny."

The boy had never seen blood run like that—in little spurting jets, and there was such a lot of it. The puddle was stealing away across the floor, and his mother had to pull three braided rugs out of the way. He could smell it, too, and it made him deathly sick. His hands faltered; the bandage dropped in a loose coil; the wad of lint fell from his slackening grasp.

"Oh, mother! You do it up. *I* can't."

He looked up appealingly. Was that his mother, with blazing, wrathful eyes, so white that her face shone, two terrible

lines between the black brows gathered in an ominous frown? But more terrible than all was the calm mouth, quietly and accurately closed, not excitedly clenched and puckered; there was no occasion for excitement. How coolly she spoke!

"My son, must I tell your father when he comes home that you are a coward?"

The word stung like the cut of a whip. Benny shut his teeth hard, jammed the lint home, wound and wound the length of bandage around his foot, felt blindly for the pins, and stuck one of them solidly in place. Then he fell back; but he did not reach the floor. He was twelve years old, but his mother swept him to her bosom as though he had been a baby.

How she mothered him then! Her brave, brave Benny! Her own precious, splendid, manly boy! Other battles were fought and won in the years that followed, and their rewards were good to his soul; but when Benny was gray I heard him tell this story, and he declared that no reward for well-doing had ever seemed quite so all-sufficient as that generous outpouring of hoarded mother-love.

All of those boys became greatly distinguished men. Nat and Rodney went "out West," as their admiring former neighbors will tell you; and, seemingly without effort, just by being what they were, they won the highest honors in the gift of the great commonwealth where they lived and wrought. Benny became a great preacher, and he was regarded as easily first among the brilliant divines of a large city.

But sorrow came to him, and grief sat as a familiar guest at his fireside all the closing years of his life. He did his work faithfully to the end, though many times he must have set his hand to the present duty and accomplished it by sheer force of will, while the hot blood was pouring from gaping wounds in his soul, wounds such as only they of his own household could have inflicted, and he felt as he did when he bandaged that foot in the kitchen of the little old farmhouse among the cedars on the ridge.

Morning and Evening

By Bliss Carman

When the morning wind comes up the mountain,
Stirring all the beech-groves of the valley,
And, before the paling stars have vanished,
The first tawny thrush disturbs the twilight
With his reed-pipe eerie, calm, and golden—
The earth-music marvelous and olden—

Then good fortune enters at my doorway,
And my heart receives the guest called Gladness;
For I know it is that day of summer
When I shall behold your face ere nightfall,
And this earth, as never yet in story,
Ledge to hillcrest dyed in purple glory.

When the evening breath draws down the valley,
And the clove is full of dark blue shadows
Moving on the mountain-wall, just silvered
By the large moon lifted o'er the earth-rim,
At the moment of transported being,
When soul gathers what the eyes are seeing,

Sense is parted like a melted rain-mist,
And our mortal spirits run together,
Saying, "O incomparable comrade!"
Saying, "O my lover, how good love is!"
Then the twilight falls; the hill-wind hushes;
Note by note once more the cool-voiced thrushes!

HEROES of the SURF

By JOHN R. SPEARS

With pictures by CHARLOTTE WEBER

THIS is a story for a stormy night. For while the reader listens to the splash of the sleet and the howl of the gale, the men of the life-saving service—our heroes of the surf—in a procession that is almost unbroken, are patrolling the storm-swept beaches from Quoddy Head to Cape Fear, from Oswego to Duluth, and from Peterson's Point to the Golden Gate. And it is when the storm is most deadly—when the sands are slippery with ice, or clogged with snow—that the life-savers are most alert. In the annals of all the Nation there are no stories more full of interest than those of the men whose life is given to this work.

The story of the organized life-savers begins in 1786, when Noyes, the blind physician of Boston, invited some of his fellow-townsmen to the "Bunch of Grapes Tavern," and there induced them to organize the "Humane Society of the Commonwealth of Massachusetts," with the Hon. James Bowdoin as President. This Society was distinguished in various ways. On the desolate beaches of Massachusetts, beginning on Lovell's Island, in 1786, it built small huts in which people who escaped ashore from wrecked ships might find shelter, and in these huts it placed fuel, blankets, and food. It built lifeboats, and placed the first constructed at Cohasset, in October, 1807. It also gave rewards to every person who especially distinguished himself in saving human life.

This Society was composed of people who were the social leaders of the Commonwealth and of the Nation. Once a year a public meeting was held in some church, and after a sermon, the Society, with invited guests, visited the rescue huts on the islands in the harbor to see that the supplies were in order. This cruise was the chief social event of the year. The Legislature adjourned to attend it, and the harbor forts fired cannon in honor of the Society. Perhaps I may be permitted to observe, aside, that the chief annual social event of modern days in New York is not a meeting of a humane society.

The date at which a lifeboat was placed at Cohasset is notable, because it was not until seventeen years later (1824) that "The Royal National Institution for the Preservation of Life from Shipwreck" was organized in England. The people of Massachusetts led the civilized world by seventeen years in the organized work of this kind. I believe that the Chinese (heathen that they were) had well-organized life-saving stations floating on their rivers some hundreds of years earlier, but it is pleasant to think that Americans led all civilized peoples in this matter.

It is also pleasant to note that the Massachusetts Society gave medals to the heroes who risked life to save the shipwrecked—it appealed to and cultivated the love of honor. But, sad to relate, the people of Massachusetts had a monopoly of this kind of work in the United States for thirty years.

On the morning of Jauuary 2, 1837,

the bark Mexico, loaded with immigrants, drifted ashore on Hempstead beach, Long Island. The courageous people of that region, under the lead of Raynor Rock Smith, launched a fishing-boat, and, pulling through the mush ice that clogged the breakers, rescued seven men and a boy. The remainder of the ship's company, to the number of 115, were driven on deck by the water that filled the hold. When on deck, the spray turned to ice as it fell upon them, and they all perished while gazing at a huge fire that was kindled on shore.

No wreck has ever stirred the people as that of the Mexico did. A lifeboat, built by popular subscription, was placed on Rockaway Beach a few months later. Engravings portraying the scene were on sale from the Atlantic to the Mississippi. The story of the wreck was discussed in Congress ten years after it occurred, and on February 25, 1847, at the instance of Robert McClelland, of Michigan, an item of $5,000 was added to the Lighthouse Bill, in order to furnish "lighthouses on the Atlantic coast with means for render-

SURFMAN HATCH RESCUING THE SAILORS FROM THE SCHOONER MINCH

THE LIFEBOAT TAKING SAILORS FROM A WRECK

ing assistance to shipwrecked mariners." It is worth remembering, too, that when arguing in favor of the item, McClelland appealed solely to the humanity of his fellow-Congressmen. The appropriation, he said, "would save annually from fifty to one hundred lives. Was *this*, in the gentlemen's view, a matter of no importance?"

Congressman William A. Newell, of New Jersey, took up the idea in 1848, and on August 9, 1849, got a bill through Congress by which the sum of $10,000 was appropriated to provide "surf-boats, rockets, carronades, and other necessary apparatus"—such as had been found useful in Massachusetts—for the Jersey beach. A reference to the wreck of the Mexico was one of the arguments used to pass the bill.

In this way, by providing apparatus for the use of volunteer life-savers, the National Government began work in the storm surf. Ship merchants and seafaring people became greatly interested. With additional appropriations, boats were distributed freely along the coast. But in time the boats were found to be too heavy. Many had been placed where they could not be reached when most needed. Wrecks occurred between lifeboat stations (the Powhatan on April 15, and the New Era on November 13, 1854, for instance), and hundreds of lives were lost. It became apparent, eventually, that the system was little better than worthless; but in the meantime Congress had authorized the Treasury Department to employ a keeper for each regular station, on a moderate salary, and the politicians had found the keepers useful. Consequently the system remained alive, if moribund, until 1871, when it was reorganized. A superintendent (Sumner I. Kimball) was appointed, and in the course of a year crews of trained men were employed under salary at several stations.

Immediately the alongshore politicians proceeded to fill the crews with heelers. Men who could not handle an oar—cripples and degenerates even—were placed on the rolls; but by 1876 a non-partisan and merit-only system, established by the superintendent, prevailed, and from that time on the United States has employed thoroughly trained men to save life.

With the inauguration of the merit system the heroic deeds of the life-savers began. The annual reports of the service, published as separate volumes, number twenty-six. Bound in coffin black, and placed on a library shelf, their appearance is forbidding; but one may search the libraries of the world without finding twenty-six other volumes containing as many hero tales as do these reports of the United States Life-Saving Service.

Consider the story of Surfman Hatch, of the Cleveland crew, at the wreck of the schooner Minch, on the night of October 3, 1883. The schooner sank in shoal water off Cleveland, and after exhausting labor, lasting nearly all night, all the crew save two were taken from the icy fore rigging by means of the breeches-buoy. The two remaining men were in the mizzen rigging. It was impossible for the life-savers to go aft along the deck to the mizzenmast, because the deck was under water and the storm waves were sweeping across it. They could not go aft by means of the stays because there were no stays from the mizzen mast to the main. It was a case so desperate that all of the life-savers except Hatch gave it up in despair and went ashore.

But in those desperate conditions Hatch found his opportunity. Going over the stays to the mainmast, Hatch found that the mainsail had been lowered, and that the main boom was swaying to and fro with the roll of the schooner as each wave passed. He knew that the end of the boom passed close to the mizzen rigging. Working his way out on that boom, in spite of the wind, Hatch rose up as it swayed toward the lee rail, and, leaping into the night, caught the mizzen rigging. And he arrived just in time to save the two sailors there from falling overboard. By lending a hand and by rousing their courage, Hatch sustained the sailors until daylight came, when a line was fired to the mizzen rigging and all were taken ashore in the breeches-buoy.

When the schooner H. P. Kirkham was wrecked on the Rose and Crown shoal, fifteen miles out to sea from the Caskata station, Nantucket, on January 21, 1892, the off-shore gale that was raging was so fierce and the sea so ugly that an ocean-going tug, after steaming some distance out toward the wreck, turned back to port. But the Caskata life-savers launched forth

with their surf-boat, took off the crew of the Kirkham, and then, anchoring on the shoal, waited until the tide turned to start for home. It was a midwinter gale. Those who have seen the Nantucket shoals at such a time may be able to imagine the plight of these men in a boat that was now overloaded, but no one else can. Yet, to the surprise of the old whalemen of Nantucket, they reached home, and but one life-saver died from the effects of the exposure.

Then there was the wreck of the schooner A. B. Goodman, on the Diamond Reef, off Cape Hatteras. Two currents meet off Cape Hatteras, and the broken water on the off-shore bars in a whole-sail breeze only is enough to dismay an ordinary seaman; but when a gale rages, the swirling plunge of the surf is appalling even to stoutest hearts. As they looked away across those seas at the Goodman, the life-savers believed that death awaited them. One of their number was therefore chosen to remain on shore, and to him each of the others made his will orally. Then they pulled out to sea, and they saved the crew of the Goodman and themselves.

One of the most picturesque incidents in the history of the service on the Great Lakes occurred during the famous gale of November 17, 1886. The steamer Robert Wallace and the huge tow-barge David Wallace stranded at night in the breakers six miles east of Marquette, where the waves made a clean breach over them, and each wave left a coating of ice as it passed. The next day people of Marquette who braved the storm in order to look at the breakwater and the light-house that had been wrecked by the seas during the night saw the stranded vessels through rifts in the storm, and rescuers were soon on their way, with boats and ropes and materials for a fire.

These rescuers included some of the bravest and most experienced sailors of the lakes—vessel officers who had passed through wreck experiences themselves. With unsurpassed zeal they strove all day long to reach the wrecks, but the wind, and the clinging mush ice, and the curling breakers foiled them. Even a powerful tug that tried to approach from the sea failed, and the crews were left freezing on the crumbling hulks.

Finally, toward night, one man, Captain John Frink, remembered that a life-saving crew was stationed on the west side of the peninsula that projects into the lake half-way to Duluth. The life-savers were six miles from the town of Houghton, but Houghton was connected with Marquette by rail. Seeing that the people in the two wrecks would inevitably perish if left there much longer, Captain Frink went to the railroad station, wired to Houghton for a messenger to go after the life-saving crew, and then arranged with the railroad officials for a special train to bring the crew and their apparatus to Marquette.

It was 7:40 o'clock at night when a tug brought the life-savers through the driving blizzard to the dock at Houghton, but a train, with the safety-valve of the engine lifting, was in waiting, and a throng of men stood by to jump the apparatus to the car. In five minutes from the arrival of the tug the conductor leaped aboard the moving train, and it fled away at top speed, literally in a race with death. It was a race 125 miles long, and the tracks became clogged with snow, but the life-savers won. They arrived at Marquette at 11:30 o'clock, and, going to the beach, they drove their boat through the mush ice and reached the wrecks in time.

When the schooner J. O. Moss stranded four miles north of the Grand Point au Sable station, Lake Michigan, though a fierce gale was blowing, not a breaker, scarce a dash of spray, reached the shore. For the surf was covered and weighed down with mush ice—a vicious liquid, a sullen gray horror that heaves and rolls and grinds, but never splashes on the beach. To whatever it touches it clings in masses, yet Surfman Stillson waded shoulder-deep into the searing mass off the Lake Michigan beach that he might save a sailor who had tried to bring a line ashore from the stranded vessel. He came out clogged with ice, but he saved the sailor. It was not a singular case, however; many surfmen have done the same thing, though not all have escaped with their lives.

The first surfmen to lose their lives while striving to rescue a shipwrecked crew with National apparatus were John F. Jones and R. D. Parker, who were drowned at the wreck of the bark Tasso

WORKING A PRIMITIVE BREECHES-BUOY THROUGH THE SURF

on the Jersey beach in 1856. The first to lose their lives in the reorganized service were the Jones Hill crew on Currituck beach. They were trying to rescue the crew of the bark Nuova Ottavia, stranded March 1, 1876, and were upset by the sailors who jumped on them in a mob as soon as the surf-boat came to the wreck. All these life-savers (seven in all) were lost.

From that time until March 17, 1902, when the crew of the Monomoy Station were lost on Handkerchief Shoal, the list of the dead who have lost their lives in efforts to save others has grown from year to year. A summary of the statistics for eighteen years shows that " the self-righting boat lost one life to every 136 saved, the surf-boat one to every 158 saved."

One might write an article solely on the shore perils of the surfmen, for they are

knocked down and even tossed about by the hurricane gusts that they have to face, while on more than one occasion the sea has invaded stations, and in one case on record a crew climbed into their boat and rowed out of the station on the back of a wave that crushed open the station doors and left them no other resource.

It is a strenuous life that the men of this service live—most strenuous. Scores of vessels are warned away from reefs by the danger signals of the night patrol men every year. Hundreds of people are rescued from stranded vessels every year. One may ask, as did Congressman McClelland, "Is *this* a matter of no importance?" To that may be added the less important statement that property worth millions is saved from the wrecks with the aid of the life-savers.

RUNNING OUT THE LIFEBOAT

After All, What is the Sunday-School?

By the Rev. John H. Vincent, D.D.

IT is the Church co-operating with the Family and the Pulpit in wisely conducted conversations with individuals in the attempt to illustrate and apply the teachings of the Holy Scriptures. It is not a place for "preaching." It is not a place for the critical study of Scripture as literature. It is not a school of sacred linguistics; nor of Christian apologetics. It is not a seminary of systematic theology. Its teachers should enjoy as far as possible the best fruits of all these fields of study; but the Sunday-school is simply one of the departments of church activity that supplements the work of the family and the pulpit in the application and enforcement of the ethical and spiritual contents of the Holy Scriptures, for the promotion of a true spiritual life; and all this through personal conversation, and by the most thorough teaching processes.

It follows from this theory of the Sunday-school that the teacher should be well prepared; that he should account himself an assistant pastor; that he should know as intimately as possible the parents and the home life of his pupils. And these pupils he should know and love. His work being spiritual, he should be earnest and prayerful. To command the respect of his pupils and their parents, he should be a man of knowledge. He must be thoroughly social, since his work is chiefly conversational both in the class and in his pastoral calls. He must care for each individual, since his best work is with units. Their personal needs and peculiarities he *must* know.

A group of children, or youth, or adults in self-forgetting, absorbing devotion, as they engage in a free, fervent, practical conversation with their teacher on the theme of the day's lesson—this is a picture that fitly sets forth the simple, beautiful, and worthy mission of the Sunday-school.

Is the standard "not high enough"? I frankly confess that I know of no situation and service that require more knowledge, more resources, more tact, more earnestness.

May these church-conversation ministries be multiplied!

THE SLOVAK AND THE POLE IN AMERICA

BY EDWARD A. STEINER

THIRTY-FIVE years ago the crescent-shaped Carpathian mountains shut in their diverse Slavic families in complete isolation from one another and from the outer world. Only the young men who had been drafted into the king's army knew of that strange world which began at the margin of the village pasture and ended in some distant province of the empire. Railroads were a far-off wonder, the telegraph a myth or a mystery, and America farther away than heaven. About twenty-five years ago I saw the first Slavic emigrants returning to their native country from America; about a dozen stalwart men stepped from a third-class railway carriage at Oderberg, each one carrying a trunk trimmed with brass after the manner of the American trunk. A large delegation of peasants awaited the travelers, and had they stepped from Paradise they could not have been received with greater awe. Their trunks, their clothes, and, above all, their huge silver watches and heavy chains, were viewed by the crowd, which asked all manner of questions and received but scant replies, for our Slovaks were traveled men and rich, and could not be spoken to by every Yan, Martzin, and Pavel—the Slovak equivalent for Tom, Dick, and Harry. These first venturesome peasants came from the most impoverished and crowded portions of Hungary, populated by Poles and Slovaks, and the wealth they brought with them was real wealth, which incited others to leave home a while to gather the dollars on the other side of the Atlantic.

The wages in Hungary then were about fifteen cents a day, with long idle winters in which the "wolf" came very near the door of every mud hut in the village, and the report of about ten times as much a day, with bread, beans, onions, and even meat for daily diet, made the timid Slovaks bold enough to climb over the mountains which shut in their native valley to seek their Eldorado, America. The coal-mines of Pennsylvania, the steel-mills, coke-ovens, and limestone quarries of Ohio, needed their muscle, their patience, and their unvarying industry, and constant calls were made for new recruits, until the present number in this country is not far from 200,000 Slovaks and 300,000 Poles.

On board ship they are the most patient passengers, for hardships are not new to them, and the bill of fare, meager though it is, contains not a few luxuries to which their palates are strangers; if it were not for the seasickness, they would consider their ocean trip as much of a pleasure as do those of us who cross the sea for a wedding trip or a vacation. I have crossed the ocean with them ten times at least, and I have never heard a word of complaint, although their more refined traveling companions say much about their untidiness, rudeness, and other marks of semi-civilization. I have never seen one of them read a newspaper; only one man do I remember who read a book, and that was the prayer-book of the Greek Church. They leave their picturesque garb at home, and lie on the deck in all kinds of weather in all kinds of dress and undress, the women being barefooted even in winter. In conversation with the men I can never go beyond the facts that they are going to work, earn money, pay off a mortgage on a piece of land at home, or save enough money to send for Katchka or Anka to be their wedded wife. If the Slovak feels any great emotions when he reaches New York, he never expresses them; he is usually dumb from wonder and half frightened as he faces this new and busy world in which he will be but an atom or just so much horse-power. In spite of the contract labor law, he is billed to an agent in New York or taken to Pennsylvania, where his new life begins and too often ends in a coal-mine.

His home is one of many, and all alike are painted green or red—shells of buildings into which from fifteen to twenty people crowd, who are taken care of by one woman, whose husband may be the foreman of a gang and the chief beneficiary of their labor. Their competitors in the field of labor accuse them of filthiness, yet, after having walked through hundreds of these shanties, I can say that the report of untidiness among them is exaggerated; for the majority of homes are cleaner than their crowded condition would warrant, while there are not a few in which the floors are scrubbed daily, and fairly shine from cleanliness. Just as uncomplainingly as into the life on board ship, the Slovak fits into the new work, whatever it may be, and no animal ever took its burden more patiently than he does as he faces unflinchingly the hot blasts of a furnace or the dark depths of mines. He can be worked only in gangs directed by one of his number who has gathered a few crumbs of English, and who seasons them freely by those words which are usually printed in dashes. Such a thing as rebellion he does not know, as his whole past history testifies; in our strikes he is a very convenient scapegoat and not seldom a sheep led to deeds whose consequences he has not measured. In nearly every case of violence which I could trace and in which he took an active part, he was inflamed by drink which interested persons had given him.

He is considered by the tradesmen of his town to be their most honest customer, and one merchant who has dealt with the Slovaks for twelve years, who has carried them from pay-day to pay-day, and through strikes and lay-offs, told me that he had not lost one cent through them, while his losses on the other miners were from fifteen per cent. to thirty-five per cent.; and, with but slight variations, this is the testimony of all the merchants.

In no small measure this is due to their fear of law, for in Hungary every debt is collectible, and not even the homestead is exempt from the executioner. There is also no petty thieving in communities where they have lived for twenty years, and they have never been accused or even suspected of theft. As one common accusation against them is that they spend very little in this country and send most of their earnings abroad, I examined this

A TYPICAL POLISH LABORER OF BUFFALO

GOING HOME FROM MARKET

matter very carefully, interviewing every merchant and every class of merchants, the postmasters, and even the saloon-keepers, and they all agree that these people are fairly good customers. In visiting their homes I found that they are not lavish as to house-furnishings; the front room, which in the American household would answer for the parlor, is filled by the trunks of the boarders, and in a few cases has that beginning of American civilization, the rocking-chair. A stand with a white cloth cover holding a few knickknacks is a rarity, but exists in about five per cent. of the houses I have visited; carpets I have seen only twice, but the lace-curtain fashion has not a few imitators. Upon his bed the Slovak lavishes a great deal of money, making it his costliest piece of furniture, while his imported feather beds keep out entirely the more sanitary mattress and blankets. He does not stint himself in his food, as is commonly supposed, for he eats a good deal, although his steak, being cut from the shoulder, is cheap, and is always called "Polak steak." He eats quantities of beans, cabbage, and potatoes, and about eight dollars a month covers the board bill of an adult. He drinks too much, but drinks economically, preferring a barrel of beer for the crowd to the more expensive glass, and he carries a bottle in his hip pocket as invariably as the cowboy is supposed to carry a pistol. Instead of whisky he takes alcohol and water, which may, after all, be the same rose by another name. In buying clothing I am told that he buys the best which is fitted for his work and for his station, and to see him after working hours, cleanly washed and dressed in American fashion from the boots up to the choking collar, one would not suspect him of miserliness. He does save money, for out of an average earning of forty dollars a month he will send at least fifteen dollars to Hungary, and on pay-day the money-order window in the little post-office is crowded by these industrious toilers who have not forgotten wife, children, old parents, and old debts.

Many of them claim that they would buy houses in this country if they were assured of work, and in many places they plead that they cannot buy property because the company owns all the real estate and prefers to rent all the houses falsely called homes. The one thing

which divides the Slovaks and Poles, and which agitates them very much, is their religion, and they cling tenaciously to that form of Christianity in which they were born, regarding all other people as heretics and infidels. The Poles are all Roman Catholics; the majority of Slovaks belong to the same Church; a smaller number are in the Greek Church, while the fewest are Lutherans. Many of the Roman Catholics belong to the Greek rite, and are that portion of the Church in Austria which united with Rome after the division of Poland, and which was permitted to use its own Slavic ritual and retain its married clergy. Only a portion of the Greek Church entered this union, so that nearly every community has a number of Rus-

A TYPICAL POLISH WOMAN
From a photograph taken in her home.

sian Greeks, who look upon the Roman Greeks with a great deal of scorn. In Marblehead, on Lake Erie, where these Slovaks are engaged in the limestone quarries, this division was discovered after all the Greeks had built one church, that of the Roman Greeks. A few of the wiser ones who arrived in this country later were dreadfully shocked when they saw this, and in Peter Shigalinsky's saloon plans were made to gain possession of the church for the only true Greeks, the Russian; many pitched battles were fought, a long and fruitless litigation followed, and finally Peter Shigalinsky built next to his saloon a new church, whose orthodoxy is emphasized by one of the horizontal pieces of the cross slanting at a more acute angle than that of the Roman Greek church, in which of course there can be no salvation. Where they have no church of their own they worship with the English or Germans if they are Romanists, but in many cases the priests told me that they are not wanted and must keep to one corner of the building. There are not priests enough to shepherd them, and those they have are in many cases unfitted for the task. It is asserted that the Lutheran pastors are no better, and count for little or nothing in making these people Christians and citizens. Various denominations, notably the Congregationalists and Presbyterians, are engaged in the difficult work of evangelizing these people, and it is a gigantic task undertaken with little money, but wherever it is successful it means the winning of men for America and for the kingdom of God. They are naturally suspicious of strangers, but grateful for every kindness, and once a door is opened to their hearts it is never closed again. Unfortunately, their speech shuts them out from the touch with American people of the same community, but there are avenues of approach in which only one language is spoken—the language of love and kindness; one noble American woman whom I know ministers to them by nursing them and suggesting simple remedies when they are ill, and has thus become no small factor in their social and religious redemption. Thousands of such doors are opened which are closed to the professional missionary, although many men of common sense, or, as in many cases, women of consecrated common sense, have accomplished much, and are daily enlarging the kingdom of God on earth.

Of literature little or nothing enters the mining villages; a Slovak weekly comes to one or two homes and that is all. The Slovak lives an isolated life, sublimely ignorant of "wars and rumors of wars;" his breakfast is not spoiled by the glaring headlines of the daily paper, nor does the magazine or novel press upon him the problems of human society. He knows his camp, his mine, his shop, and though he lives in America and in the most busy States in the Union, his world now is not much bigger than it was when its horizon touched his village pastures. As yet he is not a factor politically, though the political "boss" finds him the best kind of material, for he is bought and sold without knowing it, and votes for he knows not whom. At Braddock, Pa., it was told me that he is sold first to the Democrats and then to the Republicans, and afterwards is naïve enough to come back to the Democrats and tell of his bargain, willing to be bought back into his political family. Like almost all foreigners, he is a Democrat by instinct or by association, one scarcely knows which, although he is usually anything that a drink of liquor makes him. I asked one his political faith, "Are you a Democrat?" "No, me Catholic—Greek, not Russian," was the reply. "What are your politics?" I asked a number. "Slovak," was the invariable answer. Not twenty per cent. of those I interviewed knew the name of our President, not two per cent. the name of the Governor of the State in which they were residing. The Slovak does not know the meaning of the word citizen, and the limited franchise in Hungary is exercised for him by those wiser than himself; he is just force and muscle, with all the roots of his heart in the little village across the sea, and with his brain wherever the stronger brain leads him. As a rule, he does not plan to remain in this country, and I doubt whether the number of those who expect to do so exceeds six per cent.

He is quiet and peaceable except on feast days or when Yanko and Katchka have their wedding day, and then you may hear the voice of the bridegroom lifted in a song about the "sweetheart he

A POLISH LABORER IN A DYE WORKS IN BUFFALO

is so glad to have and wouldn't sell to any one," while the hoarse violin, the squeaky clarionet, and the grunting bass-viol come in lingeringly, " No, not to any one, to any one." If you enter the house of the bride, you will find it full of sweltering humanity, while within a small circle a dozen couples dance a mazurka, up and down and down and up, while the bridegroom sings and the fiddler plays about the " sweetheart he is so glad to have and wouldn't sell to any one, no, not to any one."

They dance thus three days at least, the wedding having taken place after the first day's dancing; the ceremony is performed in the little Greek church, with

POLISH WOMAN SEWING IN HER HOME

At the right of the picture one can see the shrines of patron saints.

the whole mining camp as interested spectators. The priest who marries them has no easy task, as he has to move both bride and groom bodily from one place before the altar to the other and fairly squeeze the responses out of them. The ceremony over, the wedding dinner is served, and never in all the Carpathian mountains was there such feasting as there is in the Alleghanies. "Polak" steak, cabbage with raisins, beets, slices of bacon, links of sausages, sweet potatoes, and, "last but not least," the great American dish, conqueror of all foreign

tastes—apple pie. It is a glorious sight to see them eat, their faces buried in these unheard-of luxuries. Beer flows as freely as did milk and honey in the promised land, and again the little band plays, this time a new tune, and the bridegroom sings a new song.

"Beer oh! beer oh! beautiful beer,
And who then will drink of it
When I am down in the pit?
Beer oh! beer oh! who'll drink it then?"

While he is singing about the future and the crowd dances to this melancholy tune, the present takes care of itself, as barrel after barrel is emptied, until the pyramids of Egypt have small rivals in those built entirely of empty beer-barrels in the Pennsylvania mining town. Many of the drinkers fall asleep as soundly as Rameses ever did after he was embalmed, while others are making ready for the end of the feast—the fight, for "no fight, no feast" is the proverb. Somebody calls a Slovak a Polak, or vice versa; some young man casts glances at some young maiden otherwise engaged—and the fight is on. I have never discovered just the reason for the fight, and one might as well search for the cause of a cyclone or for the eruption of Mont Pelée, but the results are nearly the same: furniture, heads, and glasses all in the same condition—broken; everybody on the ground like twisted forest trees, while one hears between long black curses the peaceful snores of the unconscious drunk. The next day and the next the programme is repeated, and this is the Slovak's only diversion, unless it be a saint's day, when history repeats itself and he once more practices his two vices, drinking and fighting. Sexually he is virtuous, and no scandal taints these mining camps, where one woman cooks for fifteen or twenty men, who respect her as the wife of one man, while she respects her own virtue and would fight if necessary to remain loyal to her husband. There is much coarse, indelicate talk and much crudeness, but among no other foreigners is there such virtue.

The Pole who emigrates to this country comes from nearly the same region as the Slovak, and lives very much the same life, although in many things he is his superior. He has greater self-assertion, is not so submissive to the Church, chafes

A FINE POLISH CHURCH IN BUFFALO
It stands out in marked contrast to the dwelling-houses of the Polish laboring peop'

much under restraint, has more of a literature in America, and calls himself an infidel as soon as he begins to think. In Chicago over 100,000 Poles live near the stockyards, engaged in menial tasks, yet not a few of them have gained positions of trust and influence. Politically they, too, are herded, and vote as Poles and not as Americans. I became acquainted with a saloon-keeper on Ashland Avenue in Chicago, who conducts a dance-hall, shoe store, lumber-yard, and real estate office in connection with his saloon, and who is said to control five thousand Polish votes. I tell his story in nearly his own words. "I worked in the stockyards until I said to myself, You big fool, go in the saloon business, and make money big; so I went to the beer-brewer and told him, and he gave me a corner, and put a mortgage on it. One barrel of whisky and one barrel of beer I had, and I sold all kinds of drinks out of them. I told the boys to come in and dance on Saturday night, and they came; one day a big policeman came into my saloon and say, 'Sam, have you got a license?' and I said, 'None of your business,' and he wanted to shut me up, so I went to the alderman, and he shut him up, and he come round no more."

In this dance-hall there is a fight every Saturday night, and a Polish fight is less harmless than that of the Slovak. This is the low water mark of the Poles in Chicago, but these Poles are not altogether fair examples, for there are fine representatives of that race in this country, men and women of culture, but they are rare and far removed from this class, which needs them and which could be influenced by them. In Detroit an American Protestant layman has thrown himself into the work of uplifting this mass of 40,000 Poles socially and spiritually, and the small measure of success which he has met so far is due only to the fact that small means are at his command. America has a Slav problem, but not a Slav peril, unless no leaven is introduced into this mass, which is in greater need of it and more prepared for it than we think.

The Day's Work

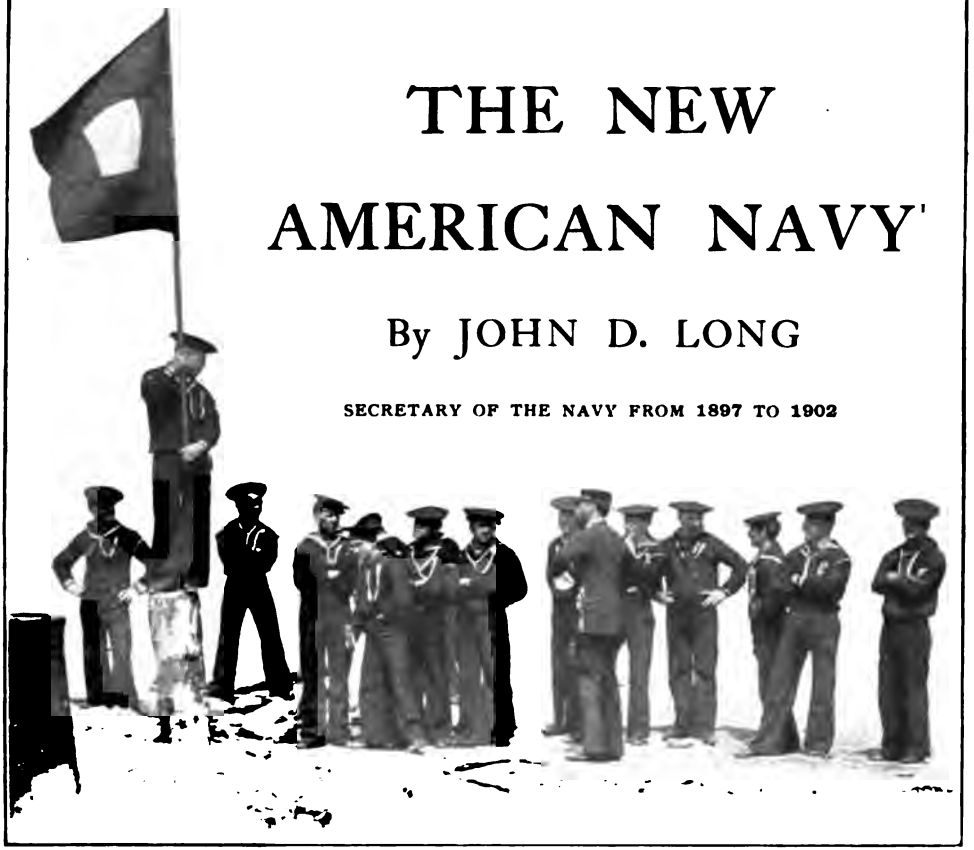
By Charles P. Cleaves

The sun's gold path has crossed the sky;
  Beneath the orchard's glowing haze
A lone bee takes his last flight home;
  The day has passed as other days.

The ship swings to the waiting dock,
  A boy climbs to the tapering mast;
From factories grim beneath the hill
  Gaunt streams of workers straggle past.

The orchard's fruit has riper grown,
  The bee has stored the clover's sweet;
The boy's heart beats with manlier tone,
  The weaver's web is more complete.

What I have done none can undo,
  Though slowly wrought with trace of pain—
By hand or heart, by speech or thought,
  By irksome toil that seemed in vain.



As I have learned, so now I am—
  The hand more skilled, the soul more free;
The truer thought, the kindlier heart—
  So God and man have fashioned me.

The fresh breeze draws through chanting trees,
  The twilight's music steals about;
The peace of God falls as the dew.
  I sit and watch the stars come out.

THE NEW AMERICAN NAVY[1]

By JOHN D. LONG

SECRETARY OF THE NAVY FROM 1897 TO 1902

WIGWAG DRILL BY THE SIGNAL CORPS

PREPARING FOR THE WAR WITH SPAIN

CUBA projected a sinister shadow across the foreign relations of the United States at the time when William McKinley was inaugurated President, March 4, 1897. Rebellion had raged in the island for years. The sound of the crack of its rifles and the swish of its machetes reached across the sea and grew more and more audible in the ears of the great Republic which for more than a century has been the ideal of freedom to all oppressed people.

Throughout the United States were manifested deep sympathy for the insurgents and a general wish for their success in their struggle. This feeling was intensified by the inhumane and barbarous methods of warfare employed by Spain to crush the revolt, and by the injury to American citizens and their industrial and commercial interests attendant upon the destructive operations of both insurgents and Spaniards. Responding to the loudly expressed demand of the people for some action on our part, President Cleveland, on April 4, 1896, tendered to Spain his good offices for the pacification of the island. The national pride of the Castilians in the integrity of their possessions rejected the offer. The note of the United States, however, had hardly reached the Spanish Government before our House of Representatives, answering the National insistence, concurred, by an almost unanimous vote, in a Senate resolution recognizing the belligerency of the Republic of

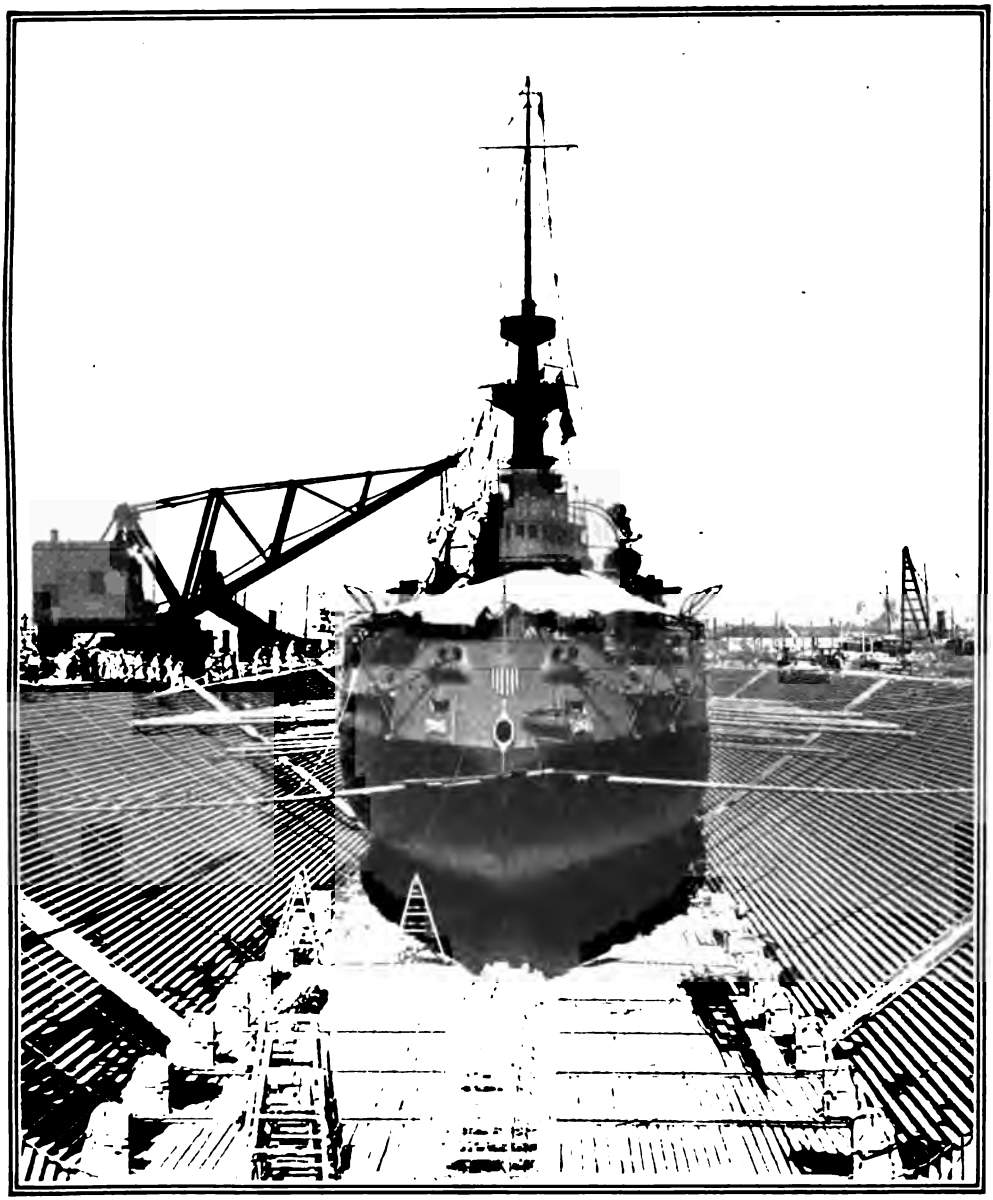
Cuba. As they lacked the attributes of belligerents, President Cleveland declined to grant the insurgents recognition of belligerency. When President McKinley entered the White House, he found the Nation enthusiastic in the cause of Free Cuba, and the Congress feverishly seeking a means to further it.

With that infinite tact and diplomacy characteristic of President McKinley, he immediately addressed himself to the task of holding the people and their representatives in check, and at the same time accomplishing by negotiation the restoration of peace in disturbed Cuba, under conditions that would satisfy the just aspirations of the fighting patriots. He initiated his foreign policy with a declaration of amity toward all nations, which perhaps contributed to cause Spain to listen more considerately to the proposals submitted by John Sherman, as Secretary of State. The inaugural address of the President contained this significant statement:



"War should never be entered upon until every agency of peace has failed; peace is preferable to war in almost every contingency."

Judicious as were these words, they yet failed to restrain the Senate, and that body, in the extra session called to enact the Tariff Bill, passed a joint resolution in behalf of Cuban independence. The Republican House, less headstrong than the Senate, stood by the President, and, in spite of public clamor, refused to take action which at once would have precipitated war and which certainly would have gravely embarrassed the diplomatic correspondence then pending.

Looking back over the negotiations conducted with Spain, one cannot but remark the high plane upon which they were placed; how the nobility and prescience of McKinley made humanity and civilization the cardinal principles of his policy—protection of American interests secondary thereto. In dealing with the Cuban question he let no selfish desire for territorial aggrandizement taint the treatment he gave it. Spain was sovereign in Cuba; her rights as sovereign must be respected. The obligation which we, as a friendly nation, owed to her, no less than the necessity of preventing the reproach that we were assisting the insurrection, led President Cleveland to establish an extensive marine patrol of our Atlantic and Gulf coasts. The same reasons actuated President McKinley in continuing it. Filibustering expeditions reached Cuba, it is true, but, annoyed as Spain was, she found herself unable to substantiate the claim that the United States failed to observe that "due diligence" which international law requires of a neutral.

The revolution, known as the Ten Years' War, which began in Cuba in 1868, was brought to a close in 1878 only by the exhaustion of Spain and her rebellious subjects. When President McKinley and his Cabinet began the study of the Cuban question, the conclusion was quickly reached that a policy of exhaustion had been adopted alike by each party to the later conflict, the one to vindicate its sovereignty, the other to achieve independence. Spain had sought to crush the rebellion in its incipiency by quartering two hundred and fifty thousand men on the island. The effort was futile. Acquainted with the soil, acclimated and hardy, the Cuban volunteer demonstrated that he was a match for the soldier of the Peninsula. The sword proving ineffectual to suppress the insurrection, Spain resorted to the blunter weapon of starvation. The rural folk were compelled to abandon their homes. Males too weak or too old to have joined the insurgents were herded with women in camps of concentration where lack of food and unsanitary surroundings begot frightful mortality. A conservative estimate of the result of this method of conducting war has been put at half a million deaths. The country, rid of its residents, was laid waste by the torch. Determination to make the war expensive to Spain caused the insurgents to vie with her soldiers in the work of devastation. The island, upon which nature lavishes her richest bounty, was transformed into a smoldering desert in which want and misery stalked. Years of work and of American capital and industry had been necessary to lift Cuba from the enfeebled condition caused by the drain of the Ten Years' War; the revolution of 1895 was forcing it back to the unhappy state of 1878.

The unfortunate situation of the Cuban

THE OREGON IN DRY-DOCK

Preparing for her long cruise.

people and of American interests and investments in the island provoked the President to action. In the name of humanity and civilization, an earnest protest was offered against the inhuman tactics enforced, and demand was made that the war be conducted in accord with the military code of civilized nations. Small concessions were made to the just expressions of our horror, but the policy of concentration was only completely abandoned under the spur of our indignation. The right to care for its own is an inherent right of every nation. President McKinley obtained from Congress an appropriation for the relief of American citizens in Cuba brought to destitution and sickness by the devastation policy pursued in the

island. This money, judiciously expended, succored many who were starving. The good it wrought was an indication of the greater good which could be accomplished by affording relief to the victims of the reconcentration camps. On December 24, 1897, the eve of the birth of the Master who taught the blessed lesson of charity, President McKinley appealed to the American people to give of their plenty to the suffering Cubans. The response was generous. His own personal contribution, of which few knew, was far beyond his means to give. Distribution of the money and supplies collected caused immediate alleviation of distress, and thousands were saved from death. The President's action was humanitarian in conception and execution, as it was also specially characteristic of his own generous nature, but it was also internationally significant, for it marked the beginning of American intervention in Cuba.

Temporary amelioration of the condition of the Cuban sufferers was the immediate object of the Presidential appeal for contributions for their sustenance. Eradication of the evils in the political system of Cuba, which made such a condition possible, was the only remedy which could prevent its return. Moreover, the United States owed it to itself and to its people to insist upon the termination of a situation which was productive of disaster to American capital, industry, and commerce, which caused constant irritation and disturbance of domestic, social, and business affairs, and which menaced the health of the Nation through the danger of the introduction of infectious diseases from the reconcentration camps of the island. These obligations were far more pressing upon the President than, and in fact superseded, the obligation to respect the sovereignty of Spain. The first step in their observance was intrusted to General Stewart L. Woodford, of New York, who was appointed Minister to Spain. On September 18, 1897, General Woodford tendered to the Madrid Government, on behalf of the President, the most kindly offices of the United States. This offer was couched in language decidedly more emphatic than that employed by Secretary Olney seventeen months before. "I cannot disguise the gravity of the situation," General Woodford said, "nor conceal the conviction of the President that, should his present effort be fruitless, his duty to his countrymen will necessitate an early decision as to the course of action which the time and the transcendent emergency may demand." This was practically the text of the instruction given to General Woodford before his departure for his post, and carefully considered by the President and his Cabinet during the hot summer days of the preceding July.

Spain suffered a Cabinet crisis eleven days after the presentation of the American note, and a new Ministry was formed, with the Liberal Señor Sagasta as its President. Sagasta appreciated the power of the United States and the temper of our people. The note of General Woodford, our able Minister to Spain, was answered by the announcement that an autonomist government would be established in the island. The innovation was one that to the President and his Cabinet indicated a hopeful change of policy on the part of the Spanish Crown. But though autonomy was established in Cuba within limited areas and with evidence of good faith on the part of Spain, it promptly developed its insufficiency to restore peace to the belligerent island. Those loyal to Spain derided it; the insurgents contemptuously refused to accept it.

Americans must review these negotiations with a feeling of satisfaction, for they clearly show that every opportunity and ample time were given to Spain to meet the demands of our President, and to effect a settlement honorable and right to herself and her rebellious subjects. During the consideration of the notes exchanged, I was often struck by the concern manifested by President McKinley and his advisers of the Cabinet to be considerate of the susceptibilities of the Spanish people, and at the same time to attain the one object in view—the permanent pacification of Cuba. It was of vital importance that the Navy Department should be advised of every development in the negotiations, as the maintenance of the naval anti-filibustering patrol was in its charge, the protection of American life and property in foreign lands was the first duty of our men-of-war, and there was, finally, the

REAR-ADMIRAL MONTGOMERY SICARD
Of the Naval War Board.

REAR-ADMIRAL A. S. CROWINSHIELD
Of the Naval War Board.

probability that war—especially involving the navy—might be the ultimate result.

His conscientious view of the situation had deterred President Cleveland from sending a man-of-war to Cuban waters, though consular officers had not failed to call attention to the advisability of such action. American citizens had been arbitrarily thrown into jail, and one, Dr. Ricardo Ruiz, died in prison under circumstances which indicated that he had been foully murdered. Energetic representations made by the State Department during the Cleveland and the first few months of the McKinley administration resulted in the release of all Americans confined in Cuban prisons. Nevertheless, General Fitzhugh Lee, our Consul-General in Havana during both administrations, found his representations in behalf of American property and commercial interests hampered by the absence of a naval force, and the known determination of the prior administration not to order a warship to Cuban waters. In the first meetings of President McKinley's Cabinet consideration was given to the suggestion to despatch a man-of-war to Havana. But because it was desirable not to arouse the suspicion that the United States was applying pressure to Spain to compel acceptance of the President's proposals for the termination of the insurrection, it was decided to defer such action. Time, however, only accentuated the gravity of the Cuban situation, and there were indications that Havana might become the scene of disturbances anti-American in character. Such demonstrations, especially if directed against the American Consulate, could only have had conse-

CAPTAIN ALFRED T. MAHAN
Of the Naval War Board.

quences disastrous to the peace of the two nations. As a measure of precaution, therefore, President McKinley, in October of 1897, decided that a war-ship ought to be stationed within a short distance of the Cuban capital. Instructions were accordingly given to the second-class battle-ship Maine to proceed to Port Royal, South Carolina. Early in December she was ordered to Key West, with instructions to open communication with General Lee, proceed to Havana at such time as, on notice from him, conditions in that city should warrant, and to grant an asylum to American citizens should they appear to be in danger. The wisdom of this action was proven by disturbances which occurred in Havana on January 12, 1898, as a result of the hostility of the Spanish royalists there to the plan of an autonomic government. General Lee cabled to the State Department that uncertainty existed whether the Spanish Captain-General could control the situation, and advised that ships be prepared to move promptly. Obviously, there was but one thing to do. Through Minister Woodford and General Lee the Spanish authorities had been advised of the purpose of the United States to have its war-ships resume friendly visits to Cuban ports. Carrying out this decision, the Maine went to Havana, and the cruiser Montgomery to Santiago de Cuba and Matanzas. Spain affected to see an ulterior motive in this action, and declared that the presence of American war-ships would obstruct autonomy and cause disorder, but responded to the announcement of the purpose to despatch war vessels to Cuban waters by declaring her appreciation of the proposed visits, and stating that she would return the courtesy by sending Spanish ships to the principal ports of the United States.

Several reasons were responsible for the selecting of the Maine for service at Havana. She was a second-class battle-ship, really an armored cruiser, sufficiently powerful to impress the Spanish troops and loyalists, and at the same time capable of making a good defense in case of an attack by shore batteries and their supporting ships in the harbor. She was under an officer in whom the Department had confidence—Captain Charles D. Sigsbee, who had been ordered to command her in April, 1897. A few months before the Maine was sent to Key West, Captain Sigsbee had shown good judgment in avoiding in the East River, New York, a collision with an excursion steamer loaded with women and children. Captain Sigsbee's conduct in Havana demonstrated that the Department had justly estimated his character. He was as punctilious as the Spaniards in official courtesies. He diplomatically refrained from involving himself in Cuban politics. At the same time, he served as the eyes and ears of the Navy Department, and transmitted to it all the information he could collect concerning political and military conditions in the island.

When the Maine was ordered to Havana, it was not intended that she should remain for a long time. In the judgment of the medical officers of the Department, sanitary reasons forbade a protracted stay. Political necessity demanded, however, that the advantage gained by the despatch of a vessel should not be lost by her immediate withdrawal. General Lee expressed the opinion that conditions required the presence of a war-ship; that the retirement of the Maine and neglect to order another ship in her place would aggravate them, and that to counteract the Spanish estimate of our navy a first-class battle-ship should be sent in case the Maine were relieved, and with it a torpedo-boat to preserve communication with the Commander-in-Chief of the North Atlantic Squadron. General Lee's views prevailed. The Maine remained in Havana Harbor, and the torpedo-boat Cushing conveyed despatches to and from her to the Commander-in-Chief at Key West.

While representatives of the United States, diplomatic, consular, and naval, were according to Spain the courtesy due to a friendly nation, the Envoy of the Spanish Government in Washington, Enrique Dupuy de Lome, committed an unfortunate breach of etiquette and propriety. In a letter to a friend in Havana the Minister referred to the President in coarse and abusive terms. The letter, brought to light, was submitted to the State Department. The usefulness of its author ceased at once. His recall was demanded, but before the demand was presented he anticipated it by tendering

THE BROOKLYN—ONE OF THE FLYING SQUADRON

Photographed from the Brooklyn Bridge by Enrique Muller. Copyright, 1901, by Enrique Muller.

his resignation. Desire to preserve its agent from humiliation prompted immediate acceptance of the resignation, but the Spanish Government subsequently expressed regret and disclaimed the views expressed in the objectionable missive. Nevertheless, unjustifiable criticism of our President by the representative of Spain and the revelation he had made of Spanish insincerity aroused indignation and distrust, and added further irritation to a situation already brimful of dangerous possibilities.

The widening rift in the relations between the United States and Spain seemed to have no effect upon the treatment of the Maine by the Spanish authorities. Captain Sigsbee reported an evident inclination on the part of Spanish officials to limit their relations with him to those prescribed by official etiquette, but he experienced no discourtesy, and the Maine's arrival and stay produced no appreciable excitement. A few days later the vessel was made fast to the buoy designated by the captain of the port, from which she never moved. Captain Sigsbee, to show his good relations with the island, attended a bull-fight with some of his officers, but while returning from the exhibition a small printed sheet vehemently protesting against the visit of the Maine was placed in his hand. The following is a paragraph: "And, finally, these Yankee pigs, who meddle with our affairs, humiliate us in the last degree, and, for a still greater taunt, order to us a man-of-war of their rotten squadron, after insulting us in their newspapers with articles sent from our own home."

As circulars containing unexecuted threats against the life of General Lee had been frequently received by that officer, no attention was paid by Captain Sigsbee to the paper delivered to him; nor was it possible of belief that Spain, with many noble traditions, could descend to the depth of authorizing the destruction of the ship of another nation, with which she was still at peace, lying peacefully within one of her harbors. Captain Sigsbee had naturally taken precautions for the care and safety of his command, without making his action offensively obvious to the Spanish authorities, but his procedure related entirely to internal administration and could not extend to external surveillance. Spain's international duty required her to protect the Maine from outside injury. The same duty imposed upon the United States the preservation from harm of the Spanish cruiser, the Vizcaya, during her visit to New York. Though the Vizcaya lay in New York Harbor immediateiy after the destruction of the Maine, she rested in perfect security, guarded—unnecessarily—by tugs and launches, and she sailed undamaged to ultimate destruction in battle on the south shore of Cuba.

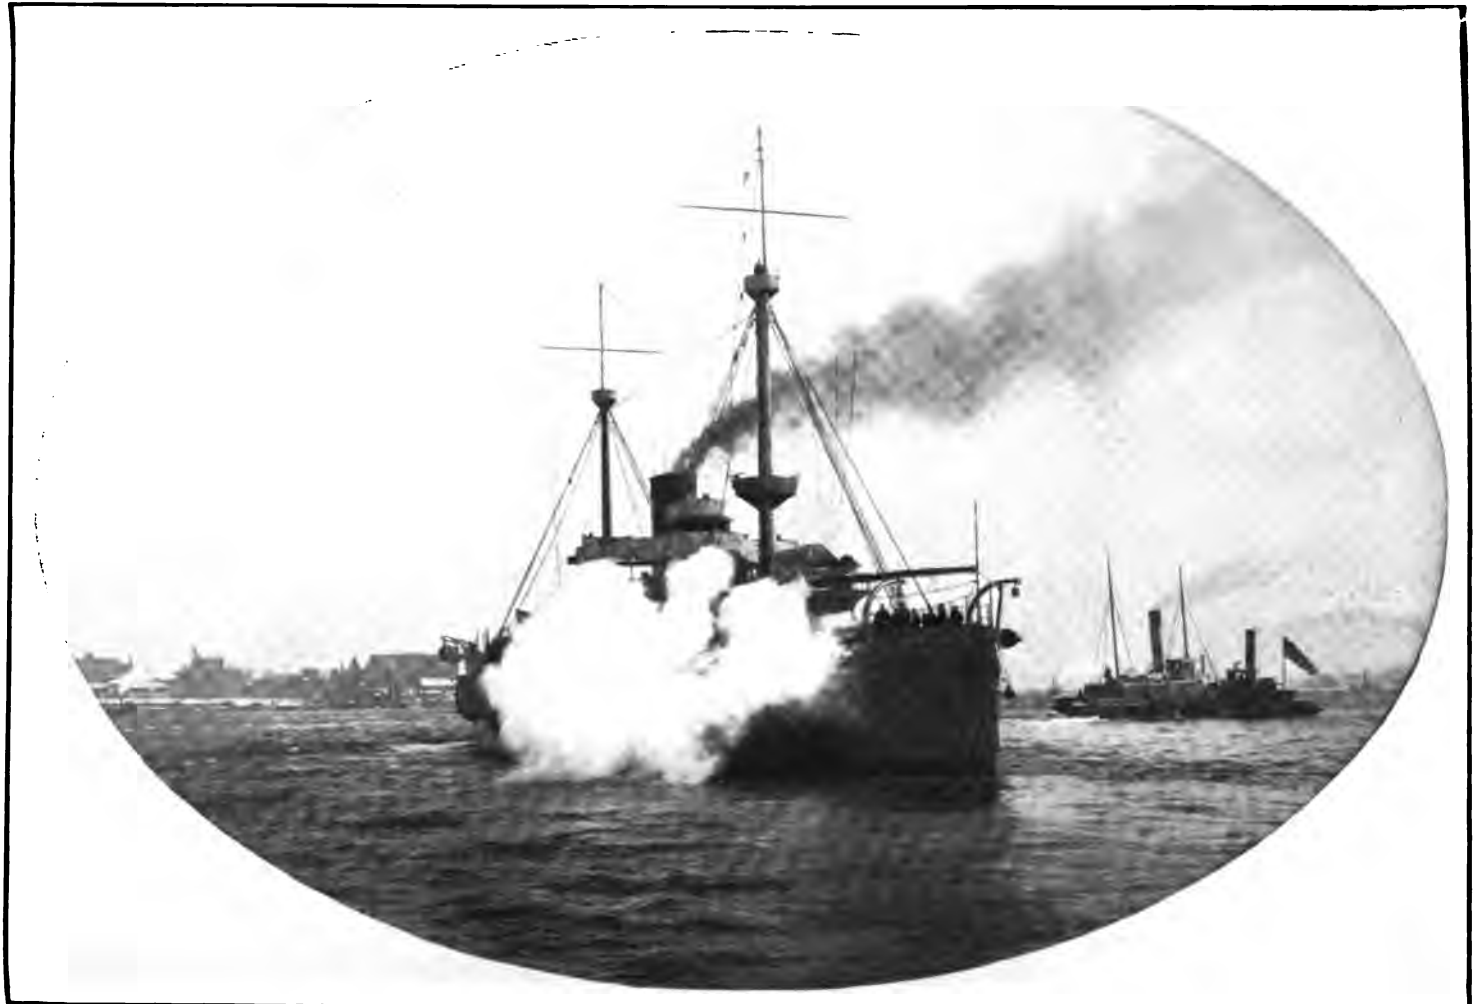
CAPTAIN W. H. BROWNSON



Who went abroad to purchase ships for the war. He is now Superintendent at Annapolis.

The Maine was blown up at forty minutes past nine in the evening of February 15, 1898. Two officers and two hundred and sixty-four enlisted men lost their lives in this catastrophe. I was awakened about two o'clock on the morning of February 16, by a despatch from Captain Sigsbee—shall I ever forget it, or the gentle hand that brought it?—briefly announcing the appalling disaster. It was a supreme moment, and that telegram was a spark that fired an explo-

sion of popular feeling throughout the country far more pregnant of death and destruction than the explosion of the Maine. The bright representatives of the press were at my door, and the news was swift upon the telegraphic wires. Commander Francis W. Dickins, Acting Chief of the Bureau of Navigation, was at once sent for and directed to notify the President. It was manifest that the loss of the Maine would inevitably lead to war, even if it were shown that Spain was innocent of her destruction. Time was necessary, however, to enable completion of our preparations for conflict. From every point of view hasty action was inadvisable. The President desired to give the civilized world no ground for criticising the American Republic. His policy had not changed from that declared eleven months before. He sought to preserve peace, but to be prepared for war in case it was forced upon him. In his despatch Captain Sigsbee had suggested that "public opinion should be suspended until further report." This advice from the commanding officer of the destroyed vessel was taken by the country to refer to the suspension of its opinion as to the responsibility of Spain for the act, and was followed in that spirit. With admirable poise, but with unrelenting determination to avenge an injury if it had been done them, the people, after the first outburst of horror and indignation, sternly and deliberately awaited the verdict of the Naval Court of Inquiry which had been ordered to make a full and thorough investigation. Appreciating the grave consequences apt to ensue from its decision, the personnel of the Court was selected with the utmost care. Captain William T. Sampson, commanding the battle-ship Iowa, was named as President; Captain French E. Chadwick, commanding, and Lieutenant-Commander W. E. Potter, executive officer of the New York, were appointed members, and Lieutenant-Commander Adolph Marix was ordered as Judge Advocate. These officers had high professional standing, and the President and his Cabinet believed that their findings would be accepted. Captain Sampson had served as Chief of the Bureau of Ordnance and as head of the torpedo station at Newport. He was, therefore, well qualified to determine the question whether an internal or external explosive agent had destroyed the Maine. Prior to assuming command of the New York, Captain Chadwick had occupied the office of Chief of the Bureau of Equipment.

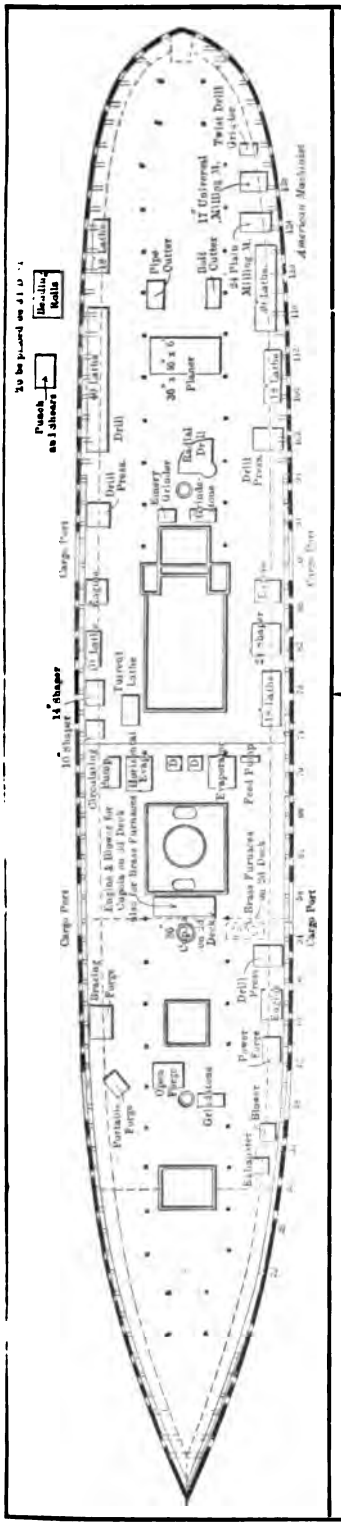
THE TEXAS, IN WAR PAINT, STARTING FOR THE WAR

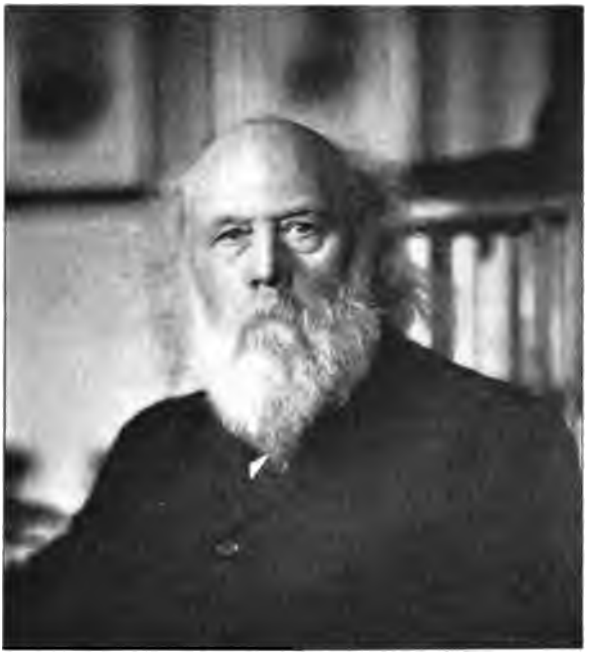
He was an expert in all matters relating to coal and electricity. Lieutenant-Commander Potter was an officer of technical experience and calm judgment. Lieutenant-Commander Marix had been executive officer of the Maine, and was familiar with the details of her structure and organization.

Conscious of the awful responsibility placed upon her by the destruction in her harbor of a friendly man-of-war, particularly one flying the flag of the United States, Spain at once gave assurance of sincere sympathy for the American Nation. The Queen Regent, whose attitude seems always to have been considerate, personally expressed profound horror and regret. The Spanish Government conveyed its condolence through our Minister Woodford at Madrid, and its Chargé d'Affaires at Washington. Governor-General Blanco and the Ayuntamiento of Havana declared their grief. From every nation and from every quarter messages of sorrow were received. The world was shocked by the disaster, and was prepared to hold the authors of it, if they could be discovered, to strict accountability. Spain's situation was most delicate. Her honor and her position in the family of nations were jeopardized by the investigation which the United States had set on foot. She proposed that a joint inquiry be made. The adoption of this proposal was impracticable. Then Spanish officers thought to throw obstacles in the way of our independent inquiry. A sharp protest ended this procedure. The wreck of the Maine was closely inspected by wreckers and divers and United States naval officers. Their discoveries and the evidence of survivors of the Maine and of persons who witnessed the explosion were heard by the court. On March 21 Captain Sampson and his associates submitted their report to the Department. They found that the Maine had been destroyed by the explosion of a submarine mine, but responsibility for her destruction was not specifically placed upon any person or persons. Unable to obtain a joint investigation, Spain ordered an independent one, which ascribed the catastrophe to internal causes. Spain subsequently suggested that an international court be convened to inquire into the Maine's destruction. The United States accepted neither this suggestion nor the Spanish findings. Immediately upon the receipt of the report of the Sampson court, Spain was advised of its character, and informed that the President did not permit himself to doubt that her sense of justice would dictate a course of action suggested by honor and the friendly relations of the two Governments. However, the soon-following declaration of war terminated all negotiations in regard to the Maine. The mystery of her loss yet remains to be solved, but the facts will some day come to light, and it will probably be found that, so far as the Spanish Government itself was concerned, it was innocent of the design, though it is possible that some of its subordinates may have been responsible for the fact.

The destruction of the Maine severely aggravated the situation and precipitated the crisis. The certainty that war was inevitable in case Spain failed to grant generous concessions to the insurgents had caused the Navy Department for some time to maintain the navy on a semi-war footing. The measures to prepare the service for conflict were, as far as possible, of a nature not calculated to arouse public anxiety. Premature disclosure might have jeopardized pending negotiations; and it is a fact that unwise publications materially hampered the President and the Department in dealing with the Cuban question. As quietly, however, as it could be done, preparations were made. Ships under construction were completed and immediately commissioned; those undergoing repairs were finished and added to the fleet. The several squadrons, particularly those of the North Atlantic and Asiatic Stations, were required to engage in evolutions and target practice, so that, when confronted with an enemy, they would be able to maneuver as a unit, and shoot with judgment, rapidity, and precision. Plans of operations against Spain were devised, and all information regarding the Spanish navy that could be obtained was collected and considered in its various relations to hypothetical war situations.



With the further development of the war cloud our preparations assumed larger proportions. Beginning with January 11, 1898, instructions were cabled to commanders-in-chief of the several squadrons



to retain in service men whose terms of enlistment were about to expire. The North Atlantic Squadron and a torpedo-boat flotilla were sent to the Florida drill-grounds. The gunboat Helena, *en route* to the Asiatic Station, was stopped at the Azores, subsequently was ordered to join at Lisbon the San Francisco and Bancroft, which comprised the European Squadron, and, after the destruction of the Maine, was brought to Key West. The Bancroft accompanied the Helena to the United States, putting in at Norfolk for repairs, and again saluted her on the Cuban blockade. The South Atlantic Squadron, consisting of the Cincinnati and the Castine, which were at Montevideo, was advised on January 17 that affairs were much disturbed in Cuba, and that it should, without causing comment, proceed to Para, Brazil. Two days after the destruction of the Maine the Squadron was directed to proceed north from Para, and reached Key West on March 26. The Wilmington, which had been assigned to the South Atlantic Station, was caught by cable at Guadeloupe, and diverted to La Guayra. She dropped anchor in Key West Harbor on the same day on which the Cincinnati and Castine arrived. The Annapolis, which was cruising in the West Indies, was also ordered to Key West. In this way the Department mobilized within ninety miles of Cuba a fleet ready, upon declaration of hostilities, to establish a blockade of the principal ports of the island, and to do battle with the hostile squadron of the Peninsular Kingdom whenever it should appear.

In preparing for war the Department did not confine its attention to the Atlantic Ocean. Commodore George Dewey, Commander-in-Chief of the Asiatic Station, was directed to assemble his squadron, with the exception of the unseaworthy Monocacy, at Hongkong. The Olympia, his flagship, had been ordered home for repairs, but this order was revoked as the certainty of war loomed upon the horizon. The cruiser Baltimore was at Honolulu. The Mohican, at Mare Island, was ordered to convey to the Baltimore a large quantity of ammunition, and after its transfer the Baltimore started at once to join Commodore Dewey at Hongkong, who was thus amply supplied with ammunition from the beginning. The battleship Oregon, which was at Bremerton, Washington, early in March, was directed to proceed to San Francisco and receive ammunition. On March 12 she was ordered to prepare for a long cruise, and on March 19 she started on that voyage back around the Horn which will be famous so long as the American Nation takes pride in gallant deeds. The gunboat Marietta, which was at San José de Guatemala, was ordered to precede the Oregon and arrange for coal and otherwise facilitate the battle-ship's passage to Key West.

Thus were the regular squadrons mobilized and augmented. New squadrons were formed. The armored cruiser Brooklyn, which was on detached service in the Caribbean Sea when the Maine was destroyed, was ordered from La Guayra to Hampton Roads, where were assembled the battle-ship Massachusetts, the second-class battle-ship Texas, and the commerce-destroyers Minneapolis and Columbia. These ships comprised the Flying Squadron which was held in readiness to defend any point on the American coast or to assail a port of Peninsular Spain. Though the Department felt assured that the West Indies were to be the theater of military operations, some of the Atlantic coast cities and towns were nervously excited over the possibility of an attack by a Spanish man-of-war, and to allay alarm the Northern Patrol Squadron, under Commodore Howell, was organized on April 20. The San Francisco, brought home from Europe, was made the flagship of this squadron, and attached to the flag were the cruisers Prairie, Dixie, Yankee, and Yosemite. The Columbia and Minneapolis and two auxiliary cruisers, Badger and Southery, were also from time to time attached to this squadron. It turned out that there was never any real need for its organization, although it patrolled the coast northward, and it was finally disbanded and the vessels comprising it assigned to more pressing duty.

The Department early appreciated that the work cut out for the navy was too comprehensive for it to perform without considerable augmentation. The Secretary had exhausted his legal authority in enlisting men and apprentices over and above the quota allowed by law. There

THE VULCAN OFF SANTIAGO IN SEPTEMBER, 1898

was not sufficient money, however, with which there was authority to buy material. On March 9 Congress, therefore, gave to Spain, and other powers not inclined to regard our policy with friendly eyes, a striking indication of our potential strength. It appropriated $50,000,000 of the ample funds in the Treasury "for the National defense." To show the confidence of the people, irrespective of political affiliation, in our President, this appropriation was placed at his disposal, to be spent in his discretion—which discretion he extended to his Secretaries. The President made allotments to the Navy Department which, in the aggregate, amounted to $29,973,274.22, all of which, with the exception of $618,447.17, was expended by it. Congress subsequently appropriated $25,000,000 for an emergency fund to meet unforeseen contingencies, and $3,000,000 for the organization and enrollment of the United States Auxiliary force. There was thus given to the Navy Department, for use at its discretion in strengthening the navy, the sum of $57,973,274.22. Of this amount there was unexpended on November 15, 1898, $25,056,131.21—practically the whole emergency fund, and more, which unexpended balance, of course, remained in the Treasury.

CAPTAIN JOHN R. BARTLETT

In command of the Coast Signal Stations during the War with Spain

All the money disbursed by the Department was honestly spent and every purchase made in good faith. Even before Congress granted its appropriation for National defense, the Department had given consideration to the question of purchasing foreign men-of-war. The navy list of every nation likely to sell had been scanned. Reports were obtained in regard to war-ships nearing completion in the private ship-yards of Europe. Captain W. H. Brownson had been sent abroad to pursue inquiry and initiate negotiations of purchase. Mr. Charles R. Flint, of New York City, through his large maritime connections, was also helpful. The Department swarmed with agents of foreign firms anxious to make sales to the United States. Sight was not lost of the fact that Spain, too, was anxious to buy, and that it was more desirable that we should pay a high price for a ship than to permit it to be incorporated into her service. As a result of the efforts of the Department and its agents, two protected cruisers, the Amazonas and the Abreu, both building at Elswick, England, for Brazil, also the gunboat Diogenes, belonging to the Thames Iron Works, of England, and two torpedo-boats, were purchased. These vessels were christened the Albany, New Orleans, Topeka, Manly, and Somers, respectively. The New Orleans and Topeka did excellent service in Cuban waters during the war; the Manly was attached to the auxiliary defense squadron at New York; the Albany was retained in England, not having been completed, until after the war.

The difficulty experienced in adding war-ships to the navy when the country was on the eve of hostilities shows the danger and folly of a policy which trusts to the last moment to make preparation. It was soon evident that foreign governments were not disposed to bring upon themselves the protest of Spain by selling vessels to the United States for hostile use against her, and practically the only Power which served us in this respect was Brazil, which authorized the sale to us of the Amazonas and the Abreu. In view of the inability largely to add regular men-of-war to the service, it became neces-

sary to improvise war vessels. Ninety-seven merchantmen were purchased and transformed into auxiliary cruisers, gunboats, and colliers; five vessels, one the City of Pekin, of the Pacific Mail Steamship Company, and four, the St. Paul, St. Louis, New York, and the Paris, were chartered from the International Navigation Company; one iceboat and two yachts were loaned to the Department, and fifteen revenue cutters, four lighthouse tenders, and two United States Fish Commission vessels were transferred from their especial departments to the Navy Department.

PHOTOGRAPH BY PURDY

REAR-ADMIRAL FREDERICK RODGERS

President of the Board for inspecting newly acquired war-ships.

The labor of purchasing vessels devolved to a great extent upon the office of the Assistant Secretary, and Mr. Roosevelt and Mr. Allen were successively efficient in procuring ships for the service and rendering other valuable service. Several hundred vessels were offered to the Department, some at extortionate prices. Little political pressure was applied to force purchases. Some American owners displayed far more greed than patriotism. Before competition became active, no doubt the Department paid a higher price than the vessels would have brought at private sale, and in one or two instances there was rank extortion; but when the honor and safety of the Nation were at stake, and time was of the greatest importance, and the ships must be had at any cost, the Department could not go without them. Once, however, the need of the Department became generally known, competition between shipowners grew energetic, with the result that vessels were obtained at reasonable prices. All the ships acquired were first inspected by a Board of which Captain Frederick Rodgers was President, or by special Boards, and the officers comprising them performed their duties with fidelity and care; thus the Department was assured by expert report that every vessel purchased was properly built and fitted to perform its part in the war.

The acquisition of vessels was followed by their transformation into war-ships. The Bureau of Construction and Repair utilized its plants at navy-yards and private ship-yards to convert them. The ships were strengthened to withstand the shock of discharge of guns, woodwork was ripped out, batteries installed, and they were docked and painted and supplied with proper equipments. The construction plants at five navy-yards, which in January, 1898, employed 2,200 men, furnished work for a maximum of more than six thousand during the war. Few of the vessels purchased had evaporators or distillers, appliances essential to continued service afloat, or proper outfits of engineering stores and tools, and many of them required overhauling in their steam departments. The Bureau of Steam Engineering performed this work satisfactorily and expeditiously. One novelty which Rear-Admiral Melville, the Engineer-in-Chief, introduced into the service was a floating steam engineering plant—a floating blacksmith shop. The vessel so transformed I named the Vulcan, and her service in North Atlantic waters showed the great value of having such an establishment attached to a fleet engaged in offensive operations. The Bureau of Equipment supplied auxiliary vessels with complete outfits of rigging, canvas, galleys and cooking utensils, boat supplies, anchors, chains, electric supplies, searchlights, binnacles, compasses, sextants, chronometers, charts and other instruments and appliances of navigation, sails, awnings, hammocks, bags, and many other articles. The best indication of the quantity of

supplies it distributed is furnished by the report made on the distribution charts. Up to the time when the preparations for war began, the quarterly output of navigation charts in time of peace rarely exceeded 6,600. During the Spanish emergency the division of Chart Construction issued 43,910 copies of charts. The Bureau of Equipment was also charged with the purchase and transportation of coal. Rear-Admiral Bradford, Chief of this Bureau, urged before the declaration of war that coaling stations be established in the vicinity of the passages about the Antilles, but this proved impossible, and the most that could be done was to direct the Bureau of Yards and Docks to construct a station at Dry Tortugas, off the coast of Florida, capable of storing twenty thousand tons of coal, which, however, was not ready for service during the war. Unable to establish coaling depots, the Department turned to the coasting fleet, which submitted numerous tenders for the transportation of coal. When war was declared, but one firm was prepared to carry out its proposal. Coal was vital to the success of naval operations, and steamers were purchased and transformed into colliers and armed and manned with naval crews. As indicating the state of efficiency reached in the matter of coal transportation, attention may be called to the fact that on one occasion 40,000 tons of coal were afloat at Hampton Roads ready to be sent at an hour's notice to any point the Department should designate. The Department was also confronted with the problem of supplying the ships with fresh water for steaming purposes, and it was necessary to purchase water, though the effort was made to meet this want by converting large steamers into a distillery and a tank-ship.

Five hundred and seventy-six guns were placed on board the vessels transformed into men-of-war. Besides purchasing many of these guns, the Bureau of Ordnance contracted for and obtained prompt deliveries of large quantities of powder, projectiles of all kinds and calibers, fixed ammunition, and small arms. To meet the demands of the service, the contractors were compelled to increase their plants and work without intermission. As a result of several years of study and development, a purely smokeless powder, combining the qualities of safety, permanency, and strength, was developed just prior to the war with Spain. The Department, however, was prevented by lack of time from supplying all its vessels with a complete outfit of this. In view of the fact that one gun using brown powder would with its smoke have nullified the effect of another of the same ship employing smokeless powder, it was necessary to move cautiously. Consequently, a few vessels only were given this kind of ammunition. The magazines of every ship in the service are now filled up with it. Just prior to and during the war the Bureau of Ordnance prepared gun-cotton mines and mining outfit; and launching-tubes for seventy-five torpedo-boats were manufactured.

The Bureau of Medicine and Surgery made preparations for putting the medical departments of the ships in condition to care for the sick and wounded; and the hospital ship Solace, under the Surgeon-General, was a creation of mercy to those who suffered from war and disease.

The Bureau of Supplies and Accounts, which was charged with making all purchases, upon requisition from the different bureaus, provided provisions and clothing for the men, and provided them with clock-work promptness. The lack of docking facilities, a matter of especial concern, was partially met for small ships by the purchase of the floating dock.

In other words, the splendid preparedness of our navy was due, as should never be forgotten, to the Chiefs of Bureaus who were charged with that duty in their respective lines. The attempt to persuade the country to a full appreciation of their desert in this respect is almost hopeless, for it rarely takes the pains to go beyond the picturesque and conspicuous, or to recognize in the plodding official at his desk and out of his uniform the man who does the work of preparation but shares none of the glory of achievement.

What has been stated shows that the Navy Department was buzzing with the activity of a beehive during the few weeks between the destruction of the Maine and the beginning of war with Spain, and this activity continued throughout hostilities. There has not yet been mentioned, however, one of the most important of the many important problems which con-

fronted the Department. That was the increase of the commissioned and enlisted forces of the navy to man the greatly augmented material. Additions to the crews of regular men-of-war were required. Crews were needed for the auxiliary navy and for vessels assigned to the defense of the coast other than those of the seagoing patrol squadron. These ships included monitors of the Civil War, converted ferry-boats, yachts, and tugs. Signalmen were required to operate the coast signal stations. At the time of the destruction of the Maine, the commissioned seagoing force of the navy consisted of 1,232 officers, distributed among the line, engineer, medical, and pay corps, and including chaplains and cadets undergoing their final cruise before graduation. The authorized enlisted force, including men and apprentices, numbered 11,750. Eight hundred and fifty-six volunteer or acting officers were appointed during the war, and there were innumerable applications of bright, eager, experienced men from all over the country, making the total commissioned force 2,088, while the enlisted strength reached a maximum of 24,123. More than 4,200 men were mustered in from naval militia organizations; while these had not had extended training and experience, their intelligence and education enabled them to make themselves quickly proficient in their duties, especially when associated with trained men-of-warsmen. The St. Paul, St. Louis, Harvard, and Yale were taken into the service on the condition that their crews should accompany them. They were placed under command of naval officers. The suggestion was made that some of the older organizations of the naval militia were competent to handle men-of-war, and Massachusetts, New York, Maryland, and Michigan were called upon to furnish officers and men for the Prairie, Yankee, Dixie, and Yosemite. The promptness with which the call was answered is shown by the fact that the New York naval brigade reported, uniformed, armed, equipped, and ready for duty, within six hours, and the Massachusetts naval brigade in similar condition within eight hours. Many of the organizations of other States, such as Illinois and others, were willing, with very creditable generosity, to be distributed among such ships as needed men.

In January, 1898, organizations of naval militia existed in fifteen States, and aggregated 200 commissioned officers and 3,703 petty officers and enlisted men. The Department had directed on March 23, 1898, the preparation of a scheme for a "mosquito flotilla" for coast defense, and while only a part of the plan had been worked out when war was declared, it was rapidly carried into execution, and the auxiliary naval force finally comprised 41 vessels, distributed so as to protect important strategic points of the United States, and to patrol the mine fields laid in the harbors.

As a part of the system of defense, a board was formed in October, 1897, to consider the establishment of coast signal stations. In accordance with the plan as outlined, arrangements for establishing the stations were made early in the following April. They were so complete that within two days after Rear-Admiral Sampson's fleet began the blockade of Cuba, competent quartermasters, signalmen, and telegraph operators from the naval militia organizations started for the points where the stations were to be located, and many had reported their arrival. In two weeks all the stations, save two located at points on the Florida coast difficult of access, had been equipped. These stations during the war, under the direction of Captain John R. Bartlett, then on the retired list, cooperated with those of the life-saving service, the United States Lighthouse service and Weather Bureau system. By this means the Department had constantly on the lookout for suspicious craft a force of 2,526 men, most of whom were experienced and provided with exceptional facilities for reporting the appearance of vessels. Though no hostile man-of-war was sighted, yet the value of this system was demonstrated by the promptness with which the battle-ship Oregon was reported off Jupiter Inlet, Florida, after her famous run around the Horn.

Any description of the work of the Department in preparation for war would be lacking in an essential particular if reference were not made to the Naval War Board. Lacking professional experience, and the navy being without a general staff, it was necessary that the Secretary should have the assistance of such a board.

Assistant Secretary Roosevelt, Captain A. S. Crowninshield, Chief of the Bureau of Navigation, Captain A. S. Barker, and Commander Richardson Clover, Chief of Naval Intelligence, were asked to act in that capacity just before the war began; but it was only a few days before Mr. Roosevelt, Captain Barker, and Commander Clover were called to more active service. Thereupon Rear-Admiral Montgomery Sicard and Captain A. T. Mahan, of the retired list, were appointed members with Captain Crowninshield of the Naval War Board, and they acted as such during the war. It was eminently fitted to co-ordinate the work of the Department and the fleet, and to keep a general surveillance over the larger strategical and technical questions which could not be dealt with by the commanders-in-chief of the several squadrons. Rear-Admiral Sicard had commanded the North Atlantic Squadron, and, just prior to the war, had been compelled, because of ill health, to relinquish this position. He was thus well acquainted with the peculiarities and capabilities of each ship and the state of efficiency of the entire squadron. Captain Crowninshield, as Chief of the Bureau of Navigation, was informed as to the distribution and movements of vessels. Captain Mahan is known as an authority on naval strategy. To my mind the Board possessed high intelligence and excellent judgment, and its service was invaluable in connection with the successful conduct of the war.

On April 15, four weeks before the arrival of Admiral Cervera's fleet in the Caribbean Sea, the New Navy was in condition to wage war against Spain. The ships of the service, which for months before had been scattered in all directions, engaged in works of peace, had been mobilized and fully manned and equipped and reinforced by auxiliary vessels. Two strong fleets were stationed at points which enabled both the assault of Spain's vital positions and the defense of our own shores. Four days before this state of preparedness was reached, President McKinley remitted the entire Cuban question to Congress. Released from the rein of the Executive, the two houses hastened to act. By the resolution approved April 20, 1898, Spanish withdrawal from Cuba was demanded. On the following day President McKinley issued instructions for the hostile movement of the fleets which, as a member of Congress and as President, he had aided in bringing into existence. And my telegram went to Acting Admiral Sampson to blockade Cuba at once.

All this time the enthusiasm of the country was at fever-heat. The Department was thronged with Congressmen and citizens at large. Tenders of service came in from every quarter; contributions of money were made, notably that of $100,000 by Miss Helen M. Gould. Private yachts were tendered. Officers whose duty held them on shore or at the Department pleaded with me with tears in their eyes for transfer on shipboard and to the scene of action afloat. The Cabinet was in frequent session, and daily and nightly those of its members who were more closely related to the war were in consultation with President McKinley at the White House. And all the while, with the tremendous responsibilities that lay on him, he kept his poise in serenity of spirit and clearness of judgment.

John Burns[1]

By Justin McCarthy

Author of "A History of Our Own Times," "The Story of Gladstone's Life," etc.

JOHN BURNS stands out a distinct and peculiar figure in the House of Commons. He is the foremost representative of that working class which is becoming so great a power in the organization of English political and industrial life. "Be not like dumb driven cattle," says Longfellow in his often-quoted lines—"Be a hero in the strife." The British workingmen were until very lately little better than dumb driven cattle; in our days and under such leadership as that of John Burns they have proved themselves capable of bearing heroic part in the struggle for great reforms. I can remember the time when the House of Commons had not in it any member actually belonging to the working classes. At that time the working classes had no means of obtaining Parliamentary representation, for it may be said with almost literal exactness that no workingman had a vote, or the means of obtaining a vote, at a Parliamentary election. The conditions of the franchise were too limited in the constituencies to enable men who worked for small daily or weekly wages to become voters at elections. In order to become a voter a man must occupy a house rated at a certain yearly amount, and he must have occupied it for a specified and considerable space of time, and there were very few indeed of the working class who could hope to obtain such legal qualifications. In more recent days the great reformers of these islands have succeeded in establishing what may be fairly described as manhood suffrage in these countries, and have also secured a lodger franchise, have established the secret ballot as the process of voting, and by these and other reforms have put the workingman on a level with his fellow-citizens as a voter at Parliamentary elections. My own recollection goes back to the time when the law in Great Britain and Ireland insisted on what was called a "property qualification" as an indispensable condition to a candidate's obtaining a seat in the House of Commons. I have known scores of instances in which clever and popular candidates got over this difficulty by prevailing on some wealthy relative or friend to settle legally on them an amount of landed property necessary to qualify them for a seat in the House. It was perfectly well known to every one that this settlement was purely a formal arrangement, and that the new and nominal possessor of the property was no more its real owner than the child who is allowed for a moment to hold his father's watch in his hand becomes thereby the legal owner of the valuable timepiece. In our days no property qualification of any kind is needed either for a vote at a Parliamentary election or for a seat in the House of Commons, and therefore the workingmen form an important proportion of the voters at Parliamentary elections and are enabled in certain constituencies to choose men of their own class to represent them in the House of Commons.

I have thought it well to make the short explanation of the changes which have taken place in the condition of the British workingmen during recent years as a prelude to what I have to say concerning that foremost of British workingmen, John Burns. It is only fair to say that the workingmen of these countries have made judicious and praiseworthy use of the new political powers confided to them, and have almost invariably sent into Parliament as the representatives of their class men of undoubted ability and of the highest character, men who win the respect of all parties in the House of Commons. Of these men John Burns is the most conspicuous. He has never, indeed, held a place in an administration, as two, I think, of his order have already done; but then John Burns is a man of resolutely independent character, and it would not be easy thus far to form even a Liberal Government which should be quite up to the level of his views on many questions of domestic and foreign policy.

[1] This forms the tenth of a series of articles on living British statesmen. Subjects already treated are: Mr. Balfour, Lord Salisbury, Mr. John Morley, Mr. Henry Labouchere, Lord Aberdeen, Sir William Harcourt, Sir Henry Campbell-Bannerman, and John E. Redmond.

John Burns would hardly be taken personally as a typical representative of the British workingman. He is short in stature, very dark in complexion and in the color of his hair, and a stranger seeing him for the first time might take him for an Italian or a Spaniard. His physical strength is something enormous, and I have seen him perform with the greatest apparent ease some feats of athletic vigor which might have seemed to demand the proportions of a giant. His whole frame is made up of bone and muscle, and although he is broadly and stoutly built, he does not appear to have any superfluous flesh. If I had to make my way through a furious opposing crowd, I do not know of any leader whom I should be more glad to follow than John Burns. But although Burns is physically made for a fighting man, there is nothing pugnacious or aggressive in his temperament. He is by nature kind, conciliatory, and generous, tolerant of other men's opinions, and only anxious to advance his own by fair argument and manly appeals to men's sense of humanity and justice. I have seen him carry a great big elderly man who had fainted at a public meeting and take him to a quiet spot with all the ease and tenderness of a mother carrying her child. But if I were an overbearing giant who was trying his strength upon a weaker mortal, I should take good care not to make the experiment while John Burns was anywhere within reach. He is an adept at all sorts of athletic sports and games, skating, rowing, foot-racing, boxing, cricket, and I know not what else. He is essentially a man of the working class, and has, I believe, some Scottish blood in his veins, but he is a Londoner by birth, and passed all his early life in a London district. He was born to poverty, and received such education as he had to begin with at a humble school in the Battersea region on the south side of London.

Now, I should think that a boy born in humble life who had in him any gift of imagination and any faculty for self-improvement could hardly have begun life in a better place than Battersea. The Battersea region lies south of the Thames, and is a strange combination of modern squalidness and picturesque historical associations and memorials. The homes of the working class poor stand under the very shadow of that famous church in Old Battersea where Bolingbroke, the high-born, one of the most eloquent orators known to English Parliamentary life and one of the most brilliant writers who adorn English literature, lies buried, and where strangers from all parts of the world go to gaze upon his tombstone. Everywhere throughout the little town or village one comes upon places associated with the memory of Bolingbroke and of other men famous in history. Cross the bridge that spans the Thames and you are in the Chelsea region, which is suffused with historical and literary associations from far-off days to those recent times when Thomas Carlyle had his home in one of its quiet streets. To a boy with any turn for reading and any taste for history and literature, all that quarter of London on both sides of the Thames must have been filled with inspiration. John Burns had always a love of reading, and I can easily fancy that the memories of the place must have been a constant stimulant and inspiration to his honorable ambition for self-culture. His school days ended when he was hardly ten years old, and then he was set to earn a living, first in a candle-factory and afterwards in the works of an engineer. Thus he toiled away until he had reached manhood's age, and all the time he was steadily devoting his spare hours or moments to the task of self-education. He read every book that came within his reach, and studied with especial interest the works of men who set themselves to the consideration of great social problems.

Burns naturally became very soon impressed with the conviction that all could not be quite right under a political and social system which made the workingman a mere piece of living mechanism and gave him no share whatever in the constitutional government of the country. At that time there was no system of national education in England, and the child of poor parents had to get his teaching through some charitable institution, or to go without any teaching whatever. So far as the education of the poorest classes was concerned, England was then far below Scotland, below Germany and Holland, and below the United States. As regards the political system, a man of the class to

JOHN BURNS

which John Burns was born had little chance indeed of obtaining the right to vote at a Parliamentary election, which was given only to men who had certain qualifications of income and of residence not often to be found among the working classes. The English system of national education is little more than thirty years old, and the extension of the voting power which makes it now practically a matter of suffrage is likewise of very modern date. It was natural that an intelligent and thoughtful boy like John Burns should, under such conditions, become filled with socialistic doctrines and should find himself growing into a mood of impatience and hostility towards the rule of aristocrats, landlords, and capitalists by which the country was then dominated. Soon after he had reached his twenty-first year he obtained employment as a fireman engineer on the Nigerian Africa and there he had a first experience of a new life and a life that was anything but

I have often heard it said that young men

employment in English steamers on the Niger he was known among his British companions as "Coffee-pot Burns," in jocular recognition of his devotion to total abstinence principles. He spent about a year in his African occupation, and during that time he had managed to save up a considerable amount of his pay, a saving which we may be sure was in great measure due to his practice of total abstinence from any drinks stronger than that which was properly contained in the coffee-pot. When he left Africa, he invested his savings in a manner which I cannot but regard as peculiarly characteristic of him, and which must have given to such a man a profitable return for his investment—he spent his savings, in fact, on a tour of several months throughout Europe. Thus he acquired an invaluable addition to his stock of practical observation and a fresh impulse to his studies of life and of books. He settled down in England as a working engineer, and he soon began to take a deep interest and an active share in every movement which had for its object the welfare of the classes who live by daily labor.

Obviously, there are many improvements in the condition of such men that could be brought about only by legislation, and John Burns therefore became a political agitator. His voice was heard from the platforms of great popular meetings held in and around London and in many other parts of the country, and he was one of the leaders of the great agitation which secured for the public the right of holding open-air meetings in Trafalgar Square. John Burns was meant by nature to be a popular orator. He has a physical frame which can stand any amount of exertion, and his voice, at once powerful and musical, can make itself heard to the farthest limit of the largest outdoor meeting in Hyde Park or Trafalgar Square. But he is in no sense whatever a mere declaimer. He argues every question out in a practical and reasonable way, and although he has some views on political and industrial subjects which many of his opponents would condemn as socialistic, there is nothing in him of the revolutionist or the anarchist. His object is to bring about by free and lawful public debate those reforms in the political and industrial systems which he regards as essential to the well-being of the whole community. The Conservative party in this country used to have for a long time one particular phrase which was understood to embody the heaviest accusation that could be brought against a public man. To say that this or that public speaker was endeavoring to "set class against class" was understood to mean his utter condemnation in the minds of all well-behaved citizens. We do not hear so much of this accusation in later days, partly because some of the very measures demanded by those setters of class against class have been adopted by Conservative Governments and carried into law by Conservative votes. But there was a period in the life of John Burns when he must have found himself denounced almost every day in speech or newspaper article as one whose main endeavor was to set class against class. John Burns does not seem to have troubled himself much about the accusation. Perhaps he reasoned within himself that if the endeavor to obtain for workingmen the right of voting at elections and the right to form themselves into trades-unions for the purpose of bettering their lives were the endeavor to set class against class, then there is nothing for it but to go on setting class against class until the beneficent result be obtained. So John Burns went on setting class against class, with the result that he became recognized all over the country as one of the most eloquent, capable, and judicious leaders whom the workingmen could show, and his unselfishness and integrity were never disparaged even by his most extreme political opponents.

A remarkable evidence was soon to be given of the solid reputation which he had won for himself in public life. A complete change was made by Parliamentary legislation in the whole system of London's municipal government. The vast metropolis which we call London was up to that time under the control for municipal affairs of the various parish boards and local vestries, each of them constructed on some representative system peculiarly its own, and none of them, it may be justly said, under any direct control from the great mass of the community. The greater part of the West End of London was under the management of a body known as the Metropolitan Board of

Works; the City of London was dominated by its own historic Corporation; each other district of the metropolis had its governing vestry or some such institution. Apart from all other objections to such a system, one of its obvious defects was that no common principle was recognized in the municipal arrangements of the metropolis; there were no common rules for their regulation of traffic, for the levying of rates, for the management of public institutions, and a Londoner who changed his residence from one part of the town to another, or even from one side of a street to another, might find himself suddenly brought under the control of a system of municipal regulations with which he was totally unfamiliar. Appeals were constantly made by enlightened Londoners for some uniform system of London government, but for a long time nothing was done in the way of reform. At last, however, it happened—luckily, in one sense, for the community—that the Metropolitan Board of Works, which ruled the West End districts, became the cause of much public scandal because of its mistakes and mismanagement, not to use any harsher terms, in the dealing with public contracts. The excitement caused by these discoveries made it impossible for the old system to be maintained any longer, and the result was the passing of an Act of Parliament which created an entirely new governing body for the metropolis. This new governing body was styled the London County Council, and it was to have control of the whole metropolis, with the exception of that comparatively small extent of municipal territory which we know as the City of London. The members of the new County Council were to be chosen, for the most part, as are the members of the House of Commons, by direct popular suffrage. Some of the foremost men in England became members of the new County Council. One of those was Lord Rosebery, another was Sir Thomas Farrer (who since became Lord Farrer), a third was Frederic Harrison, one of the most eminent writers and thinkers of his time, and another was John Burns, the working engineer. I mention this fact only to show how thoroughly John Burns must have established his reputation as a man well qualified to take a leading place in the municipal government of London. Since that time he has been elected again and again to the same position.

When the great dispute broke out in London between the dock-laborers and the ship-owners, John Burns took an active and untiring part in the endeavor to obtain fair terms for the workers, and by his moderation and judgment, as well as by his inexhaustible energy, he did inestimable service in the bringing about of a satisfactory settlement. The late Cardinal Manning took a conspicuous part in the effort to obtain good terms for the workingmen, and he was recognized on both sides of the dispute as a most acceptable mediator, and I remember that he expressed himself more than once in the highest terms as to the services rendered by John Burns during the whole of the crisis. Burns made one or two unsuccessful attempts to obtain a seat in the House of Commons—or perhaps, to put it more correctly, I should say that he consented, in obedience to the pressure of his friends and followers, to become a candidate for a seat. In 1892 he was elected to Parliament as the representative of that Battersea district where his life began, and he has held the seat ever since. In the House of Commons he has been a decided success. It is only right to say that the workingmen representatives, who now form a distinct and influential section in the House, have fully vindicated their right to hold places there, and have, with hardly any exception, done honor to the choice of their constituents. John Burns is among the foremost, if not the very foremost, of the working class representatives. He has won the good opinions of all parties and classes in the House of Commons. He has won especial merit which counts for much in the House—he never makes a speech unless when he has something to say which has a direct bearing on the debate in progress and which it is important that the House should hear. He is never a mere declaimer, and he never speaks for the sake of making a speech and having it reported in the newspapers. The House always knows that when John Burns rises he has some solid argument to offer, and that he will sit down as soon as he has said his say.

The first time I had the honor of becoming personally acquainted with John

Burns was in the House of Commons, shortly after his first election, and I was introduced to him by my friend Michael Davitt. I could not help feeling at the time that it was a remarkable event in one's life to be introduced to John Burns by Michael Davitt. Both these men were then honored members of the House of Commons, and both had for many years been regarded by most of what are called the ruling classes as disturbers of the established order of things and enemies of the British Constitution. Davitt had spent years in prison as a rebel, and Burns had been at least once imprisoned, though but for a short time, as a disturber of public order. Every one came to admit in the end that each man was thoroughly devoted to a cause which he believed rightful, and that the true and lasting prosperity of a State must depend largely on men who are thus willing to make any sacrifice for the maintenance of equal political rights in the community. I have had, since that time, many opportunities of meeting with Burns in public and private and exchanging ideas with him on all manner of subjects, and I can only say that the better I have known him the higher has been my opinion of his intelligence, his sincerity, and his capacity to do the State some service.

John Burns has made himself very useful in the committee work of the House of Commons. The House hands over the manipulation and arrangement of many of its measures on what I may call technical subjects—measures concerning trade and industry, shipping and railways, and other such affairs of business—to be discussed in detail and put into working shape by small committees chosen from among the members; and these measures, when they have passed through this process of examination, are brought up for full and final settlement in the House itself. It will be easily understood that there are many subjects of this order on which the practical experience and the varied observation of a man like Burns must count for much in the shaping of legislation. Burns has genial, unpretending manners, and although he was born with a fighting spirit, he is not one of those who make it their effort to cram their opinions down the throats of their opponents. Although his views are extreme on most of the questions in which he takes a deep interest, he is always willing to admit that there may be something to be said on the other side of the controversy; he is ever ready to give a full consideration to all the arguments of his fellow-members, and if any one in the committee can show him that he is mistaken on this or that point, he will yield to the force of argument, and has no hesitation about acknowledging a change in his views. Fervent as he is in his devotion to any of the great principles which have become a faith with him, there is nothing of the fanatic about him, and I do not think his enemies would ever have to fear persecution at his hands. There is no roughness in his manners, although he has certainly not been brought up to the ways of what is generally known as good society; and his smile is winning and sweet. He has probably a certain consciousness of mental strength, as he has of physical strength, which relieves him from any inclination towards self-assertion. I should find it as difficult to believe that John Burns countenanced a deed of oppression as I should find it to believe that he sought by obsequiousness the favor of the great.

John Burns was, it is almost needless to say, an opponent from the very beginning of the policy which led to the war against the South African Republics. When the general election came on, about midway in the course of the war, the war passion had come upon the country like an epidemic, and some of the most distinguished English representatives lost their seats in the House of Commons because they refused to sanction the Jingo policy. Many men who were rising rapidly into Parliamentary distinction were defeated at the elections by Imperialist candidates. Nor were the men thus shut out from Parliament for the time all members of the Liberal party. In some instances, although few indeed, there were men belonging to the Conservative, the Ministerial, side, who could not see the justice of the war policy and would not conceal their opinions, and who therefore had to forfeit their seats when some thorough-going Tory Imperialists presented themselves as rivals for the favor of the local voters. So great was the influence of the war passion that even among the constitu-

encies where the workingmen were strong there were examples of an Imperialist victory over the true principles of liberty and democracy. But the Battersea constituents of John Burns remained faithful to their political creed and to him, and he was sent back in triumph to the House of Commons to carry on the fight for every good cause there. He took part in many debates during the continuance of the campaign, and he never made a speech on the subject of the war which was not listened to with interest even by those most opposed to his opinions. He has the gift of debate as well as the gift of declamation, and he knows his part in Parliamentary life far too well to substitute declamation for debate. The typical demagogue, as he is pictured by those who do not sympathize with democracy, would on such occasions have merely relieved his mind by repeated denunciations of that war in particular and of wars in general, and would soon have lost any hold on the attention of the House, which is, to do it justice, highly practical in its methods of discussion. John Burns spoke in each debate on the war when he had something to say which could practically and precisely bear on the subject then under immediate consideration—a question connected with the administration of the campaign, with the manner in which the War Office or the Colonial Office was conducting some particular part of its administrative task, with the immediate effects of this or that movement, and in this way he compelled attention nd he challenged reply. I remember, for instance, that when the spokesmen of the Government were laying great stress on the severity and injustice of the Boer State's dealings with the native populations of South Africa, John Burns gave from his own experience and observation instances of the manner in which African populations had been dealt with by British authorities, and demanded whether such actions would not have justified the intervention of some European State if the conduct of the Boer Government, supposing it to be accurately described, was a justification for England's invasion of the Boer territory. Whenever he took part in the debate, he met his opponents on their own ground, and he challenged their policy in practical detail, instead of wasting his time in mere declamatory appeals to principles of liberty and justice which would have fallen flat upon the minds of those who held it as their creed that Imperial England was free to dictate her terms to all peoples of inferior strength and less highly developed civilization.

John Burns has fairly won for himself an honorable place in the history of our time. If he had done nothing else, he would have accomplished much by demonstrating in his own person the right of the workingman to have a seat in Parliament. One finds it hard now to understand how the English House of Commons could ever have been regarded as the representative ruling body of England, when it held no members who were authorized by position and by experience to speak for the working populations of the country. I mean no disparagement to the other representatives of the working classes when I say that I regard John Burns as the most distinguished and the most influential among them. Others of the same order have rendered valuable service, not merely to their own class, but to the State in general, since they came to hold seats in the House of Commons; some have even held administrative office in a Liberal Government, and have shown themselves well qualified for the duties. Not any one of them, so far as I can recollect, has ever shown himself the mere declaimer and demagogue whom so many Conservative observers and critics used to tell us we must expect to meet if the workingmen were enabled to send their spokesmen into the House of Commons.

I do not know whether John Burns has any ambition to hold a seat in some future Liberal Ministry, but I venture to think that if such should be his fortune, he will prove himself more useful than ever to the best interests of his country. He has never sought to obtain the favor and the support of his own order by flattering their weaknesses, by encouraging them in their errors, or by allowing them to believe that the right must always be on their side and the wrong on the side of their opponents. I fully believe that he has good and great work yet to do.

Books of the Week

This report of current literature is supplemented by fuller reviews of such books as in the judgment of the editors are of special importance to our readers. Any of these books will be sent by the publishers of The Outlook, postpaid, to any address on receipt of the published price, with postage added when the price is marked "net."

A B C of Stock Speculation (The). By S. A. Nelson. Published by S. A. Nelson, 16 Park Place, New York. 5×7 in. 232 pages.

We need hardly say that speculation is not an exact science, and that the man who knows least about it has in his ignorance a safeguard which he may well hesitate to throw away. Wall Street methods, terms, and ways of reasoning are here described clearly and evidently with thorough knowledge.

American Republic and Its Government (The). By James Albert Woodburn. G. P. Putnam's Sons, New York. 5⅛×8¾ in. 410 pages. $2, net.

Back to the Woods: The Story of a Fall from Grace. By Hugh McHugh. Illustrated. The G. W. Dillingham Co., New York. 4×7 in. 116 pages.

By the Ramparts of Jezreel. By Arnold Davenport. Longmans, Green & Co., New York. 5×7½ in. 388 pages. $1.50.

A long and grandiloquently written story based on the Scriptural story of Ahab.

Biblical and Literary Essays. By A. B. Davidson, D.D., LL.D., Litt.D. Edited by Professor J. A. Paterson, D.D. A. C. Armstrong & Son, New York. 5¼×8 in. 320 pages.

A few weeks since, the memorial volume containing a biographical sketch of Professor Davidson and some of his sermons was noticed in this column. The present volume is a fuller exhibition of his richly stored mind, at home in subjects as diverse as "Arabic Poetry" and "The Rationale of a Preacher." Deeply serious, Dr. Davidson can be sportive also at the expense of his American brethren in the work of the Revised Version, and sarcastic, too; *e.g.*, "In our day the number of sins has greatly diminished, and it is only particular classes that can fall into them. A clergyman may still be guilty of several; a trader, perhaps, of one; but an independent man of wealth or station cannot sin." Conservative enough he was, but would that all conservatives were as discriminating; *e.g.*, "The person who is not Christian is evil, but the nature which is not Christian may not be evil. It certainly is not perfect. But its products may be *good, because human.*" (The italics are ours.) The present exalted estimate of Biblical theology needs Dr. Davidson's judicious reminder that the principle of interpreting Scripture by Scripture must stop short of all forced reconciliations of opposing statements. Such antinomies he would state in their full strength and let them stand. "These opposite propositions in Scripture are usually akin to opposite principles in the human mind and in Providence, and our moral nature often demands their full statement. . . . Reflect," he adds, "that even in the economy of Providence no principles are carried to their full application, but there is an equipoise of forces." These essays are the work of a master.

Christian Science Cult (The). By J. J. Taylor, M.A., D.D. The American Baptist Publication Society, Philadelphia. 5×7¾ in. 40 pages.

Church and the Ministry in the Early Centuries (The): The Eighteenth Series of the Cunningham Lectures. By Thomas M. Lindsay, D.D. A. C. Armstrong & Son, New York. 5¾×9 in. 398 pages.

Reserved for later notice.

Coin of Edward VII. (A). By Fergus Hume. The G. W. Dillingham Co., New York. 5×7½ in. 284 pages.

Collegiate Church of Stratford-on-Avon and Other Buildings of Interest in the Town and Neighborhood. By Harold Baker. Illustrated. The Macmillan Co., New York. 5×7½ in. 95 pages. 60c.

This volume is so fully described by its title that it is only necessary to add that the work is very competently done, the old church receiving very full treatment, as do also Guild Hall, Guild Chapel, the Grammar School, and other historical or interesting buildings in Stratford. The book contains nearly sixty illustrations from photographs admirably reproduced.

Correspondence of the Colonial Governors of Rhode Island, 1723-1775. Edited by Gertrude Selwyn Kimball. In 2 vols. Vol. I. Houghton, Mifflin & Co., Boston. 6×9 in. 434 pages. $5.

The official correspondence of these early Governors naturally relates chiefly to the external affairs of the colony. The work of the editor, particularly the historical essay with which the volume is introduced, is well done.

Der Talisman. By Ludwig Fulda. Edited by Edward Stockton Meyer, Ph.D. Henry Holt & Co., New York. 4½×6¾ in. 171 pages. 35c., net.

Dwellers in the Mist. By Norman Maclean. The Fleming H. Revell Co., New York. 5×7¾ in. 284 pages. $1.25.

This is a collection of stories or character sketches relating to the people of the Hebrides—plain, homely, shrewd folk who still talk Gaelic and have many old ways of living and thinking. There is a good deal of "red-veined humanity" in these incidents of a minister's life among these people, and some episodes of dramatic force and passion. Mr. Maclean's work has individuality and reality.

Employment of Women in the Clothing Trade (The). By Mabel Hurd Willett, Ph.D. (Studies in History, Economics, and Public Law. Vol. XVI. Number 2.) The Columbus University Press, New York. 6×9½ in. 206 pages. $1.50.

French Commercial Correspondence. By Charles Glauser, Ph.D. Arranged and Adapted by W. Mansfield Poole, M.A. E. P. Dutton & Co., New York. 5×7½ in. 287 pages. $1, net.

Germany: The Welding of a World Power. By Wolf von Schierbrand. Doubleday, Page & Co., New York. 6×9 in. 376 pages. $2.40, net.

An important book on present conditions. Reserved for later notice.

Harmony of the Gospels (A). In the Revised Version, with New Helps for Historical Study. By John A. Broadus, D.D., LL.D. Revised by Archibald Thomas Robertson. (New Seventh Edition, Revised and Enlarged.) A. C. Armstrong & Son, New York. 6×8 in. 289 pages.

Heart of John Wesley's Journal (The). Edited by Percy Livingston Parker. Illustrated. Fleming H. Revell Co., New York. 5⅛×8⅛ in. 512 pages. $1.50, net.

In the delightful and eloquent "appreciation" reprinted in this volume as an introductory comment upon the Journal of John Wesley, Augustine Birrell declares that between the beginning and the end "there lies the most amazing record of human exertion ever penned or endured." He then proceeds to liken it to contesting an election, as the phrase is in England, for forty years. Two days, chosen entirely at random, may be taken as an example of the unremitting effort his life involved: these days are an Easter day and the following Tuesday. His first audience on those days he held in spite of the opposition of priests, until they came and drove the people away; the second audience he held in the street in competition with a cock-fight, to which the people had been thronging; and the third audience he held in spite of a storm of hail, "the greater part of them," he adds, "refusing his request even to cover their heads," and none going away until he had concluded his discourse. The record of these two days, which are typical of all, gives a glimpse not only of Wesley's telling power over men, but also of the secret of that power. This lay in a faith that was both simple and direct. In Wesley's case, at least, the style is the man. The simplicity and directness of Wesley's style can bear comparison with the greatest models of directness and simplicity—such as Defoe, Bunyan, the English Bible. In this fact is evidence, not commonly recognized, that the power of Wesley was not in that meretricious emotionalism that is frequently associated with the conduct of a religious revival. Wesley's entire Journal has never been published. Wesley himself made some selection for publication. The present volume is a selection wisely made from that selection; and is published this year in view of the bicentenary of John Wesley's birth. There is a brief introduction by the late Hugh Price Hughes. The volume contains a number of interesting illustrations, and is well indexed.

Hebraisms in the Authorized Version of the Bible. By William Rosenau, Ph.D. The Friedenwald Co., Baltimore. 5⅛×8¾ in. 283 pages.

This is an interesting and profitable book for students of our mother tongue. Specialists have observed the influence of the Bible on English speech. English-speaking people, whatever be now their case, have been in past time a "people of the book" only in less degree than Israelites; the Bible in their vernacular has been their most popular and familiar book. But many a Hebraism has thus passed into English, and, as Professor Moulton observes, the style of the Hebrew writers "has largely leavened the style of modern English." In the present work Dr. Rosenau, a pupil of Dr. Paul Haupt, exhibits this Hebrew element in the language of the English Bible; and it will seem surprisingly large to one not aware of it. Aside from the lexical and syntactical Hebraisms that are noted, those that will most attract the general reader are the proverbial Biblical passages in common use, the Biblical expressions in English literature, and the discussion of specimen expressions. A large part of the book is devoted to an alphabetical list of Hebraisms with their English equivalents, *e.g.*, "wise men who knew the times (Esther i. 13), *i.e.*, astrologers." Some of these have been modernized in the American Standard Edition of the Revised Version, *e.g.*, "sons of Belial" (1 Samuel ii. 12) is rendered "base men." Dr. Rosenau's interpretations are occasionally open to question, *e.g.*, "the living God (2 Kings xix. 4), *i.e.*, the invincible God." But his work is certainly a valuable adjunct to our apparatus for popular Bible study.

History of Pre-Clusian Botany in the Relation to Aster. By Edward Sanford Burgess. (Studies in the History and Variations of Asters. Part I.) Published by the Torrey Botanical Club, New York. 6×9 in. 447 pages.

Home Floriculture: A Practical Guide to the Treatment of Flowering and Other Ornamental Plants in the House and Garden. By Eben E. Rexford. Illustrated. The Orange Judd Co., New York. 5×7½ in. 310 pages.

This book and Mrs. Ely's "A Woman's Hardy Garden" (the full title of which will be found in its alphabetical place in this department) are both practical books, the first being written, as Mr. Rexford tells us in his introduction, for amateur floriculturists by an amateur floriculturist, for the purpose of providing a plain, practical, and easily understood handbook, based upon personal experience, which does not assume to be a short cut to complete knowledge, but to put the amateur in the way of dealing intelligently with plants, and on the path to as intimate and full acquaintance as he desires to make. Mrs. Ely's book is modestly described as dealing very briefly with a few shrubs, hardy perennials, biennials, and annuals of simple culture; but it is a book, by reason of its simple directness, its adequate knowledge, its very pleasant style, and its beautiful illustration, to tempt the reader, if he has not already yielded to the temptation, to make a venture in the difficult world of gardening. Mrs. Ely strikes the note of her whole treatment of the subject when she says that the love of flowers and of all things green and growing is with many people a kind of primal instinct which expresses itself under the narrowest possible conditions and with the fewest materials when it cannot find wider range To those who are possessed with this instinct this book comes with a singular touch of sympathy. It is the work of a born lover of flowers, and any one who has to deal with flowers knows that love has as much to do with their prosperity as knowledge, and that those who love flowers have a singular and at times almost magical way of

making them thrive. It is the diffusion throughout Mrs. Ely's book of this quality which takes it out of the class of simple books of direction and makes it personal and individual. She presents a great deal of information about proper times for planting, the regulation by numbers with reference to space and effectiveness, the protection of plants from snow, frost, and insects; in short, she writes about the garden as if she knew it by heart from its earliest to its latest stages; and she writes for the people who have not scientific knowledge, but who love flowers, and have therefore the first qualification for dealing with them successfully.

Laboratory Manual of Physics (A). By Henry C. Cheston, Philip R. Dean, and Charles E. Timmerman. The American Book Co., New York. 5×7½ in. 128 pages. 50c.

La Religion dans la société aux États-Unis. By Henry Bargy. Librairie Armand Colin, Paris. 4½×7½ in. 295 pages.

The author writes with an enthusiasm and a clearness that are both characteristically Gallic. He keeps the reader, if he is an American, in a continual state of pleased surprise at the really splendid qualities of a people who have succeeded in cultivating so fine a variety of religion. The fact is that the author of this very readable book can be clear and enthusiastic and yet very genuinely bent on saying the pleasant thing because he is willing not to qualify what he says. He selects certain traits that he finds in the religious life of America, and he concentrates his whole attention on these. And, as a matter of fact, the traits he has selected are those not only which he can praise, but also which we Americans like to have praised. M. Bargy begins by saying that all the churches of the United States have something in common, in contradistinction to their "Mother Church" of Europe—so much so that they form what might be called "the American religion." He points out the two chief traits of this "American religion." It is, on the one hand, social; it is a fraternal kind of Christianity; it has to do with the community life and the safety of the social fabric. On the other hand, it is human; that is, it lays emphasis on the practical rather than on the speculative and the so-called supernatural. He ingeniously maintains that these two traits mark the religion of America from Colonial times and have made of religion America's most original possession. He traces their development in different forms. He uses them as guides to the explanation of the Puritans, of Methodism, of the liberal movement and the Unitarians, of the type of Roman Catholicism peculiar to America, of the Society for Ethical Culture, of one or two notable churches (as St. Bartholomew's in New York and Berkeley Temple in Boston), and of the "religious peace," even between Christianity and the Jews, which, as a European, he finds remarkable on this side of the Atlantic. It decidedly strengthens one's faith in the soundness of American life to find this Frenchman discovering in what seems to us Americans very familiar and commonplace things proofs of fresh and vital religious life, even if one knows of a very different sort of religious life that is not mentioned at all.

Laurel Readers (The): A Primer. By W. N. Hailmann. Illustrated. C. C. Birchard & Co., Boston. 8½×7 in. 112 pages.

Literary Pilgrimages in New England. By Edwin M. Bacon. Illustrated. Silver, Burdett & Co., New York. 5½×8 in. 532 pages. $1.50.

Readers of Mr. Bacon's "Historic Pilgrimages" will find the same general methods here applied to New England authors, their homes and associations. In a measure the book is a compilation, but the material is deftly and pleasantly woven together, with plenty of anecdotes and talk about literary landmarks. We are sorry that the publishers thought it necessary to embellish the cover with the imaginary portraits of two very inane-looking literary pilgrims, and the printing of the cuts generally is far from satisfactory.

London Before the Conquest. By W. R. Lethaby. The Macmillan Co., New York. 5½×8¾ in. 217 pages.

This appeals to the antiquarian rather than to the general reader. It deals with topography, ancient bounds, the few remaining monuments of London before the Conquest, and similar recondite matters.

Loyal Traitors: A Story of Friendship for the Filipinos. By Raymond L. Bridgman. The James H. West Co., Boston. 5×8 in. 310 pages.

An impassioned anti-imperialist tract rather than a novel. In the earlier chapters, at least, the characters are merely pegs upon which to hang anti-imperialist facts and figures. When, however, the scene shifts from Boston to the Philippines, and the "loyal traitors"—two of them deserters from the American army—risk their all in the struggle for Philippine independence, some of them fighting in the Filipino ranks, the interest in the story is quickened, and continues to gain to the end. The heroes of the story not only identify themselves with the Filipinos, but with the irreconcilable faction which refuses to lay down its arms while foreign troops are within the islands.

Manual of Short Daily Prayers for Families (A). Compiled by Rev. Samuel Hart, D.D. Longmans, Green & Co., New York. 5×7½ in. 39 pages.

Man Visible and Invisible: Examples of Different Types of Men as Seen by Means of Trained Clairvoyance. By C. W. Leadbeater. Diagrams and Illustrations. John Lane, New York. 6×9½ in. 144 pages. $2.50.

This book tells how "a kind of film of rose-color covers the surface of the whole astral body," and gives pictures in colored plates of astral bodies of men, from the Maori to the lofty sort represented by one of the "Lord Buddha's" more advanced pupils! It is full of theosophical jargon which is designed to make great impression upon silly or shallow minds. The genuine army of books on psychical study are unfortunately discredited by the appearance of such a camp-follower in sham uniform.

Method of the Recitation (The). By Charles A. McMurry, Ph.D., and Frank M. McMurry, Ph.D. The Macmillan Co., New York. 5×7½ in. 359 pages. 90c., net.

Money and Banking: An Introduction to the Study of Modern Currencies. By William A. Scott, Ph.D. Henry Holt & Co., New York. 5½×8½ in. 381 pages.

Negro Artisan (The): Report of a Social Study Made under the Direction of Atlanta University, Together with the Proceedings of the Seventh Conference for the Study of the Negro Problem, Held at Atlanta University on May 27, 1902. Edited by W. E. Burghardt Du Bois. Atlanta University Press, Atlanta. 6×9 in. 192 pages. Paper bound, 50c.

No student of the race problem, no person who would either think or speak upon it intelligently, can afford to be ignorant of the facts brought out in the Atlanta series of sociological studies of the conditions and the progress of the negro. These annual publications have won repeated praise from the Southern History Association, and from other most competent critics at home and abroad. The present volume is a historical and statistical study of the American negro as a skilled workman. The hand of the skilled and thorough investigator is conspicuous throughout. The Atlanta idea, embodied in this series, is as valuable in its way as is the Tuskegee idea in its way. Each is a way toward the light and the blessings of the light.

New York State Department of Labor Reports: First Annual Report of the Commissioner of Labor. Fifteenth Annual Report of the Board of Mediation and Arbitration, 1901. Nineteenth Report of the Bureau of Labor Statistics, 1901. J. B. Lyon Co., Albany, N. Y. 5½×9 in.

Nuggets from a Welsh Mine: Selections from the Writings of Jenkin Lloyd Jones. Unity Publishing Co., Chicago. 5⅜×8 in. 127 pages.

These selections, brief paragraphs all, are classified under some fifteen heads, as the Home, the School, the Church, the City, Nature, Art, Religion, etc. Moral vigor and human sympathy, religious warmth, rational insight, and zeal for reality and truth are tersely and aptly expressed throughout.

One Divine Purpose (The); Through Evolutionary Processes Fulfilled in the Individualization of Substance, Life, and Intelligence in Man. By Meredith B. Little. The Glens Falls Publishing Co., Glens Falls, New York. 5½×8¼ in. 78 pages. 10c.

Oliver Goldsmith. By Washington Irving. (Longmans' English Classics.) Edited by Lewis B. Semple, Ph.D. Longmans, Green & Co., New York. 5×7½ in. 296 pages. 50c.

Of these two volumes, the latest additions to Longmans's English Classics, Irving's "Oliver Goldsmith" is edited with notes and an introduction by Dr. Lewis B. Semple; and, with the exception of the correction of a few typographical errors, the text remains as the author left it. A chronological table and suggestions for teachers are added. The three selections from the "Idylls of the King" are edited with notes and introduction by Miss Sophie C. Hart, of Wellesley College, whose introduction is in part biographical and in part descriptive of the poems. Both volumes are supplied with notes.

Paris Sketch Book (The). (Prose Works of William Makepeace Thackeray.) Edited by Walter Jerrold. Illustrated. The Macmillan Co., New York. 5×7¼ in. 356 pages. $1.

This volume carries still further towards completion the Dent edition of Thackeray, which The Outlook has already commended as possessing three valuable characteristics for the average reader—convenience of size, excellence of printing and binding, and an extremely low price. To this volume Mr. Walter Jerrold contributes a biographical note, giving some account of the articles in the Sketch-book, and Mr. Brock contributes a number of illustrations in his characteristic manner.

Path of Evolution Through Ancient Thought and Modern Science (The). By Henry Pemberton. Henry Altemus Co., Philadelphia. 5×7¾ in. 374 pages.

Under this title the author has sketched the story of the progress of human knowledge in many different lines. Mr. Pemberton is a highly intelligent layman in science and philosophy. He has read widely and thought wisely. His story of the growth of science is profitable reading for those who would obtain a bird's-eye view of its present field and reach.

Philadelphians (The): As Seen by a New York Woman. By Katharine Bingham. Illustrated. L. C. Page & Co., Boston. 4½×7 in. 227 pages. $1.25.

Pompeii of the West and Other Poems. By John Hall Ingham. The J. B. Lippincott Co., Philadelphia. 5×7¾ in. 173 pages. $1.25, net.

Quarterly of the Texas State Historical Association (The). Vol. V. July, 1901, to April, 1902. Published by the Association, Austin, Texas. 6×9 in. 370 pages.

St. Augustine and His Age. By Joseph McCabe. G. P. Putnam's Sons, New York. 5½×8 in. 516 pages. $2, net.

Reserved for later notice.

Sally Wister's Journal: A True Narrative. Illustrated. Ferris & Leach, Philadelphia. 5×8 in. 224 pages.

"Sally Wister's Journal" is the true narrative of a Quaker maiden's experiences with the officers of the Continental army in 1777 and 1778. Through the publication of such volumes as this we gain an insight into American society during critical periods which it would be quite impossible to gain from the sober histories. The present volume has been admirably edited, with notes, by Mr. Albert Cook Myers, who has also inserted many an interesting reproduction of portraits, silhouettes, manuscripts, and relics. The journal is addressed by its author to an intimate school friend, Deborah Norris, herself destined to become notable in later years. The two young ladies had apparently kept up a frequent correspondence until the British occupation of Philadelphia, when Sally's confidences to her friend took the form of a journal. It is graphic and dramatic, full of good humor and fun, acute and clever in describing persons and events, and now and then quaintly moralizing.

Selections from Latin Prose Authors for Sight Reading. By Susan Braley Franklin, Ph.D., and Ella Catherine Greene, A.B. The American Book Co., New York. 5×7½ in. 80 pages. 60c.

Short Method Christian Science (A). By Albert G. Lawson, D.D. The American Baptist Publication Society, Philadelphia. 5×7¾ in. 56 pages.

Some Actors on Our Lord's Passion. By Rev. Hermann Lilienthal, M.A. Thomas Whittaker, New York. 5×7½ in. 157 pages. 80c., net.

Special Method in the Reading of Complete English Classics. By Charles McMurry, Ph.D. The Macmillan Co., New York. 5×7½ in. 254 pages. 75c.

Story of a Motto and a Mark (The). By Walter Gilliss. Illustrated. The Gilliss Press, New York. 4×7 in. 42 pages.

Students' History of English History (A). By William Edward Simonds, Ph.D. Illustrated. Houghton, Mifflin & Co., Boston. 5×7¾ in. 483 pages.

Terra Cotta: A Study of Life in the Clay. By Alice McAlilly. Jennings & Pye, Cincinnati. 5½×8 in. 281 pages.

Theology of Christ's Teaching (The). By the Rev. John M. King, D.D. The Fleming H. Revell Co., New York. 6×9 in. 484 pages. $2.50.

Theologians may be divided into two classes—those who look at the Bible through the creed, and those who look at the creed through the Bible. By the latter only can Biblical theology be satisfactorily taught. Biblical theology, as expounded by the former, is only dogmatic theology in disguise. It is to the former, by far the more numerous class, that Principal King belonged. The varieties of Christian doctrine all grow out of the various interpretations of the Bible. Their germs all lie in the Bible, side by side. A truly Biblical theology must recognize this—must acknowledge the inclusive as well as the exclusive significance of Biblical statements. For instance, when Dr. King says of Christ: "He came to die. 'The Son of Man came . . . to give his life a ransom for many' (Matt. xx., 28)," he fails to see that the phrase "to give his life" includes his self-devotion from first to last to the great purpose of the deliverance of men from sin; he narrows its meaning to the final act of laying down the life which had been laid down daily in his work of deliverance. This is not Biblical theology, but rather creedal, of the evangelical Presbyterian type. This characteristic runs through the work, holding, as it does, that the historicity of early Old Testament narratives is established by Christ's use of them for the purposes of illustration, and also finding the end of the "world" (rather than of the "age," as in the margin of the Revised Version) in Jesus' discourses concerning the last things. Dr. King, however, was a man of power, and much beloved. His character and work, as sketched by Dr. Orr, attract both sympathy and warm esteem.

Unitarianism in America: A History of its Origin and Development. By George Willis Cooke. The American Unitarian Association, Boston. 5½×8½ in. 463 pages. $2, net.

The term Unitarianism may signify either a denomination, a group of theological doctrines, or a religious movement. There are some men who may be said to have participated in the great movement for liberalizing religious life and thought who do not hold to the theological ideas of Unitarians. There are some who may be said to hold to these ideas that are not within the Unitarian denomination. A history of Unitarianism to be complete cannot omit any one of these aspects of it, but it ought to make very clear the distinctions between them. There is nothing more vague and indefinite than a religious movement. It has no more set and visible limits than the tide. For that very reason many men who may be said to participate in Unitarianism as a religious movement should be called Unitarians only with very distinct and emphatic qualification. Denominational Unitarians, however, are very generous with their name, and have ever shown themselves ready to apply that name to men to whom it belongs only in this very qualified sense. John Greenleaf Whittier, for instance, may very properly be counted as one of those who belong to that great liberalizing religious movement characteristic of the last century, and for that reason he is classed in this volume among Unitarians, though recognized as a Friend; but it is not safe to argue from his sympathy with the liberal movement that he either held the Unitarian theology—indefinite as that is—or would be willing to count himself as among those whom the Unitarian denomination might rightfully claim. The author of this volume has shown wisdom in laying emphasis upon Unitarianism as a religious movement, because it is as a religious movement more than as a denomination, and even more than as a group of doctrines, that Unitarianism has been chiefly influential; that it can be said to have embraced the most eminent names that are included, for instance, in this volume; that it commands to-day, as it has commanded for three generations, a position of great importance in American history. But, like others who are avowedly and distinctly Unitarian, the author has been generous to a fault. So all-embracing is his conception of Unitarianism that he is willing to say, "So long as New England has been in existence, so long, at least, Unitarianism, in its motives and in its spirit, has been at work in the name of toleration, liberty, and free inquiry." This might be called pre-Unitarian Unitarianism. There is much that is suggestive in his book. He very well and frankly states the extreme position of Protestantism, that resulted in the conception of a Church composed of a select band of righteous people—righteous by no other sanction than their own assertion; and it is suggestive to find him pointing out that the Unitarians, who formerly were the most radical exponents of this theory of the Church, are moving toward saner and more social conceptions. The defects of this book are the defects of such complacent generosity as we have indicated. Its chief virtues arise from somewhat the same trait. As the result, this book, which to most people on reading the title would seem to be a history of the denomination, is really a very broad and readable account of a religious movement that is only in part characterized by a specific belief.

Correspondence

The Delaware Bribery

To the Editors of The Outlook:

In the article by Mr. George Kennan, "Holding Up a State," in The Outlook of February 7, on page 282, about a third down the first column, the statement is made that "he [Mr. Kennan] obtained in Dover a lot of ten-dollar notes whose numbers ran from 33,414 to 34,691, showing the use of $12,770." Mr. Kennan has apparently overlooked the manner in which ten-dollar National bank notes are printed. They are issued in sheets to the banks. Each sheet contains three ten-dollar notes and one twenty-dollar note. The three tens are printed at the top and the twenty at the bottom of the sheet. All notes on the same sheet have the *same* number. In addition to the number the top bill contains the letter "A," the next bill below the letter "B," the third bill the letter "C," and the fourth bill, which is the twenty, the letter "A."

Therefore, if all the ten-dollar notes between the numbers he mentions were used in Delaware, they amounted to $38,310 instead of $12,770.

In the same paragraph his estimate of $20,000 might safely be made $60,000, by figuring $30 to a number.

ALBERT G. BROCK, Cashier.
Pacific National Bank, Nantucket, R. I.

With regard to this Mr. Kennan sends us the following note: "I took to the Treasury Department the notes of the Merchants' National Bank of Boston that I brought from Delaware, and made inquiries with regard to the numbers. The clerk of the National Bank Division, to whom I applied for information, probably did not understand the object of my questions, and neglected to inform me that all the ten-dollar notes on the same sheet bear the same number, and that, consequently, the numbers from 33,414 to 34,691 represent $38,310 instead of $12,770. The larger sum agrees much more nearly with estimates that I have obtained from other sources of the amount spent by Addicks workers in Kent County. A high official of the State is said to have admitted to a friend in that county, on the 5th of November last, "We spent $200,000 in Delaware yesterday." Of this amount, Kent and Sussex Counties probably received at least $150,000. How much of it was in notes of the Merchants' National Bank of Boston I do not know; but that the southern part of the State was flooded with new bills of that particular bank there is no question."

The Statehood Bill

To the Editors of The Outlook:

First. If Mr. Quay is using the Statehood Bill designedly to prevent anti-trust legislation, why is it that, since December 10, when by agreement reached last summer before the adjournment of Congress, his bill came up as the special order, he has repeatedly asked to set a date for voting on the measure, which request his opponents have uniformly refused? Is it not clear that they refuse because they fear they are in a minority (or for some other reason), and that they, and not the advocates of the measure—apparently in the majority—are the ones who are blocking legislation?

Second. Is it not true that there are Senators among the opponents of the Statehood Bill (for instance, Mr. Hanna) who are just as much champions of the great corporate interests as is Mr. Quay? Whatever may be Mr. Quay's real motives in pushing his bill, is it not as likely at least that the opponents of the bill are prolonging the discussion in order to prevent anti-trust legislation as that Mr. Quay is using the measure for that purpose? L. T. E.
Washington, D. C.

[As to our correspondent's first question, it is very possible that the majority of the Senate are in favor of the Statehood Bill; but it is very certain that Senator Quay and a combination of Democrats, with a few Republicans, prevented the Senate from taking any action on important measures which are vital to the welfare of certain sections of the country—the Philippine Islands, for example—unless the Republican party, to which Mr. Quay belongs, would consent to the pas-

sage of the Omnibus Statehood Bill, to which an overwhelming majority of the Republican party is opposed. As to the second question, we think not.—THE EDITORS.]

The Overthrow of Prohibition in Vermont

To the Editors of The Outlook:

I am sure that the temperance people of Vermont will not thank you for congratulating them upon the overthrow of prohibition within the State. The prohibitory law has not "promoted secret drinking-places," though it has not entirely abolished them. Nor has it "excited the spirit of lawlessness," or "tended to public corruption and blackmail." And it has not made the people of Vermont "liars and hypocrites," as Bishop Potter has kindly and courteously told us that it does. We do not think ourselves extremely virtuous "because we have incorporated virtue in a statute," but we believe that, in spite of the prohibitory liquor law, we are as free from drunkenness, lawlessness, blackmail, mendacity, and hypocrisy as the inhabitants of New York City, who seem so anxious to preach temperance and sincerity to us. And in view of the notorious corruption of New York City, we may be pardoned if, instead of humbling ourselves and confessing our faults, we say to these evangelists of temperance and sincerity, "Physician, heal thyself." The people of Vermont do not claim to have solved the problem of abolishing drunkenness, and they are willing to learn of any who are capable of teaching them, but as long as New York and Massachusetts cannot control the liquor nuisance within their own borders, it seems as though they might permit Vermont to continue to try its own crude method, which, however inadequate, has given the State a reputation for temperance and virtue unexcelled by that of any other State in the country. Let it be granted that our prohibitory liquor law has not been adequately enforced, yet is it not a notorious fact that there is not in the whole country a single license law that is adequately enforced, or that has in any perceptible measure diminished the illegal sale of intoxicating liquors? Do not the licensed dealers habitually violate all the restrictive features of the license laws, and do not the low dives and kitchen bar-rooms flourish under the eaves of the licensed saloons? Why, then, is there such an outcry because the prohibitory laws of Maine and Vermont and Kansas are not enforced? If the truth were known, the most serious objection to these laws is that they are so well enforced. H. F. FORREST.

Mechanicsville, Vt.

The Working of Prohibition

The Rev. G. H. Beard, of Burlington, Vt., also writes to protest against our congratulations of Vermont on its recent action substituting local option for prohibition. He insists that prohibition in Vermont has closed all the open saloons, that it does not promote secret drinking-places more than license does, that it does not excite the spirit of lawlessness, and that public corruption and blackmail under prohibition are as "nothing compared with that which attaches to the working of the licensed saloon" "with its manipulation of legislative action and police-protected lawbreaking." He says that to his witness we "may add every Congregational minister in every one of the larger towns of the State." We give this protest to our readers, but it does not in the least modify our convictions, derived from a somewhat intimate knowledge of the workings of prohibition in the State of Maine, and some trustworthy information as to its working in the States of Vermont and Kansas.

By inadvertence it was stated in the editorial paragraph entitled "Prohibition and Law Enforcement in Maine," in The Outlook for February 21, that the figures quoted regarding arrests in Brockton, Mass., were indicative of the experience of that city after "eleven years of high license." The phrase should have been "eleven years of no license" under a local option law. This inaccuracy makes Mr. Cutler's statement weaker than it originally was. The real comparison is not between prohibition and high license, but between the relative efficiency of local prohibition (no license) under a local option law and that of State prohibition under constitutional requirement.

What Congress Left Undone

The filibustering in both houses which marked the closing days of Congress created a popular belief that the session had been disappointing in results. The Aldrich Currency Bill, which displaced the Statehood Bill at the close of the previous week, was in its turn killed by the insistence of Democratic Senators that the measure must be discussed. Senator Aldrich appealed to them to support a bill to expand the currency and thus carry out a Democratic policy, but they refused to secure currency expansion through the medium of bank notes in the manner provided by the measure. They particularly objected to the feature of the bill permitting the Treasury to accept railroad bonds as security for Government deposits made [illegible]. If, however, the Aldrich bill had been introduced earlier, there would [illegible] little question of its passage. It proposed to require the banks [illegible] one and one-half per cent. [illegible] $150,000,000 of public [illegible] ined with them what [illegible] universally popular. [illegible] bill would have [illegible] a matter upon which [illegible] difference if [illegible] over a number [illegible] bonds now held [illegible] demand, and [illegible] the all-[illegible] into [illegible] in the [illegible] bonds as [illegible] issues [illegible] there [illegible] it [illegible] the [illegible] the [illegible] this [illegible]

Tariff Bill, reducing the duty on Philippine products from 75 per cent. of the Dingley rates to 50 per cent. This measure was opposed by nearly all the sugar and tobacco growing interests, in whose behalf Senator Patterson, of Colorado, deliberately inaugurated a filibuster fatal, of course, to its passage. The Immigration Bill was passed, but not until it had been devitalized by the insistence of a small group of Senators, led by Mr. Elkins, of West Virginia, that the educational test for undesirable immigration should be stricken out. As enacted into law, the new bill accomplishes little besides the doubtful good of increasing the head tax on immigrants from one dollar to two dollars. [illegible]

Bill was defeated, and the Eight-Hour Bill, the preceding paragraph covers all the important legislative proposals defeated by the Senate. The House of Representatives has to its credit the defeat of only one important proposal—the Ship Subsidy Bill. The formation of the great steamship combination by the companies which were to receive the bulk of the proposed subsidies strengthened the opposition of the Western Republicans in the House Committee on Merchant Marine, and they, uniting with the Democrats, definitely killed the bill. In the roll of bills passed by both houses must be put the Philippine relief and currency bills, the army staff bill, the bill for the reorganization of the militia under National supervision though not National control, the bill to increase the navy by five great battle-ships costing upwards of four million dollars each, the bill repealing the tariff on coal, three of the four anti-trust measures recommended by Attorney-General Knox—the bills to expedite anti-trust decisions, to provide publicity, and to prevent rebates—and the bill to create a National Department of Commerce. Should the extra session of the Senate just assembled by the President ratify the Cuban and Panama treaties, every one of the most important matters upon which the President asked for action at the beginning of the short session will have been acted upon. If to the legislation of this session be added that of the first session of the same Congress, we have the first National irrigation act, the Isthmian Canal act, the repeal of the Spanish war taxes, and the passage of the Philippine civil government bill. We have also, of course, the appropriation bills, and in this line, unfortunately, there appears to have been too great activity. Ten years ago the Nation was shocked when an aggregate of a billion dollars was reached by a single Congress. The Congress which has closed its sessions reached an aggregate of a billion five hundred million dollars—excluding its appropriation of fifty million dollars for the Panama Canal. The tendency of prosperous times and a great National revenue to promote extravagance cannot be doubted, though in estimating this extravagance it must not be forgotten that expenditures necessarily increase with the increase of the and its wealth.

The New Senate The new Senate which met in extra session on March 5 to consider the Panama and Cuban treaties is of the same political complexion as its predecessor, though a shade more strongly Republican. Four Republican Senators—from Maryland, North Carolina, Kentucky, and Nevada—gave place to Democrats, and four Democratic or Populist Senators—from Kansas, Utah, Idaho, and Washington—gave place to Republicans, and the two Senatorial vacancies from Delaware were filled by Republicans. The new Senate stands: Republicans, 57; Democrats, 33. Senator Smoot, of Utah, took the oath of office without objection from any quarter. The protests against his retention of his seat are to be considered later by the appropriate committee. Of the work of the new Senate upon the pending treaties the public learns practically nothing, as the rule against considering treaties in open session prevents any authorized report, and the lack of public excitement checks unauthorized ones. Not even the amendments announced by Senator Morgan are publicly known. Altogether, the times seem to be as ripe for a conservative change in the Senate rules for secret sessions as in those facilitating unlimited filibustering. There are times when, even under a republican government, treaties should be considered in secret session, but it ought to require the affirmative action of the Senate to close the doors instead of affirmative action to open them. Two events in the organization of the new Senate are likely to have an important effect on the Democratic party. The first and less important of these events was the action of Senator Bailey, of Texas, in naming Senator Clark, of Montana, as his successor on the important Committee of Foreign Relations. Mr. Clark, though a silver man, is out of sympathy with the Bryan wing of his party upon the tariff, the trusts, and imperialism. The second and more important of these events was the action of the entire Democratic caucus in electing Senator Gorman, of Maryland, to succeed ex-Senator Jones, of Arkansas, as its Chairman and parliamentary leader. Senator Gorman, while he has always maintained his "regularity" as a party man, has been the intellectual head of

the faction opposed to the party's free-trade, free-coinage, and anti-monopoly programmes. Upon the Philippine question Senator Gorman supported his party's policy in the Presidential election of 1900, but a year later, when shaping the State campaign to secure his own re-election to the Senate, he ignored anti-imperialism and proclaimed the restriction of negro suffrage as the paramount issue. His election as the Chairman of the Democratic caucus in the Senate is the most serious open blow recently given to Mr. Bryan's position as party leader.

❀

An Important Labor Law Question

Judge Adams, of the United States Circuit Court for the eighth circuit, sitting in St. Louis, and acting on the application of the Wabash Railroad, has issued an injunction commanding the officers of the Brotherhood of Railroad Trainmen and the Brotherhood of Locomotive Firemen "to desist and refrain from in any way or manner ordering, coercing, persuading, inducing, or otherwise causing, directly or indirectly, the employees of the said Wabash Railroad Company . . . to strike or quit the service of said Company." The injunction further forbids them from in any way molesting or interfering with the trains of the Company. It is understood to be a temporary injunction pending an argument yet to be heard on the question whether it shall be made permanent. There are some disputed questions of fact as to the rate of wages, conditions of labor, etc., on the Wabash system, and some as to the action or threatened action of the officers of the two Brotherhoods. These disputes are involved in the issues joined before the court, and cannot be easily settled by the press on *ex parte* statements in advance of judicial investigation. But the principle of law involved in this case appears on the face of the injunction to be measurably independent of these disputed questions of fact. It is not, we think, to be doubted that the Wabash Railroad, being engaged in inter-State commerce, comes within the jurisdiction of the Federal Courts. As it is amenable to the writs of the Federal Courts enforcing obedience to the law, it is entitled to the writs of the Federal Courts in seeking the protection of the law. Practically this has been decided by the Supreme Court of the United States in the Debs case. On the other hand, the injunction does not prohibit the trainmen and locomotive firemen on the Wabash Railroad from striking. If they choose, they can quit the service of the railroad company singly or in a body. The right of employees to do this has been established by too many legal decisions, and is too evidently an absolute right of free labor, to be called in question, and it is not questioned by this injunction.

❀

The Question Discussed

But the trainmen and locomotive firemen of the Wabash Railroad belong to Brotherhoods which include employees of other railroads, and the officers of these Brotherhoods are not in the employ of the Wabash Railroad, nor, we presume, of any other railroad. The question raised by this injunction—and so far as we know it has never been legally decided—is whether men not in the employ of an inter-State railroad may lawfully order, counsel, or induce the employees of that railroad to strike. Will the courts forbid such counsel or order to be given by one who has no relation to the corporation, on the ground that this is an unwarrantable interference either with the rights of the railroad or with the commerce of the country? On the one hand, it may be contended that public interest requires that controversies between a railroad corporation and its employees should be settled by them without any outside interference. On the other, that trainmen and locomotive firemen have a right to ask counsel wherever they can get it; that they have a right to employ a broker or attorney, put their labor into his hands, leave him to negotiate their contracts for them, and determine in their place and stead the terms and conditions on which that labor shall continue. It appears to us clearly that this is their right; that the courts can no more legally forbid employees from following the counsel of a paid officer of their Brotherhood than it can forbid the corporation from following the counsel of their paid attorney; that, if the trainmen and locomotive firemen are to be free to make contracts at all, they must be free to do so through agents

not in the employ of the corporation, and this for two reasons: first, because an agent in the employ of the corporation would always be liable to have a divided interest; second, because the nature of their employment is such as to keep them occupied daily and hourly upon the road, and so prevent them from getting together and consulting as to their common interests, or even studying the situation, acquainting themselves with the facts, and coming to any just and reasonable judgment as to the right conditions of a contract between them and their employer. The Outlook hopes that this case may be carried up to the Supreme Court of the United States, and in such a form, and so divested of all side issues, as to present clearly the question of the right of employees, in their negotiations with their employers, to act through the officers of their Brotherhood or Trades-Union.

❀

The Irish Land Question

All friends of Ireland and all friends of peace will rejoice because the chief measure to be introduced at the present session of the British Parliament is to be an Irish Land Bill. The bill is to be presented by Mr. Wyndham, Chief Secretary for Ireland, and in part will follow the recommendations of the conference, already chronicled in these columns, between Lords Dunraven and Mayo, Colonels Everard and Poe, representing Irish landlords, and Messrs. Russell, Redmond, Harrington, and O'Brien, representing Irish tenants. According to their conclusions, "the only satisfactory settlement of the land question is to be effected by the substitution of an occupying proprietary in lieu of the existing system of dual ownership." This "occupying proprietary" idea contemplates no compulsory sale of land on terms claimed to be unjust by the landlords; instead, the latter are to be induced to sell by an offer of sums one-half greater than would be called for by existing values. The offer, as suggested by the conference, would be a sum amounting to nearly thirty years of the rents. The present average price of land in Ireland represents a sum amounting to about twenty years of the rents as revised by the Land Commission Courts in 1881 and 1896. The conference concluded, however, that landlords should continue to enjoy sporting and riparian rights over the lands they sell, and may have the opportunity to purchase their mansions. By these suggestions the conference registered its belief that the common good requires a continuance of identification by the landlord class with Irish society. If landlords are to be thus induced to sell, it would seem as if tenants are equally to be tempted to buy. It is proposed that, in place of rents, tenants shall become owners of their farms by paying to the State a kind of rental called "terminable annuities," these to be from one-seventh to one-quarter less than the existing rents as established by the Land Courts and to be subject to a reduction every ten years. This double difference between present prices must be made up by grants, amounting ultimately to several hundred million dollars, from the royal exchequer, the burden of course falling upon the taxpayers. We are inclined to believe that the taxpayers will get their money's worth. They may settle the question which, more than all others put together, has been at the bottom of Irish unrest. It would seem that the spirit of union, now happily evident between landlords and tenants, as shown by the recent conference, if strengthened by sympathetic legislation, would lastingly supplant that other spirit which made necessary the large numbers of the royal Irish constabulary and the enforcement of extraordinary measures to keep even a semblance of peace.

❀

Macedonia and Turkey

The pessimistic tone in the reference to Macedonia in the speech of King Edward at the opening of Parliament was abundantly justified, if we may judge from the Blue Book since issued by the British Government. The communications therein comprise consular reports and the despatches of Sir Nicholas O'Conor, the British Ambassador to Turkey, during 1902, and confirm the unofficial reports of misrule, outrages, and violent crimes in Macedonia. These, however, were not all due to Turks; there is also confirmation of the outrages and murders ascribed to the Bulgaro-Macedonian revolutionists, though the intolerable situation originally arose from Turkish misgovernment. The revo-

lutionists have been sending marauding bands from Bulgaria into Macedonia to stir up the Turks to new atrocities by destroying their villages, hoping that the European Powers would interfere and reforms or freedom be secured. At the same time the revolutionists have terrorized any Macedonians who have not approved the programme of the Bulgaro-Macedonian Committee by declaring that "it has now become the government, that everything must be conducted in the government's interest, and that whoever sets himself in opposition must suffer the consequences." The Macedonians are thus doubly downtrodden and intimidated. A system of limited proprietorship prevails in the province. The vast majority of the natives work their land upon shares; they do not own it. One-third of the crop goes to the landlord, and on the remaining two-thirds the peasants pay such an enormous tax that, in some cases, the value as prescribed by the assessors more than equals the value of the crop itself. The Turkish assessor and the Turkish collector are generally one person; and hence such an official has been able to extort infamous payment. If in his daily work—agriculture—the Macedonian finds his goods practically stolen, in his domestic relations his fate is even more terrible. He himself is terrified and beaten by the gendarmerie, or police, and often the female members of his family are subjected to violation. This condition has existed during the four centuries and a half in which the Turkish Empire has been established in Europe. The Turks remain what they were in 1453—savages; but to their savagery they have added sensuality and corruption. It is, therefore, with something like incredulity that the world learned of the Sultan's agreement to the reform proposals made concerning Turkish administration in Macedonia.

Reform Proposals

The principal points of the programme which the Powers unanimously forced on Abdul Hamid are: (1) The appointment of a Macedonian Inspector-General for a term of three years, with an extension of authority, particularly in his power to make requisition, whenever necessary, upon a military force without waiting for permission from Constantinople; his recall and the appointment of his successor to be in agreement with the Powers. (2) The organization of the gendarmerie by European officers, in which body Christian inhabitants are to be admitted in a number proportionate to the population; the Christians shall not be required to be able to read and write Turkish before being admitted. (3) The prompt settlement of cases brought before local courts. (4) A reorganization of the financial system by providing that the taxes shall not be assessed and collected by the same person; that each vilayet or district shall furnish a budget at the end of each year in which local expenses are to be a first charge upon the revenues; the revenues are to be paid into branches of the Ottoman Bank; only if, after such payment, there is a surplus, may it be sent to Constantinople; thus, from a condition of small salaries and uncertain payment the prompt payment of the local officials and of the gendarmerie would seem to be provided for, with a consequent removal of one of the causes of bribery and oppression. (5) The establishment of stringent measures to hold in check the Albanian marauders who have, in reality, been almost as vexatious to the Turkish as to the Christian inhabitants of Macedonia (in Albania itself their methods have been more barbarous still, as was shown recently by the assault upon the Russian Consul at Mitrovitza). In agreeing to these reforms, however, the Sultan apparently proposes to continue his time-honored policy of evasion, as might be deduced from his announcement that there is no money in the Turkish treasury to carry the reforms into effect! It is hard to tell, from the reports, from which class the Macedonian Christians are now suffering the most—the representatives of the Bulgaro-Macedonian Committee, or the Turkish soldiers and tax-gatherers. One thing is evident: Macedonia cannot endure the present situation, any more than Cuba could the oppression of Spain. The only logical and humane outcome, as it appears to many disinterested observers, will be the extension by the Powers in Macedonia of the autonomy now enjoyed by the other Balkan States.

Leo XIII. A fortnight ago Giacchino Pecci, better known as Pope Leo XIII., celebrated the twenty-fifth anniversary of his election to the Papal chair. Last week he celebrated the twenty-fifth anniversary of his coronation, and also his ninety-third birthday. Should he live until the middle of May he will have attained the traditional years of St. Peter as Pope, but in order to equal Pius IX.'s reign (1846–1878) he would be almost a centenarian. The whole Christian world hopes that he may attain that age, if he can continue to deliver his Church from political intrigue, and continue to direct its energies instead into intimate, sympathetic, and salutary relations with the social movements of our time. Indeed, one may claim with justice that the scholarly and accomplished Pecci has become the most democratic of pontiffs; certainly, in the history of democratic and social progress his encyclical letters will find fit place. Hence, socially as well as religiously, there is no temporal sovereign whose anniversary could match the one of last week. The vast theological and ecclesiastical power of the Church militant was represented by the participation of nearly fifty cardinals and over three hundred archbishops and bishops in the high ceremonies at St. Peter's, which were carried out with all pomp and circumstance. But the seventy thousand people in attendance, Protestants as well as Roman Catholics, were gathered to do homage to the man as well as to the Pope, and they greeted him with a more striking demonstration of reverence and affection than has been vouchsafed to any Roman pontiff for centuries. Well might they thus greet one whose ardent and indomitable spirit belies his age and is hardly contained by his frail body. Fifteen years ago, at a similar ceremonial, Leo XIII. was a figure from which apparently all physical attributes had retired; his face was like alabaster and his hand seemed almost transparent as it slowly moved in benediction. The white-robed, white-mitered form looked like a ghost, not a mortal. If he was then a "grand old man," Leo XIII. is now a wonderful old man, not so much by reason of length of years as because during these later years his most telling work has been done. In contemplating this venerable figure the minds of Christians are impressed, not only by religious emotion and historic imagination, but also by a sense of present social service rendered to present social needs.

❀

The Child Labor Agitation Both in New York and Pennsylvania the child labor agitation is being vigorously conducted. In New York a series of admirable bills have been presented in the Legislature to make the present child labor laws enforceable by requiring age certificates of real value, to extend the application of these laws to messenger and delivery services in the same way in which they now govern factories and stores, to limit the employment of children between fourteen and sixteen to nine hours a day, and to forbid children under twelve to work as bootblacks, and children under ten to work as newsboys. At the hearing before a legislative committee last week, the opposition, curiously enough, centered upon the restriction of the street trades and not upon the nine-hour provision for factories and stores. Commodore Gerry, formerly President of the Society for the Prevention of Cruelty to Children, led the defense of unrestricted child labor in the streets, declaring among other things that the restrictive bill was unconstitutional and that the licensing of newsboys put a stigma upon them. In reply to him it was brought out that the constitutionality of restricting child labor had been recognized over and over again by the most conservative courts, and that the possession of a license would put no more stigma upon a newsboy than upon a physician or lawyer. Dr. Felix Adler made the most stirring address in favor of the bills. He admitted that many good men had spent part of their boyhood in the street trades and come out unharmed, but so, he said, had many strong men come safely through dangerous contagions. Legislation, moral as well as sanitary, must be based upon the general influence of the environment, and the records of the New York juvenile asylums, which Dr. Adler proceeded to give, showed that to an astonishing degree the New York City street trades served as the schools of vice and crime. In Pennsylvania the child labor laws urged are being supported by the

State Federation of Women's Clubs, the Civic Club of Philadelphia, and the State Consumers' League, as well as by the labor unions. The prominent part borne by women's organizations in this movement for the protection of childhood is quite in line with English precedent—the instinctive sympathy of English women having been perhaps the strongest force in enabling Lord Shaftesbury to carry through his great reform against the influence of factory-owners and economists. In Pennsylvania the economists, we believe, a e now supporting the moderate child labor law demanded, but factory-owners are still resisting it. A trusted correspondent writes us as follows of the present situation:

On Saturday morning, February 28, the papers of Pittsburg announced that the Western Pennsylvania Association of Glass Manufacturers had appointed a committee to go to Harrisburg to prevent the enactment of any child labor agitation at this session. The manufacturers were reported as adopting resolutions denouncing and ridiculing that section of the bill which provides that children must learn to read and write English before beginning work. (It is probably due to the enactment of this provision in New York in 1886 that New York, in spite of its enormous immigration, has fewer illiterate children between ten and fourteen years of age than Pennsylvania, and ranks, under this test, with the Northern States, while Pennsylvania ranks with the Southern States.) The glass manufacturing industry is one of the most highly protected industries in the United States, yet it effectively prevents any legislative protection of young children. The influence of the Pittsburg glass manufacturers kept in office, as chief factory inspector of Pennsylvania for several years, Mr. James Campbell (just removed by Governor Pennypacker), who had been their advocate for years at all the hearings on the glass tariff before the Committee on Ways and Means at Washington. This is the man who told the Mothers' Congress in Pittsburg last October that Pennsylvania suffers from the excessive education of the workingmen's children.

Less than any other State can Pennsylvania afford to teach that people have a right to get cheap labor from whatever source at whatever cost.

❀

The Protest of the Tenement Dwellers

At a hearing in the New York City Hall on Thursday of last week, Mayor Low stated explicitly that the city administration was opposed to every one of the bills which had been introduced into the State Legislature to change the existing tenement-house law. Inasmuch as it is understood that Governor Odell will not sign any tenement-house bill that does not have the approval of Mayor Low and the Tenement-House Commission, this statement was reassuring and was therefore greeted with energetic applause. The speakers at this hearing were almost all dwellers in East Side tenements, and were representative of scores of thousands of others. A representative of the Downtown Ethical Society, one of the East Side Civic Club, one of the East Side Socialists, and one of the Janitors' Society made speeches; all of them were earnest, and their eloquence was that of men whose families were in peril. It was perfectly clear that the opposition to this assault on the tenement-house law is not theoretical, its strength does not lie with philanthropists, but with those whose own homes the law in a measure protects. As the Mayor said, this fight on the part of tenement dwellers for more light and air was illustrative of the old saying, "Who would be free, himself must strike the blow." On the same day Tenement-House Commissioner Robert W. De Forest made an address in Brooklyn, in which he called attention to the principle, which the newspapers in Brooklyn have been ignoring, that the character of residential districts changes in the course of years, that "the palaces of to-day may be the hovels of to-morrow." He cited the instance of his grandmother's house, once one of the finest private houses in a fashionable neighborhood, now bearing a sign "French Flats for Colored People." The law, he said, must anticipate such changes. Both he and the Mayor announced that amendments "adjusting the law to business and structural conditions" are being prepared by the Tenement-House Commission. We hope that if these amendments are offered they will be accompanied by others making more rigorous the even yet too lax requirements.

❀

Registration of Trained Nurses

There are two bills before the Legislature of New York providing for the registration of trained or professional nurses. One is vicious and ought to be killed;

the other is excellent, though capable of improvement. It ought to be amended and then enacted without delay. The first bill proposes that the Secretary of State shall keep a register of trained nurses and issue certificates to all who shall make affidavit of their intention to practice, accompanying the same with a sworn statement setting forth the amount and character of training that the applicant has had. It sets no standard of attainment and it imposes no tests. It simply perpetuates the present unsatisfactory conditions and makes change and improvement nearly impossible. In contrast with the foregoing, and intended to displace it, is the Armstrong bill, which proposes to supply the defects of the other and to provide real safeguards. An applicant for registration must be twenty-one years of age, must have had at least two years of training in an approved hospital, and must pass an examination under the auspices of the State Board of Regents. Such a person shall be given a Regents' certificate of proficiency and be privileged to bear the title of "Registered Nurse" (R. N.). The bill provides for those already in the profession as well as those still to come. Power to prosecute for the enforcement of the law should be given to some competent body; interference with the regular medical practitioner should be prevented; and ease of registration, say with the county clerk, should be secured; these provisions would perfect the law. The public has a large interest in this matter. The function of the trained nurse is a great and important one, growing, not diminishing. Some standard of attainment and some guarantee of proficiency should be afforded, and it is the duty of the State to provide it. It is not generally known that there are in operation "six weeks' correspondence schools" which give "diplomas" to "trained nurses." The public cannot go into the niceties of wording in a "diploma," and when sudden illness makes its terrifying attack there is no time to pick and choose. The call for the trained nurse is usually an emergency call, and it brooks no delay. At such a time the guarantee of a Regents' certificate would be most welcome, and both physician and patient would find in it confidence and hope.

The Beecher Memorial Mass-Meeting

On Sunday evening, March 8, a mass-meeting was held in the Academy of Music, Brooklyn, in behalf of the project to construct a memorial to Henry Ward Beecher. The people of Brooklyn were enthusiastic over the meeting. Applications for tickets greatly exceeded the supply, and an overflow meeting, at which Dr. A. H. Bradford and the Rev. Horace Porter were speakers, was arranged for at Plymouth Church. In spite of a drenching rain, which probably accounted for the large preponderance of men in the audience, the Academy of Music was filled to the limit allowed by law half an hour before the hour of opening. Above the stage, draped with an American flag, hung an oil portrait of Mr. Beecher. A choir and an organ led the singing of Mr. Beecher's favorite hymns. There were many present who knew Mr. Beecher personally. The usual note of gloom at a memorial meeting was absent, and the spirit was cheerful, as befitted the character of the man commemorated. Mayor Low, of New York, presided with his usual dignity and tact, and recalled the fact that he had, twenty years ago, presided as Mayor of Brooklyn at a meeting held in the same place in honor of Mr. Beecher's seventieth birthday. He spoke of Mr. Beecher as the champion of freedom always—of free speech and free labor. He described the memorial as an attempt, not to preserve Mr. Beecher's memory, which was secure enough already, but to enlarge and make permanent the usefulness of the church which had prospered under Mr. Beecher's leadership. Mr. Low thus gave utterance to an idea which was reiterated by other speakers during the meeting, that the memorial should express the spirit of Mr. Beecher, his love for humanity, something which should stand for activity on the part of those who would honor Mr. Beecher, and greater opportunity for all who were struggling. This especially was emphasized in the close of the address of ex-President Cleveland, who, with Mr. Justice Brewer, was greeted by the audience with unusual marks of respect. Mr. Cleveland, after dwelling on the inherent human impulse toward hero-worship, and after giving expression to his deep personal admiration for

Mr. Beecher and his personal indebtedness to him, said:

Our hero has himself declared in what manner his shrine should be approached. "When I fall, and am buried in Greenwood, let no man dare to stand over the turf and say, 'Here lies Henry Ward Beecher,' for God knows that I will not lie there. Look up, if you love me, and if you feel that I have helped you on your way home, stand with your foot on my turf and look up, for I will not hear anybody who does not speak with his mouth toward heaven." It would savor of hardihood if we who knew Mr. Beecher and his work . . . should be content with a mere idle token of remembrance. Assuredly, if it is to typify his lofty intents and purposes, . . . our memorial must be a center of work which shall redound to the glory of God and to the good of humanity. It should never be forgotten that as truly as the life and labors of Henry Ward Beecher were devoted to serving God and making the condition and destiny of his fellow-men better and happier, just so truly should our work, undertaken in his name, be entered upon with the same high intent and purpose. . . . If we would have him hear us as we invoke his approval, we must speak with our mouths toward heaven. It is also entirely manifest that we can build no memorial shrine to our hero which will attract his favor and the presence of his spirit without making Plymouth Church a part of it. . . . If, invoking his approval, and in his name, we extend his life-work, we shall not only exemplify our affection for him, but shall follow the designs of God as they were revealed to him.

❀

Further Tributes Mr. Justice Brewer, in scholarly phrase, paid a tribute to Mr. Beecher which emphasized especially his big-hearted human traits, his patriotic service to this country, and his power as a practical exponent of the gospel of love which he preached. "His theology," said Mr. Justice Brewer, "was condensed in a single sentence, 'God is love.' Among the strictly orthodox his theology was always an object of suspicion. They felt that he had too much confidence in the boundless mercy of the Infinite; but the doubt as to his theology never emptied the pews. . . . In all ages some heretic has thrown his arm around struggling humanity and blessed it. The very cause of the supposed weakness of Mr. Beecher's theology was one source of his wondrous power." The Rev. Dr. Newell Dwight Hillis, pastor of Plymouth Church, stated the plan for the memorial as it has been so far devised. He advocated the removal of Mr. Beecher's body to the proposed park which is a part of the plan for the memorial. He quoted from a sermon preached by Mr. Beecher in 1884, in which the great preacher had said that a man's burial-place should be where his work had been done. This Dr. Hillis interpreted as Mr. Beecher's forecast of his own death, and the expression of his wish concerning his burial-place. Included among the plans of the memorial, Dr. Hillis mentioned, in addition to features heretofore reported, a series of lectures on the relation between Christianity and free institutions, given annually, and a library building or club-house in the interest of the multitude of the young men and women who now live on Brooklyn Heights. The Rev. Dr. F. W. Gunsaulus, of Chicago, gave the closing address, in which he spoke of Mr. Beecher's influence upon the West, and pledged the enthusiastic support of the people of the interior to this memorial project. Before the audience left the building about twenty thousand dollars was there subscribed to the fund which is being raised by the committee of which Mr. Elijah R. Kennedy is Chairman and Mr. Theodore F. Miller, President of the Brooklyn Trust Company, is Treasurer.

❀

Trinity College Library A really notable event in the development of higher education in the South was the formal opening of the Trinity College library on February 23, at Durham, N. C. Mr. Washington Duke and his sons, Messrs. B. A. and J. B. Duke—all Southern men—have during the past ten years given more than $800,000 to the College, thus providing material equipment and enabling the faculty to do a high grade of academic work and maintain sound ideals of scholarship. The latest evidence of the philanthropic spirit of this family is the gift of a library by Mr. James B. Duke, now of New York City. In addition to a building costing $55,000—a handsome structure of granite and pressed brick, with interior timber in quartered oak and all the conveniences of a modern library—he has given $10,000 for new books, all of them selected with a view to the demands of technical scholarship. To celebrate worthily the dedication of this building and the increase in the resources of the library, a large audience

assembled in Craven Memorial Hall on the evening of February 23, many distinguished guests coming from all parts of the State, while institutions of learning throughout the country sent congratulations. President Kilgo, in an address filled with the spirit of freedom and hope, said: "It is not a dream that this new library building, with its equipment and large additions of books, may institute a new order of things in North Carolina. Trinity College feels that it has a new calling to do hard service in behalf of Southern progress. . . . A new world seems about to open for us, because a very large addition has been made to our resources. With new and larger books will come new and deeper ideas, which in turn will bring forth broader and sturdier men." The dedicatory address was made by Mr. Walter H. Page, of New York City, who spoke vigorously and impressively on the subject, "The American Citizen of the New Era." At the conclusion of his address he paid tribute to the "colossal common sense and the prodigious advancement that is marked by the progress of Trinity College." Referring to Mr. Duke, the donor, he said that he called on him before leaving New York and asked him what message he must take to Trinity College. "Tell them," he said, "I expect each man to think for himself." "By that authority," said the speaker, "I dedicate this library to free thought. Free thought is the very atmosphere of an ideal democracy."

❀

Schools for Crippled Children

The schools for crippled children in New York City are doing a work which deserves wider notice and more liberal encouragement than it has received in the past. The Children's Aid Society, the Guild for Crippled Children, and individual interest, have co-operated in establishing six of these schools in the city within the past five years, and their progress during that time has been such as to prove the great usefulness of the work. It would be a mistake to consider them as charities in the common sense of the term. Their promoters have strenuously sought to prevent any such impression from being disseminated. The pupils are taught the rudimentary branches, and are trained in various useful occupations so as to be self-supporting, and then all practicable efforts are made to provide situations for them. The instruction includes kindergarten, the ordinary school course with manual training, and a trade school course in various practical occupations. This year a trade school for girls has been established, and next year a boys' department of like character will be opened. The welfare of the schools, which are now educating some hundreds of pupils, depends largely upon private contributions; and attention is called to what has been accomplished. The Children's Aid Society will be glad to give any information.

❀

The Author of "John Inglesant"

There is impressive, if tacit, comment on the rapidity and carelessness with which most fiction is hurried into print nowadays, in the fact that "John Inglesant" was in preparation for twenty years. Joseph Henry Shorthouse, its author, who died in London last week, left behind him several other works of an imaginative kind, and one at least, "The Little Schoolmaster Mark," deserved more than temporary popularity, yet his name will be chiefly remembered as that of the writer of the romance of English and Italian life in the seventeenth century. Nothing could be more incorrect than to class "John Inglesant" as a didactic or purely philosophical study. It did, indeed, present in lucid yet subtle manner the currents and countercurrents of religio-philosophical thought in a time when convictions on such matters were directly connected with affairs of state, political intrigue, and all the vital events of history. But, apart from this side of the book, it abounds in vivid pictures of England in the time of Charles I., and of Italy in one of its most complex periods of Papal intrigue and of social picturesqueness. There is, moreover, no lack of dramatic force and of striking incident in the tale. Finally, it is written in a style of rare distinction, and is beyond doubt a fine piece of literature. Mr. Shorthouse's best work, apart from his one great romance, is to be found in his critical essays on Wordsworth, Maurice, and George Herbert. He combined intellectual and imaginative qualities in a degree not often to be found among modern English prose writers.

Un-Republicanism in Congress

The *bon mot* attributed to Senator Bailey is more than a *b n mot:* in effect, that he had come from a House which passed bills it did not debate, into a Senate which debated bills it never passed. Indeed, this is less than the truth; in the House the Rules are contrived to stifle debate, in the Senate to prevent action. Both the great political parties have declared themselves in favor of an Interoceanic Canal, but the Interoceanic Canal was halted in the Senate by one man; an overwhelming majority in both House and Senate favored opening our ports to the Philippines, but the Philippine tariff reduction was defeated by half a dozen men; the country demands, and Congress was ready to grant, tariff reduction to Cuba, but by a small minority tariff reduction to Cuba was defeated for the time, a new session was made necessary, and the reduction imperiled for the lack of the concurrence of the House; Congress with substantial unanimity desired to furnish some additional protection to the President from assassination, and the consummation of this desire was prevented by a single Senator on purely doctrinaire grounds.

The radical cause of the difficulty is plain. There are considerable numbers of men in both House and Senate who do not believe in the American principle of free discussion and the rule of the majority. This is really one principle; for the rule of the majority is a just rule only when it follows free public discussion. A partisan majority allowed to force through a measure by mere numbers without a discussion of its merits is quite as apt to be despotic or foolish, or both, as a single man. The House does not believe in public discussion, and is therefore often despotic. The Senate does not believe in majority rule; it does not provide for majority rule; it does not even allow the majority to rule; and therefore it is paralyzed and impotent. Add to this, that each wrong produces the other. The House passes measures which the minority is not permitted to debate; therefore the minority in the Senate debates them simply to prevent their passage. Despotic majorities in the House promote filibustering minorities in the Senate. And both bring contempt upon Congress and all its work.

The radical remedy is also plain: the election of men to the House who will not lend themselves to the stifling of debate, the election to the Senate of men who will not lend themselves to filibustering. Meanwhile men of both parties who believe in a return to the more creditable methods of the Fathers should unite their forces to prevent both abuses. The Rules of the House should be so amended as to put a limit to the power of the majority to order the previous question. The right of the minority to a reasonable opportunity to debate every question should be safeguarded. Debate before committees is not enough; it should be in the open, where the people through the press can hear and measure the arguments. And the Rules of the Senate should be so amended as either to confer upon a majority the right to order the previous question after a defined time has been spent in debate, or upon three-fourths or three-fifths the right to order the previous question at any time. At present Congress is in danger of falling into contempt because it treats the fundamental principle of republican government—the rule of the majority after free discussion—with contempt. If it desires to retain the respect of the American people, it must find a way to re-establish free discussion within orderly limits in the House, and re-establish the power to act after reasonable opportunity for *bona fide* debate in the Senate.

❀

The Race Problem

"A Southern View of the Negro," which we print on another page, is the view held by an increasing number of influential men and women in the South. Tendencies are determined, not by numbers, but by leaders, and leaders are always a minority. Mrs. Hammond represents the sentiments of Southern leaders; her view is that of thousands who are quietly acting on the conviction which she expresses; in a quarter of a century there will be no other view. The sentiment of the South is not interpreted by the mob which lynches a negro, any more than the sentiment of the North is interpreted by the mob which murders a "scab."

For the sentiments of Northern laborers on the labor question we look to the utterances of labor leaders; for the sentiment of Southerners on the race question we look to the utterances of Southern leaders. It is this sentiment to which Mrs. Hammond gives expression.

At no time since the Civil War has the eventual solution of the race problem seemed to us so hopeful as it seems to-day. The recrudescence of Southern prejudice, to which Northern papers give a representation out of all proportion to its importance, is partly due to the increasing manifestation of Southern interest in the education and elevation of the negro. A movement for justice and humanity always intensifies the prejudice which it combats, as sunlight always intensifies the darkness in the corners which it has not yet penetrated. The hopefulness of the present situation lies in the fact that Northern and Southern leaders are coming to understand one another better than they did. If Southern sentiment is not growing more liberal, the liberal sentiment in the South is growing more outspoken; if Northern sentiment is not growing less doctrinaire, the rational sentiment in the North is growing more influential. Sectional and party prejudices are not as rampant as they were. Certain conclusions are already accepted by the great majority of those, both North and South, who take counsel of their judgment, not of their antipathies or their so-called intuitions, and on these conclusions all future progress in the solution of this problem must be based. Among these are the following:

I. The negro is here, and he is here to stay. He cannot be exterminated. It is physically impossible to kill nine millions of people; it would be morally unthinkable so to dispose of them. They are not dying out; on the contrary, they are increasing quite as rapidly in freedom as they did in slavery. To deport them to Africa is an impossible dream. Colonization, when it was proposed half a century ago, was mathematically impossible as a solution of the race problem. If the impossible could grow more impossible, colonization as a solution is more impossible in 1903 than in 1850. Nor could we afford to deport the negroes if we had the power. The prosperity of the South depends on negro labor. Neither earthquake, deluge, pestilence, war, nor famine would inflict on the South so great a commercial disaster as would the immediate and forcible deportation of the African race, if their deportation were conceivably possible.

II. The negroes will remain here as a separate race. Blacks and whites, Africans and Anglo-Saxons, will not intermarry. The two races will never intermingle as the Anglo-Saxon and the Norman races intermingled in Great Britain. Never means a long time; and if any doctrinaire is inclined on scientific or other grounds to question this assertion, let us say that there is no prospect of any such absorption of the negro race by the white race in our time, or in any time now to be taken account of. The race problem will not be solved, so far as this generation can see, by any intermingling of the races. If it were so solved, it would be by the deterioration of one race, if not of both. Irish, Germans, Poles, Hungarians, may possibly in time lose their distinctive peculiarities and be merged in one American race—the negroes never. The Southern protest against social equality is fundamentally a protest against race intermarriage and so against race deterioration. It may sometimes foster prejudice; but it is not itself a prejudice. It is a just, natural, divine instinct for the preservation of the race. Negroes and whites share in this instinctive desire for the separation of the races.

III. These two races, white and black, living as distinct races in the same community, and largely in the Southern States, must live in friendly relations with each other. On the maintenance of such friendly relations the well-being of both races depends. Whoever arouses prejudice of white against black or black against white is the enemy of both. Whatever missionary zeal so educates and inspires the negro as to enlist his prejudices against his white neighbor is a greatly mistaken missionary zeal. Whatever political leader so inspires the negro as to lead him instinctively to vote against whatever his white neighbors desire is leading the negro to his own detriment. Whatever education accustoms the negro to think of the white man as his competitor, his rival, his foe, and to look on him with jealousy and suspicion, is doing the negro

more harm than good. And whatever influence in press or pulpit or politics has for its object to keep the negro down and to set the white against him is sowing a harvest of disaster for white no less than for black. Wise men at the North at the close of the war urged Northern men to work in co-operation with Southern men for the education of both white and black; and wise men in the North have been urging this ever since. But wise men are not always listened to. Unselfish but impracticable reformers, irrational doctrinaires, selfish politicians, sensational journals, unconscious demagogues guided by prejudice and inflamed by passion, have in unintentional alliance been sowing the seeds of suspicion and distrust, and the harvest which has sprung up from the sowing is not yet exhausted. The first duty of the North is to recognize the fact that, if the race problem is a National problem, it is also preeminently a Southern problem; that men in the South, who are lovers of their country, of liberty, and of their fellow-men, are trying to solve this problem on principles consonant with justice and freedom, and that the North can serve the negro race best by co-operation with the negro's white neighbor and largely under the white neighbor's leadership.

IV. If this black race is to live in contiguity with the white race in the South, it must be educated. An ignorant, superstitious, and immoral population is a drag upon any community; an intelligent and virtuous population is a blessing to any community. What the system of education should be is a matter for discussion; but that there should be some system of education is not a matter for discussion. Here there can be no room for argument. That the negro will be a better neighbor if he has learned the Ten Commandments, if he has learned not to steal, not to commit adultery, not to bear false witness, than if he has not learned that this is a part of religion, can hardly be questioned by any one. But this is education. That he will be a better neighbor if he has learned to be an intelligent farmer, carpenter, mechanic, if he has learned to be industrious, thrifty, economical, than if he scratches the surface of the ground with a hoe, lives in a one-roomed cabin, and borrows the money to live on at a ruinous rate of interest from the neighboring storekeeper, is also unquestionable. But this also is education.

V. That these primary lessons in manhood should precede the later superstructure appears to us not less indisputable. The negro should learn the Ten Commandments in English before he studies Hebrew; for morality is more fundamental to life than Biblical criticism. He should acquire the elements of industrial training before he studies Latin, Greek, and the higher mathematics or even the English classics, because man's first duty is to support himself, and the first lesson which a free people have to teach a people just emancipated from slavery is how to support themselves. We believe in the higher education for the negro. We believe in it because we believe that the negro race will always remain distinct from the white race and will need, and increasingly need, its own lawyers and doctors and teachers and preachers. But this is not its first need. Its first need is the capacity to support itself, and the purpose to support itself by honest industry. The education of the negro is not a Northern fad; it is not a "Yankee notion." If Northern whites have shown a commendable interest in the negro's education, and have contributed many millions to its support, Southern whites have shown an even greater interest in the negro's education, and out of their poverty have contributed to it with a patient and self-denying persistence beyond all praise. The opposition to negro education in the South—sometimes noisy, but rarely if ever influential or effective—has but accentuated the resolute purpose of the Southern States to educate the negro race for the freedom into which it was so suddenly thrust, and for which it was so little prepared. The North has too long regarded the South as missionary ground. Too many Northerners have gone South as propagandists of Northern ideas. This was natural at the close of the war; it certainly is no longer necessary. The North and the South should co-operate in a common endeavor to furnish a universal education, and if money and men are still sent into the South from the North, it should only be because the South has needs and the North has means.

We are not here attempting a solution of the race problem. We are not attempt-

ing even to state all our own views of the race problem. But in the solution of any problem, the first necessity is to distinguish the certainties from the uncertainties, the axioms from the questions. We here simply attempt to eliminate what are not questions. It is not a question that the negro race is here and is to remain here; that it is to remain a separate race not absorbed in the white race by any process of intermarriage; that the two races must live together in amicable relations based on mutual confidence, respect, and good will; that this necessitates the education of both races, and, for the negro race, education primarily in the elements of morality and in those branches of learning which, in this twentieth century, are necessary to adequate and comfortable self support. It is because, thanks to such wise whites as General Armstrong and Mr. Frissell, Governor Aycock of North Carolina and Governor Montague of Virginia, and such wise negroes as Mr. Booker T. Washington, both North and South are coming to recognize these simple but fundamental postulates, that we regard the process of solving the race problem as already hopefully commenced.

❀

Sunday Opening of Saloons

District Attorney Jerome recently appeared before one of the Senate Committees at Albany and made an earnest speech in behalf of his bill to permit the saloons of New York City to sell liquor during certain hours on Sunday, without other restrictions than those provided for week-day sales. In brief, his argument was as follows:

If I could by my own will prohibit the sale of liquors, I would do so. This is impossible. What I do object to is the existence of an unenforceable law which brings with it unlimited corruption and blackmail. This is not a Sunday opening bill. It is a Sunday closing bill. I have the positive pledge of the United Brewers, Maltsters, and Wholesale and Retail Liquor-Dealers that, should this bill become a law, they will see to it that no business is done except between the hours of 1 P.M. and 11 P.M. on Sunday. They object to paying blackmail. They do not like to see the liquor-dealers of the Twentieth Precinct, for instance, paying $13,000 or $14,000 a year to the police for the privilege of keeping open on Sunday. They call Tammany a gang of grafters, but blackmail and corruption exist under the purity and holiness of the Low administration.

The Outlook agrees with Mr. Jerome in his abhorrence of legislation which by its defiance of public sentiment necessitates blackmail and perjury on the part of public officials sworn to maintain it. But in asking that saloons be opened on Sunday to sell liquor to be drunk on the premises and thus serve as loafing, treating, and tippling places when all other business is suspended, he also defies public sentiment in many if not most of the wards of New York City.

The policy of New York State is to recognize Sunday as a holiday. In the present industrial conditions a holiday for great classes of men can be secured only by legislative enactment prohibiting or limiting work on such days. The object of Sunday legislation is ended when rest is secured for all classes. Each individual should be left free to determine what use he will make of that rest, so long as he does not employ it so as to disturb his neighbor's rights. General business operations are prohibited by law. An exception is made in favor of hotels and restaurants, because they are necessary to the comfort and well-being of the community. Ought an exception to be made in favor of saloons for the same purpose? This is a question which, in our judgment, should be left for the local community to decide. If a local community, such as New York, desires to get its drink as well as its food on the Sabbath, it should be permitted to do so, provided it does so in such a way as not to disturb the Sunday quiet and the Sunday rest of the people at large.

If, therefore, Mr. Jerome were to ask the Legislature, not to repeal the Sunday law for the city of New York, but to allow the city of New York to determine for itself what its Sunday law should be, we should advocate the passage of the bill. Such a bill would simply extend over Sunday the local option principle recognized and applied to all other days of the week in all the rural sections of the State. But to ask the Legislature to take from the city of New York the protection for its day of rest which is extended over the rest of the State, without knowing whether the city of New York desires to have that protection removed or not, is to

ask the Legislature to violate that principle of Home Rule which is or ought to be fundamental to all municipal legislation.

Meanwhile, in the absence of legislation, we do not see what the municipal government can do better than so to enforce the Sunday law as to prevent disturbance and disorder, and secure for all citizens quiet and repose, and not attempt to carry the enforcement of the law beyond that point.

If any one asks whether the city of New York wishes the abolition of Sunday legislation, we answer: Opinions of the well informed differ on that point; from the best light we can get, we judge that a majority of the people of the city are opposed to any opening of the saloons on Sunday as saloons, provided some way can be found by which the people can secure their wine and beer with their meals, in their homes, their restaurants, and their hotels. But the attempt of the Raines Law to accomplish this has proved an utter failure, and no better plan has as yet been proposed.

❀

Lenten Meditations

The New Commandment

Moses gave ten commandments; Christ gave but one:

This is my commandment, That ye love one another, as I have loved you.

Christ's life gives a new interpretation to love. It is often said that Christ has summed up all religion in the two commandments, "Thou shalt love the Lord thy God with all thy heart, and with all thy soul, and with all thy mind;" and "Thou shalt love thy neighbor as thyself." But this is not Christ's summary of religion; this is Christ's summary of the Jewish religion. These are the great commandments in the Law. Christ's summary of religion for his followers is, "That ye love one another, as I have loved you." His rule of conduct is not the Golden Rule; that, again, is Jewish; it is "the law and the prophets." Christ's rule of conduct is, "Follow me." The Golden Rule is not a law of love, it is a rule of justice. Who am I that I have any right to ask of another that he treat me better that I would treat him if our positions were reversed? The law, "Thou shalt love thy neighbor as thyself," is but this law of justice carried down into the sources of life.

Christ's standard of love and life is very different. It is: "As I have loved you." Did Christ love his neighbor no other or better than he loved himself? "Let this mind be in you, which was also in Christ Jesus: who, being in the form of God, thought equality with God not a prize to be seized, but made himself of no reputation, and took upon him the form of a servant, and was made in the likeness of men; and being formed in fashion as a man, he humbled himself, and became obedient to death, even the death of the cross." Is this loving his neighbor only as he loved himself? He, the first recorded act of whose boyhood life was his cheerful relinquishment of education, after one memorable day in the Jewish University, and his return to the narrow life of a peasant, that he might help his father in the shop, and one of whose latest acts, as he hung upon the cross, was to commend, in fragmentary sentences, with his failing breath, his heartbroken mother to the care of the beloved disciple—did he love others only as he loved himself? When did he think of himself? When did his care, his comfort, his enjoyment, his refreshment, play a part in his life? To him love meant service and sacrifice. "The Son of man," he said, "came not to be ministered unto, but to minister, and to give his life a ransom for many."

Is this an impossible ideal? Must we leave it for hymns and homilies, for stories and dramas? Ask the Sisters of Mercy in many a hospital; ask the Red Cross nurses in the battlefield; ask Valley Forge and Gettysburg; ask the missionary chapel and the college settlement; ask Paul, and Luther, and William of Orange, and George Washington, and Robert E. Lee, and Abraham Lincoln, and General Armstrong; ask the mothers innumerable who have given their lives to the nurture of their children, that they may live in their children's future lives. Christ's commandment is written in the heart of man, and in our hours of vision we see its luminous letters and long to make it the law of our lives.

"What doth the Lord require of thee," asks Micah, "but to do justly, to love mercy, and to walk humbly with thy God?" To love mercy is more than to do justly:

it is to desire to do unto others more than we would ask them to do unto us; it is pity for the suffering, compassion for the ignorant, love for the undeserving. It is to eat with publicans and sinners; it is to pass by the pious priest and go to the house of Zaccheus; it is still to love the friend who in the hour of trial deserts us, as Christ loved Peter; it is to hold with tenacity of patience to the false friend who betrays us, as Christ held to Judas Iscariot. The cross, not the balance-sheet, is the symbol of Christianity. "Whosoever will be great among you, let him be your minister; and whosoever will be chief among you, let him be your servant:" this is Christ's measure of greatness. "Though he was rich, yet for your sakes he became poor, that ye through his poverty might become rich:" this is Paul's summary of Christ's life. "He laid down his life for us; and we ought to lay down our lives for the brethren:" this is John's interpretation of that life.

Christ gave to his disciples but one commandment: That ye love one another, as I have loved you. His example is our only rule of conduct; his spirit of love our only law of life.

❀

A School Reform

No matter of greater importance to the higher interests of New York State is now before the public than the question of the unification of the control of its educational institutions. Several bills are now before the State Legislature bearing on this subject. One provides for an addition of nine to the membership of the Board of Regents, and practically constitutes that body a Board of Education to carry on the work at present in the charge of the Department of Public Instruction. This bill does not meet with the approval of the Regents, who propose to introduce a measure which will end the present system of double control and secure the unification of the educational system of the State by bringing all institutions, from the lowest to the highest grade, under the direct management of the Board as now constituted. A third bill provides for the appropriation of $135,000 to be distributed by the Regents among the high schools of the State in order to provide for the instruction of students who come from districts in which high-school facilities are not offered. The Superintendent is reported as opposed to this bill on the ground that this appropriation, if made, ought to be expended under the direction of his department.

Even a casual examination of these three measures brings out the evil inherent in the present situation—the evil which always inheres in the attempt to deal with one group of institutions, or with a single department of the public life of a State, by two or more organizations. From this evil New York has suffered for many years. The University of the State of New York was incorporated in 1784. It became a constitutional body in 1895. The Department of Public Instruction was established in 1854. The two organizations were supposed to occupy different fields, the public elementary schools being under the Department of Public Instruction, the academies and other institutions of secondary and higher learning under the management of the University. Even if the operations of the two bodies could be kept in different fields, the evils which grow out of an attempt thus arbitrarily to draw a line across the field of education, which is essentially and necessarily one, would inevitably develop in the course of time. As a matter of fact, the separation has never been practically made; and there has been constant friction between the two bodies.

There are in the State one hundred and twelve school commissioner districts for the purposes of common-school or primary education, exclusive of cities. These districts are subdivided into smaller districts in accordance with the requirements of localities. By a law passed in 1853, school districts were authorized to form "union free school districts" in order to secure a higher class of graded schools; the governing boards in these union free school districts being elected by the voters of the district and responsible to the school commissioner, but under the supervision of the State Superintendent of Public Instruction, who, according to statute, apportions and distributes the appropriations made by the Legislature for the support of such schools. Academic departments in such union free school districts come under the visitation of the Regents

and receive funds from them. Boards of education in these union free school districts must apply to preacademic grades grants from the Superintendent and to academic grades grants from the Regents. To the State Superintendent is also given general supervision over all matters relating to the training and licensing of teachers. He also acts as a court of ultimate appeal in all questions which may arise over school matters. "His decision," reads the statute, "shall be final and conclusive, and not subject to question or investigation in any place or court whatever." The Superintendent is chosen by joint ballot of the Legislature for a term of three years.

The University of the State of New York includes "all institutions of academic or higher education which are now or may hereafter be incorporated in this State, together with the State Library and State Museum," and is governed by a Board of Regents composed of nineteen persons, who are elected for life by the Legislature; the Governor, Lieutenant-Governor, Secretary of State, and Superintendent of Public Instruction being members *ex officio*. The Regents serve without pay. They have the power to prescribe standards of examination, to confer charters on colleges, academies, and other educational institutions, and to impose upon such institutions such restrictions as they think wise. They also determine the preliminary education required of professional students and they examine and license physicians, dentists, veterinaries, and public accountants. They also have the power to suspend the charter of any institution, or to change it at will.

This brief explanation brings out the different functions of the two bodies which have charge of educational matters in this State. The friction between the two organizations has been increased by the rapid growth in numbers and importance of the academic department in the union free school district. The high school is an evolution out of the common school which is under the control of the district board and the school commissioner, the latter being responsible to the State Superintendent and in large measure controlled by him. The Regents, on the other hand, have the right of visitation and examination of the high schools, and the fixing of the standards of these schools; and the enlargement of the educational facilities which these schools offer seems to bring them more and more by force of logic within the field which is under the control of the Regents. It is in the exercise of the power of visitation and investigation that friction has developed between the Regents and the Department of Public Instruction; and the position taken by the Regents, that the spending of the proposed appropriation of $135,000 among the various high schools of the State should be in their hands, would seem to be entirely reasonable. It is distinctly for purposes of secondary education, appropriations for which have been administered invariably through the Regents.

The Board of Regents have issued an appeal to the Governor, the Legislature, and the people of the State, calling attention to recent evidences of the evils arising from the dual system of State supervision of public education, and urging that the exclusive power of the supervision of public education be committed to their own Board on two grounds: first, because the dual system inevitably creates friction and prevents the freest development of educational organization in the State; and, second, because the lodging of the supervision of public education in their hands would forever take the schools of the State out of politics.

These are two very cogent reasons, which will appeal to all intelligent voters of the State, without respect to party. The prime necessity of single, harmonious highly efficient organization of the schools, and keeping them absolutely free from political influence and out of the field of political action, is self-evident; it needs no demonstration. The Regents constitute the oldest educational organization in the State; they are, as Governor Odell has said, "absolutely without partisanship and actuated by the highest motives and the purest sentiment." There may be reasons for modifying the constitution of the Board of Regents. Possibly it should be a smaller body; possibly its members should not have a life tenure; possibly the size of the body and the life tenure tend to prevent educational progress. These allegations are made, and they may be true; but if true, the remedy is the

reorganization of the Board, and not a continuance of the present dual system, still less a plan which directly or indirectly would devolve educational legislation in detail upon an already overburdened Legislature. The Board of Regents should be made the educational legislative body; the Superintendent of Public Instruction should be appointed by the Board and be amenable to the Board. The whole educational system of the State should be unified under the one control.

The Impressions of a Careless Traveler

XI.

May 5.

IN Rome at last—the city of contrasts: of Nero and of Marcus Aurelius, of Cicero and of Seneca, of Gregory VII. and of Alexander VI., of the Coliseum and of St. Peter's, of palaces and of poverty, of piety and of superstition, of self-sacrifice and of self-indulgence, where Bruno was burnt and where Luther was reborn, theater of the most beastly orgies and of the most splendid religious pageants, the Babylon and the Jerusalem of European history. I believe in air castles: if I had not dreamed for years of visiting Rome, I never should have reached it. We were welcomed at the station by our old friends Signor and Madame ——. To be in their house is like being at home—a luxury after two months of steamer and hotel life. Our supper we found laid in our room, and a little fire burning in the open stove—for it is strangely cold for April. The day has been full of excitement. The ride from Naples here has been one of strange beauty. I am weary but not sleepy. But I want to waste no days in Rome, and if I am not to waste to-morrow in resting, I must rest to-night. I will stop thinking and go to sleep.

May 6.

When you get to Rome, said a friend in America, take a carriage and spend a day in driving about the city. Then take the evening train for Florence; or—unpack your trunks and stay a year. We have followed the first part of the advice, and driven this afternoon about the city. We cannot unpack our trunks and stay a year, but I have already in my own mind resolved to prolong our stay from two weeks to three, even if we have to sacrifice something of Florence and Venice to do so. We had a driver so intelligent that we dubbed him Cicero, and Madame —— went with us and was our guide and our interpreter.

We drove first through the heart of the city, across the Tiber and up the slope of the Janiculum Hill, which is laid out as a drive and parkway. From one of its eminences we could see the city of Rome beneath us, the Tiber dividing it into two unequal sections; the Seven Hills of Rome discernible even without our glasses, and so far distinguishable that our driver could point them out to us, although in one case the valley between the neighboring hills has been filled up, either by the process of time, the destructions of war, or the art of man, so that the two hills are no longer separable to the eye, at least at a distance. Upon those hills were clearly discernible, on the Quirinal, the palace of the King; on the Capitoline, the Museum; on the Palatine, the ruins of the Palace of the Cæsars; on the Aventine, the Dominican Monastery; on the distant Viminal, the residences of the best families of modern Rome, and almost equidistant, though in another direction, the dome of St. Peter's. Then we drove by a winding road up to the over-elaborate statue of Garibaldi, so constructed, it is said, whether by accident or design I do not know, that all the guns of the group of soldiers are pointing at the Vatican, which, with its pleasure grounds and summer residence for the Pope, is in full view; then down the hill to St. Peter's, stopping long enough only to get the view of its appearance from the front with the semicircular cloisters leading up to it, and the fountains playing in the square before it; then across the Tiber by the famous Castle of St. Angelo, which has witnessed so many dark deeds of treachery and cruelty, to the Pincian Hill and the adjoining Borghese Gardens—the two together constituting the chief pleasure-ground and

popular promenade of Rome; and thence back to our home on the Viminal. We have thus, in an afternoon, driven through the heart of the city and made a circuit perhaps three-quarters of the way about it, and, thanks to our interpreter and to Cicero, have returned with a very good general idea of its topography and the location of its most notable sights.

This is preliminary to visiting it in detail —and studying it? Yes! the temptation is not to be resisted. I lay aside my resolution to do no serious work while I am abroad. I have had nearly two months of rest; for three weeks I will give myself the pleasure of a little study. I wish I could spend three months instead of three weeks here. I should like to get out of my library Mommsen's "History of Rome" to revive my knowledge of its general history, Froude's "Cæsar" to give me a picture of the city in the first century, Gibbon's "Decline and Fall" to carry the picture down to the time of Marcus Aurelius, Bryce's "Holy Roman Empire" to recall the part it played in the first few centuries of the Christian era, Creighton's "History of the Popes" to re-read his description of its social and religious condition under the Borgias, Lanciani's "New Tales of Old Rome" to connect all this history with its present topography and remains, and Countess Cesaresco's "Liberation of Italy" to bring before me in brief its most recent political history. Probably this would only whet my appetite for a much more thorough study than would be possible with only these books and only three months to study in.

But when one cannot do what he would, he must be content to do what he can. With the aid of Baedeker and B——'s knowledge of ancient history, which is much fresher than mine, I can at least connect what I see with what little I remember, and jot down here impressions to give life to future studies or definiteness to future reflections. Yes! this is what I will do. I will not attempt to record daily experiences; that I clearly see would be useless. I will record only conclusions. In Rome these pages shall be the posted entries of a ledger, not the daily entries of a journal. For the attempt to preserve here the details of daily observations would be like an attempt to give a photograph of the Forum with all its columns, arches, walls, broken busts, or of a great gallery with its forest of statues and torsos; in such a picture no feature would be distinguishable, because the plate had ambitiously endeavored to reproduce them all.

May 7.

I supplemented yesterday's drive about the city by a walk to-day through the heart of it with Signor ——. One gets a familiarity, a closeness of acquaintance, by a walk, which one cannot get in a carriage. Partly from this drive, partly from the walk, partly from the conversations with my friends who are familiar with Rome in all its phases, I find already my apprehension of Rome systematizing itself even before I have any real knowledge to be systematized. It is very well, I think, to construct the pigeonholes for one's facts before the facts are known, that one may be able to classify them as they come into his possession. B—— says rightly that Rome has no atmosphere. It is essentially a cosmopolitan city—in that respect wholly unlike Naples. Except for the variously uniformed ecclesiastics whom we meet at every turn, there are no curious costumes; except for the ruins which one may happen on everywhere in his walks, Rome might be any Continental city. And yet a little reflection impresses one with the conviction that this lack of distinction is itself a distinction.

There are three Romes, indistinguishable except by after-reflection, one built upon the other, yet all remaining to bewilder and perplex the observer—ancient or classical Rome, mediæval or ecclesiastical Rome, and modern Rome. The center and symbol of classical Rome are the Palatine and the Forum, though remains of the ancient capital are scattered in massive ruins about the city and in busts and statues in various states of preservation in the galleries, public and private. The center and symbol of mediæval or ecclesiastical Rome are St. Peter's and the Vatican—perhaps I should say St. Peter's in the Vatican, though one meets with monuments of ecclesiastical Rome in mediæval churches on every corner, many of them containing some picture, statue, relic, or mosaic which gives them a value in the eye of the devout, the antiquarian, and perhaps the art-lover. Most of the pictures, too, in the art galleries are by the "old masters," and represent a medi-

æval or quasi-mediæval type of art. The modern city is more political and educational than commercial. The commercial center is the Corso, a rather narrow street running from one side of the city to one of its centers; the political symbols are the old Parliament House, the new Palace of Justice—as yet incomplete—and the Departmental buildings, scattered, like those of Washington, about the city; the social symbols are the palaces with their art treasures and their gardens—the palaces somber and almost prison-like without, but ornate and artistic within, generally built with colonnades about an open square or courtyard; the intellectual center and symbol are the two Roman Catholic theological seminaries (one educating for foreign, the other for home, service), the Vatican Library with its invaluable and still insufficiently explored manuscripts, the colleges, whose relation to the seminaries is something analogous to that of the Oxford Colleges to the Oxford University, and the art schools and art students, the latter to be seen in the various galleries, sketch-book or canvas and easel in hand. I mean to divide my time unequally between these three cities. My first thought I shall give to ancient Rome; my second to ecclesiastical or mediæval Rome; as to modern Rome, I will see in it what chance brings to me—I shall have little enough time to divide between the other two.

May 8.

To-day being Ascension Day, we went in the afternoon to a vesper service at San Giovanni, which we are told has the best music in Rome. It was extraordinarily beautiful. One soloist in particular thrilled me by his singing; for a long time I could not determine whether the voice was masculine or feminine; it possessed in a remarkable degree the qualities of both a tenor and a soprano. I at length concluded that it was a man's voice, and I have since been told that its possessor is known in Rome as the Pope's angel. I am surprised to learn that St. Peter's is not a cathedral at all; San Giovanni is the cathedral church of Rome, and mass is said here only by the Pope or by his spiritual representative; since the occupation of Rome by the Italian Government as the capital of Italy, only by the latter, because, since that occupation, the Pope never leaves the Vatican. There are practically no seats in San Giovanni; the congregation, which relatively to the church was not large, stood clustered about the chancel; and the music was very seriously disturbed by the moving about of companies of sight-seers, some with Baedekers and some with breviaries in their hands, and, so far as I could see, the latter no more reverent than the former, save for a brief bowing or kneeling to the altar when they entered. The general effect was that of a promenade sacred vocal concert. But this was a special day and a special service, and it would not be fair to judge of the general effect of services in the churches of Rome from this one instance.

May 10.

I have been three times to see the Forum, and twice to see the Palatine; let me try to set down here some general impressions which have been produced by these visits. They will be like a composite photograph; they will reproduce nothing specific that I have seen, only general impressions; but I can recall specific remains and ruins better by the aid of Lanciani than I can by the aid of my own note-book.

Several days ago B—— took her Baedeker and with a friend explored the Forum without a guide, and by the process fixed in her own mind quite clearly the more impressive features of this confused and heterogeneous mass of ruins. Then I went with her, and with her aid got what I may call the lay of the land. Then we resolved to try an experience with Mr. Reynaud. There are two men who give peripatetic lectures in Rome, Mr. Forbes and Mr. Reynaud. They are more than guides, they are less than lecturers. Mr. Reynaud had been recommended to us as both interesting and satisfactory, and so we found him. He meets his audience —from ten to twenty—at the entrance, and walks over the ground selected for the lecture, explaining the ruins as the party come to them, and interpreting their significance by legend and history—not always discriminating between the two. How much of a scholar he is I do not know, but he is thoroughly familiar with the ground; he has facility of expression, some imagination, a good deal of quiet humor, and, if he sometimes mingles his-

tory and legend in his narratives, I should say that this is not because he lacks knowledge, but because he judges that it is not wise to attempt the difficult task of disentangling the two, especially with the limited time at his disposal and the auditors he has to address. In this I think he is wise; the attempt at disentanglement would probably only perplex his hearers. He follows Lanciani very closely; speaking broadly, it might be said that he gives an epitome of Lanciani as I give here an epitome of his two lectures, so that this is hardly more than an epitome of an epitome, or, to speak more accurately, my impression of his impression of Lanciani's impression. B—— and I, however, had gone over the Forum by ourselves before we went over it with him; we have gone over the Palatine since we went over it with him; and in the evenings I have done a little reading in Lanciani, borrowed for the purpose. These general observations—they cannot be called studies—have left on my mind a very vague impression of details, but a very vivid impression of certain general features of Roman life, which I here attempt to preserve that it may not utterly fade away.

The Palatine is a conically shaped hill, though irregular in form, the top of which has been somewhat, and I judge considerably, extended by substructures built up from below. On the top of the hill the Cæsars built in succession three or four great palaces; three I recall—those of Caligula (or Little Boots, to translate his nickname literally), Augustus, and the Flavian Emperors. Of the former little more than some of the substructure is left, unless it is still existent but buried beneath the gardens of the Farnese laid out here in the Middle Ages. The site of the second is still occupied by a nunnery, which, according to Mr. Reynaud, is to be removed when the remaining nuns have "gone to glory." Enough of the walls of the Flavian palace remain to give one a tolerable conception of this enormous structure, with its throne-room or palace of justice, its general gathering-room or courtyard, its dining-hall, its lecture-hall, etc. One curious feature was the *vomitorium*, a little room adjoining the dining-hall to which a guest retreated when he had eaten all that he could hold, and tickled his throat with a straw to compel himself to throw up his dinner that he might begin again. If D'Artagnan's servant had been familiar with the *vomitorium*, he would not have said with a sigh, "Eat as much as you please; you can eat but one dinner at a time." Adjoining this palace are the ruins of what is called the Stadium, which may have been either a place for public games or a kind of inclosed garden, or, perhaps, a spot which served both purposes; the ruins of a small house which Mr. Reynaud wishes to believe was the veritable house of Romulus, founder of Rome, but of which nothing more can be said than that it probably belongs to the period *before* the Roman Republic, *i. e.*, I believe the seventh or eighth century before Christ; the house of the mother of Nero, which is in a remarkable state of preservation; and—below and partly under the hill—the ruins of a house and school for the imperial slaves. On one side of this Palatine hill in the valley below was the Circus Maximus, the great chariot racecourse, where the people gathered for their favorite sport; on the opposite side was the Sacred Way—which was an avenue bordered by shops, temples, a great Court House, the Senate House, and the Forum or gathering-place of the people, where they debated, bargained, talked politics, heard the news and the gossip, listened to public speeches, and were occasionally inflamed to impetuous and unrestrained passion. This valley is crowded with ruined walls, pillars, arches, and pavements. Along a third side of the hill ran a road connecting the Forum with the Circus; along the fourth side the broad highway along which victorious generals passed in their triumphal processions, when they returned to be received with divine honors in the Forum by the applauding crowds. On the opposite side of this last avenue was the Coliseum, built after the death of Nero, and constituting the most gigantic amphitheater for amusement that the world has ever seen. In another direction, but adjoining the Forum Romanum, were more temples, court houses, and fora, of which little is now left, except the Column of Trajan.

B—— and I stood upon the Palatine, and looked down upon the Forum Romanum. The history of the past passes in a strange weird phantasmago-

me: Romulus and Remus laying out the boundary-lines of the future city; Virginius seizing a knife from the nearest butcher's shop and plunging it into the heart of his daughter to save her from shame; Castor and Pollux bringing the news of the victory of the Romans which saved their city from destruction and them from servitude; Cicero impaling Catiline with sharpened invectives, which pierce him like the spear-heads of a Roman cohort; Cæsar stabbed by the conspirators, and Marc Antony firing the populace to furious wrath against the assassins; Paul pleading the cause of religious liberty before Nero, winning his cause at the first trial only to lose it ten years later, so effectually that religious liberty was never again known in the city till re-established by Garibaldi and Victor Emmanuel in 1870; Titus marching along the Sacred Way, leading in triumph the priests of Jerusalem with the silver trumpets, the golden candlesticks, and the table of shew-bread, afterward engraved upon the Arch where they may still be seen; Christians thrown to the wild beasts in the Coliseum, and their bones gathered up with sacred care to be buried in the still existing catacombs outside the city walls; Constantine celebrating his victory over his rival Maxentius—a victory which ended in the overthrow of the pagan religion, the substitution of a paganized Christianity in its place, and the abandonment of Rome and the substitution of Constantinople as the world's capital; and then the curtain falls on the classical period of Rome, on its barbaric strength and moral weakness, its pagan splendor and its theatrical taste, its patrician wealth and its plebeian poverty.

These ruins seem to me to be symbols of its transient greatness. There are a few solid and substantial marble pillars; but most of the structures were made of concrete, brick, or cheap soft stone, veneered with marble. Their beauty was borrowed from Greece and was superficial; their structures were their own, and were cheap and perishable. I am impressed by this difference between the glory of Greek architecture as one sees it in the Acropolis and that of Rome as one sees it in the Forum. The temples of Greece were creations of beauty, constructed to express the Greeks' love of the beautiful; the Roman temples were artifices of display constructed to celebrate the maker; the first were the natural expression of art-genius, the others were constructed to win admiration for their builders. In Athens are the Temples to Theseus, to winged Victory, to Jupiter, to Athena; in the Forum, Temples of Faustina, of Julius Cæsar, of Castor and Pollux. The ruins of Greece retain their beauty in their ruin; the ruins of Rome are big rather than beautiful, and are impressive rather for their pathetic decrepitude than for their immortal charm. This suggestion of the difference between Greece and Rome, which I derive neither from Mr. Reynaud nor from Lanciani, but from B——, has been more and more impressed on me at every new visit to the Forum and the Palatine, and it has been still further reinforced by our visits to the galleries of Rome, where are gathered almost innumerable relics of a past age. Many of them are exceedingly beautiful, but they are for the most part Greek in their conception if not in their execution; this is pre-eminently true of the collections in the Museum on the Capitoline Hill and in the Museum in the Baths of Diocletian.

I am aware that this generalization, like most generalizations, is too broad to be wholly true. The Coliseum impressed us even more by the beauty of its great curves and the harmony of its arches, rising tier above tier, than by its size; the pillars which remain of Castor and Pollux rival in their beauty any we saw in Greece; and there are two little pillars in the Forum, I forget to what they belong, that are solid marble and exquisite in their form and their proportions. Despite these and perhaps some other exceptions, as the two elaborately carved columns, one to Trajan, one to Marcus Aurelius, with the incongruous statues of St. Peter on the one and St. Paul on the other, which some Pope with more church pride than classical taste has put upon the top of them, the moral decay of Rome is pathetically symbolized in its ruins. They leave on me an impression that the golden age of Rome might more appropriately be called the gold-plate age of Rome; that its glory was the glory of *nouveau riche*; that its splendor was as shallow and meretricious in its quality as it was egotistical in the spirit which inspired it. L. A.

A Southern View of the Negro

By L. H. Hammond

The author of the following article is a daughter of Southern parents—both slaveholders and both the children of slaveholders. Twenty-eight of the forty-three years of her life have been passed in the South. Her husband is a son of a slaveholder, and some years of active work with the Woman's Home Mission Board of the Methodist Episcopal Church, South, have given her exceptional opportunities for getting at an understanding of the point of view of thoughtful and philanthropic people through most of the Southern States regarding the Race Question. The Outlook believes that the Race Problem is one of the two most important National problems which the people of the United States have to meet and solve. It also believes that no civilized people have made in so short a time over such difficult obstacles so great an amount of industrial, educational, and social progress as the Southern people have made in the forty years since the Civil War. Believing this, and believing that the Race Question must, in its last analysis, be solved by the South itself, it sees, in spite of some manifestation, both North and South, of conflict, irritation, and misunderstanding, every promise that a solution will finally be reached. But it can be reached only by dealing with it, on the part both of the Northerner and the Southerner, in the spirit to which the following article by a Southern woman gives expression.—THE EDITORS.

WHATEVER antagonism exists between the Southern whites and the negroes is pretty well known in all its phases to the country at large; but the more hopeful aspects of their mutual relations seem little understood beyond our own borders. It is known, for instance, that many Southern people hope for no solution of the negro problem which will allow the negro to remain in the South on friendly terms with his white neighbor. Colonization, voluntary or enforced, is their expedient. There are also those who prophesy the extinction of the negro as a natural result of a higher civilization acting upon a lower race. But side by side with these impatient or despondent people is a large and growing class of Southern whites whose point of view is less well known abroad. They agree with the other class with regard to the facts of the negro's needs and deficiencies—these are too near at hand and too clamorous to be overlooked or mistaken. But, while assenting to the general conditions, they note the increasingly numerous exceptions to the rule, and draw from the acknowledged facts more hopeful conclusions than do their neighbors. It is for this class that I wish to speak.

There is among us so strong a disapproval of some aspects of negro education that we are sometimes thought of as opposed to their education altogether. One fact should end this misapprehension. The Southern whites, though still paying ninety-two per cent. of all money for school purposes, spent, in the twenty-five years following the war, $120,000,000 on schools for the negroes. In relation to the need it was a small sum, but it was great in relation to the poverty from which it came.

The feeling against college training for negroes is certainly strong, but the cause for it is not hard to understand. It is always both an easy and a dangerous thing to develop the minds of ignorant people faster than their moral natures; and many of the negroes have been thrust into a new world to which they are imperfectly related mentally, and not at all related morally. Such negroes despise the old life of manual labor, though incapable of making an honest living in any other way, while their wants and ambitions have been multiplied. Whatever their color, people like that are a menace to any community; and the Southern people have suffered enough from the mistaken beginnings of negro education to be pardoned if they are oversensitive at this point. But they do not deny the negro's right to a college education. The Southern Methodist Church—as a member of that Church I can speak more definitely of it than of any other—has long been committed to the higher education of the negro in Paine Institute at Augusta, Ga. This institution is the joint property of the Colored Methodist Episcopal

Church—a negro organization—and of the Methodist Episcopal Church, South, and has the official indorsement of the General Conference as well as of the several Annual Conferences. Its President is a member of an old South Carolina family, and its faculty is made up of Southern white and negro teachers. For years this school has been sending out men and women of good scholarship and fine character to become leaders of their race as teachers, preachers, and citizens.

In regard to social equality, the better class of negroes do not want it. Certainly they will never get it, South or North, for at least as far in the future as the mind of the white man can project itself; but this fact does not prevent mutual kindliness nor respect. In the best stores of our Southern cities white women can be seen to wait while the clerk attends to the colored customer who preceded them, and not one of them apparently gives it a thought. In the banks negro men take their place in line, and white men wait their turn behind them. Down on our public square, where the street is being repaved, white men and negroes work side by side, as they did to build the house in which I live. If antipathy exists, a friendly spirit is still more evident. No honorable negro lacks the respect of his white neighbors. This respect does not take the form of social intercourse, which such negroes desire as little as we; but it is none the less expressed and understood.

It is difficult for the people of the North to understand either the pressure of the whole great race problem upon us as a people, or its endless ramifications into the smallest details of our individual daily lives. The sharpest criticism of the negro we ever hear comes from the Northerners who come to live among us, and who find the dirt, shiftlessness, and dishonesty of the colored laborers, men and women, quite beyond endurance. They cannot understand why we "put up" with it all, and look askance at us, as lazy and shiftless ourselves—an opinion, be it observed, from which we radically dissent! After years of painful discipline—if they do not give up the struggle first, and return to the land of cleanliness and trained workers—they come to one of two conclusions. Either they do their work themselves, and are looked down upon by the darkies as "po' white trash;" or they adopt the attitude of their Southern neighbors, endure the pilfering and the slipshod work, and do what they can to awaken in these childish and undeveloped creatures some idea of trustworthiness and honor. It is not an attractive task. The long procession of incompetents tramp through our homes and business houses, never content long enough anywhere for the kindest or wisest of us to make much of an impression on them.

It is the more difficult to make any lasting impression upon them for the reason that, as a race, they are grateful only superficially, and in the immediate presence of expected benefits. But those of us who are discouraged by this patent and ubiquitous fact forget that gratitude is not a primal instinct; it is a late development in the progress of any race from barbarism, as in the growth of the normal civilized child. An illustration such as any housekeeper can furnish is found in a girl whom I tried hard to help during the year in which she cooked for me, and who left me at a moment's notice one morning when told that, on account of unusual rain and mud, the porch needed an extra scrubbing. I was ill and without other help, but that troubled her not a whit. Two weeks later the "collector," finding that she had left me and thinking her unprotected, tried to take away the furniture she had nearly paid for on the installment plan. She came to me with the untroubled confidence of a child, and of course received help as freely as she asked it. Embarrassment was of another world. Such matters are refreshing from their comical side, and should burden nobody with a sense of the negro's depravity. They spring from an undeveloped mental and moral consciousness. A few generations of reasonable patience and the negro will have passed this trying point.

But there is a darker side. It would be difficult to exaggerate the lack of morals among the mass of the negroes. Yet the whole human race has come up from the depths in this respect; and, remembering how recently their forefathers were savages, the situation is not without encouragement. Whatever the height of our

own moral superiority, it must, in God's eyes, just measure the depth of our debt to the weaker race. The difference pledges us, not to condemnation, but to service.

But there are chaste negroes and honest ones. I know many personally, and I cannot think my own experience very exceptional. A woman who was in my house thirteen years—a girl grown up since the war—is a fair specimen of this class. I believe in her virtue entirely, and would trust her with anything I possess, while her long and faithful service compels my genuine affection; and I am but one of thousands who could bear a like testimony.

It is in these exceptional negroes, and in their constantly, if slowly, increasing numbers, that we find a visible warrant for our faith in the future of their race, as well as for our faith in the providence which has bound up their future with that of our whole country.

Southern white women are sometimes said to be indifferent to the needs of the colored people. The charge is not without foundation; yet very many of the negro's best friends and most sympathetic helpers are to be found among the women who have inherited this attitude toward them from their mothers and grandmothers. In their painful progress from barbarism the negroes owe much to the Christian Southern women of the past, and more than is known to those of the present.

The new industrial school at Paine Institute is a sign, small but significant, of a growing desire among Southern women to help their darker neighbors through organized effort. It is also an indication of the growing belief that a final solution of the whole difficult problem will be reached for the mass of the race along the lines laid down at Hampton and Tuskegee. This school has been enterprised by the Woman's Board of Home Missions of the Methodist Episcopal Church, South, which is composed of women from every Southern State. A young colored woman, a graduate of Hampton, was placed at Paine this fall as instructress, and Dr. Walker writes that she is doing fine work notwithstanding the temporary lack of suitable accommodations. We have just let the contract for two industrial cottages, to be erected at once. We offered the work to a negro contractor living in Atlanta, an ex-slave; but, to his regret and ours, his time and resources for months ahead were already pledged in contracts with white people living in that city, and he could not undertake it.

It is chiefly industrial education, with its already notable good results, that is changing the attitude of many of the thinking men of the South to one of unmistakable hopefulness. Dr. J. J. Tigert, the editor of the "Southern Methodist Review," and one of the acknowledged leaders of his denomination, says in a recent editorial:

> We confess, for our own part, that we no longer share the pessimism with respect to the insolubility of the problem which has seemed to dominate much of Southern thought and sentiment. There are too many indications of the steady improvement of the negro in his Southern habitat. Commercially, educationally, religiously, the colored man is on the up grade. Many of his race are earning the cordial respect of the white people of the South by good conduct alike on the farm and in the shop, in the school and in the church. Social and moral distinctions, which are recognized by the negroes themselves, are rapidly developing among them. He who looks upon the race as a common mass of uniform quality is vastly mistaken. The worthless elements are no doubt still present in large proportions; but the worthy elements are visible and growing to him who has eyes to see. Time and patience will be needed for a permanent solution of all the difficulties of the situation; but the practical demands of business life, and various influences, both emancipating and conservative, which grow out of daily association and common interests, will make their scarcely perceptible contributions until, in ways whose operation is not measurable, but whose results are determinative, the vast and complex problem of the two races living side by side in concord and amity will be solved.

To some at the North these words may seem over-sanguine in view of the recent wholesale disfranchisement of the negroes in several of the Southern States. The charge which is brought against these States is not that negroes unfit to vote are excluded from the ballot, but that white men equally ignorant are not excluded also. But whenever the great majority of intelligent citizens in any State do a thing which to those at a distance appears unjust, it is safe to conclude that the action cannot be explained by the assumption that the intelligent majority has either laid aside its intelligence or has acted from unworthy motives. Explanations like that do not

explain, North or South. Mistakes may be made, the correcting of which will be costly enough; but in every State in the Union there is enough of the spirit of patriotism and of fair play to prevent the securing of any great majority for an act of selfish tyranny. As a matter of fact, the ignorant white vote at the South has never been, as at the North, a menace to good government. Such voters have not been gathered into towns, but scattered through the country, and coming into frequent and friendly touch with the educated classes both in the country and in the towns where they go to do their trading. They have stood entirely apart from questions of municipal government, and have been overwhelmingly on the side of law and order in the country communities. The dangers of our political life have come from the manipulation of the ignorant colored vote by a few unscrupulous whites. It is impossible for the North to realize or the South to forget the horror of the days when that vote ruled the South. In the interest of both races, for the sake of justice and decency, it must never rule again. The States which have barred the ignorant black vote but not the ignorant white vote have drawn, not a color line, but what they believe to be a danger line. All this is said, not in defense of an abstract principle, but in explanation of a concrete fact.

There are many men in the South who do not favor the retention of the ignorant white vote. The majority of them, as might be expected, are found in those States where the ignorant black vote is less overwhelming or the ignorant white vote more significant than elsewhere—that is, where the conditions tend to approximate those of the North.

It should be remembered that those States which have disfranchised these ignorant voters are taxing every resource equally with the other States to educate the negroes and to fit them for citizenship. There is neither the intention nor the wish to keep them disqualified, nor to bar them out when qualified. They are admitted as voters, and will be for years to come, on a lower level than would admit them to suffrage in one of the wisest Northern States. A mistake may have been made, but it was in the sincere belief that it was best for all classes, and with no desire to oppress the helpless or to shirk the duty laid upon the South of solving the negro problem in justice and honor.

To those of us who believe most thoroughly in a restricted suffrage the country over, there is a danger in the future which is as yet unknown among us. The rapid growth of our manufactures is drawing the scattered country population into our cities and laying the foundations of the Southern slum. The conditions which have hitherto safeguarded the ignorant white vote are rapidly changing, and the seeds of a new peril to clean municipal government are being sown. Unless the school term can be lengthened and compulsory education laws passed throughout the South, our children will find that the color line and the danger line no longer coincide. The ignorant white voter of to-day will give no trouble; but what of to-day's mill children, controlled a few years hence by the political boss? The spectacle so long familiar at the North may yet be seen at the South—the intelligent white vote arrayed against the ignorant white vote, and fighting it in the interest of good government.

But it is with the present situation that we are now concerned. We cannot, if we would, deny the crimes against the negroes which have been committed among us; but we believe that the great majority of whites will yet find a way to put an end to that which they condemn, and that the negroes themselves will eventually be raised above the moral level on which the terrible provocation is given.

It is a tremendous task which is laid upon the Southern whites, both in behalf of the negroes and to hold fast by patience and hopefulness within their own hearts. It is for the North, free from the daily burdens and conflicts which that task involves, to give us more of generous and brotherly understanding. With all her heroic effort, the white children of the South in many places are still inadequately provided for; to meet even in a small measure the needs of the colored population often seems to involve the sacrifice of needed provision for the whites. There is nothing comparable to it in all the North or West. But, whatever the South may lack, she has never yet turned her back upon difficulties nor failed in the

power of sacrifice for her ideal of duty. As much as in us is, we are debtors to the whites and to the negroes also. Southern statesmanship and Southern Christianity have long since owned the debt, and by the grace of God they will yet pay it in full.

Nashville, Tenn.

Two Gentlemen of Kentucky[1]

By James Lane Allen

We reprint this story by Mr. James Lane Allen, not so much for its charm as a piece of fiction, in which the best qualities of realism and of imaginative writing are skillfully combined, as because it is one of the most illuminative contributions to the literature of the Race Question that has been made in recent years. We believe it will give the Northern reader some insight into the gracious and friendly personality and spirit which are characteristic of a fine type of the Southern white man. We think it will also remind the Southern reader that the black man possesses traits of character—unselfishness, loyalty, personal affection, and refined feeling—which endeared him to the white master and mistress of a generation ago. These traits The Outlook confidently believes may be so encouraged and developed that the white and black races in this country shall find a common basis of agreement—a basis whereon they can live in peace and friendship, each respecting the public rights of the other without intruding upon the other's private rights. The story is reprinted by the special permission of the author and of the Macmillan Company, who issue it in the volume entitled "Flute and Violin."—THE EDITORS.

"The woods are hushed, their music is no more;
The leaf is dead, the yearning passed away:
New leaf, new life—the days of frost are o'er:
New life, new love, to suit the newer day."

THE WOODS ARE HUSHED

IT was near the middle of the afternoon of an autumnal day, on the wide, grassy plateau of Central Kentucky. The Eternal Power seemed to have quitted the universe and left all nature folded in the calm of the Eternal Peace. Around the pale-blue dome of the heavens a few pearl-colored clouds hung motionless, as though the wind had been withdrawn to other skies. Not a crimson leaf floated downward through the soft, silvery light that filled the atmosphere and created the sense of lonely, unimaginable spaces. This light overhung the far-rolling landscape of field and meadow and wood, crowning with faint radiance the remoter low-swelling hill-tops, and deepening into dreamy half-shadows on their eastern slopes. Nearer, it fell in a white flake on an unstirred sheet of water which lay along the edge of a mass of somber-hued woodland, and nearer still it touched to spring-like brilliancy a level, green meadow on the hither edge of the water, where a group of Durham cattle stood with reversed flanks near the gleaming trunks of some leafless sycamores. Still nearer, it caught the top of the brown foliage of a little bent oak-tree and burned it into a silvery flame. It lit on the back and the wings of a crow flying heavily in the path of its rays, and made his blackness as white as the breast of a swan. In the immediate foreground it sparkled in minute gleams along the stalks of the coarse, dead weeds that fell away from the legs and the flanks of a white horse, and slanted across the face of the rider and through the ends of his gray hair, which straggled from beneath his soft black hat.

The horse, old and patient and gentle, stood with low-stretched neck and closed eyes half asleep in the faint glow of the waning heat; and the rider, the sole human presence in all the field, sat looking across the silent autumnal landscape, sunk in reverie. Both horse and rider seemed but harmonious elements in the panorama of still life, and completed the picture of a closing scene.

To the man it was a closing scene. From the rank, fallow field through which he had been riding he was now surveying, for the last time, the many features of a landscape that had been familiar to him from the beginning of memory. In the afternoon and the autumn of his age he was about to rend the last ties that bound him to his former life, and, like one wh

[1] Copyrighted, 1891, 1899, by Harper & Brothers, New York.

had survived his own destiny, turn his face towards a future that was void of everything he held significant or dear.

The Civil War had only the year before reached its ever-memorable close. From where he sat there was not a home in sight, as there was not one beyond the reach of his vision, but had felt its influence. Some of his neighbors had come home from its camps and prisons, aged or altered as though by half a lifetime of years. The bones of some lay whitening on its battlefields. Families, reassembled around their hearthstones, spoke in low tones unceasingly of defeat and victory, heroism and death. Suspicion and distrust and estrangement prevailed. Former friends met each other on the turnpikes without speaking; brothers avoided each other in the streets of the neighboring town. The rich had grown poor; the poor had become rich. Many of the latter were preparing to move West. The negroes were drifting blindly hither and thither, deserting the country and flocking to the towns. Even the once united church of his neighborhood was jarred by the unstrung and discordant spirit of the times. At affecting passages in the sermons men grew pale and set their teeth fiercely; women suddenly lowered their black veils and rocked to and fro in their pews; for it is always at the bar of Conscience and before the very altar of God that the human heart is most wrung by a sense of its losses and the memory of its wrongs. The war had divided the people of Kentucky as the false mother would have severed the child.

It had not left the old man unscathed. His younger brother had fallen early in the conflict, borne to the end of his brief warfare by his impetuous valor; his aged mother had sunk under the tidings of the death of her latest-born; his sister was estranged from him by his political differences with her husband; his old family servants, men and women, had left him, and grass and weeds had already grown over the door-steps of the shut, noiseless cabins. Nay, the whole vast social system of the old régime had fallen, and he was henceforth but a useless fragment of the ruins.

All at once his mind turned from the cracked and smoky mirror of the times [illegible]welt fondly upon the scenes of the past. The silent fields around him seemed again alive with the negroes, singing as they followed the plows down the corn-rows or swung the cradles through the bearded wheat. Again, in a frenzy of merriment, the strains of the old fiddles issued from crevices of cabin doors to the rhythmic beat of hands and feet that shook the rafters and the roof. Now he was sitting on his porch, and one little negro was blacking his shoes, another leading his saddle-horse to the stiles, a third bringing his hat, and a fourth handing him a glass of ice-cold sangaree; or now he lay under the locust-trees in his yard, falling asleep in the drowsy heat of the summer afternoon, while one waved over him a bough of pungent walnut leaves, until he lost consciousness and by and by awoke to find that they both had fallen asleep side by side on the grass and that the abandoned fly-brush lay full across his face.

From where he sat also were seen slopes on which picnics were danced under the broad shade of maples and elms in June by those whom death and war had scattered like the transitory leaves that once had sheltered them. In this direction lay the district school-house where on Friday evenings there were wont to be speeches and debates; in that, lay the blacksmith's shop where of old he and his neighbors had met on horseback of Saturday afternoons to hear the news, get the mails, discuss elections, and pitch quoits. In the valley beyond stood the church at which all had assembled on calm Sunday mornings like the members of one united family. Along with these scenes went many a chastened reminiscence of bridal and funeral and simpler events that had made up the annals of his country life.

The reader will have a clearer insight into the character and past career of Colonel Romulus Fields by remembering that he represented a fair type of that social order which had existed in rank perfection over the blue-grass plains of Kentucky during the final decades of the old régime. Perhaps of all agriculturists in the United States the inhabitants of that region had spent the most nearly idyllic life, on account of the beauty of the climate, the richness of the land, the spacious comfort of their homes, the efficiency of their negroes, and the characteristic con-

tentedness of their dispositions. Thus nature and history combined to make them a peculiar class, a cross between the aristocratic and the bucolic, being as simple as shepherds and as proud as kings, and not seldom exhibiting among both men and women types of character which were as remarkable for pure, tender, noble states of feeling as they were commonplace in powers and cultivation of mind.

It was upon this luxurious social growth that the war naturally fell as a killing frost, and upon no single specimen with more blighting power than upon Colonel Fields. For destiny had quarried and chiseled him to serve as an ornament in the barbaric temple of human bondage. There *were* ornaments in that temple, and he was one. A slaveholder with Southern sympathies, a man educated not beyond the ideas of his generation, convinced that slavery was an evil, yet seeing no present way of removing it, he had of all things been a model master. As such he had gone on record in Kentucky, and no doubt in a Higher Court; and as such his efforts had been put forth to secure the passage of many of those milder laws for which his State was distinguished. Often, in those dark days, his face, anxious and sad, was to be seen amid the throng that surrounded the blocks on which slaves were sold at auction; and more than one poor wretch he had bought to save him from separation from his family or from being sold into the Southern plantations—afterwards riding far and near to find him a home on one of the neighboring farms.

But all those days were over. He had but to place the whole picture of the present beside the whole picture of the past to realize what the contrast meant for him.

At length he gathered the bridle reins from the neck of his old horse and turned his head homeward. As he rode slowly on, every spot gave up its memories. He dismounted when he came to the cattle and walked among them, stroking their soft flanks and feeling in the palm of his hand the rasp of their salt-loving tongues; on his sideboard at home was many a silver cup which told of premiums on cattle at the great fairs. It was in this very pond that as a boy he had learned to swim on a cherry rail. When he entered the woods, the sight of the walnut-trees and the hickory-nut trees, loaded on the topmost branches, gave him a sudden pang.

Beyond the woods he came upon the garden, which he had kept as his mother had left it—an old-fashioned garden with an arbor in the center, covered with Isabella grape-vines on one side and Catawba on the other; with walks branching thence in four directions, and along them beds of jump-up-johnnies, sweet-williams, daffodils, sweet-peas, larkspur, and thyme, flags and the sensitive plant, celestial and maiden's-blush roses. He stopped and looked over the fence at the very spot where he had found his mother on the day when the news of the battle came.

She had been kneeling, trowel in hand, driving away vigorously at the loamy earth, and, as she saw him coming, had risen and turned towards him her face with the ancient pink bloom on her clear cheeks and the light of a pure, strong soul in her gentle eyes. Overcome by his emotions, he had blindly faltered out the words, "Mother, John was among the killed!" For a moment she had looked at him as though stunned by a blow. Then a violent flush had overspread her features, and then an ashen pallor; after which, with a sudden proud dilating of her form as though with joy, she had sunk down like the tenderest of her lily-stalks, cut from its root.

Beyond the garden he came to the empty cabin and the great wood-pile. At this hour it used to be a scene of hilarious activity—the little negroes sitting perched in chattering groups on the topmost logs or playing leap-frog in the dust, while some picked up baskets of chips or dragged a back-log into the cabins.

At last he drew near the wooden stiles and saw the large house of which he was the solitary occupant. What darkened rooms and noiseless halls! What beds, all ready, that nobody now came to sleep in, and cushioned old chairs that nobody rocked! The house and the contents of its attic, presses, and drawers could have told much of the history of Kentucky from almost its beginning; for its foundations had been laid by his father near the beginning of the century, and through its doors had passed a long train of forms, from the veterans of the Revolution to the soldiers of the Civil War. Old coats hung up in closets; old dresses folded away in

drawers; saddle-bags and buckskin leggins; hunting-jackets, powder-horns, and militiamen hats; looms and knitting-needles; snuffboxes and reticules—what a treasure-house of the past it was! And now the only thing that had the springs of life within its bosom was the great, sweet-voiced clock, whose faithful face had kept unchanged amid all the swift pageantry of changes.

He dismounted at the stiles and handed the reins to a gray-haired negro, who had hobbled up to receive them with a smile and a gesture of the deepest respect.

"Peter," he said, very simply, "I am going to sell the place and move to town. I can't live here any longer."

With these words he passed through the yard-gate, walked slowly up the broad pavement, and entered the house.

MUSIC NO MORE

On the disappearing form of the Colonel was fixed an ancient pair of eyes that looked out at him from behind a still more ancient pair of silver-rimmed spectacles with an expression of indescribable solicitude and love.

These eyes were set in the head of an old gentleman—for such he was—named Peter Cotton, who was the only one of the Colonel's former slaves that had remained inseparable from his person and his altered fortunes. In early manhood Peter had been a wood-chopper; but he had one day had his leg broken by the limb of a falling tree, and afterwards, out of consideration for his limp, had been made supervisor of the wood-pile, gardener, and a sort of nondescript servitor of his master's luxurious needs.

Nay, in larger and deeper characters must his history be writ, he having been, in days gone by, one of those ministers of the gospel whom conscientious Kentucky masters often urged to the exercise of spiritual functions in behalf of their benighted people. In course of preparation for this august work, Peter had learned to read and had come to possess a well-chosen library of three several volumes—"Webster's Spelling-Book," "The Pilgrim's Progress," and the Bible. But even these unusual acquisitions he deemed not enough; for, being touched with a spark of poetic fire from heaven, and fired by n's fondness for all that is conspicuous in dress, he had conceived for himself the creation of a unique garment which should symbolize in perfection the claims and consolations of his apostolic office. This was nothing less than a sacred blue-jeans coat that he had had his old mistress make him, with very long and spacious tails, whereon, at his further direction, she embroidered sundry texts of Scripture which it pleased him to regard as the fit visible annunciations of his holy calling. And inasmuch as his mistress, who had had the coat woven on her own looms from the wool of her finest sheep, was, like other gentlewomen of her time, rarely skilled in the accomplishments of the needle, and was moreover in full sympathy with the piety of his intent, she wrought of these passages a border enriched with such intricate curves, marvelous flourishes, and harmonious letterings, that Solomon never reflected the glory in which Peter was arrayed whenever he put it on. For, after much prayer that the Almighty wisdom would aid his reason in the difficult task of selecting the most appropriate texts, Peter had chosen seven—one for each day in the week—with such tact, and no doubt heavenly guidance, that when braided together they did truly constitute an eloquent epitome of Christian duty, hope, and pleading.

From first to last they were as follows: "Woe is unto me if I preach not the gospel;" "Servants, be obedient to them that are your masters according to the flesh;" "Come unto me, all ye that labor and are heavy laden;" "Consider the lilies of the field, how they grow; they toil not, neither do they spin;" "Now abideth faith, hope, and charity, these three; but the greatest of these is charity;" "I would not have you to be ignorant, brethren, concerning them which are asleep;" "For as in Adam all die, even so in Christ shall all be made alive." This concatenation of texts Peter wished to have duly solemnized, and therefore, when the work was finished, he further requested his mistress to close the entire chain with the word "Amen," introduced in some suitable place.

But the only spot now left vacant was one of a few square inches, located just where the coat-tails hung over the end of Peter's spine; so that when any one stood full in Peter's rear, he could but marvel at

the sight of so solemn a word emblazoned in so unusual a locality.

Panoplied in this robe of righteousness, and with a worn leathern Bible in his hand, Peter used to go around of Sundays, and during the week, by night, preaching from cabin to cabin the gospel of his heavenly Master.

The angriest lightnings of the sultriest skies often played amid the darkness upon those sacred coat-tails and around that girdle of everlasting texts, as though the evil spirits of the air would fain have burned them and scattered their ashes on the roaring winds. The slow-sifting snows of winter whitened them as though to chill their spiritual fires; but winter and summer, year after year, in weariness of body, often in sore distress of mind, for miles along this lonely road and for miles across that rugged way, Peter trudged on and on, withal perhaps as meek a spirit as ever grew footsore in the paths of its Master. Many a poor overburdened slave took fresh heart and strength from the sight of that celestial raiment; many a stubborn, rebellious spirit, whose flesh but lately quivered under the lash, was brought low by its humble teaching; many a worn-out old frame, racked with pain in its last illness, pressed a fevered lip to its hopeful hem; and many a dying eye closed in death peacefully fixed on its immortal pledges.

When Peter started abroad, if a storm threatened, he carried an old cotton umbrella of immense size; and as the storm burst, he gathered the tails of his coat carefully up under his armpits that they might be kept dry. Or if caught by a tempest without his umbrella, he would take his coat off and roll it up inside out, leaving his body exposed to the fury of the elements. No care, however, could keep it from growing old and worn and faded; and when the slaves were set free and he was called upon by the interposition of Providence to lay it finally aside, it was covered by many a patch and stain as proofs of its devoted usage.

One after another the Colonel's old servants, gathering their children about them, had left him, to begin their new life. He bade them all a kind good-by, and into the palm of each silently pressed some gift that he knew would soon be needed. But no inducement could make Peter or Phillis, his wife, budge from their cabin. "Go, Peter! Go, Phillis!" the Colonel had said time and again. "No one is happier that you are free than I am; and you can call on me for what you need to set you up in business." But Peter and Phillis asked to stay with him. Then suddenly, several months before the time at which this sketch opens, Phillis had died, leaving the Colonel and Peter as the only relics of that populous life which had once filled the house and the cabins. The Colonel had succeeded in hiring a woman to do Phillis's work; but her presence was a strange note of discord in the old domestic harmony, and only saddened the recollections of its vanished peace.

Peter had a short, stout figure, dark-brown skin, smooth-shaven face, eyes round, deep-set, and wide apart, and a short, stub nose which dipped suddenly into his head, making it easy for him to wear the silver-rimmed spectacles left him by his old mistress. A peculiar conformation of the muscles between the eyes and the nose gave him the quizzical expression of one who is about to sneeze, and this was heightened by a twinkle in the eyes which seemed caught from the shining of an inner sun upon his tranquil heart.

Sometimes, however, his face grew sad enough. It was sad on this afternoon while he watched the Colonel walk slowly up the pavement, well overgrown with weeds, and enter the house, which the setting sun touched with the last radiance of the finished day.

NEW LIFE

About two years after the close of the war, therefore, the Colonel and Peter were to be found in Lexington, ready to turn over a new leaf in the volumes of their lives, which already had an old-fashioned binding, a somewhat musty odor, and but few unwritten leaves remaining.

After a long, dry summer you may have seen two gnarled old apple-trees, that stood with interlocked arms on the western slope of some quiet hillside, make a melancholy show of blooming out again in the autumn of the year and dallying with the idle buds that mock their sapless branches. Much the same was the belated, fruitless efflorescence of the Colonel and Peter.

The Colonel had no business habits, no political ambition, no wish to grow richer,

He was too old for society, and without near family ties. For some time he wandered through the streets like one lost—sick with yearning for the fields and woods, for his cattle, for familiar faces. He haunted Cheapside and the court-house square, where the farmers always assembled when they came to town; and if his eye lighted on one, he would buttonhole him on the street-corner and lead him into a grocery and sit down for a quiet chat. Sometimes he would meet an aimless melancholy wanderer like himself, and the two would go off and discuss over and over again their departed days; and several times he came unexpectedly upon some of his old servants who had fallen into bitter want, and who more than repaid him for the help he gave by contrasting the hardships of a life of freedom with the ease of their shackled years.

In the course of time, he could but observe that human life in the town was reshaping itself slowly and painfully, but with resolute energy. The colossal structure of slavery had fallen, scattering its ruins far and wide over the State; but out of the very débris was being taken the material to lay the deeper foundations of the new social edifice. Men and women as old as he were beginning life over and trying to fit themselves for it by changing the whole attitude and habit of their minds—by taking on a new heart and spirit. But when a great building falls, there is always some rubbish, and the Colonel and others like him were part of this. Henceforth they possessed only an antiquarian sort of interest, like the stamped bricks of Nebuchadnezzar.

Nevertheless he made a show of doing something, and in a year or two opened on Cheapside a store for the sale of hardware and agricultural implements. He knew more about the latter than anything else, and, furthermore, he secretly felt that a business of this kind would enable him to establish in town a kind of headquarters for the farmers. His account-books were to be kept on a system of twelve months' credit; and he resolved that if one of his customers couldn't pay then, it would make no difference.

Business began slowly. The farmers dropped in and found a good lounging-place. On county-court days, which were great market-days for the sale of sheep, horses, mules, and cattle in front of the Colonel's door, they swarmed in from the hot sun and sat around on the counter and the plows and machines till the entrance was blocked to other customers.

When a customer did come in, the Colonel, who was probably talking with some old acquaintance, would tell him just to look around and pick out what he wanted and the price would be all right. If one of those acquaintances asked for a pound of nails, the Colonel would scoop up some ten pounds and say: "I reckon that's about a pound, Tom." He had never seen a pound of nails in his life; and if one had been weighed on his scales, he would have said the scales were wrong.

He had no great idea of commercial despatch. One morning a lady came in for some carpet-tacks, an article that he had forgotten to lay in. But he at once sent off an order for enough to have tacked a carpet pretty well all over Kentucky; and when they came, two weeks later, he told Peter to take her up a dozen papers with his compliments. He had laid in, however, an ample and especially fine assortment of pocket-knives, for that instrument had always been to him one of gracious and very winning qualities. Then when a friend dropped in he would say, "General, don't you need a new pocket-knife?" and, taking out one, would open all the blades and commend the metal and the handle. The "General" would inquire the price, and the Colonel, having shut the blades, would hand it to him, saying in a careless, fond way, "I reckon I won't charge you anything for that." His mind could not come down to the low level of such ignoble barter, and he gave away the whole case of knives.

These were the pleasanter aspects of his business life, which did not lack as well its tedium and crosses. Thus there were many dark, stormy days when no one he cared to see came in; and he then became rather a pathetic figure, wandering absently around amid the symbols of his past activity, and stroking the plows, like dumb companions. Or he would stand at the door and look across at the old court-house, where he had seen many a slave sold and had listened to the great Kentucky orators.

But what hurt him most was the talk of the new farming and the abuse of the old

which he was forced to hear; and he generally refused to handle the improved implements and mechanical devices by which labor and waste were to be saved.

Altogether he grew tired of "the thing," and sold out at the end of the year with a loss of over a thousand dollars, though he insisted he had done a good business.

As he was then seen much on the streets again, and several times heard to make remarks in regard to the sidewalks, gutters, and crossings, when they happened to be in bad condition, the "Daily Press" one morning published a card stating that if Colonel Romulus Fields would consent to make the race for mayor he would receive the support of many Democrats, adding a tribute to his virtues and his influential past. It touched the Colonel, and he walked downtown with a rather commanding figure the next morning. But it pained him to see how many of his acquaintances returned his salutations very coldly; and just as he was passing the Northern Bank he met the young opposition candidate—a little red-haired fellow, walking between two ladies, with a rosebud in his buttonhole—who refused to speak at all, but made the ladies laugh by some remark he uttered as the Colonel passed. The card had been inserted humorously, but he took it seriously; and when his friends found this out, they rallied round him. The day of election drew near. They told him he must buy votes. He said he wouldn't buy a vote to be mayor of the New Jerusalem. They told him he must "mix" and "treat." He refused. Foreseeing he had no chance, they besought him to withdraw. He said he would not. They told him he wouldn't poll twenty votes. He replied that *one* would satisfy him, provided it was neither begged nor bought. When his defeat was announced, he accepted it as another evidence that he had no part in the present—no chance of redeeming his idleness.

A sense of this weighed heavily on him at times; but it is not likely that he realized how pitifully he was undergoing a moral shrinkage in consequence of mere disuse. Actually, extinction had set in with him long prior to dissolution, and he was dead years before his heart ceased beating. The very basic virtues on which had rested his once spacious and stately character were now but the moldy cornerstones of a crumbling ruin.

It was a subtle evidence of deterioration in manliness that he had taken to dress. When he had lived in the country, he had never dressed up unless he came to town. When he had moved to town, he thought he must remain dressed up all the time; and this fact first fixed his attention on a matter which afterwards began to be loved for its own sake. Usually he wore a Derby hat, a black diagonal coat, gray trousers, and a white necktie. But the article of attire in which he took chief pleasure was hose; and the better to show the gay colors of these, he wore low-cut shoes of the finest calfskin, turned up at the toes. Thus his feet kept pace with the present, however far his head may have lagged in the past; and it may be that this stream of fresh fashions, flowing perennially over his lower extremities like water about the roots of a tree, kept him from drying up altogether.

Peter always polished his shoes with too much blacking, perhaps thinking that the more the blacking the greater the proof of love. He wore his clothes about a season and a half—having several suits—and then passed them on to Peter, who, foreseeing the joy of such an inheritance, bought no new ones. In the act of transferring them the Colonel made no comment until he came to the hose, from which he seemed unable to part without a final tribute of esteem, as: "These are fine, Peter;" or, "Peter, these are nearly as good as new." Thus Peter, too, was dragged through the whims of fashion: To have seen the Colonel walking about his grounds and garden followed by Peter, just a year and a half behind in dress and a yard and a half behind in space, one might well have taken the rear figure for the Colonel's double, slightly the worse for wear, somewhat shrunken, and cast into a heavy shadow.

Time hung so heavily on his hands at night that, with a happy inspiration, he added a dress suit to his wardrobe, and accepted the first invitation to an evening party.

He grew excited as the hour approached, and dressed in a great fidget for fear he should be too late.

"How do I look, Peter?" he inquired at length, surprised at his own appearance.

"Splendid, Marse Rom," replied Pet

bringing in the shoes with more blacking on them than ever before.

"I think," said the Colonel, apologetically—"I think I'd look better if I'd put a little powder on. I don't know what makes me so red in the face."

But his heart began to sink before he reache his hostess's, and he had a fearful sense of being the observed of all observers as he slipped through the hall and passed rapidly up to the gentlemen's room. He stayed there after the others had gone down, bewildered and lonely, dreading to go down himself. By and by the musicians struck up a waltz, and with a little cracked laugh at his own performance he cut a few shines of an unremembered pattern; but his ankles snapped audibly, and he suddenly stopped with the thought of what Peter would say if he should catch him at these antics. Then he boldly went downstairs.

He had touched the new human life around him at various points; as he now stretched out his arms towards its society, for the first time he completely realized how far removed it was from him. Here he saw a younger generation—the flowers of the new social order—sprung from the very soil of fraternal battlefields, but blooming together as the emblems of oblivious peace. He saw fathers, who had fought madly on opposite sides, talking quietly in corners as they watched their children dancing, or heard them toasting their old generals and their campaigns over their champagne in the supper-room. He was glad of it; but it made him feel at the same time that, instead of treading the velvety floors, he ought to step up and take his place among the canvases of old-time portraits that looked down from the walls.

The dancing he had done had been not under the blinding glare of gaslight, but by the glimmer of tallow-dips and star-candles and the ruddy glow of cavernous firesides—not to the accompaniment of an orchestra of wind-instruments and strings, but to a chorus of girls' sweet voices, as they trod simpler measures, or to the maddening sway of a gray-haired negro fiddler standing on a chair in the chimney corner. Still, it is significant to note that his saddest thought, long after leaving, was that his shirt bosom had not lain down smooth, but stuck out like a huge cracked eggshell; and that when, in imitation of the others, he had laid his white silk handkerchief across his bosom inside his vest, it had slipped out during the evening, and had been found by him, on confronting a mirror, flapping over his stomach like a little white masonic apron.

"Did you have a nice time, Marse Rom?" inquired Peter, as they drove home through the darkness.

"Splendid time, Peter, splendid time," replied the Colonel, nervously.

"Did you dance any, Marse Rom?"

"I didn't *dance*. Oh, I *could* have danced if I'd *wanted* to; but I didn't."

Peter helped the Colonel out of the carriage with pitying gentleness when they reached home. It was the first and only party.

Peter also had been finding out that his occupation was gone.

Soon after moving to town, he had tendered his pastoral services to one of the fashionable churches of the city—not because it was fashionable, but because it was made up of his brethren. In reply he was invited to preach a trial sermon, which he did with gracious unction.

It was a strange scene, as one calm Sunday morning he stood on the edge of the pulpit, dressed in a suit of the Colonel's old clothes, with one hand in his trousers pocket, and his lame leg set a little forward at an angle familiar to those who know the statues of Henry Clay.

How self-possessed he seemed, yet with what a rush of memories did he pass his eyes slowly over that vast assemblage of his emancipated people! With what feelings must he have contrasted those silk hats, and walking-canes, and broadcloths, those gloves and satins, laces and feathers, jewelry and fans—that whole many-colored panorama of life—with the weary, sad, and sullen audiences that had often heard him of old under the forest trees or by the banks of some turbulent stream!

In a voice husky, but heard beyond the flirtation of the uttermost pew, he took his text. "Consider the lilies of the field, how they grow; they toil not, neither do they spin." From this he tried to preach a new sermon, suited to the newer day. But several times the thoughts of the past were too much for him, and he broke down with emotion.

The next day a grave committee waited

on him and reported that the sense of the congregation was to call a colored gentleman from Louisville. Private objections to Peter were that he had a broken leg, wore Colonel Fields's second-hand clothes, which were too big for him, preached in the old-fashioned way, and lacked self-control and repose of manner.

Peter accepted his rebuff as sweetly as Socrates might have done. Humming the burden of an old hymn, he took his righteous coat from a nail in the wall and folded it away in a little brass-nailed deerskin trunk, laying over it the spelling-book and the "Pilgrim's Progress," which he had ceased to read. Thenceforth his relations to his people were never intimate, and even from the other servants of the Colonel's household he stood apart. But the Colonel took Peter's rejection greatly to heart, and the next morning gave him the new silk socks he had worn at the party. In paying his servants the Colonel would sometimes say, "Peter, I reckon I'd better begin to pay you a salary; that's the style now." But Peter would turn off, saying he didn't "have no use fur no salary."

Thus both of them dropped more and more out of life, but as they did so drew more and more closely to each other. The Colonel had bought a home on the edge of the town, with some ten acres of beautiful ground surrounding. A high osage-orange hedge shut it in, and forest trees, chiefly maples and elms, gave to the lawn and house abundant shade. Wild-grape vines, the Virginia creeper, and the climbing oak swung their long festoons from summit to summit, while honeysuckles, clematis, and the Mexican-vine clambered over arbors and trellises, or along the chipped stone of the low, old-fashioned house. Just outside the door of the Colonel's bedroom slept an ancient, broken sun-dial.

The place seemed always in half-shadow, with hedgerows of box, clumps of dark holly, darker firs half a century old, and aged, crape-like cedars.

It was in the seclusion of this retreat, which looked almost like a wild bit of country set down on the edge of the town, that the Colonel and Peter spent more of their time as they fell farther in the rear of onward events. There were no such flower gardens in the city, and pretty much the whole town went thither for its flowers, preferring them to those that were to be had for a price at the nurseries.

There was, perhaps, a suggestion of pathetic humor in the fact that it should have called on the Colonel and Peter, themselves so nearly defunct, to furnish the flowers for so many funerals; but, it is certain, almost weekly the two old gentlemen received this chastening admonition of their all-but-spent mortality. The Colonel cultivated the rarest fruits also, and had under glass varieties that were not friendly to the climate; so that by means of the fruits and flowers there was established a pleasant social bond with many who otherwise would never have sought them out.

But others came for better reasons. To a few deep-seeing eyes the Colonel and Peter were ruined landmarks on a fading historic landscape, and their devoted friendship was the last steady burning-down of that pure flame of love which can never again shine out in the future of the two races. Hence a softened charm invested the drowsy quietude of that shadowy paradise in which the old master without a slave, and the old slave without a master, still kept up a brave pantomime of their obsolete relations. No one ever saw in their intercourse aught but the finest courtesy, the most delicate consideration. The very tones of their voices in addressing each other were as good as sermons on gentleness, their antiquated playfulness as melodious as the babble of distant water. To be near them was to be exorcised of evil passions.

The sun of their day had indeed long since set, but, like twin clouds lifted high and motionless into some far quarter of the gray twilight skies, they were still radiant with the glow of the invisible orb.

Henceforth the Colonel's appearances in public were few and regular. He went to church on Sundays, where he sat on the edge of the choir in the center of the building, and sang an ancient bass of his own improvisation to the older hymns, and glanced furtively around to see whether any one noticed that he could not sing the new ones. At the Sunday-school picnics the committee of arrangements allowed him to carve the mutton, and after dinner to swing the smallest children gently beneath the trees. He was seen on Commencement Day at Mor-

rison Chapel, where he always gave his bouquet to the valedictorian. It was the speech of that young gentleman that always touched him, consisting as it did of farewells.

In the autumn he might sometimes be noticed sitting high up in the amphitheater at the fair, a little blue around the nose, and looking absently over into the ring where the judges were grouped around the music-stand. Once he had strutted around as a judge himself, with a blue ribbon in his buttonhole, while the band played "Sweet Alice, Ben Bolt," and "Gentle Annie." The ring seemed full of young men now, and no one even thought of offering him the privileges of the grounds. In his day the great feature of the exhibition had been cattle; now everything was turned into a horse show. He was always glad to get home again to Peter, his true yokefellow. For just as two old oxen—one white and one black—that have long toiled under the same yoke will, when turned out to graze at last in the widest pasture, come and put themselves horn to horn and flank to flank, so the Colonel and Peter were never so happy as when ruminating side by side.

NEW LOVE

In their eventless life the slightest incident acquired the importance of a history. Thus, one day in June, Peter discovered a young couple love-making in the shrubbery, and with the deepest agitation reported the fact to the Colonel.

Never before, probably, had the fluttering of the dear god's wings brought more dismay than to these ancient involuntary guardsmen of his hiding-place. The Colonel was at first for breaking up what he considered a piece of underhand proceedings, but Peter reasoned stoutly that if the pair were driven out they would simply go to some other retreat; and, without getting the approval of his conscience to this view, the Colonel contented himself with merely repeating that they ought to go straight and tell the girl's parents. Those parents lived just across the street outside his grounds. The young lady he knew very well himself, having a few years before given her the privilege of making herself at home among his flowers. It certainly looked hard to drive her out now, just when she was making the best possible use of his kindness and her opportunity. Moreover, Peter walked down street and ascertained that the young fellow was an energetic farmer living a few miles from town, and son of one of the Colonel's former friends; on both of which accounts the latter's heart went out to him. So when, a few days later, the Colonel, followed by Peter, crept up breathlessly and peeped through the bushes at the pair strolling along the shady, perfumed walks, and so plainly happy in that happiness which comes but once in a lifetime, they not only abandoned the idea of betraying the secret, but afterwards kept away from that part of the grounds, lest they should be an interruption.

"Peter," stammered the Colonel, who had been trying to get the words out for three days, "do you suppose he has already—*asked* her?"

"Some's pow'ful quick on de trigger, en some's mighty slow," replied Peter, neutrally. "En some," he added, exhaustively, "don't use de trigger 't all!"

"I always thought there had to be asking done by *somebody*," remarked the Colonel, a little vaguely.

"I nuver axed Phillis!" exclaimed Peter, with a certain air of triumph.

"Did Phillis ask *you*, Peter?" inquired the Colonel, blushing and confidential.

"No, no, Marse Rom! I couldn't er stood dat from no 'oman!" replied Peter, laughing and shaking his head.

The Colonel was sitting on the stone steps in front of the house, and Peter stood below, leaning against a Corinthian column, hat in hand, as he went on to tell his love story.

"Hit all happ'n dis way, Marse Rom. We wuz gwine have pra'r-meetin', en I 'lowed to walk home wid Phillis en ax 'er on de road. I been 'lowin' to ax 'er heap o' times befo'; but I ain' jes' nuver done so. So I says to myse'f, says I, 'I jes' mek my sermon to-night kiner lead up to whut I gwine tell Phillis on de road home.' So I tuk my tex' from de *lef'* tail o' my coat: 'De greates' o' dese is charity;' 'caze I knowed charity wuz same ez love. En all de time I wuz preachin' an' glorifyin' charity en identifyin' charity wid love, I couldn' he'p thinkin' 'bout what I gwine say to Phillis on de road home. Dat mek me feel better; en de better I

feel, de better I *preach*, so hit boun' to mek my *heahehs* feel better likewise—Phillis 'mong um. So Phillis she jes' sot dah listenin' en listenin' en lookin' like we wuz a'ready on de road home, till I got so wuked up in my feelin's I jes' knowed de time wuz come. By en by, I hadn' mo' 'n done preachin' en wuz lookin' roun' to git my Bible en my hat, 'fo' up popped dat big Charity Green, who been settin' 'longside o' Phillis en tekin' ev'y las' thing I said to *her*se'f. En she tuk hole o' my han' en squeeze it, en say she felt mos' like shoutin'. En 'fo' I knowed it, I jes' see Phillis wrap 'er shawl roun' 'er head en tu'n 'er nose up at me right quick en flip out de dooh. De dogs howl mighty mou'nful when I walk home by myse'f *dat* night," added Peter, laughing to himself, "en I ain' preach dat sermon no mo' tell atter me en Phillis wuz married.

"Hit wuz long time," he continued, "'fo' Phillis come to heah me preach any mo'. But 'long 'bout de nex' fall we had big meetin', en heap mo' um j'ined. But Phillis, she ain't nuver j'ined yit. I preached mighty nigh all roun' my coat-tails, till I say to myse'f, D' ain't but one tex' lef', en I jes' got to fetch 'er wid dat! De tex' wuz on de *right* tail o' my coat: 'Come unto me, all ye dat labor en is heavy laden.' Hit wuz a ve'y momentous sermon, en all 'long I jes' see Phillis wras'lin' wid 'erse'f, en I say, 'She *g t* to come *dis* night, de Lohd he'pin' me.' En I hadn' mo' 'n said de word, 'fo' she jes' walked down en guv me 'er han'.

"Den we had de baptizin' in Elkhorn Creek, en de watter wuz deep en de curren' tol'ble swif'. Hit look to me like dere wuz five hundred uv um on de creek side. By en by I stood on de edge o' de watter, en Phillis she come down to let me baptize 'er. En me en 'er j'ined han's en waded out in the creek, mighty slow, 'caze Phillis didn' have no shot roun' de bottom uv 'er dress, en it kep' bobbin' on top de watter till I pushed it down. But by en by we got 'way out in de creek, en bof uv us wuz tremblin'. En I says to 'er ve'y kin'ly, 'When I put you un'er de watter, Phillis, you mus' try en hole yo'se'f stiff, so I can lif' you up easy.' But I hadn't mo' 'n jes' got 'er laid back over de watter ready to souze 'er un'er when 'er feet flew up off de bottom uv de creek, en when I retched out to fetch 'er up, I stepped in a hole; en 'fo' I knowed it, we wuz flounderin' roun' in de watter, en de hymn dey was singin' on de bank sounded mighty confused-like. En Phillis she swallowed some watter, en all 't oncet she jes' grap me right tight roun' de neck, en say mighty quick, says she, 'I gwine marry whoever gits me out'n dis yere watter!'

"En by en by, when me en 'er wuz walkin' up de bank o' de creek, drippin' all over, I says to 'er, says I:

"'Does you 'member what you said back yon'er in de watter, Phillis?'

"'I ain't out'n no watter yit,' says she, ve'y contemptuous.

"'When does you consider yo'se'f out'n de watter?' says I, ve'y humble.

"'When I git dese soakin' clo'es off'n my back,' says she.

"Hit wuz good dark when we got home, en atter a while I crope up to de dooh o' Phillis's cabin en put my eye down to de keyhole, en see Phillis jes' settin' 'fo' dem blazin' walnut logs dressed up in 'er new red linsey dress, en 'er eyes shinin'. En I shuk so I 'mos' faint. Den I tap easy on de dooh, en say in a mighty tremblin' tone, says I:

"'Is you out'n de watter yit, Phillis?'

"'I got on dry dress,' says she.

"'Does you 'member what you said back yon'er in de watter, Phillis?' says I.

"'De latch-string on de outside de dooh,' says she, mighty sof'.

"En I walked in."

As Peter drew near the end of this reminiscence, his voice sank to a key of inimitable tenderness; and when it was ended he stood a few minutes, scraping the gravel with the toe of his boot, his head dropped forward. Then he added, huskily:

"Phillis been dead heap o' years now;" and turned away.

This recalling of the scenes of a time long gone by may have awakened in the breast of the Colonel some gentle memory; for after Peter was gone he continued to sit a while in silent musing. Then, getting up, he walked in the falling twilight across the yard and through the gardens until he came to a secluded spot in the most distant corner. There he stooped or rather knelt down and passed his hands, as though with mute benediction, over a

little bed of old-fashioned China pinks. When he had moved in from the country he had brought nothing away from his mother's garden but these, and in all the years since no one had ever pulled them, as Peter well knew; for one day the Colonel had said, with his face turned away:

"Let them have all the flowers they want; but leave the pinks."

He continued kneeling over them now, touching them softly with his fingers, as though they were the fragrant, never-changing symbols of voiceless communion with his past. Still it may have been only the early dew of the evening that glistened on them when he rose and slowly walked away, leaving the pale moonbeams to haunt the spot.

Certainly after this day he showed increasing concern in the young lovers who were holding clandestine meetings in his grounds.

"Peter," he would say, "why, if they love each other, don't they get married? Something may happen."

"I been 'spectin' some'n to happ'n fur some time, ez dey been quar'lin' right smart lately," replied Peter, laughing.

Whether or not he was justified in this prediction, before the end of another week the Colonel read a notice of their elopement and marriage; and several days later he came up from downtown and told Peter that everything had been forgiven the young pair, who had gone to housekeeping in the country. It gave him pleasure to think he had helped to perpetuate the race of blue-grass farmers.

THE YEARNING PASSED AWAY

It was in the twilight of a late autumn day in the same year that nature gave the Colonel the first direct intimation to prepare for the last summons. They had been passing along the garden walks, where a few pale flowers were trying to flourish up to the very winter's edge, and where the dry leaves had gathered unswept and rustled beneath their feet. All at once the Colonel turned to Peter, who was a yard and a half behind, as usual, and said:

"Give me your arm, Peter; I feel tired;" and thus the two, for the first time in all their lifetime walking abreast, passed slowly on.

"Peter," said the Colonel, gravely, a minute or two later, "we are like two dried-up stalks of fodder. I wonder the Lord lets us live any longer."

"I reck'n He's managin' to use us *some* way, or we wouldn' be heah," said Peter.

"Well, all I have to say is, that if He's using me, He can't be in much of a hurry for his work," replied the Colonel.

"He uses snails, en I *know* we ain' ez slow ez *dem*," argued Peter, composedly.

"I don't know. I think a snail must have made more progress since the war than I have."

The idea of his uselessness seemed to weigh on him, for a little later he remarked, with a sort of mortified smile:

"Do you think, Peter, that we would pass for what they call representative men of the New South?"

"We done *had* ou' day, Marse Rom," replied Peter. "We got to pass fur what we *wuz*. Mebbe de *Lohd's* got mo' use fur us yit 'n *people* has," he added, after a pause.

From this time on the Colonel's strength gradually failed him; but it was not until the following spring that the end came.

A night or two before his death his mind wandered backward, after the familiar manner of the dying, and his delirious dreams showed the shifting, faded pictures that renewed themselves for the last time on his wasting memory. It must have been that he was once more amid the scenes of his active farm life, for his broken snatches of talk ran thus:

"Come, boys, get your cradles! Look where the sun is! You are late getting to work this morning. That is the finest field of wheat in the county. Be careful about the bundles! Make them the same size and tie them tight. That swath is too wide, and you don't hold your cradle right, Tom. . . .

"Sell *Peter! Sell Peter Cott n!* No, sir! You might buy *me* some day and work *me* in your cotton-field; but as long as he's mine, you can't buy Peter, and you can't buy any of *my* negroes. . . .

"Boys! boys! If you don't work faster you won't finish this field to-day. . . . You'd better go in the shade and rest now. The sun's very hot. Don't drink too much ice-water. There's a jug of whisky in the fence-corner. Give them a

good dram around, and tell them to work slow till the sun gets lower. . . ."

Once during the night a sweet smile played over his features as he repeated a few words that were part of an old rustic song and dance. Arranged, not as they came broken and incoherent from his lips, but as he once had sung them, they were as follows:

"O Sister Phœbe! How merry were we
When we sat under the juniper-tree,
The juniper-tree, heigho!
Put this hat on your head! Keep your head warm;
Take a sweet kiss! It will do you no harm,
Do you no harm, I know!"

After this he sank into a quieter sleep, but soon stirred with a look of intense pain.

"Helen! Helen!" he murmured. "Will you break your promise? Have you changed in your feelings towards me? I have brought you the pinks. Won't you take the pinks, Helen?"

Then he sighed as he added, "It wasn't her fault. If she had only known—"

Who was the Helen of that far-away time? Was this the Colonel's love story?

But during all the night, whithersoever his mind wandered, at intervals it returned to the burden of a single strain—the harvesting. Towards daybreak he took it up again for the last time:

"O boys, boys, *boys!* If you don't work faster you won't finish the field to-day. Look how low the sun is! . . . I am going to the house. They can't finish the field to-day. Let them do what they can, but don't let them work late. I want Peter to go to the house with me. Tell him to come on. . . ."

In the faint gray of the morning, Peter, who had been watching by the bedside all night, stole out of the room, and, going into the garden, pulled a handful of pinks—a thing he had never done before—and, re-entering the Colonel's bedroom, put them in a vase near his sleeping face. Soon afterwards the Colonel opened his eyes and looked around him. At the foot of the bed stood Peter, and on one side sat the physician and a friend. The night-lamp burned low, and through the folds of the curtains came the white light of early day.

"Put out the lamp and open the curtains," he said, feebly. "It's day." When they had drawn the curtains aside, his eyes fell on the pinks, sweet and fresh, with the dew on them. He stretched out his hand and touched them caressingly, and his eyes sought Peter's with a look of grateful understanding.

"I want to be alone with Peter for a while," he said, turning his face towards the others.

When they were left alone, it was some minutes before anything was said. Peter, not knowing what he did, but knowing what was coming, had gone to the window and hid himself behind the curtains, drawing them tightly around his form as though to shroud himself from sorrow.

At length the Colonel said, "Come here!"

Peter, almost staggering forward, fell at the foot of the bed, and, clasping the Colonel's feet with one arm, pressed his cheek against them.

"Come closer!"

Peter crept on his knees and buried his head on the Colonel's thigh.

"Come up here—*closer*;" and, putting one arm around Peter's neck, he laid the other hand softly on his head, and looked long and tenderly into his eyes. "I've got to leave you, Peter. Don't you feel sorry for me?"

"Oh, Marse Rom!" cried Peter, hiding his face, his whole form shaken by sobs.

"Peter," added the Colonel, with ineffable gentleness, "if I had served my Master as faithfully as you have served yours, I should not feel ashamed to stand in his presence."

"If my Marseter is ez mussiful to me ez you have been—"

"I have fixed things so that you will be comfortable after I am gone. When your time comes, I should like you to be laid close to me. We can take the long sleep together. Are you willing?"

"That's whar I want to be laid."

The Colonel stretched out his hand to the vase, and, taking the bunch of pinks, said, very calmly:

"Leave these in my hand; I'll carry them with me." A moment more, and he added:

"If I shouldn't wake up any more, good-by, Peter!"

"Good-by, Marse Rom!"

And they shook hands a long time. After this the Colonel lay back on the pillows. His soft, silvery hair contrasted

strongly with his childlike, unspoiled, open face. To the day of his death, as is apt to be true of those who have lived pure lives but never married, he had a boyish strain in him—a softness of nature, showing itself even now in the gentle expression of his mouth. His brown eyes had in them the same boyish look when, just as he was falling asleep, he scarcely opened them to say:

"Pray, Peter."

Peter, on his knees, and looking across the Colonel's face towards the open door through which the rays of the rising sun streamed in upon his hoary head, prayed, while the Colonel fell asleep, adding a few words for himself now left alone.

Several hours later, memory led the Colonel back again through the dim gateway of the past, and out of that gateway his spirit finally took flight into the future.

Peter lingered a year. The place went to the Colonel's sister, but he was allowed to remain in his quarters. With much thinking of the past, his mind fell into a lightness and a weakness. Sometimes he would be heard crooning the burden of old hymns, or sometimes seen sitting beside the old brass-nailed trunk, fumbling with the spelling-book and "The Pilgrim's Progress." Often, too, he walked out to the cemetery on the edge of the town, and each time could hardly find the Colonel's grave amid the multitude of the dead.

One gusty day in spring, the Scotch sexton, busy with the blades of blue-grass springing from the animated mold, saw his familiar figure standing motionless beside the Colonel's resting-place. He had taken off his hat—one of the Colonel's last bequests—and laid it on the Colonel's head-stone. On his body he wore a strange coat of faded blue, patched and weather-stained, and so moth-eaten that parts of the curious tails had dropped entirely away. In one hand he held an open Bible, and on a much-soiled page he was pointing with his finger to the following words:

"I would not have you ignorant, brethren, concerning them which are asleep."

It would seem that, impelled by love and faith, and guided by his wandering reason, he had come forth to preach his last sermon on the immortality of the soul over the dust of his dead master.

The sexton led him home, and soon afterwards a friend, who had loved them both, laid him beside the Colonel.

It was perhaps fitting that his winding-sheet should be the vestment in which, years agone, he had preached to his fellow-slaves in bondage; for if it so be that the dead of this planet shall come forth from their graves clad in the trappings of mortality, then Peter should arise on the Resurrection Day wearing his old jeans coat.

The Spring Will Bring Another Flower

By Martha Day Fenner

The Spring will bring another flower,
  Yea, one of richer hue.
Dame Nature knows no meager dower,
  When Spring would wed with you.
The garden of your last-year love
  Is killed by drought and waste;
Remorse has set a blight above
  The gate, then fled in haste.

The flower of richer hue will bloom,
  Yea, flaunt its color rare,
A crimson blotch upon the gloom
  That ever lingers there.
Your last-year love will look and grieve
  To see the flower apart,
Then turn with silent tread and leave
  The garden of your heart.

Child Labor in Factories

By Lillian W. Betts

FOR years there has been some agitation of the child labor problem in New York. Advance has been made, but the laws governing child labor in this State do not protect the children, nor do they protect the State. They have proved a sedative to the public conscience. The importance of New York as a manufacturing center, where law, order, philanthropy, altruism, and charity are factors in securing the highest degree of civilization, is admitted.

Briefly: the law of the State says that no child under fourteen shall be employed in any factory in the State. No child shall be employed between the ages of fourteen and sixteen without a certificate executed by a health officer. The certificate must be filed by the employer, who must keep a record also of the child and the date when employed. To secure this certificate the parent, or one standing in that relation, must file with the officer issuing the certificate an affidavit showing the date and place of birth of the child. That affidavit stands above any record as to age. An option is provided: if, in the judgment of the department or officer issuing the certificate, the child is physically unfit for the work required, the certificate may be withheld. Examination of hundreds of certificates granted to children of fourteen would indicate that this option had not been freely exercised. Work certificates for manufacturing have been granted giving the weight of the applicants, at fourteen and fourteen and a half years, as fifty-two pounds.

In addition to the affidavit as to age, a principal or teacher must furnish on demand to a child who has attended school or been instructed by such teacher, or to the factory inspector or his assistant, a certificate stating the school attendance of the child as not less than one year preceding the date of application and as having been in a building where reading, writing, arithmetic, and geo raphy are taught.

An affidavit by the parent or guardian made before a notary public, or executed by one, that the child is sixteen, puts the child wholly beyond the reach of the law. That is, the State accepts the affidavit of a parent, or one standing in that relation, as to the age of the child, as final. What the present laws governing child labor in New York have secured for the children and the State can best be illustrated by describing a manufacturing plant, the largest of its kind in the country, if not in the world, located within the limits of the city of New York.

Approaching the building from any point, it is impressive because of its simple massiveness. On one side is an open space with a canal, creek, or river. On three sides the streets separate it from lower and more or less undesirable tenement-house property. The windows, large and numerous, give an impression of light and air. The observer feels that if he had to work in a factory he would, on the whole, think that his lines had fallen in pleasant places if he worked here. The offices, on which no useless expenditures have been made, are many, all on the first floor. A small window with a man on guard, assisted by telephone, speaking tubes, bell, and all the labor-saving devices of an up-to-date office, is close to the street entrance. This window also controls the larger door through which the thousand employees enter and leave the building. The visitors were most courteously received by the superintendent, a man who impressed one at once by his physical and mental health, and also convinced at once, by his directness, of his supremacy in his own field. He bowed to no man there. In reply to the questions as to the children employed, he responded by saying, "Every child employed in this building is employed in strict conformity to the law. If there is anything wrong, it is up to the Labor Department and the Board of Health. There is not a child in this building whose work certificate we do not have on file, or the affidavit of the parents or guardians before a notary public. Back of that we do not go. This is a business, not a philanthropy."

We left the office, escorted by an employee, bearing an alphabetically arranged

record of every child employed; that is, the name, number of work certificate or affidavit, when employed, and number on pay-roll. The building was very clean; sanitary arrangements far better than in many private houses; separate dressing-rooms for the employees on each floor, large, light, and airy; sometimes there were more than one on the floor.

A door was opened into a large room filled with whirring, deafening machinery. A great number of little boys were moving rapidly over the smooth floor, pushing brooms before them that gathered the waste from the machinery. They were called by a signal to the foreman's desk. At least half of them could not speak a word of English; not even enough to understand the question, "What is your name?" Sometimes the whole group would fail to understand English. A search was made until some one was found who could speak at least one of the many languages represented, and put the answers into English. Poles, Russians, Italians, Germans, Finns, were the principal nationalities represented by these children. Less than two per cent. were American-born. Few were able to write their names in the language they spoke.

Among the swarthy foreign children whose baby faces and diminutive, ill-nourished bodies were a positive contradiction to the sworn statements of the parents on file, stood out the refined head and face of an American boy, eleven or twelve apparently. There was a certain pathetic appeal in the boy's eyes that drew the visitor to him. He answered in a refined voice and with clear enunciation as to his name and age, responding to the questions, "How old are you," "Fourteen." "When were you born?" "October 23, 1893." The visitors were able to control any expression of surprise, but asked where he attended school and when he left. At the noon hour one of the visitors went to the school to verify the boy's statement. The moment the boy's name was mentioned, the head of the department, to whom the visitor had been sent, asked breathlessly, "What is he doing?" "Sweeping floors." The teacher's eyes filled with tears. "What a crime! A boy with such a mind! He has always attended this school. Every teacher he ever had loved him. You do not know how hard we tried to keep him in school. You could not tire that child's mind; it was as fresh at three o'clock as at nine. Yes, there is his school record. He will be ten years old next October (1903). I refused to sign the school certificate for a week. He never was ill; never missed a day from school; we hoped much for his future. His mother declared he was fourteen last October. Of course, under the law her word, not our school record, stood. The principal told me I had no right to withhold my signature as to school attendance. No argument would move the mother. I signed; I do not believe they could read the signature, I could not see. Cannot something be done for him?"

The visitor went back to the factory fifteen minutes before the whistle blew for the return to work. What a sight! Troops of children, boys and girls; young men and women; those just on the edge of manhood and womanhood; middle-aged; and old, bowed by the weight of years and work. Boys in short trousers, smoking, swearing, using vile language; coarse interchange of talk between the sexes. Girls not fully clothed, who, having eaten their lunches in the rooms, had gone out for a breath of air and sunshine, hatless and coatless. So far as interchange of jokes, conversation, a rough-and-tumble play, the sexes were equal. The expletives used in conversation were the same. The small boys were profane beyond description. Two men pushed through a group of young people in the door. As one passed through he used the most frightful oath the writer ever heard. Not a head turned as he disappeared violently gesticulating.

The superintendent listened sympathetically to the report as to the boy. "I know," continued the narrator, "that I ought to ask you to discharge that boy. I am going to ask you to keep him. But can you afford to have him sweeping floors?"

"He will not be another day," was the response in quietly sympathetic tones. "We need that boy in this office. Believe me, that boy will be watched, given every opportunity for business education, and he will not be overworked."

This boy's work certificate, issued under the authority of the law and in strict

accordance with it, protects him from molestation until he has worked under its protection two years, when, that being his authoritative age record, he would be sixteen years of age, and free to work without it. If discharged, it must be returned to him, to use in securing work elsewhere. His mother had been labored with by women who loved the boy, and they failed to move her. The age record in school was not correct, she had sworn. The best protection for that boy was a man who could appreciate his mental ability; who needed the boy on the commercial side of the business he controlled. That man was secured; the child labor law does not cover office labor.

The investigation was resumed, and revealed hundreds of little girls and boys, so childish in appearance, in the expression of their faces, that it was possible only by the strongest self-control to conceal the evidence of the emotions their presence under such conditions aroused. The little girls were carrying spools, empty and filled, to the spindles. In one room dozens of them were in their bare feet running through water on the floor to the depth of about half an inch. The material at this point of manufacture had to be kept moist. Such tiny-looking things, with bodies that looked as if they might be crushed between one's hands! Nothing could be done. The every letter of the law was obeyed in employing them. There was not the slightest pretense on the part of any one in authority that he believed the certificate or affidavits under which these children were working represented the truth. The keynote was, "The law is obeyed to the very letter. We are no better than the law." As with the boys, only a very small percentage of the girls could answer in English; only a very small percentage could write their names even in the language they spoke. They were numbered on the pay-rolls; this they understood, and responded to their numbers. The service of an interpreter served to identify certificates, affidavits, and holders of them.

A walk through one room revealed a little girl, evidently an Italian, who had not appeared with the other children at the foreman's desk. She was perhaps three feet six in height, very slight, with a pathetic baby face. Her feet were bare; a dark cloth skirt, with belt folded over many times, was held about her waist by a safety-pin. The waist was made of a pair of football trousers. It was cut a little low at the neck, which was encircled by a string of coral beads. The shoulders were formed by the folding over of the material, which made a sleeve over the upper arm. The waist was sewed fast up the back with coarse black thread. It could only be removed by being ripped with scissors. This child had filed at the desk the notary public affidavit of her father that she was sixteen. No one believed, or pretended to believe, that she was sixteen, but the law says the parent's word or oath is the standard of age.

In this factory young men and women, seventeen, eighteen, twenty, who had lived in this country since they were four and five, were found who could neither understand nor speak English. Scores are working who came here when over sixteen, who, of course, do not speak English. These are the people who make the race "political boss," the greatest menace to our political body, municipal, State, or National.

At five o'clock we left that manufacturing establishment, which was "up-to-date" in construction and management, having seen the evils, injustice, and dangers of child labor fully protected by the present factory laws of the State of New York, in the most progressive, philanthropic, and greatest city in the United States of America.

Last February there was promoted from a primary to a grammar school on the East Side a Russian Jew boy who, according to the school record, was just thirteen at the time of promotion. It was conceded that the boy had the brightest mind in the school; he stood first in everything; he could, between three in the afternoon and nine the next morning, commit a long poem to memory, enjoy doing it, and recite it without an error. "I hated to promote him, he was such an incentive to the others," was the principal's comment when telling the boy's story. In April the father of the boy appeared with the blank from the Department of Health for her signature as to school attendance. The principal refused to sign it. The boy had passed from her jurisdiction two

months before. "Well, he never went to that school; I wanted him to work."

"You will never put him to work with my assistance. The boy, according to the school record, is but thirteen years and two months old. You are not poor; you are well off. The boy has a brilliant mind, and should be given every possible opportunity to study; he loves it."

The man left after violently abusing the principal, a woman, for refusing to sign the certificate as to school attendance.

In September the father and boy returned. The father wished to enter the boy as a pupil. Let the principal tell her story. "I looked at them. The boy who had left me a rosy, rollicking, happy, brilliant school-boy, stood before me a cowed, broken boy, looking like a sneak. The father, who had been one of the handsomest of men, about thirty-five, I thought, was a gray-haired, broken man. 'What has happened?' I gasped. The father, in a tone vindictive and cruel, responded: 'He is a thief.' The boy shrank within his clothes. I put my arm across his shoulders; he shook it off. 'Yes,' repeated the father, 'a thief.' The boy secured work with a jeweler in April without a work certificate. In August he was arrested for stealing—evidently beginning to steal almost as soon as he was employed. The payment by the father of the full amount of the loss claimed by the employer saved the boy from prosecution, but not from imprisonment. He had spent two nights in jail. The father used all his ready money and mortgaged a tenement to save the boy, he claimed. Whether the shock of arrest and imprisonment, or the father's evident brutality, or both, are responsible, it was necessary last December, when the boy returned to school, to put him three grades below the grade from which he was promoted; he cannot keep up with the work of that grade." Sorrowfully the principal adds, "I think his mind is destroyed."

There has been formed within a comparatively recent period an industrial trust, or, to use the euphemism of one of the managers of one of the plants, "a combine," which individually employed large numbers of children, and has been in its corporate capacity a much larger employer of children. The effect of "the combine" has been to increase the size of the plants. The children do work that requires the least amount of mental or muscular power. It was impossible not to resent the thought of children spending one or two years at such employment; it was just a degree above idleness. In one of these plants a system of stealing metals had been evolved that revealed itself only through loss. Even detectives could not discover the system by which the metals were taken from this building. One day a small boy, evidently believing that he could escape undiscovered at the noon hour, was arrested for stealing, and confessed. He was paroled in the care of his father, who swore he was twelve years old. The boy had been working eleven months. His father claimed that the boy had a work certificate, though the claim meant that he could have been prosecuted for perjury and would have been if the certificate, or record of it, could have been found. The manager claimed that the boy had a work certificate when he was employed, but he returned it. There is a boy of twelve branded as a thief, with a police record, because of the present factory laws in the State of New York. Nor is this all. Four blocks from that factory is a dealer in old metals. He has been arrested four times for receiving stolen goods, and discharged each time because the law says that the person buying the stolen property must know it has been stolen at the time he buys it.

In one plant of this "combine" ten boys were found working without certificates, as were also four girls. The sanitary conditions were deplorably crude and indecent in their arrangement, especially those for the girls. There were no dressing-rooms, nor the slightest provision for the comfort of the people employed, numbering four hundred and seventy. "The combine" refused all responsibility for the employment of children without work certificates. The foremen hired the people working under them; if they disobeyed the law, they must accept the consequences. This rule was found in operation in each of the plants of this corporation. One boy who held a work certificate was so small and emaciated that he was questioned. An examination of the record of the school he last attended gave the boy's age as thirteen next March. The father swore he was fourteen last September. His affidavit secured the work certificate. A

factory in which girls and women were employed in the ratio of about six to one man or boy was without dressing-rooms. Dress-skirts, waists, coats, and hats hung on the wall, and had to be removed in the open room. Not a seat was provided. At the noon hour the people who brought their lunches sat on the floor, or on the long baskets provided to receive the product from the machines. Passing between the rows of the machinery at the noon hour, a girl pulled the writer's dress, whispering, "For God's sake get us dressing-rooms and some place to eat." Over five hundred women and girls are employed in this factory. The product is trimming used in women's and children's clothing. Six children were employed without certificates. Scores held them under the protection of the law who should not have held them.

The following letter was received by the foreman of a factory who sent a boy home on the order of the factory inspector because the boy, working under severe physical strain, had no certificate. The letter was sent to the Department of Factory Inspection by the manager of the concern:

I have been with the boy to the office of the Board of Health, but the clerk would not give him any certificate unless he could read and write English, but he said if he had not been found out to be under age it would have been all right. You will have to hide him next time, and no one will be the wiser, or give him another name and say he is sixteen years old. Please do the best you can.

———

his father.

To show the trafficking in certificates, the following letter is given. It was sent to the Department of Factory Inspection by the employer:

Dear Sir: The child —— acknowledged to me that she changed her name in certificate. —— said she applied for certificate to Board of Health and was refused (although she claims she did attend school the entire year previous to applying). She was born 1888, and was fourteen years old May 5, attended school from seven years up. She obtained the certificate from —— the owner who said she could get another; gave $1 for it, as her mother—presumably the owner's mother—did; she lives at —— Street. The owner of the certificate at —— Street, and is now working on another certificate.

———

She was discharged.

The half has not been told. The remedy lies with the people who see in the operation of the present law the value of the protection it gives children from cruelty and injustice, and the value of the protection it gives the State from ignorance and political corruption due to greed and illiteracy.

New Books on Sociology[1]

THE winter season has added four noteworthy American contributions to the literature of sociology—two in the field of philanthropy and two in the field of social reform. Even the books in the field of philanthropy, however, have nothing to do with that form of philanthropy which now wrongfully monopolizes the once beautiful term of charity. The giving of material goods to feed and clothe the poor is distinctively the form of philanthropy which Mr. Lee excludes from consideration in his "Constructive and Preventive Philanthropy." He deals with the philanthropy which is as honorable to those who receive as to those who give; which, instead of diminishing the self-respect of the beneficiaries, increases it; which, instead of promoting their dependence on others, promotes their independence. Naturally, most of this philanthropy is essentially educational in its character, and covers the providing of opportunity for culture of every sort—the culture of the body in gymnasium and playgrounds, as well as the culture of mind in clubs, classes, and libraries. It does, however, cover provisions to aid the poor in time of need—they to make return as soon as able—and also institutions to encourage thrift and promote home ownership. It would appear that Boston has advanced further along these lines than any other American city, and some of the

[1] *Constructive and Preventive Philanthropy.* By Joseph Lee. With an Introduction by Jacob A. Riis. The Macmillan Company, New York.
Americans in Process. Edited by Robert A. Woods. Houghton, Mifflin & Co., Boston.
Our Benevolent Feudalism. By W. J. Ghent. The Macmillan Company, New York.
The Social Unrest. By John Graham Brooks. The Macmillan Company, New York.

experiments described—such as those of Mr. Robert Treat Paine in lending money to be repaid in installments, and building homes to be purchased by tenants as they pay their rent—are encouraging in the highest degree. But the limits of this review do not permit us to begin to particularize the generous social activities described in this volume. It is a remarkable record of American achievement along the line of helping men not to need help. The few scholastic pages can be easily skipped by the unscholastic reader. The body of the volume is full of human interest.

The second of the books in the field of philanthropy is the outcome of the social work done by the residents of the South End House of Boston. It is entitled "Americans in Process," and is practically a continuation of that quickening study, "The Social Wilderness," which Mr. Woods and his associates published four years ago. This book, while dealing with philanthropic work of the constructive and preventive type urged by Mr. Lee, also discusses social reform work of a type essentially political, and contains one or two brilliant chapters on politics pure and simple. It is Boston politics that is described—indeed, the whole book is almost narrowly Bostonian in its perspective—but the account of the resources and methods of the Boston ward bosses throws a penetrating light upon the problem of boss rule in every city in the country. Nothing so good has appeared since Miss Addams's chapter on aldermanic ways and means in Chicago. So true to life are the characterizations of the ward leaders in Boston that one or two of them have attempted to institute proceedings for libel—though they were unnamed. These proceedings simply intensified the public conviction that the shoes fitted the wearers. The narrative itself, however, carries its own corroboration. The book is a thoroughly calm, unexaggerated account of conditions among the poorer half, written from the standpoint of sympathy, and forcing home in unnumbered ways the essential unity of human life regardless of class lines.

The third of these noteworthy books, Mr. W. J. Ghent's social satire, "Our Benevolent Feudalism," deals, not with the efforts to better social conditions, but with the tendencies at work to make them worse. Mr. Ghent's half-mocking, half-serious thesis is that the lords of industry are re-establishing feudal relationships in our modern society, with a hierarchy of retainers and serfs as dependent upon them as were the subjects of mediæval lords. The introductory statistical chapters upon the concentration of wealth, and particularly the narrowing percentage of families owning their homes and farms, do not exaggerate the disturbing disclosures of the recent census. But as he proceeds with his task Mr. Ghent more and more gives evidence of selecting the facts which support his contention, while ignoring those which run counter to it. When, for example, he satirizes our educators as the indefatigable spokesmen of the moneyed interests, and satirizes the courts for serving as the defenders of these same interests by annulling or devitalizing laws enacted to restrain them, Mr. Ghent quotes the editor of The Outlook as a hostile critic of trades-unions, without intimating that he has defended unionism at more points than he has attacked it, and quotes a decision of a subordinate Federal court that only "unreasonable" restraints of trade can be constitutionally prohibited by law, ignoring the decision of the Supreme Court that Congress has constitutionally prohibited all contracts in restraint of trade, "whether reasonable or unreasonable." But while all this selection of evidence gives the book the effect of a shrewd attorney's plea, the evidence is none the less so artistically woven together that the reader follows it with admiration, though not with concurring judgment. Furthermore, the tendencies which Mr. Ghent represents as already victorious are unquestionably showing such power that Mr. Ghent's impressive summary of their manifestations may help in the work of arousing public resistance. Mr. Ghent himself doubtless believes that this resistance will be aroused, or else the gayety of his pessimism would be inconsistent with seriousness in the man. His point of view is unquestionably that of a socialist who believes that the temporary control of industry by a few simply paves the way for its permanent control by the whole body politic. While, therefore, his book is ostensibly the wail of an individualist over the destruction of the old

order, it is in reality the chuckle of a socialist over the introduction of the new.

The last of the books before us, Mr. John Graham Brooks's "Social Unrest," has all the literary attractiveness of Mr. Ghent's, and has besides a depth of conviction, an earnestness of purpose, and a love of truth which make it one of the most convincing and converting books of recent years. Mr. Brooks has given the better part of his life to the study of the "social unrest" which is perhaps the most distinguishing characteristic of the serious thought of our time, and in this book he has given to us the very quintessence of this better part of his life. His investigations have not merely or chiefly been made in libraries. These, too, he has made, and made thoroughly, but they serve merely as the background for the facts he has learned from men in high circles and low—the facts which are molding the thought of to-day, and had only begun to be observed in the books of a decade ago. Nowhere else, so far as we are aware, can the reader gain so quickly a comprehension of the ideas and aspirations of the struggling classes, for Mr. Brooks has studied their ideas and aspirations with a sympathy rare among the privileged classes, and has interpreted them to the reading public with a skill still more rare among the wage-earners. Certain parts of the faith of the working classes, such as the right to get back "their" jobs after a strike, have not yet been formulated into a creed by the working-class leaders themselves, but Mr. Brooks presents the instinctive thoughts and feelings of workingmen toward the loss of places they have held for years, so that the reader puts himself in their place and sees the situation as they see it. Only less valuable is the supplementary work done by Mr. Brooks in interpreting the thoughts and feelings of the captains of industry toward the current of events by which they are being swept along, and in which they often falsely appear to stand as guiders of the current. Mr. Brooks knows many men of this class personally and intimately, and the misgivings they express to him give evidence that in the class struggles ahead of us, as in those back of us, Anglo-Saxon society will not be divided sharply by class lines, because too many men of conscience and insight among the possessing will side with the struggling upon the definite reform measures which the great body of the latter are able to agree upon. Mr. Brooks rarely gives the names of the captains of industry whom he quotes either in approval or in criticism, for they would rarely wish to be quoted by name; but the volume contains an unusual amount of the "news too good to print," which those holding industrial power as well as political power possess in plenty, but for many reasons only give to the public in posthumous memoirs.

Mr. Brooks's social studies, while chiefly American, are by no means exclusively so. Two of the most brilliant chapters in his work relate to the changes which the Social Democratic parties of Europe have undergone as they have obtained political power and been compelled to give to their ideals practical efficiency. These changes have been most marked in Belgium, and we hope to give to our readers in the near future a portion of Mr. Brooks's account of what Socialism has taught and what it has learned in that country. Meanwhile we commend the book to all readers concerned with the deepest social problems of our times.

Song and Singer

By Frank Dempster Sherman

Like birds the poets come and go; but Song
Changeless abides, and shall forevermore,
As fresh to-day as when God sent the throng
Of singing stars from the celestial door.

Books of the Week

This report of current literature is supplemented by fuller reviews of such books as in the judgment of the editors are of special importance to our readers. Any of these books will be sent by the publishers of The Outlook, postpaid, to any address on receipt of the published price, with postage added when the price is marked "net."

American Diplomacy in the Orient. By John W. Foster. Houghton, Mifflin & Co., Boston. 6×9 in. 498 pages. $3, net. (Postage extra.)

This painstaking and dignified account of our diplomatic history of a hundred years with Asiatic countries and with the Pacific Islands has peculiar weight from the fact that its author has enjoyed a more varied diplomatic career than that of any other recent American statesman. He has been Minister to Mexico, to Russia, to Spain; he has acted as a plenipotentiary to negotiate reciprocity treaties with Germany, Spain, the British West Indies, San Domingo, and other countries; in succession to James G. Blaine he was Secretary of State; he visited China and Japan, having been invited by the Emperor of China to assist in the peace negotiations following the Chino-Japanese war; he was Special Ambassador to Great Britain and Russia for settlement of the Behring Sea seal question, and finally was appointed a member of the Anglo-American Joint High Commission for the settlement of Canadian questions, in which capacity he is still acting. His present volume appropriately follows his "Century of American Diplomacy," which comprised a general review of the foreign relations of the United States from 1776 to 1876. Since the latter date great events have happened in Asia and in the Pacific. The Hawaiian Islands have been annexed, and one of the Samoan; an American administration of the Philippine Islands has been begun, and the political relations between the United States and China have become much more intimate. Even without these events, however, the relations of the United States with the Pacific Islands and with Asiatic countries would have become closer because of the enormous development of our resources and the consequent increased necessity of foreign markets. The protection of our enlarged interests and the discharging of new political duties have come upon us during one and the same period. It is, therefore, with keen interest that the observer of events takes up this admirably told history of American diplomacy in the Orient, reads it with care, and judges for himself whether, after our record of a hundred years of honorable intercourse, this record is to be a safe guide for our future conduct. With the great majority of readers, we believe, there can be but one answer.

Assyrian and Babylonian Letters belonging to the Kouyunjik Collections of the British Museum. By Robert Francis Harper. Part VIII. (The Decennial Publications, Second Series. Vol. IV.) The University of Chicago Press, Chicago. 6×9 in. 142 pages.

This series, when completed, will be a noble memorial of American scholarship. The texts of the cuneiform tablets in the British Museum, with their transliterations, translations, and glossary, will fill some three dozen volumes. The present volume is occupied wholly with texts.

Background of Mystery (The). By Henry Ward Beecher. The Pilgrim Press, Boston. 5×7½ in. 32 pages. 25c., net.

Barbizon Days: Millet—Corot—Rousseau—Barye. By Charles Sprague Smith. Illustrated. The A. Wessels Co., New York. 5½×8¼ in. 232 pages.

Mr. Charles Sprague Smith knows at first hand the country which he so charmingly describes in his book, a country which was the background of the work of Millet, Corot, Rousseau, and Barye. Millet and Rousseau can hardly be understood without some familiarity with the Forest of Fontainebleau, and although Corot drew his most characteristic landscapes elsewhere, his life was so intimately associated with the Forest and with the artists who painted it that he will always be classed as one of the Barbizon men. This volume contains, in effect, four biographies or studies of artists, their genius and their work, with constant reference to the Barbizon background. Mr. Smith writes in this volume, not for the technical student of art, but for the love of good painting, and especially for the great class who have come to find in the work of Millet, Corot, and Rousseau some of the most charming and satisfying examples of modern landscape. The volume is written in an easy, flowing style, with a tendency to picturesqueness and in a very appreciative mood; it is full of the atmosphere of Barbizon, and it is very interestingly and intelligently illustrated.

Black Hills Ballads. By Robert V. Carr. The Reed Publishing Co., Denver, Colo. 5×8 in. 175 pages.

Books of Devotion. By the Rev. Charles Bodington. Longmans, Green & Co., New York. 5×7½ in. 319 pages. $1.40, net. (10c. postage.)

A very ecclesiastical, decidedly Anglican, but not illiberal account of devotional practices, and especially devotional literature, from the records of Hebrew sacrifices to Keble's "Christian Year." The latter, with other books of the nineteenth century, is hardly more than mentioned. Fully a third of the book is devoted to the seventeenth century. Naturally, the sacramentarian view of religion is given emphatic exposition. This book is one of the volumes of the Oxford Library of Practical Theology.

Ceres and Persephone: A Child Play. By Maud Menefee. Translated by Andrew Lang. Ralph Fletcher Seymour. 4½×7 in. 68 pages.

Commercial German: In Two Parts. By Gustav Hein and Michel Becker. E. P. Dutton & Co., New York. 5×7¾ in. 271 pages. $1.

Commercial German. By Arnold Kutner. The American Book Co., New York. 5×8 in. 404 pages. $1.

Daughter of the Pit (A). By Margaret Doyle Jackson. Houghton, Mifflin & Co., Boston. 5×8 in. 351 pages. $1.50.

The introduction of American coal-cutting machinery into an English colliery and the opposition of the miners furnish the solid basis upon which this novel, in which the hero is the young American inventor and the heroine a collier's daughter, is built. In the picturesque delineations of life in the mines and in the mining village there are pathos and power; but the story is deficient in that quality of humor which its other values might lead one to expect of the author. Without any disrespect to the human characters introduced, let passing compliment be paid to the good tram-donkeys whose cheerful braying brought some merriment into the gloomy life of the pit!

Every Day with Emerson. Compiled by Harriet A. Townsend. Houghton, Mifflin & Co., Boston. 3×5 in. 100 pages.

Hand in Hand. Verses by a Mother and Daughter. Doubleday, Page & Co., New York. 4×6½ in. 122 pages. $1.

Henry Ashton. By R. A. Dague. Published by the Author, Alameda, Cal. 4×6¾ in. 235 pages.

Jean François Millet. By Edgcumbe Staley, B.A. Illustrated. (Bell's Miniature Series of Painters.) The Macmillan Co., New York. 4×6¼ in. 63 pages.

Reserved for later notice.

Journal of Arthur Stirling (The). Revised and Condensed, with an Introductory Sketch. D. Appleton & Co., New York. 5×7½ in. 356 pages. $1.25, net. (12c. postage.)

Journeys End: A Romance of To-Day. By justus Miles Forman. Illustrated. Doubleday, Page & Co., New York. 5¼×8 in. 240 pages. $1.50, net.

Why this book should end as it does passes comprehension; unless, puzzles being the fashion of the day, the author when writing his last chapter became suddenly possessed with the idea of attracting readers to his book by turning the whole thing into a conundrum! In this case, he ought to have offered prizes for "correct solutions." "The Lady or the Tiger?" was welcome, but the public does not want a multiplication of books with the ends left off. The young Englishman who sells photographs and writes plays in New York, and his co-worker, the "plain-faced, red-haired young woman," are acquaintances who win our affection.

Life and Times of George Joachim Goschen, Publisher and Printer of Leipzig, 1752-1828. By his Grandson, Viscount Goschen. In 2 vols. Illustrated. G. P. Putnam's Sons, New York. 5½×9 in. $10, net.

Reserved for later notice.

Life of Joseph Parker (The). By William Adamson, D.D. Illustrated. The Fleming H. Revell Co., New York. 5½×8½ in. 387 pages. $1.75, net.

Though Dr. Joseph Parker died only last November, already his life has been written. The fact is, the book was really supposed to be finished before he died, as is evident from the preface, which is dated September, 1902. The result is a product that shows haste and bad editing. The greater part of the book, including the preface, speaks of Dr. Parker as still alive; the last two chapters suddenly jolt the reader to a new point of time, without the least explanation or apology for the abruptness. Moreover, the book is not especially interesting. This might be pardonable in a biography of almost anybody but Joseph Parker. Whatever he was not, he was most picturesquely interesting. Even his lapses from good taste and his expressions of egotism were interesting. His biographer, however, has succeeded in preserving a record of both these faults and has at the same time rendered them commonplace. The publishers, in the announcement of this book which appears on the wrapper, have made claims for the book which we do not find borne out by the book itself. Sometimes the biographer is unintentionally funny. "Not a morose or gloomy boy was Joseph," says he, and then gives an example of Joseph's "boyish pranks" and "frolics," which consisted in asking his playmates such questions as, "Where does such a word occur in the Bible? How many patriarchs were there? Were they men or animals?" And the biographer gravely adds, "Such a practice, when kept under control and governed by good feeling, adds to, rather than detracts from, the happiness of social intercourse." Dr. Parker's autobiography, "A Preacher's Life," which The Outlook reviewed when it first appeared three years ago, is and will probably remain the best portrait of him. Although, to use phrases of Dr. Parker's own making, it has more of "the limelight of fancy" than "the daylight of fact," it is a remarkable bit of self-revelation. His friend's biography of him has probably much more of fact, but certainly far less of truth.

Life Within (The): A Christian Science Romance. The Lothrop Publishing Co., Boston. 5½×7¾ in. 385 pages. $1.50.

This book may be considered either as a Christian Science tract in the guise of a novel, or a Christian Science novel in the guise of a tract. Or else it may not be considered at all.

Lover's World (The): A Wheel of Life. By Alice B. Stockham, M.D. The Stockham Publishing Co., Chicago. 5¼×8 in. 482 pages.

Lovey Mary. By Alice Hegan Rice. Illustrated. The Century Co., New York. 4½×7 in. 197 pages. $1.

Here are the same qualities that made every one like "Mrs. Wiggs of the Cabbage Patch"—cheerfulness, kindliness, sympathy with human oddities and failings, and a humor which is always spontaneous if sometimes a little exaggerated. Lovey Mary herself is as original in her own way as a child could well be, and her adventures with her beloved Tommy, whom she rescues by abduction from a worthless mother, and to whom she gives the advantages of life in the Cabbage Patch, are in turns hilarious and moving.

Meaning of Pictures (The): Six Lectures Given for Columbia University at the Metropolitan Museum of Art. By John C. Van Dyke. Illustrated. Charles Scribner's Sons, New York. 5×7¼ in. 161 pages. $1.25, net.

Reserved for later notice.

Matthew Arnold's Notebooks. With a Preface by the Hon Mrs. Wodehouse. The Macmillan Co., New York. 4½×7¼ in. 137 pages.

Reserved for later notice.

Midsommer Nights Dreame (A). By William Shakespeare. Edited by Charlotte Porter and Helen A. Clarke. (The "First Folio" Shakespeare.) T. Y. Crowell & Co., New York. 4×6½ in. 216 pages. 50c., net.

This is the initial volume of a very important undertaking—the reprinting of Shakespeare in the text of the First Folio, to be known as "The First Folio Edition," and to reproduce, not only the text, but the spelling and punctuation. This volume reprints "A Midsummer Night's Dream" as it appeared in the First Folio, all additions made by the editors in the Quartos being inclosed in brackets. In a very interesting preface the editors say that, while Chaucer and Spenser have been privileged to reach the modern reader in their own forms of speech, Shakespeare has been denied that privilege, and has been presented in English revised by many generations of editors; yet Chaucer is more archaic, and Spenser, though but little earlier than Shakespeare, much more affected and remote in style, than the dramatist. The advantages of reproducing the Folio Edition are manifest; for the First Folio is not only the first collected edition of the plays, but it is the sole authority for twenty of them, and furnishes the first complete text of at least two more, "The Merry Wives of Windsor" and "Henry V.," the earlier quarto issues of which were incomplete as well as unauthorized. The publication of the remaining fourteen plays in quarto was not only unauthorized, but was probably in defiance of Shakespeare's wish, since the publication of these plays was adverse to his interest as author, actor, and shareholder. The First Folio is the text nearest to Shakespeare's time, hand, and stage; and, so far as his authority can be claimed for any text, it is to be attached to the First Folio; yet this folio was continuously passed over by successive English editors, Rowe, who is commonly called the first editor, printing from it at third hand—that is to say, from the Fourth Folio, which was printed from the second impression of the Third Folio, which in turn was printed from the Second Folio, and that in turn from the First Folio, and every new printing meant the introduction of new errors. Rowe introduced changes on his own authority, Pope from Rowe, Theobald and Hanmer from Pope, Warburton from Theobald, Johnson from Warburton, and Steevens from Johnson, each editor in turn modernizing, emending, and changing the text in accordance with his own judgment. The Cambridge editors who have given us what is commonly regarded as the best Shakespearean text based their undertaking on a thorough revision of the traditional text. Dr. Furness, in the fifth play in the Variorum series, reprinted the text of the First Folio; the present editors propose to reproduce that text entire, with a full reprint of emendations and variorum readings, which are relegated to the foot of the page, while rejected variorum readings are put in an appendix by themselves. The volume is enriched with very copious notes covering the whole range of Shakespeare allusion, notes which draw very fully upon history and literature for the exposition of the references, historical and otherwise, which appear in the plays. The books are also to be supplied with glossaries and with selected criticism. The volumes are of pocket size, and are admirably printed on excellent paper; and the edition, when completed, will not only be unique, but will hold a place by itself among all the reprints of Shakespeare. Its value to students and general readers is apparent. The quality of the work of Miss Porter and Miss Clarke was very strikingly shown in their edition of Browning, a work of great research and eminently a labor of love.

Midsummer-Night's Dream (A). By William Shakespeare. From the Riverside Edition Edited by Richard Grant White. Edited by Laura Emma Lockwood, Ph.D. Houghton, Mifflin & Co., New York. 4¼×7 in. 100 pages.

Millet. By Romain Rolland. (The Popular Library of Art.) E. P. Dutton & Co., New York. 4×6 in. 200 pages. 75c., net.

The author holds that Millet was equally misunderstood by his admirers and detractors; that he was neither an interpreter of the new democracy nor a declaiming socialist; he was a peasant-painter because he saw in the ceaseless struggle of man with the earth something profoundly human, not in a social or political, but in an essentially religious, sense. Altogether this little book, like others in its series, is readable, unpretentious, and pleasingly anecdotal. There are many fairly satisfactory reproductions of Millet's pictures.

Mrs. McPiggs of the Very Old Scratch: A Half Grown Novel. By Frank C. Voorhies. The Mutual Book Co., Boston. 4½×7½ in. 29 pages. 30c.

A silly and feeble attempt at travesty.

Practical Wisdom: Letters to Young Men. By Sir Walter Raleigh, Francis Osborn, Lord Burleigh, Sir Matthew Hale, William, Earl of Bedford. The A. Wessels Co., New York. 4¼×6½ in. 217 pages. $1.

Pure Sociology: A Treatise on the Origin and Spontaneous Development of Society. By Lester F. Ward. The Macmillan Co., New York. 6×9 in. 607 pages. $4.

By "pure sociology" Mr. Ward means the explanatory description of society as it is and has been, excluding from consideration what it ought to be. The excluded field, he says, belongs to applied sociology—a domain of ethics rather than pure science. Despite Mr. Ward's excessive fondness for a Greek terminology, he has essentially a clarifying as well as a penetrating and vitalizing intellect, and his discussion of the evolution of society is of interest to thoughtful men outside the narrow ranks of professional sociologists.

Rainbows. By Olive Custance (Lady Alfred Douglas). John Lane, New York. 4¼×7 in. 76 pages.

Side-Lights on the Georgian Period. By George Paston. Illustrated. E. P. Dutton & Co., New York. 5⅛×9 in. 304 pages. $3, net.

Reserved for later notice.

Six Trees: Short Stories. By Mary E. Wilkins Freeman. Illustrated. Harper & Bros., New York. 4½×7 in. 206 pages. $1.25.

Reserved for later notice.

Story of Siena San Gimignano (The). By Edmund G. Gardner. Illustrated by Helen James. The Macmillan Co., New York. 5⅛×8⅛ in. 391 pages. $3.

Reserved for later notice.

Study of Browning's Saul (A). By Cora Martin MacDonald, A.M. The Fleming H. Revell Co., New York. 5×7½ in. 79 pages.

Textual Question in Acts (The). By Prof. Dr. O. Zoeckler. Translated by the Rev. A. Steimle. Second Paper of the Lutheran Society for the New Testament Study. Can be secured from the Rev. S. Paulson, New Rochelle, N. Y. 6×9¼ in. 13 pages. 25c.

Truth and Error of Christian Science (The). By M. Carta Sturge. E. P. Dutton & Co., New York. 5¼×8 in. 160 pages. $1.50, net.

In his introduction to this book Canon Scott Holland writes from the dogmatic point of view, and thereby limits his appeal to a comparatively small number of readers. Miss Sturge, on the other hand, writes from the point of view of one who has no bias except that involved in clear thinking. That bias is, of course, against confused and unenlightened thinking. She is therefore quick to discern the confusion of thought involved in Mrs. Eddy's theories, though even as she does so she maintains a spirit of fairness. She begins by stating very sympathetically the eager state of mind of one who thinks he has discovered that pain, sin, and death are unreal and illusory. She at once, however, puts her finger upon the inherent contradiction in Christian Science—namely, that involved in declaring, on the one hand, that mind is the direct opposite of matter, and, on the other, that matter is false belief, that is, a product of mind. The bewilderment only increases as this contradiction is stated in more detail. Miss Sturge then describes the Christian Science theories of the human body, of sin, of disease, of death, and of reality; and, after stating and restating with great fairness the truths to be found in this system of so-called "metaphysics," she closes with a very clear and cogent criticism of it. We commend this book as at once a thoughtful and a readable treatment of the subject.

Truth (Vérité). By Émile Zola. Translated by Ernest A. Vizetelly. John Lane, New York. 5×7½ in. 596 pages. $1.50.

Reserved for later notice.

Virginia Girl in the Civil War (A). Edited by Myrta Lockett Avary. D. Appleton & Co., New York. 5×7½ in. $1.25, net. (Postage, 12c.)

This tells the adventures of the young wife of a Confederate officer who followed his fortunes as closely as the vicissitudes of war would permit. More than this, she had the courage to "run the lines" to Baltimore and to smuggle back a fine uniform for her husband. The Virginia girl whose story is here told is seen in every page to have been a woman of charm and sprightliness, and she was treated gallantly by the Federal officers in Baltimore, who sent her back to her friends with an escort and all possible civility. The narrative is natural and simple and is also entertaining in a high degree. One feels that its pictures of life in the days of the war are true and sincere, and in its way the book is really a valuable contribution to social history.

Western Slope (The). By Celia Parker Wooley. William S. Lord, Evanston. 5×7 in. 242 pages. $1.25.

These essays, which embody the reflections of a woman preacher, writer, and lecturer, who admits herself to be on the "Western Slope"—that is, past life's meridian—are mellow in philosophy and comprehensive in review. A bird's-eye picture is given, as it were, of the half-century lying behind her, with all its great movements—religious, social, educational, and political.

William Hogarth. By G. Elliott Anstruther. Illustrated. (Bell's Miniature Series of Painters.) The Macmillan Co., New York. 4×6¼ in. 71 pages.

Reserved for later notice.

Woman Who Toils (The): Being the Experiences of Two Ladies as Factory Girls. By Mrs. John Van Vorst and Marie Van Vorst. Illustrated. Doubleday, Page & Co., New York. 5¼×8 in. 303 pages. $1.50, net.

This book, or at least Mrs. Van Vorst's part of it, does not need to be bolstered up by President Roosevelt's prefatory letter. Mrs. Van Vorst has studied the lot of workingwomen in the same way that Mr. Wyckoff studied that of unskilled workingmen, and though her narrative is not so dramatic as his, nor so original, it is fuller of keen observation and wholesome feeling. She appreciates, as Mr. Wyckoff apparently did not, that her position as a wage-worker, able at any time to leave her tasks, was not that of the ordinary workingwoman, who must stick at them or starve. Furthermore, she has more genuine democracy in that she finds herself one with the women she works among, sees their point of view and shares it. In this there is nothing whatever that is forced, and in what she says both of her fellow-employees and of her employers there is nothing that indicates the effort to establish a theory or support a prejudice. What she writes about the pay of women being less than that of men wage-earners is extremely valuable in measuring both the extent of the difference and the causes of it. The women workers she found were of three classes: those who had to be breadwinners—to which class all the men belonged—those who expected in part to support themselves, and those who merely worked to provide themselves with luxuries. While many of the brightest workers belonged to the latter class, their irregularity in coming to their work and their readiness to leave it were in a degree responsible for the sweeping generalizations about the unreliability of women workers. Mrs. Van Vorst thinks that if the women of the third class would devote themselves to industrial art—hand-weaving, wood-carving, and the like—their competition would no longer be so severely felt. The remedy of course is not a far-reaching one, but the book is not one of remedies, it is one of experiences and observations, and is thoroughly good. The work of Miss Van Vorst is frequently marred by crudeness, sentimentalism, self-consciousness, and a sense of class superiority which make it distinctly inferior to that of her co-worker.

Correspondence

Politics vs. Education

To the Editors of The Outlook:

All readers of The Outlook must have been greatly interested in the reports of Mr. Kennan in regard to the political situation in Delaware. I trust that I shall not seem unduly presumptuous if I suggest that a field for a much-needed investigation is to be found in the educational system of Philadelphia. Clippings from the daily papers of February 16 showed that the public-school teachers were being assessed by the Republican city committee, and a letter dated February 15, received from a friend, confirms this information. The gentleman who writes me is principal of one of the great schools of New York City, and is very prominent in educational work. He was in Philadelphia on a business trip, and writes me from there as follows:

> Here is the very worst example of the shameful treatment of teachers. The conditions described to me are pitiful and execrable. The school boards are managed on the most brazen political lines. Promotions are bought. A principalship costs from $200 to $1,200. A teacher who refuses to comply with the political demands has her place declared "vacant" on any trumped-up charges. All the teachers, men and women, have just been assessed by the city machine. I have one of the assessment notices before me. It reads: "Since meetings must be held and circulars relating to the party issues printed and mailed to party voters, and the expense of necessary clerk hire, postage, etc., must be paid, we are compelled to ask the necessary funds to sustain our efforts in polling the full votes of the city and defraying the proper and legitimate expenses of the campaign." In blue pencil in the corner is the percentage of salary the teacher is to pay. The circular is signed, for H. Klemmer, Treasurer, David H. Lane, Chairman Finance Committee, James L. Miles, President Campaign Committee. Several told me that fifty per cent. of the teachers had already paid up. The assessment is a regular thing in some districts. But this is the first time it has been exacted of all men and women in the schools. Is it not a degrading condition? The men discussed it under their breath. They dare not refuse. "What would you do?" they said. "Why, meet and agree not to notice it," I replied. "They can't turn you all out." "Too late," they replied. "We can't stick together well enough; too many are afraid." This is the worst condition I know of. New York in the corruptest Tweed days is said never to have made th teachers pay. San Francisco did it once, bu dear old Philadelphia, where the fathers use to meet in defiance of tyranny, is the teacher slave-driver among the cities.

I have ventured to quote at some length a part of the letter received, in the hop that it will be possible for The Outlook at least to consider the possibility of be ginning an investigation in the interest of education at large. I have within th last two weeks received a large numbe of reports in regard to the influence o the political machine on the educationa system in a large number of cities. Thes reports confirm me in the belief, long held that some determined and concerted effor is needed on the part of all interested i educational questions to wrest the school from the grip of the politician. The con dition seems to me to need the pen of Mr. Kennan to do justice to the subject.

TEACHER.

The Religious Education Association

To the Editors of The Outlook:

The Executive Board of the Religious Education Association, an account of the organization of which was given in The Outlook of February 21, has voted to push as rapidly as possible the securing of members. It has been suggested that you might be willing to make an announcement in the name of the Association containing the following points:

(1) The Association invites to membership all persons who are engaged in religious and moral instruction, or who are desirous of promoting such work; (2) the enrollment fee for members is one dollar, and the annual dues two dollars; (3) all members who enroll before March 25 will have their names printed in the list of original members contained in the first annual volume of Proceedings of the Association; (4) one copy of the Proceedings will be sent free to each member of the Association; and (5) application for membership may be made to the Acting Secretary of the Association, Professor C. W. Votaw, University of Chicago, Chicago.

C. W. VOTAW,
Acting Secretary R. E. A.

Libby's Good things to eat

Libby's (Natural Flavor) Food Products

are the most delicious obtainable.

They are carefully prepared.

The best materials procurable are used in making them and the choicest receipts are accurately followed in their preparation.

They appeal to the appetite; they satisfy the epicure, so dainty are they in appearance and different in taste from home-made dishes.

They are clean and sweet, being prepared in Libby's famous hygienic kitchens.

In every respect they are a triumph in ready-to-serve food products.

They fill a long felt want of housekeepers, as they never fail to please and are ready for any emergency at a moment's notice.

The little book, "How to Make Good Things to Eat," tells all about them, sent you free.

The Outlook is a Weekly Newspaper and an Illustrated Monthly Magazine in one. It is published every Saturday—fifty-two issues a year. The first issue in each month is an Illustrated Magazine Number, containing about twice as many pages as the regular weekly issue, and many pictures.

Price.—The subscription price is Three Dollars a year, payable in advance. Ten cents a copy.

Postage is Prepaid by the publishers for all subscriptions in the United States, Hawaiian Islands, Philippine Islands, Guam, Porto Rico, Tutuila Samoa, Canada, and Mexico. For all other countries in the Postal Union add $1.56 for postage.

Change of Address.—When a change of address is ordered, both the new and the old address must be given. The notice should be sent one week before the change is to take effect.

Discontinuances.—If a subscriber wishes his copy of the paper discontinued at the expiration of his subscription, notice to that effect should be sent. Otherwise it is assumed that a continuance of the subscription is desired.

How to Remit.—Remittances should be sent by Draft on New York, Express-Order, or Money-Order, payable to order of THE OUTLOOK COMPANY. Cash should be sent in Registered Letter.

Letters should be addressed:

The Cuban Treaty Agreement

Sooner than was expected the Senate reached an agreement for action upon both the treaties submitted to the special session. The Cuban treaty was ratified, but it was provided that the treaty should not take effect until it "shall have been approved by Congress." The avowed ground for this postponement is the clause in the Constitution: "All bills for raising revenue shall originate in the House of Representatives." It is claimed that, as interpreted by tradition both in this country and in England, this clause is to be understood as meaning that all bills which directly affect the revenue must originate in the House, and therefore that a treaty which proposes to reduce the tariff must have the approval of the House. The opponents of this view contend, first, that a clause providing that the House must originate bills for raising revenue does not imply that the House must approve treaties that reduce the revenue, and, secondly, that as the Constitution gives exclusive power of ratifying treaties to the Senate, the Senate may ratify any treaty, whatever its effect on the revenue, although the treaty might not become effectual until the revenue legislation was enacted by the House. The answer to this second position is that a treaty legally made becomes a law of the United States, binding on the officers of the United States, and therefore the customs officers would, in obedience to this treaty, have to collect lower duties on Cuban products. In our judgment, it would have been wise for the Senate to ratify the treaty unconditionally, so that this question of the right of the Senate to ratify a treaty affecting the revenue, which has never been passed upon by the Supreme Court of the United States, might have been taken to the Supreme Court for final adjudication. The result of this action is that, unless the House also is called together in special session, the treaty cannot go into effect until a joint resolution subject to prolonged debate has passed the Congress which assembles next December. If the House again insists that the reduction of the tariff on raw sugar from Cuba be accompanied by the withdrawal of the protection now accorded to the sugar trust, and the Senate again refuses to have this protection withdrawn, there is in store another deadlock. Inasmuch as the number of Congressmen desiring a deadlock is very great, and many of the nominal supporters of Cuban reciprocity are very lukewarm, the postponement of final action upon the treaty opens up endless possibilities of the measure's defeat. The American sugar-refiners would probably receive some of the benefit from the reduced duties, but the bulk of it would doubtless go to the Cuban sugar-planters, for whose relief the reciprocity measure was designed. The opposition to the treaty comes chiefly from the desire to protect the sugar-growers—cane or beet. The advantage to the United States of developing an American community in Cuba and opening a free trade between their ports and ours counts apparently for little with the representatives of these industries.

The Panama Treaty Agreement

Upon the Panama treaty the concessions made to secure an agreement for a vote on Tuesday of this week involved little more than the removal of the injunction of secrecy from the speeches already made by Senator Morgan, and those to be made by other Senators during the closing debate. Even prior to the granting of this concession Senator Morgan had practically secured the privilege

of publicity by printing eight pamphlets upon the Panama treaty first proposed. In these pamphlets the main objections urged by Senator Morgan to the ratification of the treaty were as follows:

1. That the French courts had no authority to transfer the Panama property of the old canal company to the new; that the dissolution of the old company, under its charter, transferred all its rights in Panama to the Government of Colombia, and that the Colombian Congress alone could now give a valid title to the property in question. 2. That the new Panama Canal Company, by furnishing money to continue a state of war in the United States of Colombia, had "trampled upon" the constitution of that country in order to sell its claims to the United States for $40,000,000. Senator Morgan charges that one million dollars was expended by the Panama Company in this illegitimate way. 3. That the political turmoils in the United States of Colombia, turning as they do upon the issue of clericalism, make the purchase of the Panama Canal a source of public danger. Senator Morgan asserts that the Jesuit order now controls and is likely to control the policies of Colombia, so that disagreement with Colombia brings us into conflict with a religious order of international power. Our Government becomes involved in questions of Church and State, from which it is now free.

Apart from these objections presented in the printed pamphlets, Senator Morgan, in common with many other Senators, has urged that the present treaty is ambiguous in its provisions for a divided sovereignty over the strip of land leased to us for the control of the canal. The treaty provides that Colombia shall furnish the forces necessary for the protection of life and property upon this strip of land, and that if she is unable the United States must secure her consent before providing the forces herself. This stipulation, though it aims merely to preclude territorial sovereignty on the part of the United States, was declared out of harmony with the general tenor of the Spooner Act authorizing the negotiation of a treaty for the construction of a canal under the perpetual and exclusive control of the United States. In order to make certain that the United States of Colombia understands the provisions of the Spooner Act, Senator Morgan has insisted that the text of the act should be incorporated within the treaty. Upon the remaining points urged by Senator Morgan the Senate seems ready to accept the legal judgment of Attorney-General Knox as to present property rights in the canal, and ready to trust to the future good sense of our Government to avoid entanglements with the clerical and anti-clerical factions in Colombia. As to present property rights in the canal, the acceptance of the pending treaty by the Colombian Government would certainly transfer all such rights to ourselves.

❀

Bribery in Rhode Island

For a long time past patriotic citizens of Rhode Island have been protesting against the control of their politics by sordid and corrupt money influences, and last week Governor Garvin gave expression to this protest in a message which calls for action. After freeing his charge from the appearance of partisanship by admitting that both parties have resorted to bribery, and after freeing it from the appearance of exaggeration by admitting that the bribery has rarely changed the results in State elections, Governor Garvin proceeds to state the manner in which the use of money enables a corrupt machine to keep its grip upon the State Legislature. Among other things he says:

In a considerable number of our towns bribery is so common and has existed for so many years that the awful nature of the crime has ceased to impress. In some towns the bribery takes place openly, is not called bribery, nor considered a serious matter. The money paid to the voter, whether two, five, or twenty dollars, is spoken of as a payment for his time. The claim that the money given to the elector is not for the purpose of influencing his vote, but in compensation for time lost in visiting the polls, is the merest sophistry, and should not deceive any adult citizen of ordinary intelligence. It is well known that in such towns, when one political party is supplied with a corruption fund and the other is without, the party so provided invariably elects its Assembly ticket, thus affording positive proof that the votes are bought and the voters bribed.

In a subsequent interview Governor Garvin named the places in which bribery was particularly rampant. The charge that he brings does not relate to the immigrant voters in the cities, but to the native American voters in the rural towns. These rural voters are by the State Constitution given a representation in the Legislature out of all proportion to their numbers, and this unjust political power has been the occasion of their systematic political corruption. In these towns, says Governor Garvin, "the men who

constantly accept bribes are often men of substance, owning their homes, and sometimes other property. They don't need the money. Long years of bribery have deadened their conscience." The Providence "Journal," in commenting on the situation, brings the responsibility for it home to still another self-esteemed portion of the community. It says:

> The blame for the present order of things . . . belongs with the educated manufacturers and business men of the State who are too busy making money to pay any attention to political conditions; they get what they want and fail absolutely to exercise any influence toward the lessening of corrupt and country domination at the State House.

The readiness to profit by corruption is only one shade removed—in courage as well as guilt—from the readiness to participate in corruption, and the purification of conditions demands a moral awakening all along the line. Governor Garvin narrates that in one Rhode Island town, South Kingston, a few resolute men, under the leadership of Thomas G. Hazard, put down bribery by vigorously prosecuting bribe-givers. The Governor asks the Legislature to authorize the appointment of a State commissioner whose duty it shall be to bring to justice offenders against the present bribery law. Such action cannot be refused by the Legislature without blackening the good name of the State—the good name which the condoners of corruption have hitherto claimed to guard by ignoring the growing evils.

❀

Governor Odell's Tax Programme

The Republican caucus in the New York Legislature has agreed upon Governor Odell's tax programme, by which the State may meet the interest and sinking-fund charges upon the $101,000,000 of bonds which must be issued to cover the proposed barge canal improvements, and also to do away with all State taxation upon property assessed for local purposes. This programme includes an increase of one-half in the present rates for liquor licenses, a tax of one per cent. upon inheritances of real estate where the property of the decedent exceeds in value $10,000, and, finally, a yearly tax of four mills on recorded mortgages. Even with the increase in the liquor taxes license fees in New York will still be lower than in a few other States—ranging from $1,200 in New York City down to $300 in rural townships—but the aggregate public revenue from the licenses is expected to reach $18,000,000, or twelve dollars for every family in the State. In this estimate it is reckoned that the number of liquor-dealers will be reduced about one-tenth by the increase in the fees. At present the State receives but one-third of the liquor taxes, and the local governments two-thirds. According to the new programme the State will receive a half—or nine million dollars. Compared with this aggregate the estimated receipts from the proposed extension of the inheritance tax to cover real estate as well as personalty seems small indeed, being only seven hundred thousand dollars. The proposed four-mill tax on mortgages does not appear to apply to railroad mortgages, but is expected, none the less, to yield a revenue of $12,000,000—to be equally divided between the State and the localities. This mortgage tax is illogical, and imposes a burden upon mortgaged real estate that does not rest upon real estate mortgage-free. Nevertheless it is a compromise in the direction of fairness and honesty, for under the present rarely enforced law the owner of a mortgage is liable to be taxed upon it at the full rate—generally about two per cent. in the cities. It is thought that the reduction of the nominal tax rate on mortgages from twenty mills to four mills may so increase the number of investors willing to lend money on mortgages that interest rates will not be materially raised by the systematic collection of the small tax now proposed. There are certainly to-day many honest capitalists who refuse to lend money on mortgages because of the legal liability to an oppressive tax. If the present tax programme goes into effect, there will certainly be no need of any State levy upon the local tax duplicates. There is danger, however, as Connecticut's experience shows, that greater extravagance in State appropriations will ensue when legislators are no longer restrained by their constituents' desire for a low tax rate on their property.

New York State's Dual Educational System

Last week's events would seem to show that the bill to unify the educational system of New York State may be approved by the State's legislators if their constituents give it active support. For half a century the dual system has been endured; it was inaugurated because people thought that two organizations would occupy different fields: one, the University of the State of New York, governed by a Board of Regents, elected for life by the Legislature, serving without pay and without partisanship, having the management of academies and other institutions of higher learning and prescribing standards of examination; the other, the Department of Public Instruction, controlling the elementary schools, and under a superintendent chosen by the Legislature for a term of three years. If these two classes of schools could have been kept separate, there would have been a consequent avoidance of friction, but they cannot be so kept, as has already been explained in these columns. Hence there is a natural and praiseworthy desire on both sides for unification. If this were accomplished under the Regents' control, as provided by the Stevens bill now before the Legislature, all the schools of the State would be taken out of politics; if accomplished by the Brown bill, also before the Legislature, the Regents would be gradually eliminated, and the schools kept in politics by creating a politically controlled Board of Education within the present Board of Regents, thus increasing the subjection of the schools to politics. Of course educationists whose opinions are best worth considering are practically unanimous in the conviction that the schools ought to be free from all political control. Hence the Stevens bill should be passed and the Brown bill killed. This, however, does not prevent many educationists from thinking that the Board of Regents is too unwieldy a body, and that its members should not enjoy life tenure. If the Regents will accept changes in these directions, "all genuine friends of education will zealously rally to their support," says the New York "Evening Post," apparently overlooking the fact that three years ago the proposition to unify the Empire State's educational interests was defeated *by its friends* through a desire to settle details in advance. It is clear to us that the present is not the time to discuss questions of reorganization of the Board of Regents. The other and far more vital question of taking the schools out of politics is awaiting settlement. Never in the State's educational history has there been an opportunity like the present to solve this long-vexed problem. The way is clear. Pass the Stevens bill. Then, with the main question settled, the subsidiary one of Regents' reorganization may properly be left to subsequent legislation. The process is easy, since, by the Constitution, the Legislature has power to deal with these details. To attempt now to settle details on which there are differences of opinion is to invite disaster from the start.

Amendments to the New Hampshire Constitution

Six of the ten amendments submitted to the voters of New Hampshire by the recent Constitutional Convention were rejected at the polls. Popular interest centered chiefly in the woman's suffrage amendment. Prominent representatives of the National organizations for and against the proposal played an active part in the campaign. By mass-meetings, petitions, and free discussions the voters had been well lined up before election day, but instead of the two-thirds vote necessary to its adoption, it was lost by very nearly a two-thirds negative vote. In a State in which over 92,000 votes were cast in a Presidential year, only 13,000 voters, in round numbers, favored woman suffrage strongly enough to vote for it; and scarcely more than 35,000 cared enough about it to vote either for or against it. In some places barely a half of those who actually went to the polls took the trouble to vote on the question—a fact which apparently indicates that the amendment was not taken very seriously. Next in public interest was the proposed amendment empowering the Legislature to tax franchises and inheritances. It was adopted, as was also an amendment regarding the control of trusts. The latter has little significance except as showing the disposition of the people on the subject; it seems to confer no new power. Two other amendments were adopted:

an unimportant one regarding militia officers, and one requiring that henceforth no new voter be qualified who is not able to read the Constitution in English and to write. One rejected amendment was designed to lessen the size of the New Hampshire Legislature, which is one of the largest legislative bodies in the world. The vote against this desirable measure was probably due to the form in which the amendment was presented. The other proposed amendments, with one exception, received little attention. This exception is interesting. The Bill of Rights, dating from the days of Church establishment, contains in Article 6 a recognition of the Protestant evangelical religion as the religion of the State. It also empowers the Legislature to authorize "towns, parishes, and religious societies" to support teachers of religion and morality. The Constitutional Conventions of 1850, 1876, and 1889 proposed amendments reducing the partiality of this article, but they failed of adoption. A similar proposal to strike out the words "Protestant," "evangelical," and "town" has just met the same fate. As the Legislature has long since surrendered its Constitutional powers for the support of religion, and as the old article is practically repealed by the actual separation of Church and State, the voters of New Hampshire have evidently determined not to part with the heirloom.

The Waterbury Boycott Murder and Injunction

It was thought, when the street-car riots in Waterbury were put down, and the company was able to run its cars on regular schedules, with non-union men, that the strike would speedily collapse. This result, however, did not ensue. The strike was not declared off, but, instead, the united unions of Waterbury kept in force a most persistent and successful boycott, not only of the street-car company, but of all who patronized it. It is roughly estimated that the city of Waterbury contains eight thousand trades-unionists among a population of ten thousand families, and this force acting unitedly was able to terrorize merchants, and others not in sympathy with the boycott, to obey its edicts. The Waterbury "American" remarked that the company was able to supply the city with cars, but could not make it ride. In refusing to patronize merchants who did not join in the boycott the unionists, of course, acted in accordance with Revolutionary precedent, as they are so fond of pointing out; but the effect of their boycott, as of the Revolutionary boycott, was greatly to embitter class hatreds. The effect of this bitterness showed itself in a succession of petty outrages, and finally, on Saturday night before last, in the dastardly murder of a policeman guarding a car in a lonely spot at the end of one of the lines. Naturally, this crime awoke the moral indignation of the city, and the unions made haste to denounce it in unmeasured terms, but public opinion justly held that the union's deprecation of crimes should not end in words, but should lead to positive disciplinary action by which such crimes would be prevented. Outrages upon non-unionists occur only where respectable union sentiment looks upon the crimes with toleration. Last week in Waterbury the people hostile to the boycott began to organize to assert their independence, with the prospect of success, but at the close of the week certain elements on the anti-union side attempted to secure a speedier victory by recourse to the process of injunction. Through Judge Elmer, of the Superior Court, obtained an injunction directed against seventeen Waterbury unions, their officers, over a hundred members by name, and all whom the writ might concern, forbidding any further interference with the operation of the street-car service of the Connecticut Railway and Lighting Company, efforts to induce its employees to leave its service, picketing or loitering in the streets for the purpose of interfering with such employees, and all forms of the boycott, whether of the company, its employees, local merchants, persons riding in the company's cars, or those having dealings with the company. Here we have perhaps the most sweeping injunction yet issued in an American labor conflict, and its effect has been to arouse the unions to new zeal in their conflict. Many of the things forbidden, however immoral, are apparently not illegal. Employees have a legal right to buy where they please, just as employers have a legal right to hire whom they please. Wherein the boycott was

immoral, moral weapons should have been relied upon to cope with it.

❁

The Canadian Parliament

Last week a new session of the Canadian Parliament began. To those on this side the border the principal event so far has been the attack on the Government by Mr. Borden, the Opposition leader, for not opposing the Hay-Herbert Treaty, recently negotiated and ratified between the United States and Great Britain. Mr. Borden declared that the Clayton-Bulwer Treaty should not have been abrogated without provision first having been made for the delimitation of the Alaska boundary, and added that the American Commissioners were not "impartial jurists," as required by the Hay-Herbert Treaty. Replying, Sir Wilfrid Laurier, the Premier, as reported, showed the possibility always present of unpleasantness as long as the boundary question was unsettled. Thus he regarded the treaty as a distinct victory over the position previously taken by the United States because of the abandonment of the condition that territory now in America's possession, such as Dyea and Skagway, must be recognized as American in any event. The present provision on this point is fair and honorable to both parties, he said. Decision or no decision, he continued, one result of the Commission would be the best possible education for the American and British people on the points contended for by Canada. He also had expected that the American Commissioners would be "impartial jurists" of repute. Mr. Root was much in the position of a party to a suit trying his own case. Senator Turner, he understood, was an interested party in connection with the enterprises in the Northwestern States. Senator Lodge had expressed very strong opinions against the claims of Canada, upon which he will be called to pass judgment. Sir Wilfrid declared, however, that the British Commissioners should really be "impartial jurists," the best to be found in the Empire. Sir Wilfrid, like most of his compatriots, evidently feels aggrieved by the choice of the American Commissioners. He has always been friendly to this country, but is now being assailed by the Conservative press throughout the Dominion because he consented to the new treaty's plan of settlement of the Alaskan boundary difficulty, provided that the Commissioners were to be "impartial jurists." "As soon as the matter is settled on this basis and the treaty signed," says one trusted exponent of Canadian opinion, "the President nominates as Commissioners men who certainly cannot be appropriately classed under this head." On the other hand, the English papers have taken such a different tone as to lead the Montreal "Herald" to remark: "The fulsome flattery of the Americans used by the 'Spectator' and certain other English journals will have a tendency to make Canadians angry, for it lends British encouragement to what is not fair play." Canadian dissatisfaction may be somewhat lessened if, as is now reported, the Dominion Government's recommendation that two of the three British members of the Commission shall be Canadians has been approved by the Imperial authorities.

❁

Argentina and the United States

The diplomatic note sent by the Argentine Republic through its representative in Washington to our Government, as at first inadequately reported in the newspapers, had something naïvely humorous about it. It seemed to be a proposition that the United States should enter into an offensive and defensive alliance with the Argentine Republic to prevent such a forced collection of debt by foreign nations as we have just seen carried out in the case of Venezuela. When one comes to read the full text of the note, however, this seems an exaggerated view of the proposal. It has long been held by some nations and some authorities on international law that such a method of debt collection, namely, by naval or military force, ought not to be recognized as in accordance with the sound principles of international law. This belief is often called the Calvo doctrine, and (whatever may be said for and against it) it is at least debatable. The Government of Argentina in its note to Secretary Hay really argues for the acceptance of this principle by the nations generally and by the United States in particular. It would be one thing for the United States, through its representatives

at the Hague Tribunal or through making treaties with other nations, to advocate the Calvo doctrine; it would be an entirely different thing for the United States to say or intimate that it would not permit a European nation to collect just debts from a South American republic by force because of the Monroe Doctrine. In point of fact, the Monroe Doctrine has little to do with this question directly. The principles which apply to the arbitrary collection of a debt by force in Venezuela would apply equally to similar measures as against Turkey—and in point of fact the United States has more than once pretty broadly intimated that it might be provoked to taking precisely this course against the Porte. While it is perfectly certain that Secretary Hay will not commit this country to the policy which South American States would doubtless welcome by defending them against their just creditors, it is interesting to note that Argentina urges with justice that a strong power should not apply force to a weak power until it has exhausted all reasonable resources of remonstrance; and, it is to be hoped, arbitration. Another point of much interest in this Argentina note is the recognition and indorsement given openly to the Monroe Doctrine; it is said that this is the first time that a South American nation has officially acknowledged and accepted the Monroe Doctrine as acceptable to itself.

❀

The English Church Discipline Bill

One of the most important events of the present session of the English Parliament was the passage last week of the Church Discipline Bill through the House of Commons by the significant majority of 139 to 59. While much comment has been evoked by the excesses of ritualism (increasingly evident in certain Anglican churches), still more comment has been due to episcopal action—or rather inaction—in respect to some of the offenders. Non-ritualists in England long since came to the conclusion that only Parliament could drastically and definitely deal with the matter. In 1899 the House of Commons adopted a resolution to the effect that if episcopal efforts were unsuccessful to induce avoidance of what had been declared unlawful by the Lambeth Conference, legislation by Parliament would be required. After a four years' test of the Bishops' power, the non-ritualists declare that the prelates have failed to do their duty. Accordingly, Mr. Austen Taylor recently introduced a bill in Parliament affirming that a panic practically existed in the Church owing to the failure of the Bishops to restrain the too ritualistically inclined clergy. The bill removes the Bishops' veto upon proceedings against contumacious clerics, gives to the civil courts the right to take cognizance of proceedings brought by laymen to prevent ritualistic excesses, and provides that a clergyman who continues disobedient for three months shall be deprived of his "living." The opposition to the measure was composed, first of all, of Ritualists; secondly, of High Churchmen, who were offended not so much because the bill was anti-ritualistic as because it limited episcopal functions. These opponents received a notable accession to their ranks in the person of the Prime Minister himself. While desirous that illegal practices shall be put down, Mr. Balfour, though a Scottish Presbyterian, declared his opposition, first because Dr. Davidson, the new Archbishop of Canterbury, had not yet been given time enough to carry out his plans for reform; secondly, because the authority of the Church itself should be extended, and no policy countenanced to "render the episcopate almost a superfluity." Sir William Harcourt, the veteran Liberal leader, replied by saying that conditions had now reached a stage where, if the right of veto were left to the Bishops, and laymen were not given their rights in ecclesiastical as well as in civil matters, it would be better to disestablish the Church. This is also the opinion of The Outlook. The large majority vote showed that public opinion as a rule in England supports Sir William's view, and last week's event in Parliament would seem to have brought disestablishment one step nearer.

❀

Dean Bradley Ernest Legouvé Gaston Paris

During the past week England and France have been called upon to mourn the deaths of three distinguished men. In England Dean Bradley passed away at the ripe age of eighty-three ye- Until his resignation last summer

Bradley had been Dean of Westminster for twenty-one years, in succession to Dean Stanley. Both men were fitted by nature and education to enjoy and honor a position which in real distinction is equal to any bishopric and superior to most. Both men had been pupils of Arnold at Rugby, and later, at Oxford, Bradley was a pupil of Stanley himself; he then became Assistant Master at Rugby, Master of Marlborough College, and finally Master of University College, Oxford. During Dr. Bradley's Deanship of Westminster the Abbey was transformed from a crumbling to a solid and safe material condition, but the Dean will long be held in loving memory for a more personal labor—his habit once a week of conducting chosen parties about the Abbey. He was an authority on all points concerning the venerable building and its relation to history.——Ernest Legouvé, the famous French dramatic writer, died at the fine old age of ninety-six years. The writer of many plays, he will always be best known as the author, with Scribe, of "Adrienne Lecouvreur." This play was produced in 1849 by Rachel, who, for some whim, declined later to appear in Legouvé's "Medée" and found herself supplanted in it by Madame Ristori. The striking success of the latter actress convinced the last doubters in the French Academy of Legouvé's worth, and he entered that body in triumph. For many years he has been the Academy's oldest member.——The French Academy has also lost Professor Gaston Paris, the Director of the Collége of France (succeeding Ernest Renan), who died at the comparatively early age of sixty-three years. Gaston Paris was one of the very few French scholars who had enjoyed a German education. The thoroughness of his scholarship was universally acknowledged. Only three weeks ago The Outlook reviewed a translation of his "Mediæval French Literature," a province in which he was unrivaled. His lectures were frequented by students from all parts of the world, who will feel the loss, not only of a great teacher, but a friend; for Gaston Paris was never more attractive than in dispensing personal and social favors, and his home was the rendezvous of students, scholars, and men of letters, both young and old.

The Young Men's Christian Association Work

Three interesting announcements of Young Men's Christian Association work have been made quite recently. The first reports that the Mexican Central and the Mexican National Railways have agreed to contribute $100 a month for the support of the Young Men's Christian Association in the City of Mexico. This is the first Association in Mexico, but others are to be organized in the near future at the larger commercial centers. The City of Mexico Association comprises over three hundred members from among the eight thousand English-speaking young men in that city. Some adverse criticism of the Association has come from Mexicans because of the Association's refusal to countenance Sunday baseball. This was to be expected in a land where the Sunday bull-fight continues to be the great popular pastime. Despite this, the Sunday religious meetings for young men are largely attended, and are addressed by the leading business men of the city. One reason why the club-life feature of the City of Mexico Association is strong is because the Association is housed in a fine old mansion, which, with its garden, occupies nearly an entire block. The second announcement comes from the Chicago Association, which shows nearly 4,900 members, who paid for their dues and privileges last year over $72,000—certainly an important sum. Less than one-third of the entire membership represents Protestant church affiliation. The Chicago Association occupies a thirteen-story building valued at $1,600,000, the rentals from which help to support the organization. Over two thousand young men go to the building daily, seven hundred of these visiting the gymnasium and natatorium. Over seventeen hundred students were taught last year in the evening school. In the summer one of the finest athletic fields about Chicago is conducted by the Association; its athletes take rank with the best in the country, and stand for honorable amateur athletics. The noon prayer-meeting, established by the late D. L. Moody when President of the Chicago Association, averages over fifty men throughout the year, and has not omitted its daily service for over forty years. Last year, out of over twenty-five hundred men

applying for employment, nearly a thousand situations were found through the Association bureau. While the Chicago Association is the largest in the world, it does not limit its influence to its membership. Fully twice the number of its members attend its social gatherings, thus being influenced in a practical and helpful way towards proper manhood and citizenship.

❀

The New Spirit The third announcement comes from an article in the "North China Daily News," published at Shanghai, and describing the Young Men's Christian Association plant there. Until recently there was not a single place in Shanghai for the meeting of young men for social intercourse and recreation, free from the temptation of drink; there is now at their disposal a handsome building with reading, billiard, and dining rooms, and ten bedrooms—in fact, all the concomitants of a modern club except the drinking bar. The Shanghai Association enrolls among its four hundred members representatives of every section of the community and of almost every shade of opinion. There are now five native student branches of the Association, comprising a total membership of over a thousand. The Shanghai paper thus comments upon the spirit of the work being accomplished: "Where formerly the Young Men's Christian Association stood for a narrow and lopsided culture, it now aims at an all-round excellence, religious, moral, and physical. Nothing has done more to dispel popular prejudice against the Association than the achievements of the Young Men's Christian Association in all manly games and athletics. They have gone far to convince an otherwise skeptical public that a man need not be a milksop because he is religious, or cease to be a sportsman when he becomes a Christian." These are timely words. Whether in Mexico or Chicago or Shanghai, the work of the Young Men's Christian Association has changed in character from its somewhat pietistic attitude of three and four decades ago to a broader, wiser, more practical and rational plan. The work of the Young Men's Christian Association as it exists to-day inculcates a spirit of manly Christianity in all departments of life.

The Tenement-House Fight Last week there was held in Brooklyn, N. Y., at Plymouth Church, a mass-meeting to protest against the assaults on the tenement-house law. The names on the list of those calling the meeting included the most influential men of the borough. The speakers were Mr. Richard Watson Gilder, Mr. R. W. De Forest, Tenement-House Commissioner; Mr. William H. Baldwin, Jr., President of the Long Island Railroad; the Rev. Lyman Abbott; and the Rev. W. P. Harmon, who presided. As several of them pointed out, there was a peculiar appropriateness in holding this meeting in a church which had been associated with many historic revolts against oppression and inhumanity. Especially keen was the irony directed against those who had apologized for the bills undoing tenement-house reform on the ground that such bills were pre-eminently practical measures. The most important speech of the evening was that of Mr. De Forest, the Tenement-House Commissioner, who explained at some length a new measure introduced into the Legislature by the Tenement-House Commission. He made it clear that the bill was introduced, not as a compromise or a "dicker," but as a benefit to the tenants. This, he said, would be shown in reduced rents. He gave clear and authoritative warning that if in the course of legislative action on the bill any "monstrosities" should be attached, the bill would be vetoed by Governor Odell. Both by the applause evoked by various utterances of the speakers, and by formal resolutions passed, it was evident that the audience was agreed in having a cordial confidence in the present Tenement-House Commission and its head. Three facts concerning the present status of the tenement-house question in New York are now pretty well established. First, that the people who in this fight have shown their preference for things over men are not going to have their way. Second, that the agitation caused by the introduction of inhuman bills into the Legislature has not only demonstrated the fact that the tenement dwellers, as Mr. De Forest put it, resent the homes in which they have to live, but also has educated a large part of the community, who live comfortably, regarding the fundamental nature of the

housing problem. Third, that this battle for better tenement conditions is not ended by any means, for it has to do with establishing tenements that will remain when the character of the population shall have changed and all space shall have been built upon as thickly as the law now allows. It will require continuous vigilance to prevent the reproach that has fallen upon this generation from falling upon the generation to come—the reproach well voiced by the workingman whom Mr. De Forest reported as saying to him: "Why didn't you give the East Side a chance before?"

❀

Civic Æsthetics Years ago the community of Springfield, Mass., allowed the New York, New Haven, and Hudson River Railroad to encroach upon its beautiful Connecticut River front. At that time the enthusiasm of the citizens of the town was all for the railroad and not for the river. The river promised no possibilities of growth; the railroad did. Hence a lovely, almost majestic waterfront was allowed to become unlovely and even hideous through the mistaken idea of the people that a priceless gift of nature could be bartered away for a material gain. In recent years, however, the citizens of Springfield have realized their mistake. Led by the initiative of their great daily paper, the Springfield "Republican," and by its steady, long-continued appeal and pushing, not only did æsthetically inclined citizens regret the blunder that had been made, but the community as a whole became influenced by the propaganda of the "Republican." The plan to retrieve the mistake was as follows: Bordering the principal street of the town was a large open space called Court Square; it was proposed to continue this square to the river and there to build a viaduct over the railroad tracks. The expense of acquiring and improving the necessary property, however—$200,000—seemed prohibitive, but it was thought that if half this sum could be raised by a public subscription, the town could afford to bear the expense of the rest. Impetus was given to the project by the bequest to it of $10,000 by the late Tilly Haynes and by the offer of another $10,000 from Mr. E. H. Barney. The campaign was energetically managed, haste in contributions being urged because the ground would inevitably and very soon become dearer. The conviction grew also among all classes of people that a centrally located park was a necessity in a town like Springfield, and that it should be located on this very site, since the existing City Hall, Police Building, Grand Army Hall, and Court-House (the latter a Richardson structure) would border the proposed park. The sanitary and the æsthetic values of the project seemed equally evident to every one, and the contributions came in with increasing frequency until they more than reached the sum proposed. The remarkable thing about them was their number; there were only fifty contributors of more than a hundred dollars each, while many gave less than one dollar apiece. Thus this civic improvement is not only something done for the long future and well done, but done by the whole community.

❀

The Paramount Issue

It cannot be doubted that the course of the Administration in respect to Delaware has chilled the popular enthusiasm for Mr. Roosevelt as a heroic leader in the National battle against corruption. Confidence in his statesmanship and his statecraft—his grasp of great principles and his practical skill in dealing with conflicting factions—has been steadily increasing; but faith in his political heroism has received a shock. His first appointment of Mr. Byrne was a perplexity to his friends, but they explained it as a sudden impulse; his second appointment of Mr. Byrne is to them inexplicable. It seems like a public notification from the President of the United States of a *nolle prosequi* for the men who have practiced wholesale bribery in Delaware. And yet, though we cannot doubt that this is the effect of Mr. Roosevelt's action, we cannot believe that it is Mr. Roosevelt's intention. If any are inclined, as some are, to think that he is ready to take advantage for his party of Mr. Addicks's frauds, and to condone the offense because it is politically profitable to the Republicans, we remind them that a man whose loyalty to principle has been attested by a life of heroic devotion is not to be summarily convicted of disloyalty because of one act, however inconsistent it may seem to be with his

previous record. We still hope that there will be enough Republicans in the Senate ready to join with the Democrats to defeat the appointment. We can conceive no ground on which it can be justified. Not on the ground of Mr. Byrne's distinguished ability, for his legal record is not of the best; not on the ground of political regularity, for he resigned his office to defeat the regular Republican nominee for Congress; not on the ground that he is the best possible man to prosecute the rascals who have been corrupting the elections in Delaware, for he has joined his fortunes to theirs.

We understand perfectly well that politics makes strange bedfellows; that in politics one must often work with men whom one would not choose as his associates; that in politics, when one cannot do what he would, he must fain do what he can; that in politics one must often sacrifice a subordinate issue to win a paramount one. We understand perfectly well that, in order to get the Cuban treaty and the Panama treaty and the anti-trust legislation through the Senate, it was important to have two Republican Senators from Delaware. But these are not the paramount issues; honesty is the paramount issue—that is second to none other; all other issues are second to that. We mean exactly this. It would be better to sail away from the Philippines and leave them to themselves, whatever ruin might befall them, better to refuse reciprocity with Cuba and leave her to fight her own commercial battles, better to postpone the building of an interoceanic canal another fifty years or leave it unbuilt forever, or let France, England, or Germany build it, better to leave the trusts to be dealt with by industrial forces and State governments, than to compromise with the corruption which buys a State in the open market, confesses the deed, and justifies the bribery by the cynical declaration that nothing succeeds like success.

It would be better, because it is better to be an honest nation than a big nation; better because single-hearted integrity is better in a people, as in an individual, than commercial prosperity; better because to profess humanity and essay human policies toward the rest of mankind and condone corruption at home is national Pharisaism, and Pharisaism is the worst of all sins in a nation as in an individual; better because in fact the fatal foe to dealing honestly with other peoples is popular leniency toward dishonest men at home. We need only to read the history of the past few months for evidence that the worst foes to honorable politics are dishonorable men. In vain has Mr. Roosevelt eloquently pleaded for generous treatment of the Cubans; in vain has he pleaded for fair treatment of the Filipinos. There is a Republican majority in Congress; Cuban reciprocity and Philippine tariff reduction are distinctly party policies; there is no shadow of a question that they would be overwhelmingly supported at the polls by the Republican party in a general election. But the appeals of the President and the opinions of the people are unheeded by men to whom the supposed pecuniary interest of a few beet-sugar growers and a few tobacco-growers overbalance all other considerations. It may take time and patience to convince an honest man of the truth; but even invincible ignorance will yield at last to argument, if the ignorance is honest and the argument enlightening. But time and patience are wasted on men who are corrupt and corrupters of their fellows. The only argument that weighs with a bribe-taker is a bigger bribe. Allow public corruption to go on unhalted, uncondemned, unpunished, and elections will cease to be discussions of principles: they will become auction sales, in which a minority, holding the balance of power, will sell the power which they wield to the highest bidder.

He has read to little purpose the histories of Greece, and Rome, and Venice, and Bourbon France, and England, who does not see that the issue of honest government is the paramount issue, whenever and however it presents itself. For it was because corruption conquered in Greece, and Rome, and Venice, and Bourbon France that they all died; and because the corruption of England under the Georges was conquered by the Puritan conscience of her people that England lives. He has read to little purpose the history of the past decade who does not see that this plague of the nations is in our blood. The corruption revealed in New York City, in Minneapolis, in St. Louis, in Chicago, the corruption in Mon-

tana and in Delaware, is patent, obvious, unconcealed; but these cases are not sporadic. How long must we wait before we begin our fight in dead earnest against the blood-poisoning which is more fatal than the most fatuous of public policies—be they what they may? Jethro's counsel to Moses, old as it is, the world has not outgrown; it is timely now: "Thou shalt provide out of all the people able men, such as fear God, men of truth, hating coveteousness." Not merely men who are honest, but men who are aggressively honest; who hate coveteousness; who dare risk, not their own political fortunes merely, but those of their party, rather than fight their battles with hired Hessians. Men who will strike with a strong hate and pierce with a fine scorn the bribe-taker and the bribe-giver, whether the bribe be a commercial advantage in the market, an official emolument in politics, or a roll of National bank-notes at the polls.

To get such men as this to act for us in our public life, city, State, and Nation, this is the paramount issue. It is because the American people believed that they had in Mr. Roosevelt such a man that he has aroused an enthusiasm greater than that aroused by any President since Abraham Lincoln. Any act of his that casts a shadow of suspicion on his recognition of the principle that public honesty is the paramount issue chills that enthusiasm and robs him of his power. Those who love and honor him the most feel most deeply any acts which makes possible such a suspicion. "Hating covetousness" is a spirit hard to maintain in the malarial atmosphere of Washington; but the life of the Nation depends upon maintaining it. "Principles, not men" is the devil's motto. Principles are absolutely useless except as they are incarnate in men. Men are worse than useless except as they incarnate principles. Principles in men, men of principles—this is the absolute condition, not only of National strength and National prosperity, but of National existence. It were better to adopt free trade and shut down half our factories, and free silver and close half our banks, provided we still kept honest, than to purchase a short-lived commercial prosperity by condoning or ignoring or being indifferent to the crimes against the State of a Croker in New York, an Ames in Minneapolis, a Butler in St. Louis, a Clark in Montana, or an Addicks in Delaware.

The Czar's Decree

We publish in full on another page the edict of the Czar respecting religious liberty and political reform in Russia. His successful project for the establishment of the Hague Tribunal will lead Americans to regard this edict with favorable predisposition. They will be inclined to hope from it an end to religious persecution, an initiation of some measure of local self-government, and a further enfranchisement of the serfs. We wish very much that a careful reading of the edict justified any such interpretation. We are compelled to conclude that it does not, that the decree is important rather for what it indicates than for what it promises. As a symptom of political and social unrest it is significant; as an earnest of religious or political reform it is unimportant. It does not order anything that is of real value, nor mark the beginning of a new era, nor indicate any important change in the policy pursued by the Russian Government since the death of Alexander II. What genuineness of desire for reform it may indicate in the Czar we do not undertake to determine; but measured by its actual or prospective effects it is little more than a bureaucratic attempt to placate, by means of vague promises and trivial concessions, a fully aroused public sentiment in favor of liberal reforms.

The clause in the decree which has attracted the most attention is that apparently proclaiming religious liberty. In it the Czar says: "We . . . have deemed it expedient to strengthen and decree the undeviating observance of the principles of tolerance laid down by the fundamental laws of the Russian Empire, which, recognizing the Orthodox Church as the ruling one, grant to all of our subjects of other religions, and to all foreign persuasions, freedom of creed and worship, in accordance with their rites." This paragraph does not change in any respect the existing law, or add anything whatever to the religious privileges of the

Russian people. Mohammedans have had their mosques, Jews their synagogues, and Roman Catholics and Lutherans their churches in Russia for many years, and have worshiped in them, according to their respective creeds and rites, without let or hindrance. The thing that is denied in Russia is the right of an Orthodox Christian to think for himself in religious matters, and, as the result of such thinking, to change the form of his religious faith and leave the Orthodox Church. The denial of that right is not affected in the slightest degree by the Czar's proclamation of religious liberty. The law, as it now stands, is as follows:

> All persons who leave the Orthodox Church for the Church of any other Christian denomination shall be turned over to the spiritual authorities for admonition and instruction, and shall then be dealt with in accordance with ecclesiastical rules. Until they shall return to Orthodoxy, their minor children shall be taken in charge by the Government, in order that they may not become perverted, and their lands, if occupied by Orthodox Christians, shall be put under guardianship and they shall not be permitted to live thereupon. (Penal Code, Revised Edition, Section 188.)

The punishment for inducing or persuading another person to leave the Orthodox Church is much more severe. The Code says:

> For inducing an Orthodox Christian to become a member of any other Christian Church, the guilty one shall be deprived of all special, personal, and acquired rights, and shall be exiled to Siberia, or imprisoned at hard labor, for a period of from one year to a year and a half. (Penal Code, Section 187.)
>
> For persuading or inducing an Orthodox Christian to adopt the Jewish or any other non-Christian faith, the guilty one shall be deprived of all civil rights and sent into penal servitude for a period of from eight to ten years. (Penal Code, Section 184.)

If a man or woman who is a member of the Orthodox Church marries a woman or man who is a Lutheran or a Roman Catholic, the children must be trained up in the Orthodox faith. If parents disobey this law, they are to be punished with imprisonment for a period of from eight to sixteen months. (Penal Code, Section 190.) These laws, and many others which limit freedom of conscience, freedom of teaching, and freedom of speech in religious matters, as well as freedom to criticise and discuss the Bible and the Church, remain untouched by the Czar's decree. He merely says, in effect: "You shall continue to have as much religious freedom as you have enjoyed, under the provisions of the Penal Code, during the past half-century;" but he says it in such a solemn and impressive way as to make the outside world think that he is conferring a great favor and inaugurating a momentous religious reform.

The next statement in the document is scarcely more significant. It is as follows: "We are further resolved to continue the active carrying out of measures for the improvement of the material position of the Orthodox rural clergy, while enabling them to take a larger share in public life." In point of fact, the rural clergy form, numerically, a small part of the Russian population; they have never made any particular complaint with regard to their "material position;" they are generally men of limited education, and the "share" that they have hitherto taken "in public life" has been to discourage the liberal movement, oppose secular schools, and serve as an instrument of the reactionary party.

The Czar next says that measures are "impending" "for the consolidation of the national economy"—whatever that may mean—and that, in accordance with these measures, the banks should "strengthen and develop the welfare and fundamental pillars of Russian village life, and that of the local nobility and peasantry." This may have some meaning in the original Russian, but it is very vague and obscure in the English translation. From the next sentence it appears that the "laws of the rural population" are to be "revised," and, when formulated, are to be "referred to the provincial government councils" for further development and adaptation. It is this clause which is supposed to imply some measure of local self-government, but this implication is not justified by the text. If the words "provincial government councils" are a translation of "*gubernskoe pravlenie*," the revised laws are to be submitted to boards of bureaucratic officials from whom the Russian people have already suffered much, and from whom no adequate measures of relief are to be expected. But even if the words mean the provincial assemblies or "*zemstvos*," there is no assurance that these bodies

are to have anything more than an advisory voice, and their advice, when it has conflicted with the views or the interests of the bureaucracy, has always been disregarded.

The clauses which are supposed to enlarge the freedom of the serfs are not much more significant. The order that "means are to be found to render it easier for the individual to sever connections with the community" (the village commune) "to which he belongs" is very good as far as it goes, but as a measure of relief it is trivial. The assurance that measures shall be taken without delay "to release the peasants from the present burdensome liability of forced labor" has little importance. The only "forced labor" to which the peasants are now liable is the mending of roads at certain seasons of the year, and the carrying of officials from place to place, off railroads, when such officials are traveling on Government business. This is a desirable reform, but it is insignificant. The promise that "thorough reform shall be effected in the provincial governments and district administrations by the local representatives" has a hopeful sound, but, inasmuch as it does not specify what the reforms shall be, nor indicate whether they are to be brought about by the "local representatives" of the people or the "local representatives" of the Minister of the Interior, it is vague and unsatisfactory.

In short, there is little in this decree to indicate any purpose on the part of those who have prepared it to furnish any real relief for the evils from which the Russian people are suffering. For a clear and definite statement of those evils we need only turn to the reports of the district and provincial committees appointed a little more than a year ago to consider the needs of the Russian peasantry and ascertain the reasons for the steady and progressive decline in their economic condition. Some of those evils, briefly stated, are as follows: (1) Insufficient land; (2) high and inequitable taxation; (3) deprivation of legal rights enjoyed by the higher classes; (4) inadequate educational facilities; (5) too much bureaucratic interference and control; (6) a tariff which favors manufactures at the expense of agriculture; (7) restrictions upon the right to assemble for discussion and joint action; (8) lack of a free press; (9) the passport system, and restriction, in general, of personal movement and individual initiative. The district committee of Sudja, in the province of Kursk, sets forth specifications of removable evils to the number of twenty-three; but the nine above stated are contained in a more or less definite form in the reports of nearly all the local committees. Not one of them is touched or alluded to in the Czar's decree. The Imperial proclamation amounts to little more than a vague general statement of benevolent intentions, and, however well meant by the Czar, was probably intended by the Czar's advisers to placate the educated liberal class and quiet the public feeling aroused by the widespread agrarian disturbances and student disorders of last year, the great labor strike on the Don, and the bold and frank reports of many of the agricultural-inquiry committees. It is a hopeful sign chiefly because it indicates that the Russian discontent has reached such proportions that the bureaucracy has at least been compelled to recognize that such discontent exists.

❀

The Dead Soul

The old man had come a long way, and was burdened not only with years and sorrows, but with the knowledge of good and evil. As he looked back and retraced the road he had traveled over, the weariness of the journey gathered upon his spirit until it seemed to him as if the spring of life had been choked at its source, and nothing remained save the dry and dusty channel through which the stream had once run shining in the sun. He was so worn with labor and grief and unfulfilled hope that he thought of little save rest; the soul in him had fallen into a sleep so deep that he had lost the sense of life which is keen and quick when a man feels his immortality. He cared for nothing but forgetfulness; so far had the iron of the futility of thought and knowledge and effort entered into his soul.

The irony of life never seemed so poignant and piercing as when he caught the faint echoes of the old songs of his youth, the ghostly cheers that had rung around his early achievements and had become

mocking echoes of labors which brought no gain and applause, which lay in the ear for a moment and then dissolved in that appalling silence in which at last all human cries and songs are hushed. It was a dead past which lay behind him; a path through a desert without bloom or shelter or the shadow of trees in which birds rest and sing; the desolate and solitary way of a lonely man through a world which always bloomed as he advanced and withered as he stretched out his hand to grasp its offerings.

Tired as he was to the verge of extinction, he had not wholly lost the remembrance of the energy which once sent him with vigorous step along the ascending way, of the high things which summoned him from their inaccessible fastnesses, of the steady and unbending purpose which kept him to his task. He had set himself to go alone to the end of the journey; to break all bonds which held him in place among his fellows that he might follow

"Knowledge like a sinking star
Beyond the utmost bound of human thought."

Others might be content with nearer and lesser things; he gave himself to the remoter and greater ends. Others might carry the common burdens and share the common fortunes; his way led him apart from the crowd to some remote and solitary place where the mystery of the universe would suddenly disclose itself in cloud and fire and splendor unspeakable; a fate too large and terrible for any save those who had taken the path of solitude and lonely watching of sun and star in the awful silence of space.

There had been a time when the hopes that men cherish had knocked at his heart, and more than once he had struggled long before he barred the door. But the path lay before him, and he who walked in must be free of hindrances. In those earliest years love had held him for a moment with eyes that looked into his strangely sorrowful, and had walked a little way with him, not pleading, but with a touch on his hand so full of pity that his pride flung it aside. There was no room for such companionship on that narrow path; no smoothness for such tender feet on that rough highway. What had he to do with love whose heart was set on knowledge? In those first years voices had often called to him as he passed, imploring his aid, and sometimes through his growing self-absorption the anguish in these voices had reached his heart and stung the old human sympathies into life; but he looked up at the far heights and hardened his heart and passed on resolute and unshaken. The morning was already moving toward noon; why should he waste the hours that were to carry him to the goal? What claim had common souls, content with the small gains and losses of life, with love and the prattle of children and the cheer of friendship, on one who sought the highest and the remotest secret of life? They were content with the hour; he would accept nothing less than the full content of eternity.

Long ago love had left him; long ago men had ceased to call upon him for help as he passed swift and unswerving on his way. And the way had grown more silent and solitary, until nothing was audible save the touch of his own foot, and he had no companionship save his own thought. He had broken every tie, discarded every hindrance; and freedom had brought him measureless weariness and a passionate longing for death!

He had learned much by the way, and that wisdom of old age was his which had been distilled, drop by drop, out of disillusion and despair—that wisdom which is often called knowledge of life, but which is really knowledge of death. What had been born of the man's long travel was the knowledge of himself. The world about him was so vast that as he scanned it there seemed neither measure nor limit; but it was hard, barren, dead to the uttermost verge. The order which pervaded it was the rigid regularity of death; no seed was germinating in the soil, no egg was brooded over in any nest, no throat was swelling with its song, no sap was rising in any tree; vastness there was and sublimity, but it was without the speech of beauty; for the soul of the man was dead, and saw only its own desolation. Long ago the power of vision had faded within him, and he saw only the shell of things: the secret was farther from him than when he set out on his journey! He had gained knowledge, but without love there is neither wisdom nor life.

Lenten Meditations

The Day of Judgment

Every day is a day of judgment. Christ's fan is in his hand, and he is separating the chaff from the wheat. The Son of man has already come, and before him are gathered all people, and he is separating the sheep from the goats. We are taking our places, each one selecting his own, and we know it not. We classify ourselves by various artificial and temporal distinctions—as rich and poor, laborer and capitalist, employer and employed, cultured and ignorant, white and black; and all the time we are sorting ourselves unconsciously by the only real, eternal distinction, that of character. The rifts and chasms in society are shallow and superficial; the fellowships of society are apparent and temporary. Virtue and vice, honor and shame, probity and corruption, live side by side in the same street, shoulder against each other in the same tenement, work together in the same political party, chat together in the same club, kneel together in the same church. It is better so; for only so can virtue and honor and probity do anything for the world's redemption. But all the time the great gulf is imperceptibly increasing between them—the gulf which presently will become impassable. And all the time He sees, He knows, He understands.

And wh n the C mforter is come, he will convince the world of sin, b:cause they have not had faith in me; of righteousness, because I go to my Father, and ye see me no more; of judgment, because the prince of this world is judged.

Christ convinces the world of sin. The great picture judges the two men who stand before it. Their judgment of the picture is the picture's judgment of them. The great symphony judges the two hearers who sit side by side apparently listening to it. What one hears the other does not hear. In their judgment of the music they reveal their own musical capacity. The measure of our appreciation of Christ is the measure of our own character. Faith in Christ is not faith in what the Church has said about Christ; that is faith in the Church. Faith in Christ is understanding him, appreciating him, loving him. Both his friends and his foes thought that Christ was put on trial in the court of Caiaphas and before the judgment-seat of Pilate. They were mistaken. He was the Judge; Caiaphas and Pilate were brought before him for trial. He uttered no sentence; they adjudged themselves, and wrote the sentences so clearly that all the world has read them ever since. Each actor in that tragedy unconsciously announced his own judgment of condemnation or approval on himself:—John—I am a loyal friend; Peter—I am a cowardly disciple; Judas—I am a despicable traitor; Caiaphas—I am an unscrupulous ecclesiastic; Pilate—I am a trimming politician. Still the vociferous tragedy of life is enacted while Christ stands silent by. Without word or movement he compels iniquity to tear the mask from its countenance, and the treacherous follower, and the cowardly friend, and the ambitious ecclesiastic, and the trimming politician appear as what they really are, silhouetted in their hideous blackness against his luminous judgment presence.

Christ convicts the world of sin because he is the revealer of righteousness. Not by what he says, but by what he is, he condemns the world. His life is the standard for all life; his character is the measure for all characters. The world instinctively accepts him as the only measuring-rod. Not the Bible, but Christ, is the only infallible rule of faith and practice. His utterances are the rule by which all other utterances are to be measured; his character is the standard by which all other characters are to be tested. By him we measure Abraham and David and Isaiah and Paul no less than Gregory VII. and Martin Luther and Oliver Cromwell and John Wesley. By his utterances we measure the Books of Deuteronomy and of Leviticus no less than the Puritan code of morals and the Roman Catholic canons. Not "God is a man of war," but "Our Father which art in heaven," is the rule of faith. Not Paul before Ananias, but Christ before Caiaphas; not "God shall smite thee, thou whited wall," but "If I have spoken evil, bear witness of the evil: but if well, why smitest thou me?" is the rule of practice.

By Christ is the prince of this world judged. Betrayed, denied, forsaken, convicted, executed—his death draws all men unto him. His defeat is his victory. Judas, Caiaphas, Pilate, crown him

with glory and honor. Death entombs him only to make him the Lord and Giver of life. All the forces of evil league together—treachery, cowardice, forms of law, mob violence, cunning malice, brutal stupidity; against them all is one unfriended man, his character his only armor, his God his only ally. And he is conqueror and more than conqueror. Wickedness is folly and weakness; righteousness is wisdom and strength: this is the lesson of Passion Week; this is the lesson which history is continually repeating. Napoleon is wrong: God is not on the side of the strong battalions. Frederick Douglass is right: one with God is a majority.

Every day is a day of judgment. Every day Christ's fan is in his hand; every day he is separating the chaff from the wheat.

The Impressions of a Careless Traveler

XII.

May 12.

THIS is the third time I have been in St. Peter's to-day. Mass was being said in one of the chapels, which was crowded to and beyond the doors, so that my companions made no attempt to enter. But I had long anticipated joining in such a service with fellow-worshipers of the Christ whom we both love and endeavor loyally to follow; for I thought that the spiritual atmosphere of this ancient church would deepen my reverence for God and broaden my fellowship with my fellow-men. I have joined gladly and heartily in the silent services of Friends, in the emotional services of Methodists, in the historic and orderly services of the Episcopalians, in the simple and unornate ritual of Congregationalists, and in one with as much spiritual help as in another. And I had looked forward to a special impulse from a service in St. Peter's, though conducted in a ritual I could not understand; for understanding is not necessary to fellowship in worship. I easily and quietly worked my way in a few moments through the outer row of mere sightseers with their Baedekers in hand and got into the inner circle of the pious pilgrims. So long as I looked at them I could realize and share in their service, though it did not seem like a very deep or enduring feeling; but when I looked away from them to the priests, I could discern no reverence at all. There were three or four officials at the altar, attended by their acolytes; the seats in the chapel were all occupied by ecclesiastics of various degrees, from two or three cardinals, designated by their red caps, to simple priests. During parts of the service they responded together in a sing-song tone to the sing-song tones of the officiating priest; at other times they were reading in the devotional book as though they were taking this time to go through certain pages prescribed by their rules; or were looking about the chapel with a gaze as devoid of any appearance of spiritual interest as that of the Baedeker sightseers. In general, their appearance betokened, not hypocrisy, but pure formalism; and their ceremonial performance to have about the same relation to piety that court etiquette does to love. There were two or three priests whose faces were expressive of intellectual or spiritual life, or both, though I recall only one which was so at all eminently; but in general they were stolidly inexpressive, while a few were distinctively gross and sensual looking. There were no seats in the chapel except for the priests; the worshipers stood or knelt; the music was fairly good, but not extraordinary. I mean to come to another service on some Sunday, when perhaps there will be more worshipers and fewer sightseers, and I can come early and get from the beginning into the spirit of the service.

St. Peter's itself disappoints me. Why? Its approach is imposing; so would be its interior, if the authorities had not interfered with the simple design of its great architect. But they have done what they could to spoil its sublimity by despoiling it of its simplicity. The massive pillars are ornamented with what I suppose to be winged cherubs, and they suggest classical cupids, and they are draped from top to bottom with hideous red hangings put up, I believe, to celebrate some church

festival, I know not what; even the statues of heroic size at the far corners of the dome attempt to be impressive only by being big. There is but one piece of statuary in the church that impresses me as really artistic—the monument to Clement XIII. by Canova, on the right-hand side of the church. Even the Pietà of Michael Angelo, with the Christ held in the lap of Mary, does not seem worthy of the great sculptor. There is only one point where the effect on the imagination is what Michael Angelo meant it should be; it is obtained by standing under the dome and looking directly up into it. Then the cupids and the red trouserings of the pillars disappear, and even Bernini's statues are lost to sight, and there is an impression of immensity which I can compare to nothing but to that which sometimes overcomes one in looking up to the starlit dome above him on a clear night.

May 14.

I have been looking over Symonds's life of Michael Angelo, and I confess myself glad to find that my own impression respecting what are St. Peter's characteristically impressive features is confirmed by what he says. "St. Peter's," he says, "is vast without being really great, magnificent without touching the heart, proudly but not harmoniously ordered. The one redeeming feature in the structure is the cupola; and that is the one thing which Michael Angelo bequeathed to the intelligence of his successor. The curve which it describes finds no phrase of language to express its grace. It is neither ellipse, nor parabola, nor section of a circle, but an inspiration of the creator's fancy. It outsoars in vital force, in elegance of form, the dome of the Pantheon, and the dome of Brunelleschi (at Florence) upon which it is actually modeled." And Symonds quotes an unnamed English critic as saying that "internally the sublime concave of this immense dome is the one redeeming feature of St. Peter's." This is stronger language than I should use; St. Peter's seems to me to be not without grandeur, though perplexing to the observer for its lack of harmony.

May 16.

I have now spent three mornings in the Vatican galleries; one of them in the gallery of sculpture, one in the Sistine Chapel and adjoining apartments, and one in the picture gallery. It would be useless to attempt to record here impressions in detail; I have underlined in my Baedeker special sculptures and special pictures and frescoes, and this will serve to supplement my diary. I am impressed with the generosity of the Vatican in throwing open all its treasures to the public. There is a moderate charge for admission to the gallery of sculpture, but the picture gallery, the Sistine Chapel, and the apartments are free. It is not easy for one who is born and bred a Protestant and a Puritan to define exactly what is the relation between these galleries of art and the functions of the Church; perhaps this zeal to define everything with exactitude is a mistaken one. But I am sure that it is impossible to estimate the effect on the human race of throwing open to the whole world these art treasures. It is true that a considerable number of those who go to these galleries really see nothing, and there are those who use them merely as a convenient place to meet and gossip with friends; but I am inclined to believe that the proportion of interested observers to indifferent sightseers in the Vatican is quite as great as the proportion of serious worshipers to indifferent sightseers in St. Peter's. Yesterday morning we fell in with a very courteous attendant in the Borgian apartments who spoke French, and, finding us interested, gave us a good deal of information not in the guide-books. He pointed out to us two portraits of the same face—Lucretia Borgia; in the one case she was presented as a fine lady in her court robes; in the adjoining fresco she was made to do duty as Saint Somebody—I forget who. It struck me as a curious illustration of the relation, or rather lack of relation, between ethics and religion in the Middle Ages that Lucretia Borgia should have been selected by a court painter to serve as a saint, and this on the walls of the palace of the Holy Father. To-day I have been sitting for half an hour before Raphael's picture of the Transfiguration; it is the only picture a distinct remembrance of which I have brought away with me from the Vatican picture gallery. The critics, I believe, say that a picture ought not to tell a story, and if that is so they are quite

right in criticising this picture. It does tell a story, and tells it with wonderful effectiveness. I have never before realized so perfectly how utterly inadequate a photograph is to reproduce a really great picture; for a really great picture I must think the Transfiguration to be, despite the critics, and despite the fact that what it represents never could have occurred—as Raphael represents it.

May 18.

I have been again to service in St. Peter's; this time on Sunday and in ample season, so that there was nothing in our entrance to disturb the devotional feeling. I am sorry to record a repetition of the disappointment experienced at the previous services at San Giovanni and St. Peter's. There was the same air of indifference in the priests, the same mechanical formalism in the service. At one point in the service my companion detected a priest making signs to two fellow-priests to join him at supper after the service was over.

May 20.

I have now visited half a dozen or more of the churches in Rome and have attended four services, and the impression is always the same; it may be expressed by the one word formalism. Comparing the ruins of ancient Rome with the religious services of modern Rome, the first are the remains of a civilization long since departed, the second of forms of a life that still exists, though there is no longer a reason for its existence or an enthusiasm which it expresses; in the Forum one finds the bones of the dead and is inclined to moralize over them as Hamlet does over the skull of Yorick, St. Peter's or San Giovanni reminds the Protestant of an old man living on long after he has lost the inclination, if not the power, to think or act in the present.

Dr. Kennedy, the head of the American College, tells me that all the text-books in Rome are in Latin, and practically all the lectures are given in Latin. The student, therefore, before he can take advantage of the theological courses in Rome, must be familiar with Latin as a means of communication. Why? For two reasons: First, these students come from all over the world—America, England, France, Germany, Greece, etc.—and they have one language in which they all do their studying. The language is one both as a symbol of the unity of the Church and as a means for its preservation. Second, the language is a *dead* language; it does not change; therefore the dogmas expressed in it do not change. The same dogmas are taught as in the fourteenth century, because they are taught in precisely the same linguistic forms. Dr. Kennedy's explanation makes it clear that there is a definite, and it must be added a skillfully devised and well-adapted, endeavor to continue the thought of the Middle Ages unchanged and unadapted to changing conditions either of time, race, or country. This petrifaction extends to everything in the Roman Church as one sees it in Rome. The churches, and there are said to be three hundred and sixty-five, are nearly all mediæval, and when one goes into a modern church he wishes that were mediæval also, for it is but a poor copy of mediævalism. The churches are generally patterned after the old pagan temples; in some cases the pagan temple has been converted, with no great change, into a Christian church. I am inclined to think the Pantheon the most impressive church interior in Rome, and the addition of the unattractive altar and the movable choir gallery are, I believe, the only material changes made in it since it was used for the worship of all the gods. I know too little about the Roman ritual to be certain, but I judge that many of its features are borrowed from the pagan ritual which it at once modified and supplanted, and that substantially it repeats what had been repeated here for some centuries before the Christian era. In all the churches which I have visited the congregations are small; there are few or no seats; the congregation are spectators who stand and look on; even the devout pilgrims are quite apt to bow, to kneel, to join with silent moving lips for ten minutes, and then go about the church or cathedral with their guide, much as a Cook party might do. Of devout-appearing laymen, or rather laywomen, there are not a few—though they are the exception; but I have scarcely seen one priest who appeared to me as though to him the service was the expression of any real devotion.

For my knowledge of the public sentiment in Italy toward the Church, and

toward religion as it is expressed in the churches, I am dependent on others, of course; but the result of my inquiries in various directions, including some loyal ecclesiastics, is the impression that the prevalent feeling, at least in the cities of Italy, is one of entire indifference, grading off at the one extreme to bitter hostility, and in the other to what I would call a traditional respect. I cannot find out that the Church is doing much for the people. I do not learn of specific philanthropic work like that of the Paulist Fathers in New York, though my opportunities for inquiry have not been many. In general, however, the churches appear to have been built and to be operated for the supposed glory of God, not at all for the benefit of men—except as offering sacrifice for their sins is for their benefit. There is practically no preaching done except during Lent; the churches do not exist for the instruction of the people, or the instruction is remitted almost wholly to the confessional, where it is furnished in private. I am told of a humorous survival of mediævalism in Florence. Bread is no longer distributed by monks at the gates of the churches to the poor; modern philanthropy has learned a better way of caring for the poor. So at one of the Florentine churches food is distributed every noon at the door to the stray cats of the city. The incident is slight, but it illustrates the perpetuation of a custom as a habit after the reason which called it into existence has entirely disappeared. In short, there is about the same relation between the ceremonies of the Roman Church in Rome and mediæval piety that there is between the occasional attempted reproduction in modern times of ancient tournaments or races, and the old spirit of chivalry out of which they grew. The genuineness of the antique is gone, and only its form, sometimes only a travesty of its form, remains.

Sometimes faith and frolic are strangely intermingled. I went to the sacred staircase the other day where Luther heard the voice proclaiming, "The just shall live by faith," and from which he fled to become the leader of a great revolt against this ceremonialism. Some devout pilgrims were going up on their knees, and repeating at every step a prayer; but others were going up on their knees in unmistakably pure fun, and with their laughter ill suppressed. In lieu of a serious faith there is sometimes substituted a credulity which is to me quite incomprehensible. Mr. Reynaud told us in the Forum the other day the legend of Peter and Simon Magus; how the two engaged in a conflict in Rome, how Simon Magus challenged Peter to a flying-match, and Peter accepted the challenge; how, while Simon Magus attempted flight, Peter, kneeling on the stone, prayed that the magician might fail, and the magician fell, broke both his legs, and died. And, continued Mr. Reynaud with a smile, the stones with the impress of Peter's knees are still preserved in yonder church—to which he pointed—and are shown to the faithful. I went in the other day to the Church of St. Peter in Vinculo, which has Michael Angelo's statue of Moses. I had long wanted to see it; no photograph does or can give one any adequate conception of it; it is an embodiment in marble of the majesty of authority. As we sat looking at it and letting the sense of the dignity and worth of divine law grow into our souls, a priest passed us with keys in hand and two visitors accompanying him. He lighted two candles before a kind of cupboard or closet, as a token of reverence, and showed to the tourists or pilgrims—perhaps pilgrim tourists, of whom one sees many in this city—the identical chains with which Peter was bound while a prisoner in Rome. In the Santa Maria Supra Minerva is Michael Angelo's statue of Christ. Ecclesiasticism has put a bronze garment about his loins and a bronze shoe on the one foot which was being worn away by the kisses of fervent pilgrims. A more grotesque effect it would be hard for a caricaturist to contrive.

But it is useless to multiply illustrations. At every step one of a modern spirit is impressed with the anachronism of mediæval forms bereft of the mediæval spirit which gave them dignity, and often marred by modern taste or want of it, producing incongruities which would be ludicrous were they not pathetic. I do not wonder that Luther was made a Protestant by coming to Rome; I rather wonder that any thoughtful man can escape the same result.

L. A.

THE BOOMERANG BLOCKADE

THE TRUE STORY OF THE VENEZUELAN IMBROGLIO

BY JAMES BARNES

Special Correspondent of The Outlook in Venezuela

FOR the last few months the world has watched the drama in Venezuela—a serio-tragic comedy in three short acts and a postponed epilogue, introduced by a *lever-de-rideau*, to which few people paid any attention, although it lasted some scores of years. The epilogue has yet to be seen and heard, but to those initiated it may prove the most interesting part of the performance, and the supposedly finished comedy may have a serious sequel; already it has begun with a startling introductory that has almost escaped public notice—but all that in time.

The prologue was long, but it might be well to outline it, for it introduces the stage setting in which the play itself revolves. The stage is some six hundred and thirty-three thousand square miles of mountain, valley, plain, and forest; it contains some two million seven hundred thousand people, only a small fraction of whom ever had speaking parts in the long-drawn prologue, and a minority any voice in the chorus. Eighty-six per cent. are of mixed blood, preserving all the characteristics of a mingled ancestry. In seventy-four years there have been no less than one hundred and four revolutions, until it has grown to be the accepted belief that no change in the bill could take place without the accompaniment of gunpowder and sword play. With a monotony that was wearing upon the properties, tiring to the performers, and boring to the beholders and enforced subscribers, the prologue lingered on, until finally there stepped upon the scene a brilliant figure in Guzman Blanco, President, Dictator, and leading man. The melodramatic tableaux ceased for the nonce, and a spectacular production, sparing no expense, succeeded them. Despite the fact that all this time the "Constitution" was in existence, none of the stage managers used it, none of the actors spoke its lines, and few of the supers had any more than heard of it. Guzman Blanco amused himself by ignoring it when he wished to, and juggling with the privileges it accorded to the principals. And, so far as leading rôles are concerned on the stage of Venezuelan politics, he started twenty years and more ago the fashion that holds sway to-day. He gave all his friends and his family the "fattest" parts, and he appointed to the positions of advance agents, ticket-takers, and treasurers only those who accounted to him as sole proprietor and lessee. So he prospered, and in order to arrange for a long run without a change of bill during his lifetime, and to assure that he would not be forgotten by his constituents and posterity, he dressed the stage well. Nature had done generously with the background; he provided smaller accessories, with no little tinsel and much tawdry show. Parks and plazas were decorated with marvelous statues, public buildings were frescoed with crude appeals to fervid patriotism. Heroes lived again in bronze and marble, and the bones of ill-used "patriots" were brought together in a stuccoed pantheon for which the treasury was debited at the cost of Parian marble. He jumbled history, fact, and fiction to produce picturesque results, and incidentally he did much useful good. He advertised and placarded Europe and America, and visitors came to behold, and, beholding, subscribed to the enterprise. For, to provide all the machinery and the luxuries, he had to submit his plans to the bids of alien contractors, and, like many showmen, he had a jovial disregard of debts. Cheerfully he left them as an inheritance to his followers; his methods he bequeathed as a criterion for his lesser imi-

tators. Upon his departure to Europe to raise more money on promises and privileges, on one occasion the assistant manager whom he had installed at the head of affairs usurped his power, and the company and spectators, angered at non-fulfillment of performances and postponement of salary days, took their wrath out in destroying the decorations. They tore down his prancing statues, obliterated his personal tablets, but perpetuated his name forever in the intangible form of a never-to-be-forgotten personality that will live through tradition, if not in existent monuments. The "illustrious American" has left his impress and will not be forgotten.

Successive would-be managers came and went, fought and jostled each other out of office, subsiding in each case—if they survived—with a large proportion of the contents of the treasury, to a life of ease and retirement in exile. The habit of rewarding the alien contractors, who supplied the machinery and most of the practical and useful conveniences, with promissory notes that were redeemed in words, and the everlasting reference to *mañana*, at last became tedious. There was excuse, however: the rows that broke out behind the scenes absorbed most of the managers' time and distracted their attention from business matters. Slowly it became evident that past obligations would most probably be entirely disregarded, and doubt began to be expressed as to the good faith of future contracts. The creditors began to grow uneasy.

Now, one day in September, 1899, there entered the center of the stage one Cipriano Castro. He had jumped to the front in a more or less spectacular manner. His training for his high office was of the slightest; but he was possessed of courage, a natural ability to endure, and a capacity for seizing opportunities and turning the situation to his best advantage. Through the ups and downs of his own particular revolution he had managed to keep his feet, and, by a sudden and unexpected change in the tactics of his chief military opponent, who, for purely personal reasons, came over bodily with all his troops and ammunition, he was able to march into the capital a victor in his darkest hour. He arrived, if not with the applause of the bystanders, at least with the acquiescence of the only force that might have retarded him.

They say it was a strange sight. Andrade, the President, had fled. The few troops he left behind him were marshaled by their officers and stood for hours in the broiling sun, waiting to salute the conqueror's coming. Into the city at last he marched, followed by a ragtag and bobtail army carrying their yellow flags. Dusty and footsore, they made their way to the Plaza Bolivar and took possession of the Casa Amarilla, the Government house, from the windows of which the women camp-followers, whose name is legion in Venezuela, were soon looking down upon the silent crowds in the streets. There was no disorder, there were no barricades; the citizens accepted matters quietly; there was no rioting; many of the old conservative party who for years had been ciphers in the political figuring hoped for a betterment of conditions, on the old ground that no change could be for the worse. Many prayed that this little dark-skinned ex-clerk, ex-farmer, and small politician would gather about him men who would assist in honestly directing affairs for the furtherance of lasting peace. The foreigners who had invested money hoped that debts would be paid, that collections might be made. and that prosperity, so long forestalled, or at least so continually interrupted, would come at last. No one can tell what might have happened if the old story had not begun again. That very night one of his quondam allies, General Hernandez, marched out of the city with about eight hundred followers and began another revolution. But hard luck attended him; he was defeated, captured, and placed in prison.

No long peace followed, yet people still hoped, and, with that wonderful vitality of the country, spirits, trade, and crops revived perceptibly under the benign influence of this hope alone. The foreigners who had accepted former promises became sanguine again, and gullible. For a short period a roseate hue permeated the commercial atmosphere. There was money, almost plentiful good money in circulation, as there had been at times before; luxuries that could be purchased on credit went with a rush, for Venezuelans are a good deal like children in their ideas of cash when they have it, and

credit when it can be obtained. If they could purchase something by promising to pay for it the next day, it was an opportunity not to be missed; if they did not have to pay for it until next week, they would order it for their family, and if not till next month they would cheerfully subscribe and scatter it broadcast among their friends.

So the markets improved a little; the Government, hastily taking advantage of exchanging concessions, in some cases for payment and in others for future and assured benefits, grew gay and careless. Plantations began to promise returns in coffee and cocoa and sugar. Many of the wealthier Venezuelans had bought stock in foreign companies, for there was no venture in the way of modern progress and development that did not bear the stamp of foreign ownership and management. The Government attempts to build works of public service, to control and to maintain them, had proved utter failures. The railroads were English or German, the water-works Belgian, the telephone lines American or English, the tramways English and German, the breweries German entirely, the harbor improvements English, the cable French, and three-fourths of the concessions for mining and the products of the great forests were owned in Europe.

But the budget, that wonderful and coveted fetich that is the desired possession of the Venezuelan politicians, *that* belonged to the Government! To collect it, to administer it, and to pocket it, had been their particular business. Their tariff was peculiar—there were duties on diamonds and literature by the pound; the latter, being something of a luxury, perhaps, suffered most, because books are heavy; flour and necessities doubled and tripled in cost by the time they passed the customs, and to even matters up exports were taxed also, and the process of strangling the goose now began with a vengeance. Bills and claims accumulated, payment of interest on government paper lapsed, pledges and assurances were ignored and practically repudiated, especially if made by former administrations.

Soon the old excuse of "trouble enough at home" began; revolutions reared their heads—eight had happened in five years. Hardly a penny was spent for public improvements, but Ministers and officials rolled in fine carriages and maintained large establishments. The Government held on, for it had the best generals, one to every hundred men or less; it controlled most of the ammunition and the naval equipment of a few small converted yachts and cheap gunboats, so that it could transport easily troops along the seaboard, and keep possession of the harbors. The short-lived hope of peace began to die.

The Venezuelans themselves were the chiefest sufferers, but they had stood the yoke so long that their necks were callous. The disgruntled foreigners on the spot, and the stockholders abroad, began to talk of a "get-together" club. The ideas of their Ministers began to reach the home governments, and Germany and England, being the most interested, talked together. But their reasons for any action were diverse. Germany had obtained a foothold in a way that England had not. Her people had gone heavily into the plantation business, had loaned money in all directions, and ambition and cupidity had both been aroused. England wanted no more land—for Heaven knows she had enough scattered about the world at large; but the Kaiser cast covetous eyes upon the broad and smiling country. The Germans were unpopular with the people on account of their manner and far-reaching business methods. It was all for Germany and the Germans. The English were more unpopular with the Government, maybe from the inheritance of the feeling that had existed during the boundary dispute, and positively just then on account of the unpopularity and lack of tact of the British Minister, Mr. Haggard, a letter from whom to his home office had come into Castro's possession. It had spoken slightingly of the Venezuelan character, and had advocated thoroughly the importance of encouraging Italian immigration. There is no doubt that he was rudely treated by Castro and some of the members of his Cabinet, which did not tend to brighten his further reports. Rumors of a coalition began to grow, and the President in private gave vent to utterances that, repeated publicly, had the note of defiance. His advisers began to read carefully the doctrine of Monroe,

and talk for a purpose of its sheltering protection.

Germany did not like the Monroe Doctrine; she never had liked it; there is no doubt that, with England's aid, she would have been glad to test its power. And the British were deceived, not only by the mistaken ideas of the situation, but by Teutonic diplomacy. It is fair to believe that they accepted the representations made that, should a display of force be shown, the Venezuelans would back down, and Castro himself seek terms at once. This is at least an amiable conclusion. For that England wished to try the temper of the American people is now a discarded idea, in view of the expressions of her press and the utterances of her public men. But Germany had another iron in the fire.

General Manuel A. Matos, the leader of the revolution, had a pro-German leaning. He hated Americans as he hated the English. A wealthy man and a survivor of the old Blanco régime, it would be for Germany's profit that his revolution should succeed. To be successful a revolution needs arms, ammunition, and money. Generally speaking, with this combination men are forthcoming, and the successive moves on the chessboard of military politics are bound to be easy. Germany could aid the revolution, and, despite denials, it is believed in Caracas that she did so!

But the little President at the Palace of Miraflores did not weaken. He appeared more angry than frightened, and yet, withal, he smiled. The revolutionists, although badly beaten in the battle of La Victoria in November, were still under arms and the dangerous fire was smoldering. President Castro saw in the situation a chance to do away with a threatening near-by trouble, and let foreign relations shift to the broad shoulders of Uncle Sam. He grew more diffuse in his explanations, and, perhaps, defiant in his attitude. At the same time he was preparing a manifesto that he hoped would gather the malcontents under his flag—at an appeal to patriotism and in response to a call to defend the land from the invader! But, as will be seen, things did not work out the way he thought they would. Political allegiance was stronger than love of country, and that alone is one of the indices to the hopelessness of the present hour. During the whole of the past trouble there has been no concrete representation of the voice of the Venezuelan Republic.

On December 7 the German and English Ministers left at the private residence of Mr. Baralt, the Minister of Foreign Affairs, their demands for the settlement of their claims, which in subsequent correspondence have been termed ultimatums. The usual evasive reply was followed by the Ministers' mysterious departure from the capital the next day, and their embarkation on their respective war-ships. Then there was consternation! The German and English subjects were arrested by the wholesale and thrown into prison. What rioting took place was much exaggerated in the press accounts, and confined in the main to shouts and marching. For once Castro appeared to be popular, owing to the puff of patriotism in the city.

But now the representative of the United States took a hand in the little game. He was burdened with responsibilities enough, but Herbert W. Bowen was not afraid to assume others. With Mr. Russell, the Secretary and Chargé-d'affaires, whose knowledge of the people was of great assistance, he demanded the release of all the prisoners. It was immediately granted, and they all could have stayed in the country, as many of them did, unmolested. But highly colored stories got abroad and an exodus followed.

And now the American representative found himself in a most peculiar position; not only was he acting German Minister, English Minister, and soon to be Italian, for Baron de Riva followed suit with his demand and ultimatum on the 11th of the month and left the country on the 17th, but he was the representative of Holland also, owing to the absence of the Dutch Minister. He represented, too, the Government of Colombia, owing to the death of the latter's representative. And, strangely, and moreover by the force of circumstances, he found himself legal and military adviser to the Venezuelan Government! Thinking that perhaps the allies might contemplate an immediate landing, he was asked and gave his opinion as to the posting of Venezuelan forces of resistance, and found that through him the Government looked to America for help and practical consolation. No man ever occu-

pied so unique a position. Never was there such a need for the unbiased and absolutely uncolored truth to be submitted to the governing powers at home; never was a display of tact so called for.

Three great countries were getting ready to stiffen their muscles over an apparently small question that they did not understand. It would have taken very little to have started the ominous growling of irritated attention, and change it to the leap of anger. No force could land without obtaining possession of South American property, whether to be held permanently or not is beside the question, and there stood the Monroe Doctrine, with all its elasticity of construction—a bar to the indifference of the United States. With England at her side, the inference is that Germany was intentionally reckless of results. But the English bulldog fighting spirit was hardly ruffled; the blowing up of one of her vessels or the killing of some of her marines would have changed this instantly, and to Mr. Bowen thanks may be given that the opportunity for no such contingency arose. Seeing that the blockade had progressed no further than the occupancy of harbor waters and the seizure of the helpless little fleet of nondescripts, he counseled, urged, and insisted upon the withdrawal of all attempts to resist the mere floating presence of the formidable foes. Even the troops in the mountain passes were withdrawn, and, except for the idleness at shipping centers, the life and manners of the Venezuelans continued as if nothing unusual was on foot. Nothing unusual, truly, for, despite Castro's hopes and the publication of his appeals and manifestoes, the revolution pursued its course. The release of General Hernandez, the leader of the Nationalist party, from prison, had caused some little excitement that had subsided without a ripple, and the honest old war-horse, from his semi-retirement, counseled his followers to show loyalty and to hide their feelings.

Castro had made a bad blunder in exercising the Czar-like powers of a presidential dictator in sending foreign residents to prison; but the foreign residents themselves, who remained, soon began to fear that their own Governments had made a worse one. A few influential German firms attempted to persuade their Government to abandon its course of action, and, to show the extent of German interest, one firm (Blohm & Co.) has over $10,000,000 invested in the country. Many prophesied ruin of German interests. Up to this time there had been no conflict, and not a lanyard on board any of the ships whose threatening guns commanded the little mud-built towns had been pulled. But in the port of Puerto Cabello the British merchant vessel Topaze lay at the dock, and when the orders had come to arrest British and German subjects her captain and crew were taken and placed in the prison cells of the fortress. The crowd that had boarded the vessel hauled down the flag, and, uncontrolled by the police, indulged themselves in some ransacking, but they helped themselves to little of value. After the release of the prisoners on December 13, Captains Montgomerie of the Charybdis, and Riede of the German cruiser Vineta, addressed a formal complaint, the English officer insisting that the representative of the Venezuelan Government at the port should make an *amende honorable* in the way of a written apology; if not, the combined fire of both ships would be directed at the fort at five o'clock in the afternoon. While what happened threatened to be the hinge upon which affairs might take a serious turn, no one can look at the facts as they actually happened without a sense of amusement. The civil chief, Vicente Mora, read the note and put it in his pocket. Five o'clock meant any time, seeing that it was a few hours off, and any time meant mañana. So he neglected to inform the military commander, and went up into the town to a café. Time wore on and no reply came. But notice was sent to the forts through the kind offices of the American Vice-Consul, who knew that Anglo-Saxons are generally prompt when they promise, with closed fist, to hit anything, and the military commander removed the civil and military prisoners and the troops from the fortress across the little stretch of water to the town. Señor Mora was found at last and informed of the passing of time, and about ten minutes before five he prepared what might, by a stretch of friendly imagination, be termed an apology. With the American Vice-Consul and the Italian Consul the little party repaired to the

water's edge and frantically signaled to the vessels lying out in the harbor, whose guns were being carefully trained on the old mass of Spanish masonry that had taken so many long years to build. It lacked but two minutes of firing time, and their efforts to attract attention were unseen. Promptly at five the first gun was fired. And then until dark the ships divided their attention between the fort at the harbor mouth and the castello on the brow of the hill half a mile inland. Mortar flew, a few stones and bricks were tossed about, and there was a deal of powder burnt. People in the town were at first much excited, and then gathered to witness the target practice. The next day parties landed and with dynamite attempted to complete the work of destruction. They destroyed a few of the old guns which had been directed and used, in former revolutions, mostly against the town, and they smashed up things generally, but, after spending half a ton or more, they must have given up in despair, for when the writer visited the fort on the 14th of January it was far from destroyed, and a few weeks' hard work would put it in shape again, except for the fact that the secret of the old Spanish adamantine mortar is all but lost. The excitement of this day lasted in the capital for some sixty hours, and then went the way of other such outbreaks of feeling—people stopped thinking about it.

On the 18th of December the blockade was formally declared existent. La Guayra, Puerto Cabello, Carupano, Cumana, Maracaibo, and the mouths of the Orinoco were guarded. But two ports, Tucacas and Coro, were not included in the blockade. The latter was an important one in the German field of operations. It was in the hands of the revolutionists, and for weeks it remained open and vessels could enter and leave it at will! When the British Admiral arrived upon the scene, he ordered a vessel there, and the revolutionists' steady stream of supplies stopped for a time.

But how about affairs at the capital? Nothing had changed. There was for a long time no shortage of any commodity; the shoe did not pinch at first. The band played in the Plaza Bolivar on Thursday and Sunday nights, and on New Year's Day the trees and houses were decorated with flags, rows of Japanese lanterns stretched from branch to branch, and at the hour of midnight the careless, happy-go-lucky Venezuelans threw themselves into one another's arms in the national salutation, and wished one another a happy New Year, as if nothing had ever taken place, and as if nothing ever would, except music, good cheer, and rejoicing. The little half-ragged, half-gorgeous soldiers from the mountains looked on stolidly, and the dark-skinned and really efficient police force, which, odd to relate, has no political affiliation and does not figure in revolutions, patrolled the streets on the lookout for the too exuberant man with the ready revolver. As every third citizen carries one of these about him generally, and on New Year's is wont to let fly up into the air or anywhere, the police curtailed this form of enjoyment. There no doubt were some Englishmen and Germans in the crowd. Accidents happen at such times. Long before this all the influential merchants, Venezuelans (including one American and a few foreigners), to the number of two hundred or more, had united in a letter to President Castro asking that Mr. Bowen be appointed, with full power, to arrange the Anglo-German question. All of the newspapers in the city, which of course are but Government mouthpieces, took on a pro-American flavor. "America para los Americanos!" was the cry everywhere. The case as it stood was most strongly misrepresented. In a lively cartoon Minister Bowen was made to represent a bull-fighter tempting the bull, labeled "The Alliance," to charge, while Uncle Sam stood by holding and ready to let slip a huge canine that could have taken the bull in at a gulp. The traditional figure that represented America, his high hat and chin-whiskers, was everywhere regarded and hailed as "El Salvador"—they even pushed the simile to the verge of the sacrilegious.

Signs that had any reference to "Allemania" were taken down or painted out, and "America" took their place. No feeling at all seemed manifested against England, however, and German goods alone appeared to be boycotted. But slowly the shoe began to pinch a little. It was shown at first in a rise in prices. The days of flour and coal supply were

numbered. The numbers of unemployed and ill-fed people increased, and beggary grew more frequent. More and more Venezuela grew to be "the corpse that laughs."

Foreign relations were proceeding with many hitches. The news that the President of the United States had at first refused to act as arbiter was received with some surprise, and the belief that the whole proceeding would be submitted to The Hague was met with different comments. The Germans were rather pleased, for, as it had always been customary in courts of international decision to grant temporary or perpetual possession of land as guarantee for debts or treaty obligations, they argued that the United States could not well refuse to go back upon the findings of the Court in such a case, and that the Monroe Doctrine would get its final test, and that its quietus or a war would follow.

But Minister Bowen came once more to the front. It was necessary that Venezuela should have a representative who could appear out of the country, and whose utterances and assurances would have the weight of good faith and intention, and, besides, a capacity for the fulfillment of obligations. Search high or low, there was no such man! Castro was wise enough to see it. And it was so brought about that the offer was made to Mr. Bowen himself, and, as all the world knows, he accepted, with the result that the present dispute was ended, if not without hitches and some bitter feeling, at least without bloodshed. It was a strange sight—his departure. Castro was at the station with some members of his Cabinet, in their high hats and gray frock coats. An American bystander remarked that the platform had the appearance of "Haverly's coming to town."

A few of the Germans and Italians were worried that the big American Minister should leave, taking with him his calm reassuring presence, for many nervous people believed that it was his sheltering arm alone that kept them from murder or assassination. But he left behind an able lieutenant in Mr. Russell to carry on his multifarious duties, as shall be seen.

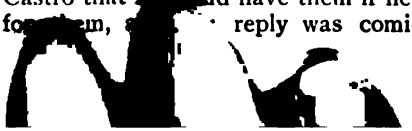
The Government itself was very hard up; the budget had not been paid, and it is very expensive being a Minister in Venezuela. Although it is not always incumbent upon any Cabinet member to pay his debts to butcher, baker, and candlestick-maker promptly, and it is absolute disloyalty on the latter's part to enforce collection, it is nice to have money to jingle in one's pocket, and, moreover, generals and troops are much influenced in their allegiance by the regularity or the infrequency of pay-day. Sometimes, when unsuccessful or unpopular, generals have been paid and allowed to hold the money for a short time in their hands, and then requested kindly to lend it to the Government back again and receive an I. O. U. But a Venezuelan private with his month's pay in his pocket is a nabob, and nabobs are supposedly contented and not anxious to exchange their position for any more precarious livelihood. They also attract imitators. It was absolutely necessary to obtain ready money to render the army more satisfied and the jingling more musical. Some of the Government people were building houses, and the money they had invested could not be turned into cash. And so the old system of a forced loan was brought into requisition. In the middle of the month of January all the merchants and enterprises in town were taxed at a rate suggested by a friend of the Government who was supposed to know just what pressure each one might bear without bursting. It was put in the form of a popular and patriotic contribution. The man who so imagines it must be graced with a sense of humor.

Venezuela is, fortunately for all concerned, on a gold basis. Owing naturally to the condition of affairs, the Bank of Caracas and the Bank of Venezuela had little or no money to put out at interest. They had wisely refused to loan the Government any more upon its paper—in fact, they did not have it—and for a few days after the refusal the Bank of Caracas and the Bank of Venezuela were in almost a precarious position. But the public belief in their solvency, backed by the wise and patient attitude of the prominent merchants, saved the day, and the credit of both institutions was sustained. The value of their bank notes never deteriorated, yet at one time they would change but small amounts into gold or silver. Many of the business houses found it impossible to meet the full amount of the exacting

forced payment. On the ground that one could not get blood out of a stone, they appealed to the powers that were imposing on them, with the result that they paid only as little as they could, and the Government squeezed out just as much as it could get. One or two big stores suspended business. Others, by means of friends at court, had the assessments materially reduced; in one case a company that was living a hand-to-mouth existence, and whose stocks were held mostly in England, offered the Government all it had in the treasury, namely $250, in place of the original amount of $4,000. With the condescending gratitude that goes with the expression, "Every little helps," the Government accepted it, but then, regretting this, decided to renew its demands or force the company, a poorly paying tramway line, to shut down. This would have thrown a large number of employees out of work and necessitated the sending out to pasture of a large number of mules and horses. No doubt they would have been acceptable to the revolutionists, or to the Government itself for that matter, which would probably have had the first opportunity to commandeer them. But, owing to the intercession of the American representative again, the little project of spite was not carried out, and the Transvia continued in operation.

What personal popularity the President had gained began to dwindle. Upon the dead walls of the city, in many cases, appeared the legends "Abajo Castro!" or "Mora Castro!" and no one took the trouble or the interest to obliterate them. When the President drove or rode abroad, followed by two or three mounted but ununiformed guards, he attracted no attention. I have seen him travel the length of a long street and no one lift his hat. Perhaps at a corner some people might gaze after him and whisper, but the head of the Government, beleaguered at the seacoast by the vessels of two great powers, and slowly being hemmed in by the advancing cordons of the revolution, created no show of sympathy or loyalty. The two regiments of Andinos—as alien to the citizens of Caracas as if they were from a foreign shore—held the city in subjection; and the departure and return of the various bodies of marching men, a third of whom were not men, but little boys of fifteen, created hardly a stir. Wan, wounded soldiers, who had kept their feet or legs, and thus managed to bring themselves back from the battle-fields, excited neither pity nor interest. The Government reports of their own successes and the movements of their opponents were garbled and distorted. Only those possessed of secret information whispered it among themselves. The publication of a little news-sheet, devoted simply to cable and telegraphic information, was suspended for disloyal utterances. For some time Caracas knew nothing of what was going on in the outside world. Slowly the pall of hopelessness and despair grew heavier and heavier.

There was no spending money. The cafés were all but deserted. The farcical attempts at bull-fights were so ill-attended that they were abandoned. In the cheap little gambling-houses men risked pennies where they had once risked pesos. The weekly lottery was forced to suspend for lack of patronage. Families of the better class who owned big houses with wide, flowery patios found themselves devoid of any support at all. Social gayety ceased. Men actually starving sat in the sun, dejected and helpless. Yet there was no great uprising, no outcry, and no unusual signs of widespread suffering or discontent. It is a Venezuelan characteristic to accept things as they come, and from long practice to make the best of them as they may exist. Out in the country the coffee plantations were in a deplorable state. The trees, laden with berries, had not been picked; owing to the depleting revolution labor was hard to get, and it was a moot question whether it would pay to gather and ship the crops or not. The pueblo lived on fruits and what the people could gather from the ground. The trains of pack animals grew fewer and fewer. Railway traffic fell away to nothing.



But the band played on Thursdays and Sundays, and the usual crowd of men in evening dress, women in silks and satins, and peons in clean duck suits, gathered in the plaza to listen. For, despite the fact that there is a popular superstition that too much bathing of the body tends to weakness and ill health, the Venezuelan attempts to keep his clothes clean and to

sent a respectable appearance. The s of washerwomen bordering the soap-regnated little streams did not appear grow less. It was the only industry t was unaffected by outside circumnces.

The outgoings and the incomings of Government forces increased in num- and varied in direction. Soon tele-onic communication with outlying towns sed, and it was known that the revo-ionists had possession of places within day's march of the capital. But the tories of Castro's generals in highflown guage appeared in the papers, and the *tus quo* of military affairs was hard to termine. Friends of the Matos party en predicted the day and exact hour at ich he would enter the capital. The fair at Maracaibo, where the fort replied opened fire upon the German cruiser, ssed by with scarcely a flutter. The tle President at Miraflores appeared utwardly undisturbed; the revolution oncerned him more, and it would have een safe to venture that had the oppos-g army arrived, they would have found im (for they fight, these little brown oldiers) with the last forlorn hope defend-ng the last barricade. His adherents say hat he and his followers have not had an pportunity to do any more than fight, hat his endeavors to keep himself and his arty in power have absorbed all his noney, time, and attention. So it may e; but the fact remains that his policy, so much as it can be called a policy, has been and is responsible to-day for much of the ruin, suffering, and death. Whether the cause of personal ambition is worth all this, or whether he would really have done differently from his predecessors if the chance had been offered him, is a mere matter of conjecture and opinion. But the whole inherited system is so rotten, its traditions and methods are so deplorable, that, looking at it from an abstract politic al standpoint, it is hopeless and impossible. Whether the change can come from the inside or not, of this unhappy land, one cannot say. Only here are all the possibilities: the wonderful climate, the rich fertile soil, the teeming forests and unfound mines, the acres of fallow land and vacant pastures, the veins of useful metals and high-grade coal, wasted waterways and almost abandoned harbors, and a people tired and weary of the everlasting burden, crying for peace and relief from internal war and bloodshed. A people kindly and courteous, honest when they have been untouched by the corrupting wand of politics, and industrious with the usual industry of the tropics, where little work produces much result and nervous energy is considered wasted time.

But to return from this digression. One day there appeared on the little blackboard that leans against the cathedral that fronts the central plaza a short sentence written in chalk. It stated simply that the blockade would be relieved at three o'clock the following day. A few people stopped and read it, and walked on; others followed suit, but no crowd gathered. With the same indifference that had characterized their previous behavior, they discussed the message that would mean so much. But the mercantile houses sighed in relief, and the heads of business projects began to think of the future. Down at La Guayra the idle stevedores stopped fishing for sardines from the pierheads, and plucked up hope. The blockading English vessels made steam and departed, and, without a note of rejoicing, the blockade was a thing of the past! The German vessels, with a disgruntled air, remained anchored in the harbor of Puerto Cabello, but the officers landed and drank beer at the German hostelry, over which their national flag was again floating, the German sailors walked the streets of the town, singly or in pairs, unmolested and almost unnoticed. The last act in the serio-tragic comedy was over. And now to the postponed epilogue!

Under the kindly offices of the traditional figure in striped trousers and the tall beaver hat, the bill-collecting allies had come to terms and withdrawn their men in charge. The demand for immediate payment of sums of money that were not obtainable had been changed to a supervision of the customs, and thirty per cent. of the receipts were to be taken in defrayment of the long-unpaid claims. The few vessels of the Venezuelan navy, renovated and put in order for the first time in years, were turned over to the Government. At least it was intimated to Castro that [illegible] have them if he sent for [illegible], and [illegible] reply was comically

pathetic. "How can I do that?" he replied; "my people cannot walk on the water." So what vessels remained unsunk were sent back to the home ports by the victors of the bloodless war, and with little ceremony the flags were changed. The allies had thrown their stick, but soon they may be dodging its return.

A merchant of prominence sought out a Cabinet Minister. He was not a Venezuelan, but a large shipper and exporter of coffee and other products of the country, cocoa, and hides. He asked if there was any possibility of an increase in the export customs, and was assured there would not be. On the strength of this he made heavy purchases and advanced money to the almost ruined plantation-owners. The German commission houses and planters prepared to gather and ship their crops, for coffee is the real commodity of exchange and the gauge of prosperity. For an instant affairs looked brighter, and then there came a quick dénouement. The Government imposed an added tax on everything that left the country! It was done so quickly that not a single shipload had left a solitary port. Thirty-two per cent., in round figures, was added to the cost of exportation. The foreign merchants, especially the Germans, were once more in despair. That very day over four thousand francs were received at the French cable office for messages canceling the orders for imports. Commission houses refused to advance more money, or to remove even those crops already gathered. Dull despair sank down on every hand.

How much of what does come in will enter through the custom-houses in charge of the Belgian supervisors, no one knows. The Spanish Main is a smugglers' paradise. The illicit entry of goods has gone on for years from Curaçoa. It is rumored that other Governments have winked at this (winking is so easy when it has once become a habit!); and, apropos, some one remarked to the writer that there would soon be a new business house in Venezuela that would not be listed on the Exchange, "Castro & Co., General Importers, Limited." Perhaps he was mistaken, or only facetious, but the question arises with potency and timeliness, Is the trouble over? Has the situation bettered much?

No, and cannot be until the great change comes, whether from inside or from out; not until the soap and water has been used, and the political pipe system flushed and cleansed, and the sluices watched for waste and honest direction of the over flow. Not till the hand of education has taken the child's hand of Venezuela and taught it to write the copy-book maxims that we know so well, and not until those maxims have been impressed upon the public mind and grown into mottoes that will govern the nation's existence. When the epilogue is finished, the world will know the end. Who will speak the last word? when will the curtain drop? What is it tending to? Nations are concerned, although the general public may have lost interest in the news quality of the matter. And let it be known and understood that there, in Venezuela, are wealth and opportunity, and that there a people cry for help.

Pilgrimage

By Arthur Chamberlain

I said unto myself, "My way is barred;
The cliff is high and grim and tempest-scarred."
Yet step by step I mounted it, till, lo,
I felt the free air on the summit blow.

I said unto myself, "My strength is small,
And I am weary and I fear to fall."
And, lo! an angel took me by the hand
And led me safely where I feared to stand.

THE FOREST[1]

BY STEWART EDWARD WHITE

Author of "The Blazed Trail," "Conjuror's House," etc.

Chapter I.—The Calling

"The Red Gods make their medicine again."

SOMETIME in February, when the snow and sleet have shut out from the wearied mind even the memory of spring, the man of the woods generally receives his first inspiration. He may catch it from some companion's chance remark, a glance at the map, a vague recollection of a dim-past conversation, or it may flash on him from the mere pronouncement of a name. The first faint thrill of discovery leaves him cool, but gradually, with the increasing enthusiasm of cogitation, the idea gains body, until finally it has grown to plan fit for discussion.

Of these many quickening potencies of inspiration, the mere name of a place seems to strike deepest at the heart of romance. Color, mystery, the vastnesses of unexplored space, are there, symbolized compactly for the aliment of imagination. It lures the fancy as a fly lures the trout. Mattágami, Peace River, Kánanaw, the House of the Touchwood Hills, Rupert's House, the Land of Little Sticks, Flying Post, Conjuror's House—how the syllables roll from the tongue, what pictures rise in instant response to their suggestion! The journey of a thousand miles seems not too great a price to pay for the sight of a place called the Hills of Silence, for acquaintance with the people who dwell there, perhaps for a glimpse of the saga-spirit that so named its environment. On the other hand, one would feel but little desire to visit Muggin's Corners, even though at their crossing one were assured of the deepest flavor of the Far North.

The first response to the red gods' summons is almost invariably the production of a fly book and the complete rearrangement of all its contents. The next is a resumption of practice with the little pistol. The third, and last, is pencil and paper, and lists of grub and duffel, and estimates of routes and expenses, and correspondence with men who spell queerly, bear down heavily with blunt pencils, and agree to be at Black Beaver Portage on a certain date. Now, though the February snow and sleet still shut him in, the spring has drawn very near. He can feel the warmth of her breath rustling through his reviving memories.

There are said to be sixty-eight roads to heaven, of which but one is the true way, although here and there a by-path offers experimental variety to the restless and bold. The true way for the man in the woods to attain the elusive best of his wilderness experience is to go as light as possible, and the by-paths of departure from that principle lead only to the slightly increased carrying possibilities of open-water canoe trips and permanent camps.

But these prove to be not very independent side paths, never diverging so far from the main road that one may dare hope to conceal from a vigilant eye that he is *not* going light.

To go light is to play the game fairly. The man in the woods matches himself against the forces of nature. In the towns he is warmed and fed and clothed so spontaneously and easily that after a time he perforce begins to doubt himself, to wonder whether his powers are not atrophied from disuse. And so, with his naked soul, he fronts the wilderness. It is a test, a measuring of strength, a proving of his essential pluck and resourcefulness and manhood, an assurance of man's highest potency, the ability to endure and to take care of himself. In just so far as he substitutes the ready-made of civilization for the wit-made of the forest, the pneumatic bed for the balsam boughs, in just so far is he relying on other men and other men's labor to take care of him. To exactly that extent is the test invali-

[1] Copyright, 1903, by the Outlook Company.

dated. He has not proved a courteous antagonist, for he has not stripped to the contest.

To go light is to play the game sensibly. For even when it is not so earnest, nor the stake so high, a certain common sense should take the place on a lower plane of the fair-play sense on the higher. A great many people find enjoyment in merely playing with nature. Through vacation they relax their minds, exercise mildly their bodies, and freshen the colors of their outlook on life. Such people like to live comfortably, work little, and enjoy existence lazily. Instead of modifying themselves to fit the life of the wilderness, they modify their city methods to fit open-air conditions. They do not need to strip to the contest, for contest there is none, and Indian packers are cheap at a dollar a day. But even so, the problem of the greatest comfort—defining comfort as an accurate balance of effort expended to results obtained—can be solved only by the one formula. And that formula is, again, *go light*, for a superabundance of paraphernalia proves always more of a care than a satisfaction. When the woods offer you a thing ready made, it is the merest foolishness to transport that same thing a hundred miles for the sake of the manufacturer's trade-mark.

I once met an outfit in the North Woods, plodding diligently across portage, laden like the camels of the desert. Three Indians swarmed back and forth a half-dozen trips apiece. An Indian can carry over two hundred pounds. That evening a half-breed and I visited their camp and examined their outfit, always with growing wonder. They had tent-poles and about fifty pounds of hardwood tent-pegs—in a wooded country where such things can be had for a clip of the ax. They had a system of ringed iron bars which could be so fitted together as to form a low open grill on which trout could be broiled—weight twenty pounds—and split wood necessary for its efficiency. They had air mattresses and camp chairs and oil lanterns. They all had corpulent duffel-bags that would stand alone, and enough changes of clothes to last out dry-skinned a week's rain. And the leader of the party wore the wrinkled brow of tribulation. For he had to keep track of everything, and see that package Number Twenty-eight was not left, and that package Number Sixteen did not get wet; that the pneumatic bed did not get punctured, and that the canned goods did. Besides which the caravan was moving at the majestic rate of about five miles a day.

Now tent-pegs can always be cut, and trout broiled beautifully by a dozen other ways, and candle lanterns fold up, and balsam can be laid in such a manner as to be as springy as a pneumatic mattress, and camp chairs—if desired—can be quickly constructed with an ax, and clothes can always be washed or dried as long as fire burns and water runs, and any one of fifty other items of laborious burden could have been ingeniously and quickly substituted by any one of the Indians. It was not that we concealed a bucolic scorn of effete but solid comfort; only it did seem ridiculous that a man should cumber himself with a fifth wheel on a smoothly macadamized road.

The next morning Billy and I went cheerfully on our way. We were carrying an ax, a gun, blankets, an extra pair of drawers and socks apiece, a little grub, and an eight-pound shelter tent. We had been out a week, and we were having a good time.

Chapter II.—The Science of Going Light

"Now the Four-Way lodge is opened—now the smokers of Council rise—
Pleasant smokes are 'twixt trail and trail they choose."

You can no more be told how to go light than you can be told how to hit a ball with a bat. It is something that must be lived through, and all advice on the subject has just about the value of an answer to a bashful young man who begged from one of our woman's periodicals help in overcoming the diffidence felt on entering a crowded room. The reply read: "Cultivate an easy, graceful manner." In like case I might hypothecate, "To go light, discard all but the really necessary articles."

The sticking point, were you to press me close, would be the definition of the

word "necessary," for the terms of such definition would have to be those solely and simply of a man's experience. Comforts, even most desirable comforts, are not necessities. A dozen times a day trifling emergencies will seem precisely to call for some little handy contrivance that would be just the thing, were it in the pack rather than at home. A disgorger does the business better than a pocket knife; a pair of oilskin trousers turns the wet better than does kersey; a camp-stove will burn merrily in a rain lively enough to drown an open fire. Yet neither disgorger, nor oilskins, nor camp-stove can be considered in the light of necessities, for the simple reason that the conditions of their use occur too infrequently to compensate for the pains of their carriage. Or, to put it the other way, a few moments' work with a knife, wet knees occasionally, or an infrequent soggy meal are not too great a price to pay for unburdened shoulders.

Nor, on the other hand, must you conclude that because a thing is a mere luxury in town, it is nothing but that in the woods. Most woodsmen own some little ridiculous item of outfit without which they could not be happy. And when a man cannot be happy lacking a thing, that thing becomes a necessity. I knew one who never stirred without borated talcum powder; another who must have his mouth-organ; a third who was miserable without a small bottle of salad dressing; I confess to a pair of light buckskin gloves. Each man must decide for himself—remembering always the endurance limit of human shoulders.

A necessity is that which, *by your own experience*, you have found you cannot do without. As a bit of practical advice, however, the following system of elimination may be recommended. When you return from a trip, turn your duffel-bag upside down on the floor. Of the contents make three piles—three piles conscientiously selected in the light of what has happened rather than what ought to have happened or what might have happened. It is difficult to do this. Preconceived notions, habits of civilization, theory for future imagination, all stand in the eye of your honesty. Pile number one should comprise those articles you have used every day; pile number two, those you have used occasionally; pile number three, those you have not used at all. If you are resolute and single-minded, you will at once discard the latter two.

Throughout the following winter you will be attacked by misgivings. To be sure, you wore the mosquito hat but once or twice, and the fourth pair of socks not at all; but then the mosquitoes might be thicker next time, and a series of rainy days and cold nights might make it desirable to have a dry pair of socks to put on at night. The past has been x, but the future might be y. One by one the discarded creep back into the list. And by the opening of next season you have made toward perfection by only the little space of a mackintosh coat and a ten-gauge gun.

But in the years to come you learn better and better the simple woods lesson of substitution, or doing without. You find that discomfort is as soon forgotten as pain; that almost anything can be endured if it is but for the time being; that absolute physical comfort is worth but a very small price in avoirdupois. Your pack shrinks.

In fact, it really never ceases shrinking. Only last summer taught me the uselessness of an extra pair of trousers. It rains in the woods; streams are to be waded; the wetness of leaves is greater than the wetness of many rivers. Logically, naturally, inevitably, such conditions point to change of garments when camp is made. We always change our clothes when we get wet in the city. So for years I carried those extra nether garments—and continued in the natural exposure to sun and wind and camp fire to dry off before change time, or to hang the damp clothes from the ridgepole for resumption in the morning. And then one day the web of that particular convention broke. We change wet trousers in the town; we do not in the woods. The extras were relegated to pile number three, and my pack, already apparently down to a minimum, lost a few pounds more.

You will want a hat, a *good* hat to turn rain, with a medium brim. If you are wise, you will get it too small for your head, and rip out the lining. The felt will cling tenaciously to your hair, so that you will find the snatches of the brush and the wind generally unavailing.

By way of undergarments wear woolen.

Buy winter weights even for midsummer. In traveling with a pack a man is going to sweat in streams, no matter what he puts on or takes off, and the thick garment will be found no more oppressive than the thin. And then in the cool of the woods or of the evening he avoids a chill. And he can plunge into the coldest water with impunity, sure that ten minutes of the air will dry him fairly well. Until you have shivered in clammy cotton, you cannot realize the importance of this point. Ten minutes of cotton underwear in cold water will chill. On the other hand, suitably clothed in wool, I have waded the ice-water of north country streams when the thermometer was so low I could see my breath in the air, without other discomfort than a cold ring around my legs to mark the surface of the water, and a slight numbness in my feet when I emerged. Therefore, even in hot weather, wear heavy wool. It is the most comfortable. Undoubtedly you will come to believe this only by experience.

Do not carry a coat. This is another preconception of civilization, exceedingly difficult to get rid of. You will never wear it while packing. In a rain you will find that it wets through so promptly as to be of little use; or, if waterproof, the inside condensation will more than equal the rain-water. In camp you will discard it because it will impede the swing of your arms. The end of that coat will be a brief half hour after supper, and a makeshift roll to serve as a pillow during the night. And for these a sweater is better in every way.

In fact, if you feel you must possess another outside garment, let it be an extra sweater. You can sleep in it, use it when your day garment is soaked, or even tie things in it as in a bag. It is not necessary, however.

One good shirt is enough. When you wash it, substitute the sweater until it dries. In fact, by keeping the sweater always in your waterproof bag, you possess a dry garment to change into. Two handkerchiefs are enough. One should be of silk, for neck, head, or—in case of cramps or intense cold—the *stomach;* the other of colored cotton for the pocket. Both can be quickly washed, and dried *en route.* Three pairs of heavy wool socks will be enough—one for wear, one for night, and one for extra. A second pair of drawers supplements the sweater when a temporary day change is desirable. Heavy kersey "driver's" trousers are the best. They are cheap, dry very quickly, and are not easily "picked out" by the brush.

The best blanket is that made by the Hudson Bay Company for its servants—a "three-point" for summer is heavy enough. The next best is our own gray army blanket. One of rubber should fold about it, and a pair of narrow buckle straps is handy to keep the bundle right and tight and waterproof. As for a tent, buy the smallest shelter you can get along with, have it made of balloon silk well waterproofed, and supplement it with a duplicate tent of light cheesecloth to suspend inside as a fly-proof defense. A seven-by-seven three-man A-tent, which would weigh between twenty and thirty pounds if made of duck, means only about eight pounds constructed of this material. And it is waterproof. I own one which I have used for three seasons. It has been employed as tarpaulin, fly, even blanket on a pinch; it has been packed through the roughest country; I have even pressed it into service as a sort of canoe lining; but it is still as good as ever. Such a tent sometimes condenses a little moisture in a cold rain, but it never "sprays" as does a duck shelter; it never leaks simply because you have accidentally touched its under surface; and, best of all, it weighs no more after a rain than before it. This latter item is perhaps its best recommendation. The confronting with equanimity of a wet day's journey in the shower-bath brush of our northern forests requires a degree of philosophy which a gratuitous ten pounds of soaked-up water sometimes most effectually breaks down. I know of but one place where such a tent can be bought. The address will be gladly sent to any one practically interested.

As for the actual implements of the trade, they are not many, although of course the sporting goods stores are full of all sorts of "handy contrivances." A small ax—one of the pocket size will do, if you get the right shape and balance, although a light regulation ax is better; a thin-bladed sheath-knife of the best steel; a pocket-knife; a compass; a waterproof match-safe; fishing-tackle; firearms, and cooking utensils, comprise the list.

All others belong to permanent camps, or open-water cruisers—not to "hikes" in the woods.

The items, with the exception of the last two, seem to explain themselves. During the summer months in the North Woods you will not need a rifle. Partridges, spruce hens, ptarmigan, rabbits, ducks, and geese are usually abundant enough to fill the provision list. For them, of course, a shotgun is the thing; but since such a weapon weighs many pounds, and its ammunition many more, I have come gradually to depend entirely on a pistol. The instrument is single shot, carries a six-inch barrel, is fitted with a special butt, and is built on the graceful lines of a 38-caliber Smith & Wesson revolver. Its cartridge is the 22 long-rifle, a target size, that carries as accurately as you can hold for upwards of a hundred yards. With it I have often killed a half-dozen of partridges from the same tree. The ammunition is light. Altogether it is a most satisfactory, convenient, and accurate weapon, and quite adequate to all small game. In fact, an Indian named Tawabinisáy, after seeing it perform, once borrowed it to kill a moose. "I shootum in eye," said he.

By way of cooking-utensils, buy aluminum. It is expensive, but so light and so easily cleaned that it is well worth all you may have to pay. If you are alone, you will not want to carry much hardware. I made a twenty-day trip once with nothing but a tin cup and a frying-pan. Dishes, pails, wash-basins, and other receptacles can always be made of birch bark and cedar withes—by one who knows how. The ideal outfit for two or three is a cup, fork, and spoon apiece, one tea-pail, two kettle-pails, and a frying-pan. The latter can be used as a bread-oven.

A few minor items, of practically no weight, suggest themselves—toilet requisites, fly-dope, needle and thread, a cathartic, pain-killer, a roll of surgeon's bandage, pipe and tobacco. But when the pack is made up, and the duffel-bag tied, you find that, while fitted for every emergency but that of catastrophe, you are prepared to "go light."

[TO BE CONTINUED]

The Coming Religious Problem

By Theodore D. Bacon

IF the question were asked, "What is the coming religious problem?" the answer from many, perhaps most, thoughtful people would be, "The new views about the Bible." And therein the thoughtful people would, I believe, be wrong, provided we take the reply in its ordinary meaning, for the simple reason that this problem has been solved already. If we mean the questions growing out of the newer attitude toward the Bible, we shall undoubtedly be right; but that is by no means the same thing; the one is a question of Biblical interpretation, the other may include every problem under the sun. It is the Biblical problem that we have in mind when the subject is mentioned, and this has been settled very much more than is generally appreciated.

There are three stages in the solution of this problem: first, the investigation; second, the winning over of the leaders; and, third, the obtaining of the general consent. The first is a long process attracting little attention, the second a shorter process attracting more attention, and the last comes with a rush and attracts a great deal of attention. Of these processes, the first is very largely finished. That is what the scholars themselves say, and they are not men to belittle their task.

The second stage of the process is also very nearly completed. We have but to look around us to see the progress it has made. As the younger generation comes forward, it is with practically unbroken ranks as regards this question. Not all go the same length, but practically all accept the general principle and many of the conclusions.

Even the last stage of the process has made greater progress than most of us imagine. For a long time these ideas have been making their way comparatively unobserved among the more intelligent members of the churches, and but little more is needed to make the change practically

universal. It is like the going out of ice from the river in spring. The sun beats down, and for a long time little change is visible. Then all at once the mass goes out with a rush. This is what we may look for almost any time, and it is time for us to look about us and ask ourselves, "What next?" Some things are sufficiently obvious.

Evidently one of the most pressing needs is the reorganization of the Sunday-school. We cannot go on teaching one point of view from the pulpit and another in the class-room.

A similar problem is to be found in the hymns of the Church. Many of those which have been supposed to be sure of their hold on popular approval for all time no longer make the same appeal to us that they did to a former generation, and the general run of hymns fail to stir us with more than a qualified emotion. There is a great opportunity here for those gifted with the poetic faculty. Hitherto the newer thought has made but little use of it. For liturgical churches it is evident that, some time or other, the same work must be done for the liturgy. The time seems distant, but it may be nearer than we think.

Another evident result of our change of thought is greater progress toward church unity. The newer thinking leaps across denominational barriers as if they were not. Those who accept it find themselves far nearer in thought to those of the same trend in other churches than to the more conservative members of their own body. Such questions as the mode of baptism or apostolic succession vanish from sight, and the only dividing lines are those of organization. Few people realize how much the theory of an infallible Bible, combined with the right of private judgment as to its interpretation, has been a cause of division among Protestants.

Still another evident need is the rewriting of our theological systems on a new basis. The old doctrines must be thoroughly tested and established so far as they hold true on rational grounds. We shall return to this question of systematic theology, but, aside from that, we must acknowledge that the problems thus far stated as the outcome of our change of thought have two characteristics: they deal almost entirely with the intellectual side of the question, and the results to be achieved are largely negative. We get broader views of Bible history and of God's dealing with mankind, and we are relieved from oppressive beliefs, but at the same time the last vestige of absolute authority is taken away, and the individual believer is left very much to his own devices. Besides, the usual means of worship are very greatly affected. Not only the hymns, but the reading of Scripture and even prayer, appeal to us at least in a different way than formerly.

To those who have fought their way through from irrational and oppressive beliefs there is a freedom in the new-found position that is full of exhilaration. We imagine that it is the content of the new that sustains us, whereas it is in reality the sense of victory over the old. Even the rankest unbelief often manifests a very great enthusiasm during the lifetime of its protagonist. But it is a very different thing for those who have been brought up in an atmosphere of unbelief. With them it is no personal triumph over past superstitions, but a matter of course, and as such it always shows itself insufficient. Somehow or other the adherents of such a movement always drift away, and they or their children find their way back into the churches. Their action may not satisfy their reason, but it follows a demand of their lives that is deeper than reason. The great religious problem before us is how to cast out the errors of an outworn creed and yet hold fast to its truths —how to avoid what the Germans call emptying the child out with the bath.

Absolute unbelief is by no means the only attitude toward religious questions that shows the reactionary tendency mentioned; every advance toward what are called more liberal views shows its reaction among those who find something unsatisfying in them. It was so at the Reformation. The Ritualist movement is a similar reaction against the Low Church evangelicalism out of which Methodism took its rise. There are many other instances, but the one that comes nearest to us is the Unitarian movement, which in so many ways resembles the development of the "new theology."

We have in Unitarianism a form of religious belief which ought, apparently, to appeal to every one by its simplicity,

its reasonableness, and its liberty. It has had for its leaders men of high intellectual, moral, and spiritual character. It has counted in its ranks many of the noblest names in our history; and yet as a popular movement it is a failure. There is a constant inflow from other denominations, but this is offset by a constant reaction, largely toward Episcopalianism, with occasional accessions to Roman Catholicism. The recruits are largely ministers, so that it is said that more than half the Unitarian ministers have come from other denominations. Naturally, those who fall away are mostly from the laity, so that the Unitarian body is to a great degree composed of leaders without followers. Its leaders, moreover, have ceased to expect a great following. They count rather on the influence of Unitarianism on other bodies. This is tantamount to a confession that there is something essential left out of their form of religion. It needs something more than they have to satisfy the human soul.

Here, then, we see the difficulty and danger writ large for us on the face of history. Where is the remedy? Evidently it cannot be in refusing to see the truth. We may sympathize with Cardinal Newman, but we cannot follow him. It must be in the endeavor to see more truth in those things that have been more or less recklessly cast aside in the search for the fundamentals, and the determination to accept nothing that does not submit to the most severe tests.

There is a very evident significance in the trend we have seen among Unitarians toward Episcopalianism and even Roman Catholicism. Two elements of attraction are discernible—liturgy and authority. Members of non-liturgical churches may be inclined to scoff at liturgy as a matter of little importance, but a glance at history and at modern conditions will show its power. The continual stream of increase from all sides into the Episcopal Church of those who care nothing for its history or its government is alone enough to show this power.

Religion is not merely a matter of the intellect, but of the whole soul. Most people do not go to church to think, but to feel, and whatever stirs their religious emotions, and at the same time gives expression to them, gives them deep satisfaction. This may not be highly intellectual, but it is not irrational, as we would sometimes like to imagine. Evidently, then, one problem of no little importance for non-liturgical churches is to recognize more fully the sensuous element in religion and to provide for its legitimate satisfaction. Many attempts have been made in this direction, but it must be acknowledged that, so far as liturgy is concerned, a great deal is so lacking in beauty or logical arrangement that it might almost as well not have been done at all.

But liturgy is by no means the only attraction to those who pass from Unitarianism to the Episcopal Church. Another element of greater importance, though perhaps less distinctly realized, is authority—and coupled with it the element of mystery.

Unitarianism eliminates these two as completely as possible. Good advice is offered in profusion, but there is no compelling authority and no great stir of the emotions to urge men to follow the advice. For a certain class of minds, especially those given to theological speculation, this may be satisfactory, but the class is a small one. The desire for some authority on which to depend is almost universal. It is also entirely legitimate within certain bounds. We recognize the need of it in children, and we are coming to recognize that men do not cease to be children because they have lived twenty-one years. Even we ourselves must, most of us, acknowledge that we do not always feel competent to settle every one of the great problems of life, and long in our weaker moments for some one to lean on. In the Episcopal Church, and of course still more in the Roman Catholic Church, the suggestion of authority is everywhere present. It is not generally obtrusive, but is everywhere implied. A mind with its spiritual longings unsatisfied, perplexed with the great problems of life and death, wearied with ineffectual efforts at a satisfactory explanation, is glad to commit their solution to a Church that will assume the responsibility, without inquiring too closely into its title-deeds.

Is it possible to maintain an authority such as so many minds crave and yet be loyal to the spirit of truth? There is no necessary incompatibility. Turn to the

physical sciences. There we have at the same time perfect freedom of inquiry and an authority that is tremendous, though not absolute. Not only by the unlearned, but by the learned, in other branches of science are the conclusions accepted on the authority of the specialist in his own department. It is generally understood that these conclusions are liable to modification, but they are so continually verified by actual experience that they are felt to be working hypotheses sufficiently accurate for practical purposes.

We have here, then, an example of authority and freedom of inquiry working together in entire harmony. Such authority may seem hardly adequate to the purpose, but a little reflection will show it to be not only equal to that offered by either Roman Catholic or Episcopal Church, but equal to the demands of the mind. Those who enter the Episcopal Church from the Unitarian rarely do so because they have made a critical study of the basis of the authority of the Church, but because they find in its practical workings that which satisfies their religious instincts, often in the face of their doctrinal beliefs. All that the general public asks is a working hypothesis which includes all the facts in the case—the facts being those of spiritual experience.

Such movements as Christian Science or Dowieism are profoundly instructive. Logically they are naught, but practically they have immense success because they bring into prominence neglected or underemphasized facts of the soul's life, and the general mind rightly cares far more for facts than for theories. A person whose whole life has been illumined by Christian Science is not likely to find much fault with its theories. But though facts are the first thing and theories must always be subordinate to them, yet theories are of immense importance in handling facts; that is the only way in which the human mind can deal with them. False or imperfect theories, like the Ptolemaic system of astronomy or the Salem witchcraft delusion, may lead us terribly astray, while more correct and nobler theories, like the theory of gravitation, or the doctrine of the universal fatherhood of God, may be of unspeakable benefit in science and religion. What we have to do is to develop a theory which shall cover all the facts in the case. Sir Arthur Conan Doyle makes one of his characters say, "When theology squares itself with life, I'll read it up." This strikes the keynote, for theology is fundamentally a part of psychology, as are music and art, ethics and sociology. The fact has been obscured hitherto by the exclusive use made of the Bible as not only the source but the final arbiter of every doctrine. Inexhaustible as a source, it fails us when applied to a purpose for which it was never intended by its writers. But we are now beginning to see more clearly, and when we have a theology based on the needs of the human heart we may feel confident that it will carry with it an authority to which men of science will listen with respect, while the man on the street will not find it lacking, since it is from his own desires and aspirations, unconscious though they be, that it has been taken.

Of course there have been numerous attempts to make theology more humane and more rational, the two purposes generally going together. The idea of rationality has generally been more evident, but the humane idea has been at least equally efficient. Of these attempts the Unitarian and Universalist movements and the present "new theology" movement are the most prominent. But the difficulty with the first two has been that, while incomparably more rational and, in the common meaning of the word, more humane, than the systems which they opposed, they have failed to include certain elements essential to the nurture of the ordinary human soul. Attractive as they are to the reason, these two forms of religious belief have proved to be like unfertilized flowers—beautiful, but incapable of developing fruit.

Wherein have these attempts at humanizing theology failed? Two points of some importance have already been pointed out, but a third of still greater influence remains to be mentioned.

When Unitarianism began, it seemed likely to carry all before it. Jefferson prophesied that in fifty years all America would be Unitarian. But its development was soon checked. For all its reasonableness, the mass of the people refused to accept it. It was, as they said, too cold. The reason for this coldness lay, not in

any theory concerning the person of Christ, but in the question over which the contest was really waged—the doctrine of total depravity. Small blame to the Unitarians for protesting against that doctrine in the horrible form in which it was then presented. But in their endeavor to make religion more humane they cast out that element in it which is most essential to human nature—the doctrine of the new life, known also as regeneration and as conversion. It is the conviction that its adherents have entered upon a new life which has been the power of religious movements in all ages. When this was discarded, the movement soon ceased to show great vitality. Some of the leading Unitarians themselves recognize this lack, and are doing what they can to remedy it.

Recent investigations have proved that regeneration is a normal event in human development. During his youth every one enters into a new life of some sort, and the question is whether this new life shall include the highest part of his nature. Nor is it to be expected, or even desired, that this great change shall be accomplished without excitement. As well might we expect that the process of falling in love should proceed without excitement. A religious life without excitement is likely to be shallow and unfruitful. A soul that has not been stirred to its depths is not likely to be of great use in the world. Of course the nature of the excitement will vary very greatly in different individuals. Great revulsions of feeling will come rather with those whose previous life has been in distinct antagonism to the new than in those in whom it has been a preparation for the new. But even in the latter there must be this deep stirring of the soul, however quiet its outward manifestation, if there is to be spiritual strength and maturity. The danger of morbid excitement is real and obvious. The danger of spiritual deadness is no less real though it may be less obvious, and at the present it is much more imminent.

It is evident from the results of the inquiries which we have mentioned that the effort of theology to square itself with human nature is not discredited by previous attempts. The difficulty with our "natural theology" hitherto has been simply that it was not natural enough. It took its human nature for granted instead of studying it scientifically.

To sum up, then, in a word the results which we have reached, the problem which we have to meet is, "How to maintain the spiritual life of the Church in view of the changed views concerning the Bible and the consequent undermining of our religious faith?" The answer to the problem I find to lie in a "new theology" founded on God's revelation of himself in human nature, of which the revelation in the Bible forms a most important part. For practical purposes the points on which we need to lay greatest emphasis at the present time are liturgy, authority, and, most of all, the reality and necessity of the new birth.

It may be that there are other elements of equal consequence with those I have named in the solution of the problem; but it will not, I think, be denied that these are of the highest importance. If there are others, we may feel confident that that same inductive method which has proved so all-powerful in every other branch of inquiry will not fail us here.

Dr. Federn's Dante[1]

DANTE died in exile at Ravenna in 1321. In 1373 Boccaccio lectured on the Inferno in St. Stephen's at Florence, and Benvenuto da Imola was making his great commentary on the Comedy, which had not yet been called "Divine." Since those days Dante has stirred the hearts and busied the pens of so many writers that the mere catalogue of them and their works fills two big volumes.

Dr. Federn, known already through his translation into German of Dante's "New Life," has now written in English, with the help of English friends, what academic and unacademic readers must know before they can fairly understand Dante. We need not pick out the flaws in this writer's style. If he habitually says "while" where he means "although;" if, again,

[1] *Dante and His Time.* By Karl Federn. McClure, Phillips & Co., New York.

he tells of "the wolf which, when howling, holds his forepaws to its mouth," Dr. Federn is making such blunders as an American or an Englishman would make in German. It would be ungracious to dwell on the few verbal errors of a German who has paid us the compliment of writing in our mother tongue a good book on inexhaustible Dante.

Of all who have essayed this theme, Lowell has written the best. His scholarship is never quibbling, is abreast of the time. His style is glowing, and he grasps his subject in a manner so masterly that whoever has read Lowell well cannot miss what is greatest in Dante. Yet, in an essay, Lowell could not tell us everything. One must read many others to understand adequately the environment in which our poet lived. Franz Xavier Kraus has lately written a work on Dante wherein scientific criticism is combined with sound æsthetics. But his book would take a month to read, and it is in German.

Dr. Federn tells less eloquently but more fully than J. A. Symonds those historical and moral facts that bear on the life and work of Dante. Through the ages of ignorance, filth, starvation, cruelty, and suicide, he brings us to the New Moral Ideal. Out of the darkness in which men are sinning they at least look forward to a distant light which they will never overtake. The tolerant beliefs of Western heathendom have yielded to the intolerance of the East. Peter Lombard, speaking for old and mediæval Christendom, tells how the joys of the blest are enhanced by the sight of the damned in their pain. Dr. Federn shows how the mediæval world thought itself to have been divinely foreshadowed in pagan antiquity; he explains how, through forgeries foisted easily into the minds of an ignorant public, the early ecclesiastical politicians established widespread belief in the Church's temporal power. If they expressed the spirit of the age, little it mattered whether such rights were "decreed" in Rome or forged in Reims.

The confusion of Italian politics, the growth of wealth and population in the towns, the degree of culture reached in the thirteenth century, are made clear. Whoever would know more about the fight for knowledge should read Dr. Andrew D. White's "History of the Warfare of Science with Theology." Dr. Federn does well briefly to analyze Brunetto Latini's "Tresor," which roughly sums up many scientific notions of Dante. Our author somewhat errs in thinking that Dante outstripped contemporary men of science. It is rather his stupendous poetic synthesis that makes him the noblest literary representative of thought in the Middle Ages. Dr. Federn speaks truth in saying, "There is but one soul in those distant days whose inmost thoughts are laid before us and may be glanced over—the soul of Dante."

Of our poet's life we learn here nothing new. Lowell hints at a strain of Germanic blood; Dr. Federn alludes to the curious fact that Aldiger (from which come Aldigherius and Alighieri) meant in Old German "Ruler of the Spear," and he refers to Shakespeare. Symonds, by the by, is quite wrong when he says that Alighieri means the "Wingbearer."

Though Dante's Beatrice has been studied more deeply by Dr. Edward Moore, Professor Norton, Gaspary, and others, Dr. Federn shrewdly sums up some striking reputations of academic folly: "Gabriele Rossetti [thinks] that Beatrice indicates the Roman Empire, while Father Gietmann proves just the contrary, that she means the Roman Church; Francesco Perez declares her to be 'Active Intelligence,' and Professor Bartoli maintains that she is simply the Ideal Woman. Many have replied to this with the ironical questions why Dante, just at the age of nine, should have encountered the Roman Empire, aged eight, in the streets of Florence, and why the Roman Empire laughed so merrily whenever it saw him, and how the Church could ever go to Church, and how it was possible that the Active Intelligence died precisely on June 9, 1290; and a hundred similar things which are not to be understood." We may agree with Dr. Federn that Dante idealized, then symbolized, a lovely Florentine whom he had worshiped in their childhood and youth.

Of Dante himself this writer speaks with some eloquence. "He had suffered all ill chance that could fall to the lot of man. He loved and had lost his beloved one; his family life was unhappy; he was

a statesman, and as such was unsuccessful; he saw his party defeated and driven from the land, and when the Emperor, from whom he had expected the redemption of Italy and his own reinstatement, entered Italy with a victorious army, he saw him die. He had been full of the noblest intentions, yet men not only gave him no thanks, but had hunted him out, had branded his name with foul crimes, and condemned him to death. He had lost his whole fortune; one of the proudest of men, he was forced continually to humble himself and to live on foreign alms; one of the greatest poets of all times, he saw himself neither understood nor honored. His whole life was devoted to his native city, he clung to it with all his heart, and he passed twenty-two years longing in vain to return to it."

To those whom "long study and great love" have guided along the hidden and often thorny paths that lead to understanding of Dante Dr. Federn says nothing new. Yet to this class of men, as well as to all who would know in a measure the greatest spirit of mediæval Christendom, his book will be both useful and entertaining. A many-sided man requires a many-sided volume.[1]

[1] The following books will also be of great value to English as well as to Italian readers of Dante: "The Divine Comedy," translated by C. E. Norton (very literal); by Longfellow (with good notes); by T. W. Parsons (only Hell and Purgatory, but one of the most adequate translations in the world's literature). The "Vita Nuova," translated by Rossetti. "The Convivio" or Banquet, by Katharine Hillard, published by Kegan Paul, Trench, Truebner & Co., London. "De Vulgari Eloquentia," or Eloquence in the Vernacular, by A. G. Howell (Kegan Paul, etc.). "De Monarchia," by F. J. Church (Macmillan). "Canzoniere," or Book of Songs, by Plutre. "Eclogues," by Wicksteed and Gardiner. Paget Toynbee's Dante Dictionary is a mine easily explored and always full of good ore.

Books of the Week

This report of current literature is supplemented by fuller reviews of such books as in the judgment of the editors are of special importance to our readers. Any of these books will be sent by the publishers of The Outlook, postpaid, to any address on receipt of the published price, with postage added when the price is marked "net."

An Uncrowned Queen: The Story of the Life of Frances E. Willard told for Young People. By Bernie Babcock. The Fleming H. Revell Co., New York. 5×7⅛ in. 270 pages. 75c., net.

Augustus Cæsar and the Organisation of the Empire of Rome. By John B. Firth, B.A. Illustrated. G. P. Putnam's Sons, New York. 5⅛×7¾ in. 371 pages. $1.35, net.

This is a biography of more than ordinary merit and value. The real character of Augustus is still an open question. If ever a great man stood in a precarious position, if any such man needs to be judged with full knowledge of the conditions surrounding him and the problems confronting him, it was the man who bridged the formidable gap between the Roman Republic and the Empire, and effected the necessary transition. Augustus is therefore not only an interesting figure to the ordinary reader of history, but for the modern politician and statesman a fascinating subject for study. Mr. Firth's analysis of the political situation and of Augustus's policy evinces insight and discrimination. Particularly illuminating are the frequent parallels he draws between those times and the present. For instance, the fact that the Crown is to-day the bond of union between the separated members of the British Empire helps us to understand how Cæsar-worship, to us so repugnant, rapidly spread through the Roman world, less as a tribute to a monarch than as a divinizing of the idea of the Empire personified in him. Mr. Firth regards Augustus as a true conservative, whose purpose was not to uproot the old, but to graft upon it the new that new conditions required. The volume has many lessons for the student of political science. It is effectively illustrated.

Beauty of Holiness (The): Meditations and Addresses Delivered Chiefly at Cuddesdon. By the Venerable C. W. Furse, M.A. E. P. Dutton & Co., New York. 5⅛×9 in. 256 pages. $2.50, net.

Archdeacon Furse was a clergyman of the type whose life is their sermon, a man, according to Bishop Gore, of rare richness, depth, and power as a spiritual teacher. This memorial volume contains selections from his addresses to candidates for Orders, and from papers written for meetings of the clergy. Their pervasive note is evangelical simplicity and warmth. Archdeacon Furse was a man of strong "High Church" convictions, and his ecclesiastical horizon was apparently bounded by the pale of the establishment; but within those limits he was a power for charity and sincerity, for breadth and depth of spiritual life.

Boy on a Farm (A): At Work and at Play. By Jacob Abbott. Edited by Clifton Johnson. Introduction by Lyman Abbott. The American Book Co., New York. 45c.

This little volume includes "Rollo at Work" and "Rollo at Play," familiar to the childhood of many readers now of middle age. Jacob Abbott, the introduction says, not only loved children but respected them, and he would have as soon defaulted on a promissory note as to break a promise to a child. It was because he was a natural and sincere friend of children that they liked his stories even when they were a little didactic. We doubt whether the present tales, designed as they were for

very young children, were ever quite as beloved as the "Beechnut" and other Franconia stories. Mr. Clifton Johnson, who furnishes some simple pictures, says of the educational effect of Jacob Abbott's stories that "they taught industry, honesty, and all the manly virtues, and they had a distinctly refining and elevating effect."

Calvert of Strathore. By Carter Goodloe. Charles Scribner's Sons, New York. 5¼×7¼ in. 377 pages. $1.50.

A very pleasantly written story of life at the American Embassy in Paris during the Revolution, Jefferson and Morris being among the most prominent characters; the hero a gallant young Southerner, and the heroine a fascinating Frenchwoman of the Old Régime. The interest of the story lies largely in the picture of life which it presents during the early days of the Revolution. It is not marked by any unusual power of invention, but it is written with excellent taste and restraint, and shows evidences of a cultivated mind.

Cinna, ou la Clemence d'Auguste. By Pierre Corneille. Edited by John E. Matzke, Ph.D. D. C. Heath & Co., Boston. 4¼×6½ in. 128 pages.

Daily Training. By E. F. Benson and Eustace H. Miles. Illustrated. E. P. Dutton & Co., New York. 5×7⅛ in. 288 pages. $1.50, net.

With commendable simplicity and reasonableness, suggestions and directions are here set down concerning such exercises and general regimen as may contribute to the acquisition or preservation of health. Rules are based on the experience and observation of both authors, one of whom is a vegetarian, the other a meat-eater; one takes regular, the other sporadic, outdoor exercise; one a hot, the other a cold, bath; one uses tobacco, the other abjures it. They claim to be in harmony on fundamentals, and their advice is doubtless the more acceptable and effective because of their differences in practice. Argument for physical culture goes deeper than the simple invigoration of the body: "There is no healthful habit of body which does not exercise healthful influence on the soul," say they.

Doukhobors (The): Their History in Russia, Their Migration to Canada. By Joseph Elkinton. Illustrated. Ferris & Leach, Philadelphia. 5¼×8 in. 336 pages. $2.

An extremely interesting book to all in sympathy with religious idealism. The first half of it is an account of the author's personal experiences among the Doukhobors of Canada, whom he visited upon a philanthropic, or rather an educational, mission. Plunging right into the heart of his subject, he convinces the reader in his first few pages that the Doukhobors have been seriously misrepresented by the sensational despatches describing their hopeless fanaticism. It is true, he says, that several hundred of them in the Yorkton district "liberated" their farm animals, and followed their leader across the plains at the approach of winter to meet the returning Christ, but these victims of religious delusion, he claims, no more represented the general mass of Doukhobors than the followers of Mr. Dowie or Mrs. Eddy represent the general mass of Christians in America. All the "liberated" farm animals in the Yorkton district were bought by other Doukhobors in this district, and in the Saskatchewan district none of the Doukhobors followed the deluded prophet. Mr. Elkinton found the Doukhobors to be of a very high type spiritually, fine in their domestic relations and in their hospitality, ready to welcome education, and, as a rule, notably prosperous in their new homes. The latter half of the volume is a sympathetic account of the early history of the Doukhobors and of their recent persecutions and exodus from Russia. The photographs with which the volume is profusely and well illustrated were mainly taken by the author during his visit to the colonies in Canada.

Elementary History of the United States: Told in Biographies. By James Baldwin. Illustrated. The American Book Co., New York. 5½×7½ in. 360 pages. 65c.

Few of Hamilton's Letters (A): Including His Description of the Great West Indian Hurricane of 1772. Edited by Gertrude Atherton. The Macmillan Co., New York. 5×7¾ in. 277 pages. $1.50.

Mrs. Atherton's selection from the great mass of Hamilton's correspondence has been guided by the purpose of bringing out the human, personal, individual man, rather than the statesman or financier. In this she has been reasonably successful. The letters about Arnold and André are particularly vivid and moving. All readers of Mrs. Atherton's "The Conqueror" will feel peculiar interest in seeing Hamilton's own account of the hurricane which forms so prominent a scene in the novel; the account, written for a newspaper, is bombastic but brilliantly descriptive. Mrs. Atherton wrote her description before she saw Hamilton's, and, terrible as her picture was, she justly says that after reading Hamilton's she thinks she "drew it mild." We commend the book to those who would like to have a first-hand view of the great American in many moods and relations.

Fishing and Shooting. By Sydney Buxton, M.P. Illustrated. E. P. Dutton & Co., New York. 6×9 in. 268 pages. $3.50, net.

A handsome volume with illustrations by Archibald Thorburn, recording the thoughts, experiences, observations, and suggestions of a sportsman who loves out-of-door life quite as much as he loves the prosecution of sport. The chapters are very pleasant reading because they are full of the atmosphere of the open fields and the streams.

From a Thatched Cottage. By Eleanor G. Hayden. Thomas Y. Crowell & Co., New York. 5×7⅛ in. 309 pages. $1.50.

A story of crime that brings its curse and love that brings its blessing. The people who figure in it are middle-class country folk in England; among them are men who visit taprooms too often, women who keep hearth-fires bright, gossips who carry idle tales, and poachers who risk their lives to catch a hare.

Grey Wig (The): Stories and Novelettes. By I. Zangwill. The Macmillan Co., New York. 5×7⅝ in. 563 pages. $1.50, net.

Some of these tales are very short; one or two run to the length of the novelette. Most

of them relate more or less directly to the social problems of womankind. Mr. Zangwill always writes cleverly, but not always does he have a story worth telling. Here he is as far as possible from dealing with the kind of subjects which made "The King of Schnorrers" and "The Children of the Ghetto" so delightful, but while one may prefer that earlier work, it is impossible not to recognize ability and versatility in some of these stories.

Greek and Roman Stoicism and Some of its Disciples: Epictetus, Seneca, and Marcus Aurelius. By Charles H. Stanley Davis, M.D., Ph.D. Herbert B. Turner & Co., Boston. 5×7¾ in. 269 pages. $1.40, net.

In spite of the impressive list of titles and offices appended to the author's name, his treatment of his subject is untechnical, not to say amateurish. He is not so much a discriminating thinker as a fair, if somewhat eclectic, reporter.

Guided and Guarded. By Joseph S. Malone. The Abbey Press, New York. 5⅛×8 in. 221 pages. $1.25.

History of American Political Theories. By C. Edward Merriam, A.M., Ph.D. The Macmillan Co., New York. 5×7½ in. 364 pages. $1.50.

A compact, interesting, illuminating account of the development of political theory in America—the growth of democratic ideas in the colonies, the enthusiasm for democratic ideals during the war for independence, the aristocratic reaction which followed, the further progress of radicalism under Jefferson and Jackson, the new reaction against these "leveling" tendencies among pro-slavery statesmen and the new enthusiasm for them among the anti-slavery leaders, and, finally, the tendencies at the present day to modify the individualistic theories and decentralizing tendencies which had hitherto been increasingly dominant in our political life. In his concluding chapter the author defends the present-day tendencies against the charge that they involve a departure from the lines of democracy, but in the main the volume is so purely historical in its spirit that the author's views on current questions could not be gathered with any assurance from his narrative.

Hand-Loom Weaving: A Manual for School and Home. By Mattie Phipps Todd. Illustrated. Rand, McNally & Co., New York. 5×7 in. 160 pages.

This little manual contains a great deal of information useful to those interested in the theme, and directions for practicing the art, with cuts illustrating its progressive steps, from mats produced in kindergartens to the afghans, hammocks, and rugs possible to higher-grade experts. The ethical value of weaving in training head, hand, and heart is insisted upon; patience, perseverance, and delicacy of hand are values accruing, it is said, from employment of simple, primitive tools which leave much for the hand to do. Mothers, as well as teachers and folks who weave for weaving's sake, might find the book helpfully suggestive.

In the Garden of Charity. By Basil King. Harper & Bros., New York. 5×7½ in. 320 pages. $1.50.

Two pure women, wronged by one man, are thrown with each other—upon each other, as it were. They must stand or fall together. One is wife by law; the other wife by a marriage she believed legal. What happens in Charity's garden, where for twenty years she has waited for William and where Hagar comes instead, is the climax of a story strongly and delicately told. There is room and to spare for a fine play of jealousy, resentment, pity, and sympathy between the women, and, on the part of the author, for reserve and breadth in the treatment of William's character. The literary ability is not marked.

Italy. Handbook for Travelers. By Karl Baedeker. Twelfth Remodeled Edition. With Maps and Plans. Charles Scribner's Sons, New York. 4¼×6¼ in. 563 pages. $2.40, net.

Lady Rose's Daughter. By Mrs. Humphry Ward. Illustrated. Harper & Bros., New York. 5×7½ in. 490 pages. $1.50.

Reserved for later notice.

Language Lessons. By J. W. Sewell. Illustrated. The American Book Co., New York. 5×7½ in. 160 pages. 35c.

Light Behind (The). By Mrs. Wilfrid Ward. John Lane, New York. 5×7¾ in. 303 pages. $1.50.

This book takes into account the spiritual cry (suppressed though it may be) of the modern society man and woman toward God; without showing bias for Roman Catholic or Protestant forms, there seems to be quiet insistence on the necessity of form for that cry's expression. Yet this is not a religious novel. It is a story of English high life, and the heroine is a beautiful, noble woman, a fine type of the great lady here and abroad, whose hands are so full of philanthropies and clever schemes for helping people along that she sometimes overlooks things of greater importance. Unmindful of the injury his character may sustain in the race for success into which she thrusts him, Lady Cheriton nearly ruins, before she knows it, the life and character of a protégé on whose advancement her heart is fixed. There is a plea for life's negative and quiet virtues, and a harking back to the "Light Behind" as the radiance which must show the soul the pathway to the light that shines ahead.

Love with Honour. By Charles Marriott. John Lane, New York. 5×7 in. 337 pages. $1.50.

This will increase the favorable impression made by Mr. Marriott's first novel, "The Column." The intellectual quality of the book is unusual; one feels that the author is seriously intent on a true analysis of character and motive. A certain vagueness of form is compensated for by the increasing interest of a singular and dramatic situation. The men and women of the story grow clearer and clearer in portrayal as the tension of this situation increases, and one lays down the volume with gratitude that at least one fiction-writer can abstain from producing "pot-boilers" and "quick sellers," to give us instead something worthy of the thoughtful consideration of readers who value proportion, natural development, and creative ability.

Man of Destiny (A): Being the Story of Abraham Lincoln. An Epic Poem. By Ernest Linwood Staples. The Lincoln Publishing Co., Shelton, Conn. 5×8⅛ in. 71 pages. Paper bound. 75c.

Marty. By John Strange Winter. The J. B. Lippincott Co., Philadelphia. 5×7½ in. 338 pages. $1.25.

The strong point of this novel lies in a certain "homey," domestic quality peculiar to other works by the same writer. The real heroine is not Marty, for whom the book is named, but her mother. In the latter is found the combination of a second-hand clothes dealer, a wise and kind mother, and the adorable mother-in-law of a fine gentleman worthy of the connection—which is saying a great deal for him. Marty makes one blunder so utterly out of keeping with herself as to cast a reflection upon the ingenuity of the author, who had to make her do it for the sake of the story. The scene is laid in London, Paris, and a French convent.

New International Encyclopædia (The). Edited by Daniel Coit Gilman, LL.D., Harry Thurston Peck, Ph.D., L.H.D., and Frank Moore Colby, M.A. Vol. VII. Dodd, Mead & Co., New York. 7×10 in. 888 pages.

New Variorum Edition of Shakespeare. Edited by Horace Howard Furness. Vol. II., **Macbeth.** Revised Edition by Horace Howard Furness, Jr. The J. B. Lippincott Co., Philadelphia. 6½×10 in. 566 pages. $4, net.

On Satan's Mount. By Dwight Tilton. C. M. Clark Publishing Co., Boston. 5×7½ in. 459 pages. $1.50.

The author's evident intention is to show through the medium of his novel that the love of power in the individual American threatens American moral life, American institutions, and the life of the Republic. The American loves money, but as a means to an end, and that end is power; lust of power distorts his character, until in one and the same man are seen the tender husband and father, the philanthropist helping churches and building palaces for children of the poor, and the monopolist who in the routine of business crushes men, women, and children to death, as a matter of course and without compunction. Through his ambition to become the world's financial dictator, Mr. Tilton's capitalist is finally caught in a net which makes him a traitor to his own country. His champion of labor, affected with the germ of the national infirmity, stands at last, dizzy, on "Satan's Mount," is President of the United States for a few days, and dictatorship is within his grasp. Wall Street and Washington are the theaters of action, and in the characters many will think they recognize composite pictures of prominent men. The story is fanciful, but not without power and not without a lesson.

Our Homes and How to Beautify Them. By H. J. Jennings. Illustrated. (Second Edition.) H. Harrison & Sons, London.

This volume is made attractive by its scores of finely printed pictures of notable pieces of furniture, tapestries, chimney-corners, fireplaces, and friezes, and by its pictorial suggestions for arrangements or treatments of different parts of the home—halls, drawing-rooms, cozy corners, dining and billiard rooms, and so on. A closer examination shows that the text abounds in sensible advice and abundant information bearing on a very large number of subjects connected with artistic and tasteful house-furnishing.

Pilgrim Alden: The Story of the Life of the First John Alden in America. Prepared under the Direction of Augustus E. Alden. Illustrated. James H. Earle & Co., Boston. 5×7½ in. 232 pages. $2.

Pontius Pilate. Saint Ronan of Brittany. Théophile. Three Plays in Verse. By Henry Copley Greene. The Scott-Thaw Co., New York. 5½×8 in. 90 pages.

School Grammar of the English Language (A). By W. M. Baskervill and J. W. Sewell. The American Book Co., New York. 5×7½ in. 216 pages. 50c.

Sophocles. Translated and Explained by John Swinnerton Phillimore, M.A. Illustrated. Longmans, Green & Co., New York. 5×7½ in. 215 pages. $2.

Star Dreamer (The). By Agnes and Egerton Castle. The F. A. Stokes Co., New York. 375 pages. $1.50.

Many readers will find this book disappointing as compared with the "Pride of Jennico." It lacks compactness and directness. One feels also that there is a sustained effort to carry on the romantic, idyllic key in which the style is pitched at the outset. Some of the characters lack reality and solidity. There is plenty of plot, turning chiefly on the efforts of the sister of the "star dreamer," Sir David, to ruin a noble and beautiful woman loved by Sir David, who has been already once betrayed and driven from the world to star-gazing by an equally villainous plot. The humor is furnished, not always very successfully, by an old lady of the Mrs. Malaprop type.

Studies in the Life of Paul: For Bible Classes and Private Use. By William H. Sallmon, M.A. (Revised Edition. Fourteenth Thousand.) The International Committee of Young Men's Christian Associations, New York. 3½×6¾ in. 130 pages. 25c.

Tar-Heel Baron (A). By Mabell Shippie Clarke Pelton. Illustrated. The J. B. Lippincott Co., Philadelphia. 5×7¾ in. 354 pages. $1.50.

As a presentation of phases of Southern life around Asheville, N. C., this book has an interest apart from the love-story it tells. The "Baron" and other leading characters gain a hold upon the reader's affection and respect. For villains there are a revenue officer and a moonshiner. Hilda, from an artistic standpoint, ought to have been kept in the background and left in Germany.

Witchery of Sleep (The). Compiled by Willard Moyer. Illustrated. Ostermoor & Co., New York. 5¾×7¾ in. 205 pages. $2.

The subject is at once poetic and practical, and is treated accordingly. "A man can go forty days without solid food; he can live seven days or longer without food or water; he can live but seven days without sleep." Diet seems, therefore, hardly so important a theme as sleep, save as it is related to "Nature's sweet restorer." Sleep in mythology, in poetry, in hygiene, how to induce it, the sort of bed and pillow one should use—dreams—these are various phases of the one theme discussed. In the series of illustrations, "The World's Sleeping Places," the history of the bed from its earliest form and use until now is pictured. A collection of famous poems and notable sayings about sleep concludes the book.

Correspondence

By Way of Remonstrance

To the Editors of The Outlook:

I want to tell the readers of The Outlook a little story of actual experience, and ask them if these things ought so to be. By a combination of evil circumstances I have been tied up here in Penang in the Straits Settlements nearly a week pending the departure of a ship for Rangoon. Yesterday I was rushing about, as one does that in the tropics, trying to extract from the English steamship agents some ideas as to sailing dates and the other things one traveling wishes to know. They all denied knowledge of the points in question. I believe an Englishman fears that he will cease to acquire merit if he answers questions. Finally I bethought myself of the American Consul. He, I thought, being an American, will know things, and will not be afraid to tell them.

After a good bit of dodging around 'rickshaws and Chinese barbers, I came across a little dingy tin sign indicating that the premises of the Consul were within. There was, however, no flag to be seen anywhere. On going up an exceedingly dirty pair of stairs, I found myself in what was apparently a Chinese market. Asking in some surprise where the Consulate was, I was directed to a man at the top of the room. I gave him "Good-morning" and presented my card, adding with a good deal of pride, "I am an American." And the reply I heard, in exceedingly Teutonic English, was, "Ah—very good; I am not an American." As he had just told me he was the Consul, I was a bit staggered. On asking him *what* he was, it developed that he was a German-Swiss who had never even been in the States. As he knew even less than the English, and could not express that so well, I left very shortly.

On the street again a very little inquiry developed the fact that the other nations of the earth have native consuls and supply them with offices and flags. And we, the richest of them all, have a German-Swiss!

Have the people of the United States no National pride? Do they not see how such things as this must appear to the residents of other countries in a place like this? An American doctor here tells me that the English do not care to meet the Americans socially. And small wonder. I should not care particularly for the society of Englishmen in some American port if their Consul, officially the first Englishman of them all, were a Mexican or a Chinese. Or is there no incongruity in talking big about protection and home industries, and having Consuls "made in Germany" without even a naturalization label on them?

EDWARD COLERIDGE ROBERTS.

Penang, Straits Settlements.

Destroying the Pines

To the Editors of The Outlook:

I have read Mr. McFarland's article in your issue of the 7th February on "The Pines" with a great deal of pleasure, and I also regret the wanton destruction of our pine-trees in our Northern as well as our Southern woods. Around the Christmas holidays I have often noticed carloads of these young trees standing in the yards of the railroad over which I travel daily to the city. I would not minimize in the least the Christmas spirit, but it does seem to me that the pleasure of a few days is not to be compared with the pleasure that is to be derived from a walk through the woods in the "living presence," as Mr. McFarland puts it, of these trees, and which can be enjoyed at all seasons of the year. Would it not be a good plan to start a crusade against this wholesale destruction of our pine-trees?

Scotch Plains, N. J. F. H.

Work Not Wanted

To the Editors of The Outlook:

Not longer ago than last Thanksgiving your paper contained a pathetic story about the experiences of a poor woman in New York in trying to support herself by labor. The story recorded only her failure. Ever since then I have been getting up my courage to say to you that we have room for a few such women (and men as well) in this town. Any woman who knows how to work can earn in t'

town a dollar and a half a day six days in the week, and if she is sharp about it, can get two of her three meals as well.

It is flatly impossible to secure anybody to come into one's house and do a day's work. And in presenting the above opportunity, I am offering the worst end of the opportunity; for it is said that one woman here, who faithfully does laundry work at her own home, has made twenty dollars a week and turns away work that is offered.

Of course it is housework and it is not in Manhattan. There are few chances to go to the theater; but the air is good, the climate full of variety, and there is a trolley.

The same way with men. If one wants a man to do work about one's place, one has to wait two or three weeks and then wish he had waited longer. The lowest compensation for such work is a dollar and a half for nine hours. Any one of us would be glad to pay a man who would *work* two dollars.

It seems to me that papers like The Outlook would do well to have some such facts as these to offer to the plaints of the city poor; for I am persuaded that conditions like this prevail in the majority of Massachusetts towns.

Middleborough, Mass. G. E. M.

The Czar's Decree

Elsewhere we comment on the imperial decree issued by the Czar last week. The following is the full text:

On ascending the throne of our ancestors by the providence of God, we made a solemn vow before the Almighty and our conscience to guard sacredly the centuries-old pillars of Russian power and to dedicate our life to the service of our beloved fatherland in indefatigable solicitude for our subjects. We chose, in order to assure the well-being of our people, the way indicated by the memorable deeds of our predecessors, especially our never-to-be-forgotten father. God pleased to interrupt the deeds of our father by his early death, and thus laid on us the sacred duty of completing the consolidation of order and truth begun by him in conformity with the exigencies of national life. The troubles agitating our country, which to our deep regret have partly been sown by designs hostile to the State and partly engendered by doctrines foreign to Russian life, hinder the general work of ameliorating the well-being of our people. These troubles confuse the public mind, remove the people from productive labor, and often ruin families dear to our heart and young energies, among high and low, necessary to the internal development of the country. In demanding the fulfillment of this our will, while remaining strongly opposed to any violation of the normal course of national life and having confidence that all will loyally discharge their local duties, we are irrevocably decided to satisfy the needs for which the State has become ripe, and have deemed it expedient to strengthen and decree the undeviating observance of the principles of tolerance laid down by the fundamental laws of the Russian Empire, which, recognizing the Orthodox Church as the ruling one, grant to all our subjects of other religions and to all foreign persuasions freedom of creed and worship in accordance with other rites; and we are further resolved to continue the active carrying out of measures for the improvement of the material position of the orthodox rural clergy, while enabling them to take a larger share in intellectual and public life.

In accordance with impending measures for the consolidation of the national economy, the efforts of the State credit institutions and especially the nobles' and peasants' banks should be directed to strengthening and developing the welfare and fundamental pillars of Russian village life, and that of the local nobility and peasantry. These principles marked out by us for the revision of the laws of the rural population are, when formulated, to be referred to the provincial government councils, so that, with the assistance of persons enjoying the public's confidence, they may be further developed and adapted to the special conditions of individual localities. In this work the fundamental principle of the inviolability of communal property is to be maintained, while at the same time means are to be found to render it easier for the individual to sever connections with the community to which he belongs, if he so desires.

Without delay, measures must be taken to release the peasants from the present burdensome liability of forced labor.

Thorough reform is to be effected in the provincial governments and district administrations by the local representatives, while attention will be devoted to securing closer co-operation between the communal authorities and parochial trustees of the orthodox churches wherever possible.

Calling upon all our subjects to co-operate in strengthening the moral foundations of the family, school, and public life, under which alone the well-being of the people and the confidence of every one in the stability of his rights can develop, we command our Ministers and chief officials concerned in this matter to submit to us their views regarding the execution of our intentions

Ralston HEALTH SHOES $4

Are different from all others

We want to hear from the man who "has trouble with his feet." The bulk of our business is with men who never got *just what they wanted* until they answered our advertisement — which is all we ask *you* to do.

It is Your Last Chance to Buy at Present Prices

You should weigh every word in this advertisement.

It means a reasonable certainty of thousands of dollars of profit by investing $510 *at the rate of $6 a month.*

The lot that we sell to-day for $510 is guaranteed by us to be worth $561 on May 1st and $637.50 on Nov. 1st; in other words, you will make 25% by buying before May 1st.

It is hardly necessary, after the many advertisements which have appeared in The Outlook, for us to go into further detail regarding our now famous proposition—

$10 SECURES A $510 LOT IN GREATER NEW YORK

WITHIN 35 MINUTES OF THESE SKYSCRAPERS—FARE 5c.

For three years we have advertised this remarkable offer and the result has been sales of nearly eight millions of dollars to 5,500 investors in New York City and throughout the country. Our work of selling Greater New York lots to non-residents is about over, and we shall now begin the sale of the local allotments to home builders. **Already the greatest activity is manifest at all of our Greater New York properties. Scores of teams and hundreds of workmen will soon be busy macadamizing streets, making granolithic walks, laying water mains, etc., and an unprecedented demand for homes is promised this year.** Hundreds of persons who purchased through the mails have been here to inspect their holdings, and 75% of those, who were in a financial position to do so, at least doubled their original purchase. Could there be a better indorsement than this?

Our final word—Don't disregard this truly great opportunity of a handsome return on a small investment. **No man or woman who can afford to save $6 a month should fail to investigate.** A postal card will bring full particulars, or, if you feel that you can have confidence in a firm that refers to 20 National Banks, the prominent Commercial Agencies, and over 30,000 customers, **send $10, with the understanding that it be returned to you if we do not fill your order satisfactorily.** An immediate inquiry will be to your advantage. Write to-day.

WOOD, HARMON & CO., Dept. D18, 257 Broadway, New York

An unusual opportunity for a limited number of energetic men of unquestioned reputation to act as our permanent representatives in their own communities. Write us for particulars, addressing "Agency Dept. D18" as above.

CORRESPONDENCE 742

The Outlook is a Weekly Newspaper and an Illustrated Monthly Magazine in one. It is published every Saturday—fifty-two issues a year. The first issue in each month is an Illustrated Magazine Number, containing about twice as many pages as the regular weekly issue, and many pictures.

Price.—The subscription price is Three Dollars a year, payable in advance. Ten cents a copy.

Postage is Prepaid by the publishers for all subscriptions in the United States, Hawaiian Islands, Philippine Islands, Guam, Porto Rico, Tutuila Samoa, Canada, and Mexico. For all other countries in the Postal Union add $1.56 for postage.

Change of Address.—When a change of address is ordered, both the new and the old address must be given. The notice should be sent one week before the change is to take effect.

Discontinuances.—If a subscriber wishes his copy of the paper discontinued at the expiration of his subscription, notice to that effect should be sent. Otherwise it is assumed that a continuance of the subscription is desired.

How to Remit.—Remittances should be sent by Draft on New York, Express-Order, or Money-Order, payable to order of THE OUTLOOK COMPANY. Cash should be sent in Registered Letter.

Letters should be addressed:

THE OUTLOOK COMPANY

287 Fourth Avenue, New York

toward the final remedy, and one absolutely necessary for the development of intelligent public control of public perils.

❀

Responsibility for Lawlessness

The remainder of the report, reviewing industrial and social conditions in the anthracite mining regions, is to the effect that these conditions—except as to the peril of life and limb in the mines—are better than the miners' champions have commonly asserted, and afford no justification to the miners who have sent their little children into the factories to increase the family earnings. The National leaders of the miners' union and a majority of its members are freed from responsibility for the violence employed against non-union men, but the Commission finds that a lawless minority, with too much sympathy from local leaders, stained the history of the strike "with a record of riot and bloodshed, culminating in three murders, unprovoked saved by the fact that two of the victims were asserting their right to work, and another, an officer of the law, was performing his duty in attempting to preserve the peace." As to the acquiescence of the orderly element, the Commission says pointedly: "The resentment expressed by many persons connected with the strike at the presence of the armed guards and the militia of the State does not argue well for the peaceable character or purposes of such persons. No peaceable or law-abiding citizen has reason to fear or resent the presence of either." The extreme forms of boycotting employed in many instances against non-union men are condemned as "cruel and cowardly," and as deserving to be punished as criminal conspiracies. These conclusions of the Commission, which also are unanimous, demonstrate the possibility of securing just judgments all along the line from a commission representing men of the most diverse employment and sympathies. In addition to its significance as the settlement of the most important labor controversy of the decade, this Commission by its action marks an important stage in the development of the industrial problem; in this respect we are inclined to think it is the most important event in the industrial history of the past quarter-century. Of this aspect we shall have something to say in a future issue of The Outlook.

The Cuban Treaty Ratified

The extra session of the Senate ended on Thursday of last week with the ratification of the amended Cuban reciprocity treaty. The final vote in favor of the ratification stood 50 to 16—or, including pairs, 65 to 24. Senator Bard, of California, was the only Republican who was recorded against the treaty. Nine Democrats supported it, while twenty-three voted or were paired in opposition. In the final debate Senator Nelson, of Minnesota—a beet-sugar State—sharply criticised the treaty and successfully demanded its amendment by a stipulation that Cuba must admit American flour and corn-meal at thirty per cent. less than her regular tariff. Senator Bacon, of Georgia, one of the Democrats who supported the treaty, obtained a similar amendment in favor of American cotton products sent to Cuba. The most important amendments to the treaty, however, were of course those previously agreed to by the Republican leaders, requiring the passage of a joint resolution by Congress before the reduced duties provided for could go into effect, and pledging that the American duty on sugar should not be further reduced while the treaty remains in force, whether by any concession to other sugar-producing countries or by a lowering of the tariff for American consumers. The first of these important amendments, having been made at the demand of the Democrats, was adopted without opposition. The second, which was made at the demand of the beet-sugar growers' convention, was opposed by all the Democratic Senators, but adopted by a strict party vote of 44 to 22. The speeches against the treaty were all made by Democrats—the Louisiana Senators taking the lead, but being supported by Teller, of Colorado, Newlands, of Nevada, Berry, of Arkansas, and Carmack, of Tennessee. The first three spoke as representatives of sugar-growing constituents, Mr. Newlands as an advocate of annexation and Statehood for Cuba, and Senators Berry and Carmack as opponents of the policy of fettering the future tariff action of Congress by the stipulations of the treaty. Senator Berry's criticism was directed particularly against the beet-sugar growers' amendment pledging that similar treaties should not be made with other sugar-growing coun-

tries, or the general tariff on sugar be reduced during the life of the treaty. This amendment is undoubtedly the weakest point in the treaty, and its adoption threatens complications with other sugar-growing powers, which may demand the treatment of the "most favored nation" granted them in our general commercial treaties. The defense of the treaty fell upon Senator Spooner, of Wisconsin, and Senator Simmons, of North Carolina. The former urged strongly the considerations of justice and generosity prompting us to help the Cuban republic, and the latter urged the reciprocal commercial advantages which Cuba concedes to us in the treaty. These include a twenty per cent. reduction in the Cuban tariff upon most imports from America, and a twenty-five, thirty, and even forty per cent. reduction upon a large variety of American manufactures and farm products. The treaty is for a term of five years, and until one year after either power signifies a desire to terminate it.

❀

Cincinnati's Fight Against Boss Rule

The conditions of misgovernment which have led to exposures and reform movements in New York, Minneapolis, and St. Louis, exist in Cincinnati also. A municipal "boss" has held sway there for years and has even attained the distinction of being bracketed by Mr. James Bryce with Mr. Croker as exercising despotic control to be paralleled only in Russia. This ruler is Mr. George B. Cox, and the extent of his power may be judged from the fact that, in declining the nomination as candidate for Mayor upon the Democratic-Citizens ticket, Judge Rufus B. Smith assigned as one reason the practical certainty that, if he were to leave his place on the bench, the ring, managed by Cox, would, through the Governor, control the appointment of a judge. Judge Smith's speech was a notably courageous and straightforward attack on ring rule in Cincinnati. He declared that, through the Council, the machine not only controls all patronage and keeps an army of employees really in its pay, but that it sells franchises to the highest bidder and puts the money into the ringsters' own pockets instead of into the treasury of the city; that it has terrorized public-service corporations into alliance by threatening rival grants; and that these corporations have "sought fancied protection in the arms of the syndicate, which plucks and plunders them at will," allowing them, as best they may, to recuperate their losses by inferior service to the public. Specifically, Judge Smith charged that the city government under the ring rule has farmed out gambling privileges to favorite officers and ward captains, has licensed prostitution, has filled every public office, from high officials down to the scavengers who sweep the streets, and has enforced upon these employees its decrees under penalty of a loss of their positions. These are only a few of the more salient charges made; all may be summed up in the declaration that "the entire administration of our public affairs has passed into the hands of a syndicate of predatory politicians." Under these circumstances it is not surprising to find that a strong and aggressive Democratic-Citizens movement is now under way. The Democratic-Citizens party has nominated for Mayor Mr. Melville E. Ingalls, a railway president of great executive ability, and a man whose public spirit has been shown by liberal contributions to many educational and art objects. The country at large will watch the progress of the fight now going on in Cincinnati with sympathy and interest. The reform movement aims at the separation of National politics from municipal government; at the improvement of street-car service, and at other much-needed public improvements; but most of all at the entire crushing of the present practice of blackmailing corporations and contractors, and at the overthrow of "boss" rule.

❀

Political Corruption in Delaware

Last week, by the close vote of 9 to 7, the Delaware State Senate voted to repeal the notorious Voters' Assistant law, the chief aid to bribe-givers in making sure that the vote-sellers carried out their bargain. So far, Governor Hunn (an admitted Addicks adherent) has not signed the bill, and it will fail to become law, as we understand it, if he does not sign it within ten days after its passage. Governor Hunn's attitude toward Addicks is shown by the fact that the Governor has appointed Addicks a member of the

Board of Directors of the Delaware State College—an appointment which has excited ridicule and protest among all intelligent people. The extraordinary spectacle was witnessed during the debate in the Senate of an outspoken defense of bribery by a representative of the people whose oath binds him to observe the laws. Senator Conner, an Addicks Republican, is reported by the press despatches as follows:

We have been accused of buying votes under the operation of this law. There have been rumors in the air of vote-buying in Delaware ever since any of us can remember, and I happen to know that Delaware is not the only State where votes are bought and money is spent at elections. The voter's assistant system again comes in and commends itself for fairness. It insures delivery of the goods. When I buy a horse, I want my horse. When a Republican buys a vote, he wants his vote. I contend that there is no politics in the matter, for when a Republican or Democrat wants to buy a vote, he has an opportunity of thus securing it instead of being cheated out of it, as has been the case so many times in this State.

We are glad to be able to contrast with this utterance the admonition of the Wilmington Methodist Conference. After calling attention to the fact that bribery and corruption are rampant in Delaware, the resolutions of the Conference conclude with these words:

We, therefore, admonish all our people that any one guilty of this shameless crime stands discredited before the Church, contemptible in the eyes of his brethren, and condemned in the sight of God.

❀

Corruption in Rhode Island

If the greatest States in the Union have developed the most corrupt political machines, the smallest States have apparently developed the greatest amount of corruption among the voters. The fact that the individual voter in the small State exerts so direct an influence upon political affairs has caused the corruptionists to seek him out, while in the great States with a highly organized and centralized political machinery it is only necessary to influence the relatively few men in control. But, whatever the reason, the fact is clear that in the smallest Eastern States—and Montana in this respect ranks with them—the distribution of corruption funds among the voters has been carried to the furthest point. Last week the New York "Evening Post" had a representative in Rhode Island who described conditions comparable with those exposed by Mr. Kennan in Delaware. A Democratic politician from the town of North Smithfield, who, according to his own statement, was in charge of the corruption fund of his party in that community from the early eighties till a few years ago, talked with freedom of the methods used. Among other things, he described a public auction of the floaters near the town hall steps. This almost incredible scene was led up to by the efforts of the floaters to get the two party managers to raise each other's bids, and finally the managers decided to end the contest by a regular auction. In this way the whole group was finally sold to the hero of this self incriminating story for $25 apiece. In another town the story was told of the two party leaders—university men—meeting together before the election and agreeing to let the one with the most money carry the town—the two managers not entering into a buying contest, but keeping the money themselves. Still more alarming was the evidence gathered regarding the supine attitude of the ministry toward the corruption. Upon this point the "Evening Post's" correspondent quotes as follows from an informant in close touch with ministers all over the State:

The taking of bribes is not looked upon as a crime by some leading church workers and men of substance in the country. For this reason the pastor, unless he wishes to terminate abruptly his career of usefulness, is bound to defer to the sentiment of the community. It is a question of bread and butter, and for the sake of their families, and to continue in their pastorate, they refrain from speaking on a question that would possibly offend the community and result in their discharge. Many of them, in preaching only the Gospel, intrench themselves behind the text from St. Paul, "This one thing I do."

One minister's wife, whose husband was elected to an important office by means of bribery, was quoted as saying: "You can't get elected unless you do spend money, and I guess the man that was elected before my husband spent it. That's the only way you can get an office down here, and I don't see why you should blame us; we haven't done any worse than anybody else." These statements, says the "Evening Post's" correspondent,

were submitted to Bishop McVickar, and he was asked if they represented correctly the attitude of the clergy toward vote-buying. His reply was that they did, and that the hands of the clergy had to be upheld "to enable them to speak out without financial ruin." A blacker situation than this is not easily pictured. It is not to be reformed by any mere change in political machinery. It demands the moral awakening of the whole State.

❀

New Hampshire Abandons Prohibition

For more than fifty years New Hampshire has had statutory prohibition, being the second State in the Union to enact such a law. During this whole half-century there has never been a time until now when the opponents of the law stood the slightest chance of repealing it. It was upheld by the dominant party and by the vast majority of the people of the State. Ten years ago, when a motion was made in the Legislature for its repeal, it was not supported by a baker's dozen. The law was enforced in those communities—and they were many—where its enforcement was backed by sufficient local influence. It was violated in others, under an illegal system of license by periodical fines. Road-houses of the vilest character were planted in the country districts without any regulation whatever. In most of the cities, particularly Manchester, Nashua, Dover, and Portsmouth, the saloon business was carried on openly. The "Healey System" of periodical fines regulated the traffic in Manchester. But former Governor Goodell petitioned for and secured from Judge Peaslee, January 1, 1902, a mandatory order that the saloons be closed. This mandamus proved to be the downfall, not only of the Healey system, but of the prohibitory law. For several weeks the saloons were actually out of business, but, under the pretext of selling soft drinks and "no per cent." beer, they gradually resumed a thriving trade. New saloons, freed from illegal regulation, sprang up where no saloons had been. The prohibitionists accused the police of conniving at all this on the I-told-you-so principle. So the last state was worse than the first, and the demand for repeal rose to irresistible proportions. A local option Legislature was elected, and a Judiciary Committee appointed, composed chiefly of men inclined to carry the reaction to its furthest possible limit. They reported a virtually straight license bill. A board of three State License Commissioners, with vast discretionary powers, was to be appointed by the Governor, to whom they were to report. For instance, licenses for hotels were to be anywhere from $25 to $1,000, in the discretion of the Commission, and though the towns were given the nominal right of local option, the License Commission was empowered to license liquor-selling at hotel bars, railroad restaurants, and club-houses, even in "no-license" towns. Furthermore, license was to be forced on all the cities at once—even those in which no saloon now exists—without the privilege of voting on the subject for nearly four years. A tremendous protest arose from every section of the State, from all the newspapers except two or three party organs, and from Roman Catholic priests and ministers of every denomination. A two-hour mass-meeting of protest was held in Legislative Hall the night before the vote on the bill. With amendments providing for immediate local option in towns and cities, removing the worst features of the hotel provision, increasing the maximum license to $1,200, and diminishing the discretionary powers of the Commission, the bill finally passed by a vote of 218 to 84, and New Hampshire passes out of the prohibitory column.

❀

Police Reform in New York City

Last week an association of beer, wine, and liquor dealers asked Mayor Low, of New York, for a hearing against the increase of license fees as proposed in the Legislature. Mayor Low, replying, stated that he could not receive any committee of this association until he was informed whether it was true or not that a fund of $3,000,000 was raised by it, as rumored, and, if so, for what purposes it was used. It is plain to be seen what relation such a fund, if it exists, is likely to bear to corrupt influence over the police whose business it is to enforce the excise laws. The dealers have expressed much indignation at the implications in the Mayor's letter; and the Chairman of the committee has declared that "whatever may be done

by individuals in this city we do not know, but this organization, as an organization, is and will continue to be absolutely opposed to the payment of blackmail." The Mayor has replied stating explicitly his reasons for believing that the association has connived at the practice of blackmail in the city. These reasons are based in part on the reluctant testimony of the vice-president of one of the association's local branches, under oath, before the court. Whatever the final outcome of the discussion on this point may be, Mayor Low, by his letters, has again called the attention of New York citizens in a concrete way to the undertaking on the part of the city administration to root out police blackmail. That the administration has not been inactive in this respect, so far as changing the personnel of the police is concerned, is demonstrated by the changes that have occurred in the Police Department since a year ago last January first. The campaign of the previous fall centered about the promise to drive out Devery, the notorious Deputy Police Commissioner, whose name stood for all the brutal and corrupt abuses of police power. To-day, out of the forty-three precincts that comprised the city of New York before consolidation, all of the former commanders have gone except four. When it is remembered that these are the precincts where corruption prevailed, the change in police administration is seen to be really revolutionary. The method by which this change has been secured has illustrated the saying, "The wicked flee when no man pursueth." Captain after captain has "retired on a pension," not through any information as to charges to be brought against him, but through simple fear that he might be the next to be struck at. Such retirement, though not so dramatically effective as removal, is more effective practically; for, being nominally voluntary, it makes reinstatement by the courts impossible. The places of such men are now filled by captains who, not having had to pay for the appointments, are relieved of the temptation to reimburse themselves by levying blackmail. The present administration has therefore done for the police of the city what it has been [illegible] it was the function of government to do for a people—it has made vice more difficult and virtue easier.

❀

An Appointment in Behalf of Public Safety

An important reform has recently been brought about by the Administration at Washington with very little disturbance. Indeed, it is probable that few of those who will most profit by it know of its occurrence. It concerns the safety of all who travel by water—whether on the great ocean liners or merely on ferryboats. This reform has been secured by the appointment by the President of Mr. George Uhler as Supervising Inspector-General of Steamboats. Not long ago a great deal of anxiety was occasioned by the failure of the steamship St. Louis to arrive at the port of New York for several days after she was due. The danger to which her passengers were subjected would have been avoided by proper inspection of her boilers. Other vessels have constantly been allowed to go to sea without adequate provision for extinguishing fires, for lowering lifeboats, and for protecting in other ways the lives of those on board. Ferryboats, on which thousands daily go to and from their work, have been allowed to remain ill fitted with life-preservers. Either through dishonesty or inefficiency, the Steamboat Inspection Service has failed in great measure to prevent the continuance of these and similar conditions which might almost any day have resulted in a shocking disaster. Without waiting for such a disaster to occur, President Roosevelt and Secretary Shaw have made a radical change in the administration of the service. Mr. Uhler, who has now become head of the bureau, is a man not only of high integrity, but of practical knowledge of his subject, executive ability, and a spirit of enthusiasm that is contagious. These traits may be illustrated by what has been told in the New York "Evening Post" of his work as President of the Marine Engineers' Association of the United States. When he held that office, which is the highest in the craft, he traveled about educating the men in their work. "He would set up his blackboard,' recounts Representative Miner, whom the "Evening Post" quotes, "and call them around him as a schoolmaster does his

pupils. He would set them to working out problems, and he made them do their own studying and thinking with everything. . . . He seemed to imbue them with his own spirit, and he put down drinking and deviltry wherever he went." This is the sort of chief the Steamboat Inspection Service supremely needs. The appointment, in which Secretary Cortelyou has a share, is a highly meritorious one, and is more important than many appointments that occasion much more discussion.

❀

Premier Combes's Victory

Last week, in the French Chamber of Deputies, M. Combes, the Prime Minister, obtained a more signal victory than any which he has yet won. By the law of 1900 it is now necessary for all associations in France, religious or otherwise, to obtain governmental authorization in order to maintain a legal existence or to exercise their functions. This measure was chiefly directed against the monastic associations, particularly those of the male teaching orders, whose schools are believed to be hotbeds of political intrigue. As is well known, the Radicals and Socialists now in power in France believe that all the Roman Catholic orders represent the negation of human liberty and the abdication of individual personality. Some orders declined to apply for authorization and withdrew from France; others, knowing that they had no chance of being authorized, also withdrew. On the other hand, a large number applied for authorization; some of these applications were granted. Definite refusals were advised, however, by the Cabinet in the cases of many of the monastic orders, and the Cabinet appealed to Parliament for confirmatory action. The appeal was referred by the Chamber of Deputies to a committee, which made a report in sympathy with the Cabinet's stand. Last week the Chamber itself voted to adopt the committee's report, and the majority vote is large enough to indicate that, notwithstanding any defection, the Cabinet commands more than sufficient strength to put in execution its policy of terminating the existence of objectionable religious teaching orders and of substituting a system of governmental schools. Of course such a triumph of drastic policy has not been obtained without much irritation and the creation of apparently needless animosities. Some of the excluded orders have performed admirably self-sacrificing eleemosynary work, and others have not the less admirably served French religious and political interests abroad, especially in the Far East. In these cases it would have seemed wise and just that the mother-houses in France should be kept open, and indeed this might possibly have happened if the vote could have been taken on each individual association separately. Such a course was naturally deprecated by the Government as involving it in great uncertainty and perhaps ultimate defeat. The tie which bound the questionable associations together was that they all depended on chiefs residing in Rome; consequently, according to the claim of Radical opponents, the members must be regarded as men without a country. The situation, both politically and religiously, is one of extreme interest. Friend and foe alike agree that no more thorough proscription has taken place since the days of the French Revolution.

❀

Taxation in Italy

In a recent number of the Toronto "Sun" Professor Goldwin Smith points out the ways in which the Italian people are ground down by taxation: "At the gate of every city there is a custom-house to take toll of the poor man's morsel of coarse bread and cup of thin wine. The tax-gatherer goes round, counting every leaf of tobacco that is grown. Salt is taxed, and the tax is so rigorously enforced that salt cannot even be taken from the sea." It is true that the burden of taxation in Italy continues to be crushing, especially in comparison with England, France, and Germany. Italy is taxed from two to five times as much as the latter countries are on petroleum, coffee, sugar, and salt. As for England, though the average wealth is three times as great as Italy's, the yearly interest-charge is not so large as in the Peninsula. Not only has taxation reached its highest point in Italy and cannot be increased, but this injustice is made tenfold more bitter because the poor realize that the rich often contrive, through

the favor of the collectors, to evade payment of their due share. Hence Socialism flourishes proportionately, having as its express object to start a revolution, overthrow the Government, set up a Commune, abolish the army and navy, and, above all, reduce the present burden of taxation. It is, then, as surprising as it is pleasant to note that Italian budgets now show a balance on the right side of the ledger. Commenting on them, Signor Maggiorino Ferraris, editor of that famous fortnightly, the "Nuova Antologia," declares, "I do not know of a country in Europe where the budget is in a healthier condition than in Italy." If Italy suffers by comparison with France and Germany in matters of taxation, in matters of national credit France and Germany now suffer by comparison. No part of Europe has been supposed to be more harassed by excessive taxation and depression of industries than has Italy; yet the Italian budgets would seem to show that she is, for the time being, really in the best condition of any European country. Deficits have been transformed into surpluses, first, by the extension of the wine industry; Italy now sells wine in vast quantities throughout the world. Again, the exportation of fruit, vegetables, and butter has been trebled during twenty years, while the export of cheese has been quintupled. More remarkable still is the industrial growth, which now requires nearly three times as much coal as it did two decades ago, in addition employing a vast amount of electrical power; in no country in the world has the development of electricity been more remarkable. Italy has long built her own locomotives, wagons, ships, and machines, and has woven her own cottons, woolens, silks; she now builds and weaves also for foreign countries. The result of all this is seen, not only in favorable budgets, but also in the fact that Italian securities are quoted at par, and the gold premium on Italian currency has vanished. It would seem as if this flourishing condition presented an opportunity for the lessening of the burden of taxation, and we are glad to learn that the State is to make a beginning in the grain and flour schedule. The natural resources of Italy are of the best; militarism and bad financing have been her curse.

English Political Parties It is asserted that since the last general elections in Great Britain the aggregate Conservative vote has declined seven per cent., while the Liberal vote has increased fifty-three per cent. The seats thus far affected are so few in number that the Tory majority in the House of Commons may continue to lose by-election contests and yet remain strongly intrenched in office. The reverses of last week, however, in supposedly safe constituencies, are none the less striking. At Woolwich, in succession to Lord Charles Beresford, the winning candidate was Mr. Crooks, a Liberal, and, what is more significant, a member of the Labor party. His majority was over three thousand; it was due principally to the fact that the constituency, which had never hitherto polled over 10,500 votes, polled more than 14,000. At Rye, in succession to Mr. Brookfield, Conservative, Mr. Hutchinson, Liberal, was chosen by a majority of over five hundred, obtaining more than two thousand more votes than he did in 1900, when he opposed Mr. Brookfield, while the Conservative vote fell off about a thousand. At North Fermanagh, Ireland, in succession to Mr. Archdale, Conservative, Mr. Mitchell, Liberal, was elected by a majority of 150. These are the first Liberal gains since that party took up a definite attitude in the army controversy. Mr. Winston Churchill seems following in his father's footsteps as the leader of a new fourth party brought into being by the present condition of criticism of military methods. The division last week in the House of Commons on the amendment to the army estimates (providing for the reduction of the army by 27,000 men) shows, as even the London "Times" admits, that the revolt against the methods of the present Cabinet is one to be seriously reckoned with. Two events will nevertheless aid the Cabinet. The reappearance in England of Mr. Joseph Chamberlain, Colonial Secretary, can be compared only with the returns to Rome of victorious generals and pro-consuls, and will probably strengthen the Cabinet materially. A far more striking addition of strength, however, is likely to come through the introduction of the promised Irish Land Bill, which, it is confidently assumed by Conservatives and

Liberals alike, will largely follow the lines laid down by the recent conference between Irish landlords and tenants, when, apparently for the first time in Irish history, agreement was reached between these two classes. If such a measure could be passed, it might easily stand as the most vital piece of British legislation in our time. It has already accomplished the seemingly impossible task of putting the Irish Nationalist party in Parliament under full restraint, and for the first time in a long period this party no longer retards the course of public business.

❀

The Death of Dean Farrar

The Very Rev. Frederic William Farrar, whose "Life of Christ," "Life and Works of St. Paul," and other religious books have had a wide reading in America as well as in England, died last Sunday. He was born in Bombay, India, in 1831. He received his bachelor's degree from the University of London, and was a Fellow of Trinity College, Cambridge. He was from 1876 to 1890 connected with Westminster Abbey, first as Canon and then as Archdeacon. The preaching of Canon Farrar will long remain in thousands of minds as one of the finest associations clustering about that great Abbey, and the Church of St. Margaret's in its shadow. At the time of his death he was Dean of Canterbury. He had a long experience as a teacher of boys, first as Assistant Master at Marlborough College, then Master at Harrow, and again in Marlborough College as Head Master. He seemed to have an instinct for discerning the peculiar temptations of boys and the ideals that they secretly cherish; and by this instinct he was enabled to preach to boys with peculiar effectiveness. Two of his earliest works, "Eric; or, Little by Little" and "St. Winifred's; or, the World of School," deal with English public-school life. His religious books attained a remarkable popularity. These, together with works on temperance, number over seventy titles. Their circulation has been very extended, and their influence has been for tolerance, breadth, and hopefulness. Indeed, the phrase, "the larger hope," to which he gave currency, well epitomizes this influence. His writing is marked by readableness, fluency, and pictorial rather than creative imagination. He was one of the earliest to present the life of Christ as a picture with its background of scenery, customs, and human life. His works on the Bible, notably "The Bible: its Meaning and Supremacy," represent it, not as a repository of infallible law, but as a record of divinely inspired life. In these as in his other books, Dean Farrar was a popularizer of the less dogmatic and traditional, the more vital and reasonable, conception of religion.

❀

Enlarging the Conception of Theological Education

During the past winter the Union Theological Seminary of New York has been carrying on a number of "courses for lay workers." These courses have been designed to increase the efficiency of Sunday-school teachers and officers, secretaries of Christian associations, and others engaged in church work outside of the ministry. Similar courses were given a year ago. Classes have been held not only at the Seminary itself, but in churches as well. Within a week the students of the Seminary have conducted a conference of college men for the consideration of the opportunities and work of the ministry. What the function of the minister is under present religious and intellectual conditions, what channels of usefulness are opened to him by those conditions, and how his work is viewed by laymen and ministers to-day, formed the subject of a number of addresses by representative men, some of whom have a National reputation. Fifty students from the most important Eastern colleges accepted the personal invitations to attend which had been sent them. The conference was markedly successful. These courses for lay workers and this conference on the work of the ministry are here reported in juxtaposition, because they are both indicative of a broad conception of the function of a theological seminary. The traditional view has been that the function of the seminary is to supply its students with a technical or quasi-technical training in certain branches of learning supposed to be suitable for a clergyman's mind. The view which is here exemplified is that the function of the seminary is to supply the Church with

men and women mentally and spiritually equipped for the work which the Church of the present has to do. The latter view includes all that is of lasting importance in the former—for a part of the work of the Church is to maintain scholarly standards in religious investigation and thinking—but it contains more besides. It includes within its range practice in practical service for men, as Union Settlement, vitally connected with the Seminary, testifies; it includes also the improvement of the work of the laity and the increase of the number of well-educated men to enter upon special training for the ministry, as these courses and this conference bear witness. The Union Seminary is doing much toward enlarging and vivifying the conception of what the aims of the theological seminary should be.

❀

The Beecher Memorial

The proposal for a memorial to Henry Ward Beecher was laid before Plymouth Church last Friday evening. In the absence of the pastor of the church, the plan was put before the church by the Chairman of the Memorial Committee, Mr. Elijah R. Kennedy, substantially as it has been already reported in these columns. The place determined upon for the Memorial is on the west side of the church building. The property on Orange Street, from which the main entrance to the church leads, has already been bought. At the meeting it was proposed that lots should be obtained so that the property would reach through to the rear of the church on Cranberry Street. In that case the Memorial would cover a ground space of fifty by two hundred feet. Mr. Kennedy declared that the hall would be as fine as anything of the kind in the world. In stating his own opinion he said he would like to see a reading-room and library, not to be a miscellaneous collection of books, but the best possible collection of works on Christian patriotism. A committee of ten was appointed to take up the matter of the fund and to provide plans so that Plymouth Church might do its part in raising funds. Mr. B. F. Blair was made the Chairman of this committee. It was announced that $42,113.46 had been pledged for the Memorial. The Treasurer of the fund informs us that over $13,000 has been paid in up to the date of our going to press. It should be added that the subscriptions received are from men of different denominations and different political faiths; the memorial is neither denominational nor political in its character.

❀

The American Tract Society

Last week the annual meeting of the American Tract Society was held in Washington. During the year publications have been issued in English, German, Italian, Bohemian, Polish, Hungarian, Spanish, and in the dialects of India and the Pacific Islands. The number of distinct publications is now nearly nine thousand, of which about two thousand are volumes. The whole number of tracts and periodicals reaches nearly eight hundred millions, and does not include the millions of tracts and volumes issued at missionary stations in foreign lands. There is no more serious question than that of supplying wholesome reading matter for the great masses of people who never enter a book-store, seldom are found in a church, and are practically outside of Christian influences. These immigrants, miners, lumbermen, fishermen, day laborers in cities, sailors, and soldiers, are, for the most part, not ill-intentioned nor illiterate. Even those who are foreign-born can generally read, and will read, if only they can find something that they can understand. Another phase of the same problem appears in the Philippines, Cuba, and Porto Rico. From each one of these comes word of a great desire for reading. Upon the quality that is furnished will depend the quality of the self-government in those islands. The question takes on another form, yet has the same substance, if we turn to what are known as mission lands. The churches of America send out a large number of missionaries, employ an army of native preachers, teachers, and other helpers, organize churches, and have already accomplished marvels in Asia, Africa, and the South Seas. The American Tract Society's colporteurs meet the immigrants as they land, and give to each in his own tongue a message of helpfulness in his new life; don the miner's costume, that they may gain fellowship with the toilers underground; seek

out the lumber camps, the fisher folk, the gangs in subways or on railroads. Its libraries cheer sailors and soldiers on ships or in camp. It publishes child's papers for the school children of the West Indies, and papers, tracts, and books for all of every language under the flag. It has recently donated a printing-press to an American mission in India, and its gifts of money and books receive heartiest thanks from laborers of every denomination in every country of the world. Keeping pace with the advance in modern methods, it has enlarged the scope of its work till it includes, not merely the tract as known a century ago, but books by noted authors, newspapers, and annotated editions of the Scriptures in twenty-one languages, while it aids the publication of a large number of others.

❀

A Spokesman for Both Church and Workingman

An appointment has recently been made in the Presbyterian Church which seems to us indicative of a wholesome change that is taking place in more than one religious body. It implies a recognition on the part of the Christian Church that the alienation from it of the great mass of wage-earners has become a distinct phase of present religious conditions, in the United States at any rate. No one is better aware of this alienation than the wage-earners themselves. Indeed, it is the fact that this is a conscious alienation that makes the relationship of wage-earners to the Church different from that of other men. It is because he was once a mechanic, an employee in a factory, that the Rev. Charles Stelzle, of St. Louis, understands what this separation between the Church and the workingman means from the point of view of each side. This fact has been one of the causes of his success as pastor of the Markham Memorial Presbyterian Church in St. Louis, in a section of the city where the inhabitants are mainly manual laborers. As the readers of The Outlook know, Mr. Stelzle has made some special study of the attitude of trade-union leaders toward the Church. By early environment and training, by the nature of his ministerial work, and by special investigation, Mr. Stelzle is, therefore, peculiarly fitted for carrying out an undertaking for which he has recently been selected by the Presbyterian Board of Home Missions. He is to make a tour of the large cities with a two-fold purpose: on the one hand, to place the claims of the Church before the workingmen; and, on the other hand, to present the claims of the workingmen before the churches. He has a well-achieved right to speak for both. Whatever the immediate outcome of Mr. Stelzle's tour may be, the very proposal of it is a sign that at least one branch of the Church is openly admitting the existence of a condition which, because it is not very creditable to the Church, has been officially either denied or ignored. This branch of the Church is aware that the condition is serious and has taken a very wise first step toward meeting it.

❀

The Liquor Interests and Home Rule

In Vermont and New Hampshire the liquor interests have been conducting a vigorous and successful campaign for the principle of local option, but in Rhode Island, in New York, and in Illinois they have been conducting a campaign equally vigorous against this very principle. Even in New Hampshire the bill which they introduced into the Legislature to substitute local option for prohibition, itself violated the local option principle. It permitted the towns to vote as to whether they will have saloons or not, but it forced the saloons upon the cities whether they wished to license them or not, and forced the towns to license liquor-selling in hotels. Last week, however, the temperance forces of New Hampshire aroused themselves and secured the amendment of the bill, before its final passage, so as to secure complete local option everywhere. In Rhode Island the disregard of the local option principle by the liquor interests has been still more gross. The residents of Block Island voted by a large majority not to license the sale of liquor in their township; but the liquor interests, with the aid of the State machine, secured a hurried special act of the Rhode Island Legislature forcing the saloon upon the people of Block Island against their protest. The temperance people of the State

are now in arms to secure the repeal of this special law, but thus far without success.

In New York the violation of the home-rule principle by the liquor interests is as flagrant as in Rhode Island. It is not, indeed, so brazen in its effrontery, but is more contemptible, because it substitutes stealth for boldness. The present New York law concedes local option only to rural communities. The people in towns and villages are permitted to decide every year whether they will license the sale of liquor in stores, bar-rooms, or saloons. It was not known that this law was in danger of attack from any quarter, when a few alert temperance people suddenly learned that the Assembly Excise Committee had decided to report favorably a bill introduced by a Mr. Yale, denying the people in any district the right to vote upon the sale of liquor by hotels. If this bill is passed, any man who pays the tax may open a so-called hotel in any community in the State and sell liquor on Sundays as well as week-days. The experience of the cities with the so-called Raines Law hotels indicates that they are even worse, as a rule, than bar-rooms without hotel accessories. If this bill is enacted into law, no community, however great the majority against license, can prevent the establishment within it of a center of degrading influences with licensed activity seven days in the week. This measure ought to enlist against it all who believe in local self-government. It ought to secure the support of those only who believe in the free and unrestricted sale of liquor regardless of the sentiments and opinions of the local community. It is not easy to think of any law which the Legislature could enact which would more directly attack the principle of home rule, to which every party in New York, if not in every American State, is absolutely committed by its platform pledges to the people. The Yale bill should call forth the indignant protest, not only of those who care for enforceable temperance laws, but of all people who believe in the principles of democracy.

In Illinois—the remaining State in which the liquor interests are conspicuously arrayed against the home-rule principle—we are glad to state that their attitude is defensive rather than offensive, for in Illinois it is the anti-saloon forces that are pursuing an aggressive campaign. They are demanding, with apparently an overwhelming popular sentiment back of them, that the State shall have a law by which the people of every community shall constitute the licensing board and shall have a right to keep saloon-free their neighborhoods, towns, and counties. The Illinois measure is of far-reaching importance, and is being pushed with vigor by the Anti-Saloon League. The success of the similar league in Ohio indicates that the Illinois movement is certain to triumph if its supporters have enlisted for the war and not merely for one campaign. The principle it would establish is one which the liquor interests must accept when it hurts them, as well as espouse when it helps them. Every community has a right to govern itself, if it does not thereby injure the State. No one can contend that the State is injured when any community closes the bar-rooms within its borders. The right of the community under our system of self-government is absolute, and by the exercise of this right a steadily increasing part of the territory of this country can be effectively freed from the impoverishing and degrading traffic of the saloon.

❀

Trades-Unionism and the Individual

One objection brought against trades-unionism is that it reduces all men to the same level; fixes a certain standard of wages for all alike, the good and the poor worker, the expert and the inexpert; and thus puts a premium on laziness and shiftlessness by denying to energy and intelligence its just reward. This, if true, is a fatal objection to trades-unionism. For under our present industrial system a number of workmen unite in making an article which is the joint product of their various forms of labor, so that the incentive furnished by pride in the product of one's labor is taken away. If, in addition, all men doing the same kind of work are required to receive the same rate of wages, irrespective of the quality of the work or the amount produced by it, then the economic incentive furnished by increased returns for increased or improved

work is taken away. The reader will recall the parable of the laborers in the vineyard, in which the lord of the vineyard gave a penny to each laborer, whether he had worked all day long or only for the last hour. If this were the regular method of paying wages practiced by the employer of the parable, it is very certain that before long the laborers would have declined the invitation to labor until the twelfth hour.

The object of life is the development of individual men and women. If trades-unionism tends to prevent such development, by treating all alike, if it fixes a maximum rate of compensation and gives this to the poorest workman and prevents the best workman from getting any more, it is radically bad. No economic advantage can compensate for discouraging endeavor, dwarfing growth, and reducing all men to the level of the poorest or even of the average. To ascertain what is the custom of trades-unions in this respect, The Outlook some time ago addressed a letter to five of the largest trades-unions in the country. It selected for this inquiry trades-unions of different types. They included miners, tailors, printers, masons, machinists, and railroad employees. In addition, The Outlook prints an interview with a trades-union representative, whose high character is attested by the positions he has occupied in this city outside his trade, as President of the Social Reform Club, and as a member of the Executive Committee of the Citizens' Union. The answers to these inquiries, addressed by letter and in person, are printed in full elsewhere in this issue. We invite our readers to give to them a careful and unprejudiced reading. We might leave them thus without note or comment, but it seems proper to add a few words as to the result of this inquiry on our own minds.

It is clear that it is not an essential characteristic of trades-unions to fix a maximum rate of wage. Not one of the trades-unions to which The Outlook has applied for information does so. We have not been able to learn, by a somewhat extended inquiry, that any trades-union ever does so or ever has done so. If any of our readers can specify any trades-union which puts any such limit on the rate of compensation which an expert workman may receive, we shall be glad to have him give us the information, provided he is able to speak with certain knowledge, not at second hand, and to specify the trades-union, so that we may ask it for an explanation and give it an opportunity to be heard in its own defense. Nor, apparently, is the freedom of individuals to make more than the standard rate of wage a mere nominal freedom. It appears from these letters to be habitually exercised. Mr. Boulton tells the rather remarkable instance of one man who receives more than double the standard rate of wages by reason of the excellence and value of his work. We judge from the letters and from Mr. Boulton's article that no trades-union interferes to prevent any member from earning the largest possible wage. It only prevents the wage for any member falling below a minimum standard.

And, apparently, only one of the trades-unions represented in this correspondence fixes a maximum output. This is the United Garment Workers of America. The General Secretary of that organization states that such a maximum output is enforced "for the purpose of preventing rush work." Other inquiries, however, lead us to believe that there are other trades-unions which fix a maximum *amount of product*, and that members are not allowed to produce more than this maximum. Two grounds are alleged in justification for this practice: first, that it prevents hurried, careless, and imperfect work; second, that it prevents employers from hiring some abnormally expert workman, and making him a standard to whom all others are unreasonably expected to conform, under penalty of a fine or a reduction of the wage. We suspect a third reason is still more effective, namely, that, as the trust sometimes reduces the output of the product in order to raise the price of the article, so the workingmen sometimes reduce the output of the product in order to raise the price of labor. Such an attempt to create an artificial price by producing artificial conditions is as just in the one case as in the other, and no more so.

The objection to the trades-unions that they tend to dwarf the development of the individual is probably not wholly unreasonable. Like other democratic developments of modern society, they may sometimes sacrifice the individual to the

supposed general advantage of the mass. But the objection is probably partly due to a general impression that organization necessarily sacrifices the individual; and this is certainly an error. As a rule, the more highly developed the organization, the more highly developed the individuals of whom it is composed. Compare the days of railroads and of stage-coaches; who can doubt that the trainmen are a more intelligent class than the hostlers, and the locomotive engineers are more intelligent than the coachmen? Compare factory days with those of individualistic labor; who can doubt that the factory hands of the twentieth century are more intelligent than Silas Marner? America is politically far more highly organized than Russia; who can doubt that the American farmer is immeasurably more highly developed than the Russian farmer? It can scarcely be doubted that, in the main, labor organizations have developed the life and character of their members. On the average, union workingmen are a higher class of laborers—more intelligent, more efficient, better workers, than those who are not in the unions; the evidence of this fact is that, as a general rule, they are better paid. That trades-unions are sometimes tyrannical, vexatious, irrational, cannot be doubted. They are sometimes indifferent if not complaisant toward violence; sometimes selfishly disregard public interests in pursuing their own; sometimes are oppressive toward their own members; sometimes are irritatingly combative; sometimes disregard their moral obligations and violate their contracts; and are often grossly unjust to members of their own trade who are not also members of their own order, much as ecclesiastics were in the Middle Ages to Christians who were not also churchmen. But that, as a whole, trades-unionism tends to prevent individual development has not been proved and cannot be assumed. That they generally fix, directly or indirectly, a maximum rate of compensation, so that an exceptionally capable and efficient workman is prevented from receiving more than the average workman, appears to be disproved by these letters. Certainly no one who takes the trouble to read these semi-official statements should reaffirm the charge that trades-unionism has the habit of fixing a maximum rate of compensation, and so leveling all workmen down to an average standard, without offering some evidence to substantiate the statement.

❀

A Wandering Scholar

Mr. Charles G. Leland, who died in Florence last week at the age of seventy-eight, belonged to a class of wandering scholars, students, and writers which has never been large in any country, and to which Americans have not furnished many illustrious members. The spirit of adventure which formerly sent men far and wide in search of new fields of action and new forms of experience still survives, especially in peoples who have English blood in their veins; and among modern Englishmen the passion for the individual career has manifested itself in many forms. General Gordon was a type of the man of adventure in military life; Laurence Oliphant an example of the wanderer who finds novel experiences at the ends of the earth; Richard Burton an exponent of a kind of cosmopolitanism which, touching many remote things, never loses the flavor of individuality; Edward Henry Palmer, the narrow-chested, consumptive boy and student, revived in the romance of his own career, both intellectual and active, the energy, curiosity, and variety of the sixteenth century; George Borrow peddled Bibles in Spain or lived on the road with the Gypsies with equal zest; and Robert Louis Stevenson was at home in the Forest of Fontainebleau, on the rivers of France, on an emigrant train crossing the continent, in the Adirondacks, or in the South Sea Islands. Men of this class cannot work in harness; they must make their own paths, hew their own way, so to speak, and, although they are often men of fortune, they are never men content with ordinary conditions. They have the thirst for knowledge, for adventure, for different kinds of life, for experience, which sends them to the farthest corners of the globe and makes them the friend and confidant of alien races.

Of this class of modern adventurers Charles G. Leland was perhaps the most conspicuous American example. There have been other Americans in recent days, among them Mr. W. J. Stillman, who have touched life in many lands and shared in

many unusual experiences with remote peoples; but Mr. Leland was a Gypsy Scholar in the most uncompromising sense of the phrase. He loved the open road which, to such a nature as his and that of Borrow, is the path of freedom and joy. He took delight in peoples who reversed in habit, tradition, and standard the race among whom he was born; it was his pleasure to get as far away from the established civilization as possible. Born in Philadelphia, in the old Dolly Madison house on Chestnut Street, his introduction to the magical art was almost contemporaneous with his birth. It is reported that, three days after he had opened his eyes in this world, he was carried by an old Dutch nurse into the garret, where he was found in his cradle, a Bible beside him, salt to secure long life, money in his hand to avert want, and burning candles about him. It is said that among the negroes in the country Mr. Leland was regarded as a supreme master of the voudou, and he possessed a black stone which had such magical properties that it brought pilgrims to him from long distances eager to make use of its supernatural qualities. This was precisely the kind of reputation that gave Mr. Leland the deepest satisfaction, and the people who would seek him for such a purpose were the people who most deeply interested him.

Although never an accurate scholar and never in any sense an exact man, Mr. Leland's store of curious knowledge of all sorts was laid on a broad foundation of a knowledge of substantial and real things. He was one of the members of that extraordinary school which Bronson Alcott kept for a time, in which the teacher punished himself instead of the offending pupil, by way of carrying out practically the principle of vicarious suffering. By Mr. Alcott he was introduced to Spenser's "Faerie Queene," which he knew intimately at a very early age, as he did many of Shakespeare's plays. At the age of ten he was writing verse, at fourteen he was reading Gower and Chaucer and the old English poets of their period with infinite delight, varying these serious studies with excursions into the field of occultism. He was even then something of an alchemist and not a little of a Rosicrucian. While he was yet a boy he was on intimate terms with the old French of Villon. When he entered Princeton, at the age of sixteen, one of the instructors at the college is reported to have said that there were probably not ten men in North America who had read more extensively than this young undergraduate. Naturally, the Transcendental movement, then in the air, found him what is called a "sensitive," and he was soon deep in Fichte, Schelling, Kant, and the German mystics of the earlier times. It is reported that he read the "Critique of Pure Reason" more than thirty times. Such a student, browsing at large over the whole field of knowledge and following his tastes rather than the lines of study marked out by the curriculum, invariably takes away a great mass of material from his college, but stands very low in his class. He declared later that he graduated lowest but one in his class; but the faculty, recognizing that this was not just, gave him the poem—the second highest honor.

He was on the Continent at a most exciting time, and had the great delight of going through the adventurous year of 1848 in the very heart of the popular movement in Europe. His room in Paris became a center of all sorts of queer bohemians. He heard the first shots fired in the revolution which made Louis Philippe a fugitive; and he had the proud satisfaction of rushing through the streets of Paris with a mob of students, a red shawl around his waist and a gigantic pistol in his hand. That moment on the historical barricade on the Faubourg St. Antoine was one of the most dramatic episodes in his life. Later he studied law, but adopted authorship as a profession, and made his entrance through the door of journalism. He was connected with a number of journals in New York and Philadelphia, and with one Boston antislavery paper. He was an indefatigably industrious and extraordinarily entertaining writer. Whenever he could, he traveled extensively through the heart of the country, studying life in its most characteristic aspects. In 1869 he returned to Europe, and for the next ten or twelve years was absorbed in the study of the Gypsies, whose language, customs, history, and character he knew by heart. He and Palmer were so thoroughly versed in

Gypsy lore of all sorts that they could deceive the Gypsies themselves. His books on "English Gypsies" and "Gypsy Sorcery" are among the most important and fascinating contributions to this very interesting subject. He was an enthusiastic student of all folk-lore, and his knowledge of Indian folk-lore was so extensive and his ability to secure the confidence of the Indian so striking that he always believed he had Indian blood in his veins. On his return to this country in 1880 he devoted a great deal of time to the introduction of industrial education into public schools, and rendered no small service in that direction, incidentally writing some excellent text-books on the crafts. He was one of the originators of the Folk-Lore Congress held at Paris in 1889. The well-known "Hans Breitmann's Ballads," written during or not long after the Civil War, secured him almost instant National popularity.

Mr. Leland was a man of striking personality, with a vivid interest in everything which was significant of life, an insatiable curiosity, a power of production which never seemed to ebb, and a remarkable faculty of being at home with all sorts of people and of enjoying all kinds of experience. In this busy country, with its immense commercial activities and strong bent toward practical life, Mr. Leland's tastes and career stand out with striking individuality.

The Panama Treaty Ratified

By far the most important event of the special session of the United States Senate, which has now terminated, was the ratification last week of the Panama Treaty, absolutely unamended, with the Republic of Colombia, for the construction of an isthmian canal. The vote for ratification was 73 to 5, those voting in the latter category being Senators Morgan, Pettus, Teller, Daniel, and Martin. Thus, in order to please these five men, the majority of United States Senators have not only been put to unnecessary trouble, but have been, as a public body, humiliated in the eyes of the whole world. The prestige of the Senate is indeed at a low ebb when it can be, so to speak, "held up" by a few men, who have also defied the practically unanimous opinion of the whole country.

It is only fourteen months since an even more overwhelming vote was taken in the other branch of Congress on an isthmian canal. On January 9, 1902, the Hepburn bill for a Nicaragua canal passed the House of Representatives by a vote of 308 to 2. At that time many papers were in the habit of treating the proposed waterway through Nicaragua as the only possible "American" canal. The campaign of education has made good progress since then.

The ratification is a distinct triumph for President Roosevelt and Secretary Hay, to be reckoned among the most notable of their careers. In pressing the treaty upon the Senate Mr. Roosevelt has shown a praiseworthy perseverance, which now has been crowned with deserved success.

It was evident that the great majority of Senators, irrespective of party, held—(1) That the correct view was that presented by Attorney-General Knox, in his report on the title which the Panama Canal Company is capable of giving to its property and franchises (that the company had come legitimately into possession of the canal concession, and hence had an undoubted right to transfer it to the United States); (2) that no necessity existed for inquiring into the credentials of Señor Herran, the Colombian representative; (3) that one country, in making a treaty with another, must recognize the *de facto* government of that country; (4) that the United States Government could not be accused of taking a position against the political party out of power in Colombia: and (5) that, as our Government had not "in effect committed itself to the concordat between the Pope and the Colombian Goverment," there could be no pretext for the interference by Colombian authorities with the religious affiliations of Americans in the canal zone. Three principal amendments, all unsuccessful, were offered by the Democratic minority. The first provided that the canal zone should be absolutely controlled by the United States. The second was a substitute for Article IV. of the treaty, which disavows any intention on the part of the United States to increase its terri-

tory at the expense of South or Central America. The substitute reiterated the doctrine of non-interference with the affairs of *all* the American Republics, with the view of reassuring Mexico on that point. As Mexico may properly be regarded as constituting a part of Central America, the substitute was defeated. Every one knows that we cherish as benevolent feelings towards Mexico as towards any other American Republic. Another amendment had to do with the necessity for the canal's permanent defense, whether it needs it or not. This was defeated, on the ground that the United States is strong enough to defend the waterway without permanent fortifications, and that, in any case, it would be unwise unnecessarily to affront Colombian susceptibilities.

The pride of the Colombians, however, will receive some shock when Senator Morgan's long and bitter denunciations reach Bogota. His speeches and Senator Cullom's brief reply were all of the debate permitted to be published *in extenso.*

When the treaty is ratified by the Colombian Congress, the world will, for the first time in history, be assured that the Atlantic and Pacific Oceans are to be united by a waterway large enough to admit ships of any existing tonnage. As the necessary counterpart to that ratification, the action of the United States Senate last week is an epoch-making one. It gives to this country a commanding position as a world-power, and it adds incalculably to the world's civilizing influences.

Lenten Meditations

The Two Lord's Prayers

And in the morning, rising up a great while before day, he went out, and departed into a solitary place, and there prayed.

Once he took three of his disciples up into the mountain with him, and they saw there, conversing with him, Moses and Elijah. By what strange spiritual sight did they recognize these unknown? Once he took them with him and bade them watch, and as they fell asleep they caught a sentence of his prayer, and as they wakened, in that strange moment midway between sleep and waking, they saw—or did they but feel?—the presence of an angel with their Master, strengthening him. The solitary place, then, was not always solitary. The communion was sometimes a communion of spirits. Each time, too, the disciples heard, or somehow knew, the answer which their Master received. His prayers were not, then, as ours too often are, mere monologues. They were true communions; an interchange of life with life; an intercommunication of earth with heaven. Once, when he entered into his closet to pray to the Father which seeth in secret, the door was left open, and the eleven heard the prayer, and John afterward recorded it. This prayer, in the seventeenth chapter of John, is the true Lord's Prayer, the real interpretation of his own spirit. It is strangely like and strangely unlike that other prayer which he gave to his disciples when they asked him for a new ritual.

That is not a distinctively Christian prayer. It belongs to all humanity. The pagan may utter it no less than the Christian. How shall we pray? With what words, in what form, by what ritual, according to what etiquette, can we, his subjects, approach acceptably the Great King? Christ's answer, applicable alike to all who feel any need of help from above, is: Come to him as children come to their father—say, "Our Father;" reverently—"Hallowed be thy name;" seeking to make his will your will, not your will his will—"Thy will be done;" for the rest, tell him simply what you want. What is it we children want? Are not our wants all comprised in these four things: Food; Forgiveness; Guidance; Strength? Ask for them; that is all.

When Christ prays, giving expression to his own deepest desires for us who are his pupils, his followers, and his friends, he comes to God in the same spirit of sonship—"Father," he says; in the same reverent desire for his Father's will, expressed less by his words than by his life, which has been one unbroken prayer that his Father's name may be hallowed—"I have glorified thee on the earth." But his petitions are not the same. He does not ask for food; he knows that the heavenly Father knoweth what things we have need of before we ask him. Nor for forgiveness; he assumes that those for

whom he is about to die, and who have received his words and are trying, however imperfectly, to take them as the law of their life, are already forgiven. He does not even pray that they should be so guided as to escape temptation: "I pray not that thou shouldest take them out of the world;" he is come into the world to meet its temptations and to conquer them, and he does not ask that his followers shall live apart from the world or flee from its temptations. He calls them to go into the world, not apart from it. "As thou hast sent me into the world, even so have I also sent them into the world."

He asks for us who are his pupils, his followers, and his friends far higher things than he bade his pupils ask in the first hour of their acquaintance with him, when he was interpreting to them, not his wishes for them, but their wishes for themselves. He asks that we may be kept in intimate fellowship with the Father, as he has been kept in intimate fellowship with the Father: "Holy Father, keep through thine own name those whom thou hast given me, that they may be one, as we are one." He prays that thus they may be kept out of companionship with the Evil One, living in an evil world yet not contaminated by it, because not in companionship with its Prince: "I pray . . . that thou shouldest keep them from the Evil One." He prays that their acceptance of the truth may purify and cleanse them and make them whole: "Sanctify them through thy truth: thy word is truth." He prays that they may share his glory because they see it, and may see his glory because they share it: "That they may be made perfect in one; . . . that they may behold my glory, which thou hast given me."

There are two Lord's Prayers: let us not confound them. The first is childhood's prayer; the prayer of a soul which has not yet learned how to pray, because it knows not what to desire. The other is Christ's own prayer; the culmination of prayer; the prayer of the Master; the prayer also of the disciple who has lived long enough with Christ to catch Christ's spirit and to wish what Christ wishes for him. He is not burdened for food—for he has learned how both to abound and how to suffer need and still to be content; nor for forgiveness—for already the song of the forgiven is singing in his heart, prelude to the new song of the redeemed in heaven; nor for escape from temptation—for the martial eagerness of the soldier is his, and his desire is to fight a good fight and come off conqueror. His prayer is that he may have fellowship with God through Jesus Christ; that he may have no fellowship with the Evil One; that he may be one with God as Christ was one with God; and that his may be the purity and health and glory that living with God and in God brings to God's children.

The Impressions of a Careless Traveler

XIII.

May 22.

WE went this morning to see a review of Italian troops in the open ground on the other side of the Tiber. In some ways Italy is more democratic than America. In New York there would have been provision at such a review for carriages, or else there would have been a stand erected on which one might, for a consideration, get seats. Not so here. Our carriage was stopped three or four blocks from the grounds where the review took place, and we had to walk the rest of the way and take our chance with the pedestrians. There was a woman who had chairs to rent, but we could see nothing if we sat down, and the chairs were valuable only because we could stand up on them and look over the heads of the people. The only carriages allowed in the place were those which brought the Court party from the Quirinal. The variety of uniforms furnished a fine color effect, and the cavalry exhibited some fine mounts; but the marching was not so good as we would have seen in the crack regiments of New York, and the cavalry line, as it galloped past us, was decidedly broken. We had a good view of the King. He sits his horse well and is a fine-looking man. My Italian companion says of him

that he hates the show which court etiquette imposes on him, and every now and again runs away from the guard which, after the assassination of his father, is supposed to be necessary to his protection.

The occasion for this review was the visit of the Shah of Persia, which also furnished an incident curiously illustrating a political condition which it would be impossible to maintain in the United States; it could not survive the satirists. Ever since the Italian Government has occupied Rome as its capital, the Pope has confined himself to the Vatican, including the park which adjoins St. Peter's, which is all that is left of the Papal domains. These he never leaves, on the theory that to do so would be to render him subject to the civil power of Italy. The Roman Catholic countries, France, Spain, Austria—I do not know about Germany—send two ambassadors to Italy, one to the Papal court, one to the Italian court. The Vatican is the palace of the one, the Quirinal of the other. The Pope will receive no guest who comes from the Quirinal, much as, in a country town, Mrs. A., after a social quarrel with Mrs. B., is "not at home" to Mrs. B. nor to any one who comes from Mrs. B.'s house. The Shah was a visitor at the Quirinal; was prepared to pay his respects to the Pope; was informed that if he desired to be received he must go from the quarters of some ambassador to the Vatican; replied that he would go from the embassy of his own country or not at all, and left Rome without calling on the Pope. The papers say that he was deluged with telegrams and letters from all over Italy thanking him for his course. So far as I can judge from inquiry, most of the Italians are in their religious affiliations, if not in their religious convictions, Roman Catholics, but only a small minority are Papists. Every Italian is compelled to choose between loyalty to the kingdom of Italy and loyalty to the Pope; and most of the men in the towns choose the former. I do not know about the women, nor about the rural populations. I am inclined to think that if I lived in Italy I should vote for the maintenance of a large standing army, because the three years' service in camp is, next to the school system, the most efficient method of developing loyalty to the Government and counteracting the influence of the clerical party, who are avowedly in favor of overthrowing the Government and restoring Rome and the former Papal States to the Papacy.

May 24.

We had a very interesting experience today. By the kindness of Dr. Kennedy, of the American Roman Catholic Theological College, and Bishop Gorman, of the United States, we were taken into the Vatican gardens. These gardens are really a park of considerable extent, and constitute, with St. Peter's and the Vatican Palace, the remnant of the Papal territory where the Pope is the supreme authority. They are laid out with great taste, with walks and lawns and flowers and fruit trees and fountains, but are, very properly, not open to the public. Indeed, I believe that admission to them is rather difficult to obtain. We happily obtained even more. For in walking about the grounds we presently came upon a house, neither large nor ornate, which we were told was the Pope's summer retreat. Here he comes sometimes to spend a night, sometimes a week, in quasi-retirement. After some little delay, we were admitted and conducted over it, rather to the surprise of Dr. Kennedy, who had not anticipated obtaining this privilege for us. We went out on to a large balcony or platform, where we had a fine view of Rome and the surrounding hills. Then we were taken rapidly through the apartments—a reception-room, its ceiling crowned with a dome representing the blue vault of the heavens, with the constellations indicated on it by gilt stars, each constellation having an appropriately sized electric light or group of lights, so that at night it furnished a sort of miniature facsimile of the heavens; the oratory, a completely furnished chapel, but not larger than a moderate-sized bedroom; the throne or audience room, with a plain armchair of that prescribed type which is used by the Pope on all official occasions, and a beautifully inlaid desk, a present to him by I forget what royal donor; and, not least interesting, his bedroom and dining-room, both in one. The dining-table was hardly larger than an ordinary dressing-table, and could not well have served as a dining-table for more than one. "Where does the Pope eat," I asked innocently enough, "when he has com-

pany?" "He never has company at table," was the reply; "he always eats alone." "Always?" I asked; "are there no official functions at which he eats with others?" "Rarely," was the reply, "and then never at the same table with any other person, always at a table by himself."

And to this the Pope is condemned by the requirements of his position. Set apart from the rest of mankind, without wife or children or anything which most of us call a home, without society, or the familiarities of equal friendship, or variety of life, or enjoyments of travel, confined by the policy of his Church—how far he is personally responsible for that policy I do not know—to one palace and its park; eating, sleeping, living, generally worshiping, in isolation—this is the price he must pay for the honor of being the head of the most influential organization in the world, and the privilege of rendering to mankind what doubtless he accounts the highest service which God permits any of his children to render to their fellow-men. It is a costly purchase; yet if I could believe as he does, I should also believe with him that it was worth the price.

May 25.

To-morrow we leave Rome, and I know nothing about the modern city. I had meant to attend a meeting of Parliament, which is in session, but I have had no time. I cannot compare the Rome of to-day with that of twenty-five years ago, except as the accounts of other travelers give a basis for the comparison. Taking that as a basis, the contrast is startling. The city is as clean as Paris or Vienna, and much cleaner than Naples, London, or New York; the health of the city, as indicated by its death-rate, is equal to that of any European city of equal size; the Pontine marshes are drained, and the Roman fever has well-nigh disappeared, though those who live on the Campagna protect themselves from the pestilential mosquitoes by gloves for their hands, wire masks for their faces, and nettings for the doors and windows of their houses—alas! no chain armor has yet been invented which is proof against the less pestilential but not less irritating fleas; the water is excellent, the water supply abundant, and the fountains are a feature of the city which I wish some man of wealth would introduce into New York City; the cab service is cheap and the cabmen obliging—the warnings I had received against extortion have not been justified by my experience. I decided on arrival that when I could not afford a franc for a cab I would walk or ride in a horse-car; and as a franc was a trifle over the legal tariff, and the cabmen on the neighboring stand soon learned my custom, I found myself hailed by three or four men at once when I came within their sight, and was always well served. The cost of living is greater than at Naples, but not great for a capital; the owners of private picture galleries open them to the public with a generosity which has no parallel in any city in America, and in them are to be found some of the very finest works of the older artists. Of modern art I have seen but little, I might say nothing save for a visit to the studio of one of our fellow-countrymen, Mr. Ezekiel, whose "Jefferson," now erected in the public square at Louisville, and whose "Dead Christ" in Paris, copies of both of which he showed us, impressed me as remarkable alike in originality of conception and sincerity of feeling.

The Italian people impress me as religious in temperament, and yet, by reason of circumstances, without a religion. Their patriotism and their piety are at war, and unhappy is the lot of any people of whom that is true. I cannot but believe that this is the fault of the Church rather than of the State. "The Italians," said a Waldensian clergyman to me, "with few exceptions, either fear God or do not believe in him." This seems to me too epigrammatic to be true, and yet to veil a truth beneath the epigram. They have lost their faith in the old forms; they have found no new forms through which to express their faith. They are no longer Romanists; they certainly are not Protestants—they cannot be; their temperament demands a richer, warmer, less intellectual, more emotional, more sensuous symbolism than Protestantism affords. They are without great leaders; for in politics Cavour, and in religion Gavazzi, have left no successor. And yet the people are moving upward and forward, though without leaders and without programme, to a higher form of life than any that Italy has ever known, even in the best days of her past. L. A.

The Efficiency of Union Labor

BY A. J. BOULTON

Mr. A. J. Boulton, former Vice-President of New York Stereotypers' Union No. 1 and member of the Executive Committee of the Citizens' Union, has for many years held a high place among energetic workers in public-spirited movements, and two years ago was elected President of the Social Reform Club—the first trades-unionist to occupy this position. The following interview with Mr. Boulton, which took place at the request of the editors of The Outlook, turned upon the questions of efficiency and discipline, which the unions are often commonly believed to overlook in their effort to wrest from employers the largest possible wage for the least possible work. The conversation began with regard to the high wages asked by the union, but soon and naturally led to the points upon which the attitude of the unions has been most sharply arraigned. The questions are printed only where necessary to introduce Mr. Boulton's answers regarding them.—THE EDITORS.

HOW do union wages in New York compare with non-union?

Among stereotypers the union scale is now $27 a week. There are non-union men in this city getting as low as $16. Hardly any of them are getting over $20. The only large non-union office in the city pays from $16 to $22.

Could you save it money and unionize it?

Yes, I think we could. By putting our men into another office we saved it twelve dollars a week.

How?

By doing the work with two men less—or really with three men less. They had nine men in the office, and paid wages running from fourteen dollars a week up to thirty dollars for the foreman. Our scale is twenty-seven dollars a week. The foreman need not necessarily get any more than the men. That is at the option of the employer. As a matter of fact, the foreman of the newspaper referred to gets thirty-five dollars for seven nights, but he need not receive more than the men are paid. Our foreman is a working foreman in an office like that. When it was a non-union office, the foreman very largely walked around.

Do union stereotypers need less oversight?

Yes. They know as much about the business as the man in charge. They have all served their apprenticeship, and they know their work.

You claim that the union has the best men in the trade?

Yes. All the best men are always anxious to get in. They know they can't get in unless they are competent. Competent men try to get into the union because wages are higher in the union than out. We test men to see if they are efficient. We give a stranger in town a permit to go to work. He cannot be admitted to the organization unless he is getting the scale. His efficiency is guaranteed by the fact that the employer is willing to pay him the scale. The employer is practically the determining factor as to whether he is efficient or not. We seek to get every competent man in. We offer a large selection to employers. We say to the employers, We have an organization of 550 members. You don't have to keep any one of our men a day longer than you want. You have all those men to pick from. If you have a non-union office, you have no men to pick from. The "——" is now the only non-union newspaper office in the city. Its foreman can neither get men nor suggestions from other offices. He is not in a position to go around and see all the improvements that have been made. If I meet the foreman of another office, and he tells me of some way to more quickly dry a mold or get out a starter, I take advantage of the information. By systematizing the work and having each man do the kind of work he can do best, the union does cheaper work. It is by this systematizing of work that New York can compete with other places.

How does your scale for stereotypers in New York compare with what is paid in smaller cities?

Our scale in New York runs from fifty

cents to one dollar a day more than in any other place in the country. It is fifty cents a day more than in Boston, and a dollar a day more than in Chicago or Philadelphia:

Are the New York union stereotypers superior to the union stereotypers in those places?

Yes; very much. For instance, we require a five years' apprenticeship. They require only four. High wages in every line of work attract the good mechanic. It is the good man who comes on from those places to New York. He feels that he is a hustler, and he says to himself, I am competent to hold a position anywhere, and it is as natural for him to seek the place where he can earn the best wages as for water to run down hill. Many of our men here have to go out of town because they are crowded out. The bosses won't pay them the money when they can get better men. Many of those who were born in New York have drifted to Philadelphia and other places, because they were not speedy enough as far as the work was concerned. Nearly all last summer most of our men in the book and job offices were getting $27 a week, though the scale was then only $24. The bosses were voluntarily paying more. There was a rivalry to get first-class men. New York publishers do the stereotyping for the big editions more cheaply than it can be done anywhere else. They make the plates here and send them all over the country. New York gets trade away from other places.

Of course you want to remember this—that a great city like New York is where the great plants are. They have superior machinery, and the machinery plays quite a part in the cheapening of production. Every new machine that can take the place of a high-priced man will find a ready sale in New York City.

What is the attitude of your union toward machinery?

Our union has always favored machinery. We have never tried to obstruct its use in any way. I think the trade-union movement is too intelligent to have any other feeling than that opposition to the employment of improved machinery would be an injury to the union. The unions which oppose it sooner or later realize that they have made a mistake.

Some unions have successfully fought off improved machinery. In the glass trust the company and the employees entered into contracts. They agreed to use certain machinery, and made a contract as to the output. The glass trust wanted the plate-glass workers to shut down in May instead of June, to limit the output. The workers agreed to this, fearing that the employers might introduce new machinery if they didn't. The advantage to the glass trust of limiting production would be so great that they would be willing to let the new machinery go. Of course the men would not be willing to concede to the glass trust's wishes unless the glass trust would give them something in return. The wages average about $4.50 a day.

I think that the general effect of the trade-union movement in this country has been an incentive to the production of improved machinery. High wages always offer an incentive to the introduction of improved machinery. In a part of the country where wages are low an employer would not have this incentive. But where he sees a lot of men working and making four dollars a day, he thinks, If I make a machine that can take the place of some of those men, it will be wanted. If they are getting only two dollars a day, it is not worth bothering about. The autoplate machine, for instance, costs $20,000, so unless it displaced a number of high-priced men it would not pay. The higher the wages the greater the incentive for improved machinery. The high-priced men are always more intelligent and better able to use high-priced machinery.

Shorter hours, too, have been an advantage to the employer. In shorter hours a man is able to keep his mind alert. The longer he works, the greater the danger of accidents. A man becomes stupid and careless and lacks energy after long hours of work.

Something that the trade-union has learned is that improved machinery does not displace the number of men that at first glance it appears to do. I can remember when, fifteen years ago, the molding-machine was introduced into the stereotyping business. It is used on newspapers and magazines for taking an impression from type. The machine does in half a minute what it would take a man

three minutes to do. It cheapened the getting out of the plates, so that the publishers used more plates. The same thing is true of the autoplate machine. If they now made only the same number of plates as before its introduction, fewer men would be employed, but as a fact they make more plates. I find very little hostility even outside of our union to improved machinery, partly from the idea that it would be foolish to oppose it, and also from the idea that to cheapen production is going to increase production.

What about the common statement that the unions fix a maximum scale of wages?

I do not know of any trade-union that imposes a maximum scale. I do not think any trade-union would be so foolish. The members do not feel that every one ought to be placed on the same level. They feel their individual worth as much as if they were not members of a union. If we had such a maximum, the best men would want to stay out. Our object is always to get the best men into the union. Sometimes we find good men who oppose the union, but when we do we try to secure them, as they strengthen the union. But the man who is not competent we want to leave outside. He is no menace to us on the outside, and if inside he does not give satisfaction. If the employer pays every one the same scale, it is his own fault. The union merely fixes the minimum scale, and we are glad to have him pay more.

One-third of the men in our union were receiving premium wages during the past year because business was brisk, but there never has been a time when a considerable number of them were not receiving premium wages. There were always some experts who received more. Map work is difficult work, and some men are much more apt at it than others. If a firm has a good deal of map work, it is anxious to get the very best men. To secure them it must offer premium wages.

The scale is never raised unless the business warrants it. It is always done through discussion and agreement. We meet the employers and talk over the matter with them. Our scale in book and job offices was raised from $4 to $4.50 last fall. The employers had increased the selling price of the plates, and we thought it no more than fair that, if the value of the product had increased, the producer was entitled to a share in the increase.

The premium men go up with the scale. Quite a number of them now are getting premium wages. For example, take ——, the foreman of a large shop which sends its molds to twelve different cities. The molds are all made in New York City, mailed to the branch offices, plates cast there, and sent out. He is at present receiving $60 a week, over twice the union scale, and there is no jealousy among the members because he gets such high wages. This foreman has the rare knack of handling men to the best advantage, and competition for his services between two large offices sent his wages up from $40 (at which he had worked for years) to $60 a week. This is an individual matter with which the union has nothing to do.

Another illustration, but this time a body of men: The proof-readers on morning newspapers, as a rule, receive premium wages. The "Herald" pays $33 a week, the "Tribune" $32, the "Journal" and "Times" $30, the "World" $29, and I don't know a single office that pays as low as the minimum scale set by the union, which is $27. And the office that has its proof-reading done best and cheapest is the one that pays the highest wages, because the best and speediest men naturally gravitate there.

How about the man who is a little slow or a little old? How does the union affect him?

The man who is getting a little old or slow has, as a rule, to get on the substitute list. We try to "work him in" three or four days a week. He gets more money for three or four days a week at our scale than he would as a non-union man for a full week's work. We try to get him in a big office, where by working a little extra the men can carry him along. The younger men will work a little more to make up for his deficiency. They always sympathize with a man who is getting along in years, and do everything they can to help him along. We usually don't call him an old man till he gets to be sixty. When I was working on the "——" there was a change to be made there, and Mr. ——, the manager, said to the foreman, "We are going to employ

another man, and I don't want one who is gray-haired or who wears glasses." The foreman hires the men, but the manager tells him the kind he wants. The manager will go and look around the office, and say to the foreman, "There are too many men with gray hair and wearing glasses. You want to get some younger men in their place." Some of the older men leave town and get places in the smaller towns, where there is not so much rush. There is always a great drive in a big city like this. Of course that rush is more intense in a newspaper than in a book or job office.

The fact that the union has the scale so high keeps the employers from employing these old men. There is no question about that. A few years ago I was vice-president of the organization, and wanted to unionize the "—— ——" in Brooklyn. I went to see the owner, and explained to him that the composing-room was union, and for a trifling expense he could make the stereotyping-office union. There were two men there. One was being paid our scale, the other not so much. I said that by paying five dollars a week extra he could make it a union office. He said, "Now, Boulton, —— there has worked for me fifteen years. He is a good, faithful man, and I could not see him go out of town." I said, "We do not propose to have him go out of town. We propose to take him into the organization. We can't take him in according to our rules while he is being paid less." The owner said, "I realize that I shall have to unionize my office if you insist on it. But if you do, I am not going to pay the scale to a man who is blind in one eye and has no energy. If I am going to pay the scale I want a strapping young fellow in here." He lost his interest in his old workman at once.

Have you not some rules by which you limit the work a man shall do?

No; we have no such rules at all. It is because we have not that the employer pays premium wages. The employer or the foreman, as the case might be, finds out that a man turns out good work and a great deal of it. Then they say, "If we don't give him more money, some other firm will find out about him and he will be offered more somewhere else." When a man is speedy and does good work at the same time, even the boys get to talking about it.

But aren't there in some trades rules against speeding?

Carpenters don't object to being speeded, but they do object to the employer selecting a young, vigorous fellow and quietly saying to him, "If you hustle to the best of your ability, I will give you a quarter of a dollar or half a dollar a day more; but don't say anything about it." He understands that he is given that money to set a pace for the rest of the men. That thing is worked so underhandedly that even when the men stand in line to get their pay in envelopes, the speeder gets only the same pay as the rest on the outside of the envelope. The employer goes around and points to his work, and expects the same of the others. When the men find that some man is rushing, they know very well that he is the driver, and he is cutting out a pace.

Yet the carpenter organization does not pretend to discipline those fellows. It doesn't fine them, but there is a feeling among the men against them. The organization always feels that by turning out a large product it makes a better claim for high wages But when a big strong fellow and fast workman sets a pace that it is impossible for the rest to follow, that is not fair. They are all willing to do a good hard day's work. My brother, who is a builder, said he never saw a time when union men were unwilling to do a good day's work. The men who loafed on him were always found to be the non-union men.

When my uncle went into partnership with him in the construction business over ten years ago, they took a large job of fourteen houses, small stores with flats overhead. When it came time to do the carpentry work, the walking delegate appeared and said to my uncle, "Mr. Boulton, you have got to employ card men here." My uncle said, "I have figured on this job with non-union men. I have been figuring on doing this with the men I have in the shop [the unions don't bother much with men in the shops]. If you will allow me to finish it with them, I will agree to use union men in my shop hereafter." The delegate said, "You can do it cheaper with union men. I want to put union men on so you will make

something on the job." The old gentleman got indignant, and said, "Do you mean to tell me I don't know my business?" The delegate said, "If you think you can do this job cheaper with non-union men than with union men, you don't understand it. You ought not to be in the business."

They talked it over and my uncle said, "Well, I suppose the non-union men can work all day, or finish out the week." The delegate said, "No; they must stop at noon. There is a crowd of men waiting to come here at noon." My uncle said, "Well, call them up by telephone." The delegate said, "If any one of these men does not satisfy you, don't think you have to keep him. How long has that man on the wainscoting over there been working for you?" "He has worked for me about two years." The delegate said, "He could not work for me two minutes. The man I send down to you this afternoon to do this wainscoting, if he does not do twice as much as that man, you will not need to pay him at all. We would pay to have him out of the union."

The men came, and my uncle said that the man who worked on the wainscoting did a good deal more that afternoon than the other man had done in a day. The non-union men were paid $2.25, and the union men got $3.25, so there was only a dollar's difference, but much more than that in the amount of work. He said he made $800 more on that job than he had figured on making—that much more than he would have made if the delegate had allowed him to go on with non-union carpenters.

In the carpenters' organization, if you go around on the buildings, you notice there are very few gray-haired men at work. That is where the strain and rush are. If you go to the shops, you will find that the majority are gray-haired men. In Brooklyn, where the scale is $3.60 a day, and will be $4 the first of May, they allow men in the job shops who have a privilege card in the union to work there for $18 a week. It is steady work. In the job shops there is some place for the older man to go. He is not absolutely driven out of town.

How does it happen that the general public has the idea that union men are time-killers, and longs for a return to the old days of the non-union men?

The reason is that the householder and the professional man simply deal with the men sent out from the job shops. They have these men in their employ from the job shops who are not speedy, who could not hold up their end in new work, and there is no particular incentive for them to work fast when they go out to do job work. Then there is their employer's point of view. If I have a lot of orders in, and I am sending a man out to a job, I say, "Hurry up; I have a lot of things to do." But if work is slack, the man knows it, and works accordingly. If work is slack and he were to rush a job, his employer might say, "That fellow is a know-nothing." The employer charges for his services so much a day. That same man, if he were put out on contract, would hustle, because his employer would want him to hustle.

What about the limitation of apprentices?

We limit apprentices so as not to have too great a surplus of labor on the market. I think that in our craft particularly we are quite liberal with the apprentices. We allow an apprentice to one journeyman. If there are three journeymen, we allow two apprentices and one helper. For five journeymen we allow three apprentices, and after that one apprentice to every three journeymen. If we did not limit the apprentices in the big offices, they would hire boys to do the bulk of the work, leaving the expert work to a few of the older men. The result would be that most of the men would be thrown out. The end would be that there would be so many stereotypers that wages would have to go down. Professional men have a natural protection against overcrowding in that it costs so much money to learn a profession that few men can afford it. The law, too, requires a doctor's or lawyer's apprentice to study several years during which he earns nothing. Apprentices in our business in the first year get six dollars a week. We seek to do artificially what is accomplished naturally, and through law, in the professions.

In a union office who determines what men may be discharged?

In each office there is a chairman who represents the union, and a foreman who represents the management. The fore-

man can discharge any man in the office for any cause whatever except the chairman. The union protects the chairman. He cannot discharge the chairman except for cause. The cause would be either inefficiency or drunkenness or something of that kind. He could discharge every other man without question. We have to make the chairman not afraid of the foreman, so that he knows if he does his work the foreman cannot discharge him. The foreman might abuse the apprentices or put in more than he ought, and everybody would be afraid to object.

Does not the union foment friction?

A union employer has less friction with his men than a non union employer. There is more harmony and more discipline. In a union office, if a man comes in over five minutes late, the foreman tells his sub to go to work. The man can go home. All that falls on the union, not on the employer. The employer knows the men will come on time and be sober. If a man was intoxicated, the chairman of the chapel would have to report that the man had showed up unfit for work. The man could not be fined less than ten dollars, but he could be fined as much more as was thought proper. That is a protection to the employer. There is hardly a meeting in which fines are not levied. If the chairman should fail to report such cases, he would be fined. That keeps the chairman fair, otherwise he might hound some fellows and favor others. The union pays damages if botchwork is done by drunken union men. For example, the stereotypers employed on one of the Hebrew papers on the East Side got the worse for liquor. They spoiled some work, and delayed getting out the paper, and broke the machinery. They got the place in a thoroughly demoralized condition. The manager called up our office on the 'phone, and our president visited the place and told him the first thing he would have to do would be to discharge the two men, and we would furnish him with two good, competent men. The two men put everything in perfect order in three days. The employer was asked to send his bill for the amount of the damage to the organization. The union paid the bill, and the two men who had held the position were fined the amount of the bill. They paid it in installments. We never ask a man to do the impossible.

Afterwards a combination of the East Side papers was attempted to be formed to shut out the union, and this man, who was the largest employer on the East Side, refused to go in. He said he had been treated so fairly by the stereotypers that he was not going to join in any proposition that would injure them.

Does not such discipline cause friction within the union?

In every organization there are two factors—the radicals and the conservatives. The radicals are seeking to use the organization to increase wages; the conservative men always say, before we do anything, Is it just, and will the condition of the trade warrant it? Before an increase of pay is demanded, a vote of the organization is taken, and the subject is thoroughly threshed out as to whether the trade conditions in the city and country warrant it. We watch trade conditions throughout the country.

Twice a month there is a meeting. Everything concerning trade matters comes up, and the meeting acts as an education. It increases the intelligence of those who come. I know men in the organization who could hardly write their names when they joined, but work in the union started them on the road to self-education.

The Question of a Maximum Wage

Not long ago The Outlook sent to a number of representative labor leaders and officers of labor organizations the following questions: (1) Do trades-unions fix a maximum wage, so that more than average merit cannot earn more than average wages? and (2) Do they fix a maximum output, so that a wage-earner of more than average ability is no. permitted to produce more than the product of the average worker? We print below the answers received, and in our editorial columns we comment on the bearing of the facts thus ascertained upon the labor question.—THE EDITORS.

I.

FROM JOHN MITCHELL

President of the United Mine Workers of America

The United Mine Workers of America does not fix a maximum rate. It does fix a minimum scale. If a workman develops an unusual degree of skill, the employer is at perfect liberty to pay him or any other workman a higher rate than the rate fixed in our agreements with such employer. What we seek to do is to fix a reasonably fair rate of wages for all men who work in the mining industry, so as to give them a wage that will enable them to live in a manner conformable to American standards, and put something away for old age or infirmity.

In the mining industry fully seventy per cent. of the workers are employed on piece-work, and their earnings are of course regulated wholly by the amount of work they do, excepting that we fix a certain price per ton in our agreements with the operators, and the workman who performs the most labor makes the highest wages. We do not place any restrictions upon the amount of labor that shall be performed.

II.

FROM HENRY WHITE

General Secretary of the United Garment Workers of America

(1) Trade-unions do aim to establish a minimum wage, which does not, however, prevent those having more than the average ability from getting an increased wage.

(2) The maximum output is usually enforced for the purpose of preventing rush work.

I desire to say, in addition, that the effect of such rules is to eliminate the least competent workman. If the employer is given the option of choosing his men, he will naturally select the more competent, and the others will, in time, leave the trade for other occupations more suited to their abilities. Such is the case in the cutting trade in this city, which accounts for the efficiency of the New York cutters in comparison with those of other cities.

III.

FROM JAMES M. LYNCH

President of the International Typographical Union

The subordinate unions of the International Typographical Union fix a minimum wage, and not a maximum wage. The minimum wage is believed to be in accordance with the earning powers of the average printer, and there is nothing to prevent a firm or employer from recognizing more than average merit if it or he desires to do so.

The International Typographical Union does not fix a minimum or maximum output. Our members working by the piece and on time, both at hand and machine work, are expected to perform a fair day's work for a fair day's pay.

The International Typographical Union has been in existence for more than fifty years, having been organized in May, 1852, and the above has been its policy during all that time.

IV.

FROM JAMES DUNCAN

National Secretary of the Granite Cutters' National Union

The Granite Cutters' National Union does not fix a maximum wage. What it does is to fix a minimum wage for those employed under what is called the day-work system. Thus, in as far as day work is concerned, wages are graded upwards, and men of more than ordinary ability can receive the full value of their services, by mutual agreement with the employer. Those who are employed by the piece, in that they receive so much

per foot instead of so much per diem, also receive the full value of their labor, in accordance with the scale prepared; so the whole tendency of our National Union, which has a first-class system of agreements with employers, is and has been to fix a minimum, and grade upwards according to ability, instead of fixing a maximum, which we would consider retrogression of the most objectionable kind.

To your second question, I answer that the reply to your first question suggests what may be said to the second. There is no maximum output contemplated by our laws or any of our agreements, for inasmuch as our wage rate is established upon a minimum, the more a man produces the better chance there is for his increased day-wage rate, and if he is employed by the piece, his increased output would give him in comparison increased compensation.

V.

FROM JAMES O'CONNELL

International President of the International Association of Machinists

(1) Organizations do not fix a maximum wage. On the contrary, a minimum wage is established which places the mechanic with the greatest skill or merit in a position to advance himself to the highest wages paid in his trade or calling.

(2) The maximum wage is not set by any trades organization, in so far as I am acquainted. The organization that I represent requires its members to perform a fair day's work for a fair day's pay, and we recognize that one man is capable of producing more than another, because we are not all mentally or physically constructed alike.

I quote from the Constitution, Art. I., Sec. 4:

> Each lodge (or lodges) shall establish a minimum scale of wages in its locality, and no machinist who is a member of the organization shall work under that scale in that locality; nor shall an applicant for membership be considered eligible unless he receives the minimum scale of wages in his locality.

VI.

FROM E. E. CLARK

Grand Chief Conductor of the Order of Railway Conductors of America

I consider the subject of your questions a very important one. It does not, however, apply to the class of employment in which the members of our Order are engaged as it would in the industrial trades or in manufacturing lines.

The general basis of pay for our members is a certain rate per mile run or trip made. This full amount is paid, no matter how quickly the trip or run may be made, but if they are delayed beyond a certain maximum time, they are paid for the additional hours required of them; as, for instance, if a division of a road is 100 miles in length, a freight conductor would receive, say, $3 per trip over the district, and if on any trip he is required to work longer than ten hours, he is paid additional at the rate of ten miles per hour for the extra hours. On some roads the rate per mile or per trip is different for different classes of trains, dependent upon the nature of the work which the trains are required to do.

The only limit we put upon the amount of work a man shall perform or the amount of his earnings is the proviso which obtains in all of our working agreements, that after a man has been continuously on duty, say, sixteen hours, he shall be entitled to eight hours' rest before being required to again start on a trip, it being understood that this rest is to be taken at a terminal, and that the rule does not permit the men to abandon their work between terminals.

Our general rule for promotion of men is, that if merit, ability, and qualifications are equal, the man longest in the service will have preference for promotion and the more desirable runs, but we make no rule which contemplates the promotion of incompetent or indifferent men.

We aim to gather into membership the thoroughly competent and reliable train conductors. We aim to protect them against injustice, and to secure the highest rates of pay, the shortest hours of labor, and the most favorable conditions of employment which can be secured within the limits of justice, right, and reason.

I have heard the claim made that some trades-unions did fix a maximum wage and a maximum output for their members. Personally, I think such action is a mistake. I think that we should make every effort to secure for all industrious men a

living minimum wage, but that, having established the minimum wage, we should not restrict the ability or the disposition of a man of more than average ability or willingness to earn more by producing more.

THE FOREST[1]

BY STEWART EDWARD WHITE

Author of "The Blazed Trail," "Conjuror's House," etc.

Chapter III.—The Jumping-off Place

SOMETIME, no matter how long your journey, you will reach a spot whose psychological effect is so exactly like a dozen others that you will recognize at once its kinship with former experience. Mere physical likeness does not count at all. It may possess a water-front of laths and sawdust, or an outlook over broad, shimmering, heat-baked plains. It may front the impassive fringe of a forest, or it may skirt the calm stretch of a river. But whether of log or mud, stone or unpainted board, its identity becomes at first sight indubitably evident. Were you, by the wave of some beneficent wand, to be transported direct to it from the heart of the city, you could not fail to recognize it. "The jumping-off place!" you would cry ecstatically, and turn with unerring instinct to the Aromatic Shop.

For here is where begins the Long Trail. Whether it will lead you through the forests, or up the hills, or over the plains, or by the invisible water paths; whether you will accomplish it on horseback, or in canoe, or by the transportation of your own two legs; whether your companions shall be white or red, or merely the voices of the wilds—these things matter not a particle. In the symbol of this little town you loose your hold on the world of made things, and shift for yourself among the unchanging conditions of nature.

Here the faint forest flavor, the subtle invisible breath of freedom, stirs faintly across men's conventions. The ordinary affairs of life savor this tang—a trace of wildness in the domesticated berry. In the dress of the inhabitants is a dash of color, a carelessness of port; in the manner of their greeting is the clear steady-eyed taciturnity of the silent places; through the web of their gray talk of ways and means and men's simpler beliefs runs a thread of color. One hears strange, suggestive words and phrases—arapajo, capote, arroyo, the diamond hitch, cache, butte, coulé, muskegs, portage, and a dozen others coined into the tender of daily use. And occasionally, when the expectation is least alert, one encounters suddenly the very symbol of the wilderness itself—a dust-whitened cowboy, an Indian packer with his straight fillet-confined hair, a *voyageur* gay in red sash and ornamented moccasins, one of the Company's canoemen, hollow-cheeked from the river—no costumed show exhibit, but fitting naturally into the scene, bringing something of the open space with him—so that in your imagination the little town gradually takes on the color of mystery which an older community utterly lacks.

But perhaps the strongest of the influences which unite to assure the psychological kinships of the jumping-off places is that of the Aromatic Shop. It is usually a board affair, with a broad high sidewalk shaded by a wooden awning. You enter through a narrow door, and find yourself facing two dusky aisles separated by a narrow division of goods, and flanked by two wooden counters. So far it is exactly like the corner store of our usual districts. But in the dimness of those two aisles lurks the spirit of the wilds. There in a row hang fifty pairs of smoke-tanned moccasins; in another an equal number of oil-tanned; across the background you can make out snowshoes. The shelves are high with blankets—three-point, four-point—thick and warm for the out-of-doors. Should you care to examine, the storekeeper will hook down from aloft capotes of different degrees of fineness.

[1] Copyright, 1903, by the Outlook Company.

Fathoms of black tobacco-rope lie coiled in tubs. Tump lines welter in a tangle of dimness. On a series of little shelves is the ammunition, fascinating in the attraction of mere numbers—44 Winchester, 45 Colt, 40–82, 30–40, 44 S. & W.—they all connote something to the accustomed mind, just as do the numbered street names of New York.

And exploration is always bringing something new to light among the commonplaces of ginghams and working shirts and canned goods and stationery and the other thousands of civilized drearinesses to be found in every country store. From under the counter you drag out a mink skin or so; from the dark corner an assortment of steel traps; in a loft a birch-bark mokok, fifty pounds heavy with granulated maple sugar, dispenses a faint perfume.

For this is above all the Aromatic Shop. A hundred ghosts of odors mingle to produce the spirit of it. The reek of camp-fires is in its buckskin, of the open woods in its birch bark, of the muskegs in its sweet grass, of the open spaces in its peltries, of the evening meal in its coffees and bacons, of the portage trail in the leather of its tump-lines. I am speaking now of the country of which we are to write. The shops of the other jumping-off places are equally aromatic—whether with the leather of saddles, the freshness of ash paddles, or the pungency of marline; and once the smell of them is in your nostrils you cannot but away.

The Aromatic Shop is always kept by the wisest, the most accommodating, the most charming shopkeeper in the world. He has all leisure to give you, and enters into the innermost spirit of your buying. He is of supernal sagacity in regard to supplies and outfits, and if he does not know all about routes, at least he is acquainted with the very man who can tell you everything you want to know. He leans both elbows on the counter, while you swing your feet, and together you go over the list, while the Indian stands smoky and silent in the background. "Now, if I was you," says he, "I'd take just a little more pork. You won't be eatin' so much yourself, but these Injuns ain't got no bottom when it comes to sow-belly. And I wouldn't buy all that coffee. You ain't goin' to want much after the first edge is worn off. Tea's the boy." The Indian shoots a few rapid words across the discussion. "He says you'll want some iron shoes to fit on canoe poles for when you come back up stream," interprets your friend. "I guess that's right. I ain't got none, but th' blacksmith'll fit you out all right. You'll find him jest below—never mind, don't you bother, I'll see to all that for you."

The next morning he saunters into view at the river-bank. "Thought I'd see you off," he replies to your expression of surprise at his early rising. "Take care of yourself." And so the last hand-clasp of civilization is extended to you from the little Aromatic Shop.

Occasionally, however, though very rarely, you step to the Long Trail from the streets of a modern raw town. The chance presence of some local industry demanding a large population of workmen, combined with first-class railroad transportation, may plant an electric-lighted, saloon-lined, brick-hoteled city in the middle of the wilderness. Lumber, mines—especially of the baser metals or commercial minerals—fisheries, a terminus of water freightage, may one or all call into existence a community a hundred years in advance of its environment. Then you lose the savor of the jump-off. Nothing can quite take the place of the instant plunge into the wilderness, for you must travel three or four days from such a place before you sense the forest in its vastness, even though deer may eat the cabbages at the edge of town. Occasionally, however, by force of crude contrast to the brick-heated atmosphere, the breath of the woods reaches your cheek, and always you own a very tender feeling for the cause of it.

Dick and myself were caught in such a place. It was an unfinished little town, with brick-fronted stores, arc-lights swaying over fathomless mud, big superintendent's and mill-owner's houses of bastard architecture in a blatant superiority of hill location, a hotel whose office chairs supported a variety of cheap drummers, and stores screeching in an attempt at metropolitan smartness. We inspected the stand-pipe and the docks, walked a careless mile of board walk, kicked a dozen pugnacious dogs from our setter, Deuce, and found ourselves at the end of

our resources. As a crowd seemed to be gathering about the wooden railway station, we joined it in sheer idleness.

It seemed that an election had taken place the day before, that one Smith had been chosen to the Assembly, and that, though this district had gone anti-Smith, the candidate was expected to stop off an hour on his way to a more westerly point. Consequently the town was on hand to receive him.

The crowd, we soon discovered, was bourgeois in the extreme. Young men from the mill escorted young women from the shops. The young men wore flaring collars three sizes too large; the young women, white cotton mitts three sizes too small. The older men spat, and talked through their noses; the women drawled out a monotonous flow of speech concerning the annoyances of domestic life. A gang of uncouth practical jokers, exploding in horse laughter, skylarked about, jostling rudely. A village band, uniformed solely with cheap carriage-cloth caps, brayed excruciatingly. The reception committee had decorated with red and white silesia streamers and rosettes an ordinary side-bar buggy, to which a long rope had been attached, that the great man might be dragged by his fellow-citizens to the public square.

Nobody seemed to be taking the affair too seriously. It was evidently more than half a joke. Anti-Smith was more good-humoredly in evidence than the winning party. Just this touch of buffoonery completed our sense of the farce-comedy character of the situation. The town was tawdry in its preparations—and knew it; but half sincere in its enthusiasm—and knew it. If the crowd had been composed of Americans, we should have anticipated an unhappy time for Smith; but good, loyal Canadians, by the limitations of temperament, could get no further than a spirit of manifest irreverence.

In the shifting of the groups Dick and I became separated, but shortly I made him out worming his way excitedly toward me, his sketch-book open in his hand.

"Come here," he whispered. "There's going to be fun. They're going to open up on old Smith after all."

I followed. The decorated side-bar buggy might be well meant; the village band need not have been interpreted as an ironical compliment; the rest of the celebration might indicate paucity of resource rather than facetious intent; but surely the figure of fun before us could not be otherwise construed than as a deliberate advertising in the face of success of the town's real attitude toward the celebration.

The man was short. He wore a felt hat, so big that it rested on his ears. A gray wool shirt hung below his neck. A cutaway coat miles too large depended below his knees and to the first joints of his fingers. By way of official uniform his legs were incased in an ordinary rough pair of miller's white trousers, on which broad stripes of red flannel had been roughly sewn. Everything was wrinkled in the folds of too-bigness. As though to accentuate the note, the man stood very erect, very military, and supported in both hands the staff of an English flag. This figure of fun, this man made from the slop-chest, this caricature of a scarecrow, had been put forth by heavy-handed facetiousness to the post of greatest honor. He was Standard-Bearer to the occasion! Surely subtle irony could go no further.

Some sudden movement caused the man to turn. One sleeve of the faded, ridiculous old cutaway was empty. He turned again. From under the ear-flanging hat looked unflinching the clear, steady blue eye of the woodsman. And so we knew. This old soldier had come in from the Long Trail to bear again the flag of his country. If his clothes were old and ill-fitting, at least they were his best, and the largeness of the empty sleeve belittled the too-largeness of the other. In all this ribald, laughing, irreverent, commonplace, semi-vicious crowd he was the one note of sincerity. To him this was a real occasion, and the exalted reverence in his eye for the task he was so simply performing was Smith's real triumph—if he could have seen it. We knew now, we felt the imminence of the Long Trail. For the first time the little brick tawdry town gripped our hearts with the well-known thrill of the jumping-off place. Suddenly the great, simple, unashamed wilderness drew near us as with the rush of wings.

[TO BE CONTINUED]

Sir Michael Hicks-Beach[1]

By Justin McCarthy

Author of "A History of Our Own Times," "The Story of Gladstone's Life," etc.

SIR MICHAEL HICKS-BEACH is now, as everybody knows, out of office. *Il reviendra*, no doubt, and in a happier sense, we may trust, than fate allowed to the once-famous personage concerning whom the words I have quoted were said and sung throughout France. *Il reviendra* was the burden of the chant composed to the honor of the late General Boulanger and echoed through all the French music-halls at the time when Boulanger got into trouble with the existing government. But Sir Michael Hicks-Beach is a man of very different order from Boulanger, with whom he has, so far as I know, nothing whatever in common except the fact that they were both born in the same year, 1837.

The admirers of Sir Michael Hicks-Beach may take it for granted that he will some time or other return to a high position in an English administration. Whether that administration is to be Liberal or Conservative we must wait for events to show. One can imagine the formation of a Conservative Government which might rise to the level of Hicks-Beach; or one might imagine the formation of a Liberal Government in which Hicks-Beach could see his way to take office; but I think it would be hard to realize the idea of such a man being left out of office or kept out of office for many years. He was, according to my judgment, the most efficient and capable member of the Conservative Government now in office, the Government from which he felt himself compelled to withdraw, or in which, at all events, he was not pressed to continue. He was not a brilliant figure in that Government. He had not the push and the energy and the impressive debating powers of Mr. Chamberlain, and he had not the culture, the grace, and the literary style of Mr. Arthur Balfour. He made no pretensions whatever to the gift of oratory, although he had some at least of the qualities which are needed for oratorical success. His style of speaking is remarkably clear and impressive. No question, however complex and difficult, seems hard to understand when explained by Hicks-Beach. He compels attention rather than attracts it. There are no alluring qualities in his eloquence, there are no graces of manner or exquisite forms of expression; there is a cold, almost harsh clearness enforcing itself in every speech. The speaker seems to be telling his hearers that, whether they agree with him or not, whether they like him or not, they must listen to what he has to say. There is a certain quality of antagonism in his manner from first to last, and he conveys the idea of one who feels a grim satisfaction in the work of hammering his opinions into the heads of men who would rather be thinking of something else if the choice were left to them. "Black Michael" is the nickname familiarly applied to Sir Michael Hicks-Beach in private conversation by the members of the House of Commons, and the nickname has found its way into the columns of "Punch" and other periodicals. The term "Black Michael" does not, we may assume, refer merely to the complexion of Hicks-Beach, to the color of his hair; but means to suggest a grim darksomeness about his whole expression of countenance and bearing. Certainly any one who watches Sir Michael Hicks-Beach as he sits during a debate in the House of Commons, waiting for his turn to reply to the attacks on some measure of which he is a supporter, will easily understand the significance of the appellation. Hicks-Beach follows every sentence of the speaker then addressing the House with a stern and ironical gaze of intensity which seems already to foredoom the unlucky orator to a merciless castigation. I must say that if I were a member of the House of Commons devoted to the championship of some not quite orthodox financial theory, I should not like to know that my exposi-

[1] Subjects already treated in this series have been: Mr. Balfour, Lord Salisbury, Mr. John Morley, Mr. Henry Labouchere, Lord Aberdeen, Sir William Harcourt, Sir Henry Campbell-Bannerman, John E. Redmond, and John Burns.

tion of the doctrine was to be publicly analyzed by Sir Michael Hicks-Beach.

Yet Hicks-Beach is not by any means an ungenial man, according to my observation. Some of his colleagues say that he has a bad temper, or at least a quick temper; and I must say that I can easily understand how a man of vigorous intelligence and expansive views might occasionally be brought into a mood of unphilosophic acrimony by the goings-on of the present Conservative administration. During my many years of service in the House of Commons I had opportunities of coming into personal intercourse with Hicks-Beach, and I have always found him easy of approach and genial in his manners. At different times while he was holding office I had to make representations to him privately with regard to some difficulty arising between an administrative department and certain localities which felt themselves oppressed, or at least put at a disadvantage, by the working of new regulations. I always found Sir Michael Hicks-Beach ready to give a full and fair consideration to every complaint and to exercise his authority for the removal of any genuine grievance. But I can easily understand that observers who have not had personal dealings with Hicks-Beach and have only observed him as he sits silent, dark, and grim during some debate in the House of Commons, may well have formed some very decided impressions as to his habitual moods and tempers. A member of the House once asked me whether I was aware of the fact that a certain line in one of Macaulay's "Lays of Ancient Rome" was supposed to contain a prophetic description of Sir Michael Hicks-Beach. I gave up the puzzle, and then my friend told me that the description was contained in the lines describing the Roman trumpet-call which tell that

"The kite knows well the long stern swell."

I hope my American readers will not have quite forgotten the meaning of the term "swell," now somewhat falling into disuse, but at one time very commonly employed in England to describe a member of what would now be called "smart society."

Sir Michael Hicks-Beach has held many offices. He has been Under-Secretary for the Home Department, and Secretary to the Poor Law Board; he has been twice Chief Secretary for Ireland, or, to speak more strictly, Chief Secretary to the Lord-Lieutenant of Ireland; and he has been twice Chancellor of the Exchequer. I need hardly say that he was not able to accomplish much during the periods of his Irish administration. I have said in preceding articles that it is not possible for the Chief Secretary of a Conservative Government to accomplish anything worth attempting in the work of Irish administration. What Ireland demands is the right to manage her own national affairs in her own domestic Parliament, and there is nothing worth doing to be done by any government which will not take serious account of her one predominant claim. No patronage of local charities, local flower-shows, and local racecourses, no amount of Dublin Castle hospitalities, no Viceregal visits to public schools and municipal institutions, can bring about any real improvement in the relations between Great Britain and Ireland. I have no doubt that Hicks-Beach did all in his power to see that the business of his department was efficiently and honestly conducted in Dublin Castle, but under the conditions imposed upon him by Conservative principles it was impossible for him to accomplish any success in the administration of Irish affairs. It has often come into my mind that a certain sense of his limitations in this way was sometimes apparent in the bearing and manner of Sir Michael Hicks-Beach, when he had to take any prominent part in the business of Dublin Castle. He has an active mind and a ready faculty of initiative, and there was no place for such a man in the sort of administrative work which mainly consists in the endeavor to keep things going as they have been going, and striving after an impossible compromise between despotic principles and a free constitutional system.

Hicks-Beach, of course, was more in his place when at the head of the financial department of the administration. He is admitted to have been one of the most skillful and enlightened among modern Chancellors of the Exchequer. His financial statements were always thoroughly clear, symmetrical, and interesting from first to last. He never got into any en-

tanglement with his figures, and his array of facts was always marshaled with something like dramatic skill. I do not profess to be very strong upon financial questions, but I could always understand and follow with the deepest interest any financial exposition made by Hicks-Beach. He seemed to me to be distinctly above the level of his party and his official colleagues on all such questions, and it has often occurred to me that such a man was rather thrown away upon a Conservative Government. Whatever else might be said against them, it could not be said that his speeches at any time sank to the level of the commonplace. There was something combative in his nature, and his style of speaking, with its clear, strong, and sometimes almost harsh tones, appeared as if it were designed in advance to confront and put down all opposition. The House of Commons had for a long time got into the way of regarding Hicks-Beach as a man in advance of his colleagues on all subjects of financial administration. Every Tory in office, or likely to be in office, now professes himself a free-trader in the English sense of the phrase, but Sir Michael Hicks-Beach was evidently a genuine free-trader, and never could have been anything else since he first turned his attention seriously and steadily to financial questions. I should describe him as one of the foremost debaters in the House of Commons among the men who made no pretensions to the higher order of eloquence; and probably an additional attraction was given to his speeches by that aggressive and combative tone which I have just noticed. I have sometimes fancied that his combativeness of manner and his dictatorial style were less intended for the discomfiture of his recognized political opponents than for that of his own colleagues in office. Long before there was any rumor of incompatibility between Hicks-Beach and the members of the present Government, I have often found myself wondering how the man who expressed such enlightened ideas on so many financial and political questions could possibly get on with a somewhat reactionary Conservative administration. Of course I have no means of knowing anything beyond that which is known to the general public concerning the causes which led to Hicks-Beach's withdrawal or exclusion from his place in the present Government. Even those London journals which profess to know everything about the inner counsels of the Cabinet did not, and do not, tell us anything more on this particular subject than the news, impossible to be concealed, that Sir Michael Hicks-Beach had ceased to be a member of the Conservative administration. We were all left to make any conjectures we pleased as to the cause of this remarkable change, and I feel, therefore, no particular diffidence in expounding my own theory. During the long debates on Hicks-Beach's latest Budget proposals, which I had to follow only through the medium of the newspaper reports, I became possessed with the idea that Hicks-Beach was performing reluctantly an uncongenial and almost intolerable task.

Let me recall to the minds of my readers some of the conditions amid which Hicks-Beach found himself compelled of late to carry on his work. It should be said, in the first instance, that he never showed himself, and, as I believe, never could have been, a genuine Tory of the old school. He never exhibited himself as an uncompromising partisan on any of the great subjects which arouse political antagonism. He must have had very little sympathy indeed with the dogmas and the watchwords and the war-cries of old-fashioned militant Toryism. He never identified himself with the cause of the Orangemen in Ireland or the principles of the Jingoes in England. He seldom addressed the House of Commons on any subjects but those which belonged to his own department, and these were for the most part questions of finance. When, however, he had occasionally to take part in debates on subjects connected with England's foreign policy, he generally spoke with an enlightenment, a moderation, and a conciliatory tone which would have done credit to any statesman and seemed little in keeping with the policy and the temper of modern Toryism. But Hicks-Beach had fallen upon evil days for a man of his foresight, his intellect, and his temperament generally who had found a place in a Conservative Cabinet. The policy which led to the outbreak of the war in South Africa aroused a passion in the English public mind which found

its utmost fury among the partisans of Toryism. Tory and Jingo became for the time synonymous terms. The man who did not allow his heart and soul to be filled with the war spirit must have seemed to most of his friends unworthy to be called a Conservative. Even among certain sections of the Liberals it required much courage for any man to condemn or even to criticise with severity the policy which had led to the war. Any one who ventured on such a course, whether he were Liberal or Conservative, was straightway branded with the opprobrious epithet of pro-Boer, and that title was supposed to carry his complete condemnation. England had come back suddenly to the same kind of passionate temper which prevailed during the earlier part of the Crimean War. "He who is not with us is against us," cried the professing patriots at both times—he who does not glorify the war is a traitor to his own country and a pro-Boer, or a pro-Russian, as the case might be. This was the temper with which Hicks-Beach found that he had to deal during the later years of his financial administration.

It would be out of place to enter into any speculation as to what Hicks-Beach's own views may have been with regard to the whole policy of the war. It is now well known that Queen Victoria was entirely opposed to that policy, although she did not feel that her position as a constitutional sovereign gave her authority to overrule it by a decision of her own. There is very good reason to believe that peace was brought about at last by the resolute exercise of King Edward's influence. It is at least not unlikely that a man of Hicks-Beach's intellect and temperament may have been opposed at first to the policy which brought on the war, but may have, nevertheless, believed that his most patriotic course would be to remain in the Government and do the best he could for the public benefit. He soon found himself compelled to perform as disagreeable a task as an enlightened financial statesman could have to undertake—the task of extracting from the already overburdened taxpayers the means of carrying on a war of conquest with which he had little sympathy. It was perfectly evident that the needed revenue could not be extracted from the country without some violation of those financial principles to which Hicks-Beach had long been attached. There was no time for much meditation—the money had to be found somehow—and a great part of it could only be found by the imposition of a duty on foreign imports. We now know from public statements made by Sir Michael Hicks-Beach himself that while the war was going on he became impressed with the conviction that the whole administration of the military department was grossly mismanaged, and that the money of the nation was thrown away when the War Office came to spend it. The conviction thus forced upon him could not have tended to make the task of providing means for such further expenditure any the more agreeable to him. We may assume that he saw no other course before him than to make the best of a bad job and try to find in the least objectionable way the amount of money necessary to carry on the business of the State. It was evident to him that the principles of free trade must be put aside for the present, and he found himself driven to the odious necessity of imposing a duty on the importation of foreign corn, a duty which in fact amounted to a tax on bread. Hicks-Beach well knew that no tax could be more odious to the poorer classes of the British islands; but we may presume that in his emergency he could see no other way of raising the money, and he accepted the situation with a dogged resolve which made no pretense at any concealment of his personal dislike for the task. His manner of delivering the speech in which he set forth his scheme of finance was that of a man who has to discharge an odious duty, or what he finds himself by the force of circumstances compelled to regard as a duty, but will utter no word which might seem to make out that he has any excuse other than that of hateful necessity. The substance of Hicks-Beach's explanations on this part of his Budget might be summed up in such words as these: "We have got to pay for this war, and we have no time to spare in finding the money; we must cast aside for the time the principles of free trade; but do not let us further degrade ourselves by hypocritical attempts to make out that what we are doing is in accordance with the free-

trade doctrine." I remember well that on reading Hicks-Beach's Budget speech I became deeply impressed with the conviction that his task was becoming so intolerable to him that we might expect before long to see a change in the composition of the Government. But it appeared to me that, as the debate went on and the days went on, the position of Hicks-Beach was becoming more and more difficult. Some of the members of the Cabinet became to all appearance suddenly possessed with an inspiration that the time had arrived for a bold movement of reaction against the long-accepted doctrines of free trade. The Chancellor of the Exchequer had already receded so far from the established policy as to propose the imposition of a tax on the imported materials for making bread; and why, therefore, should we not take advantage—thus at least I construed their ideas—of this tempting opportunity to introduce a system of preferential duties and an imitation Zollverein for England and some of her colonies, and to break away from the creed and dogmas of men like Gladstone, Cobden, and Bright? These proposals must have opened to the eyes of Hicks-Beach a vista of financial heresies into which he could not possibly enter. He probably thought that he had gone far enough in the way of compromise when he consented to meet immediate emergencies by the imposition of a bread-tax. Is it possible that he may have felt some compunctious feeling because of his having yielded so far to the necessities of the moment? However that may be, I take it for granted, and took it for granted at the time, that Hicks-Beach found the incompatibility between his own views as to the raising of revenue and the views beginning to be developed by some of his colleagues becoming more and more difficult to reconcile.

Let me venture on an illustration, although it be not by any means photographic in its accuracy, of the difficulty with which the Chancellor of the Exchequer found himself confronted. Let us suppose Hicks-Beach to be the leader of a pledged society of total abstainers. At a moment of sudden crisis he feels called upon to relax so far the rigidity of the society's governing principle as to allow one of its members who is threatened with utter physical prostration a few drops of alcoholic stimulant. He finds his course cordially approved by some of his most influential colleagues, and at first he is proud of their support. But it presently turns out that they regard his reluctant concession as the opening up of a new practice in their regulations, and they press upon him all manner of propositions for the toleration and even the encouragement of what my friend Sir Wilfrid Lawson, the great English champion of total abstinence, would term "moderate drunkenness." Fancy what the feelings of Sir Wilfrid Lawson would be if by some temporary and apparently needful concession he found himself regarded by those around him as an advocate of moderate drunkenness! Such, I cannot help thinking, must have been, in its different way, the condition to which Sir Michael Hicks-Beach felt himself brought down, when he discovered that his introduction of an import duty on foreign grain was believed by his principal colleagues to be but the opening of a reactionary movement against the whole policy of free trade.

The Government of Lord Salisbury seemed to be in the highest good spirits at the prospects before it. Mr. Chamberlain in especial seemed to believe that the time had come for him to develop an entirely new system of his own for the adjustment of import and export duties. For many weeks the English newspapers were filled with discussions on Mr. Chamberlain's great project for the new British Imperial Zollverein, of which England was to be the head. Numbers of Mr. Chamberlain's Conservative admirers were filled with a fresh enthusiasm for the man who thus proposed to reverse altogether the decisions of all modern political economy laid down by Liberal statesmen and Radical writers. Stout old Tory gentlemen representing county constituencies began to be full of hope that the good old times were coming back.

That was the crisis—so far at least as the official career of Sir Michael Hicks-Beach was concerned for the time. What may have happened in the private councils of the Government we of the outer world were not and are not permitted to know. All that we actually do know is

that Lord Salisbury resigned his place as Prime Minister, that Arthur Balfour was called to succeed him in office, and that a new administration was formed in which the name of Hicks-Beach did not appear. There were other changes also made in the administration, but with these I shall not for the present concern myself. The important fact for this article is that Sir Michael Hicks-Beach was no longer Chancellor of the Exchequer. All manner of conjectures were made as to the reasons why Lord Salisbury so suddenly withdrew from the position of Prime Minister, and why he could not be prevailed upon to hold the place even nominally until after King Edward's coronation. I do not suppose that the resignation of Lord Salisbury had anything to do with the fact that Sir Michael Hicks-Beach ceased to be Chancellor of the Exchequer. The vacancies were not made simultaneously, nor did there appear any reason to believe that Hicks-Beach was so closely identified with the political fortunes of Lord Salisbury as to be unable to remain in office when his leader had ceased to hold the place of command. So far as an outsider can judge, it must have been that Hicks-Beach could not get on with the new administration, or that the new administration could not get on with him. My own theory, and I only offer it to my readers as the theory of a mere observer from the outside, is that Hicks-Beach could not stand any more of the reaction towards protection principles—thought he had gone quite as far as any sense of duty to his party could exact from him, and made up his mind that if his colleagues were anxious to go any further in what he believed to be the wrong direction they must do so without any help or countenance from him.

This theory has taken a firmer hold than ever of my mind since I read the report of a speech lately made by Hicks-Beach weeks and weeks after he had ceased to be Chancellor of the Exchequer. That recent speech might have been made by a member of the Liberal Opposition. Certainly in some of its most important and striking passages it enunciated opinions and laid down doctrines which might have come from almost any of Sir Henry Campbell-Bannerman's colleagues on the front Opposition bench. It denounced extravagant war expenditure at a time when Imperialist politicians are calling out for something very like military conscription, and it insisted that the defense of England by the strength of her navy ought to be the main consideration of English statesmanship. That was a doctrine which used to be proclaimed in distant days by such men as Cobden and Bright, which soon became an accepted principle among all genuine Liberals, but has lately been repudiated by all Imperialists, Liberal or Tory, who seemed to think that the one great business of English statesmanship is to turn England into a military encampment. The natural and reasonable conclusion to be drawn from such a speech is that during the last session or two of Parliament Hicks-Beach found it impossible to put up any longer with the reign of Jingo principles in the Cabinet, and made up his mind to set himself free from such a domination. The Tory Government has lost its ablest financial administrator, and Sir Michael Hicks-Beach has regained his position of independence.

The future must tell the story of Hicks-Beach's remaining career. That he has yet an important career before him may be taken for granted if only the fates allow him the ordinary length of man's life. Nothing but absolute retirement from Parliamentary work could reduce such a man to a position of complete neutrality, or could prevent him from having an influence which the leaders of both political parties must take into consideration. He is too strong in debate, too well trained in the business of administration, and too quick in observing the real import of growing political changes, and in distinguishing between them and the mere displays of ephemeral emotion, not to make his influence felt at any great crisis in the conditions of political parties. I hold, therefore, to the hope expressed at the opening of this article, that *il reviendra*—that Sir Michael Hicks-Beach will come back before long to an important place in some administration. The House of Commons could not afford just now to lose the services of such a man, and I take it for granted that Hicks-Beach could not remain long in the House of Commons without being called upon to accept an official position. He is beyond question

one of the very ablest men on the side of the Government in that House, and his integrity, his moderation, his capacity to understand the significance of new facts, and his disinterestedness have won for him the respect of all parties in Parliament and outside it. We are, to all appearance, on the eve of great changes in the composition of our political parties. With the close of the war has come to an end that season of Jingoism which brought so many weak-minded Liberals into fascinated co-operation with the Tories. The reaction against Toryism must come, and it will probably bring with it a reconstitution of both parties on the principles which each may consider essential to its character at a time when peace at home gives our legislators a chance of studying the domestic welfare of the people in these islands. It will not be enough then for a public man to proclaim himself an Imperialist in order to win the votes of a constituency, or to denounce his rival as a pro-Boer in order to secure defeat for that unlucky personage. The constituencies will begin to ask what each candidate proposes to do for the domestic prosperity of our populations at home, and to demand an explicit answer. Under such conditions, whatever be the reconstitution of parties, I am strongly of opinion that Sir Michael Hicks-Beach will before long begin a new administrative career.

The French Revolution: Two Views[1]

WE of this generation have cause for mingled gratitude and regret that our ancestors were possessed of the desire, and had the leisure, to write in minutest detail of their times. A passing thought might be given to the query as to how much posterity will be able to gather from our personal letters—or telegrams—concerning the daily happenings of our lives. That there is appreciation, from some quarter, ready and waiting for all sorts of old correspondence, journals, and diaries is clear, when one notes the product of the press. Significant or trivial, worthy or foolish, witty or dull, all is translated or edited, and is turned out volume after volume, to satisfy popular demand.

France has given us many of the most delightful records of past days, and one turns with pleasant anticipations to two recent books, "The Guardian of Marie Antoinette" and the "Memoirs of a Contemporary."

The first is published in two fine volumes, and gives the substance of the letters written to the Empress Maria Thérèse by the Comte de Mercy-Argenteau, Austrian Ambassador to the Court of Versailles, 1770–1780, admirably edited by Lillian C. Smythe.

The letters of the devoted Ambassador are well known to French and Austrian students of history, but their presentation to readers in this country will be of interest. For a quarter-century Florimond, Comte de Mercy-Argenteau, kept his hand upon the springs that moved the courts of Europe. To the world, the author says, he was an acute diplomatist; to the Empress of Austria, her private appointed guardian of Marie Antoinette's manners, mind, and morals; to Madame Elizabeth (the young sister of the Dauphin), who spoke her mind quite frankly, always "*le vieux renard.*"

The author shows great skill in her use of the facts at her disposal, weaving them into a lucid and engaging narrative—not an easy task when one remembers that the period described was one of most intricate and perplexing court intrigue. Marvelous to say, the daily letters from the Ambassador to his Empress were regularly despatched for ten years without a suspicion being raised either in the mind of the King, Louis XV., or of the spies in royal pay. One finds, therefore, a remarkable candor in the communications. Upon the marriage of the little Marie Antoinette to the Dauphin, the guardianship began.

Only fourteen, hardly knowing how to write, very childish in appearance, idle and pleasure-loving, as might be expected,

[1] *The Guardian of Marie Antoinette.* Letters from the Comte de Mercy-Argenteau, Austrian Ambassador to the Court of Versailles, to Marie Thérèse, Empress of Austria, 1770-1780. By Lillian C. Smythe. 2 vols. Dodd, Mead & Co., New York.

Memoirs of a Contemporary. Being Reminiscences by Ida Saint Elme, Adventuress, of her Acquaintance with certain Makers of French History, and of her Opinions concerning them. From 1790 to 1815. Translated by Lionel Strachey. Doubleday, Page & Co., New

the little Princess was a lonely figure in the corrupt Court of France. It is a sad picture. Her only friend was the Comte de Mercy-Argenteau, who, warning, guiding, persuading, first the child Dauphine, then the young Queen, was a powerful factor in her history, and to him was largely due whatever of success came to the unfortunate Queen of France. It is suggested that his guiding hand might perhaps have averted the most terrible of royal shipwrecks, the terror of which he foresaw, but he was called at that very time to the apparently greater danger threatening Austria after the death of Maria Thérèse, and could only warn his beloved Queen from a distance. He died after an exhausting journey to England, whither he went in 1794 with the hope of raising subsidies in London for the punishment of France.

The dainty little figure of the French Queen has always been a center of warm interest. This picture of her daily life, her fascinating manners, her uncompromising truthfulness, her careless gayety, and her willful, foolish extravagances, all unite to deepen the impression. A vivid sketch is given of the four old aunts (of the Dauphin), the Mesdames of France, nicknamed by their unmerciful father "Loque," "Coche," "Graille," and "Chiffe," all ungraceful and even hideous women of *bourgeoises* tastes. These, with the intriguing brothers of the Dauphin and their wives, were to be companions and examples for the little Marie Antoinette. Her wits were soon on the alert, and her careful guardian had a task to restrain her use of them. She made honest efforts to improve the sluggish, almost imbecile, Dauphin, and her biographer gives many scenes disclosing the pathos of her position. She improved daily in appearance and gained in influence. The old King—Louis XV.—increased his attentions and friendliness, but for years her charms produced no effect upon the half-developed Dauphin.

All these facts have passed into history, but a new light is shed upon them in this intimate chronicle, skillfully edited with vivacious comments. Before the death of Louis XV., the Comtesse du Barry tried in vain to win toleration from the future Queen, but to none of her overtures was there a response, and, as is known, upon the succession of Louis XVI. the former royal favorite was retired to privacy. The contrast between the brilliant young Queen and her loutish husband was most painful. Daily they grew more and more opposed in thought, desires, and pursuits. "The Queen, alive in every nerve of her body, every thought of her mind, in vivid health, untiring, brilliant, emotional, to whom the day and night are too short for all her interests, witty, sweet-natured, proud, and sovereign; the King, dull, plodding, ignorant, stolid, half-alive, imperfectly conscious, undeveloped in body and in mind, toiling at his little mechanical duties of kingship, as he does at his forge, with a great desire to do his poor best, so seldom speaking that his disused voice squeaks with the effort, with the loud, meaningless laugh and 'horrid grimaces' and loutish tricks of the imbecile, yet with gentle, docile nature that submits meekly to the inevitable impulses from stronger wills. He lives a life by routine; she, by caprice. He is bent by every force; she resents even the shadow of domination. He took his kingdom with '*Quel fardeau pour moi!*' and she took hers with 'admiration of the arrangements of Providence that has chosen me for the most beautiful kingdom of Europe.'"

With these two young people on the throne France went lightly on to disaster—as the author says in commenting upon public opinion in 1778, when Franklin was being fêted by the Parisians. "The French welcomed with effusion the ideas of liberty, equality, and fraternity, which they hailed as seed from Heaven, and sowed in a soil rank with the weeds of centuries, sour with oppression, and darkened by incredible ignorance; and they blossomed into 'The Terror.'" The tales told of the devotion of the fickle ladies of the court to Franklin are piquant. Madame de Créquy was an exception, and describes Franklin's way of eating eggs thus: He broke five or six eggs into a goblet, put butter, salt, pepper, and mustard upon them, and then "nourished himself with little spoonfuls of this *joli ragoût philadelphique*." He bit his asparagus, and took a knife to his melon. "*Vous voyez que c'etait un vilain sauvage.*"

In 1778 a Princess was born to the King and Queen, and though a Prince

had been desired, she was no disappointment to her mother, who said, "Poor little thing, you were not wanted, but you will be my very own the more for that; a son would have belonged to the State." Everywhere joy was evident, and devotion to the Queen; but the new ideas of nature, equality, and simplicity were undermining the principles of monarchy. The author asserts that the desire of Marie Antoinette for simplicity of manners was no pose, but was classed as such by those to whom pose was nature.

In 1790, upon the death of Joseph II., the Comte de Mercy-Argenteau was called from the guardianship of Marie Antoinette to save the empire of the successor of Joseph, his brother Leopold, and he left Paris never to return.

Here the narrative ends, in the deep shadow of coming destruction. The letters in the possession of the present Comtesse de Mercy-Argenteau, the author tells us, repeat incessantly the forebodings of the statesman. "The most unceasing efforts, the most unwearying perseverance, cannot make them see with my eyes. . . . The danger presses equally upon all thrones; all will be overthrown if they do not unite to crush the monster rising against them." But his warnings fell unheeded, and his guardianship ended with the execution of Marie Antoinette.

The two volumes are embellished by exquisite portrait prints. One of Marie Antoinette when the Dauphine is especially beautiful. Almost the entire collection is now at the Château d'Argenteau, and was presented by its Imperial and Royal owners to the Comte de Mercy-Argenteau, and has never before been reproduced. The portraits are all of great historical and artistic value.

Leaving the touchingly sad story of the unfortunate Queen—pure in life, though cruelly maligned by her enemies—always a lonely figure, and finally deserted by those whose lives were shamed by hers, we turn to the merry tale of one of the beautiful actors in the drama immediately succeeding that of the wrecked monarchy, the triumphant Republic of France. The few and fleeting scruples that came to the gay writer of the "Memoirs of a Contemporary" are as beautifully expressed and as truly superficial as those that move the emotions of the audience of the usual French play. "Ida St. Elme," self-styled and self-made adventuress, though probably innocent in childhood, became a thorough woman of the world—or the half-world—in her earliest youth. Of mixed Hungarian and Dutch parentage, born in Italy in 1778, and therefore a contemporary of Marie Antoinette, she came into contact with many of the men who were making French history during the period included between 1790 and 1815. The point of view is in interesting contrast to that taken by the French Court. She was married at twelve years of age to a Dutch gentleman who sympathized with the Revolutionary party in France, and for whom she seems to have entertained a high respect, though the attraction of the young French officers into whose company she was carelessly thrown proved too powerful for her vanity and inexperience. Before she was out of her teens she was embarked upon her adventurous career and became a skillful agent in political intrigue. She relates many anecdotes of famous men and women whom she knew. Moreau, Carnot, Beaumarchais, Pichegru, and finally Bonaparte, all are actors upon her stage. Some insight may be gained into the temper of the "Contemporary" from her candid estimate of herself. She says she had always been told of her beauty, and took it as a matter of course—but she was immensely flattered when compliments were paid to her wit. "But in my vanity there was nothing offensive to other women. I was really a good sort of soul. Still, if I was not disagreeable, I knew how to defend myself against attack from one of my sex." The reader of these vivacious reminiscences is not left in doubt as to that point, but it would be entertaining to know the feelings of that member of her sex against whom the "Contemporary" defended herself. General Moreau was a strong influence in her early life; while Marshal Ney, to whom she dedicated her mature womanhood, was the dominant power of her existence. She gives a pleasant picture of Beaumarchais, a harmless and gentle man, adored by his family, and a most engaging talker. He said, when he read the bulletins that Napoleon sent from

Egypt, that he fancied himself reading a chapter of "Arabian Nights' Entertainment." "He transcends probability; his ideas and actions are all marvel." During the first part of the Consulate it was resolved to exclude the ladies of the contractors and bankers from the society of the Tuileries, whose ranks were already meager enough. "Hence," is the comment, "the Consular Court was for some time a sort of magic-lantern show, with mixed pictures and a great many changes." It is possible that a prejudiced view is taken by the narrator of some witty encounters between herself and "Citizen Talleyrand." When she writes of him, she explains that there was not a vestige left in him of his former episcopal station except the manner of wearing his hair—as she expresses it, the Bishop of Autun had nothing left of the church but his powder and his good manners. "His cleverness in speech might have been exceeded, but not that of his reticences." At one time, in playful mood, the hand that was wont to sign treaties for France condescended to use thousand-franc bank notes as curl-papers for the fair hair of the "Contemporary." She was patient enough to have many tresses curled. Very early in her career she adopted the fashion of donning men's clothes whenever the fancy seized her. Being filled with a desire to share the experiences of an active campaign, she endured great exertion and fatigue and even suffered wounds, in order to follow the fortunes of Marshal Ney. In 1807 an appointment to the court of Elisa, Grand Duchess of Tuscany, sister of Napoleon, was secured for the adventurous Ida, just recovered from a wound received in battle, and she entered with zest into the intricacies of current politics in Tuscany.

From this Court she went to visit that of the Queen of Naples. Of her she remarks, "The Queen had a sneering chuckle whenever she spoke, which grew both tiresome and painful. By nature awkward and dull, she did her utmost to be affable that day."

Then came the campaign of 1812, and Ida made up her mind to brave the perils of the famous Russian expedition disguised, as usual, as a man. The horrors of the retreat from Moscow are briefly described, and, as she says quaintly, "Presently morals began to loosen," and theft, cruelty, and license reigned. Having for a companion a beautiful Lithuanian girl called "Nidia," Ida forded rivers, suffered cold and hunger, kept Cossacks at bay, and witnessed the horrible and pathetic scenes of that terrible catastrophe. Upon her return she began again to travel restlessly, and introduced herself at Gratz to Louis Bonaparte, former King of Holland, whom she characterizes as a bard grafted on a burgomaster, "but besides writing poetry he did a great deal of good"!

Established once more in Paris, she renewed her intrigues, and tried to restore Ney's waning enthusiasm for Napoleon, with but small success.

In 1814 Ida had an interview with "Madame Mère," as Napoleon's mother was called. She was seated at a table strewn with small pieces of bead-work, which she bought from poor women and distributed among the ladies about her. "I can easily believe that any one would be flattered to receive a gift from Mme. Mère," said Ida.

"A gift? A gift, did you say? What can you be thinking of! I pay for them, and am paid back. I see, my dear, that you are not at all economical. As for me, I am not like my daughters; I don't play princess, as they do!"

The year 1814 opened under dark auspices. Trade was languishing, and the hostility of the middle classes and society to the Emperor was evident. On March 29, 1814, a mournful procession left the Tuileries, and the Empress-Regent and her son, the King of Rome, took their departure, never to return. The next day the fate of Paris was to be decided.

Of less heroic mold than was the weak Louis XVI. when facing the final catastrophe, Napoleon is represented by the "Contemporary" as having attempted to take his own life by poison. She was in the palace of Fontainebleau, and, roused by unwonted noises, rushed to the Emperor's apartments, where she heard the word "poisoned" twice repeated. She remarks, in a true Gallic spirit, "Reawakened to his sense of moral greatness by the failure of his attempt on his own life, Napoleon resolved to submit to his fate, since, forsaken by all, he could not even find refuge in death."

After all was over, the "Contemporary"

was instructed with a secret mission to Elba, where she had a private interview with the great exile. Upon writing to Marshal Ney her observations gathered during her journey to and from Elba, he replied, "Whoever desires a change desires the ruin of France. Our sole want is peace. What matters it who governs? All that matters is France—her welfare and her dignity. Let us think of nothing but our country." But, as is known, Ney returned to his allegiance and met Napoleon, on his return, with loyalty.

The final chapters are devoted to the calamitous history of 1815, and the book ends with an outburst of French sentiment and religion. Ida, dressed in the garb of a Sister of Mercy (borrowed for the occasion), knelt beside Ney's bier, her "hero struck down by French bullets." Upon rising she made a vow to live henceforth according to the religion which granted her the blessing of praying for the hero's immortal soul, and addressed to him these words: "Ney, thou illustrious shade, how full of hope were the supplications I poured out in the presence of thy spirit! The promise I made in the depth of my sorrow I have faithfully kept. My vow has been observed. And, holding it sacred, Ida, in keeping before her mind thy noble nature, dares to trust her faults will be forgiven."

The translator and editor, Lionel Strachey, has preserved to a remarkable degree the vivacity of the original, and in his editing shows a judicious appreciation of the taste of English readers. Two portraits of Ida Saint Elme represent her as still a beautiful woman, though past her youth. A third shows her with short hair, in men's clothes, as she appeared in 1806. Many illustrations from old prints and many interesting portraits of more than ordinary value are scattered through the volume.

Books of the Week

This report of current literature is supplemented by fuller reviews of such books as in the judgment of the editors are of special importance to our readers. Any of these books will be sent by the publishers of The Outlook, postpaid, to any address on receipt of the published price, with postage added when the price is marked "net."

Adventures du Dernier Abencerage. By Chateaubriand. Edited by James D. Bruner, Ph.D. The American Book Co., New York. 5×7 in. 96 pages. 30c.

Andromaque Britannicus and Athalie. By Jean Racine. Edited by F. M. Warren. Henry Holt & Co., New York. 4½×6½ in. 350 pages.

Art in the Nineteenth Century. By Charles Waldstein. The Macmillan Co., New York. 4½×7 in. 110 pages.

Reserved for later notice.

Christ the Apocalypse. By the Rev. James Cooke Seymour. Jennings & Pye, Cincinnati. 5×7½ in. 350 pages. $1.

The thought unfolded in this book, that Christ is the revealer of God's being, character, law, and grace, is thoroughly sound, but the exposition of it is continually injured by loose and careless or extravagant statements, *e.g.*, "If it is impossible for the Son of God to lie, then the first chapter of Genesis is true." No writer is trustworthy, however well-meaning, who regards it as "blasphemy" to say that Jesus used fermented wine at the Last Supper.

Descriptive Guide to the Best Fiction, British and American (A). By Ernest A. Baker, M.A. The Macmillan Co., New York. 5¼×8 in. 610 pages. $2.50.

This contains brief descriptions and sometimes critical comment on about 4,500 novels, alphabetically under classifications and nationality. There are added a historical appendix and elaborate indexes. The whole takes up about six hundred closely printed pages, at least nine-tenths of which relate to the century just closed. The book might have been made smaller without greatly injuring its value, by such omissions as a few out of the twelve entries under "Tytler, Sarah," or one or two of the eight under "Crane, Stephen," and in other like cases. But perhaps all-inclusiveness was thought essential. The general usefulness of the work as a reference-book is apparent. So far as we may judge, the work has been done adequately and carefully.

Down the Orinoco in a Canoe. By S. Perez Triana. Thomas Y. Crowell & Co., New York. 5×7½ in. 253 pages. $1.25.

This is no stereotyped book of travels. The first chapter reads like the beginning of an old Spanish romance. The region Señor Triana covered by muleback and canoe is one of the richest and most beautiful in the world, and has rarely been visited by civilized man since the old Spanish conquerors came that way. The Señor, son of an ex-Governor of Colombia, and a true South American, is thoroughly familiar with the history and legend of his native land, and wields a pen at once poetic, humorous, and picturesque. It is often too philosophic, giving pages of sage reflections where one would rather have descriptions of what he saw. Information as to South Ameri-

can resources, opinions regarding South America's place in the world's future, plans for industrial development which might form a basis for the permanent pacification of Venezuela and Colombia, contribute to the value and timeliness of the book.

Epoch-Making Papers in United States History. Edited by Marshall Stewart Brown. The Macmillan Co., New York. 4½×6 in. 207 pages. 25c.

Euripides. Translated into English Rhyming Verse by Gilbert Murray, M.A., LL.D. Illustrated. Longmans, Green & Co., New York. 5×7½ in. 355 pages. $2.

This and the volume on Sophocles, the full title of which is given under that name, form the third and fourth volumes in the very competent series entitled "The Athenian Drama." The volume devoted to Sophocles contains translations of "Œdipus Tyrannus," "Œdipus Coloneus," and "Antigone," by Professor John S. Phillimore, of the University of Glasgow; the volume of Euripides presents "Hippolytus," "The Bacchæ," and "The Frogs," in the translation of Dr. Gilbert Murray, both volumes being supplied with elaborate introductions, with commentaries, notes, and illustrations. Dr. Phillimore discards blank verse, and his translation is in rhyme-couplets.

Explorations in Bible Lands During the Nineteenth Century. By H. V. Hilprecht, Ph.D., D.D., LL.D. Illustrated. A. J. Holman & Co., Philadelphia. 6½×9½ in. 810 pages. $3, net.

Reserved for later notice.

From the Unvarying Star. By Elsworth Lawson. The Macmillan Co., New York, 5×7¾ in. 292 pages. $1.50.

This romance has real poetical feeling, a charming love story, and closer character study than is to be found in the average novel. The plot deals largely with the trials of a young English Dissenting minister, who is not only "pestered for opinion's sake" by a hypocritical and hard-grained elder, but is accused wrongfully of having an illicit love affair, the fact being that he has rescued his sister from a scoundrel (the excessive villainy of this man and his melodramatic death are the weakest points in the book) and is sheltering her from public scorn. With the exception named, the story is natural, simple, and sincere.

Great Siberian Railway from St. Petersburg to Pekin (The). By Michael Myers Shoemaker. Illustrated. G. P. Putnam's Sons, New York. 5⅛×8 in. 243 pages. $2.

Though twenty years have elapsed since Mr. Shoemaker's first visit to Russia, he detects but little improvement in the condition of intelligence among the rank and file of the inhabitants, "and the worst of it is that they appear indifferent to their ignorance." This author doubts if the building of the trans-Siberian railway will, after all, really consolidate the Russian Empire. He regards its consolidation, and also its extension, very much as an intelligent Russian would, appreciating the peculiar advantages of the Czar's government as applied, for instance, to Manchuria; Mr. Shoemaker hopes that Russia "will hold on to that province as tightly as England has to Egypt." In any case, he thinks one feature fortunate when the controlling element in Asiatic expansion is Russian, for, half Oriental as the Russian is, he knows better than do pure Europeans or Americans how to deal with Oriental races. For the sake of getting these first-hand observations we can afford to read some of the occasionally rather too literal transcripts from the author's daily journal. Mr. Shoemaker's account will be specially appreciated by those who have enjoyed his previous volumes, particularly his "Quaint Corners of Ancient Empires."

Heredity and Social Progress. By Simon N. Patten. The Macmillan Company, New York. 5×7¾ in. 214 pages. $1.25.

Under this title Professor Patten solves an economic problem by the aid of biology. The problem is whether the temporary surplus, which forms part of each year's product through human effort, can be transformed into permanent conditions or into mental traits. On the possibility of this depends all progress. The answer is sought in a study of biologic life, as a field the changes in which are parallel to those of economic life. Even an epitome of the analogy thus presented in this original and striking essay would exceed the present limits. It is not perfectly easy reading for the non-scientific reader, but it is simplified to the extent it will bear, and very clearly presented to those who will take care to understand. There is, of course, a certain analogy between "ecology"—the term here preferred to economics, as free from technical limitation—and biology; for there is an analogy between the life of the community and that of the individual. There is also an analogy between a social and a physical science, as ecology and biology; for physical forces have to do with each. But the analogy between these two fields is limited; they but partly coincide; man and society are dominated by superphysical as well as physical forces. While Professor Patten does not seem to press the analogy beyond its worth, he sometimes so expresses himself as to tempt that way a reader who is not on his guard; *e.g.*, "an ethical impulse begins in improved bodily mechanisms." His conclusions run counter to some widely held doctrines in economics and in education. "Progress is the development of the strong, not where they are strong, but where they are weak;" and the strongest men are weak in some point. "Education cannot improve natural characters"—the strong side—it is for the strengthening of the weak side of nature. "Men and women tend to be different. They must be kept on an equality by an education that shall give to each sex the qualities that are natural to the other." So in the field of reform: "Every class must give its strength and characters to other classes, and each race to its neighbors. Then a new surplus will appear," the basis of continued progress. The whole course of thought which issues in these conclusions is eminently fresh and suggestive.

History of Woman Suffrage (The). Edited by Susan B. Anthony and Ida Husted Harper. Illustrated. In 4 vols. Vol. IV., 1883-1900. Published by Susan B. Anthony, 17 Madison Street, Rochester, N. Y. 6×9½ in. 1,144 pages.

This volume covers the history of the woman's rights movement during the past two decade

and summarizes the present state of the law in all the American States not only as regards the voting and office-holding privileges of women, but also as regards the whole field of their civil rights. The editorial work is well done, and the narrative of events in nearly all the commonwealths is compact with significant facts. The work, therefore, is of value—particularly for reference purposes—to the critics of the movement as well as to its advocates. The defeats are recorded as fully as the victories—though of course the arguments presented by the opponents are not recorded with anything like the fullness accorded to the arguments in its favor. The defeats—except that in Kansas in 1894—seem not in any measure to have discouraged the suffragists. In each State where equal suffrage has been twice submitted to the voters—Colorado, Oregon, and Washington—they point out that the suffragists were much stronger at the second election than at the first. In most of the recent Western campaigns the chief supporters of woman's suffrage have been the Populists and Silver Republicans. The regular Republican conventions have been noncommittal and the Democratic conventions hostile toward the movement.

Human Destiny in the Light of Revelation. By John F. Weir, M.A. Houghton, Mifflin & Co. Boston. 4½×7 in. 186 pages. $1, net.

This book is founded on the dualistic philosophy. Its teaching may be summarized briefly as follows: There are two worlds, a physical and spiritual, a natural and supra-natural. Science deals with the first, revelation deals with the second. Man by nature is of the earth, earthy; he is not a son of God. He was not made in the image of God. The statement in the first chapter of Genesis, that God made man in his own image, refers to a perfected creation, a perfect man. The statement in the second chapter of Genesis, that he was formed of the dust of the ground, states the historic fact, and in this it is not affirmed that he was made in the image of God. The divine life, which alone is capable of transforming man into God's image and making him a son of God, was brought into the world by Jesus Christ, and it is only through JesusChrist that men are made in God's image. They then become partakers of his nature, and so sharers in his destiny. The author leaves us in doubt respecting those patriarchs and prophets of the Old Testament dispensation who were created before Jesus Christ, and those men of the pagan world who have never heard of him. The writer makes full and large use of Scripture in support of his theory, but the Scripture which he uses seems to us, in many cases, not to justify the conclusions which he deduces; thus: "It is plain that man was not created a child of God in the order of nature; for it is said that 'the creature waiteth for the manifestation of the sons of God'—that is, for that new birth, 'of the Spirit,' which implants in man 'the divine nature.'" But "manifestation" is not equivalent to "creation." The very fact that the creation waiteth for the manifestation of the sons of God indicates that sonship already exists, though dormant, hidden, undisclosed. The volume will be interesting to the student of Scripture, but we do not think it will carry conviction to the average modern mind. Its scheme of life is too unnatural, the critic would say too artificial, the author would perhaps say too spiritual.

Human Personality and its Survival of Bodily Death. By Frederic W. H. Myers. Longmans, Green & Co., New York. In 2 vols. 6×9⅛ in. $12. Reserved for later notice.

In Piccadilly. By Benjamin Swift. G. P. Putnam's Sons, New York. 5×7½ in. 264 pages.

A wild and tumultuous tale dealing with primitive passions in modern fashionable London. One always feels in Mr. Swift's books that he really should have been a tragic poet of the Elizabethan age rather than a modern realistic novelist. He uses an abrupt staccato style; his characters are mostly unlovely and often unreal; he often "writes at the top of his voice;" he has no sense of humor; nevertheless there are here and there flashes of real power and something very like real genius. This story of jealousy, illicit passion, hatred, and murder is far from pleasant, but it has virile force, nevertheless.

Italy and the Italians. By Edward Hutton. Illustrated. E. P. Dutton & Co., New York. 5⅛×8 in. 343 pages. $1.50, net.

Mr. Hutton's impressions of Italy are printed on exquisite paper, as befits the often exquisite thought—a thought peculiarly attuned to those subtler charms of the Peninsula which are apt to escape the quick traveler. In Mr. Hutton we have a writer who seems to have lived in Italy, to have absorbed it, to have been absorbed by it, not merely to have seen it in a cursory manner. His language seems instinctively poetic, and we see through a poet's eye Genoa, Pisa, Siena, Orvieto, Rome—in fact, the principal Italian cities. We see notable personages too, and at close range: for instance, the Pope, the King, Cardinal Rampolla, the poet Carducci, the novelist Foggazzaro, and the dramatist Gabriele d'Annunzio. The last named becomes a somewhat more interesting character than in other descriptions of him. Mr. Hutton acknowledges that this Italian is "not without the words of the sensualist," in which madness he, like all in its grip, becomes "minute, dreary, infinitely infinitesimal." This, however, seems almost forgotten in the enthusiastic phrases which describe the genius of one who has often been regarded principally as a *décadent*. Another interesting allusion in this interesting book concerns the talent of the late Mr. Shorthouse. Mr. Hutton declares that "'John Inglesant' has caught more of the spirit of Italy than has any other book;" undoubtedly he meant to add "by a foreigner."

Jewish Ceremonial Institutions and Customs. By William Rosenau, Ph.D. Illustrated. The Friedenwald Co., Baltimore. 5×7½ in. 193 pages.

An interesting book, well illustrated. A note worth making is that at the present time no divorce can take place according to Jewish law except upon mutual agreement of husband and wife—a great mitigation of the Mosaic rule.

Leavening the Nation: The Story of American Home Missions. By Joseph B. Clark, D.D. The Baker & Taylor Co., New York. 7½ in. 362 pages. $1.25, net.

Reserved for later notice.

Mazzini. By Bolton King, M.A. E. P. Dutton & Co., New York. 5×8 in. 380 pages. $1.50, net.

This biography is entirely worthy of such admirable paper, print, and binding. It is a dignified, painstaking, acceptable account of a great dreamer's life and thought. More nearly than any other attempt to deal with either, this book puts that life and that thought in truer perspective with other men's lives and other men's thoughts. The present volume is not only interesting personally and politically; a sufficient period has now intervened since Mazzini's death (1872) to enable us to judge both the man and the politician. As we turn page after page of this appreciation, Mazzini the ethical teacher looms luminously rather than Mazzini the man or Mazzini the statesman. When he was in the twenties, his inspiration of duty, and his conviction that all morality rested on an ideal, seemed to be as stimulating as during his last heroic days. Happiness was never the end of his life, but duty. Hence Mazzini's greatness as a man, revolutionist, politician, thinker, teacher, was purely that which belongs to character. Circumstance or status—the things which environ so many men's lives, warping them, or unnecessarily or unreasonably magnifying them—had little or nothing to do with the development of Mazzini's character. If he had not been a revolutionist, if he had not been a republican, if he had not been an enthusiast for unity during apparently hopeless years, his character must still have stood out beyond those even of such distinguished co-laborers as Cavour, Manin, Garibaldi, and Victor Emmanuel. Fortunate it was for an often unpractical man that he had such associates—especially Cavour. Wherever we see Mazzini, as described by his latest biographer—during the 1831 revolution, at Marseilles, Geneva, London; during the 1848 rising and the all too short period of the Roman Republic, and then during the glorious days of the final welding of Italian unity—we learn from him, not only that democracy is the ideal government, not only that unity and peace must finally grow out of disintegration, but that society cannot rest on morality alone—it must also have religion—and, above all, that the spiritual, not the material, is lastingly paramount.

My Woodland Intimates. By Effie Bignell. The Baker & Taylor Co., New York. 5×7½ in. 241 pages. $1, net.

All who are pleased to listen to true tales of how little wild creatures may live on friendly and confiding terms with human beings who prove themselves worthy of such distinction will enjoy this volume of quiet nature stories.

Pastoral Visitation. By the Rev. H. E. Savage, M.A. (Handbooks for the Clergy Series.) Longmans, Green & Co., New York. 5×7 in. 182 pages. 60c.

Specially designed for the instruction of Anglican clergymen.

Phillips Brooks. By William Lawrence. Houghton, Mifflin & Co., Boston. 4½×7 in. 51 pages. 50c.

This is the address delivered on the 23d of January, the tenth anniversary of the death of Phillips Brooks. It is published just in time for Easter, and is an appropriate Easter gift. Edward Everett Hale is reported to have said that it is the best interpretation of Phillips Brooks and his work that has been given. We certainly think it is the best that we have seen in anything like so brief a compass.

Principles of Criticism (The): An Introduction to the Study of Literature. By W. Basil Worsfold, M.A. (New Edition.) Longmans, Green & Co., New York. 5×7½ in. 256 pages. $1.12, net.

A new edition of a condensed and well-written survey of the general subject of literary criticism, with citation of principles from Plato, Aristotle, and the earlier and later critics, both Continental and English, and with a discussion of the various forms of literary art.

Proverbs and Common Sayings from the Chinese, Together with Much Related and Unrelated Matter, Interspered with Observations on Chinese Things in General. By Arthur H. Smith. (New and Revised Edition.) The American Presbyterian Mission Press, Shanghai. 6×9½ in. 403 pages.

Publications of the Mississippi Historical Society. Edited by Franklin L. Riley. Vol. VI. Printed for the Society, Oxford, Miss. 6×9½ in. 567 pages.

Several of the papers contained in this volume are of National as well as State interest. Sociologists all over the country will be interested in Colonel J. H. Jones's compact account of "Penitentiary Reform in Mississippi." It is written in a spirit of fine humanity, and frankly recognizes that a negro legislature took the first steps to suppress the horrors of the convict lease system, and that the first white legislatures after the overthrow of negro government permitted the abuses of the system to develop. The final overthrow of the system, instead of bringing the financial losses which the materialists used to anticipate, has opened the way for a system of State employment which is more than self-supporting. The long chapter on "Suffrage and Reconstruction in Mississippi" is of even wider historical interest, and explains better than any recent work on the reconstruction period how the South was led to reject the Fourteenth Amendment, when its acceptance promised to restore the Southern States to their old places in the Federal system without negro suffrage. This offer was, without doubt, made in good faith by the overwhelming majority of the Republican Congress, and had it been accepted the Fifteenth Amendment could not have been adopted.

School History of the United States: Being a Revision of a Brief History of the United States. By Joel Dorman Steele, Ph.D., F.G.S., and Esther Baker Steele, Lit.D. The American Book Co., New York. 5½×8 in. 432 pages. $1.

Selection of the Shorter Poems of Wordsworth (A). Edited by Edward Fulton, Ph.D. The Macmillan Co., New York. 4×5¾ in. 181 pages. 25c.

This latest addition to Macmillan's "Pocket American and English Classics" is edited with an introduction by Professor Edward Fulton, of the University of Illinois. It presents

an ample selection from the shorter poems of Wordsworth, and has an introduction of considerable length, which deals with Wordsworth's biography, the influences which were brought to bear upon him, his theory of poetry, his philosophy of life, and the quality and art of the shorter poems. The volume is supplied with notes.

Socialist and the Prince (The). By Mrs. Fremont Older. The Funk & Wagnalls Co., New York. 5×8 in. 309 pages. $1.50.

Another novel in which the contentions of labor and capital form the web through which the thread of a love-story winds its way. The battle is waged in this instance, not in Wall Street, but in San Francisco, which is a welcome variation; and the burning question is not the matter of a coal strike or a corner in stocks, but of Chinese labor, the date of the story being that of the anti-Chinese labor agitation of some years ago. Paul Stryne, the workingmen's leader, is the best-drawn character in the book; his love-making to the capitalist's daughter, his mastery of his followers, his defection from their cause at a critical moment in a political campaign, furnish chapters of intense and dramatic interest.

Sophocles. Translated by John Swinnerton Phillimore, M.A. Illustrated. Longmans, Green & Co., New York. 5×7⅛ in. 355 pages. $2.

See the note under Euripides in another column.

Spirals in Nature and Art: A Study of Spiral Formations Based on the Manuscripts of Leonardo da Vinci. By Theodore A. Cook, M.A., F.S.A. Illustrated. E. P. Dutton & Co., New York. 5⅛×8 in. 200 pages. $2.50, net.

The accomplished author of "Old Touraine" has now published an ingenious study of spiral formations, specially based on the manuscripts and work of Leonardo da Vinci. Leonardo was not only great as a painter, but also as an architect, scientist, engineer, mathematician, biologist. Through him we realize that certain natural laws bind an architect's work as they bind the growth of all organic structure, and in the present essay Mr. Cook suggests one of these laws. The investigation of spiral forms in nature is still incomplete, but much has been done by our author in his new volume to show how they have been and may be adapted in architecture.

Studies in Christian Character, Work, and Experience. By Rev. William L. Watkinson. In 2 vols. The Fleming H. Revell Co., New York. 5×7⅛ in. Per vol., $1, net.

These two volumes of brief sermons, like "The Blind Spot" and "The Bane and the Antidote," by the same author, exhibit insight and abound in illustrative writing that really illustrates. Mr. Watkinson does not hesitate to emphasize the reverse aspect of a truth, after stating its converse. His way of saying things is eminently terse, clear, concrete, and practical.

Studies in the History of Educational Opinion from the Renaissance. By S. S. Laurie, A.M., LL.D. The Macmillan Co., New York. 5×7¼ in. 261 pages.

In this excellent book Mr. Laurie does not try to treat the whole question of education from the Renaissance to our own times. Instead, he adopts a far more interesting and popular method: he selects representative men from the fifteenth century to the present as subjects for his admirable appreciations; for instance, such educationists as Erasmus, who died in 1536; Montaigne, who died in 1592; Bacon (1626), Milton (1674), Locke (1704), and Herbert Spencer, who, happily, is still living. Mr. Laurie's characterization of these and other men is striking. Of course he calls Montaigne and Locke Rationalists, and Roger Ascham a Humanist, but Comenius is a "Sense-Encyclopædist," Milton is a "Classical Encyclopædist," while Spencer is a "Modern Sense-Realist." According to Mr. Laurie, the roots of the Renaissance are to be found further back in the Gothic Age than we sometimes think. Certain precursors of the Renaissance are evident enough in the Middle Ages, it is true—the Crusades and the age of chivalry, the beginnings of national vernacular literatures, and, above all, the freedom of discussion at the mediæval universities. These elements, however, in the opinion of many, are not so notable in foreshadowing the Renaissance as in adding distinction to the period of scholastic philosophy, cathedral schools, and university foundations—to the age of Dante, Giotto, St. Thomas, St. Francis, St. Bernard, and St. Louis.

Story of the Churches (The): The Presbyterians. By Charles Lemuel Thompson, D.D. **The Baptists.** By Henry C. Vedder, D.D. The Baker & Taylor Co., New York. 4½×7 in. Per vol., $1, net.

Illiteracy is in more degrees than is popularly supposed. The church member ignorant of the history of his own Church is not free from an illiteracy that is not creditable. These outlines leave less excuse for it than the big books hitherto dealing with the subject. What every church member ought to know is here presented in clear and compact form, sufficiently condensed for the limitations of busy people. So briefly is the story told as to make it easy for one to learn also about other churches than his own—an accomplishment now rare, but most desirable.

Theory of Education in Plato's "Republic" (The). By John E. Adamson, M.A. The Macmillan Co., New York. 5×7¼ in. 258 pages.

This is a book of no merely antiquarian interest. Plato is perennially fresh. His theory of education touches modern needs at many points, at none more than in regard to the social interest in education, the making of good citizens, for which a purely individual interest has too often been substituted. Those who are minded to turn from the new wine of our modern educational literature to the old wine of Plato's Academy will find Mr. Adamson's book not only instructive, but charming in its setting forth of principles thought out so long since, and still tasking wisdom to apply. According to Plato, religious and moral training in reverence toward God and the family virtues is primordial. In this a powerful factor is literature. But one must guard against the dangers of imitation. Individuality and self-reliance must be cultivated. The teacher must efface himself, not impress himself upon his pupils; to superintend and guide is his

sole function. Æsthetic and intellectual training are essential constituents of moral culture; the beautiful and the true are intimately related to the good. "The end of a 'musical' education is a good character." Other chapters deal with physical culture, social welfare, the cardinal virtue. But one may question if Mr. Adamson rightly conceives of patriotism as "a dangerous emotion." Defined as love of one's countrymen as a brotherhood, rather than of one's country as a place to make one's fortune in, only the lack of patriotism can be dangerous.

Theism. By Borden P. Bowne. Comprising the Deems Lectures for 1902. The American Book Co., New York. 5⅛×8⅛ in. 323 pages.

In this largely augmented revision of his work on "The Philosophy of Theism" Professor Bowne holds closely to the essentials of theistic argument, intent wholly on clearing up and settling its logical principles. Not, however, as if the issue between theism and its contradictories rested on logic. The office of logic ends with determining the correctness of the process of reason from premiss to conclusion—a purely regulative function. Tested thus by logical principles, atheism is shown to be "a mental outlaw," and "philosophically illiterate and belated." Viewed as a presentation of the logical validity of the theistic argument, Professor Bowne's outline might be called "the Logic of Theism." But he admits that the entire argument rests on the basis of "faith;" he insists that it must so rest, and rests securely so. Faith is rooted not in logic, but in life, in the mind's necessity of self-realization and self-preservation. The fundamental realities are the principles by which we live, and live our best life. These are assumed by an act of faith in the essential truthfulness of life and reality. He who will assume nothing of this cuts away the basis of science as well as of religion. But, so much being assumed, the issue between theism and atheism is virtually settled. Regarding these as rival hypotheses for the explanation of the cosmos and of man, it appears that while theism cannot be "proved" without begging the question, it cannot be denied without ending in absurdity. Atheism, as Professor Bowne observes, "is a kind of intellectual parasite." It has flourished less through any vitality of its own than on the faults of some theistic arguments. The thorough work in theistic thought accomplished during the past generation has bereft it of this nutriment, and "the atheistic gust" has mostly blown over. Professor Bowne has himself contributed to this, especially in the field of epistemology, where the suicidal nature of atheistic thought is demonstrated. Theism still has its puzzles, to which atheism has given more attention than to its own desperate ones. The problem of "the One and the Many," the inner relation of the world of individuals to God, is one of these, and here Professor Bowne himself is less clear than elsewhere. Theism will not be perfected till it has absorbed all the truth there is in Pantheism, and this Professor Bowne does not seem to have quite done.

Two Heroes of Cathay: An Autobiography and a Sketch. Edited by Luella Miner. The Fleming H. Revell Co., New York. 5×8 in. 238 pages. $1, net.

Reserved for later notice.

Under the Rose. By Frederic S. Isham. Illustrated. The Bowen-Merrill Co., Indianapolis, Ind. 5×7½ in. 427 pages.

A love story of the time of Francis I. of France and Charles V. of Spain; the principal scenes are laid in the court of the former and the tent of the latter. There are princes and princesses to spare, and enough jesters to amuse them—the hero being a "fool," who came very near to playing a most serious joke upon himself.

"Unofficial:" A Two Days' Drama. By Hon. Mrs. Walter R. D. Forbes (née Farwell). D. Appleton & Co., New York. 5×7¼ in. 275 pages. $1.

The combination of several situations which possess the inherent attractiveness peculiar to the staples of the story-teller's art are so strung together as to make this little volume an entertaining companion for a leisure hour when one wants to read something very light indeed.

Veronica. By Martha W. Austin. Doubleday, Page & Co., New York. 5×8 in. 256 pages. $1.50.

One charm of this prose idyl lies in its sympathy with nature, appreciation of her moods, and acceptance of her ministries. It is a love story, and keen and delicate insight is displayed in depicting the tortures of a constant by an inconstant heart, and in showing the broadening and strengthening of the former through doubt as through faith.

We Shall Live Again: The Third Series of Sermons which have Appeared in the New York Sunday Herald. By George H. Hepworth, D.D. E. P. Dutton & Co., New York. 5¼×7¾ in. 271 pages. $1, net.

Of the more than fifty sermonettes in this collection, which takes its title from the subject of the first, a large number open windows toward the world of spirit. Dr. Hepworth felt himself a citizen of that world as of this, and the uplifting influence of it pervades his thought. Life was to him worth living, and these short sermons to the readers of the New York "Herald" are pointed with an aim to make it so.

What Manner of Man. By Edna Kenton. The Bowen-Merrill Co., Indianapolis, Ind. 5×8 in. 300 pages.

This is a modern version of "Prometheus Bound," the Prometheus being a woman whose martyrdom comes when she discovers why her artist-husband married her. Thayer, the artist, paints the souls of women; he is equal to heroic measures in bringing the soul to the surface while studying the embodiments transferred to his canvas.

Wisdom of James the Just (The). By Right Rev. W. Boyd Carpenter, D.D. Thomas Whittaker, New York. 5×7½ in. 253 pages. $1.20, net.

The Bishop of Ripon assumes that the Epistle of St. James is an epistle and was written by James; he does not go into the critical discussion of this New Testament contribution to Hebrew wisdom literature. His comments are exegetical. His work is an elaborate untechnical commentary.

Correspondence

A Letter from Senator Hoar

To the Editors of The Outlook:

I have seen in one of the papers that The Outlook has stated lately that I had reproved or rebuked the President of the United States for interfering with legislation, and, in commenting on that, added that I formerly made a public complaint of persons who ventured to exercise their constitutional right of petitioning Congress or the Senate.

I have done neither the one nor the other, and the statement of The Outlook rests on a total misunderstanding of what I said.

A Senator stated on the floor that a bill which he desired to have taken up and passed was approved by the President and one of the Heads of the Departments, and that the President, although he had shortly before vetoed a similar bill, was now satisfied that the bill ought to pass. Of that statement I complained, calling attention to the fact that such statements as to the opinion of the Crown are always held a breach of privilege in the British Parliament, and I urged that nobody had the right to undertake to influence legislation by statements of the opinion of the President; to which I added that "the time for the President to make up his mind about legislation is after we have passed it and not before, unless he avail himself of his constitutional right to make recommendations in his messages, which is the proper way."

I did not in the least reprove President Roosevelt, and did not complain that he had in any respect departed from propriety. All that I complained of was the habit that has grown up among some of the Senators of claiming to be special depositaries of the President's wishes.

Second. I never complained of the right of petition, or uttered a word or had a thought inconsistent with it. Some years ago there was a proposed treaty agreed upon between our State Department and the British Minister which provided, among other things, that when any question came up between the two countries, it should be left to a tribunal which should contain two Justices of the Supreme Court of the United States. It also provided that other nations should be invited to accede to that treaty. We have only nine Judges of the Supreme Court of the United States. It takes five for a quorum. So if that treaty had become law, and we had had a question with Great Britain grave enough to be referred to that tribunal, we must have withdrawn two of our Judges; and if two of the others—all of them being men of an advanced age—had happened to be at that time ill, we should have had a bare quorum to settle the greatest constitutional questions which might affect the fate of the Republic.

Further than this. The treaty provided that any other countries that saw fit might become parties to it. So we might have made treaty oblgations which would require the taking from their duties for a long period of time the whole of the Supreme Court of the United States, or a majority of it. The investigations which might come up might take, as the Canada dispute has taken already, a good many months. We might have boundary questions, like the Venezuela case, or questions of commercial or maritime rights, like the Canada fisheries case, or like the Behring Sea sealing question. In other words, the Hay-Pauncefote treaty, as it stood, was utterly preposterous.

Now, before the treaty had been printed, and before the papers accompanying the treaty had been sent to the Senate and laid on the table, the press, and especially the religious press, was clamoring that we should adopt the treaty without delay and without amendments. One well-known paper, published in my own city, said: "Let the Senators stop talking about it and vote and go home." A very worthy orthodox minister in Worcester preached a foolish sermon from his pulpit denouncing the Senate for thinking that such a humane measure in the interests of peace needed any discussion. Then the petitions began to come in—petitions signed in utter ignorance of what the petitioners were talking about.

Now this was not simply harmless folly.

I was very eager at that time to get this treaty ratified with proper amendments. I got the pledges of many Senators, who would otherwise have voted against it, that if I would get certain amendments, among others one modifying this provision in regard to the Judges of the Supreme Court, they would vote for it. I got the votes of eleven Senators, nearly enough to secure its passage by the necessary two-thirds vote, by that amendment. But this public clamor which came from the press and the pulpit made it much harder for us to get Great Britain to amend it. The trouble with this angry talk about diplomatic matters is that the other side to the bargain, when we try to get them to come to our terms, says to our diplomatic agents, "Why, your own people are for this thing as it is. Your newspapers are writing articles for it. Your clergymen are preaching for it, and your citizens are petitioning for it." It is not a good Yankee method of making a bargain to have an agent in the midst of his trade reviled by his principal and employer because he does not come at once to the other side, unless the other side is to be expected to dictate the terms.

What I have said in this letter is in substance what I said in the Senate.

I am, with high regard, faithfully yours,

GEORGE F. HOAR.

Committee on the Judiciary, United States Senate, Washington, D. C.

[In this letter Senator Hoar states two principles: from the first we dissent; with the second we agree. In our judgment, the President occupies a position much more nearly akin to that of the Prime Minister than to that of the King in England. The King has no politics and belongs to no party. The President, like the Prime Minister, is the official leader of the party which has elected him to office. There is very good reason, therefore, why he should inform Congress of the views which he entertains as the leader of his party, and this has often been done by Presidents in other ways than through formal messages. We are inclined to think that it would be well if the members of his Cabinet had seats in the House of Representatives and could be questioned on the floor of the House, as the members of the Government can be in the House of Commons. On the other hand, while it is quite legitimate for the press and the public to discuss the general principles involved in a treaty, as the principle of reciprocity involved in the Cuban treaty, and of an interoceanic canal involved in the Colombian treaty, the details should always be left to be settled by the authorities in Washington, and, in our judgment, those details should be discussed privately in executive session, and for the reasons which Senator Hoar has so admirably stated.—THE EDITORS.]

Lend-a-Hand Book Mission

To the Editors of The Outlook:

I am constantly asked for information in regard to the Lend-a-Hand Book Mission. This was its origin. In 1892 a Southern minister and a teacher applied to me for the gift of second-hand publications to give to people in the rural districts who had no money to pay for them. Generous donations were sent, which were followed by touching expressions of gratitude.

Other calls received a liberal response. From this humble beginning has arisen a wide educational movement under the name of the Lend-a-Hand Book Mission.

Its object is to collect books and periodicals which the owners have read and laid aside, and place them in communities where the people are scantily supplied.

We are now confronted with new and important opportunities and responsibilities. In going from city to town and village the past winter, we everywhere found leading men and women of the South fully comprehending the ignorance and destitution of dwellers in remote places, and they are making energetic efforts to place higher mental advantages within the reach of the masses.

I have attended meetings of the Woman's Clubs in several States, and am greatly interested in the very successful philanthropic work they have entered upon. They are sending traveling libraries into the rural districts. Each library consists of from fifty to one hundred useful and entertaining books; one-third are for adults and the remainder are for children. A library remains in a town from two to six months, and then is transported to another equally needy community.

The country people who read these

books are kind, warm-hearted, and honest, with good capabilities, but lack development.

Some of the Woman's Clubs have so many applications on file that it is impossible to supply the demands, and people are obliged to wait for weeks before their turn comes to receive a library.

The value of providing useful literature cannot be overestimated. I have talked with this class of Southern people, and understand their aspirations and necessities. They have enlisted my sympathy and interest, and I wish to make a strong plea in their behalf.

Thirty traveling libraries through the Lend-a-Hand Book Mission have been presented to some of the Woman's Clubs. They ask and need our continued help. So many requests are coming to this Mission that at least one hundred and fifty traveling libraries are needed to carry forward this part of our work. The books most called for are "Black Beauty," "Ben-Hur," the Henty books, "Little Men," "Little Women," "Chatterbox," "Pilgrim's Progress," "Beautiful Joe," "In His Steps," "Adam Bede," Dickens's "Child's History of England," "Five Little Peppers," Phillips Brooks's Sermons, "Alice in Wonderland," etc. These and other books of a similar character are carrying brightness and knowledge into thousands of obscure homes.

Sunday-schools are constantly replenishing their libraries. What becomes of the old books? They would furnish excellent food for hungry minds. Town and city libraries sometimes have duplicate copies of volumes, which, after their early popularity has passed, would be a great boon to less fortunate libraries.

I have visited some of the State prisons. Convicts are especially glad to receive the "Youth's Companion" and the "Christian Herald." The wardens are uniformly polite, and consider it a privilege to give helpful publications to the unfortunate prisoners under their charge. Magazines, juvenile Sunday papers, Bibles, Scripture and picture cards can be used to great advantage.

All offers of reading should be made to me. Please do not send packages to the Lend-a-Hand Office, Boston, as this is my post-office address only, and it is not a depot for reading supplies.

Please send me a list of what has been collected, and I will reply, giving information to whom and to what place in the South your reading material can be forwarded. The freight must be *prepaid* by the donors.

This useful work of making thousands of restricted lives richer and happier has no boundary line, and its influence cannot be measured.

SARAH P. BRIGHAM.

Lend-a-Hand Office, 1 Beacon Street, Boston, Mass.

The Mormon Attitude

To the Editors of The Outlook:

In your issue of February 14 you state that "testimony . . . was to the effect that *no* Mormon would run for political office without the consent of the 'First Presidency' of the 'Church.'" This statement will not be borne out by the facts, which are well understood in this section, and should have been known by the Senators from Utah, Idaho, and Colorado. The organization of the "Mormon Church" is most thorough and efficient, and it is true that no church officer would leave his church work for a political position which would take him away from his church duties, without resigning or securing leave of absence from his immediate superiors (not necessarily from the "First Presidency"). Would this not be true of any church organization? Any Mormon who is not an officer of the Church *would not* have to secure permission from any one.

With the practical abandonment of polygamy and admission of Utah as a State came a breaking up of the old division into Mormon and anti-Mormon parties and a readjustment along National party lines. It is claimed by the "Mormons," and believed by the unprejudiced "Gentiles" who are in a position to judge, that for the past fifteen years the "Mormon Church" has not in the slightest particular interfered with the political beliefs of the members of that body The writer of this letter is not a member of the "Mormon Church," but rather entirely opposed to their peculiar beliefs.

Boise, Idaho. J. R. F.

MEDICAL OPINIONS OF

Buffalo Lithia Water

"NOTHING TO COMPARE WITH IT IN PREVENTING URIC ACID DEPOSITS IN THE BODY."

Dr. P. B. Barringer, *Prof. Physiology and Surgery, University of Virginia:* "After more than twenty years of practice, I have no hesitation in stating that for prompt results I have found nothing to compare with **BUFFALO LITHIA WATER IN PREVENTING URIC ACID DEPOSITS IN THE BODY."**

"MAY BE RELIED UPON TO GIVE MOST SATISFACTORY RESULTS."

Dr. Alexander B. Mott, *of New York, Professor of Surgery, Bellevue Hospital Medical College, Surgeon Bellevue Hospital:* "I have made sufficient use of the **BUFFALO LITHIA WATER** to be satisfied that it **possesses very valuable therapeutic properties.** In the **Gouty Diathesis, Chronic Inflammation** of the **Bladder,** and other diseases affecting the urinary organs, it may be relied upon to give most satisfactory results."

"THE MOST VALUABLE MINERAL WATER IN USE."

Dr. Graeme M. Hammond, *of New York, Professor of Diseases of the Mind and Nervous System in the New York Post-Graduate Medical School and Hospital:* "In **all** cases of **BRIGHT'S DISEASE** I have found **BUFFALO LITHIA WATER** of the **greatest service in increasing** the **quantity of urine and in ELIMINATING** the **ALBUMEN.** In certain cases of **Melancholia,** accompanied by **excessive elimination of URATES** and **URIC ACID,** it is **often** the **only remedy necessary.** In **GOUT** and **RHEUMATISM** it is highly beneficial. **I have long regarded BUFFALO LITHIA WATER** as the **most valuable mineral water in use."**

BUFFALO LITHIA WATER is for sale by Grocers and Druggists generally.

THE absolute purity of the Royal Baking Powder makes it pre-eminently the most useful and wholesome leavening agent known. Containing no lime, alum, phosphate, or other impurity, it leaves no alkaline or acid residuum in the food, and its use insures pure, light, and sweet bread, biscuit, and cake, that are perfectly digestible and wholesome whether hot or cold, fresh or stale. Its leavening power has been determined the highest whenever tested by official authority, and physicians, chemists, and writers on food hygiene commend it for its sterling qualities.

The Outlook is a Weekly Newspaper and an Illustrated Monthly Magazine in one. It is published every Saturday—fifty-two issues a year. The first issue in each month is an Illustrated Magazine Number, containing about twice as many pages as the regular weekly issue, and many pictures.

Price.—The subscription price is Three Dollars a year, payable in advance. Ten cents a copy.

Postage is Prepaid by the publishers for all subscriptions in the United States, Hawaiian Islands, Philippine Islands, Guam, Porto Rico, Tutuila Samoa, Canada, and Mexico. For all other countries in the Postal Union add $1.56 for postage.

Change of Address.—When a change of address is ordered, both the new and the old address must be given. The notice should be sent one week before the change is to take effect.

Discontinuances.—If a subscriber wishes his copy of the paper discontinued at the expiration of his subscription, notice to that effect should be sent. Otherwise it is assumed that a continuance of the subscription is desired.

How to Remit.—Remittances should be sent by Draft on New York, Express-Order, or Money-Order, payable to order of THE OUTLOOK COMPANY. Cash should be sent in Registered Letter.

Letters should be addressed:

The Tenement-House Bill

The delegation which went to Albany from the city of New York last week to protest against any changes in the amended Tenement-House Bill prepared by the Tenement-House Commissioner, and passed unanimously by the State Senate, is said to have been one of the largest and most influential that has ever been seen in Albany. Some three hundred citizens, including representatives from the tenement-house districts, went up on a special train, and some forty or fifty more went up on one of the regular trains. Both delegations visited the Governor, and received explicit assurance from him that no legislation would receive his approval which had the effect to impair the efficiency of the present law in the protection it affords to the poorer people in New York. A hearing was to have been given on the bill by the Assembly Committee which has it in charge, but the canal bill occupied the attention of the House until eight o'clock in the evening, so that most of the delegation had been compelled to return to the city before the Committee could be convened. The selected speakers, however, remained, and presented the cause of the people to the Committee, and they included, besides representatives of the Tenement-House Commission, others who represented the better class of builders. The opposition to the bill in its present form comes mainly from speculative builders, who wish to put up cheap and poor tenements, and owners of old tenements built before the present law, not constructed for tenement-houses, and unequipped with any proper sanitary provisions. These the law requires them to add, and to this some of the landlords object. The argument for the Commissioner's bill was tersely put by an Assemblyman from one of the river counties in private conversation with a staff representative of The Outlook. "We are," he said, "constantly passing legislation for the protection of fish and game in the country, and it seems as though we might legitimately pass legislation for the protection of women and children in the crowded sections of the great cities."

❀

New York's Canal Referendum

After an exciting contest in each house, the New York Legislature last week passed the bill submitting to the voters of the State the proposition to issue $101,000,000 worth of bonds for the construction of a thousand-ton barge canal in the place of the present Erie Canal. In the Senate the vote stood 32 to 14, in the House 87 to 55. In both bodies a small majority of the Republicans voted against the bill, while all the Democrats in the Senate and all but three in the House supported it. The division, however, was in no sense partisan. It was altogether sectional. The representatives of Greater New York and of Buffalo, without regard to party, supported the bill, while a majority of the representatives of the rural counties, without regard to party, voted against it. The smallness of the Democratic vote against the bill was due to the smallness of the Democratic vote from the rural counties not bordering upon the canal. The arguments used against the canal were the enormous cost of the project, the decreasing value of canals because of railway competition, and the injustice of taxing rural New York to cheapen the transportation of Western grain. The replies made by the friends of the canal are badly reported in the despatches, but are briefly as follows: (1) The cost of the improvement is less in proportion to the wealth of the State than was the cost of the original canal in 1817 or its widening in 1835. The

original canal cost the State $9,000,000, or $9 per capita for the million people then living in the State; the widening (and deepening) in 1835 cost $25,000,000, or $12 per capita; while the present project calls for an expenditure of $101,000,000, or less than $14 per capita at a time when the average wealth is treble that in the former periods. (2) Water transportation is still far cheaper than railroad transportation, and barge canals equipped with electric traction bid fair to furnish effective competition for railways for a long time to come. Not only would they lower the transportation rates for building materials, coal, and manufacturers' materials of all sorts carried by themselves, but they would regulate the charges imposed by the consolidating railroads. (3) The argument that the rural counties must not be taxed for the benefit of New York and Buffalo is untenable, as these cities, with barely one-half of the people of the State, contribute more than two-thirds of the State taxes in which the rest of the State takes an equal share. Many of the individual benefits of the canal reach nearly the whole State, and it involves no sectional injustice in the use of State funds.

❀

The Alternatives Presented

That the bill which has passed the Legislature will be signed by Governor Odell was virtually pledged in his letter accepting the nomination for Governor. The people of New York State must therefore proceed to educate themselves upon the great business proposition to be voted upon in November. Practically there are but two courses of action. Either the proposed barge canal should be constructed, or canal transportation should be abandoned. The latter course seems to us the more hazardous of the two. Yet this is the course prescribed if a majority of the people of New York vote "no" at the approaching referendum. It will not do to say that a vote against the barge canal proposition opens the way to the construction of a ship canal by the National Government. In every State many of the firmest believers in canal competition for railways would oppose this stupendous project for the National Government, because it could be inaugurated only as part of a bankrupting scheme involving corresponding appropriations for all other States represented by efficient log-rollers in Congress. The producers of the lake regions already have an open waterway to foreign markets through Canada. It is primarily for New York State that the canal is designed, and the State must and should meet the cost of the improvements demanded. Neither will it do to say that a vote of "no" at the referendum opens the way for the improvement of the present canal. This used to be true, but to-day the students of canal problems are practically a unit in declaring that the barge canal equipped with electric traction is the only businesslike proposition under modern conditions. It is this proposition which the great commercial bodies of New York City have indorsed as essential to preserving the city's commercial ascendency, and it is this proposition which canal advocates throughout the State indorse as essential to effective regulation of railway rates. The aggregate expenditure proposed is enormous, but is only the sum expended every year by the city government of Greater New York. If it promises to add as much to the future wealth of the State, it should be indorsed. We speak with diffidence upon the problem, but we prefer to risk the large expenditure to the abandonment of canal competition.

❀

Boss Brayton Defines His Position

Boss Brayton, of Rhode Island, appears to wear his crown—or rather wield his whip—with almost as easy an indifference to public condemnation as Boss Addicks, of Delaware. When interviewed last week by the New York "Evening Post's" New York correspondent, who has so forcibly exposed his misrule, General Brayton talked with the utmost calmness of the situation and answered freely and fully every question put to him —except one. In brief, his statement was as follows:

I don't think there is much outright vote-buying done; the voters are paid for their time, because they have to leave their work and come down to the polls. Sometimes that takes all day. The manufacturers in the State are really to blame for present conditions. Some of them haven't treated the party just right. The Republicans have never passed any legislation that would bother them, like the ten-hour law and things like that, until

there was such a strong demand from the labor people and the citizens that the party had to do it, and then, with the people voting against us because we didn't pass such laws, and the manufacturers not helping us as they should, we have been caught between two fires. . . . I am an attorney for certain clients, and look out for their interests before the Legislature. I am retained annually by the New York, New Haven, and Hartford Railroad Company. As every one knows, I act for the Rhode Island Company [street-railway interests], and I have been retained in certain cases by the Providence Telephone Company. In addition to these, I have had connections, not permanent, with various companies desiring franchises, charters, and things of that sort from the Legislature. I never solicit any business. It all comes to me unsought. You see, in managing the campaign every year I am in a position to be of service to men all over the State. I help them to get elected, and naturally many warm friendships result; then when they are in a position to repay me they are glad to do it.

Apparently this statement is as accurate as it is bold. The power of the machine in Rhode Island—and in every other State except Delaware—does not rest upon the personality of the boss, but upon the campaign-contributing interests for which he acts as agent. So long as the public conscience tolerates the giving of ill-disguised corruption funds by corporations and the receiving of ill-disguised bribes by voters and legislators, the boss system will endure and the removal of one agent will but make room for another. In conclusion, it may be noted that the one question which General Brayton declined to answer was the prospective fate of the bill repealing the special act forcing a barroom upon the people of Block Island, despite their vote. The repeal is demanded by well-nigh the whole public, but the boss seems to think the public interest in it will die down. The private interests, he knows, will remain alert.

❀

The Chicago City Election

In Chicago at the present time interest centers in the city election that is to take place Tuesday, April 7, when a Mayor and one-half the City Council are to be chosen. The opposing candidates for Mayor are Carter H. Harrison and Graeme Stewart. Mr. Harrison, the Democratic nominee, is now finishing his third consecutive term as Mayor of Chicago. Mr. Stewart, the Republican nominee, is a successful merchant and a member of the wholesale grocery house of W. M. Hoyt & Co. He is the Republican National Committeeman from Illinois, and a man of good personal standing in his community. The chief issue of the campaign is the traction question. Many of the most important street railway franchises expire on July 30 of the present year, and the questions involved in the renewal of those franchises have constituted for the last half-dozen years the most important topic of local political discussion. During the past winter the Council Committee on Local Transportation entered into negotiations over the question of franchise renewals with representatives of the companies, among the latter being Mr. Auerbach and Mr. Govin, of New York, representing Mr. J. Pierpont Morgan, and Mr. W. F. Harrity, of Philadelphia, the noted Democratic politician, representing the Widener-Elkins interests. The negotiations were broken off by the representatives of the companies, who claimed that the terms proposed by the city were too onerous. Mayor Harrison has recently said that Messrs. Harrity and Auerbach, during the progress of these negotiations, boasted to him of their power in National Democratic politics, and intimated that higher political honor might be in store for him if he would but assist them to secure the desired franchise renewals. The platforms of both the Republican and Democratic city conventions take progressive ground on the street railway question. Both favor State legislation authorizing cities to own and operate street railways. Both declare against franchise renewal grants for a longer period than twenty years. Both declare that any such grant must contain a clause reserving to the city the right to take over the property at or before the expiration of the grant. The chief difference appears to be as to the referendum. Mayor Harrison's platform demands that the people be given an opportunity to vote on the renewal grants before they shall become effective. Mr. Stewart's platform is silent on this phase of the question. Mr. Harrison, during the six years that he has been Mayor, has won favor with the people and has excited the enmity of some of the heavy financial interests by his stand on the traction question. He has, however, been the subject of considerable

criticism for administrative faults—particularly his failure to suppress gambling-houses and keep the streets clean. Mr. Stewart promises, if elected, to give the city a first-class business administration. His critics contend, however, that, with the traction question unsettled, no man should be elected Mayor of Chicago who is without a record on that question, which is the case with Mr. Stewart. The latter is subjected to some criticism, too—his friends claim unjustly—because his nomination came to him at the hands of a rather unpopular party machine. The favorite of the independent Republican element for the nomination was John Maynard Harlan, son of Justice Harlan, of the Federal Supreme Court, who polled seventy thousand votes as an independent candidate for Mayor in 1897. Without any organization to start with, Mr. Harlan secured more than a third of the delegates to the recent Republican city convention that nominated Mr. Stewart. There is also a full labor ticket in the field, but it is not expected to secure a heavy vote. The people of Chicago do not allow interest in a Mayoralty election to divert their attention wholly from the City Council, thirty-five members of which are to be elected at the same time. Chicago boasts of having the best Council of any large city in the country, and the nominations made—largely through the activity of the non-partisan Municipal Voters' League—assure the continued high quality of that body for the year to come.

❀

The Newark Indictments

There has never been any question that the frightful trolley accident in Newark, by which nine school-children were killed, was the result of criminal carelessness and recklessness. The only difficulty in fixing responsibility has been that the guilt is distributed among many people, all deserving of severe censure. Thus, not only were the trolley conductor and motorman clearly guilty of violating the regulations, but the superintendent and other operating officials of the trolley road were, it was shown, perfectly well aware that their rules were being violated daily, while the city officials were equally negligent in not enforcing the city by-laws, and the steam-railway company was also shown to be violating the city ordinances every day. None of these violations of law was slight or unimportant. The crossing was in any weather and at any time a most dangerous place—such a grade crossing as a proper railroad law would not permit to exist. Unfortunately, New Jersey has no Railroad Commission, and the attempt to carry through the Legislature a very moderate law for a Commission (a law the only fault of which is that it is not sufficiently stringent) seems unlikely to succeed. The Newark Grand Jury has now acted with courage and independence. It has not only found indictments for manslaughter against the roadmaster, general superintendent, division superintendent, and assistant superintendent of the trolley line, but also has gone to the fountain of authority, and has indicted the President, Vice-President, and executive officers of the North Jersey Street Railway Company. The list includes Mr. A. J. Cassatt, President of the Pennsylvania Railroad, Mr. John D. Crimmins, a well-known contractor and capitalist of this city, Mr. E. F. C. Young, a prominent banker of Jersey City. The Grand Jury takes the ground that the highest officials of the road are not only technically but morally responsible for the deaths of these children. It may be hoped that this direct placing of responsibility upon those highest in authority may have throughout the country the effect of increasing the watchfulness and administrative care which the officials of all such lines should undoubtedly exercise. The criticism has been made that in such a case as this it may be hard to secure actual punishment in the case of indicted officials who are only remotely concerned with the actual occurrence. It must be shown in this case that the executive officers either did know or should have known about the conditions at the crossing; the first is entirely improbable, the second may be held at least in theory. As to the responsibility of the officials who directly control the working of the trolley line in Newark there can be no question, and it may be added that equal responsibility rests upon the city officials who were willfully and perhaps corruptly blind to violations of the law. The citizens should watch for future violations of law as well as applaud prosecution for past offenses.

Labor Politics in England

The labor movement in England has reached a critical stage. Trades-unionists are beginning to separate themselves from the two existing political parties, drawing a hard and fast line of demarcation between Labor and Liberal or Labor and Conservative. The movement was initiated. in the first place by Mr. Keir Hardie, M.P., and now boasts a membership of over 800,000, the constituent elements being the large trades-unions and members of the Independent Labor party and other Socialist organizations. Up to this time the Miners' Federation has held aloof, and also the extreme Socialists represented by the Social Democratic Federation. At the last general election fifteen candidates were voted for, but only two, Mr. Richard Bell, M.P., and Mr. Keir Hardie, were returned to Parliament. Mr. Bell has since been censured for the assistance which he rendered to certain Liberal candidates. At the next general election it is quite probable that some fifty candidates will be named. This great movement is largely the outcome of the Taff Vale decision, a judgment which seriously and radically affected the whole position of trades-unions. The Amalgamated Society of Railwaymen, of which Mr. Richard Bell is Secretary, has been mulcted in damages to the amount of £23,000. Trades-unionists, resolved to alter by legislative enactment the law as thus interpreted, are determined to place their own representatives in the House of Commons. This new political movement on the part of trades-unionists is not in open antagonism to either party, although at the present moment it seems to be antagonizing the Liberals to a greater extent than the Conservatives. It is probable that in the final issue the Radical wing of the Liberal party will compel the Liberals to make some sort of "give and take" alliance with the labor men, apportioning to them one seat in each of the large double-member industrial constituencies, and receiving in return the support of the trades-unionists and Socialists in constituencies where labor candidates would be without any possible chance of success. Any other solution would probably mean the keeping of the Liberal party out of office for many years still to come, or at least a paralysis of that party as an engine of government if returned to power with a slender majority.

❀

Macedonia

According to last week's despatches from Constantinople, considerable dissatisfaction was expressed at the Austrian and Russian Embassies with the tardiness of the Turks in carrying out the Macedonian reform plan. The Embassies are unable to watch the manner in which the Porte fulfills or fails to fulfill its engagements, because they have not received copies of the code of regulations drafted by the Turkish Council of State for the application of the reforms. Dissatisfaction has also been expressed in Macedonia even with the long-desired provision that the taxes shall not be assessed by the same person who collects them. The prompt payment of the local officials, especially the gendarmerie, provided by the reform which the Powers have imposed on the Sultan, would seem to remove the chief cause of bribery, outrage, and oppression, and we may look for some relief from the oppressive course taken by the civil and military representatives of the Turkish Government. The Sultan must certainly be allowed sufficient time in which to institute the reforms to which he has agreed, though the continued arrival of Macedonian refugees in Bulgaria is a disquieting symptom. The Powers are bringing pressure to bear upon Prince Ferdinand of Bulgaria to keep the Macedonian revolutionary committees quiet. The region about Samakov in Bulgaria has been their headquarters for arming. Bands of brigands, representing the Macedonian committees, form in that region and march over the border. After some weeks' absence they return without arms, and are again equipped. They declare martial law and condemn to death those who do not fall in with their plans, or help support the cause by contributions of money. In this way they have intimidated the Christian subjects on the Turkish side of the border, and especially the Greek Christians, to whom they, as Bulgarians, are inimical. Last week the President of the Græco-English Byron Society received a letter from the Greeks of Macedonia complaining that, after waiting for centuries for deliverance from the Ottoman yoke,

"we are now scourged by the heavier oppression of brigand bands aided by the Bulgarian committees, who not only rob, but do not stop at murder, cruelty to women, and arson." It would therefore seem as if Turkey's recent mobilization of 240,000 men might find abundant police duty at home and defensive work on the frontier.

❀

La Grande Chartreuse

Last week The Outlook chronicled the French Parliament's refusal to authorize a continuance of the work done by many of the Roman Catholic male teaching orders, on the ground that they fomented discontent with the actual Government. By the new Law of Associations every association, religious or secular, must obtain Governmental authority to exist. This week we have to record the Parliament's action in refusing authorization to the commercial monastic orders. Of these, the Carthusian is the most important, as it is the wealthiest order in France. The Carthusians (or Chartreux) have long been employed in the manufacture of a cordial—chartreuse. Most of the money they make is nobly used in benefactions and in the foundation of hospitals, schools, and churches throughout the country in the neighborhood of their great monastery, as Abbé Lemire claimed in defending them in Parliament last week; he also presented a petition signed by nearly a hundred thousand inhabitants of the country surrounding the monastery begging that the Carthusians be not banished. Replying, M. Combes, the Premier, declared that the Carthusians should not be favored because they were rich, or because their departure would certainly mean serious loss to the region in which their mother-house—La Grande Chartreuse—was situated (the country just north of Grenoble). The fact was, he said, that the Carthusians had conducted an active propaganda against the Republic, culminating in the signature of their Superior-General to a recent pamphlet urging all citizens not to pay their taxes, and to boycott the Republican officials. By a vote of almost three to two, the Radical and Socialistic majority in the Chamber of Deputies then refused authorization to the Carthusians. It is evident to many friends of the Government, however, that the extreme and atheistic Radical wing is now bent upon a destructive policy towards all forms of religion. However necessary it may have been to banish from France those monastic orders which have been shown to be at enmity with republican government, it is not necessary to go beyond this and denounce the Concordat—a time-honored pact, now a century old, between the Vatican and the Government of France, assuring financial support, not to the monks, but to the priests and bishops, who are, as a rule, of the admirable class described by Halévy in "L'Abbé Constantin." It would be better for the extremists to follow the advice which Premier Combes, himself a Radical, gave to them last week. He would not say that the day for the denunciation of the Concordat would not sometime arrive, but declared that the time for its denunciation had not yet come; and he declared that the Government would maintain the Concordat if, on their part, the clergy would keep out of politics.

❀

Captain Mahan on Personal Religion

Before the Church Club of New York, Captain Alfred T. Mahan, of the United States navy, who is widely known as the foremost writer on sea power and allied subjects, spoke last week on the subject of "Personal Religion." It is rare that this subject is touched upon without some appearance of disingenuousness or sentimentality. Captain Mahan's address, notable of itself as coming from a man of his standing, was therefore the more notable because of its dignity, its transparent sincerity, and the persuasive beauty of both its substance and its form. The extent to which the Christian impulse is to-day languid he attributed to two immediate causes: the advance of science, by which God is revealing those forces which seem to some eyes to obscure him; and criticism of the Bible, which seems to necessitate a radical change in our ideas concerning the nature of God's revelation—ideas, as Captain Mahan tersely expressed it, "which being ours were not necessarily God's." Back of these immediate causes he placed, however, the ultimate cause—the habit of being governed by appearances rather than by love of God himself. For this reason a

certain benevolent feeling toward mankind has to a great degree been substituted for personal loyalty to God as the controlling impulse of the Christian life, and humanitarian activity put in place of the Christian life itself. The remedy for a languid Christian impulse, he declared, is the restoration of the personal direct relation of the soul to God as the prime object. This means that a man should seek to save his own soul, not from hell, but from sin; not for his own sake, but for the sake of God, because sin is hateful to God; not to satisfy himself, but to lay his life at the feet of him who gave himself for that life. A man's soul is not his only charge, but it is the one specially committed to him alone; as he fulfills that charge, so he shows his love to God. Then out of that love and out of that duty duly performed all other love and other duties will naturally flow. Love to man and service of man will then rightly be the fruit of Christian life instead of being substituted for that life. Such an address cannot be reported thus in outline without being marred and deprived of its best qualities; but we do thus report it because it states an aspect of religious truth that needs to-day especial emphasis. No ripple of philanthropy in the sea of human life ought to be regretted because it has extended so far that the original impulse which sent it on its course has been forgotten; but, on the other hand, it will be the end of all service for man if that impulse ceases to be exerted. It ought to be said, however, that the highest religious condition is attained when humanitarian service is more than mere benevolence, more than even the fruit of personal religious loyalty—when it is undertaken as one of the essential ways by which men can identify themselves with him who went about doing good.

❀

Elgar's Cantata "The Dream of Gerontius"

Three times last week Edward Elgar's "sacred cantata," "The Dream of Gerontius," was performed: once, on Monday, in Chicago, by the Apollo Club; twice, on Tuesday and Thursday, in New York, by the Oratorio Society. Edward Elgar, who four years ago was an obscure provincial musician, has written to Cardinal Newman's poem music which has called forth a great deal of comment, much of it praise, in England, in Germany, and now in the United States. The poem represents the death of a man, the passage of his soul in the company of his guardian angel up into the piercing presence of God, and finally down to languish and to be cleansed in purgatory. It is a curious commentary, not only on the mediæval character of this Roman Catholic poem, but also on the mediæval spirit of some modern Protestants, that two or three of the chorus in New York refused to sing because of the doctrines embodied in the cantata! With enthusiastic devotion, Mr. Elgar, who is a sincere Roman Catholic, has written music marvelously expressive of the mystical spirit of a mediæval church; but instead of relying on antique devices, he has called to his use all the resources which the modern development of music offers. And of these resources Edward Elgar is a proven master. He wields the orchestra with the confidence and sometimes with the daring of Richard Strauss. He weaves the voices of the chorus as only a master of counterpoint can, so that in the midst of ultra-modern harmonies every part has strong melodic value. He uses the solo voices, too, not for singing recitatives and arias, after the conventional fashion of Handel or Mendelssohn, but rather for singing a continuous melody, as Wagner uses them in his music-dramas. Indeed, Elgar's cantata bears much the same relation to the traditional cantata or oratorio that Wagner's work does to the traditional opera. The impressive chant-like *Proficiscere* of the priest and assistants as they bid the Christian soul go forth into the unknown, the celestial song of the soul as he wakes in the world beyond, the uncouth dissonances of the "hubbub" of demons, who ages past were disinherited, "dispossessed, aside thrust, chucked down," and now assemble, "hungry . . . to gather souls for hell," the majestic hymning adoration of the choir of angelicals as they sing their "Praise to the Holiest in the height," the burst of sound as the gaze of God enters the soul of Gerontius, the final quietude as the soul sinks content to suffer and be purged—so varied are the demands upon the

spiritually dramatic imagination of the composer. Like Verdi's "Requiem," the "Dream of Gerontius" witnesses to a composer who has a vivid religious faith, much as the cathedrals of France or the old morality plays are artistic monuments to the faith of men in other ages. Whether this work will separately long endure no one with real critical judgment is likely to say; but it will be strange if it does not endure as at least an influence in the future development of oratorio. The typical British "sacred cantata" has been an uninspired thing that has done much to vitiate English taste in music. "The Dream of Gerontius" has dealt a blow at the enervating musical tradition which has kept this form of music half-alive among English-speaking peoples.

❀

Jewish Socialists Take up Co-operation

Among the Jews in the United States the idealism of the race has for many years expressed itself largely in the enthusiastic advocacy of revolutionary socialism. At the present time, however, the social unrest among them has resulted in an effort to give their ideals an immediate application in industrial life. In other words, they are turning from declamations about the co-operative commonwealth that is to be, to practical efforts to establish now co-operation in the management of the stores by which they are served and the little factories in which they work. This new movement, we are informed by a reliable Hebrew correspondent, was really inaugurated about three years ago, but during these three years has grown until the New York society has a membership of six hundred persons, the Philadelphia society a membership of fifteen hundred, the Boston society a membership of three hundred, and other societies are being formed rapidly in other Jewish centers. The New York society has for over a year conducted "a large and prosperous hat and shoe and men's furnishing goods establishment, which sells the goods made by the Jewish labor unions of the East Side workers." Most of the purchasers are in some way partners in the undertaking, and all of them of course will share in the profits from their purchases. Very recently the New York society opened a tea store, and is hopeful of success along this line also. In Philadelphia the Jewish Co-operative Society has been in business for two years, and has recently purchased its own building. The hat and shoe stores conducted by the Philadelphia society have been prosperous and constantly growing establishments. In Worcester, Baltimore, New Britain, Newark, and other places where smaller societies have been started, plans for similar undertakings are being eagerly pushed. In some cases the capital for these undertakings is obtained by the sale of shares at five dollars each, and in other cases social entertainments are held to raise the needed funds. In New York the movement has awakened such popular interest that the Jewish daily paper "Forwards" now publishes a weekly department devoted to the co-operative cause, which is read with keen interest by the radicals of the Jewish quarter. In this country, under Gentile auspices, mercantile co-operation has never been a success; but it is possible that the business talent of the Jewish race, combined in this undertaking with its instinctive idealism, may lead to success.

❀

Peace for Ireland

Last week Mr. Wyndham, Chief Secretary for Ireland, introduced the Government's Land Bill in the House of Commons. As already foreshadowed in The Outlook, the measure largely follows the recommendations of the now famous conference recently held between Irish landlords and tenants, when, for the first time in history, a plan of land settlement was agreed upon by the two parties.

Nine-tenths of the discontent in Ireland seems to have arisen from agrarian distress. This discontent has, in turn, caused violence and sedition, making still unhappier an island unhappy enough by reason of falling prices for farm produce, industrial depression, absentee landlordism, and evictions. Conditions have improved, however, by reason, first of all, of Gladstone's Land Act of 1881. The great Liberal Premier and his coadjutors sowed the seed of which the Conservatives are now reaping the crop. The latter, however, are even outdistancing the Liberals in radical land reform. Mr.

Wyndham's bill is more sweeping than any measure ever presented by his political opponents; indeed, for proposing almost this very scheme Mr. Davitt was imprisoned in 1879. Mr. Wyndham's speech in introducing the new bill is likely to rank as the chief Irish event of our time. The great-grandson of Lord Edward Fitzgerald—the rebel who forfeited his life for the Irish cause—has gone a long way towards establishing his reputation as a statesman of the first rank.

Mr. Wyndham proposes to convert discontented tenants into contented proprietors, and at the same time amply to compensate the present owners. His system involves both cash and credit. He asks for a free grant-in-aid of $60,000,000 to be used to pay to the vender a percentage of the purchase-money; a percentage largest on small estates and smallest on large ones. A gift of $60,000,000—the first proposal by the Conservatives of such an outright bonus—is none too dear to pay for the settlement of the Irish land question; it would be cheap at a higher price.

While cash aid is necessary, we attach greater importance to the credit operation. This is to be conducted by capitalizing the land at $500,000,000 and issuing stock upon it in yearly installments of about $25,000,000, guaranteed by the Government, unredeemable for thirty years, and bearing interest at two and three-quarters per cent. This plan appears to be both safe and profitable, since (1) the land has a much greater value than the sum (five hundred millions) to be lent on it, and (2), borrowing at a low rate of interest, the Government will repay itself at a higher, as three and one-quarter per cent. is to be paid on sums necessary to be advanced in order to induce purchases. Further, it is announced that, under the new régime of peace, the present enormous annual cost of Irish administration (largely on account of the inordinately large constabulary force) will be reduced by $1,250,000. Thus, if the interest charged on the free gift of sixty millions be put at $1,975,000, the maximum annual net cost to taxpayers may not now exceed two millions, or, at a later time, $725,000.

There is to be a very long period of repayment—sixty-eight and a half years. The present landowners need not fear either confiscation or expatriation; they may retain their home demesnes and sporting rights, and continue as a support to industrial and social Ireland. Their land is to be appraised at values judicially established by the last Land Commission, and they are to be assured of a payment on liberal terms by the credit of the Imperial Government itself. The tenants may receive from the Government advances up to $2,500 on holdings in congested districts, and to $5,000 in non-congested districts. To all Irish tenants, however, past and present, the most astonishing and gratifying provision is that which includes evicted persons within the bill's scope. As reported in the despatches from London, any persons who within twenty years have been tenants may purchase holdings and obtain the necessary loans. The act, if passed, will take effect November 1, 1903.

The whole plan shows that the party in power is determined to go to a great length if it be convinced that Irish landlords and tenants are prepared loyally to co-operate in making its scheme a success. We believe that such co-operation—really a contract—may be secured, if for no other reason than that the British Government has not lost one cent from advances made to eighty thousand peasant proprietors under the previous and less radical Land Act.

No bill ever presented in Parliament has commanded more instantaneous and unanimous support. Conservatives, Liberals, Nationalists, were for the nonce of one mind. Colonel Saunderson, the extremest advocate of landlordism, spoke with enthusiasm of the measure, and Mr. John Redmond, the leader of Irish tenantry representatives, praised the sincerity of the Government, and even claimed that the adoption of its scheme would not only settle the land questions, but might ultimately result in the complete disposal of all the controversies between England and Ireland. With Celtic eagerness, many Irishmen are expecting immediate results of this wholesale nature. They may well be warned that, even with the main point of contention settled, industrial depression, undue taxation, educational and religious difficulties, remain. Mr. Wyndham's treatment of the main cause of Irish discontent, however, is not only a great improvement on his scheme of last year, but seems the

most promising effort ever made. We trust that a new era is about to dawn on a new Ireland.

❀

The Coal Commission Report

The question whether the operators were right or the miners were right is not the most important question which the Coal Commission report, summarized in these columns last week, has decided. In fact, it decides, as might have been anticipated, that neither party to the controversy was wholly right. It decides that the miners had a grievance, and that the operators were wrong in refusing to give any consideration to their grievance, for the report definitely adjudges them an increased wage. It decides that some of their claims were impracticable, for it adjudges against them on the question whether the coal shall be weighed. It condemns the State for leaving the operators to protect their own property by a coal and iron police which they pay for, a method which has been condemned again and again by public writers. It condemns the miners for acquiescing in crimes of violence perpetrated in sympathy with if not in support of the strike, crimes for which there is no justification, no excuse, scarcely a single apology. The Scotch verdict of "not proven" may be regarded as rendered on the charge brought against the miners' unions that they encouraged the crimes of violence, but they cannot be commended for having done all in their power to discourage such crimes. If the trades-unions were to expel from membership any man guilty of violence, and were to boycott any such person not a member of their order, it cannot be doubted that the crimes would be greatly diminished if not absolutely ended. It is, however, incidentally worthy of note that the murders, which were reported by some of the press as amounting to thirteen, have diminished, in the light of this investigation, to three in number.

But these aspects of the Commission's report are not the most vital nor the most important; there are two other aspects of this decision much more important: the illustration which it affords, first, of the right, and, secondly, of the power, of the public to intervene in a labor war in which public interests are concerned.

The doctrine of what is known as the "Manchester school" may be stated briefly in a sentence thus: Leave employer and employed absolutely free. Regard labor as a marketable commodity. Let the laborer and the capitalist trade and dicker respecting this commodity. The laborer will require the highest price, the capitalist will offer the lowest price. In the conflict of the market which ensues justice will be secured. Freedom of contract will result in equal rights. In this doctrine there was some measure of truth. It was an advance on serfdom. So long as the market-place contained a number of individual capitalists bidding against one another, and a number of individual laborers bidding against one another, a rough kind of justice was secured, though it was often accompanied with gross injustice to the weaker and the less skillful. But presently employers combined, partly for the purpose of preventing labor competition in the market, partly for other reasons; then laborers combined, partly for other reasons, but chiefly to prevent competition in the labor market. Capitalists ceased to bid against one another; laborers ceased to bid against one another. Capitalists combined and offered an ultimatum; laborers combined and offered another ultimatum. Competition was changed into war, the market-place into a battlefield.

Last spring a body of capitalists, who had control of all the anthracite coal in the country, and who were sufficiently combined not to bid against one another, were paying wages and furnishing conditions of labor which were unsatisfactory to the laboring men, and which the Commission now declare the laboring men had reason to be dissatisfied with. Then the laboring men combined and offered an ultimatum to the capitalists which they would not even consider as a basis for negotiations, and which the Commission now declare included some demands which it was impracticable to grant. Then began a tug of war between the capitalists at one end of the rope and the laborers at the other, and as fall approached it became evident that the Atlantic seaboard would be almost wholly deprived of its necessary fuel, while Western cities would be seriously inconven-

ienced by the lessened supply. The Manchester theory of freedom of contract was proved inadequate, because it took no account of two important factors: on the one hand, the possibility of such combination as would prevent the free competition on which it relied for adjustment of wages; and, on the other, the inconvenience and distress to the public in case no such adjustment took place.

Then it was that President Roosevelt appeared upon the scene and invited the contending parties to a conference. He did this with the explicit statement that he was concerned only for the third party —the general public; that he took no part in the controversy as advocate either of employer or employed, of capitalist or laborer; that he took part solely as an informal representative of the great public, on whom the most disastrous effects of the strike were about to fall. The reluctant acceptance of his interference by the operators, the appointment of the Commission, the return of the miners to work, based upon the agreement by both sides that the decision of the Commission should be accepted; the decision of the Commission and its acceptance alike by miners, operators, and the general public, emphasize the fact that there is a third party. It is a National recognition of the truth that there are other rights besides individual property rights; that no man may use his property to the injury of the community, or refuse to use it if that refusal involves serious and widespread injury to the community; that private rights, so called, are subject to the superior right of the public to have its interests promoted, its welfare regarded, its rights respected.

There is nothing absolutely novel in this doctrine; there is only a novel illustration and application of it. Health boards which forbid private owners to pollute private streams in such a way as to promote disease, legislation forbidding child labor, regulating woman's labor, prescribing conditions in mines and factories, railroad commissions exercising supervisory power over great railroad corporations in their management of State and National highways, tenement-house laws determining the conditions under which landlords may build and tenants may occupy houses in the great cities, are all illustrations of the same fundamental principle; but in this case that principle has been reasserted and carried a little further. The mine-owners may not do what they please with their mines. They may not quarrel with their workingmen and leave the community to freeze. Their right to own and operate the mines is a right conferred by society, and it must be exercised subject to the superior right of society to regulate the methods of operation, if it becomes necessary for the welfare of the community.

But the finding of this Commission and the general acquiescence in it illustrate not only the right of the people but their power. It was truly said, both by the President and to the President, that he had no legal power to compel either operators or miners to accept his arbitration. They might have refused his invitation, and no constable could have been sent after them. When the Commission was appointed, it was without legal power; it could not compel the attendance of witnesses or the production of papers. We do not think it had any power to administer oaths, or to punish for perjury in case of false testimony. Now that its decision is rendered, there is no legal power to enforce the decision. If the operators do not choose to pay the additional ten per cent. wages, there is no legal power to compel them to pay; if the miners do not choose to go on with their work under the conditions recommended by the Commission, there is no legal power to compel them to go on with their work. Everything from beginning to end is outside the domain of law. There is no coercive authority.

And yet it is quite apparent that neither miners nor operators have acted in the premises in a wholly voluntary manner. They have been coerced, not by law, but by public opinion. There are other powers in the country than those of sheriffs and constables; there are other incentives than those furnished by mere money considerations. Men care for the good opinion of their fellow-men; they are not wholly indifferent to the sufferings of their fellow-men. When the President proposed a method of adjustment which would give relief to the public, and the operators at first refused to consider this mode of relief, there was an outburst of

indignation against them. It found expression in some extraordinary propositions, such as that of the Democratic party of this State that the National Government take possession of the coal-mines, under the right of eminent domain, and operate them for the benefit of the public. It found expression in other forms, perhaps more sane, although more passionate. The small body of men who had the legal ownership of the mines, and legal authority to close them and leave the public to suffer, were not willing to face this public opinion; they were not willing to be held responsible by the public for all the suffering which would be entailed if the mines were not reopened. When at length the conditions of reopening were agreed upon between the operators and Mr. Mitchell, the threatened opposition to continuance of work upon those conditions, emanating from a few of the wilder spirits among the miners, disappeared before this same public opinion. The President, by his action, focused that public opinion. He did what a burning-glass does when it concentrates the rays of the sun on a pile of leaves and starts them into flame. Behind the verdict of the Commission is this same public opinion. So far as we know, no miners' union and no operator, either corporate or individual, proposes to disregard the Commission's decision. This is because the public have accepted that decision and have made it their own. The power of concentrated public opinion has perhaps never had a more striking illustration than that which is furnished by the forcefulness of this wholly extra-constitutional and extra-legal proceeding for the adjustment of a great industrial controversy.

It is this which gives to the decision its greatest significance. This, too, indicates to the public the method by which they may avoid future controversies of this description or solve them if they arise. For this purpose it is only necessary to give to the President the power which the Canadian law gives to the Minister of Labor, to appoint at any time a commission to inquire into conditions which threaten seriously the National well-being. The power of a President to appoint such a commission would be simply power to turn on the light, to ascertain the facts, to determine the responsibility, and to concentrate public opinion, making it effective by making it intelligent. The present conditions do not demonstrate, but they indicate, that a recognized body, impartial in its character and judicial in its spirit, with power simply to inquire into and report upon the facts, would possess all the power necessary for the adjustment of great industrial difficulties in which the interests of the third party, that is, the general public, are seriously concerned. With all that is said from time to time concerning the power of public opinion in America, we have not yet learned how to concentrate and so to utilize it. The Coal Commission's report, and its universal acceptance, indicate one way in which this dormant power can be used in the public interest and for the promotion of public justice.

A Preacher's Story of His Work

Twenty years ago there was a dying church on the East Side of New York. Families that had lived in the vicinity were moving away. Their houses were being transformed into flats. The incoming population was to all appearance indifferent to what the church had to offer. The emptying houses were being refilled with more people than they contained before. The emptying church became each year emptier and emptier. The church was offered for sale. Nobody would buy it.

To-day that church is one of the greatest powers for good in that great city. Its services are thronged. Working men and women sit and kneel beside people of wealth and power. A Parish House joined to it affords recreation for those who have no other places of recreation than the saloons, the dance-halls, and the street, as well as for those who choose to go there from homes of refinement for the social life it affords. A trade school is maintained by the church to supply industrial training for the boys of the parish. Active organizations thrive—religious because ministering to needs that are fundamentally human. The church which two decades ago was itself in the grasp of death is to-day living in that community that the community itself may have life and have it more abundantly.

Humanly speaking, this change has been wrought by one man. In 1882 he was acting as rector of St. James's Cathedral Church, Toronto, Canada. When he was called to this despondent church in New York, he went with a clear idea of what a city parish ought to be and what ends it ought to serve. That idea, by persistent, active, courageous faith, he has translated into a living, visible reality. That man is Dr. W. S. Rainsford, and his achievement is the great parish of St. George's.

The narrative of this achievement suggests the true solution of two kinds of perplexity. There is the perplexity of those who believe in Christianity, but, repelled by theories and dogmas, are distrustful of the Church; there is also the perplexity of those who are in the Church but do not see how to bring Christianity, which is the power of the Church, to bear upon the life of men outside. The story of this man's work, besides being full of sheer human interest, brings to those troubled by the one perplexity information as to what the Church at least in one place is doing, and to those troubled by the other perplexity encouragement as to what the Church can do.

The story of human achievement is first of all the story of man. The story of every human achievement is the story of some human life back of the achievement. So the record of what has been done near Stuyvesant Square in New York is ultimately the record of the experiences and activities of the man who has done it.

It is because The Outlook believes this that it has asked Dr. Rainsford to tell the story of his work. And Dr. Rainsford has consented. He has told it. He has not written it. "A Preacher's Story of His Work," which begins in this number of The Outlook, is literally his story as he related it in his study at St. George's Rectory. It is what he has talked of to those who listened. And the readers of this story, if they would get the story as it was given, must place themselves in imagination in that room, where books and antlers covering the walls, bearskins on couch or floor, and papers on desk betoken a life of combined thought and activity; and then settle themselves, not to read, but to hear.

Lenten Meditations

Why Need Christ Suffer?

Should we not rather ask, How was it possible that he should not suffer? Can one come to the suffering, the ignorant, the willfully sinful, seeking to deliver them from their suffering, their ignorance, and their sin, and not suffer for them and with them?

Could he deliver them and not have compassion on them? But what is compassion but suffering with another? Could he deliver them if he had not sympathy for them? But what is sympathy but suffering with another? Could we accept deliverance from an indifferent or unfeeling deliverer? Must he not feel our sorrows, if he is to succor us in them? Is not this in truth the nature of all deliverance: that the strong deliverer enters into our sorrow and our weakness, and so identifies himself with us, and then lifts us out of our sorrow and our weakness, and so identifies us with him? If he would have us share his experience, he must first share our experience with us.

And how this his participation in our suffering must have been intensified by his consciousness that most of human suffering is wholly needless! He knew the remedy, and he knew we would not accept the remedy. It is hard to stand beside the sick-bed and see the one we love suffer; how immeasurably more hard if we know how the suffering might be stopped, and yet are not permitted to apply the remedy! To see a young man walking carelessly, singing as he goes, down the road to death, to know what the end must be to him as it has been to so many before him, to long to halt him and turn him back, and to be utterly unable! To long to call out the word of warning to him, and be unable to speak; or to call it out, and hear his laughing rejection of the call; or to see him stop long enough to toss back a careless resolution to be broken as carelessly to-morrow! Oh! the unutterable pain of such an experience; who that has ever tried to be a deliverer to his fellow-men has not known this suffering? What must it have been for Christ to look down the ages, to see with prophetic vision all the misery

almost incur-
and have
an aspiration
aroused by
shocked
be targumed
the whole
—and have
the joys
They
because he could
met the min-
gave me
which
stinging-knife
glass of whisky,
in the glass.
the entire world never
was given me for one
strangeness that
than
might misunderstand them,
might understand
them. And yet—
would be
see, com-
the devouring appetite, as
some men Shakespeare, to feel
a thrilling one of his hor-
rors, as the actress clutched at
the "breaders of the Sea;" to
see the temptation which one
has felt, yet feels, and which he was
able to resist, is another—it is
a more endurable
experience. And this
the third great tempta-
tion, the ambition.
Three are
mystical
temptation when appetite
saying, Use your marvelous
power to feed yourself; and vanity
tempted him saying, Win the admiration
of the spectators who crowd Jerusalem,
by casting yourself down unhurt from the
pinnacle of the Temple; and ambition
tempted him, saying, Do obeisance to the
spirit that rules the world, that you may
conquer the world. Could such solicita-
tions to evil surge up to the very citadel
of his heart and he not feel a horror
which we in our best estate can but dimly
imagine? Thrice they came upon him.
Once in that temptation in the wilderness,
vanquished by his memory of the Bible
teaching of his childhood; once in that
hour when he prayed that the cup of his

were the contemporaries of that most
corrupt age, and actors who were the
demands and heroes of an epoch given
over to drunkenness and harlotry.

And yet this suffering of sympathy, of almost hopeless endeavor, and of social participation could not have been comparable to the suffering involved in entering into the experience of the sin which he had come to cure. "God made him to be sin for us, who knew no sin." What does this mean? The minister may have

anguish might pass from him, and yet vanquished that prayer by the other prayer that he might be made strong to drink the cup which his Father gave to him; and once when that subtlest and most terrible of all temptations came upon him, the temptation to distrust his Father, and to believe that his God had forsaken him, almost yielded to for the moment, finally conquered in the triumph cry, Father, into thy hands I commit my spirit.

Ought not Christ t' have suffered these things and to enter into his glory?

Why ought Christ to have suffered? Because he could not take away sin from the world without entering into the sin of the world; and he could not enter into the sin of the world without a suffering in spirit, of which the scourge, the crown of thorns, the nails, are but feeble and imperfect symbols. The whole life of Christ was a Passion; the whole life of Christ was a Crucifixion.

❀

English in the Home

It is not often that a book written largely for teachers deals with a vital subject in so fresh and practical a way as to make it of even more importance to parents. This may be said, however, of Mr. Percival Chubb's "Teaching of English," which bears the imprint of the Macmillan Company, and is the work of an experienced teacher saturated with the literary spirit and an exponent of the most genuine kind of culture. The value of Mr. Chubb's discussion is twofold: it makes clear the prime importance of familiarizing children from their earliest years with the best literature, and it furnishes for each stage of development suggestions with regard to the kind of books which ought to be put in the hands of a child. There are many fathers and mothers who are entirely unaware of the immense educational importance of the home. They do not understand that it is not only the first school in point of time which the child attends, but it is to the very end, in certain respects, the most important school. The best teacher a boy of imagination and gifts can have is a wise, sympathetic, and open-hearted mother who understands his nature, knows how to appeal to the best in him, and where to find the material to which he ought to have access. Literature is rich in the testimony of men of genius to the vital suggestion which they received from their mothers during those sensitive and formative years when the ideas which are afterwards to be developed are sown as seeds in the mind, or pass through their earlier stages of germination.

A wise and thoroughly trained head of a school for girls said, not long ago, that her chief difficulty was not with students but with parents. Many parents are obstacles in the way of the true education of their children. Instead of co-operating with teachers, they antagonize them; instead of assisting in the difficult work, they throw obstacles in the way of that work. They are always questioning the wisdom of the discipline, asking special favors which involve interruption of study, and, consciously and unconsciously, in many small ways hindering the work which the school is trying to do for the child. The chief injury, however, which many parents do to the school is in sending their children without that general training, that steady discipline, that influence for refinement, which the school cannot give, but upon which it must build. The rawness and crudity of many children who come out of well-to-do homes is amazing. These children know almost nothing of the things which in intelligent homes are in the very atmosphere. They have no fund of general intelligence; they are untrained in manners, in speech, in voice, and in mind; and the school has to do for them, in a very limited time and under very difficult conditions, the work that the home ought to have done under the best possible circumstances and with the fullest possible time.

Dr. Nicholas Murray Butler, in an introduction to this volume, brings out the relation of the child to the home and of the school to the home in a single sentence—"The one ruling maxim of English teaching ought to be: The child will speak and write the sort of English that he hears and reads." It is in the home that children acquire their use of language; it is in the home that proper facilities for reading must be supplied them. Mr. Chubb does not exaggerate when he says that on no other subject do the forces of the social environment,

against which the school has to strive, make themselves so continually felt as they do in English; and if there be a single test of education which may be applied to all men and women, it is, as President Eliot some time ago pointed out, the free, correct, and individual use of one's own language. The difficulty with which the school has to contend lies in the fact that this language is not properly taught in the great majority of homes, and that it is often grossly, not to say brutally, abused outside the home and the school in those general associations which all children form. It is quite impossible to convey a sound feeling for language and a right conscience about its use to a child who never hears the language properly spoken in his own home, and who hears it constantly misused by his associates and playmates outside. It ought to be understood, as Mr. Chubb points out, that good speech is not merely a matter of education; it is a point of social manners. "Why is it," he asks, "that the average English, German, or French child speaks and writes his native tongue more correctly and pleasantly than the average American child? The principal, though not the only, reason is to be found, not in a better and more laborious teaching of the school, but in a higher standard of social manners. We lack linguistic conscience and linguistic pride in this country. We do not attach to illiteracy the stigma that attaches to it abroad—a stigma that money, dress, ostentation, cannot atone for."

This is a new country of immense extent, and its people have been compelled to do an enormous amount of work in a very short period of time. It would have been very unjust, up to this time, to hold this country to the standards of physical order and neatness which rule in smaller countries like England and Belgium; but there is danger that slovenliness may become a national habit. Slovenliness is something more than a violation of good taste; it is indifference to the best way of doing things; it is a kind of easy-going morality in matters of method; it involves a low standard, and its influence upon children is in the last degree disastrous. Now, in nothing are Americans, as a whole, more slovenly than in their use of their own language. It is humiliating to notice how limited are the vocabularies of many children of good material surroundings, and how constantly slang, which is the evidence of poverty of speech, is substituted for the right and telling phrase or word. Everywhere—on railroad trains, in city street-cars, on ferry-boats—wherever men and women talk, one hears careless, inaccurate, and slovenly speech; speech which not only lacks shading, refinement, individuality, but which betrays the most limited knowledge, an uneducated ear, and a wholly untrained social sense. This vocal slovenliness the schools are doing what they can to correct; but it can never be thoroughly corrected until American fathers and mothers understand that they, and not the teachers in the schools, give children the language they speak. The home in which good English is spoken, by people whose voices are modulated, imparts the habit of good English speech without any didactic methods or any pedantic consciousness.

To this familiarity with good spoken English in the home must be added familiarity with the best written English; that is to say, with the best literature. Fathers and mothers of a good deal of intelligence are often at a loss to know what books to place in the hands of their children at different stages in their development. It is a matter of prime importance that that development should not be unduly hastened by the reading of books which at one period of life develop morbid emotions, and at another period foster and give expression to the most wholesome feelings. Mr. Chubb intelligently discriminates between the kinds of literature which are adapted to successive periods, and lays down principles that any intelligent father or mother can apply. He has rendered an important service, not only to the teachers of the country, but to the homes in which the Americans of the future are being trained.

By the courtesy of Messrs. Charles Scribner's Sons, the publishers of "The Blue Flower," and with the cordial consent of Dr. van Dyke, The Outlook is able this week to present its readers with the charming poem, "Who will Walk a Mile with Me?" which prefaces the limited edition of "The Blue Flower," and which is too tender and beautiful to be confined to the readers of a single volume.

Friedrich Delitzsch

Dr. Friedrich Delitzsch, whose lectures delivered before the German Court on the Babylonian origin of much of the religion of the Old Testament have called forth wide criticism, especially on the part of the German Emperor himself, is professor of Assyriology at the University of Berlin. Until recently the name Professor Delitzsch called to mind his father, Dr. Franz Delitzsch, who died in 1890, and who was distinctly a conservative in theology. The son, however, by utterances which in the German churches have been considered extremely radical, has gained a popular fame which the father never had. Dr. Friedrich Delitzsch's eminence as a scholar has been derived from his explorations in the territory which once was occupied by the great Babylonian Empire. There he has made notable discoveries, corresponding to those made by Professor Hilprecht, of the University of Pennsylvania. As the result of his archæological discoveries concerning the life of these ancient Babylonians, Dr. Delitzsch has formulated, concerning the Babylonian origin of religious conceptions of the Old Testament, conclusions which he regards as subversive of belief in revealed religion as commonly held. These conclusions regarding Biblical criticism are not, however, those of an expert; and they have been controverted by Biblical critics of the radical school. Unlike his theological opinions, his archæological discoveries have been of great value. By bringing to light records of the common life and of the political institutions of the ancient Babylonians, they have made the life of that ancient people seem very human to us, not to say almost modern. Dr. Delitzsch uses the English language fluently. American students in Germany have found him especially approachable. His interests are broad. He is far from being a recluse; he is rather, as one of his American pupils has said, a citizen of the world.

NIGHT IN THE WOODS

THE FOREST[1]

BY

STEWART EDWARD WHITE

Author of "The Blazed Trail," "Conjuror's House," etc.

WITH PICTURES BY THOMAS FOGARTY

Chapter IV.—On Making Camp

"Who hath smelt wood-smoke at twilight? Who hath heard the birch log burning?
Who is quick to read the noises of the night?
Let him follow with the others, for the young men's feet are turning
To the camps of proved desire and known delight."

IN the Ojibway language *wigwam* means a good spot for camping, a place cleared for a camp, a camp as an abstract proposition, and a camp in the concrete as represented by a tent, a thatched shelter, or a conical teepee. In like manner, the English word *camp* lends itself to a variety of concepts. I once slept in a four-poster bed over a polished floor in an elaborate servant-haunted structure which, mainly because it was built of logs and overlooked a lake, the owner always spoke of as his camp. Again, I once slept on a bed of prairie grass, before a fire of dried buffalo chips and mesquite, wrapped in a single light blanket, while a good vigorous rain-storm made new cold places on me and under me all night. In the morning the cowboy with whom I was traveling remarked that this was "sure a lonesome proposition as a camp."

Between these two extremes is infinite variety, grading upwards through the divers bivouacs of snow, plains, pines, or hills, to the bark shelter; past the dog-tent, the A-tent, the wall-tent, to the elaborate permanent canvas cottage of the luxurious camper, the dug-out winter retreat of the range cowboy, the trapper's cabin, the great log-built lumber-jack communities, and the last refinements of sybaritic summer homes in the Adirondacks. All these are camps. And when you talk of making camp you must know whether that process is to mean only a search for rattlesnakes and enough acrid-smoked fuel to boil tea, or a winter's consultation with an expert architect; whether your camp is to be made on the principle of Omar's one-night Sultan, or whether it is intended to accommodate the full days of an entire summer.

But to those who tread the Long Trail the making of camp resolves itself into an algebraical formula. After a man has traveled all day through the northern wilderness he wants to rest, and anything that stands between himself and his repose he must dispose of with as few notions as is consistent with reasonable thoroughness. The end in view is a hot meal and a comfortable dry place to sleep. The straighter he can draw the line to those two points the happier he is.

Early in his woods experience Dick became possessed with the desire to do everything for himself. As this was a laudable striving for self-sufficiency, I called a halt at about three o'clock one afternoon in order to give him plenty of time.

Now Dick is a good, active, able-bodied boy, possessed of average intelligence and rather more than average zeal. He even had theory of a sort, for he had read various "Boy Campers, or the Trapper's Guide," "How to Camp Out," "The Science of Woodcraft," and other able works. He certainly had ideas enough, and confidence enough. I sat down on a log.

At the end of three hours' flusteration, heat, worry, and good hard work, he had accomplished the following results. A tent, very saggy, very askew, covered a four-sided area—it was not a rectangle—of very bumpy ground. A hodge-podge bonfire, in the center of which an inaccessible coffee-pot toppled menacingly, alter-

[1] Copyright, 1903, by the Outlook Company.

nately threatened to ignite the entire surrounding forest or to go out altogether through lack of fuel. Personal belongings strewed the ground near the fire, and provisions cumbered the entrance to the tent. Dick was anxiously mixing batter for the cakes, attempting to stir a pot of rice often enough to prevent it from burning, and trying to rustle sufficient dry wood to keep the fire going. This diversity of interests certainly made him sit up and pay attention. At each instant he had to desert his flour-sack to rescue the coffee-pot, or to shift the kettle, or to dab hastily at the rice, or to stamp out the small brush, or to pile on more dry twigs. His movements were not graceful. They raised a scurry of dry bark, ashes, wood dust, twigs, leaves, and pine needles, a certain proportion of which found their way into the coffee, the rice, and the sticky batter, while the smaller articles of personal belonging, hastily dumped from the duffel-bag, gradually disappeared from view in the manner of Pompeii and ancient Vesuvius. Dick burned his fingers and stumbled about and swore, and looked so comically-pathetically red-faced through the smoke that I, seated on the log, at the same time laughed and pitied. And at the last, when he needed a continuous steady fire to fry his cakes, he suddenly discovered that dry twigs do not make coals, and that his previous operations had used up all the fuel within easy circle of the camp.

So he had to drop everything for the purpose of rustling wood, while the coffee chilled, the rice cooled, the bacon congealed, and all the provisions, cooked and uncooked, gathered entomological specimens. At the last, the poor bedeviled theorist made a hasty meal of scorched food, brazenly postponed the washing of dishes until the morrow, and coiled about his hummocky couch to dream the nightmares of complete exhaustion.

Poor Dick! I knew exactly how he felt, how the low afternoon sun scorched, how the fire darted out at unexpected places, how the smoke followed him around no matter on which side of the fire he placed himself, how the flies all took to biting when both hands were occupied and how they all miraculously disappeared when he had set down the frying-pan and knife to fight them. I could sympathize, too, with the lonely, forlorn, lost-dog feeling that clutched him after it was all over. I could remember how big and forbidding and unfriendly the forest had once looked to me in like circumstances, so that I had felt suddenly thrust outside into empty spaces. Almost was I tempted to intervene; but I liked Dick, and I wanted to do him good. This experience was harrowing, but it prepared his mind for the seeds of wisdom. By the following morning he had chastened his spirit, forgotten the assurance breathed from the windy pages of the Boy Trapper library, and was ready to learn.

Have you ever watched a competent portraitist at work? The infinite pains a skilled man spends on the preliminaries before he takes one step towards a likeness nearly always wears down the patience of the sitter. He measures with his eye, he plumbs, he sketches tentatively, he places in here a dab, there a blotch, he puts behind him apparently unproductive hours—and then all at once he is ready to begin something that will not have to be done over again. An amateur, however, is carried away by his desire for results. He dashes in a hit-or-miss early effect, which grows into an approximate likeness almost immediately, but which will require infinite labor, alteration, and anxiety to beat into finished shape.

The case of the artist in making camps is exactly similar, and the philosophical reasons for his failure are exactly the same. To the superficial mind a camp is a shelter, a bright fire, and a smell of cooking. So when a man is very tired he cuts across lots to those three results. He pitches his tent, lights his fire, puts over his food—and finds himself drowned in detail, like my friend Dick.

The following is, in brief, what during the next six weeks I told that youth, by precept, by homily, and by making the solution so obvious that he could work it out for himself.

When five or six o'clock draws near, begin to look about you for a good level dry place, elevated some few feet above the surroundings. Drop your pack or beach your canoe. Examine the location carefully. You will want two trees about ten feet apart, from which to suspend your tent, and a bit of flat ground underneath them. Of course the flat ground

A WET DAY. LANDING AT THE CAMPING PLACE

need not be particularly unencumbered by brush or saplings, so the combination ought not to be hard to discover. Now return to your canoe. Do not unpack the tent.

With the little ax clear the ground thoroughly. By bending a sapling over strongly with the left hand, clipping sharply at the strained fibers, and then bending it as strongly the other way to repeat the ax stroke on the other side, you will find that treelets of even two or three inches diameter can be felled by two blows. In a very few moments you will have accomplished a hole in the forest, and your two supporting trees will stand sentinel at either end of a most respectable-looking clearing. Do not unpack the tent.

Now, although the ground seems free of all but unimportant growths, go over it thoroughly for little shrubs and leaves. They look soft and yielding, but are often possessed of unexpectedly abrasive roots. Besides, they mask the face of the ground. When you have finished pulling them up by the roots, you will find that your supposedly level plot is knobby with hummocks. Stand directly over each little mound; swing the back of your ax vigorously against it, adz-wise, between your legs. Nine times out of ten it will crumble, and the tenth time means merely a root to cut or a stone to pry out. At length you are possessed of a plot of clean, fresh earth, level and soft, free from projections. But do not unpack your tent.

Lay a young birch or maple an inch or so in diameter across a log. Two clips will produce you a tent-peg. If you are inexperienced, and cherish memories of striped lawn markees, you will cut them about six inches long. If you are wise and old and gray in woods experience, you will multiply that length by four. Then your loops will not slip off, and you will have a real grip on mother earth, than which nothing can be more desirable in the event of a heavy rain and wind squall about midnight. If your ax is as sharp as it ought to be, you can point them more neatly by holding them suspended in front of you while you snip at their ends with the ax, rather than by resting them against a solid base. Pile them together at the edge of the clearing. Cut a crotched sapling eight or ten feet long. Now unpack your tent.

In a wooded country you will not take the time to fool with tent-poles. A stout line run through the eyelets and along the apex will string it successfully between your two trees. Draw the line as tight as possible, but do not be too unhappy if, after your best efforts, it still sags a little. That is what your long crotched stick is for. Stake out your four corners. If you get them in a good rectangle and in such relation to the apex as to form two isosceles triangles of the ends, your tent will stand smoothly. Therefore be an artist, and do it right. Once the four corners are well placed, the rest follows naturally. Occasionally in the north country it will be found that the soil is too thin, over the rocks, to grip the tent pegs. In that case drive them at a sharp angle as deep as they will go, and then lay a large flat stone across the slant of them. Thus anchored you will ride out a gale. Finally, wedge your long sapling crotch under the line—outside the tent, of course—to tighten it. Your shelter is up. If you are a woodsman, ten or fifteen minutes has sufficed to accomplish all this.

There remains the question of a bed, and you'd better attend to it now, while your mind is still occupied with the shelter problem. Fell a good thrifty young balsam and set to work pulling off the fans. Those you cannot strip off easily with your hands are too tough for your purpose. Lay them carelessly criss-cross against the blade of your axe and up the handle. They will not drop off, and when you shoulder that ax you will resemble a walking haystack, and will probably experience a genuine emotion of surprise at the amount of balsam that can be thus transported. In the tent lay smoothly one layer of fans, curve side up, butts toward the foot. Now thatch the rest on top of this, thrusting the butt ends underneath the layer already placed in such a manner as to leave the fan ends curving up and down towards the foot of your bed. Your second emotion of surprise will assail you as you realize how much spring inheres in but two or three layers thus arranged. When you have spread your rubber blanket, you will be possessed of a bed as soft and a great deal more aromatic and luxurious than any you would be able to buy in town.

Your next care is to clear a living space

THE CAMP FIRE

in front of the tent. This will take you about twenty seconds, for you need not be particular as to stumps, hummocks, or small brush. All you want is room for cooking, and suitable space for spreading out your provisions. But do not unpack anything yet.

Your fireplace you will build of two green logs laid side by side. The fire is to be made between them. They should converge slightly, in order that the utensils to be rested across them may be of various sizes. If your vicinity yields flat stones, they build up even better than the logs—unless they happen to be of granite. Granite explodes most disconcertingly. Poles sharpened, driven upright in the ground, and then pressed down to slant over the fireplace, will hold your kettles a suitable height above the blaze.

Fuel should be your next thought. A roll of birch bark first of all. Then some of the small, dry, resinous branches that stick out from the trunks of medium-sized pines, living or dead. Finally, the wood itself. If you are merely cooking supper, and have no thought for a warmth-fire or a friendship-fire, I should advise you

to stick to the dry pine branches, helped out, in the interest of coals for frying, by a little dry maple or birch. If you need more of a blaze, you will have to search out, fell, and split a standing dead tree. This is not at all necessary. I have traveled many weeks in the woods without using a more formidable implement than a one-pound hatchet. Pile your fuel—a complete supply, all you are going to need—by the side of your already improvised fireplace. But, as you value your peace of mind, do not fool with matches.

It will be a little difficult to turn your mind from the concept of fire, to which all these preparations have compellingly led it—especially as a fire is the one cheerful thing your weariness needs the most at this time of day—but you must do so. Leave everything just as it is, and unpack your provisions.

First of all rinse your utensils. Hang your tea-pail, with the proper quantity of water, from one slanting pole, and your kettle from the other. Salt the water in the latter receptacle. Peel your potatoes, if you have any; open your little provision sacks; puncture your tin cans, if you have any; slice your bacon; clean your fish; pluck your birds; mix your dough or batter; spread your table tinware on your tarpaulin or a sheet of birch bark; cut a kettle-lifter; see that everything you are going to need is within direct reach of your hand as you squat on your heels before the fireplace. Now light your fire.

The civilized method is to build a fire and then to touch a match to the completed structure. If well done and in a grate or stove, this works beautifully. Only in the woods you have no grate. The only sure way is as follows: Hold a piece of birch bark in your hand. Shelter your match all you know how. When the bark has caught, lay it in your fireplace, assist it with more bark, and gradually build up, twig by twig, stick by stick, from the first pin-point of flame, all the fire you are going to need. It will not be much. The little hot blaze rising between the parallel logs directly against the aluminum of your utensils will do the business in very short order. In fifteen minutes at most your meal is ready. And you have been able to attain to hot food thus quickly because you were prepared.

In case of very wet weather the affair is altered somewhat. If the rain has just commenced, do not stop to clear out very thoroughly, but get your tent up as quickly as possible, in order to preserve an area of comparatively dry ground. But if the earth is already soaked, you had best build a bonfire to dry out by, while you cook over a smaller fire a little distance removed, leaving the tent until later. Or it may be well not to pitch the tent at all, but to lay it across slanting supports at an angle to reflect the heat against the ground.

It is no joke to light a fire in the rain. An Indian can do it more easily than a white man, but even an Indian has more trouble than the story-books acknowledge. You will need a greater quantity of birch bark, a bigger pile of resinous dead limbs from the pine-trees, and perhaps the heart of a dead pine stub or stump. Then, with infinite patience, you may be able to tease the flame. Sometimes a small dead birch contains in the waterproof envelope of its bark a species of powdery dry touchwood that takes the flame readily. Still, it is easy enough to start a blaze—a very fine-looking, cheerful, healthy blaze: the difficulty is to prevent its petering out the moment your back is turned.

But the depths of woe are sounded and the limit of patience reached when you are forced to get breakfast in the dripping forest. After the chill of early dawn you are always reluctant to leave your blankets, to fumble with numbed fingers for matches, to handle cold steel and slippery fish. But when every leaf, twig, sapling, and tree contains a douche of cold water; when the wetness oozes about your moccasins from the soggy earth with every step you take; when you look about you and realize that somehow, before you can get a mouthful to banish that before-breakfast ill-humor, you must brave cold water in an attempt to find enough fuel to cook with, then your philosophy and early religious training avail you little. The first ninety-nine times you are forced to do this you will probably squirm circumspectly through the brush in a vain attempt to avoid shaking water down on yourself; you will resent each failure to do so, and at the end your rage will personify the wilderness for the purpose of one sweeping anathema. The hundredth time will bring you wisdom. You will do

A SMUDGE IN THE TENT. DRIVING OUT THE FLIES

the anathema—rueful rather than enraged—from the tent opening. Then you will plunge boldly in and get wet. It is not pleasant, but it has to be done, and you will save much temper, not to speak of time.

Dick and I earned our diplomas at this sort of work. It rained twelve of the first fourteen days we were out. Towards the end of that two weeks I doubt if even an Indian could have discovered a dry stick of wood in the entire country. The land was of Laurentian rock formation, running in parallel ridges of bare stone separated by hollows carpeted with a thin layer of earth. The ridges were naturally ill adapted to camping, and the cup hollows speedily filled up with water until they became most creditable little marshes. Often we hunted for an hour or so before we could find any sort of a spot to pitch our tent. As for a fire, it was a matter of chopping down dead trees large enough to have remained dry inside, of armfuls of birch bark, and of the patient drying out, by repeated ignition, of enough fuel to cook very simple meals. Of course we could have kept a big fire going easily enough, but we were traveling steadily and had not the time for that. In these trying circumstances Dick showed that, no matter how much of a tenderfoot he might be, he was game enough under stress.

But to return to our pleasant afternoon. While you are consuming the supper you will hang over some water to heat for the dish-washing, and the dish-washing you will attend to the moment you have finished eating. Do not commit the fallacy of sitting down for a little rest. Better finish the job completely while you are about it. You will appreciate leisure so much more later. In lack of a wash-rag you will find that a bunch of tall grass bent double makes an ideal swab.

Now brush the flies from your tent, drop the mosquito-proof lining, and enjoy yourself. The whole task, from first to last, has consumed but a little over an hour. And you are through for the day. In the woods, as nowhere else, you will earn your leisure only by forethought. Make no move until you know it follows the line of greatest economy. To putter is to wallow in endless desolation. If you cannot move directly and swiftly and certainly along the line of least resistance in everything you do, take a guide with you; you are not of the woods people. You will never enjoy doing for yourself, for your days will be crammed with unending labor.

It is but a little after seven. The long crimson shadows of the north country are lifting across the aisles of the forest. You sit on a log, or lie on your back, and blow contented clouds straight up into the air. Nothing can disturb you now. The wilderness is yours, for you have taken from it the essentials of primitive civilization—shelter, warmth, and food. An hour ago a rain-storm would have been a minor catastrophe. Now you do not care. Blow high, blow low, you have made for yourself an abiding-place, so that the signs of the sky are less important to you than to the city dweller who wonders if he should take an umbrella. From your own doorstep you can look placidly out on the great unknown. The noises of the forest draw close about you their circle of mystery, but the circle cannot break upon you, for here you have conjured the homely sounds of kettle and crackling flame to keep ward. Thronging down through the twilight steal the jealous woodland shadows, awful in the sublimity of the silent places, but at the sentry outposts of your fire-lit trees they pause like wild animals, hesitating to advance. The wilderness, untamed, dreadful at night, is all about; but this one little spot you have reclaimed. Here is something before unknown to the eerie spirits of the woods. As you sleepily knock the ashes from the pipe, you look about on the familiar scene with accustomed satisfaction. You are at home.

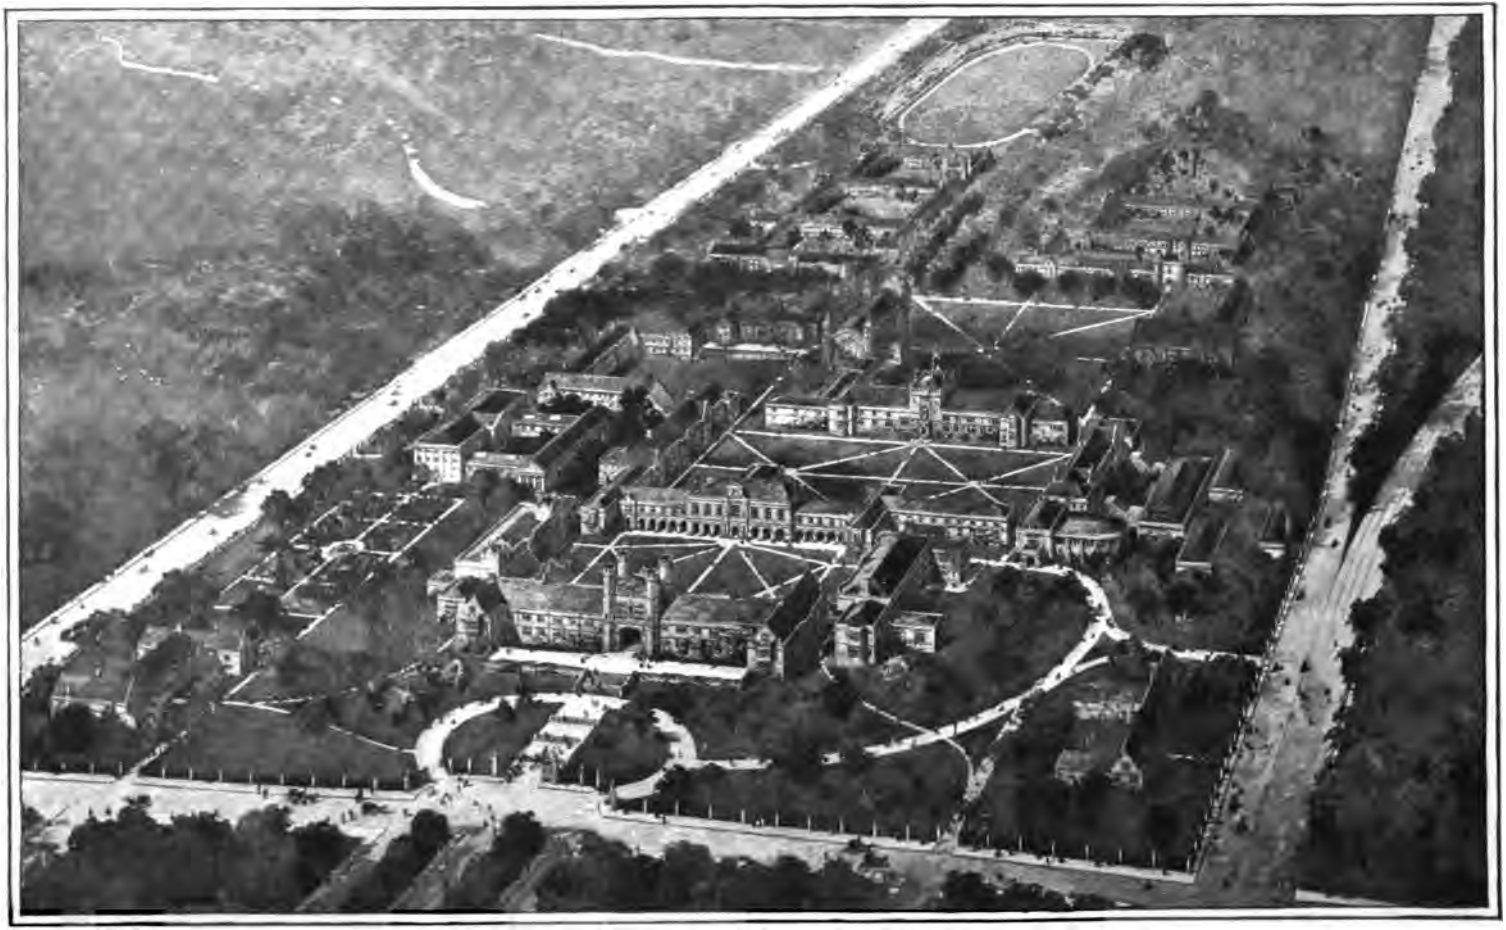
The New Opera Director

Mr. Heinrich Conried, who has just been elected Director of the Metropolitan Opera-House, New York City, is one of the most prominent and picturesque personalities in the dramatic world. His genius for stage direction is so great that his own theater (the Irving Place, New York City) may be said to be the only American playhouse preserving the classic traditions of the Comédie Française at Paris or the Burg Theater at Vienna. The guiding principle of each of these three theaters is to seek for excellence in performance rather than of performer. At each, leading actors are often invited to assume minor rôles. Theater-goers thus have the comfortable assurance that every character will receive adequate representation, and that the resultant whole will be consistently artistic. The emphasis of this principle should be characteristic of next year's performances at the Metropolitan Opera-House under Mr. Conried's direction. The audience will then have an opportunity to hear, not merely singers, but operas.

PENNSYLVANIA INSTITUTION FOR THE INSTRUCTION OF THE BLIND, AT OVERBROOK, PA.

Walter Cope: Architect

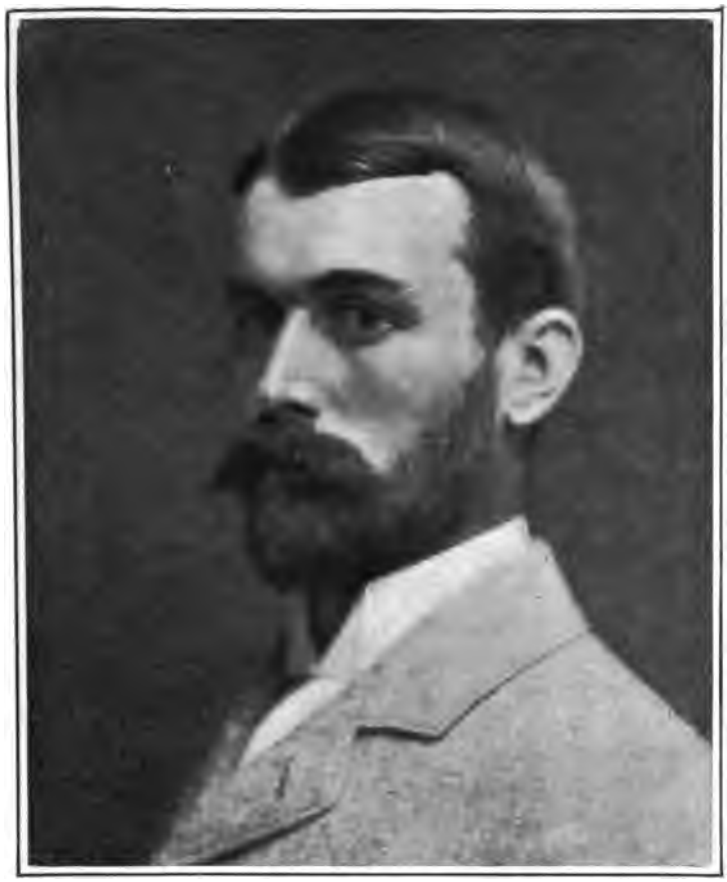
By R. Clipston Sturgis



Believing that the architect has a distinct place in the development of the higher civilization through æsthetics, and that the general good of a community receives a constant if silent stimulus by reason of rational and lofty ideas in building construction and ornamentation, we are glad to print this appreciation of one distinguished architect by another. Though young in years, Walter Cope achieved a genuine fame and a permanent place in the history of American architecture. He was a Philadelphia boy; he was born there in 1860, and there he died in 1902. He was the pupil of no particular school of architecture, nor had he other training than that of his own industry and enthusiasm. The happiest hours of his early boyhood were spent in a little workshop which his father gave him. Walter Cope was the kind of boy who generally had a finger tied up with a rag, and at least one black nail, but he was not long in mastering all kinds of carpenter's tools, even doing creditable metal work. He was, however, always drawing, and more and more as he grew older his love of beauty gained on his taste for practical mechanics. At nineteen years of age he became draughtsman to a builder, and later to an architect. At twenty-four he went abroad to study; he was all alone and worked very hard, drawing a great deal of detail, especially of French Gothic, which made a lasting impression on his mind. . When he returned to Philadelphia he went into partnership with the late John Stewardson, and it was not long before the now well-known firm of Cope and Stewardson achieved enviable repute.—THE EDITORS.

IT is impossible for one who knew him to write of the work of Walter Cope without having his judgment influenced by the strong individuality of the man himself. It is right that it should be so, for all his work was imbued with his own characteristic personality. At the time of his death he was a young man, but he was at the head of a large office, was engaged in large undertakings, and was necessarily debarred from doing much with his own hand. Yet, notwithstanding this, the work executed by his office was as instinct with his spirit and thought as if his own hand had put on paper and his own mind had directed the execution of the buildings erected by the firm.

No one could come in contact with him without feeling the strong influence of a master mind; yet withal he was modest and unassuming, appreciative and sympathetic. His mind was always actively at work. There were no off days; but it was not always nor only architecture. The last time I was with him we tramped the woods one late autumn day, and he opened my eyes to so many unnoticed beauties of wood and meadow that I felt as if I must have often walked before blindfold. He gathered a winter bouquet—goldenrod and various grasses gone to seed—almost as lovely in their gray and silver feathers as in their more gorgeous summer colors. He pointed out the beauty of the bare-limbed trees. Some day, he said, he wanted to make a collection of photographs of trees in winter. I had never noticed what he called the Gothic structure of the tulip-tree: when young, twelfth-century lancet lines, upspringing; when old, fourteenth-century, with the quick curves and cusps of the later work. For the snow breaks the ends of the pendent lower branches,



THE CUPPLES DOORWAY, WASHINGTON UNIVERSITY

BIRD'S-EYE VIEW OF THE NEW WASHINGTON UNIVERSITY, ST. LOUIS

WALTER COPE

and they break out again with sharp up curves, making the line of the cusp with the main branch.

These little things, to my mind, show the thought of the man ; and that joyous, appreciative observance of all that was beautiful expressed itself in all his work. To what thing soever he put his hand he did it with his whole heart. Personality was then the keynote of his work, but he was too faithful a student and too learned to fall into the common error of striving for originality. His work was all based on good precedent, modified wisely to meet the occasion, and ever touched with his own individuality, so that none could ever say, This is Tudor and that Georgian, except with the reservation that it was neither the work of the copyist nor of the purist, but rather of the student who knew the terms of that language and used them freely to express modern ideas.

Perhaps his best-known works are his collegiate buildings—for the University of Pennsylvania at Philadelphia, for Bryn Mawr College, for Princeton, and for Washington University, St. Louis, Missouri. In all of these he has shown very clearly the qualities above referred to, and in some of them another and very valuable quality—just common sense. It appeared as if he approached a problem, large or small, with a view to reach a clear understanding of the needs, and then to present a solution of those needs, and finally to clothe them in beautiful forms. I was one of those who judged the competition for Washington University ; and if there was one thing more than another which determined the jury in favor of the design eventually selected, it was the evidence of thought and study which showed in the block plan, with its changing and yet associated axes following the marked contours of the land, and the intelligent understanding of the needs of each group

of buildings; the accessible, dignified, and formal arrangement of the academic group, the domestic character of the dormitories, and, finally, the detailed study of the needs of each building. Much time and thought had been expended here, and comparatively little on the expression; but I, for one, felt convinced that a man who could approach a subject in such a spirit could certainly express it in fit terms. The event justifies this confidence.

Nor was he ever content with the solution of a general problem. Many a man works at his best in the zeal and the excitement of imaginative expression. Every faculty is alert and strained when one is studying a big scheme, and trying to make his mind-picture so vivid as to enable him to put it on paper. But when it comes to the often long-delayed execution, the keenness of the vision is past and the subject is stale—one has other irons in the fire. It was not so with Cope. One has but to examine his detail, the door to the Cupples building or any other small bit, even the contour of a molding, to see how fresh was his enthusiasm up to the last stroke of the work. This was more than faithful thoroughness, this was the devotion of the lover.

The Pennsylvania State Institution for the Blind at Overbrook, Pa., was an example of a certain versatility of temperament which showed only occasionally. I don't know what prompted this effort, but whether it was a sight of Spain, or of Spanish America, he succeeded in getting at the kernel of the matter and expressing something in Spanish which is yet his own sentiment. The building is pleasant in mass and pleasant in detail. The Law School for the University of Pennsylvania was not such a far cry from his collegiate work as this Spanish effort, but it is, at all events, of another century of English work, well removed in sentiment from the earlier; but it is equally well understood and expressed, and has virile and interesting quality. The English were never purists anyway, nor sticklers for style and period. I fancy they used such material as they had, whether mental or physical, and put it together in a way that would meet their needs and would look well; and I think Cope did somewhat the same thing. If things looked well, he let them go, whether they tallied with orders or with the twelfth century or not; and if they did not look well he would never dream of letting

THE UNIVERSITY OF PENNSYLVANIA LAW SCHOOL

A GATEWAY AT WASHINGTON UNIVERSITY, ST. LOUIS

them go, but would change and modify, redesign completely if necessary, and never be content until they did look right. With what is generally considered less important work—*i.e.*, domestic—Cope was equally successful, but especially with houses set in the surroundings of the country he loved. In such work he was exceptionally at home, and absolutely free from any touch of that love of ostentation which makes so many of our country houses seem merely vulgar when they wish to look grand. It is true that the larger work affects a larger number of people, but I believe the architect can do no nobler duty than to help to show people what domestic architecture in town or country should be. It may be the purely domestic side shown in the country house, together with knowledge of and love for the animals that are housed in stable and barn, and the love of flowers and green things that are fairly and in order set about the house; or it may be the grand town house, where is shown the knowledge of the lives of gentlefolk, and means and methods for entertaining friends and performing those social duties which, if worth doing at all, are worth doing well. His houses are quiet, simple, modest, unassuming, yet full of charming touches—in short, quite like himself.

Spring Song

By Charlotte Fiske Bates

Buds of the cherry and peach and plum,
Slowly to perfect blossom come!

Eden-like apple-blooms, linger long,
Where ye tint the canvas and key the song.

For when your beauties have opened wide,
Artist and poet and all have sighed

That the lovely things of the fresh young May
Have bloomed to ripeness, and touched decay.

Winds, move softly, lest ye should blow
Over this May-time the thought of snow;

Every blossom that lights the spring,
Fly away with a tardy wing!

Childhood of Nature! Why, far more,
Do I cling to thee than I clung before?

Is it because I am growing old
I count thy days with a backward hold?

Because the curfew of life has rung,
Do I joy in beauty so fresh and young?

Is it because I am nearing the night,
I crave so keenly thy precious light?

Rather, if nearing Eternal Day,
Why do I cleave to a mortal May?

Yet so I do, and I hold it fast,
Lest too soon it be overpast.

Childhood of Nature! I love thee so,
With sorest grudging I let thee go;

For I feel at my heart a subtle pain
When thy buds are a year away again!

THE NEW AMERICAN NAVY

BY JOHN D. LONG

SECRETARY OF THE NAVY FROM 1897 TO 1902

THE BATTLE OF MANILA BAY[1]

OUTLYING colonies, inadequately defended, are, in time of war, sources of serious weakness to the mother country. This military axiom was never better exemplified than in the case of Spain at the time of her struggle with the United States. The naval strategist saw at a glance that her undoing lay in her possessions in the East and West Indies, and that a campaign in the Peninsula was inadvisable unless control of the sea were first obtained, and that, if attempted, it would be productive of great loss without compensating advantage. On the other hand, destruction of Spanish power in the Philippines, Cuba, and Porto Rico would force the Madrid Government to its knees, while Continental Europe, unfriendly to our action and policy, would not be disposed to regard with

This is the sixth of a series of twelve papers to appear in the Magazine Numbers of The Outlook. Other papers will be: The Blockade of Cuba, Bottling up Cervera's Fleet, The Battle of Santiago, Valiant Deeds in the War with Spain; Samoa, the Philippines, and China; Recent Naval Lessons.

approval an American invasion of the territory of one of its powers, but, on the other, could not question the destruction of Spanish power in the Philippines, Cuba, and Porto Rico, although the result would be to force the Madrid Government to yield.

These conclusions caused the Navy Department, in preparing plans for war, to fix primarily on the East and West Indies as theaters of naval operations. Annihilation of the Spanish squadrons in those regions would require the despatch from Spain of new forces, which, deprived of support at points of destination and embarrassed by voyages far distant from their initial bases, could be met and overcome by superior commands. Observance of a policy predicated upon these deductions assured complete defeat for the enemy, protection of our own shores and commerce, and achievement of the humanitarian purposes of the war—freedom of Cuba and accordance to its people of the inalienable rights of life, liberty, and the pursuit of happiness.

Thus the campaign adopted by the Navy Department had two main objectives—the absolute crushing of the Spanish squadron in Philippine waters and the control of the sea in the Atlantic Ocean. Strategical and tactical blunders by the Spanish Admiral in the Far East, the demoralized condition of his command, and the promptness, magnificent courage, and high efficiency of the officers and men who fought under the Stars and Stripes, enabled the attainment of the former object first. The victory gained in Manila Bay was important from a strategical standpoint, but, of far greater consequence, was productive of far-reaching international and territorial results. It must, therefore, take rank as one of the foremost achievements of modern wars.

Seven hours only were required by the American squadron to place the Philippine Archipelago at the mercy of the United States, and relieve this Government of anxiety for the Pacific slope and its trans-Pacific trade. More than seven years, however, had been needed to provide the ships and perfect the personnel which accomplished this result. The men-of-war participating in the actual fighting on that famous first of May, 1898, were born of the New Navy, and well they demonstrated their birthright. The flagship was the protected cruiser Olympia, of 5,800 tons displacement, which had been laid down in San Francisco in 1890. Following her lead were the protected cruiser Baltimore, of 4,600 tons, built at Philadelphia in 1887–88; the protected cruiser Raleigh, of 3,217 tons, built at the Norfolk navy-yard between 1889–92; the protected cruiser Boston, of 3,000 tons, one of the pioneers of the New Navy, the keel of which was laid at Chester, Pa., in 1883; the gunboat Concord, 1,710 tons, contracted for in 1888; and the gunboat Petrel, 892 tons, of date of 1887. Accompanying them were the modern revenue cutter McCulloch, 1,400 tons, used as a despatch-boat, the collier Nanshan, and the supply-ship Zafiro, the last two purchased at Hongkong just before the outbreak of the war.

The possibility of a rupture with Spain existed during the closing year of the administration of President Cleveland, and Secretary Herbert had taken precautionary measures to maintain an effective naval force in Asiatic waters. Examination of the list of vessels on foreign stations in 1898 shows that the fighting ships in the East were the Olympia, Boston, gunboat Machias, and gunboat Yorktown. The Machias and Yorktown required overhauling and were ordered to return to the United States, but, that there should be no diminution of the strength of the squadron, they were replaced by the Petrel and Concord.

Portentous signs of war caused the Department under Mr. Herbert's successor to give the closest study to the number and character of the fleet stationed by Spain in the Philippine Islands. Lieutenant George L. Dyer was appointed naval attaché in Madrid in the summer of 1897, and it was a comparatively easy matter to ascertain through him the exact number of Spanish ships in the East, and whether despatch of reinforcements was contemplated; but it was far more difficult to find out the condition of the vessels. As a matter of fact, the Department was unable to learn the state of their effectiveness. It knew that the Spanish force comprised the iron cruiser Reina Cristina, flagship, of 3,520 tons, built at Ferrol, Spain, in 1887; the wooden Castilla, 3,260 tons, launched at Cadiz in 1881; the iron gun-

Drawn by Henry Reuterdahl

boats Don Juan de Austria and Don Antonio de Ulloa, 1,159 tons each, constructed at Cartagena and Carraca respectively, in 1887; the steel gunboats Isla de Cuba and Isla de Luzon, 1,045 tons, laid down at Elswick, England, in 1886; the Velasco, 1,152 tons, constructed at Blackwall, England, in 1881; gunboats Marques del Duero, 500 tons, and General Lezo, 525 tons; surveying ship Argos, 508 tons; and a score of mosquito gunboats. The march of events pointing inevitably to war, Spain made a feeble attempt to augment her shore defenses, and sent to Manila the Isla de Mindanao, one of her large auxiliary ocean liners, heavily laden with guns and other munitions of war.

None of the Spanish vessels in the Philippines was capable of operating at a considerable distance from a well furnished and protected base, but, if in effective condition, they comprised, with the shore defenses, a formidable force for the small United States squadron to attack, especially as the latter was certain to have the ports of Asia barred by the institution of unyielding neutrality, and was seven thousand miles from a port where it could hope to obtain assistance. In estimating Spain's strength in the East Indies, therefore, it was necessary to consider the batteries placed at the points at which it was likely her fleet would take station for the battle. A dispute with Germany over the Caroline Islands had threatened war a few years before Spanish-American relations became acute; and, to defend her possessions in the Pacific from German assault, Spain installed at Manila and other important points high-powered guns capable of sinking any of the ships of our little squadron. Manila was defended in the fall of 1897 by four 9½-inch muzzle-loading rifles; four 5½-inch converted breech-loading rifles, and fifteen 6.3-inch obsolete muzzle-loading bronze rifled guns, distributed in front of and along the mediæval wall located on the bay shore of the city. A casemated earthwork of entirely modern character, over which poked the muzzles of two 15-centimeter Ordonez rifled guns, was built at Sangley Point. A stone redoubt at Cavite and the antiquated Fort San Felipe adjacent were the sites of three 6.3-inch Armstrong muzzle-loading rifles. The entrance to the Bay of Manila is divided by the island of Corregidor into two channels, one known as the Boca Grande and the other as the Boca Chica. Boca Grande was covered by three 6-inch Armstrong breech-loading rifles, three 12-centimeter breech-loading rifles, and three 16-centimeter Palliser muzzle-loading rifles, and Boca Chica by three 8-inch muzzle-loading Armstrong rifles, three 18-centimeter Palliser muzzle-loading rifles, and two 16-centimeter Hontoria breech-loading rifles. Within twenty-four days the defenses of the entrance of Manila Bay were put in condition for action, and just before the declaration of war the battery at Sangley Point was reinforced by one 14-centimeter breech-loading rifle. Several hulks were sunk in the northwest channel of Subig Bay; but four 15-centimeter guns sent to defend this harbor lay unmounted when the American squadron arrived.

Every effort was made by our Navy Department to learn the number and caliber of the guns comprising the batteries defending Manila and Subig Bay, and while some information was obtained through our naval attaché and confidential sources in Madrid and through United States Consul O. F. Williams, who remained in Manila until forced to leave, it was not sufficiently accurate to be of much value. The condition of the defenses in 1897 was reasonably well known. As war approached, additional guns were placed, but in what numbers and at what positions could not be ascertained. Mines were also reported to have been laid.

The mistake of underrating the strength of the enemy was not made. It was advisable that our squadron should be superior to that of Spain in order to offset the advantage lent to the latter by the shore batteries. The Olympia completed her tour of duty on the Asiatic Station in the winter of 1897–98, and was ordered to San Francisco for repairs and alterations. Ten days after the destruction of the Maine, these orders were revoked and she was directed to remain in the East. The Raleigh was attached in 1897 to the European Station, which was certain to be abandoned in case of war, and instructions were sent to her in December of that year to join the Asiatic Squadron. The Baltimore was placed in commission

COPYRIGHT, 1899, BY FRANCES B. JOHNSTON

ADMIRAL GEORGE DEWEY

in October of 1897, and relieved the Philadelphia as flagship of the Pacific Station. She was destined to remain but a short time on this duty. The Department had selected her to replace the Olympia on the Asiatic Station, but in March of 1898 she was ordered to reinforce that vessel. Besides the additional strength she gave the Asiatic Squadron, her assignment to it was important for another reason. While all of the ships were provided with ammunition sufficient for battle, their magazines contained the allowances of peace. Hostile operations require abundant supplies. The wooden cruiser Mohican, at Mare Island, California, was loaded with powder and projectiles and was hurried to Honolulu, where the Baltimore was anchored. The transfer of her precious cargo to the Baltimore was promptly effected, and on March 25 the Baltimore sailed for Hongkong via Yokohama. By utilizing the Baltimore instead of a merchant ship for the transportation

of the munitions, there was less chance of their capture in case the Spaniards should enterprisingly seek to gain possession of them; but it was within the bounds of possibility that a bold plan to intercept the cruiser would be attempted, and a feeling of intense anxiety pervaded the White House and Navy Department until news of her safe arrival at Hongkong on April 22 reached the Bureau of Navigation. After the war with Spain, a report gained credence that, in order to provide the Asiatic Squadron with sufficient ammunition to engage the Spanish force, the Department had found it necessary to send a special train carrying supplies across the continent to San Francisco, where the freight was transferred to the Mohican. As a matter of fact, with the ammunition brought by the Baltimore the Asiatic Squadron was amply supplied, and did not expend a third of its ammunition at the battle of Manila. As to the railroad train, the only one sent across the continent consisted of fourteen cars, and was assembled at Harrisburg, Pa., on June 30, 1898, almost two months after the battle. The munitions it carried were intended to form a large reserve supply for the Pacific and Asiatic Squadrons, there existing at the time some apprehension that Spain might send a fleet from Europe to the Philippines and that Germany might provoke us to war. At no time, however, was any American squadron so short of ammunition that it would have been unable to engage an enemy's fleet.

The last reinforcement given to the Asiatic Squadron comprised the auxiliaries McCulloch, Nanshan, and Zafiro. The McCulloch had been built on the Atlantic coast and was ordered to San Francisco via the Suez Canal to perform revenue cutter service. Under the law authorizing the transfer of revenue cutters to the control of the navy in time of war, she was attached to the Asiatic Squadron, and on April 8 was caught by cable at Singapore and directed to proceed to Hongkong, avoiding Spanish ports and vessels *en route*. As the Asiatic Squadron had no base nearer than San Francisco, though supplies could have been obtained at Honolulu, then the capital of an independent republic, it was necessary to provide it with a collier and a supply ship, and the British steamers Nanshan and Zafiro were purchased at Hongkong and loaded with coal and other necessary supplies. On the eve of war the Navy Department was able to make the following comparison of the strength of the naval forces of the United States and Spain in the East:

	United States.	Spain.
Vessels: Cruisers	4	2
Gunboats	3	11
Mosquito craft	0	25
Armed tonnage	20,619	20,693
Guns in main battery	53	44
Guns in secondary battery	84	81
Broadside discharge main battery guns	3,700	3,000

Afloat, the United States was superior, but Spain was stronger so far as *matériel* was concerned, taking her land and naval forces together. The batteries defending Manila Bay were capable of firing at a single discharge 3,750 pounds of metal. It is the testimony of experts that guns ashore are, by reason of steadiness of platform and protection afforded to the gunners, capable of more effective results than guns installed on men-of-war.

Personnel is largely the deciding factor in naval engagements, and this fact was to be demonstrated in the battle of Manila Bay. The commander-in-chief of the American force was Commodore George Dewey. The selection of Commodore Dewey to command the Asiatic Squadron was made during the fall of 1897. Rear-Admiral A. S. Crowninshield, Chief of the Bureau of Navigation, called the attention of the Secretary to the fact that the tours of duty of Rear-Admiral Thomas O. Selfridge, Jr., in command of the European Squadron, and Rear-Admiral Frederick V. McNair, in command of the Asiatic Squadron, would expire within a few months, and that it was advisable to relieve them. The Secretary examined the Naval Register, and found that there were three officers whose turn for sea had come: Commodore E. O. Matthews, Commodore John A. Howell, and Commodore George Dewey. Commodore Matthews was Chief of the Bureau of Yards and Docks, from which place it was not thought desirable to take him; Commodore Howell was Commandant of the League Island Navy-Yard, and Commodore Dewey was President of the Board of Inspection and Survey. Both had had long service and valuable experience; Howell had reputa-

COPYRIGHT 1891 BY ENRIQUE MULLER

THE OLYMPIA

tion as an ordnance expert of marked ability; Dewey had served as Chief of the Bureau of Equipment of the Navy Department, and subsequently as a member of the Examining and Retiring Boards, receiving in 1895 his orders to the Board of Inspection and Survey. The Asiatic Squadron, in case of war with Spain, offered the larger probable opportunity for distinction, although the European Squadron was a choice flag command of the navy and included the Spanish waters. I decided to give Dewey the Asiatic and Howell the European station, and this arrangement, on my submitting it to President McKinley, who had made no suggestion in the matter, and who always left such matters to the Secretary, was approved by him. I remember his simply saying to me, in his characteristically pleasant way, "Are you satisfied that Dewey is a good man for the place and that his head is level?" to which I affirmatively answered. Political or personal influence had nothing to do with his selection. Indeed, war was not then—in the fall of 1897—so imminent that there was reason for departing from the usual routine of making in the usual regular sequence the selection of the two or three officers whose turn to go to sea had come. A month before war was declared Commodore Howell was withdrawn from Europe, the European Squadron having

been broken up, and placed in command of the Northern Patrol Squadron, organized to defend the North Atlantic coast; he was subsequently ordered to Cuban waters as Commander of the First North Atlantic Squadron.

The orders to Dewey were signed on October 21, and he was directed to sail for Nagasaki, Japan, and there relieve Rear-Admiral McNair. He gave immediate evidence of the fact that the Department was warranted in placing faith in him. As soon as it was definitely decided that he should assume command of the Asiatic Station, he began collecting data in regard to the Spanish forces in the Philippines, and the Department assisted him in every possible way. Moreover, before and during the war the Department made it a first duty to advise him of every development which would be of interest or importance in the conduct of military operations. Before he sailed, the policy of the Administration toward Spain was outlined to him, and he received specific instructions as to the course to pursue in the contingency of war.

When Dewey assumed command of the Asiatic Station on January 3, he found a thoroughly efficient and well-trained force, and the credit for this condition is due to Rear-Admiral McNair. When the latter arrived in Washington, he stated that he had turned over to Dewey plans for an attack upon the Spanish forces, similar in many respects to those afterwards followed.

Protection of American interests had required the scattering of the ships of the Asiatic Squadron along the Chinese and Korean coast. Believing the time for action not far distant, orders were cabled to Dewey on February 25 directing him to mobilize his squadron, with the exception of the unseaworthy Monocacy, at Hongkong, and to keep his ships filled with coal. "In the event of declaration of war with Spain," he was advised, "your duty will be to see that the Spanish squadron does not leave Asiatic coast, and then offensive operations in Philippine Islands." Other preliminary orders were issued, including an instruction, cabled on April 7, to land all woodwork and stores not considered necessary for operations, and on April 21 the Commander-in-Chief was informed that the naval force on the North Atlantic Station was blockading Cuba and that war might be declared at any moment. Commodore Dewey had been active in carrying out his instructions to prepare for war. Everything had been done that promised increase of the effectiveness of his command. Machinery was examined and repairs made where needed; guns were overhauled; magazines, magazine hoists, signal apparatus, in fact, every little detail which made up the complex engines so soon to be put to test, underwent careful and conscientious scrutiny. Arrangements were made with the British authorities to dock the Baltimore immediately upon her appearance in the harbor, and two days after her arrival she was cleaned and coaled and reported ready for war. White is the peace garb of American naval vessels, and so decorated they form splendid targets. To make the ships as inconspicuous as possible, the Department ordered that they be painted slate color. Thus clad, they awaited instructions to advance on the Spanish force. Great Britain did not, however, permit them to remain in the harbor. She gave recognition of a state of war by issuing on April 24 her proclamation of neutrality. Dewey at once ordered the Boston, Concord, Petrel, McCulloch, Nanshan, and Zafiro to Mirs Bay, an inlet on the Chinese coast, distant thirty miles from Hongkong, which he had selected as a rendezvous. The Olympia, Baltimore, and Raleigh took advantage of the twenty-four hours' grace allowed by the proclamation to remain until the expiration of that time. The purpose of their stay was twofold: Commodore Dewey desired to confer with the United States Consul at Manila, who was *en route* to Hongkong on an overdue steamer, and certain parts of the machinery of the Raleigh were undergoing repairs in a machine-shop ashore. Neither the Consul nor the machinery came within the time-limit, as the Commodore received from the Department the instruction which moved him at once to action.

This instruction was not striking in its originality; in fact, it was simply in line with the programme of procedure which Dewey knew so well. As soon as war was declared, it was the unanimous opinion of the Department, agreed on by the Secretary, the Assistant Secretary, and

the Chief of the Bureau of Navigation, indeed by all who expressed an opinion, that we should strike at once at the Spanish fleet in the Philippines. On Thursday, April 21, I urged this action on President McKinley. He thought it not quite time. But early Sunday forenoon, the 24th, I conferred with him at the White House. So vivid is the picture he presented on that memorable occasion that it has remained in my memory with the distinctness of a first impression. It inshield before or after I went to the White House, was put in cipher and cabled. It was as follows:

Washington, April 24, 1898.

Dewey, Hongkong:

War has commenced between the United States and Spain. Proceed at once to the Philippine Islands. Commence operations at once, particularly against Spanish fleet. You must capture vessels or destroy. Use utmost endeavors. LONG.

It was sent none too soon. Just after it had gone, word was received from

THE LATE CAPTAIN CHARLES V. GRIDLEY
Who commanded the Olympia at Manila.

was a lovely, sunny spring day, a bright contrast to the grim business in hand. We sat on a sofa, he thoughtful, his face showing a deep sense of the responsibility of the hour. My memory is that I took to him for approval the now famous despatch, and that it had been prepared by the Bureau of Navigation before I went to the White House. I am advised, however, by officers of that Bureau that it was not prepared till after my return. At any rate, the President gave me that morning the desired authority, and the despatch, whether drafted by Rear-Admiral Crown-

Dewey that the Governor of Hongkong had issued a proclamation of neutrality, which required the departure of the American ships. With this famous despatch ceased all immediate control by the Department of Dewey's conduct. He was left unfettered, and to him and to his subordinates was confided the responsibility of achieving his task. Accompanied by the Raleigh and Baltimore, the Olympia left Hongkong, and, with the bands playing the "Star-Spangled Banner," and followed by the ringing cheers of British sailors and soldiers, steamed for Mirs

Bay. Consul Williams and the completed parts of the Raleigh's machinery arrived twenty-four hours later, and on April 27 Commodore Dewey signaled his command to get under way. Shortly after leaving Mirs Bay the crews were assembled, and to them was read the bombastic and abusive proclamation issued at Manila on April 23 by the Captain-General of the Philippines. This proclamation is worthy of examination because it shows the contemptuous view of us entertained at the time by the officials of Spain:

Spaniards! Between Spain and the United States of North America hostilities have broken out.

The moment has arrived to prove to the world that we possess the spirit to conquer those who, pretending to be loyal friends, take advantage of our misfortunes and abuse our hospitality, using means which civilized nations count unworthy and disreputable.

The North American people, constituted of all the social excrescences, have exhausted our patience and provoked war with their perfidious machinations, with their acts of treachery, with their outrages against the law of nations and international conventions.

The struggle will be short and decisive. The God of Victories will give us one as brilliant and complete as the righteousness and justice of our cause demand. Spain, which counts upon the sympathy of all the nations, will emerge triumphantly from this new test, humiliating and blasting the adventurers from those States that, without cohesion and without a history, offer to humanity only infamous traditions and the ungrateful spectacle of Chambers in which appear united insolence and defamation, cowardice and cynicism.

A squadron manned by foreigners, possessing neither instruction nor discipline, is preparing to come to this archipelago with the ruffianly intention of robbing us of all that means life, honor, and liberty. Pretending to be inspired by a courage of which they are incapable, the North American seamen undertake, as an enterprise capable of realization, the substitution of Protestantism for the Catholic religion you profess, to treat you as tribes refractory to civilization, to take possession of your riches as if they were unacquainted with the rights of property, and to kidnap those persons whom they consider useful to man their ships or to be exploited in agricultural or industrial labor.

Vain designs! Ridiculous boastings!

Your indomitable bravery will suffice to frustrate the attempt to carry them into realization. You will not allow the faith you profess to be made a mock of; impious hands to be placed on the temple of the true God; the images you adore to be thrown down by unbelief. The aggressors shall not profane the tombs of your fathers, they shall not gratify their lustful passions at the cost of your wives' and daughters' honor, or appropriate your industry has accumulated as a provision for your old age. No, they shall not perpetrate any of these crimes inspired by their wickedness and covetousness, because your valor and patriotism will suffice to punish and abase the people that, claiming to be civilized and cultivated, have exterminated the natives of North America, instead of bringing to them the life of civilization and of progress.

Filipinos, prepare for the struggle, and, united under the glorious Spanish flag, which is ever covered with laurels, let us fight with the conviction that victory will crown our efforts, and to the calls of our enemies let us oppose, with the decision of the Christian and the patriot, the cry of "Viva España."

Your General,
BASILIO AUGUSTIN DAVILA.

Manila, 23d April, 1898.

"Mr. Dooley" could have written nothing funnier.

Following the reading of this proclamation, the crews were informed that the squadron was bound to Manila, there to "capture or destroy the Spanish fleet." The cheers that resounded and the delight manifested constituted a patriotic reply to the vainglorious utterances of the Spanish officer. It was a spontaneous declaration by the men who served the guns that they would courageously and enthusiastically execute the orders which had been given to their commander-in-chief.

The important problem Dewey was set to solve was the whereabouts of the Spanish fleet. Consul Williams had advised him that it was assembled in Manila Bay, which was defended by additional batteries and was also mined. The obvious strategical course for the Spanish Admiral to follow was either to establish his squadron at Subig Bay, from which point he could threaten the communications of the American commander and make well-calculated dashes upon his ships blockading Manila, or evade him, and force his men-of-war to burn up their coal in fruitless pursuit. Both plans would have required the concentration of the invading force, and would have prevented the despatch of troops for land operations. Admiral Montojo, Commander-in-Chief of the Spanish squadron, seems to have had some notion regarding the advisability of establishing his base at Subig Bay. That arm of the sea had for thirteen years been subjected to exhaustive examination by a number of special commissions, and at Olongapo, situated on its eastern shore, the construction of a naval station had begun. It was hardly to be believed

that this point had not undergone some measure of effective defense. Dewey had been informed that the Spanish squadron proposed to take position at Subig Bay; and, in fact, that had been the intention of its commander-in chief. He sailed for Subig Bay on April 24, but on arrival found that the modern guns provided for its shore defense had not been placed. The Castilla started to leak, and it became necessary to pack her shaft alley with cement; the Velasco was not in condition for offensive work either at Subig or Manila; and the Ulloa was anchored by her infirmities at Cavite. The council of Spanish commanders convened at Subig advocated return to Manila because the water was shallow, and there was more chance of saving life there in case of disaster. This last conclusion shows the demoralization of the Spanish force. Montojo returned to Manila Bay with such speed as could be made by the inefficient ships of his command, and upon arrival placed them under the guns of the battery, where he awaited events.

Possessing little knowledge of the deplorable condition of the Spanish fleet, Dewey intrepidly steamed toward Luzon. The green hills of this island of Spain rose out of the water as dawn was breaking, on April 30. There was no enemy in sight, but the invisible Spanish signalman at Cape Belinao telegraphed that the Americans had come. Toward Subig Bay Dewey turned the prows of his squadron, and the Boston and Concord, when a short distance from their destination, were sent ahead to reconnoiter that arm of the sea. Twenty-four hours earlier and the Battle of Manila Bay would have been in history the Battle of Subig Bay. But no trace of the Spanish ships was found. When Dewey learned of the fruitlessness of his search, he stopped his squadron and signaled his captains to repair aboard the flagship. At this conference final plans were adopted for running past the batteries defending the entrance to Manila Bay and attacking the enemy if he had been guilty of the strategical mistake of selecting that harbor as the battle scene.

Crossing the China Sea little attempt was made to screen the movements of the squadron. Forcing the channel into Manila Bay, which was doubtless mined, and certainly defended by heavy guns, demanded the exercise of extraordinary precaution. When tropical night fell, the gleam of a single white light at the stern of each ship, by which the following vessel steered her course, was the only illumination allowed the squadron. Fortune smiled on the boldness of the assailant and aided his enterprise by giving him a night well suited to its achievement. A young moon furnished the little light needed to outline the Boca Grande, as the squadron, its guns loaded and ready for discharge, approached that channel. Across the face of the heavens sped black, thunderous clouds; the lightning flashing from them brought into sharp relief the headlands which nature had constructed as her defenses of the bay. Near the center of the wide entrance loomed the island of Corregidor, and within half a mile stood the rock El Fraile, a frowning sentinel.

Onward Dewey's vessels steamed, spurning danger, and heedless of mines or guns, which Spanish reports asserted would be potent for defense. With good British charts and relying solely upon American seamanship to navigate the ships, and with the Olympia in the lead, he moved toward El Fraile, ignorant that a formidable battery had been placed there. As the flagship turned in its direction, a Spaniard sighted the white light shining in her stern. Almost at the same instant a sheet of flame shot from the smokestack of the McCulloch. Signal lights communicating the news of the presence of the enemy were at once displayed at Mariveles Bay, and a rocket burst on the south shore near Punta Restinga. From the battery at the latter point came the first shot of the war in the East. El Fraile, too, opened fire. The Raleigh, Boston, and McCulloch returned the hostile greeting with more effect, one of their projectiles exploding among the gunners of the Restinga battery and silencing it after it had been in action only three minutes. There was no pause for this exchange, but the squadron moved on, and in half an hour entered Manila Bay, absolutely unharmed and encouraged by the wretched gunnery of the Spanish marksmen and the loss by its antagonist of a part of the strength upon which he had relied to do it injury.

Manila lay twenty miles away, the

lights illuminating it casting a bright glare upon the horizon. Desiring to attack by daylight, Commodore Dewey signaled that the speed should be four knots. When the lights twinkling this order and the bright replies made thereto by all the ships had died away, the men were permitted to lie down beside their guns. Few slept, for none knew what an hour might develop. The silvery sheen of dawn disclosed a fleet of merchantmen before the city of Manila, but they were not the craft that Dewey sought, and, paying little attention to the batteries which were wildly firing in his direction, he headed the Olympia toward a line of gray objects lying in front of a group of white buildings comprising the naval arsenal of Cavite. Following the Olympia in the order named were the Baltimore, Raleigh, Petrel, Concord, and Boston. Action impending, the McCulloch and the colliers were sent to the middle of the Bay, there to give assistance to any of the ships, should assistance be needed.

Thus the opposing squadrons came face to face. Montojo had been informed on April 28 by the Spanish Consul at Hongkong: "Enemy's squadron sailed at 2 P.M. from the Bay of Mirs, and according to reliable accounts they sailed for Subig Bay, there to destroy our squadron, and will then go to Manila." He was apprised of Dewey's appearance off Cape Bolinao on April 30, and of his arrival off Subig Bay twelve hours later. He learned of the search made in Subig, but, despite the grim persistency which this procedure betokened, he seemed to think that Dewey would hesitate to force Manila Bay. If so, he underestimated his man and paid the penalty of his mistake. Officers and men of the Spanish force were in Manila, some in bed, when the news that the American squadron was in the Boca Grande reached the city. They were hastily summoned, and for several hours were compelled to suffer that nervous mood which oppresses most men prior to battle, before they sighted the ships destined to deal death and destruction among them.

Such little preparation as could be made in the short time remaining before the battle Montojo attempted. Yet the first gun had not been fired when the Spaniards knew that they were beaten. Montojo directed that every disposition be made to burn the coal and stores at Cavite arsenal, to prevent them from falling into Dewey's hands. He distributed his ships in a long, curved line, one end of which, protected by batteries and iron lighters loaded with sand, rested on Sangley Point. They were in such position that the batteries of Fort San Felipe and Cavite could fire over them. In the Spanish line of battle were the Don Antonio de Ulloa, Castilla, Reina Cristina (flagship), Don Juan de Austria, Isla de Cuba, Isla de Luzon, and Marques del Duero. Lying at the arsenal were the Velasco, Lezo, and Argos, and the Manila took refuge in the roads of Bacoor, not far distant. None of these last-named vessels joined in the action. Admiral Montojo, in his comparison of the relative strength of the two squadrons, counted himself greatly inferior, as shown by this table, which he prepared:

	Tons.	Horse-Power.	Guns.	Men.
American...	21,410	49,290	163	1,750
Spanish...	10,111	11,200	76	1,875

Approaching the Spanish line, the momentous signal, "Prepare for general action," was flown from the signal-mast of the Olympia, and following it the inspiring flag of our country was broken out on every ship. What a thrilling moment! Answering the challenge, the Spaniards hoisted their red and yellow colors, and a deafening roar announced that the batteries of Cavite and Manila were endeavoring to cripple or destroy their audacious enemy. At twenty minutes after five the Spanish vessels joined in the thunder of battle. Save for two shells fired by the Concord at the Manila battery, our squadron proceeded silently, relentlessly, toward its naval antagonist. Fifty-six hundred yards distant, the Commander-in-Chief, without the smallest trace of excitement, turned to Captain Charles V. Gridley, commanding the Olympia, and authorized him to open fire. It was the now famous legend: "You may fire when you're ready, Gridley." Immediately one of the 8-inch guns of the forward turret sent its steel messenger of a nation's wrath toward the Spanish line. As each vessel got within range, it, too, discharged all available guns. Regardless of mines—two of which Dewey reported as exploding just

ahead of the Olympia—the flagship, followed by her supporting ships, ran parallel to the Spanish vessels, smothering some and demoralizing all by a deadly hail of projectiles. At the beginning of the action, a lead-colored launch steamed toward the flagship. Seemingly a dangerous torpedo-boat was coming to perform its deadly mission. The secondary batteries of the Olympia and Baltimore quickly picked up the range, and disabled the launch, which turned toward the shore, where she was beached. Another torpedo launch which Dewey discovered was equally unfortunate, being sunk in the shallow water near Cavite. The Spaniards claimed that no torpedo-boats participated in the action, and that the craft which was beached was really a market-boat performing its daily duty. These distracting incidents of the battle did not, however, divert the attention of the American gunners from the one important fighting ship of the Spanish force—the Reina Cristina. She was the target of all the marksmen of our squadron, and only when she was out of range did the Castilla and other Spanish vessels undergo a fire as murderous as that to which the flagship had been subjected. Believing that closer quarters might turn the tide of battle, Montojo, in the Reina Cristina, put out from the Spanish line. The maneuver promised nothing, but it created an opportunity to show to Spain and to the world how bravely a Spaniard could die. An exploding shell set the cruiser on fire forward, a 6-inch projectile pierced her stern, and through the hole thus made an 8-inch shell, with terrible energy, forced its way. Flames burst from the hull; white steam mingling with the black smoke showed that the steam-pipes had been penetrated. Uncontrollable, her decks filled with dead and wounded and slippery with blood, the Cristina retreated from the fire she had precipitated and sought refuge at Cavite. The Isla de Cuba and the Isla de Luzon were signaled to aid the Marques del Duero and men from the Cavite arsenal in rescuing such of the crew as were alive, and this was accomplished under a fire as terrifying as that which had destroyed the Spanish flagship. The execution done by the American squadron is shown by the fact that when the Cristina went into action her complement comprised 493 men. The men able to respond to muster at Cavite Arsenal numbered 160, of whom 90 were wounded. The loss of the vessel in killed and wounded was thus 423 men.

Dewey passed up and down parallel to the enemy's line three times, the range decreasing from 5,600 yards to 2,600 yards as confidence grew in the charts and in the marks of the leadsmen, and contempt developed for the Spanish gunners afloat and ashore. Spanish shell churned the water along the path of the squadron, passed between the smoke-stacks of the ships, and, shrieking, flew high above their mastheads. Erroneously informed that the 5-inch battery was short of ammunition, the Olympia signaled at 7:35 A.M. to "withdraw from action," and, when out of reach of Spanish range, Dewey ordered: "Let the people go to breakfast." Except for a little coffee given on some of the ships in the early morning, the men had been without food for sixteen hours; yet they served their guns with the energy, alacrity, and courage which have so often been the characteristics of American seamen.

Distant from the Spanish squadron, the terrible effects of the American fire could be seen; the Reina Cristina lay under the north wall of Cavite. her bulwarks awash. The Castilla still floated, but she was on fire, and at ten o'clock her flag came down, and flames sprang from her hull, and, with fantastic leaps, licked her spars. The Don Juan de Austria, which had received almost the concentrated fire of the American squadron, when the destruction of the Cristina was complete, was badly damaged, and the Isla de Cuba and the Isla de Luzon had been repeatedly struck. The Spanish ships, which had hastened in disorder behind Cavite Arsenal, were, with the exception of the Antonio de Ulloa, abandoned, and their sea-valves were broken. The commander of the Don Antonio de Ulloa disregarded Montojo's instruction to sink his ship, and gallantly remained to resume battle on odds promising certain disaster.

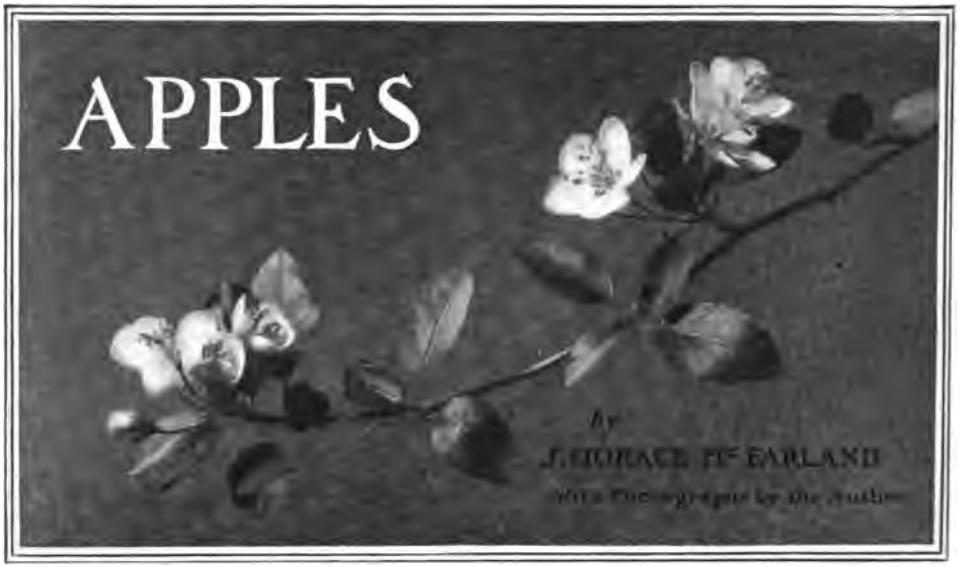
While the men were at breakfast Commodore Dewey consulted his captains in regard to conditions aboard their vessels and the next move in the programme. During the conference a strange vessel was sighted, and the captains returned to

their posts prepared to do battle in case reinforcements for the enemy had arrived. The stranger was found to be a merchantman. Dewey sent word to the Governor-General of the Philippines to order the batteries defending Manila to cease fire instantly or he would shell the city. This warning was effective, and then the Admiral returned to Cavite to complete the work of destruction. The Baltimore, leading the column in place of the Olympia, was granted permission to attack the enemy's earthworks. A duel of ship and shore occurred, described as one of the most picturesque events of that eventful day. The battery at Canacao was the first to withdraw from the contest, its flag hauled down and the men flying from their defenses. Fort Sangley was the next to undergo the American fire, the entire squadron joining in the attack. Bursting shell silenced the guns thrice, and finally a white flag succeeded the Spanish ensign, showing that the enemy had surrendered. As the Baltimore neared Sangley Point, the Don Antonio del Ullao opened fire. Upon that brave little craft were turned the guns of the Baltimore, Olympia, and Raleigh. Soon her crew swarmed over her side and swam ashore, and she listed and sank. At twenty minutes after twelve the cheering signal flew from the signal-arm of the Petrel, which gallantly stood in to the Cavite arsenal: "The enemy has surrendered." The battle was won. Dewey took station in front of Manila, and subsequently ordered the Baltimore and Raleigh to destroy the batteries on Corregidor Island. The McCulloch was sent post-haste to Hongkong to notify the anxious country of the victory, and a few days later the President and Navy Department were informed that the Commander-in-Chief could take Manila at any time, but he had not sufficient men to hold it.

The despatch sent by the McCulloch reached Washington early on the morning of May 6. It was in cipher, and it was not until almost nine o'clock that its translation was completed. A cheering mob of men and women crowded the anteroom of the Secretary's office. General R. A. Alger, then Secretary of War, came to offer his congratulations. I recall saying to him, referring to the military operations in the Orient, as he was preparing to return to his department:

"The navy has completed its work, General. The army's labor has begun."

Stupendous were the results of this brilliant victory. The Philippine archipelago, comprising 1,700 islands and inhabited by 8,000,000 people, belonged by conquest to the United States to hold permanently as indemnity for the war or as a means for exerting pressure upon Spain to sue for peace. Victory for American arms at the outset of the war produced a moral effect of incalculable advantage, and demonstrated to the world the powerlessness of our enemy. From this time the Pacific coast was entirely free of apprehension. Commerce was free alike from peril of the foe and from the high rates of friendly insurance. How great the lesson that could be drawn from the battle! Seven men slightly wounded, and no damage of any account to our vessels, made up the American casualties. Ten ships destroyed, three batteries silenced, and 381 killed are the gruesome totals of Spanish defeat. American valor had again won the victory. President McKinley at once appointed Dewey an acting Rear-Admiral, and recommended his promotion to the grade of Admiral, and that the thanks of Congress be conferred upon him. Each of the captains and many of the subordinate officers received advancement for gallantry in action. In this way only could substantial compensation be given, but it was given spontaneously, and the officers who received it knew that their greater reward would lie in the fact that they had gloriously observed the traditions which have made the American navy historically famous.



A Mile with Me

By Henry van Dyke

O WHO will walk a mile with me
Along life's merry way?
A comrade blithe and full of glee,
Who dares to laugh out loud and free,
And let his frolic fancy play,
Like a happy child, through the flowers gay
That fill the field and fringe the way
Where he walks a mile with me.

And who will walk a mile with me
Along life's weary way?
A friend whose heart has eyes to see
The stars shine out o'er the darkening lea,
And the quiet rest at the end o' the day,—
A friend who knows, and dares to say,
The brave, sweet words that cheer the way
Where he walks a mile with me.

With such a comrade, such a friend,
I fain would walk till journeys end,
Through summer sunshine, winter rain,
And then?—Farewell, we shall meet again!

WELL do I remember one of the admonitions of my youth, brought upon me by an attempt to take apple-blossoms from a tree in bloom because they were beautiful. I was told that it was wrong to pluck for any purpose the flowers of fruit-trees, because the possible fruitage might thereby be reduced. That is, feeding the eye was improper, but it was always in order to conserve the possibilities for another organ of the body. In those days we had not learned that nature provides against contingencies, and that not one-tenth of all the blossoms would be needed to "set" as much fruit as the tree could possibly mature.

The apple, well called the king of fruits, is worthy of all admiration as a fruit, but I do not see why that need interfere in the least with its consideration as an object of beauty. On the contrary, such consideration is all the better for the apple, which is not only most desirable and pleasing in its relation to the dessert, the truly great American pie, the luscious dumpling of the housewife, and the Italian's fruit-stand of our cities, but at the same time a benefaction to the eye and the sense of beauty, in tree, in blossom, and in fruit.

It is of the æsthetic value of the apple I would write, leaving its supreme place in pomology unassailed. Look at the young apple-tree in the "nursery row," where it has been growing a year since it was "budded"—that is, mysteriously changed from the wild and untamed fruit of nature to the special variety designed—by the nurseryman. It is a straight, shapely wand, in most varieties, though it is curious to find that some apples, notably the favorite "Rhode Island Greening," start in promptly to be picturesquely crooked and twisty. As it grows and branches under the cultivation and guidance of the orchardist, it maintains a lusty, hearty aspect, its yellowish, reddish, or brownish twigs—again according to variety—spreading out to the sun and the air freely. A decade passes, and the sparse showing of bloom that has decorated it each spring gradually gives place to a great glory of flowers. The tree is about to bear, and it assumes the character of maturity, for while it grows on soberly for many years, there is now a spreading, a sort of relaxation, very different from the vigorous upshooting of its early youth. After a crop or two, the tree has become, to the eye, the familiar orchard member, and it leans a little from the blasts of winter, twists aside from the perpendicular, spreads comfortably over a great expanse of ground, and settles down to its long, useful, and truly beautiful life.

While the young orchard is trim and handsome, I confess to a greater liking for the rugged old trees that have followed blossom with fruit in unstinted profusion for a generation. There is a certain

character of sturdy good will about these substantial stems that the clinging snows only accentuate in winter. The framework of limb and twig is very different from that of the other trees, and the twisty lines seem to mean warmth and cheer even against a frosty sky. And these old veterans are house trees, too—they do not suggest the forest or the broad expanse of nature, but instead the proximity of man and the home, the comfortable summer afternoon under their copious leafage, the great piles of ruddy-cheeked fruit in autumn.

I need hardly say anything of the apple-blossoms, for those who read these words are almost certain to have long appreciated their delicately fragrant blush and white loveliness. The apricot and the cherry are the first of the fruit trees to sing the spring song, and they cover themselves with white, in advance of any sign of green leaves on their twigs. The apple has an advantage; coming more deliberately, the little pink buds are set amidst the soft greens of the opening foliage, and the leaves and flowers expand together in their symphony of color and fragrance. The grass has grown lush by this time, the dandelions are punctuating it with gold, and everything is in the full riot of exuberant springtime.

But there are apples and apples and apples. Even the plain orchard gives us a difference in flowers, as well as in tree aspect. Notice the trees this coming May; mark the flat, white flowers on one tree, the cup-shaped, pink-veined blooms on another. Follow both through the fruiting, and see whether the sweeter flower brings the more sugary fruit.

Perhaps there is a "crab" in the old orchard, ready to give the greatest burst of bloom—for the crab-apple flower is usually finer and more fragrant than any other of the cultivated forms. It is an especial refuge of the birds and the bees, you will find, and it invites them with its

A FULL-BLOSSOMED APPLE BRANCH

THE BRILLIANT FRUIT OF THE NATIVE CRAB-APPLE

rare fragrance and deeper blush, so that they may work all the more earnestly at the pollination without which all this richness of bloom would be ineffective in nature's reproductive scheme.

This same crab-apple is soon to be, as its brilliant fruit matures, a notable object of beauty, for few ornamental trees can vie with its display of shining color. There was a great old crab right in the flower garden of my boyhood's home, amid quaint box-trees, snowballs, and lilacs. Lilies-of-the-valley flourished in its shadow, the delicate bleeding-heart mingled with old-fashioned irises and peonies at its feet. From early spring until mid-August the crab-apple held court of beauty there—and an always hungry boy often found something in addition to beauty in the red and yellow fruits that were acid but aromatic!

Why do we not plant more fruit trees for beauty? Not one of our familiar fruits will fail us in this respect, if so considered. The apricot will often have its white flowers open to match the purity of the last snow, the cherry will follow with a burst of bloom, the apples and crab-apples will continue the show, aided by plum and pear and peach, and the quince—ah, there's a flower in a green enamel setting!—will close the blooming-time. But the cherry fruits now redden in shining roundness, the earlier apples throw rich gleams of color to the eye, and there is chromatic beauty until frost bids the last russets leave their stems, leaving bare the framework of the trees to teach us in lines of symmetry and efficiency how strength and elegance are combined in nature's handiwork. Do you fear that some of the fruit may be taken? What of it? Plant for beauty, and the fruit is all extra—give it away freely, and pass on some of God's good gifts, to your own true happiness!

There is another crab-apple that is distinctive in its elegance, color, and fragrance. It is the true "wild crab" of eastern North America, and one who makes its acquaintance in blooming-time will never forget it. The tree is not large, and it is likely to be set with crooked, thorny branches; but the flowers! Deep pink or rosy red chalices, rather longer than the commonplace apple-blossom, and

hanging on long and slender stems in a certain picturesquely stiff disposition, they are a joy for the senses of sight and fragrance. This notable native may be found on rich side-hills and in dry glades—it is not fond of swamps. It is grown by some enlightened nurserymen, too, and can well be planted in the home grounds to their rue adornment. The blossoms give way to orm handsome yellow fruits, about an nch in diameter, which are themselves nuch more ornamental than edible, for ven the small boy will not investigate a econd time the bitter flesh. I have heard at a cider of peculiar "hardness" and otency, guaranteed to unsettle the firmest ead, is made from these acid fruits, but have not found it necessary to extend y tree studies in that direction.

The States west of Kansas do not know is lovely wild crab, to which the botanists ive a really euphonious designation as *Pyrus coronaria*. There is a prairie-States rab-apple, which I have never seen, but which, I am told, has nothing like the beauty of our exquisite Eastern native. This Western species lacks the long stem and the bright color of the flowers of our favorite, and its fruits, while quite as viciously sour, are a dull and greasy green. The great West has many other things, but we have the wild crab-apple.

Rather between, as to beauty, is the native crab-apple of the Southland, which is known as the Soulard crab. It is not as attractive as our own Eastern gem, a pure native possession.

Curiously enough, our own fruiting apple is not a native of America. It was at a meeting of a New England pomological association that I heard, several years ago, an old man of marvelous memory and power of observation tell of his recollections of seventy years, notable among which was his account of seeing the first good apples, as a boy, during a visit in the State of New York. We owe the apples we eat to Europe, for the start, the species being probably of Himalayan origin. America has greatly developed the apple, however, as one who has looked over the fruit tables at any great exposition will promptly testify, and nearly all our really good varieties are of American origin. The curious story of "Johnny Appleseed" is given us by historians, who tell us of this semi-religious enthusiast who roamed barefoot over the wilds of

AN APPLE ORCHARD IN WINTER

A "DOUBLE" APPLE-BLOSSOM

Ohio and Indiana a century ago, sowing apple-seeds in the scattered clearings, and living to see the trees bearing fruit, selections from which probably are interwoven among the varieties of to-day.

It is not only for the fruit that we are indebted to the Old World, but also for some distinctively beautiful and most ornamental varieties of the apple, not by any means as well known among us as they ought to be. The nurserymen sell as an ornamental small tree a form known as "Parkman's Double-flowering Crab," which produces blooms of much beauty, like delicate little roses. Few of them, however, know of the glorious show that the spring brings where there is a proper planting of the Chinese and Japanese crab-apples, with some other hybrids and varieties. The Outlook has many readers, I am sure, in New England, and to these a pilgrimage to Boston is always in order. In the Public Gardens of Boston are superb specimens of these crab-apples from the Orient, and for several weeks in May they may be enjoyed.

It is at the wonderful Arnold Arboretum, that Mecca of tree-lovers just outside of Boston and really within its magnificent park system, that the greatest show of the "pyrus family," as the apples and pears are botanically called, may be found. Here have been gathered the lovely blooming trees of all the hardy world, to the delight of the eye and the nose, and the education of the mind. To me the most impressive of all was a wonderful Siberian crab (one must look for *Pyrus baccata* on the label, as the Arboretum folks are not in love with "common" names) close by the little greenhouses. Its round head was purely white, with no hint of pink,

THE BEAUTY OF A FULL APPLE BRANCH

and the mass of bloom that covered it was only punctuated by the green of the expanding leaves. The especial elegance of this crab was in its whiteness, and that elegance was not diminished by the later masses of little yellow and red, almost translucent, fruits.

A somewhat smaller tree is commonly called the Chinese flowering apple, and its early flowers remind one strongly of the beauty of our own wild crab, as they are deeper in color than most of the crabs, being almost coral-red in bud. This "spectabilis," as it is familiarly called, is a gem, as it opens the season of the apple-blooms with its burst of pink richness.

The beauty-loving Japanese have a festival at the time of the cherry-blooming—and it is altogether a festival of beauty, not connected with the food that follows the flowers. They actually dare to cut the blossoms, too, for adornment, and all the populace take time to drink in the message of the spring. Will we workaday Americans ever dare to "waste" so much time, and go afield to absorb God's provision of soul and sense refreshment in the spring, forgetting for the time our shops and desks, our stores and marts?

Professor Sargent, that deep student of trees who has built himself a monument, which is also a beneficence to all

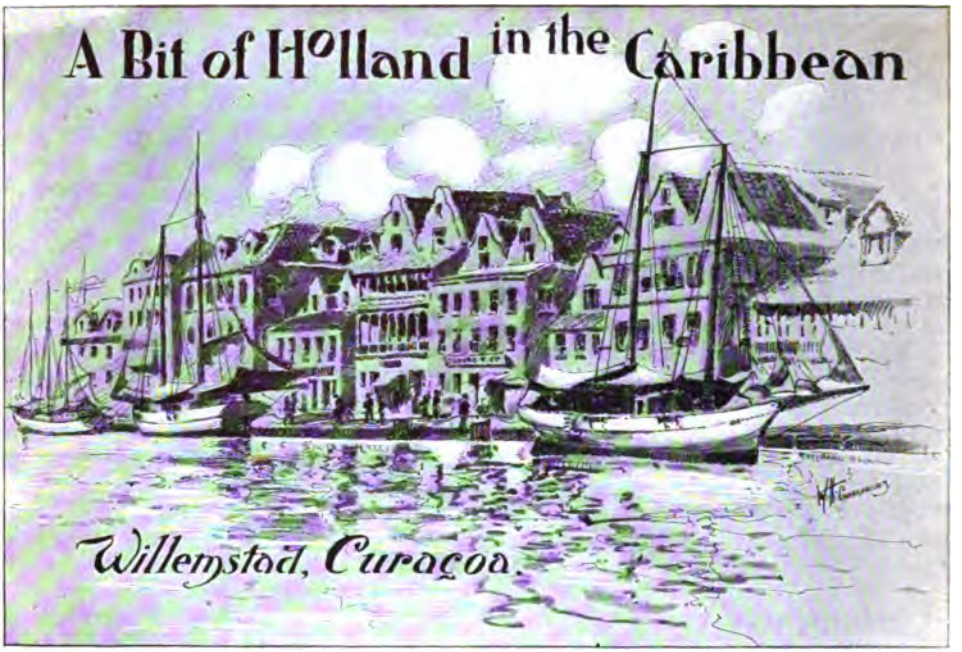
mankind, in the great volumes of his "Silva of North America," lives not far from Boston, and he loves especially that jewel of the apple family which, for want of a common name, I must designate scientifically as *Pyrus floribunda*. On his own magnificent estate, as well as at the Arboretum, this superb shrub or small tree riots in rosy beauty in early spring. While the leaves do come with these flowers, they are actually crowded back out of apparent sight by the straight wands of rose-red blooms, held by the twisty little tree at every angle and in indescribable beauty. If the visitor saw nothing but this Floribunda apple—"abundant flowering" sure enough—on his pilgrimage, he might well be satisfied, especially if he then and there resolved to see it again, either as he planted it at home or journeyed hither another spring for the enlargement of his soul.

There are other of these delightful crabs or apples to be enjoyed—Ringo, Kaido, Toringo—nearly all of Japanese origin, all of distinct beauty, and all continuing that beauty in handsome but inedible fruits that hang most of the summer. My tree-loving friends can well study these, and, I hope, plant them, instead of repeating continually the monotonously familiar shrubs and trees of ordinary commerce.

But I have not spoken enough of one notable feature of the every-day apple-tree that we may see without a journey to the East. The fully set fruiting branch of an apple-tree in health and vigor, properly nurtured and protected against fungous disease by modern "spraying," is a thing of beauty in its form and color. See those deep-red Baldwins shine overhead in the frosty air of early fall; note the elegance of form and striping on the leathery-skinned Ben Davis; appreciate true apples of gold set in green enamel on a tree of the sunny Bellefleur! These in the fall; but it is hardly full summer before the closely set branches of Early Harvest are as beautiful as any orange-tree, or the more upright Red Astrachan is ablaze with fruit of red and yellow. Truly, an apple orchard might be arranged to give a new picture of changing beauty of color and growth from early spring until fall frost, and then to follow with a daily panorama of form and line against snow and sky until the blossoms peeped forth again. Let us learn, if we do not already love the apple-tree, to love it for its beauty all the year!

Questionings

By Val Ormond



Have ye heard, unstirred,
The sobbing of the night,
When moon-forsaken;
When stars refuse their light
Joy to awaken?
When Earth, from hill and dale,
Peers through a misty veil—
Dark, cold, and dimly pale,
And spirit-shaken:
Have ye heard?

Have ye heard, unstirred,
The sobbing of the gale,
When Boreas scolds it;
When shivering Earth turns pale
As snow enfolds it?
When trees are leaf-destroyed,
And all things storm-annoyed,
E'en Nature song-devoid
While she beholds it:
Have ye heard?

Have ye heard, unstirred,
The sobbing of the sea,
When winds are lashing;
When ships in misery
Are shoreward dashing?
The shrieking in the gloom;
The wailing o'er their doom,
When to their ocean-tomb
The ships go crashing:
Have ye heard?

Have ye heard, unstirred,
The sobbing of the soul
When frenzy-driven;
When faith—the Master's dole—
Has vainly striven?
When Love's extinguished fires
Leave naught but cold desires,
When every Hope expires
That man was given:
Have ye heard?
Have ye heard.

A Bit of Holland in the Caribbean

BY WALTER HALE

WITH DRAWINGS BY THE AUTHOR

DEPENDING upon Venezuela for most of the necessaries of life, the little Dutch town of Willemstad, or more commonly Curaçoa, since it is the only important place on the island of that name, really suffered more through the recent blockade by the allies than did the cities on the mainland, against which it was directed. Fresh beef, vegetables, fruit, to say nothing of coffee and sugar, all come from ports on the Venezuelan coast, but with these harbors guarded by a cordon of gunboats and cruisers, the source of supply was cut off entirely, and the fleet of coasting schooners engaged in the trade lay moored along the quay, their flags flapping idly in the breeze, while the crews slept beneath the awnings stretched over the decks.

Lying at anchor in the Schottegat, when I was in Curaçoa a few weeks ago, were the war-ships of many nations—English, German, American, Dutch—sometimes as many as a dozen, seldom less than four or five, their white hulls glistening in the sunlight, their masts rising above the low hills that separate the harbor from the town. Add to these the merchant vessels along the wharves in the bay of Santa Anna, from the big steamships of the Dutch and Spanish lines—transatlantic flyers in their day, renamed and reconstructed, and now filling a humble mission in the nomadic trade of the historic Spanish Main—to the vagrant Russian and English "wind-jammers" waiting till the blockade was raised to deliver their cargoes of coal to the Venezuelan railways, and one can form some idea of the traffic centered in this busy West Indian port.

And these hundreds of Jackies and sailormen must be fed, in addition to the town people, who under the blockade found prices higher and food scarcer every week. Go to the quaint market that stretches along the Waaj Gaat, and go early in the morning, when the snub-nosed punts are creeping beneath the bridge, with their deck-loads of fresh fish, and long pack-trains of donkeys are coming in from the country, their panniers filled with charcoal or bundles of fodder, sometimes with vegetables from the insufficient crop raised on the plantations.

Such a jumble of nationalities would surprise even cosmopolitan New York;

here the Chinese steward of the Marietta is counting out coppers into the dusky hand of a native muleteer, while his assistants hurry off to the launch with well-filled baskets. Beneath an awning are a group of German mess-stewards from the Falke and Vineta, their spotless white uniforms set off by funny little straw hats like inverted soup-plates. Japanese servants from the English ships, and stolid-faced Dutchmen from the De Ruyter and the Surinam, bargain with inky, wrinkled dames who squat about their stores of shining fish. Other dusky mothers are selling cheap prints in all the shades of the rainbow, while their chocolate-colored babies, quite naked, play about in the sun.

OLD HOUSES IN OTRABANDA

Then there are dock laborers scantily clad in flimsy duck trousers and shirts, and tall native women with the erect carriage and graceful swinging step that seem to come from balancing the week's washing or the day's marketing in long tray-like baskets on their heads. Dodging in and out of the crowd is the ever-present small dog, while hucksters, venders of lottery tickets, and braying burros add to the noise and confusion.

The navy stewards are early on the scene, and they make a clean sweep of the market; when they have finished, it looks as though a cyclone had passed by. Small wonder that there was great rejoicing among the Curaçoan housewives when news came from Washington that Mr. Bowen had come to terms with the allies and the blockade was to be lifted.

As a matter of fact, all this shipping is the life and soul of Willemstad; the town could never exist without it, for the surrounding country is as barren as the Desert of Sahara. To the west three large peaks rear their gaunt, scraggy outlines

GOVERNMENT HOUSE AND PONTOON BRIDGE, CURAÇOA

against the sky. Near the coast is a long, low line of so-called salt-water foliage, dingy green in color, relieved now and then by the red-tiled roof and white pillars of some plantation house. East of the city are two more big hills. The plain between Goat Mountain and Santa Barbara is historic ground, for here the Dutch soundly thrashed the invading English army a few years before the Treaty of Amiens was concluded in 1802. In this vicinity is the quarantine station, and further to the eastward are the phosphate works, now almost abandoned since the discovery of the mineral in Algiers. Almost at the foot of Goat Mountain is an old Spanish citadel guarding a secluded harbor; and here one's boyhood recollections of Captain Kidd and Lafitte, with other bold mariners of their ilk, are revived; that for years was a favorite haunt with the ancient buccaneers who held sway over the Spanish Main. "The entrance is narrow, but once inside there is plenty of water, and a ship can lie here in safety, completely hidden from the sea by the hills." This description, which has a familiar ring, applies on a larger scale to the harbor of Willemstad itself. There are legends on every hand of those bloodthirsty days in the Caribbean; stories of pirates and filibustering expeditions are a part of the stock in trade of the oldest citizens, and no one could do full justice to the history of Curaçoa without dipping one's pen occasionally in crimson ink.

VANDENBRANDHOF PLAIN, WILLEMSTAD

PLAZA AGUASAL, OTRABANDA, CURAÇOA

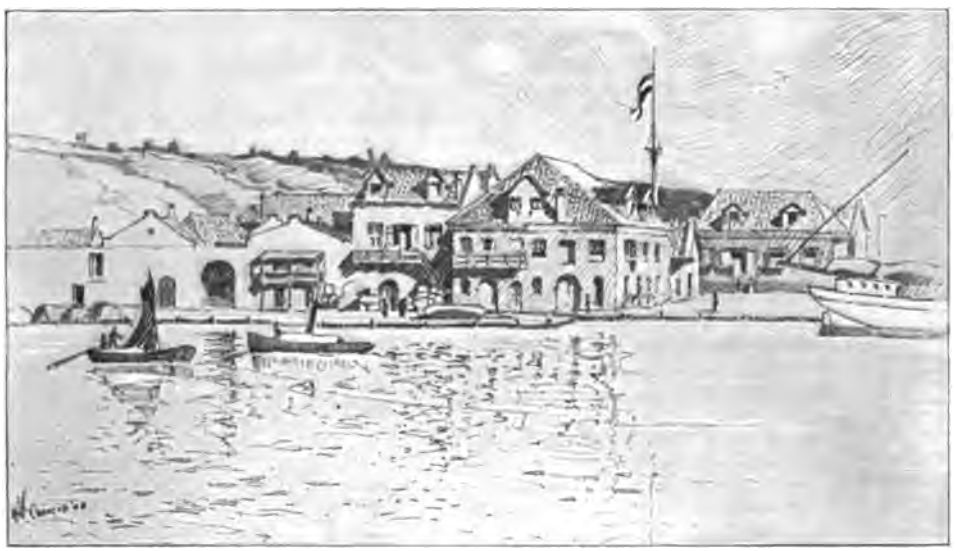
From the sea the town affords a riot of light and color glittering beneath the blazing sun. A white city it is, stretching away on either side of the two grim forts that mark the narrow channel leading into the harbor. It looks as though some picturesque section of old Dordrecht or Utrecht or Zaandam had been transported to the West Indies, given a clear blue sky instead of the moving masses of dark gray clouds, and then whitewashed pink and yellow, blue and green, in place of the somberer, richer hues of Holland.

In the foreground the waves spend themselves against the porous rocks and solid masonry on the shore. Tiled roofs, queer Dutch gables, dormer-windows, stand out against the dead background of the hills, while here and there a church tower or the masts and spars of the ships in the inner harbor rise above the housetops.

Just inside the pontoon bridge—opened and shut with the aid of a puffing tugboat—is the harbor of Santa Anna, a narrow strip of water connecting the Schottegat with the sea. Along the wharves on either side are moored lighters, tugs, steamers, brigs, and sloops—a motley collection. Back of the quay, on the right bank, are the shipping houses, wholesale merchants, and steamship agencies, occupying queer old Dutch buildings with the inevitable tiled roofs and curved white gables. In the first of these houses is the Club de Gezelligheid, where most of the masculine social life of Willemstad begins and ends. They are generally three-bottle men, these Curaçoans, and their favorite pastime is to spend the hot hours of the tropical noontide on the overhanging balcony, where they can follow the busy life along the quay and indulge a craving for liquid refreshment that would put to shame many of our more pretentious organizations in the north.

The Governor lives in a big, plain building on the same side, facing the harbor and the sea, guarded by two or three rusty cannon and a lot of soldiers in short blue jackets, white trousers, and policemen's helmets. The place has all of the license permitted in other seaport towns. By night the narrow streets echo with the shouts and laughter of drunken sailors and discordant music from cheap dance-halls; the disorderly element has things its own way till early morning; but, fortunately, the Curaçoan Tenderloin is confined to a limited area.

If the men of the better class find the life uneventful and monotonous, it must be immeasurably more stupid for the women. There are no theaters or amusements, except when a military band plays in the fort on Sundays and in the little kiosk at Otrabanda on Wednesday nights.



A STREET IN OTRABANDA, CURAÇOA, AND FAMILIAR STREET TYPES

They are seldom seen on the streets, and there is practically no social intercourse between the prominent families. The great event of the year is the Governor's Ball on New Year's Eve, and there are two or three smaller entertainments and an occasional dinner at the Palace.

It is not surprising to find that the larger business interests in Curaçoa are in the hands of Jews. Their Portuguese ancestors were banished, and fled to Holland, whence they were transported by the State, with orders on the Governor of the island for land and mules. There are two synagogues, a Roman Catholic cathedral and a church, St. Mary of the Rosary, which holds a commanding position on the east bank of the Waaj Gaat. The only Protestant church in the place has three cannon-balls in its tower, a memento of frequent bombardments by the British fleet.

The liqueur which takes its name from Curaçoa is made from the dried skins of a peculiarly sour and distasteful orange, but droughts have destroyed the trees, and the fruit is now sent to Holland from other points in the West Indies. A system of windmills, wells, and irrigating pipes has been adopted on the plantations where they raise mangoes, nisperos, tamarines, and long grass for fodder. Water is naturally very scarce in the town, and the hotel proprietor looks offended when you ask for a bath. One can have a good swim in the ocean, in a sort of basin cut out of the porous rock, though it is an enervating exercise, the water is so oppressively hot. A fresh tub is a luxury, and it requires a lot of entreaty in English, Spanish, and Papiamento, the local dialect, before the black "boots" can be induced, for a consideration, to climb over the roof to the cistern and down again on the rickety ladder. The bath is really more like a game. The black boy, armed with a tomato-can on the end of a stick, throws the contents of a bucket of water on the back and shoulders of the bather, who has been standing in a sculptured marble tub that promised better things.

Perhaps the last vestige of the old buccaneering days is found in the fleet engaged in the smuggling trade with Colombia and Venezuela. There is enormous profit in the business with the closed ports on the coast; and of the innocent-looking white schooners tied up along the quay, with the flags of Holland and Venezuela at their mast-heads, one in every five is probably loaded with salt or some valuable miscellaneous cargo, waiting for orders before slipping out and trying to land her contraband, under the shadow of night, in some harbor on the mainland. All of these small craft are not necessarily engaged in smuggling; many are sent on more dangerous errands, with messages or more substantial aid to the Venezuelan

ALONG THE HARBOR OF SANTA ANNA, CURAÇOA

insurgents; for General Matos, since his flight from Chichirivichi after the rout by Castro's army, has made Willemstad his headquarters, and directed many of his operations from this safe vantage-point. With Guzman Blanco's sons, who also find refuge here, and General Hernandez, who was released from prison when a war blockade was declared by the allies, he represents the most powerful opposition to the present head of the Venezuelan Government. The people firmly believe that Matos is receiving aid from the Germans, and that the recent expedition which landed arms and ammunition for the insurgents at Corro was organized in Curaçoa not long after the reported interview between him and Commodore Scheder, when the flagship Vineta was last in port. The revolutionists will have to look elsewhere for a capital, however, for the Dutch authorities have ordered Matos and his friends to leave the island at once.

For years Curaçoa has been the refuge for political exiles and conspirators from Colombia, Venezuela, Santo Domingo, and Hayti. Its strategic advantage as a base from which operations could be directed against the towns of the Spanish Main—which really meant the coast from Trinidad on the east to Colon on the west to distinguish it from the islands—was not only recognized by pirates and filibusters of the early days, but by England, Spain, Holland, and Portugal, all of which fought and negotiated in turn for its possession. Battles between navies of the Old World were fought within view of its harbors, invading armies were beaten off on the low plains about the city, there were attacks at night by freebooters and outlaws, and first the flag of one nation, then of another, flew above the two citadels that guard the entrance to the bay.

During the crisis just over it was of the utmost importance as a coaling station. The allies in general, and Germany in particular, looked with envious eyes in its direction, and if wiser counsels had not prevailed and the difficulty been adjusted by arbitration, the tight little Dutch colony might have had a few more interesting pages added to a history already over-rich in romance and adventure.

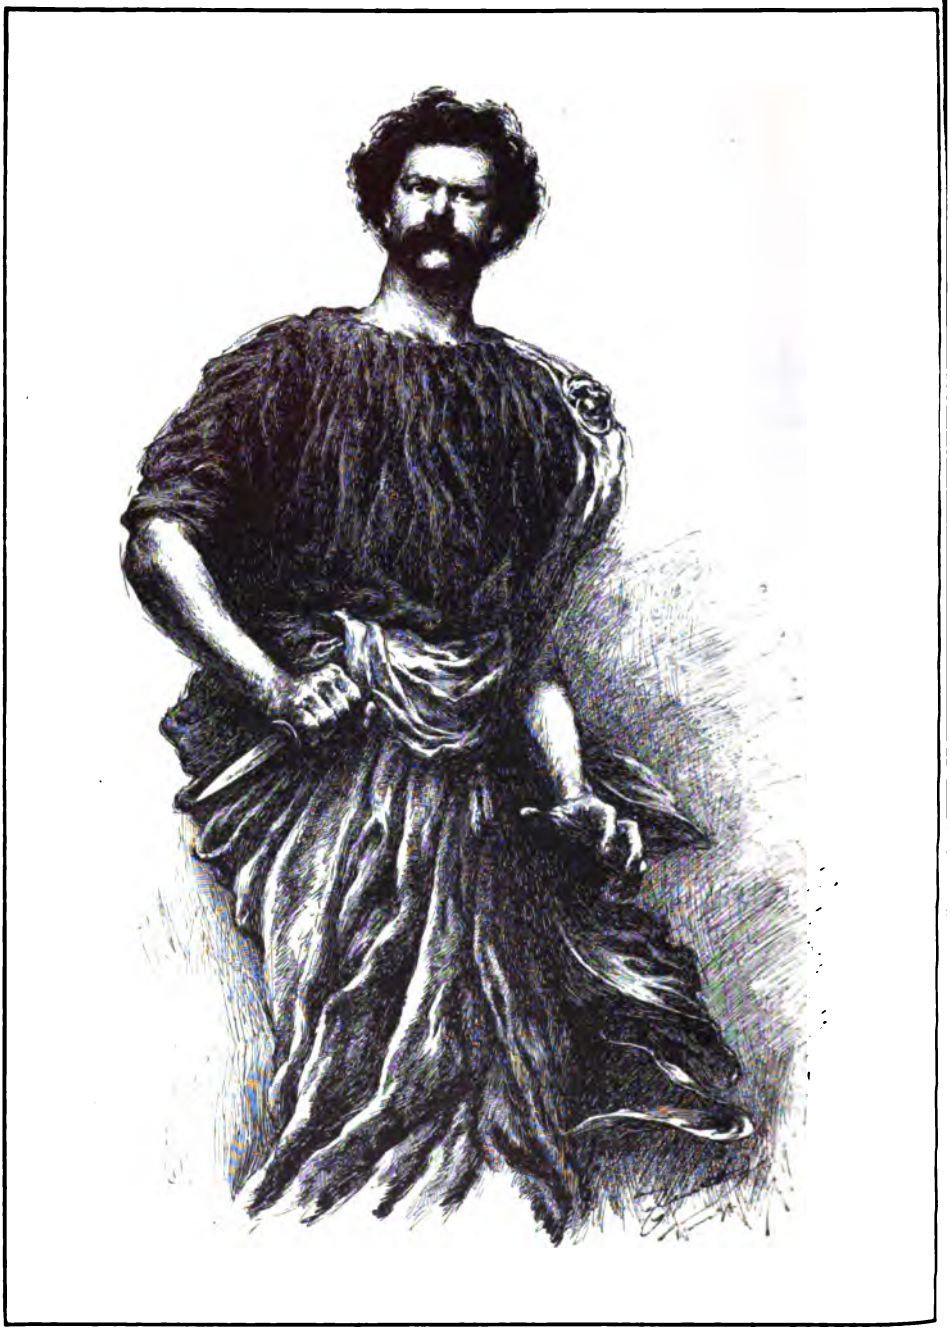
Palm Sunday

By Mabel Earle

Lord, when they lifted up their songs,
And laid their garments at Thy feet,
Thine eyes looked on beyond the throngs
Unto that Shadow Thou must meet.
Lord, when the laughing children pressed
Close to Thy side with anthems clear,
Thy heart foreseeing saw the rest—
The scourge, the thorns, the cross, the spear.

Lord, by that long foresight of pain,
Show mercy unto us who see
How soon the night must fall again,
How short our day of song shall be.
Lord, by the gloom Thy spirit met
Beyond the praise, the palms, the light,
Be near us when our sun is set;
Go down with us to meet the night!

Our Age



By John G. Whittier

(Not heretofore published)

NOTHING is clearer to my mind than the fact that the world is growing better. It is sweeter, tenderer; there is more love in it. A worthy deacon of the old time in New England once described a brother in the church as a very pious man God-ward but a rather hard one man-ward. It cannot be denied that very satisfactory steps in the latter direction had been taken in the century now drawing to its close. Our age is tolerant as regards creed and dogma, and practically recognizing the brotherhood of the race; it is quick and generous in its sympathies whenever and wherever a cry of suffering is heard. It cannot look on poverty or pain without seeking to diminish their evil. It has abolished slavery; it is lifting woman to an equality with man before the law.

Our criminal codes no longer embody the maxim of "an eye for an eye and a tooth for a tooth," but have regard not only to the safety of the community but also to the well-being of the criminal. All the more for this amiable tenderness do we need the counterpoise of a strong sense of justice. All the more for the sweet humanities and Christian liberalism which are drawing men nearer to each other and increasing the sum of social influence, we need the bracing atmosphere of the old moralities.

It is well for us that we have learned to listen to the persuasions of the Beatitudes; but there are crises in all lives which require the emphatic "Thou shalt not" of the Decalogue.

SALVINI AS ICILIO IN THE "VIRGINIE" OF ALFIERI

Drawn by Frederick S. M. Pape

Tommaso Salvini

By John S. Crellin

The author of this article, as probably many of our readers know, is an actor of long expe-ence and of the old school of training. For some fifteen years he has not been actively con-ected with the stage, except as a teacher of elocution, oratory, and dramatic art, but prior to at time he was identified with the companies of such renowned actors as Edwin Booth and istori, while he played in leading parts with Salvini for several seasons, and had, therefore, ausual and intimate opportunities for studying the great actor professionally and for becom-g acquainted with his personal traits and character.—THE EDITORS.

T was not that I was to the manner born," said Salvini to me, "but that I was to the manner forced. Whatever name and fame I may have achieved in dramatic rt I owe to tireless and conscientious ffort. The school in which I was oached was a rigorous one. My conception of the parts that I have undertaken is due to the most careful study nd observation, and their embodiment nd outer covering are the result of atient, almost laborious, endeavor. While t is true that 'the labor we delight in hysics pain,' some little weariness must ttend the ceaseless work I have done to ttain as near perfection as in me was ossible."

Salvini was an indefatigable worker. When not traveling he always devoted rom one to two hours daily in his room o the rehearsal of the part he was to ssume in the evening; and his inviolable ule was to be in his dressing-room at he theater and made up for the part not later than four o'clock.

Owing to the training I received at the hands of the celebrated stage manager, playwright, and actor, the late Mr. John W. Murray, and to his insistence upon the minutest detail of dramatic work, I was enabled, in a measure, to observe and appreciate the almost invisible touches that Salvini gave to his work, which made up the perfect whole—the blending, as it were, of fine shades of color into one magnificent harmony. It was his infinite variety and conception of minute as well as gigantic utterance that gave to Salvini his immense and charming witchery of power. He was noted for his careful attention to every detail in the dress, racial and facial characteristics of each part he assumed. He even used waxen candles as "make-up" lights, claiming that gas as well as electricity produces an unnatural pallor—an undesirable accentuation of physiognomical effects.

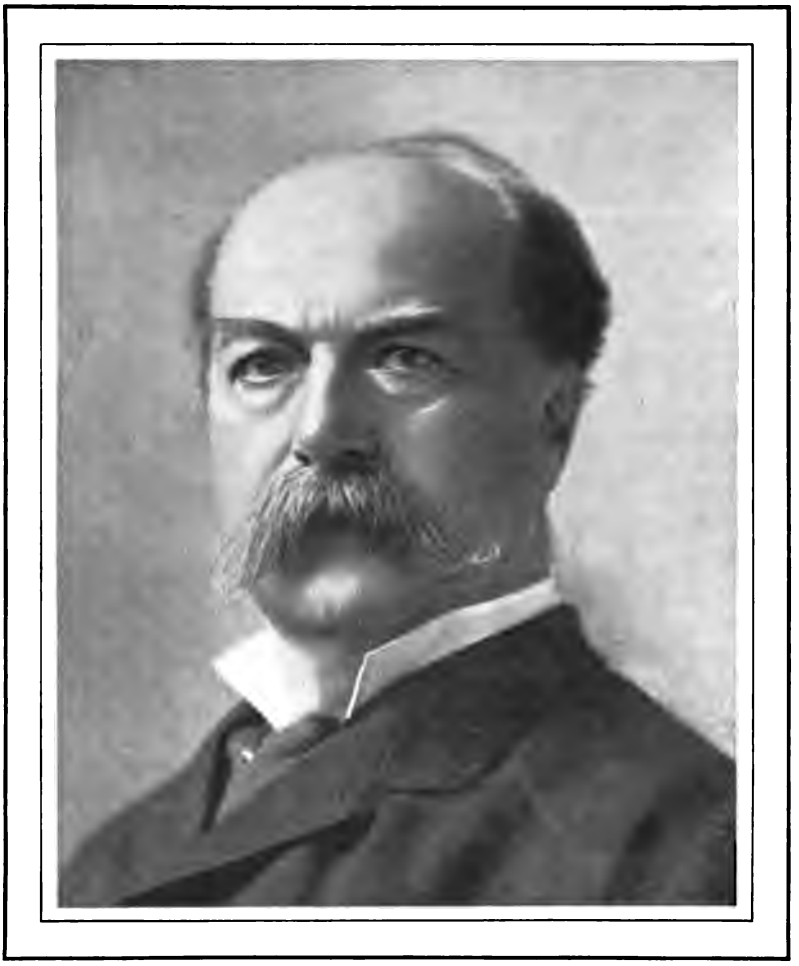
While I had never seen Salvini, either on or off the stage, his reputation had excited in me great curiosity, and the fact that his name was to be found in the biographical portion of Webster's Dictionary caused me more awe than my first glimpse of the man himself. It was not that I was unaccustomed to the sight of greatness, for I had been one of the company supporting the great Ristori, and at the close of the season of 1884–5 I was engaged by her manager to support the distinguished Italian in his forthcoming tour. However, I waited anxiously at rehearsal for my first introduction to Salvini as an actor and as a man. I had received the impression—an erroneous one—quite early, that bad actors always act at rehearsals, and that good actors merely mumble their parts, walking through the lines and business relating to them; but at my first experience with this unassuming Italian, whom I found as a man to be so modest, so gentle, and almost diffident, this preconceived impression entirely vanished; and, to my astonishment and gratification, I learned that the greatest actor of our day, if not of all recorded time, at least in the parts he played, was as intense and earnest at rehearsal as I imagined he could possibly be at a performance.

"In order to know what you are to do," he said, "it is necessary that you should know what I shall do before and not after the fall of the curtain;" and while he adhered strictly to the "business" of the play as prearranged by him, so far as that business concerned any member of the cast, I have wondered at his seemingly inexhaustible resource that enabled him to

avoid the constant repetition of action, gesticulation, and even intonation which might have tended to make him unconsciously mechanical. In this manifestation of acquired resource Salvini was not alone; all actors who have attained preeminence in their profession have manifested it. It is a part of Joe Jefferson's inimitable art; and was inherent in the late Edwin Booth, in whose company I played and whom I studied, admired, and loved. This quality of resource is possessed by many others who are now writing their names upon the eastern horizon of their art, and was possessed by many more who have left their names emblazoned upon its western extremity as they made their final earthly exit. But this infinite variety of acting, born of the pregnant matrix of emotion, I have never seen displayed in so broad a measure as in Tommaso Salvini.

What most impressed me at my first meeting with Salvini was the idea that he was an understudy for the real Salvini who was to appear later on. He looked more like a well-to-do merchant or member of the bar than an actor. He had none of the airs or manner of the great tragedian as I had pictured him. Somewhat disappointed, I said to myself, "Surely this man cannot be the great Salvini about whom I have heard so much. He looks so little like an actor." But the first movement he made as he began to rehearse, before he had spoken a word, convinced me that I was in the presence of a genius—one absolute master of his art.

Salvini was tall and handsome, slightly inclined to baldness, and had a powerful physique. Although he weighed, I should say, about two hundred and fifty pounds, his actions were lithe—almost panther-like in their perfect grace. His facial expression was phenomenal, inspiring, and—those eyes! I have never seen an actor who could do so much with every member of his body as Salvini could do with his eyes. I have seen him play whole scenes where his body was almost motionless and where the wonderful play and by-play of his eyes was more forceful than the gesticulated action of any other actor I have ever seen. His absolute repose was tremendous action in itself.



"All our teachers of elocution, oratory, or dramatic art," said he, "overlook or are ignorant of the one indisputable fact that the force of all gesticulation whatsoever lies in the human eye. Dramatic art should follow subserviently like a trained animal and not be ever before one to impede and clog both thought and action, reducing one's work to a condition of automatism."

The question has often been asked, "How did Salvini arrive at his wonderful effects—such telling results from the apparent nothings which many artists have passed over as unworthy of painstaking effort?"

I believe Salvini himself would have found it difficult to answer this question. He possessed that subtle something called personal magnetism which an impartial analysis would doubtless show to be an utter temporary annihilation of self; an absorption of personality in the character assumed; a dual mentality or consciousness; a psychological and indefinable dominance of self by diametrically opposite characteristics. Salvini knew that the constantly changing picture held before the eye, the rhythmic harmony of that wonderfully modulated voice, ever rising and falling like the tones of a perfect instrument upon the grateful ear, together with the conviction of reality from which one had no desire to escape, must not be marred by an inartistic movement.

"The actor," said Salvini, "the moment he enters upon his scene is like a spider in that he spins an infinite number of delicate magnetic threads which attach themselves to his auditors; delicate, yet so perfect in its temperament and strength that each thread binds a member of the actor's audience as with hooks of steel, while he himself is wrapped within the power of his art. But his strength, like that of a shorn Samson, becomes weakness if these threads are broken by the least inartistic motion."

Salvini's husbanding of force, his great reserve of dramatic power, was characteristic of his whole life, and manifested itself in his every-day affairs, becoming a thrift which approached at times too narrow a line, in the opinion of those who did not understand the generous nature of the man, to be called economy. He was not grasping. He was only just, according to others what was due them. But if he

PHOTOGRAPH BY SARONY

TOMMASO SALVINI

did exact the last penny that was due him, certainly his disposal of it precluded the idea of parsimony. As an illustration of this trait of the man's character, I might cite an incident of our Western tour, which was not attempted until the latter part of the season. Our manager was congratulating himself upon the tragedian's very sparing use of candles. He had not used more than a dozen up to our arrival in San Francisco, yet his contract called for two of the largest and best at each performance. However, the next day the manager came to me in great consternation.

"What do you think!" said he. "Salvini has seen some wax candles on Kearny Street and insists upon the full performance of our contract, and now we must carry East with us several boxes of candles among our surplus baggage."

"What will you do with so many candles between now and the time we close?" I asked the Signor.

"They will light my palace at Florence," he replied.

At the opening of our three weeks' engagement in San Francisco Salvini was taken with a severe throat difficulty which prevented his public appearance for a time. While thus suffering he received a cablegram from Italy apprising him of the sudden and unlooked-for death of a beloved brother. Our manager *pro tem.*, who was less reflective than excitable, gave to the public as a reason for Salvini's failure to appear, not that he was ill, but that his grief over the death of his brother

was so deep as to prevent his playing. This was placarded before the theater, and the shrewd local manager, taking advantage of the error, insisted upon having every cent of the receipts which were realized during the remainder of the engagement to compensate him for the non-appearance of the star. In this position he was upheld by the courts, which assumed that while a sore throat or other physical disability was a sufficient excuse for an actor's failure to appear, grief, in and of itself, was no bar to a performance, though illness superinduced by such grief would be.

I met the manager one day during this halt in our affairs, and, noticing that he was excited, asked him the reason for it.

"I have just received a terrible shock from Salvini," he said. "I went," he continued, "to the Signor's room to inquire after his health. I prayed all the way upstairs that a decided change for the better had taken place. But as I approached his door, I heard him groaning most awfully, as he paced to and fro like an elephant, yes, like a menagerie. I stopped outside, overcome with despair and fright. But the situation was desperate. Salvini's contract called for a thousand dollars a night and a third of the gross receipts. It had taken thus far all the surplus money realized from Madame Nevada's concert tour, under the same management, to keep us on our feet, and if Salvini should fail to appear during at least the last week of the engagement, it would be a problem how to get the company home. Two-thirds of the subscriptions for seats have been withdrawn. The world at large might recover even from the death of the maestro, but the company not so easy, three thousand miles from home—as well a million. Well, I waited at the door, trembling, but as the groans seemed to increase rather than to diminish, I took the liberty of entering the room without knocking. Salvini ceased his pacing—he was at bay. 'Alas!' I stammered, 'what is it? I know you are worse. You will not be able to play. What shall we do?'

"'No,' said Salvini, 'you are wrong. I shall play, must play for you, the company, the public, myself.'

"'Ah, then you will play!' I exclaimed, rubbing my hands together, for I dared not applaud, as I felt prompted to do, so great was my relief.

"'What shall hinder?' growled Salvini, as he eyed me dubiously.

"'But you are in pain!' I hesitated, as I thought, not of the pain, but of a way to escape from him and vent my gratitude outside.

"'Pain,' he responded, 'yes, here,' and slapped his hand, not on his anatomy, but his purse. 'The doctor has just been here and has ordered me more medicine.'

"'But that is no great calamity,' I ventured.

"'No,' he grumbled, 'the medicine is no calamity, but the price is; it's a dollar a bottle.'"

I have often seen Salvini, while traveling in the smoking-car, take from his pocket a penny cigar, brought over from Italy, and mend its cracked or broken end by wrapping it with cigarette paper; and have watched him with interest as he carefully saved the bits of tobacco that flaked off and put them on the window-sill that his manager might smoke them later on in his pipe. I have seen him in apparent, yes, real concern over the loss of a tawdry trinket from his costume, and have noted the smile of genuine gladness that overspread his features when a cheap bone collar-button which he had lost was returned to him. Yet the genuine adornments he wore, the gifts of cities, kings, and peoples, were of immense value. However, these were securely fastened.

As to the other side of the character of this remarkable man, who was not only gifted by nature in every direction of dramatic excellence, but had urged each gift to the limit of its power by unceasing and exhaustive study, it is as striking as the one just described. He always refused to give two consecutive performances of Othello, preferring to play it on Monday and not again until Saturday or Friday.

"It is a mystery to me," he said, "that one can ever hope to reach excellence in his art who repeats his performance of a certain character night after night without intermission until he becomes a machine. Instant advantage of spontaneous thought can never be taken by such an artist, because the thought ceases to flow with any degree of spontaneity."

On our way east from the Pacific Coast

SALVINI AS OROSMANE IN THE "ZAÏRE" OF VOLTAIRE

Salvini played "Othello" at Sacramento, the "Gladiator" at Salt Lake City, and was to have opened with "La Morte Civile" or "The Outlaw" at Denver. When we reached that city, however, its inhabitants, having heard of this plan, were up in arms against it. Any one who has ever witnessed Salvini's rendition of the character of Othello can appreciate the refusal of the people of Denver to tolerate the substitution of "The Outlaw" for the jealous Moor.

Salvini was waited upon by the local manager with the request that the bill be changed to Othello.

"What!" said Salvini. "I played Othello only three nights ago. It is a character which I cannot repeat more than

once weekly, and in which I do not dare to become mechanical."

"But the citizens are anxious to see your performance of the part; have looked forward to it for months; must have it."

"Yes, but it is the established rule of my career. I have never departed from it."

"But the people insist; will hold me responsible. Besides, they have made up a purse, and have deputized me to offer you fifteen hundred dollars in cash, in addition to the night's receipts."

Salvini drew himself up to his full height, fire flashed from his eyes, and he gave the manager a look of supreme contempt, replying, as he walked away, "My art cannot be bought."

Before the time for the evening performance had arrived, something most unusual, and, so far as I know, unique in the history of the drama, had taken place. An engrossed petition, signed by the leading citizens of Denver, men and women, beseeching Salvini to alter his resolution and play Othello, was presented to him. While the petition was being translated to the Signor his eyes filled with tears.

"Yes," he replied, "tell the citizens of Denver that they shall see Othello tonight—and without their bonus."

Every one in the caste, even the supernumeraries, was imbued with the spirit of the occasion, and a greater rendition of the sooty Venetian Salvini had never given.

"Othello," said Salvini, in answer to the question, "Which of your creations do you consider greatest?" "Othello is the most familiar and most popular of the characters assumed by me, and must, of necessity, be ranked as first in my repertoire, though not requiring more analytical effort than do many others, notably that psychological masterpiece, Macbeth. Each one of these characters, from Conrad to King Lear, requires the play of an entirely different class of emotions. As to which part is most adapted to the range of my mentality I cannot say. The public is the best judge as to that."

It was the late Marie Prescott who said to a certain noted star, in reply to his assertion, "You cannot act," "Acting is merely a matter of opinion, depending only upon who is the judge."

The unanimous verdict of the public [illegible]d to Salvini's characters was that Othello was the greatest, on account of the tremendous situations and intense dramatic possibilities.

An amusing incident comes to my mind in connection with the Denver engagement. The late Alessandro Salvini, son of Tommaso Salvini, who passed away on the very threshold of his career, was playing Romeo at the afternoon performance with a Denver novice as the Juliet. Fired by the honor the citizens had done his father, the young man gave an effective and manly personation of the character. But in the cell scene with Friar Lawrence, in the vehemence of his disappointment at Juliet's supposed disdain, he rendered the well-known lines, "Tell me, Friar, tell me, in what vile part of my anatomy lies my name?" thus, "Tell me, Friar, tell me, in what vile part of my body lies my anatomy?"

Although Salvini was a law unto himself, imbibing deeply and alone the spirit of the character he assumed, yet he depended for effect largely upon the energetic and sympathetic action of those who were supporting him.

"In order to respond with force," he said, "we must be questioned with energy and accused with vehemence."

He was impatient of any delinquency in this respect. Once he found fault with the lady who played the part of Parthenia's mother in 'Ingomar' for not using enough force in her accusation in the last act where she says, "I tell thee to thy face, thou art a spy and a traitor." She was annoyed, and said, *sotto voce*, "He'll not find any more fault with me. I'll give him the lines strong enough next time to take away his breath."

When she reached the lines that night we waited for the terrific outburst she had hinted at. It came: "I tell thee to thy face, thou art a tray and a spider!"

Salvini's realism was proverbial. The test of it was its effect upon his audience. But a superior test, perhaps, was its effect upon his support—a supreme measure of his dramatic powers. Men and women who were accustomed to all the chicanery of stagecraft and the witchery of high artistic work—who could, as it were, like the soldier, sleep calmly under the belching cannon—were spellbound by the intense realism of this new luminary.

The lady who was engaged for the part

Amelia, Iago's wife, which she had ayed for many consecutive seasons with e late John McCullough, said before e performance, "I have heard that Sal- ni, when he steals out from behind the rtains after the murder of Desdemona, ways frightens the lines out of the melia's head. He'll not frighten them ut of my head. I could say them in my eep. If he does scare me out of my its, I'll repeat them unconsciously, like n automaton."

The performance came off on schedule me. It was at the Metropolitan Opera- louse, and, by the way, it was during the nly dramatic engagement ever played at hat theater. During his three weeks' tay at the Opera-House Salvini gave but our performances a week.

On the night of the opening perform- nce of Othello the "Amelia" braced erself for the shock of the human tiger tealing forth from his jungle, licking his hops still dripping with the life-blood of he murdered Desdemona. But when he ssued forth, she saw him, staggered hor- ror-stricken down the stage till an oppos- ing table halted her, and there she stood, speechless, spellbound, absolutely *Medusa- ized.*

"Speak!" fairly hissed the quivering tragedian under his breath. He might as well have said fly. The prompt entrance of Iago saved the situation.

We cannot wonder at the temporary paralysis of "Amelia" when it is known that the great Iago, Edwin Booth, usually so alert and confident, never came on in the final scene with Othello during the nota- ble joint engagement of these two artists that he did not caution those who were to restrain the Moor in his mad rush at his treacherous lieutenant, to "Hold him fast! He'll kill me, I know it."

One night during this engagement, Booth, as Iago, was so completely carried away by the masterful performance of his colleague that, as Othello in his frenzy approached to seize him, throw him to the stage, and stand threateningly above his prostrate body, he backed unconsciously so far down toward the footlights that he fell over into the orchestra and landed on the bass drum with a resounding thump. Salvini reached over, took him by the hand, and, with no more effort than if he were a toy balloon, lifted him up and placed him on his feet on the stage. Ludicrous as the situation was, not one of the audience laughed or even seemed to notice that falling into the bass drum was not a part of Iago's nightly performance, so great was the naturalness and dignity of the "Othello" as he made his exit.

The Signor's strength was enormous, and one special feature of his performance of Othello in his native land was his novel and forceful action during the de- nunciation of Iago, when, goaded to a jealous rage by the crafty wretch, he picked him up bodily and, holding him horizontally above his head, recited the lines beginning, "Be sure thou prove my love a wanton," then, releasing him in mid-air, stepped quickly back from under him, and as Iago struck the stage he towered over him with extended arms like the very genius of vengeance. The American Iago who played the part dur- ing Salvini's first tour of the United States endured the realistic treatment but one rehearsal, and refused to risk head and limb to aid a dramatic holiday or fill a managerial coffer.

A certain member of the cast of "Cori- olanus" had cause to remember Salvini's strength for some time, for with one blow of his broadsword the Noble Roman knocked his heavy papier-maché helmet from his head and up into the flies, where it lodged between two pieces of scenery, hid for two acts as completely as though it had evaporated, and there remained until dislodged by the shifting of the scenery. Fortunately for the apprehensive actor, Coriolanus strained the muscles of his hip in delivering the blow, and cut the combat out of future performances, to the actor's great relief.

One of the cast in a minor part of the same play always shouted while he, as one of the conspirators, bore down with drawn sword upon the stricken Roman, "Kill him pleasantly," a no doubt amiable inten- tion if possible to carry out, though the line was written, "Kill him presently."

Salvini was a man of the people, and the lofty dramatic eminence upon which his feet were so firmly planted never separated him from the most humble member of his company. He had served in the Italian Revolution, in which he rose to the rank of General. Hence his title *Il Commanditore.* He graduated from

the mimic warfare of the old Italian tragedies into the reality of death and carnage. He was commanding in physique, and possessed that subtle something which the world calls animal magnetism, but which is only a manifestation of powerfully individualized mentality, never reckless, but courageous to the point of prudence. His enormous strength and his voice, like his emotions and his actions, were ever under control. I never saw him even partially lose control of himself but once, and that was when we were playing the "Gladiator." There was reason for it, because if there is any one point about which an actor is supersensitive, it is the preservation of a climax or of some delicate bit of artistic work for which he has striven conscientiously through the entire play. Salvini's death scenes were marvels of realism, and he could forgive the overturning, by accident or otherwise, of any but his mortuary effects. We were playing at New Haven, and many college students had requested to be allowed to act as "supers" that they might in after years recall the fact that they had at one time played in the cast of Tomaso Salvini—a request which was granted.

The last act was almost over. Salvini had not yet stabbed himself upon the still writhing bodies of his enemies. The assistant stage manager, who should have been at the curtain with his finger upon the bell, but, instead, was up at the back of the stage discussing a climax, suddenly realizing that the act was over, rushed down to the first entrance, saw one of the company who was nearly as big, in his make-up, as the Gladiator himself, fall as Salvini drew his reeking blade out of his back, and, mistaking him for the star, rang down the curtain. I could hear the suppressed growling as of an enraged beast, his louder manifestation of lung as he issued from his den, his tremendous and terrifying roar as he sprang upon his prey. It was the great Salvini, who for the moment had lost control of himself.

The Gladiator was one of the most trying parts of his repertoire. In it he embodied all the virility of the Roman with the athletic grace of the Thracian athlete. He had carried his audience with him through the five long acts of the play with seemingly but one climactic point in view—his mighty death-throes. Yet here the curtain had fallen before he had time to "play the Roman fool and die upon his own sword."

I had often wondered if there were any truth in what I had heard of the tremendous lung power that had been ascribed to Salvini by those who fought under him in the noise and carnage of battle. I had often said to myself, "Oh, if he would only let himself out a little!" And this reserve of power, by the way, is one of the great secrets of an actor's strength—that of apparently never quite reaching to the limit; never gesticulating quite so far as the arms will reach; never meeting or moving quite to the point or boundary of absolute expression. Of this Salvini was more than any actor I have ever seen, the perfect master.

I rose to my feet and stood aside in awe, for surely sound like that never issued from the throat of any beast. It culminated in a roar that seemed to start the trembling rafters as the enraged Gladiator, his face almost demoniac with fury, strode toward the now thoroughly frightened stage manager. He seemed such a little man to me as this giant of the arena raised his arms threateningly above him. Those who have seen Salvini as Othello in his denunciation of Iago, where Othello stands above his prostrate body with one foot raised, as if to blot him out of existence, can partly grasp the force of the picture before me. But in a moment Salvini regained control of himself, realizing his own enormous bulk, accentuated by his wrath. He dropped his arms, looked at the stage manager with contempt, and marched off to his dressing-room. Then I was sure I had heard a voice that would have filled Rome's Coliseum.

The greatness of the man was made still more apparent when, the following day, he made ample apology for his temporary forgetfulness. This incident brings to mind one similar in some respects.

While we were in San Francisco, Salvini was accosted one day on the street by a fellow-countryman. Notwithstanding the reiterated claim of the stranger to Salvini's recognition, the tragedian was unable to recall him.

"You must remember me," insisted the

tranger, "because I played with you in Florence."

"I feel that you are telling the truth," said Salvini, eying him in a puzzled manner, "but your face is strange. I should like so much to recall you. It would give me great pleasure, here, so far from our native home. Did you play a juvenile, a heavy part, or were you one of the priests of Jupiter?"

"I was neither," said the man, looking up at him eagerly. "I was of more importance. I sustained my character in the arena."

"Strange," said Salvini; "surely I cannot recall you. What part did you play? Aufidius?"

"No, Signor, I was one of the lions—had on a lion's skin and growled through the gratings of the arena. You commended me for my voice."

Salvini is said to have loved money. Doubtless he was thrifty, but I am inclined to the conviction that he was thrifty only in the sense that he hated waste. It was a national trait with him, and must not be construed as greed, or in any sense as precluding generosity. Above all else he loved his art. No money consideration could tempt him to sacrifice or even jeopardize his art or his idea of its royal dignity. The saving of tobacco clippings and the eager searching for an indifferent trifle might be accounted an eccentricity—one of the many idiosyncrasies of genius. But sacrifice his art? Never. Not for the mines of Ophir. Had there been avaricious traits in the make-up of the man, would he have refused Sarony one single sitting as Othello, when the price Sarony offered him was fifty thousand dollars? He was averse to a vulgar display of polychromatic posters, which he called "circusing the art." "My art is not for sale," said he. "If the public wishes to see me as Othello, let it come to the theater."

Salvini loved and was in perfect sympathy with those who wanted, he knew, to see him for the sake of his art. He often worried because, owing to the indifferent acoustic arrangement of some of the theaters he played in, those who paid the least were apt to see the least. None knew better than he that the most appreciative portion of the audience is often the most impecunious. This sense, and this alone, prompted him to violate some of his dearest stage traditions. An incident which occurred while we were playing "The Outlaw" will serve to illustrate this.

"The Outlaw" is the story of a man who is supposed to be dying, through five long but intensely interesting acts, of a broken heart. I have known the audience to sit for several minutes after the curtain fell on the last act, under the hypnotic spell of Salvini's realistic death scene. And he was always anxious that every one who witnessed his performance should miss no coign of vantage from which to take in all the subtleties of his art.

One night at the Boston Theater, during a performance of this play, I saw Salvini do what no other would have dared attempt. The apron of the stage, or that part of it which projects beyond the proscenium arch or curtain line, is very deep in that theater. This forms a sort of separating wall which keeps the actor, most of the time, far away from his audience. Towards the end of the act, and just before his great death scene, I saw Salvini do a thing that it is impossible for any but the most accomplished artist to do without being detected by his audience. During one of his most intense speeches he began slowly pushing the furniture of the scene gradually down on to the apron beyond the curtain line. I was astonished. I knew that the audience was so absorbed in watching the facial expressions of the Italian, their attention was so riveted to his personality, particularly that portion of it about his shoulders, that they did not see that he was rearranging the stage before their very eyes without detection. I watched him closely, for I knew that he was attempting one of the cleverest tricks known to his profession—that of distracting the attention of an audience from an object while apparently riveting its attention to it. To succeed in this is an accomplishment indissolubly linked with the cunning of the prestidigitateur, but seldom resorted to by a dramatic artist on account of its seemingly impossible execution.

I knew how averse Salvini was to being called before the curtain after a death scene, as he claimed that it destroyed completely the illusion of the whole performance. "Yet," thought I, "here he is

moving the chair in which he dies, and out of which he pitches on to his face after death, so far out that the curtain must fall behind him. Is the man mad?" I thought. "What can have prompted him to break over all the traditions of his career as to die solitary and alone on the stage where the curtain must fall at his back? If he dies there—falls from the chair on his face—surely he must lie there until the audience has departed. And will they depart? Will they not remain standing on tiptoe to gaze upon his prostrate body? Wonderful stage tactician as he is, how will he summon the forces of his thought to lift him out of this dilemma? But no, he will not die there. No one but an insane person would attempt it. He will leave the chairs and tables there, perform some clever stage maneuver, and fall back, too far up stage to be trapped by the descending curtain."

I waited and watched, because every movement of this master was an inspiration. But see, he sinks into the chair as the hiccoughs come bubbling from his throat—the unmistakable symptoms of near-approaching dissolution in those who are supposed to die of heart disease. Many of the audience have half risen, leaning, drawn toward him by that subtle force, those invisible chains, with which he binds them to him. As they watch, horrified, the workings of his features while the pallor of death steals over them, he lurches forward, grasps at the table by his side, half rises as he tries to resume his feet, then pitches forward prone upon his face.

An absolute silence, unbroken even by the orchestra with its departing strains, follows. Then rises this great master of the intricacies of dramatic art before his spellbound audience, as there breaks forth an acclamation which in the Coliseum of ancient Rome would have been heard beyond the Tiber. He bows his acknowledgments, and passes behind the curtain.

I have known many repetitions of that prolonged silence which preceded acclamation and followed some powerfully delivered climax to an act. Salvini was never in doubt as to his effects. His assurance was wonderful. When we opened in Philadelphia, the curtain did not rise until nine o'clock, owing to a delay which we had experienced on the road between that city and Boston. We were playing "The Outlaw," and I thought, when the curtain descended in dead silence at the close of the second act, wherein Conrad describes his escape from prison, that the audience was manifesting a little pique at our tardy appearance, and so expressed myself to Conrad.

"Not at all," he replied, smiling.

"But they are unappreciative, or why this absolute silence? It is more than a minute since the curtain fell."

"Wait," he said, as he raised his finger. For a moment more the stillness that had hung like a pall over the audience seemed to deepen, then a hand-clap broke the spell, and the audience broke into salvos of applause that swept and deepened and spread and thundered until long after the Star had gone before the curtain, acknowledged the ovation, and reached his dressing-room to prepare for another act.

Being and Living

By Emerson G. Taylor

Mine the shadowy wood-way dim:
  Here, in tune with the summer peace,
Stainless I walk, my joy at the brim;
  Thrilled by each moment's mysteries,
My heart poured out, my life a hymn,
  Faring to God and His sweet surcease.

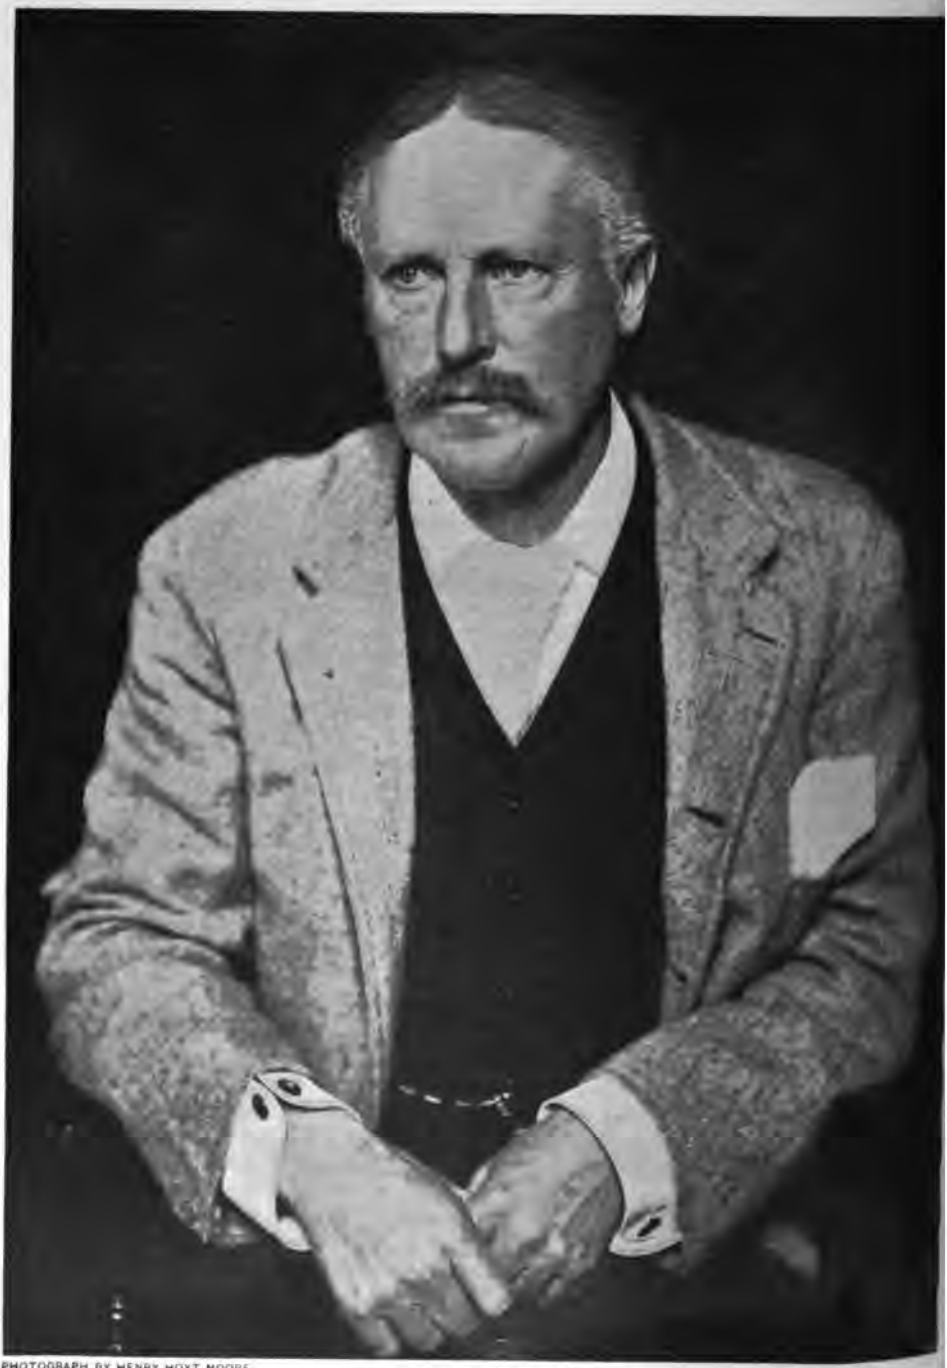
Mine the dusty highway, friend!
  Crowded with men who fight for place,
Sweating and lame. Where I must lend,
  Just as I think to win the race,
A hand to my brother; nor look for an end,
  Glad for a moment's wind in my face.

A PREACHER'S STORY OF HIS WORK[1]

BY W. S. RAINSFORD

Rector of St. George's Church, New York City

I.



I WAS born in Dublin, the 30th of October, 1850. My father was the Rev. Marcus Rainsford, at that time chaplain of the Hospital for the Blind in Dublin. The chaplain attached to a hospital like that was often the center of quite an important ministry; the hospital was almost subordinate. My father was a preacher from the very beginning; he had drawn about him quite a large congregation in Dublin. He was a man of remarkable power then; he was about thirty years old when I was born. My mother was the daughter of a clergyman who was appointed to the living of Dungarvan, in the South of Ireland, by his father, who was, I believe, Bishop of Meath. This is interesting because my great-grandfather was Fox's one episcopal appointment. He was at Eton with Fox, and Fox died in his house in Mayfair. He stuck to Fox through thick and thin; and there has always been a tradition that my great-grandfather had a great deal to do with bringing out what was best in Fox. I noticed in Trevelyan's "Life of Fox" the pleasantest sort of a letter about him.

An ancestor of my father's had been one of Cromwell's right-hand men in Ireland, and in the rearrangement of things had come in possession of a large estate, the last remnant of which had become heavily encumbered when my father was a young man, and he had volunteered to pay his father's debts, which, as you understand, under English law he need not have done. Therefore, during the early years of my life, my father and mother struggled with very real poverty.

Later he left his work in Dublin to become Vicar of Dundalk, a town in the northeast of Ireland, and to become chaplain to the Earl of Roden, a great friend of my father's; and there, in the old red brick vicarage, we children grew up—eight of us. My father and mother at that time had certainly not $1,500 a year to bring us all up on—to school us and everything else. I remember my dear mother, who was a very strong little woman, used to get up at six o'clock every morning to look after her flowers in the garden; a large part of our clothes she made with her own hand; anything very nice we had to eat she cooked herself; she was the soul of brightness; and everything I am I owe largely to her. She suddenly broke down when she was about forty-eight with rheumatic gout—from over-straining—and the last years of her life were spent in blinding torture. She died at sixty-seven, worn out with agony—nearly twenty years of intense suffering. I have never seen in all my ministry pain so persistent and so agonizing.

In Dundalk all my brothers and sisters were born. In England we could not have lived as refined a life as we did in Ireland, on the small amount my father had. Very nice people would come and stay with us. We did not entertain many visitors, but still we did entertain some charming people; and there was in those days a very high tone in the best society in Ireland. There were no country gentry to speak of in the town of Dundalk, and so our house—very simple and plain as it was—was the place where any one of note stayed. Then there were two or three big houses always open to us, and that is a great help to a boy. Lord Roden was well known in England—one of the few good men who still maintained a place in court under George IV., a man of very stern Christian character, though an Irishman, and he was always very kind to me. I remember my first dinner party, in a made-up evening coat at Tullymore Park, a beautiful place (a well-known show place in Ireland to-day) where some of the most distinguished people of the time came. You will see that the life of a poor vicar in Ireland, if he came of a good family, lacked entirely the sordid element. That condition was a good

REV. W. S. RAINSFORD, D.D.

eal because of my mother; an ordinary oman would have sunk under the burden; ne did not; for twenty years she accomshed miracles.

y early life was spent in Dundalk. old grammar school was the only where I could go to school; my nts could not afford to send me away. master of the school, as is often d in Ireland, was a first-rate man—a e man—Trinity College, Dublin; the other masters did not amount to . I was a great, overgrown boy, terly tall for my age and unspeakably thin. school hours were long and hard. had to be there at seven o'clock on a r morning and do two hours' work empty stomach before we could go to breakfast; then we went back and ed from ten until two; then a recess two until four; then returned at four stay until six.

It was a beautiful place; and one of blessed things in my life—my love of ture—I got right there. The old vicarstood facing the bay into which a river ptied itself. There was an ancient y, and considerable shipping—fishing, ling, and landing of steamers—mountins 2,000 feet high running down to sea; and, jutting into the bay, a autiful mountainous promontory. I can e as clearly as if it were only yesterday e yellow patches of golden grain, the purple heather, the light on the mountains. They were treeless mountains, except along the base.

Whenever I got a holiday, I was off to the mountains. When I was only about twelve years old, I had an almost crazy desire for sport; and I shall never forget one of my first gifts, a small fishing-rod which my father gave me. The only time I had to fish was on Saturday afternoons, and I had to walk three or four miles to a stream where occasionally a trout was caught. I remember when I caught my first trout I ran home wild with delight, and my father gave me half a crown. When I was thirteen years old, he gave me a gun; and after that, for several summers, I arose every morning at four. I had leave from the Earl of Roden to shoot rabbits on his domain, and my mother gave me sixpence for every rabbit I got. Each one was a real addition to the larder. So I used to get up at four and poke around looking for rabbits; sometimes I got two or three, and then off to school at seven. As I look back I wonder how I managed to get up so early, morning after morning, and stick it out on an empty stomach until nine. I think my intense love of the open air, my delight in the open country, and the fascination of pursuing rare game (for it was very rare —if a man shot a snipe or a wild duck he would mark that day with a red letter) kept me up. All such things have much to do with giving a lad certain freedom and certain power to see and find himself, and are of immense value in after life.

My school life in Dundalk was not happy. I was stupid, very dull at Latin and Greek, very shy; I was only really happy when off by myself in the country. I was very much bullied by the bigger boys because I was so tall and thin and shy. I cannot think of any master at that time who understood me. School life was brutal then. The boys did not like my father; I never could quite make out why; he was generally most popular; but I think the boys were obliged to go to church and listen to his long sermon, and they took out their spite on me. I remember often in the morning they would shut me in between the inside and outside doors of the school, and pour a bucket of cold, dirty water down my back; that was not exactly a pleasant thing to begin the day on. Schools have changed much; boys now have delightful memories; I have never had any but unpleasant ones. The master wore very heavy boots, and when I made a mistake in class he would kick me violently in the shins. A mistake in Virgil was announced by a fearful kick on thin, boyish shins with his heavy boots; and if through self-consciousness we did not answer quickly enough to suit him, we got a slashing box on the ear. I did the best I could, too. I always worked hard, saving the two or three hours in the morning which I kept for the open air.

I shall never forget the home training I got on the Bible. My mother made me repeat to her five or six verses every day. However hard my school work might be, I always learned those verses for Mother. It was an invaluable thing to me. So, by the time I left home, I knew a vast

THE REV. MARCUS RAINSFORD

DR. W. S. RAINSFORD'S FATHER AND MOTHER

part of the Scripture by heart; that is one thing I never have forgotten—those verses I learned every day. My memory was never even second-class. I remember the boys were required to learn by heart forty lines of Virgil every day, but the master found out after a time that the task, for me, was simply impossible, and he let me off with ten or twenty. I never had a memory. For years and years I have tried to commit to memory a few lines while dressing; but though conscientiously always doing the best I knew in that direction, I have never had a memory; I have had to supplement that lack with a thorough system of memoranda; it has been a great drawback.

At that time there was quite a strong movement in the religious world both in England and Ireland. The great revival in Ireland in '59 made a great impression; the revival swept all over the country and produced some remarkable phenomena. The Revivalist Hymn-Book was one of the results. Before that time, as I remember, there was no such thing as hymnology in the Church. The wave was something more than the Moody and Sankey movement in this country. It was distinctly evangelical. You will find a number of the hymns that came to life then in the Moody and Sankey book; they were ultra-evangelical, as we understand the term. It was a new presentation of the doctrine which my father was really preaching with all his might. By this time he was quite a noted preacher. His pulpit in Dundalk had become quite remarked. He did not know anything but his Bible; he did not know even his Greek Testament; but he was eloquent—one of the first exponents of the early evangelical movement in Ireland. Of course that movement slopped over into hysteria of all kinds. They had the phenomenon of a man falling down in a sort of fit, or trance, and all that sort of thing. Spiritual conversion was supposed to express itself in that form. The best people in the country were swept along in that wave. Laymen went to preaching; my father was in correspondence with scores of people all over the country; it was emotionalism; it moved profoundly the North of Ireland. It did not get among Roman Catholics to any extent; they were divided by a Chinese wall from Protestantism; but it profoundly affected the life of Ireland. I fancy it was similar to the movement which swept over Scot-

land ten years earlier; but the sober Scotch character was partially saved from the emotional manifestations of the Celtic temperament which belonged to the Irish experiences.

When I was fifteen, my father got the idea that the school in Dundalk was not the place for me. He determined to send me to a boarding-school in Shropshire, England, which was eminent throughout the country for its religious position. My father was profoundly impressed by the religious opportunities this school presented, and I and a brother were sent there. It was a boarding-school, but because of my father's position we did not pay full fee. It was in a most beautiful part of England, but it was a regular hell—a horrible place, although there was a good man at the head. I missed immensely the freedom I had enjoyed in Ireland, and I felt I was learning nothing. We were forced to unnatural religious expression; the boys who professed religious experience were favored and pampered, and the whole atmosphere was unreal, unscholarly, and stultifying to the last degree. It was the unhappiest time of my life. I look back to it with the keenest possible dissatisfaction; it was physical, moral, and intellectual death. But it gave me, perhaps unconsciously, the deepest sympathy with multitudes of young people whose school environment has been unhappy; and it helped me afterwards, I think, to do something, by voice and otherwise, towards helping forward education.

In 1866 my father was called to take charge of St. John's, Halkin Street, Belgrave Square, London. I left this abominable school and went to my father and mother. I cannot exaggerate the extraordinary change that came to me—a slow, raw Irish boy who had spent every spare minute on the mountains and by the streams in Ireland and then had been entirely suppressed in this horrible school; I do not think I was aware myself at first of the momentous nature of this change.

It is only fair to say that my father took the West End of London by storm. He was a holy man, a very eloquent man, he was tremendously in earnest; and he very quickly gathered around him what, as I look back, seems to me to have been one of the strongest congregations in London, from a social point of view. The chapel was soon jammed, not even standing room; and, until the High Church movement took practical shape in the West End of London some years later, he exercised more influence in that section of the city than any other man, I do believe.

I began to get interested in my school life at Kensington, and did a pretty good year's work, until in '67, when I attended the Oxford-Cambridge race at six o'clock and got wet through. A cold settled on my lungs, and I was in bad health for several months. The doctors said I must have change of air, and I went to stay for three months with one of the dearest, kindest friends a man ever had, the late Lord Farnham. He had always been kind to me; and there, in his beautiful estate in the North of Ireland, I got back to the free life of the country—fishing, hunting, and climbing. I did not get worse, but at the end of three months I came back to see the doctor. He was one of the best medical men of the day on pulmonary troubles. He looked me over carefully, and then said to my father, who was present, with almost brutal frankness, "This boy has six months to live." I did not believe him. My father asked what was to be done, and he said, "His only chance is to go to the South of France." The pinch of poverty had gone from our household by that time, but we were not rich. Again kind friends came to the rescue (one of the fortunate things in my life has been my kind friends). They immediately put money at my father's disposal and I went off to the South of France—my second real home-leaving. The first time off to school in England and now to the South of France, an absolutely green boy. I was in most delightful society; the late Duke of Westminster and his wife were very kind to me, and many others, too; I was getting well and strong. I really had a glorious time. I felt that I was not going to die, but that there was something for me to do in the world. I think the time spent in the South of France was of incalculable value.

By this time I was casting about in my mind as to what I should be, and all my hopes and aims tended towards the army, where I had many friends, and where my

ancestors had been for many years; both on my father's and mother's side my ancestors had been field officers. I loved the army and made up my mind to go into it. With that intention I returned to England, and was confronted with the question, what to do? I awoke to the fact that I had no proper education, and I worked very hard for six months with an excellent tutor.

During that time something very remarkable happened; I began to be interested in the problem of East London. It was in '67 that the people of London first became alive to the problem of the poverty on the East Side. The East Side Committee was formed, with Lord Ripon, who was afterwards Governor-General of India, Lady Ripon, a type of the high-class Englishwoman, Lady Hobart, a very dear personal friend of my parents, and others. They made about the first effort to grapple with the East Side problem. One of the pathetic things in London about this time was that no one knew what any one else was doing in this way; and yet the tremendous problem was being attacked from many points of view. I suppose the ladies on this committee would be considered emotional to-day, but they sacrificed time and money in trying to get at the difficulty, and in giving help the best way they knew how.

My first visit to the East Side of London was, I believe, the turning-point in my life. I was a gawky boy, but through my father's influence I had *entrée* to some of the best houses in London, so, when this committee was formed, I knew personally half of the members. One day Admiral Fishbourne came to lunch with my father and said to me:

"Willie, come over with me to the East Side of London; I want you to see what we are trying to do there." We went to East London to an old chapel in a dirty street where there were about four hundred poor women working. These women met together twice a week for three hours' work, getting sixpence; I think they also got what they were working on, and when the work was done some one gave an address. They were very ignorant and very poor; there had been no social movement to reach these people, but these charming ladies (no bluestocking type) took the trouble to show these poor women how to work, and talked with them, and that was something. Well, I went to this chapel, talked with the women, asked questions, etc., and when the time came for the address, the Admiral, a great big man, got up and said, "My friends [I hope God has forgiven him the lie], my young friend William Rainsford is here to-day, and has come to make an address." I had no more idea of talking to these people than the man in the moon; I had never even talked in Sunday-school, so when I heard him say that I shivered with dismay and terror. I was only seventeen; there were half a dozen ladies present, of whom I was naturally afraid, and four hundred poor women looking up at me. I seized the Bible upside down and stammered and sputtered something for three or four minutes. The agony of that thing is still vivid in my mind. Afterwards one of the ladies, a sweet Christian woman, came to me and said, "Now you must come back next Tuesday." I went back and I spoke again. I think it was largely conceit that gave me courage, but I had made a beginning; but I think God uses our miserable little sins and mistakes often for his purposes. It ended by my speaking regularly to these women. I liked to go, and they listened. So this work in the chapel had important results as far as I was concerned.

While in Switzerland I had met a young man named Fred N. Charrington, the son of a rich brewer, and among other things we discussed religion, and I talked earnestly about my own religious experiences, which were very real and vital, and a new thing for him. Months afterward, to my amazement, I found Charrington at work in the East Side of London. I met him in this new field; he had got in ahead of me and was working with great enthusiasm. He had entered a little house in Bethnal Green, and went to live there, his people protesting violently. He is living there to-day. Another man at that time was going through a similar experience—H. W., also the son of a rich brewer, who afterwards married my sister; he was also drawn to the work; and, like Charrington, giving up an enormously large fortune to do it.

At that time we knew nothing at all about social service; but we were anxious

to help these people. We all spoke in the streets. It was a religious movement—nothing but religion—we had not the slightest consciousness of the social side of it. Charrington really had a social settlement, but he did not know it.

Before long I was deeper in the East Side work than I knew; I had worked pretty hard, and had grown to be a pretty stout boy, although the doctors were not quite satisfied. Strangely enough, about this time the committee determined to send out a batch of emigrants to Canada. There was great distress in East London, and to relieve the pressure somewhat the committee determined to send some families to Canada; and H. W. and I were assigned to select the families. He did most of the work. The doctors advised another change for me, and I was anxious to see the country, so H. W. and I took these eight hundred people to Canada, and saw them settled along the Canadian line. The Canadian Emigrant Bureau took charge of them entirely: we simply brought them over, and got reports of where they were settled. After that was done I wanted to see the States. I proposed to my brother-in-law to go West and shoot buffalo—I wanted to see the great West I had read about as a boy. He met me half-way; he was well off, and I had no money. Off we started. At that time I still thought of the army; I had not thought of the ministry.

It was exceedingly interesting from a hunter's point of view, this great West. We arrived at St. Paul, where the railroad stopped, absolutely ignorant, without maps, and no proper outfit; but, with the ignorance of Englishmen, we thought it would be easy enough to start out and hunt buffalo. We had letters of introduction and of credit from the Hudson Bay Company; and one fine day in '68 we started out with a discharged soldier of the United States army, with the idea of riding to the last United States army post. The country had been devastated by the Sioux Indians; everything was deserted; occasionally we came upon a shack, the walls riddled with bullets; and the farther we went the more discontented our guide got. At last we got to Winnipeg—it was only Fort Garry then. We laid our plans before the Hudson Bay people. They said we could cross the country all right; and we started from that place the beginning of June, with a Hudson Bay convoy, and we never stopped until we reached Vancouver's Land. So I crossed the plains, and saw the buffalo in herds; I lived for weeks with different bands of Indians; I saw long lines of Indian horsemen charging great herds of buffalo; I stayed for days with bands of Indians who had never seen a white man except in war; and I had two or three pretty narrow shaves. It was very stimulating and intensely interesting, though somewhat risky.

We found ourselves at last in the heart of the Rocky Mountains at the end of December, near the headwaters of the Columbia River. We had no maps, and often no guide; sometimes we had to lie hidden all day on account of hostile Indians; our clothes were in rags. One day I nearly split my foot in two with an ax. We were nearing American civilization, and my brother-in-law, with great self-sacrifice, rode one hundred miles, without food and in a heavy storm, to the nearest outpost for help. Three days later the doctor came, but my wound was then much better. It troubled me for years afterwards. After returning to the East we spent two months in traveling over the country and visiting the battlefields of the war. I had seen the "Illustrated London News" occasionally with pictures of the war that had been going on in this country; but I was very immature then, and they did not make much impression. I went back to England in the summer of '69.

When I got back to England, I settled down to hard work. I remember one morning, while studying in the same room where my father was writing his sermon, he suddenly looked up and said: "Well, have you made up your mind what you want to be? The desire of my heart is that you should become a clergyman." I was always emotional; I always jumped before I looked, as my father always said; and at that moment I seemed to have a vision of my life-work. I had just come back from a trip of adventure in a new country; I had always looked forward to going into the army, and it came to me then that, should I go into the army, I was in danger of becoming a man of

pleasure; going into fighting for the sake of fighting, into exploration simply because of the love of adventure; and a vision came to me. These moments of vision are known to everybody. I remember the sunlight streaming into the room outlining the pattern of the carpet. I bowed my head and said: "Daddy, if you will send me to Cambridge, I will be a clergyman." That settled it then and there.

My father sent me to Cambridge. I worked pretty hard, but not as hard as I should, and, on the whole, I have not much to say about those Cambridge years. I did not make the most of them. I had the great advantage of attending Lightfoot's classes, and he was very kind to me. Lightfoot was the shyest and biggest-hearted man I met at Cambridge; and he was a great help to me. Some went to Westcott's lectures; but I was not prepared for them; I was not enough of a scholar. When I left Cambridge I knew almost nothing about theology. I simply knew the Bible as my mother had taught it to me. I prayed; I tried to be good.

I passed through a fearful struggle at Cambridge with what is called evil, which first presented itself to me there with terrific power. In my boyhood, and during my strenuous, open-air life in the West, I was not tempted much with evil; but when I came to my full strength and force at Cambridge and had leisure time, evil presented itself with all its seductions. I had a most appalling struggle, and through the mercy of God I came out all right. I think that strengthened me so that years afterwards things that appealed to other men did not appeal to me at all. The intellectual struggle was to come years afterwards; I was then simply a boy struggling with the flesh.

The intellectual struggle really ought to have come then, or ought at least to have begun. It complicated my position that it did not come until later. I simply took things as I heard them; no intellectual ferment at that time touched me; I have no doubt there was such ferment, but it made no impression on me whatever. You know what I mean by a "grind." I suppose if you got hold of one of that sort he would tell you that many men entered earnestly into the spiritual, social, and political movements of the time: but I was not a grind, and not particularly intellectual. I remember one brilliant man at St. John's, a queer, lonely creature who was looked upon as a heretic; but I suppose I should call him very conservative now. No doubt I might have made much more of my opportunities; the conversation at the college table was anything but inspiring; we never got much in the way of politics, literature, theology, or anything else. The most earnest fellows I knew there gathered at the prayer-meeting on Sunday afternoons; over one hundred and fifty men used to meet every Sunday; the meetings were entirely evangelical in character. I cannot recall anybody who touched me deeply through preaching; Dean Farrar I heard, but he did not impress me particularly. Nobody impressed me as did my father; his doctrine was sufficient for me; and his earnestness touched me.

The High Church movement did not touch Cambridge much. I am inclined to think that if you asked any ordinary Oxford man—a man fairly average in everything and not specially prominent in any one thing—he would tell you that the general effect of the High Church movement on the University was grossly exaggerated. When I give my impression, I am speaking for the vast majority of clean, decent, well-bred fellows at Cambridge who went through the University without particular distinction. Another man might come along and give you an entirely different picture of Cambridge during that time; but the movement of unrest did not touch me. I was not at all a prominent man in college. We had athletics, and I might have been a good oar, but I got rheumatism in my back and had to quit just about when I was beginning to amount to something. I might have rowed in the 'Varsity if it had not been for that bad luck. I was second captain for a time in college; but altogether I was a very inconspicuous figure in Cambridge.

So I say I was not affected by any great movement; I do not believe Harvard as a whole is much affected by such things; but I do think there is far more discussion of public things at Harvard to-day than at Cambridge then. Moreover, I think it is hard for you to realize how very boyish we were at that time in England—how imma-

ture. I was very immature at twenty-three; perhaps more so than the average, although in a way I had had wider experience than some. My own boys knew more at seventeen than I did at twenty-three. I had nobody to advise me and tell me things as I tell them. My father was as innocent as I was; he knew nothing of the world; he lived in a world of his own.

While at Cambridge I was keeping fully in touch with the East End London work. Whenever I got a holiday, I was off to the East Side. I passed my examinations pretty well, and took a plain degree. The question then was: where to go.

[TO BE CONTINUED]

The Life of Teasle

By Arthur Henry

IT was necessary for me to be in the Catskill Mountains one Sunday in the latter part of October. The nearest railway station to my point in the mountains was Tannersville. The station agent at Syracuse from whom I inquired looked at me pityingly.

"You must be mistaken in the time of year," he said.

I assured him it was not the pursuit of pleasure that took me into the cold and stormy altitude, and he consulted his time-tables and advices.

"The Otis road," he said, "has stopped for the season. The nearest place I can land you is at Saugerties."

Saugerties is a little town on the lowlands along the Hudson River. From there it is more than a twelve-mile drive up the mountains to Seifferth's farm. I telegraphed ahead for a livery rig, although I knew it was something of a risk to order one in this offhand manner for such a drive, before the price of the trip had been agreed upon; but when you have a road like mine to face, after dark, every moment counts.

When I arrived, the night had fallen very heavily over Saugerties. A light hanging below a buggy behind the station, a faint, creaking sound of the harness on a restless horse, directed me.

"How much will this cost me?" I asked.

"Where are you going?"

"To Seifferth's."

"Where is that?"

"Why, it's up on the mountains—about six miles this side of Tannersville."

The driver whistled, in token of surprise and uncertainty. "Well," he said, "I didn't expect such a trip."

"You were informed of it in the telegram," I said, severely, suspecting in this a ruse by which I was to be filched.

"Well," he said, with sudden cheerful resolution, "if that's where you want to go, I don't suppose any other place will do you."

"How much?"

"Four dollars is what we get for a trip up there."

It was too dark for me to see his face, but there was a pleasing frank and friendly quality in his voice. I felt that he would be open to reason and persuasion.

"Don't you think," I said, "that three dollars would be a fair price?"

"I will tell you what we'll do," he said. "We'll split the difference. I won't quarrel with you, anyhow."

I got in, and drew the lap-robe around my legs.

"I am in no way fixed," he said, "for such a trip. This horse is not used to the mountains, and is pretty slow. This buggy is light, and I am afraid you'll find this lap-robe pretty thin, for a cold drive."

I turned my coat-collar up and settled back against the seat without reply. I hoped this driver would not talk. Some years had passed since I had been in the mountains—this very drive across the lowlands and up the gorge of the Kaaterskill Clove was associated with romantic memories. I wished to enjoy them undisturbed. At the moment of starting, however, I realized that the driver was even more companionable than I had feared, and if I were to enjoy my journey in my own way, I must close my senses to his chatter, availing myself of an art long since acquired—the art of heedlessness.

"This livery-stable life," he said, "is a tough one. Now, here am I. I haven't

been by my wife a night for over a week. There ain't a rougher lot of men in all the world, I guess; but I tell you it's easy to get into bad ways, living as we live. I haven't had my clothes off for nine days, now. Take it to-night. It'll be twelve or one o'clock before I get back; of course I can't go home. It would only rout the wife out from her sleep, and I have to get up by five o'clock, anyhow, so there wouldn't be no use. I'll just lie down on a floor somewhere in the stable. If I was given to drink, now, it would be a big temptation. When you work like that and get no sleep, a little liquor, you think, would brace you up. But it don't. I have found that out, and I leave it alone. There is lots of the boys that can't leave it alone when they've got to drinkin' it once.

"I wasn't always in the livery-stable business. I used to be a private coachman once, and it was all my own fault that I didn't stay there. I worked for a good man, too. Mr. Randolph Barlowe—maybe you've heard of him. He's got a stable of fine horses, I tell you."

The pleasant voice of the man beside me had continued so far without a break. There was romance in his musical inflections, a world of humor, of pathos, of warm humanity enveloping his words and glorifying them.

"What was the fault," I said, "by which you lost that place?"—thinking to myself that this loss had been the means of teaching him the folly of liquor.

"Well," he answered, pleasantly, "Mr. Randolph had two sons—Mr. George and Mr. Louis. Mr. George, the oldest boy, is a fine man; so long as he was there and had charge of things, there was never any trouble. He liked to see the place kept up and the horses well fed, and sleek, and full of mettle. But he got married and went away. Mr. Louis was what you might call a mean boy. He was so mean, you might say, he wouldn't eat what he wanted. He was always nagging at me for feeding the horses too much; but, of course, he was Mr. Randolph's son, and I stood it without ever talking back. One morning I pulled the wagon out I used for exercising, and one of the nuts fell off. I thought that was very queer, but I took a wrench and put it on again, and examined all the other wheels, but they were tight. When I drove out, Mr. Louis was standing on the porch. I said to myself, 'Well, Mr. Louis, if you're standing there expecting to see me pitched in the ditch, you'll be fooled this time.' When I got back I examined all the wheels again, and found them right. The next morning, when I pulled the wagon out, the same thing happened. Well, of course, I knew somebody had been tampering with the wheel. It happened that Mr. George came around that morning, and I told him all about it."

"Well, I guess Mr. George spoke to Mr. Randolph. Anyhow, it didn't occur again. But it got to wearin' on my mind. Of course, after that I never could take a buggy of any kind out of the barn without examining every bolt and nut on it. And every time I used the harness, I had to look it over carefully. Then, too, I got to fearin' there might be some damage done the horses, maybe. I wasn't easy in my mind no longer. So one day I says to Mr. Randolph:

"'Mr. Randolph,' I says, 'I guess I'd better go.'

"'Why, Teasle,' said he, 'what are you going for?'

"I didn't like to say anything, but he kept insisting, so I said:

"'Well, your son, Mr. Louis, he don't like me. And, of course, Mr. Randolph, he's your son, and he oughtn' to have anybody around here that is irritatin' to him. 'Tain't good for him to feel that way.'

"And so I left that place."

"Do you get better pay at the livery-stable?"

"Oh, no, I don't get so good. Mr. Randolph gave me thirty-five dollars a month and house rent. At the stable I get nine dollars a week, and that's all. It's pretty hard to pay house rent, to feed and clothe your family, on nine dollars a week. But," he said, with a cheery emphasis on the "but," "maybe I'll get something better sometime. I think maybe I'll have a better life than what I have had before I'm through, though, of course, I don't know. It's a little better," he said, after a pause, "in one way, than it used to be. I've got four children. My oldest daughter, now, she's married."

"Did she marry well?" I asked.

"Well, yes, she did. Her husband is

doing well, but, of course his business isn't just what it ought to be. He runs one of them hotels in New York—sells liquors, you know. Of course that isn't right. It worries me a good deal. He's just as nice a feller as ever was, and is good to her, and I guess he don't drink a drop himself, but he gets his money that way, and it won't come to any good."

"How old are you?" I asked.

"I am forty-eight. Been married twenty-eight years this fall."

"Born around here?"

"Yes, up the mountains in Quarryville. My father was a stone-cutter by trade—worked in the quarries. When I was a boy, I was always working around there, too. Got my first job shoveling dirt, taking off the top cover of the quarry. I worked along at pretty good wages, and finally got to handling the mallet myself. When I was twenty I got married—to one of the neighbors' girls I had always known. Of course I was young then, and didn't realize but that everything would go just as it was a-goin'. We got a little house, and I bought a cow. For a while we did first-rate on what I earned, but about two months after I was married I got sick, and never left my bed for 'most a year. When I got round again, I found that wages had gone down in the quarry. It was at the beginning of winter, and bad weather. All my money was gone, and I owed a lot beside. While I was wondering what to do, I heard from a fellow, O'Toole, who had gone from Quarryville to a place in Pennsylvania. Work was plenty there and steady even in bad weather. Well, I was standin' outside my house and wonderin' how I could get to Pennsylvania, when Mr. Howard came by, and I said to him:

"'Mr. Howard, you want to buy a cow?'

"'I don't mind if I do,' he says.

"'Well,' says I, 'come in and look at mine.'

"He looked her over and says:

"'How much do you want for her?'

"'Forty dollars.'

"'Is she all right?'

"'Well, Mr. Howard,' I says, 'there's just two reasons why I want to sell her. One is, she cut one of her tits—cut it on a barbed fence. You can see the scab there now. Of course, if it cut clear through she'll be a three-titter.'

"'Well," said Mr. Howard, 'I don't want a three-titter.'

"'She's a splendid milker, you know that, and, of course, the cut may not hurt her any, but I tell you, I want to sell her bad. I want to go to Pennsylvania to-night, and I haven't a cent. If I can sell this cow, I can go out there and get work.'

"'Well, Teasle,' said Mr. Howard, 'I'll give you thirty-eight dollars for the cow.' He pulled out his pocketbook, and I took the money.

"I went in the house, and saw my wife in the kitchen ironing.

"'Molly,' I said, 'I want you to get my things packed right away. I am going to Pennsylvania, and the train leaves in an hour and a quarter.'

"Well, she just stood and looked at me.

"'What do you mean?' she said.

"'Now, Molly,' I said, 'you'd better take that iron off your dress, or you'll burn a hole in it. I want you to get my things packed right away. I am going to Pennsylvania to get work.'

"'But you can't go,' she said; 'you haven't the money.'

"'I've sold the cow,' I says, 'for thirty-eight dollars. Here's twenty-eight for you. That will keep you comfortably until I can send you more.'

"Well, she looked kind of white and scared, and I took her by the arms and said:

"'You know, Molly, I can't get work here that will be steady and keep us and pay my debts. Now, I can get good wages where I'm going.'

"'Well,' she said, 'of course, if you must go, you must.'

"So she packed my things and I left right off. I heard her crying in the door, but I didn't look around until I got to the bend in the road. When I turned around, she waved her apron. As I lost sight of her and the house, I remember that I started in to cry. I had never been away from there before, and it was hard to leave Molly that way.

"When I got to the place in Pennsylvania, I saw O'Toole, and he arranged with the boss there to let me come on and cut until the week was out, and then my wages would be fixed. Of course I went in there as a first-class stone-cutter, for I made up my mind, if ever I was going to be one, now was the time. Well, they

gave me a stone slab to cut sixteen feet long.

"'Now, take your time,' says O'Toole to me. 'You ain't hurried here as you are in Quarryville.'

"So I did. I just set that stone up and made up my mind that I was going to cut it nice. I just put all idea of how long it would take to cut it out of my head, and I says, 'If I just stand here all my life a-cutting this one piece of stone, I ain't goin' to cut one bit faster than I can cut nice,' and I was just as cool and easy as might be. But, of course, I can't take all the credit myself. It is a curious thing to me how near you always can come to failing, and how it is just a little accident, perhaps, or a word spoke in time, or something, that your whole life seems to turn upon. Now, if left to myself, I would have turned the bevel, as we do in Quarryville. But O'Toole, he says to me, 'How nice it would be, Charley, if you could just turn the bevel.' And I said, kind of surprised, 'Well, can't I turn the bevel?' And he said, 'You take my advice, Charley, and don't you turn the bevel.' So, as I was cutting alone, the boss came and watched me for a while, and, afterwards, in speaking to O'Toole about it, he said, 'That young fellow, I guess he will do. He seems to know the business. If he didn't, he would have turned that bevel.'

"When Saturday came I went to the boss, and says, 'Well, now, how much pay am I going to get?' He said, 'Well, Teasle, we pay from $2.25 to $2.75 a day. Now, what do you think you ought to have?'

"'If you leave it to me,' I said, 'I will take $2.75 a day.' He says, 'Well, Teasle, I have watched your work and you satisfy me,' he says; 'specially I like that first stone you cut.' He says, 'I've got that up there in my office now alongside of one Bill Bates cut some years ago, and that is supposed to be the best-cut stone this quarry ever turned out; but,' he says, 'think yours is a little the best.' He says, 'Yours is all out of tine, while Bill Bates' is about one-sixteenth of an inch out of tine on one end."

"What's tine?"

"The bevel. Well, as I was saying, the work was very steady there all that year, and I wasn't sick a day. It cost me $12 a month to live there, and all the rest I sent home to Molly, and she paid my debts. Of course we kept the post-office pretty hot, it being our first parting. I liked the work first rate and never could complain of the boss, but Molly was always anxious about my working in the quarries. You see, her father, my father, and my brother had all died there in Quarryville of stonecutters' consumption, and it made her anxious about me. I have often thought if I could have stayed right there that things might have been different with me. The time I left the quarry in Pennsylvania the boss, I guess, thought more of me than he did of anybody. He had got to rely upon me for almost anything he wanted. Just the day before I left I was cutting away at a stone when the boss came to where O'Toole and I was working, and he said, 'I've got to get that rough stone out at once. I hate to be balked this way. But that driller can't seem to make his drill work right.'

"Then O'Toole, who was working near, he spoke up, and he says, 'I will bet a month's wages against a week's wages that Teasle can drill more holes in a day than the fellow you have got there can drill in a week.' 'Well,' the boss says, 'Teasle, I am terribly anxious to get that rough stone out, and it means a good deal to me to get it out right away, and I wish you would take that drill in the morning and go to work.' 'Well,' I said, 'I didn't come down here to run a drill. It's pretty dirty work, and, besides that, that driller would not feel very good toward me if I took his place.' 'I will fix that,' said the boss. 'I will make it all right with him and with you.'

"Well, I asked him how many holes there were drilled already—what the distance was to go, and how far apart the holes were to be. 'How long,' I said, 'do you think it will take, now, to finish up that job?' He said, 'If you're as spry as O'Toole says you are, it ought not to take you more than two days and a half.' 'Well,' I says, 'will you give me wages for two days and a half for the job?' and he says, 'Sure I will.' So the next morning I went up and started in to drill. But I had not gone but a few inches before I saw what the trouble was with the drill. I got some pieces of steel from some hoops and fixed it so it would do, and went to work. When it came four o'clock, I signaled to the engineer to turn off steam

and laid down my drills and left the quarry, washed my face and hands, and changed my clothes, got the evening paper, and sat down in the rocking-chair beside the door, and when the boss came up to supper, there I was, and he says, 'What are you doing here?' and I says, 'I am reading the evening paper.' 'Well,' he says, 'I told you I wanted to get that rough stone out. If you found you couldn't do it, you might have told me.' 'Well,' I says, 'the job is done.'

"'Teasle,' he says, 'I don't want you to leave me,' he says; 'if you will stay and run these drills, I will give you $3.50 a day.' Of course that was pretty big wages, but I told him no, I was going home, and I went. Somehow, ever since the thought of going home had come, I had got awfully homesick.

"Well, when I got back I thought to myself that I'd lease a quarry up in Quarryville myself. I was sure I could run it better than was being done and make good money. But the day I got back to Saugerties I met Mr. Randolph Barlowe on the street, and he says, 'Teasle, I want to hire you for a year.' He says, 'If you will come and be my coachman, I will give you thirty-five dollars a month and your house rent.' So I went home to Molly and told her.

"Well, then, Molly went to pleading for all she was worth.

"'Your lungs are all right now,' she said, 'but you don't know how soon it will get you. I wish you would go as coachman. You may make less, but we can live on that and save a little besides, and then I won't be worrying about you.'

"Well, I have always thought that when a man is married and his wife was faithful and good, that he ought to do as near as he can what she wants him to do; and so at the end of the week I went with Mr. Randolph Barlowe as coachman."

Constant as had been Mr. Teasle's flow of words, he had found a place, whenever necessary, for an admonition to the horse. He kept the animal moving briskly with his "clicks," and "Come, Baby's," and tappings of the whip which were more like caresses than blows.

As we left the lowlands and began the climb among the foot-hills, now ascending an elevation, now dipping into a precipitous hollow, I was surprised at the unhesitating manner in which he swung around the abrupt corners of the road, which in many places skirted the very edge of a ravine on one side and a wall of rock upon the other. The lantern under the buggy cast its light a few feet beyond the horse, making the outer world of darkness even more impenetrable. When we arrived at the base of the mountains, we crossed a brook that came roaring down the yawning gorge, and began an abrupt ascent. For several miles the road clung to the mountain-side, creeping along ledges just wide enough for a single wagon to pass. It was impossible to see very far into the increasing depth below us. Around us rose the mighty mountain, covered with a dense growth of forest through which a fitful, impetuous wind was ever stirring. As the night advanced it grew very cold. Mr. Teasle, as he talked, continually slapped now one hand, now the other, upon his knees. But he never complained. During the long and dangerous drive of four hours he was busy with the memories of his very simple life. It is impossible to retell it word for word, with all of the infinite detail, as he recounted it. All the principal events, however, I have recorded—a year of sickness, the sale of his cow, the cutting of a stone entirely out of tine, the handling of a drill for a day, his dream of becoming a quarry operator abandoned at the plea of his wife, a peaceful two years as coachman at thirty-five dollars a month and house rent, the enmity of a malicious boy that drove him, through lofty considerations, to the hard life of a livery stable at nine dollars a week.

This was a very simple life indeed, but the story of it thrilled me as I listened. Here was a nature strong in the qualities that make this country great—a nature at once gentle and vigorous, resourceful, ambitious, and courageous. The principles of morality, of human relationship, of truth and honor, that civilization has established through the ages, were more than precepts to him. They were rules to live by, and he had lived by them. He became for me, as I rode and listened, a man to fit the mountains we were driving through, for he seemed as elemental and as majestic as they.

Books of the Week

This report of current literature is supplemented by fuller reviews of such books as in the judgment of the editors are of special importance to our readers. Any of these books will be sent by the publishers of The Outlook, postpaid, to any address on receipt of the published price, with postage added when the price is marked "net."

Apostolic Order and Unity. By Robert Bruce, M.A., D.D. Charles Scribner's Sons, New York. 5×7½ in. 151 pages. $1, net.

A strong protest is made here by a missionary of the Anglican Church against the divisive theory "based upon the so-called apostolic succession of the Diocesan Episcopate." The body of the work is devoted to an examination of the early church fathers down to Polycarp, with the result of finding no support for a theory which unchurches the non-episcopalian bodies. This theory, as held by Bishop Gore in his work on "The Church and the Ministry," is strongly condemned. Dr. Bruce testifies to the evil effects of it in the missionary field. His argument and testimony appeal especially to his own Church, which he holds responsible for a serious evil.

Book of Beasts and Birds, Written and Illustrated with Photographs from Life (A). By Gambier Bolton, F.Z.S. Illustrated. Charles Scribner's Sons, New York. 6×7½ in. 132 pages. $1.50, net.

One notices first the extremely tasteful decorative cover design of this volume, then the great abundance of animal photographs direct from nature; finally the clear and explicit information about beasts and birds, plainly written, but thoroughly scientific.

Bible and Modern Criticism (The). By Sir Robert Anderson, K.C.B., LL.D. The Fleming H. Revell Co., New York. 6×9 in. 281 pages. $1.50, net.

The late Joseph Cook, a man of extraordinary intellectual power, undertook to explain to his Boston audiences the then comparatively new science of biology in a series of popular lectures; and for all his pains got called a "charlatan" by the eminent scientist, Professor Asa Gray. Mr. Cook's mistake lay in supposing that outside knowledge of his subject, derived from books, put him on a level, for the purpose of popularizing the science, with the inside knowledge derived from the processes of the laboratory. The same mistake is committed by the intelligent layman who writes this book, and the pious bishop who writes its Preface. They have simply an outside knowledge of their subject. It is rather ludicrous to hear Sir Robert say that when the text of the Authorized Version differs from that of the Revised Version, one may assume that the former is correct. Bishop Moule, while commending the work in general, wisely takes some exceptions to it. Sir Robert far overshoots the mark in terming the progress of the higher criticism "an apostasy unparalleled in the history of criticism." One who has read so far need read no further except in curiosity. As to Bishop Moule's logic, assuming that Jesus' frequent phrase, "It is written," puts the stamp of his authority upon the entire contents of the Old Testament as nowhere defective or erroneous, it is of the kind too often heard from the pulpit. Sir Robert is right in his "warning against identifying the fact of inspiration with any definition of it, or with popular theories respecting it." If he had comprehended the full import of his words, and reasoned consistently, he would have written a better book.

Conjuror's House: A Romance of the Free Forest. By Stewart Edward White. Illustrated. McClure, Phillips & Co., New York. 5×7¾ in. 260 pages. $1.25.

A strongly knit and dramatic tale of an outpost of the Hudson Bay's Company; of a fur-trader who dares to invade the dominion ruled over by a powerful old Scotch factor; of the free trader's narrow escape from being made to take "la longue traverse"—in other words, to be forced to fight his way out of the wilderness without rifle or provisions; of his sudden love for the old man's daughter, her aid in his escape, their capture, and finally of reconciliation and happiness. The flavor of romance and the spirit of the lonely life of the frozen North are everywhere felt. Undoubtedly the book holds the reader's attention closely; and while it is slighter than "The Blazed Trail," it has a certain unity of purpose and form not in the larger work.

Cornet Strong of Ireton's Horse. By Dora Greenwell McChesney. Illustrated. John Lane, New York. 5×8 in. 343 pages. $1.50.

A historical romance of Cromwell's time, written with spirit and vigor, and decidedly original in plot. One resents a little, however, the literary trickiness which deliberately leads the reader to believe one thing all through the story in order to give him a shock of surprise at the end, when the valiant warrior and Puritan who gives the book its name turns out to be a woman.

Der Talisman. By Ludwig Fulda. Edited by Edward Stockton Meyer, Ph.D. Henry Holt & Co., New York. 4½×6¾ in. 171 pages. 35c., net.

Dr. Wells, in his "Modern German Literature," published in 1895, puts Ludwig Fulda in the same school with Sudermann and Hauptmann, and not unnaturally, for Fulda's "Verlorenes Paradies" and "Die Sklavin" had recently appeared. These unpleasantly realistic plays mark the period when Fulda was carried away by the success of the naturalistic drama, under the lead of Hauptmann and Sudermann. At the present time, however, Fulda's works show emancipation from that influence. Not only are they written in direct defiance of it, but, by their exquisite artistic expression, they give to their author a pre-eminence among modern German writers. Even the ultra-realists have become so impressed by this that both Hauptmann and Sudermann have changed their course, and have now

gratified the world, the' one with "Die versunkene Glocke," and the other with. "Die Drei Reiherfedern." But Fulda still remains the leader in fine fancy and in feeling for form. With a Teutonic weight and sincerity, he possesses, as Dr. Meyer points out, a lightness of touch and graceful felicity of language not always found in German writers, and reminding rather of the author of "Cyrano de Bergerac." The most popular of Fulda's works, "Der Talisman," may also justly be regarded as the masterpiece of modern German drama. The play is a satire upon William II., his court, and the German political parties. When the great Iron Chancellor was summarily dismissed in 1890, the young and comparatively inexperienced ruler was accused of ingratitude and megalomania; in the present volume we find a keenness of thrust such as has not been in literary evidence since the days when, in "The Knights" and "The Wasps," Aristophanes satirized the demagogue Cleon and his political tyranny. As a picture of modern conditions in Germany, therefore, "Der Talisman" has value aside from the masterly manner of its recital. American readers will appreciate this edition, which includes many illuminatively biographical and critical notes; those which concern the actual text, however, would be better placed at the bottom of the page than at the end of the volume.

Development of Muslim Theology, Jurisprudence, and Constitutional Theory. By Duncan B. Macdonald, M.A., B.D. (The Semitic Series.) Charles Scribner's Sons, New York. 5×7½ in. 386 pages.

Not only the growing interest in the study of comparative religion, but interests of a very practical kind, give timeliness and importance to the appearance of this work in an unoccupied field. There are, indeed, movements in the Muslim world which give reason to competent observers to affirm with the present author that, as in the days of the Crusades, the Christian North and the Mohammedan South will again meet in a conflict that "will cast into forgetfulness even the recent volcanic outburst in China." It is certain that Mohammedanism is by no means a spent force. It exhibits to-day a vitality as strong as Roman Catholicism. As Mr. Macdonald points out, there is a movement of revival and reform in Islam to-day remarkably parallel to that counter reform in the Roman Catholic Church which followed upon the Protestant Reformation. And among the factors in this reforming movement, the revival of the Augustinian theology by Luther and Calvin is singularly paralleled by the reviving influence of a Muslim theologian who lived within a half-century of Augustine, Al-Ghazzali, "the equal of Augustine in philosophical and theological importance," whose teaching is now dominant at Mecca. Al-Ghazzali's creed, in eight closely printed pages, "intended to be committed to memory by children," is marked by a sublimity and a hardness in close affinity with Calvinism. On the other hand, as Mr. Macdonald notes, he has points of affinity with Ritschl. The two "hopeful signs in modern Islam" are the tendencies on one hand to the simple monotheism of Mohammed, and on the other to an agnostic mysticism. It is, however, a militant civilization that stands athwart the advance of Christianity. For a better understanding of it Mr. Macdonald's work is eminently helpful.

Exits and Entrances. By Charles Warren Stoddard. The Lothrop Co., Boston. 5½×8¼ in. 375 pages. $1.25, net.

It is a good many years since Mr. Stoddard published that delightful book "South Sea Idyls," so redolent of the atmosphere of those far-away countries under tropical skies. That volume was noticeable for felicity of description, for its romantic vein, and for charm of style. These qualities have not forsaken Mr. Stoddard during his long silence; they are found again in several chapters of "Exits and Entrances," notably in the description of a night on an island in the Nile, and in the semi-humorous and very entertaining sketch of the Minister of Foreign Affairs in the old Hawaiian days. Many readers will find the greatest attraction in the two delightful papers on Stevenson—one on Stevenson as Mr. Stoddard knew him in the California days, and the other an impression of the work which came from Stevenson after he had gone to Samoa. There is a delightful account of an afternoon with George Eliot at the Priory, and of a luncheon with Charles Kingsley, and there are vivid impressions of Mark Twain, Joaquin Miller, Bret Harte, and other interesting persons. Mr. Stoddard was at one time an expert traveler. He covered the distance from the Sandwich Islands to Egypt, and he saw countries with his imagination as well as with his eyes. This combination of observation with capacity for feeling and conveying sentiment makes him a charming recorder. It is a long time since any book has come from the press, of a semi-personal character, more delightful in its intimacy, its quiet humor, and its grace of style than "Exits and Entrances."

Gate Beautiful (The): Being Principles and Methods in Vital Art Education. By John Ward Stimson. Illustrated. Albert Brandt, Trenton, N. J. 9×12 in. 420 pages. $7.50, net. (Postage, 40c.)

This curious, sumptuous, and often extremely interesting volume should certainly accomplish something in the direction of elucidating principles and methods of art education, though it would seem as if the text might have been condensed with profit. The author divides his work into the natural sections of theory and practice: the first appealing to the general public interest in nature as a whole; the second appealing to the professional practitioner and teacher of class-room study. In treating of the philosophy of beauty, Professor Stimson justly claims that there is a modern demand for the comprehension of the principles of æsthetics, and his text is of signal worth in satisfying that demand, even though, when he comes to his "Chart of the Threefold Cosmic Correspondences" and its exposition, the general reader may find some difficulty in following him. The work is elaborately illustrated with many rare and detailed plates, including some interesting drawings by the author himself. Its illustrations double the volume's value; indeed, they are vitally necessary to give adequate expres-

dental movement and touches its keynotes, with biograpnical references.

Representative Art of Our Time, with Original Etchings and Lithographs and Reproductions of Oil and Water-Colour Paintings, Pastels, etc. Edited by Charles Holme. Published by the International Studio, 67 Fifth Avenue, New York. 11×15 in. Part II. Complete in 8 Parts, each $1, net.

The second installment of this work contains an interesting article on the modern aspects of artistic lithography, by Joseph Pennell, who has already contributed largely to an exhaustive history of this art. The author considers particularly the later English efforts, which received their chief encouragement from the distinguished work of Thomas Way, the well-known printer. Mr. Pennell concludes his essay by saying: "I regard artistic lithography as one of the most individual methods of expression, and I regret that commercial considerations prevent artists and painters from devoting themselves to it as zealously as they would like." In point of illustrations, this number is even better than the first one, and its six examples of art work are reproduced with telling effect. The most striking picture, a water-color by Albert Goodwin, R. W. S., represents Milan Cathedral with its spires brilliantly illuminated by the golden light of the setting sun. A beautiful mezzotint by Max Pietschmann, entitled "The Bather," is also worthy of special mention. "A Study of a Child's Head," by F. E. László, "London Bridge," by Frank Brangwyn, "Breton School Girls," by L. Lévy-Dhurmer, and a water-color entitled "Fleet Street, London," by Herbert Marshall, R.W.S., complete the list.

Robin Brilliant By Mrs. Henry Dudeney. Dodd, Mead & Co., New York. 5×7½ in. 398 pages. $1.50.

Everything Mrs. Dudeney writes is worthy of serious attention, because she gets beneath the surface of things and she does carefully study character and motive. Her "heroine" here, Robin, is a singular girl and a most interesting person. Her lover is also more or less in love with another girl, but instead of throwing him over with scorn, Robin deliberately sets herself to win the victory. How she wins and then renounces forms the burden of this novel. Unfortunately, the book is inordinately long, is not well proportioned, and an immense amount of talk by rather feeble minor characters obstructs the real current. In its placidity and slowness the story is a surprising contrast to Mrs. Dudeney's first book, "The Maternity of Harriott Wicken."

Social Ethics: An Introduction to the Nature and Ethics of the State. By James Melville Coleman. The Baker & Taylor Co., New York. 5×7½ in. 357 pages.

Begins with a criticism of the legal ethics of Hobbes and the biological ethics of Spencer; ends with a proposition to insert into the Federal Constitution an acknowledgment of the sovereignty of Jesus Christ.

Spiritual Evolution, or Regeneration. By R. C. Douglass. Lee & Shepard, Boston. 5×7½ in. 350 pages. $1.20, net. (Postage, 10c.)

This is a theosophical rather than a theological work, "a course of lessons in Christian metaphysics." It is in close affinity with the Gnostic speculations of the second century, and with those of Swedenborg. Its divine Christ is impersonal, "the Principle of Truth," with which Jesus identifies himself. It regards the Bible as "a book of 'concealed mysteries,' written by mystics in the language of mystics in symbol, metaphor, allegory, and allegoric history." The two main documents into which the Pentateuch is analyzed by critics are "a double allegoric picture of man in the duality of his nature," combining a higher self and a lower. The first part of the work is occupied with "The Genesis Symbolology," the second part with "The Christ Symbolology," in which Mary represents "tender motherly understanding" and Joseph "fatherly will." For "the conception of the Christ in consciousness" the daily repetition of three pages of formulæ is recommended as helpful. While such a work does not require serious criticism, its extravagance strikes one as a sign of the present recoil from the extravagant materialism that has affected a world intoxicated with its mechanical arts and acquisitions.

Social Germany in Luther's Time: Being the Memoirs of Bartholomew Sastrow. Translated by Albert D. Vandam, with an Introduction by Herbert A. L. Fisher, M.A. Illustrated. E. P. Dutton & Co., New York. 5×8 in. 349 pages. $2.50, net.

Sastrow was, Mr. Fisher tells us, "a hard-headed, plain-spoken Pomeranian notary." What his memoirs give us is not charm or amiability, but the record of a time of strenuousness left by a political and legal contestant. He has a lively, ironical, and sometimes abusive style, and his memoirs do not lack salt or pepper. They certainly throw a clear light on the controversies and social upheavals that followed the introduction of Protestantism in Germany.

Substitute (The). By Will N. Harben. Harper & Bros., New York. 5×7½ in. 330 pages. $1.50.

A sound, wholesome, genuine tale of North Georgia life, with real raciness and humor and character. It is as good as Mr. Harben's "Abner Daniel"—and that is saying not a little.

Summer in New York (A): A Love Story Told in Letters. By Edward W. Townsend. Henry Holt & Co., New York. 5×7½ in. 196 pages.

Slangy and sporty. Champagne flows like water. Millions are as common as dirt. Fashionable people flirt and plot and counterplot over the newly arrived daughter of a multimillionaire, who in the end marries her artist lover. The whole is amusing in a decidedly surface way.

Tito. By William Henry Carson. Illustrated. The C. M. Clark Publishing Co., Boston. 5×7½ in. 363 pages. $1.50.

Variation in Animals and Plants. By H. M. Vernon, M.A., M.D. Henry Holt & Co., New York. 5×8 in. 415 pages. $1.75.

Words for the Church. By the Rev. Edgar Gardner Murphy. Thomas Whittaker, New York. 5×7½ in. 114 pages. 45c.

Wrought Brim (The): Twelve Discourses Given in the South Church, St. Johnsbury, Vermont. By Edward Taylor Fairbanks. Published by W. W. Husband, St. Johnsbury, Vt. 6½×9½ in. 195 pages.

Correspondence

Sheepmen and Cattlemen

To the Editors of The Outlook:

In the issue of November 22, 1902, of The Outlook appeared an article by Charles Moreau Harger entitled "Sheep and Shepherds of the West," which is of a most interesting nature did it not contain so many inaccuracies.

There is no business or industry involving the vast capital it does and giving employment to so many men that is conducted with less strife and bloodshed than the sheep industry of the Western ranges. There is more rioting and bloodshed over mining matters, irrigation and water rights, or many other enterprises of less importance than over the stock industry. Instead of the sheep-herders of Wyoming "wandering over the vast unoccupied reaches of Wyoming," each flock-owner, with a very few exceptions, occupies and owns the same ranges year in and year out, one range being used for summer and the other for winter grazing. Instead of the sheep-herder being a "nomad and dwelling in loneliness," he is hardly ever out of sight of another sheep camp, and a day seldom passes that the herders do not meet and discuss the news of the day and other matters in which they may be interested. Statistics show that insanity and suicides are no greater among sheep-herders than among any other class of people; in fact, far less than among writers and farmers.

The days of trailing cattle and sheep from the "far-off Pacific to Nebraska and Kansas" are a thing of the past, owing to the settling up of the country by ranchmen and stockmen. No band of sheep has been trailed across the State in the past two years.

The idea that a band of sheep passing leaves "the prairie as if a fire had swept over the range" is as absurd as it is ridiculous; also the assertion that "the touch of his hoofs is fraught with an odor that gives offense to cattle and horses, and that the keen clip of his teeth leaves nothing for the larger animals."

Cattle and horses passing along the trail will leave the prairie in a similar condition; as to the hoofs of sheep being fraught with an odor that gives offense to cattle and horses, this idea was exploded years ago by actual demonstration, and is referred to only when making sport of some unsophisticated tenderfoot. To completely refute this statement, it is only necessary to call attention to the fact that a great many of the largest owners of sheep in the range States and Territories are also among the largest owners of cattle, experience having taught them that it is more profitable to run both classes of stock on the same range; and to-day cattle, horses, and sheep may be seen grazing and watering together in peace and harmony "on a thousand hills," sheep grazing and feeding on the smaller and finer grasses while they leave the hardier and coarser for the horses and cattle.

The assertion that the "cowboys declared war on the shepherds, and sought to limit their range," and "that it is tempting for the sheepman to move to new pastures at the risk of attack, even though he knows that a cattleman has been long in possession and will fight to maintain his place," is unfounded. As a rule, the cattlemen and the flockmasters respect each other's ranges. Now and then, however, there is a clash; but on being traced to its source, it is usually found that subordinates in the employ of either the sheep or the cattle men have disregarded the wishes of their employer.

The assertion that 600,000 head of sheep, valued at $2,000,000, had been wantonly killed by cowboys in the last ten years, and that it is estimated that there have been five hundred men killed annually accompanying the sheep killings (making 5,000 during the ten years) by these same cowboys, is too absurd for any sensible person to believe, and should find no place in literary journalism.

The writer hereof has been a resident of the great grazing country extending from the Missouri River on the east to the Pacific Ocean on the west for the past thirty-six years, having brought into Wyoming one of the first bands of cattle ever trailed from Texas as well as having trailed sheep into the State from New Mexico in the early days of the sheep industry, and has kept in touch with these two industries ever since; hence should

be conversant with the subject under consideration. I therefore make the assertion that in all the sheep killings by cowboys during these thirty-six years the number will not exceed 25,000, valued at $75,000, and during this time the killings resulting from feuds between cowboys and shepherds over the range question will not exceed fifty.

Referring to the assertion that "masked men, mounted, killed the herders of several thousand sheep in central Wyoming last July and killed thousands of sheep, and in addition 65,000 head were scattered, which resulted in further loss," it was found on investigation to be, one man missing, some 2,000 head of sheep killed, and as many more scattered. As a rule, the rights of the homesteaders are respected, and they are perfectly safe from any infringement by the sheepmen.

I do not wish to be considered a defender of lawlessness, but to state the facts as they are, in order that a false and injurious impression may not go abroad concerning two of the greatest industries lying west of the Missouri River.

E. P. Snow,
Secretary Wyoming State Board of Sheep Commissioners

[In reply to the above letter, the author of the article in question, Mr. C. M. Harger, writes as follows: "This view, which assumes a hostility neither expressed nor implied in the article referred to, is precisely that of the exclusive sheepmen, and is an excellent illustration of their contention, in the long-standing contest with the cattlemen, that flocks do not injure range more than herds. Nevertheless, because of the damage done, the Government prohibits sheep and goats from pasturing on forest reserves except in regions where rain quickly restores herbage, while other live stock is admitted. Idaho and some other Western States forbid the flocks within two miles of a settler's dwelling. Such authorities as E. Benjamin Andrews, Chancellor of the Nebraska State University, and Captain James McClintock, formerly of the 'Rough Riders,' a practical sheepman of New Mexico, declare sheep destructive to the range. The latter, in a recent article, says: 'Sheep may exist in propinquity with cattle, but the reverse is not true. The nervous American cannot stand the life [of the shepherd]. The eternal "baa" drives him mad. Sheep and cattle can no more occupy a range in common than oil and water can float coherently. Where a flock of sheep has passed, the grass is gone, and the track so reeks with the sheep's peculiar odor that cattle and horses avoid the ground for weeks.' The former, in a magazine article (January, 1903), says: 'There are always plenty of nomad herders . . . not scrupling to ignore range rights. Sheep-feeders are more commonly in this class. . . . Sheep easily eat the herbage out by the roots, killing even the perennial grasses.' The 'Government Year Book, 1901,' says: 'Sheep-grazing can never be conducted without more or less injury. . . . In feeding, the sheep takes nearly everything, and thus cuts close and clean.' If it be true that recently sheep and cattle have learned to graze in large numbers on the same range profitably, it is a most important discovery, one that will revolutionize the opinion of stockmen throughout the West, and of which they are as yet unaware. To have been fair, Mr. Snow should have noted that the statements concerning alleged killing of shepherds and sheep were expressly quoted from late reports (Associated Press despatches from the localities named, and leading daily papers of the West) uncontradicted at the time (last summer) when the article was prepared. Dr. Andrews, quoted above, in a magazine article (January, 1903) gives similar statements. As explicitly pointed out in the article, the conditions of the shepherd's life are unquestionably changing, and doubtless Wyoming, with its recent immigration, is more advanced than many remote sections. The claim that well-nigh universal harmony and good-fellowship have existed between the cattlemen and sheepmen on the range is ridiculous to any Westerner, though exigencies of development are now compelling amicable arrangements, and both are expected to unite in asking Congress to amend the lease laws in such manner as to adjust the difficulties. It may be interesting to add that in 1902 the product of scoured wool produced in the Nation increased 4,100,000 pounds over 1901; the number of sheep, 780,000. The average fleece (unscoured) weighed 6.8 pounds, varying from 8.5 pounds in California to 3 pounds in North Carolina."]

HAPPINESS

"It Makes Musicians of Us All."

enters the home with the **SIMPLEX PIANO PLAYER.** Every member of the family becomes not only an interested listener, but an intelligent performer by its aid. It enables anybody to play the piano in an artistic manner.

The desire for an automatic piano player is now almost universal. To choose a player intelligently, personally try them all. Try the **SIMPLEX** first or try it last, and note its following points of excellence and attractive features:

1 Ease of Operation
2 Simplicity of Construction
3 Perfection of Execution
4 Artistic Finish
5 Perfect Tempo
6 Note Accentuation
7 Softness and Elasticity of Touch
8 Automatic Rolling and Re-rolling of the Music
9 Supply and Character of Music
10 Music Library Arrangements
11 Complete Control of the Shading and Expression

Constructed on scientific principles, yet simple and lasting.

The **SIMPLEX** is manufactured with a view to **QUALITY** and **DURABILITY** of each mechanical part. Only best possible materials used, and the highest order of skilled labor employed.

Every **SIMPLEX IS GUARANTEED** and will last a lifetime.

Price, $250

AGENCIES IN ALL PRINCIPAL CITIES

Descriptive illustrated booklet, also music catalog, on application

CORRESPONDENCE 889

The Outlook is a Weekly Newspaper and an Illustrated Monthly Magazine in one. It is published every Saturday—fifty-two issues a year. The first issue in each month is an Illustrated Magazine Number, containing about twice as many pages as the regular weekly issue, and many pictures.

Price.—The subscription price is Three Dollars a year, payable in advance. Ten cents a copy.

Postage is Prepaid by the publishers for all subscriptions in the United States, Hawaiian Islands, Philippine Islands, Guam, Porto Rico, Tutuila Samoa, Canada, and Mexico. For all other countries in the Postal Union add $1.56 for postage.

Change of Address.—When a change of address is ordered, both the new and the old address must be given. The notice should be sent one week before the change is to take effect.

Discontinuances.—If a subscriber wishes his copy of the paper discontinued at the expiration of his subscription, notice to that effect should be sent. Otherwise it is assumed that a continuance of the subscription is desired.

How to Remit.—Remittances should be sent by Draft on New York, Express-Order, or Money-Order, payable to order of THE OUTLOOK COMPANY. Cash should be sent in Registered Letter.

Letters should be addressed:

THE OUTLOOK COMPANY

287 Fourth Avenue, New York

tells that it is a

Remington

Remington Typewriter Company
327 Broadway, New York

The housekeeper must learn to discriminate between Ivory Soap and the others that look like it. They all lack some quality of the Ivory, and she can not afford to take the imitation for the slight saving in price. Ivory Soap is 99 44/100 per cent. pure.

Registered Trade Mark

500 Dozen Handkerchiefs

At $1.50 a Box

Per Half Dozen

(Mail orders have special attention)

This is an especially desirable lot of Ladies' Initial Handkerchiefs at the price.

They are made of sheer Irish linen; the letters are all hand-embroidered, in butterfly, bird, and wreath designs; and all are finished with the narrow hem now in vogue.

The President's Speeches: The Monroe Doctrine

The President left Washington on his long journey, which is to occupy about two months and to take him through many Western States, on Tuesday of last week, and made his first speech in Chicago on Thursday, taking as his subject the Monroe Doctrine, which he restated, with comments on the recent Venezuelan incident, with characteristic frankness and candor. He gave the text of State documents which made clear, what the country has understood from the beginning, that there never was, for a moment, any apprehension of serious differences between this country and the Governments of Great Britain and Germany; that there was a clear understanding between the three Governments, each acting with perfect frankness and with entire good faith, and closing the transaction by submission to the Hague Tribunal, without any questioning of one another's motives during the entire transaction. England and Germany, the President declared, kept the assurances which they gave "with an honorable good faith, which merits full acknowledgment on our part." In giving assurances that the principles of the Monroe Doctrine would not be violated, England and Germany have given added authority to the Doctrine; while this Government has had the opportunity of making its significance clear, not only to Europe, but to South America. This Government does not intend to protect South American States from the consequences of their own wrongdoing; it simply undertakes to prevent any further acquirement or extension of territorial rights by European Powers on this continent. What the President has to say about the need of backing up this Doctrine with a strong navy, in view of what is being done throughout the world, will command the assent of the majority of Americans, many of whom, however, in company with The Outlook, will hardly accept as National policy the old adage which the President quoted, "Speak softly and carry a big stick." There is too much emphasis on the "big stick" both in this country and abroad. We need to be ready to protect ourselves; but, as we have made a new departure in international relations in our dealings with China and in our determination to establish the principle of arbitration in international differences, so it lies in our power, and is our bounden duty, to help lift the burdens of the world by declining to take part in the mad race to build navies and equip armies—a competition which is likely, sooner or later, to produce economic and political reactions of the most destructive kind. The United States ought to have an efficient army and an efficient navy; ought to be able to protect itself and its citizens; but it ought to keep entirely out of the competition in the creation of the forces of destruction: "the vulgar musket-worship," to quote Emerson's phrase to Carlyle, must not found a new cult in this country.

❀

The President's Speeches: Anti-Trust Legislation

The position of the Administration respecting trusts and the proper legal method of dealing with them is clearly defined by the President in his Milwaukee speech. The principle he lays down in the following words:

> It is clear that corporations created for quasi-public purposes, clothed for that reason with the ultimate power of the State to take private property against the will of the owner, hold their corporate powers as carriers in trust for the fairly impartial service of all the public. Favoritism in the use of such powers, unjustly enriching some and unjustly impoverishing others, discriminating in favor of some places and against others, is palpably violative of plain principles of justice.

This appears to us an admirably clear and a wholly incontrovertible definition of

the fundamental principle on which all legislation regulating corporations should proceed. What has been done under this principle by the present Administration the President states in a comparatively brief summary. This is, in brief, the creation of a Department of Commerce with power to investigate the conduct of corporations employed in inter-State commerce; an anti-rebate law strengthening the present Inter-State Commerce Law; and a law to expedite actions of public moment under the anti-trust law. We may add, what the President does not, that this action of Congress is almost wholly due to the President. It was he who raised the issue before the people in spite of the dissuasions of his admirers; he who urged action upon Congress when it assembled; he who, to the declaration that nothing could be done in so short a session, replied that if that was the case he both could and would call an extra session; he who thus, by creating and interpreting a public opinion in favor of legislation, and by insisting that this public opinion should be heeded by Congress, secured the anti-trust legislation of the last session. The President further shows that the Attorney-General has demonstrated the practical efficiency of the anti-trust laws by the proceedings which he has taken against the merger of the Pacific railways, against the Beef Trust, against the pooling of the Southern railroads to control cotton shippers, and against the Salt Trust, the three latter already prosecuted to a successful issue. The President thinks that Congress has done all that was practicable—if he means all that it was practicable to secure from Congress we agree with him—and he adds:

> Nothing of value is to be expected from ceaseless agitation for radical and extreme legislation. The people may wisely, and with confidence, await the results which are reasonably to be expected from the impartial enforcement of the laws which have recently been placed upon the statute-books.

❀

The President's Speeches: Possible Future Legislation

With this conclusion The Outlook agrees. We do not, indeed, believe that all has been accomplished that can be and ought to be accomplished by National legislation. We want to see the anti-pooling law repealed, pooling agreements legalized, and at the same time the Inter-State Commission authorized to hear complaints against excessive charges, such as might grow out of pooling agreements, and to determine rates when necessary to prevent public injustice. We want to see corporations engaged in inter-State commerce enabled and encouraged to take charters from the National Government; possibly practically required to do so, by a tax levied on all such corporations as are not Nationally incorporated. We want to see a moderate tax levied on the net income of all such corporations, perhaps on all corporations of a public or a quasi-public character, such as would bring them directly under Governmental inspection, much as National banks are now under such inspection. And we want to see some effectual legislation to prevent that stock-watering which, as the President has himself shown, is an incentive to overcharges and a prolific source of fraud and corruption. But for all this we are willing to wait. Constant experimental legislation is undesirable. Let us see what are the effects of the present legislation before proceeding to the *enactment* of new laws, though not before considering what new laws may be necessary. As to the proposition urged in certain quarters—as by the New York "Times" and the New York "Evening Post"—that nothing serious has been done respecting trusts until the tariff on trust-made goods is abolished, The Outlook agrees with Secretary Root in his address as reported before the Home Market Club of Boston:

> You cannot get rid of the trusts by revising the tariff. If duties are lowered below the point of adequate protection, the independent manufacturer will go to the wall first; the trust will be the last one to go. In determining when and how the process of tariff revision shall be undertaken, two cardinal rules should be observed. First, it should be done only when Congress is as free as possible from the distractions and temptations of an active political campaign. The second rule to be followed is expressed by the oft-repeated saying that the tariff should be revised by its friends. If the American people wish the principle of protection to be maintained, then the political party which believes in protection should do the work of revision.

The thoughtful reader will observe the *if* in the last sentence. The Outlook does not believe in the principle of protection in the present state of America's industrial development. But so long as that

principle is maintained by the Nation, the revision of the tariff must be made by those who believe in that principle. If protection is to be abolished, it should be because the Nation has come to the conclusion that its infant industries can now afford to have their swaddling-clothes taken off and themselves taken out of the cradle and put on their feet; not on the ground that certain schedules incidentally aid monopoly. Any mere modification of protection for the purpose of affecting special monopolies, while the essential principle of protection remains intact, would be liable to do more harm by its disturbance to business interests than good in producing competition and lowering prices.

❀

The Wabash Anti-Strike Injunction Dissolved

Last week Judge Adams, of the United States District Court at St. Louis, dissolved the temporary injunction he issued a month before restraining the brotherhoods of railway trainmen and firemen from ordering a strike on the Wabash railroad system. In his decision Judge Adams finds that the charges of the railway company upon which he issued the injunction are not sustained by the evidence. These charges were, in brief, that the officials of the railway unions had entered into a malicious conspiracy to secure the recognition of their brotherhoods by falsely representing that the members thereof in the employ of the Wabash were dissatisfied with their condition, and that these officials were about to force an undesired strike upon the union men employed on the Wabash; and that they were about to prevent the Wabash road from discharging its duties as a carrier of the mails and of inter-State commerce by forbidding the members of their unions employed on connecting roads from handling Wabash traffic. The court finds that the officers of the unions had merely acted as agents of the members of their brotherhoods, and had legally expressed their collective demands for better conditions. The brotherhoods have a right to act collectively, and under present laws a right to quit work collectively. The injunction against their doing so was therefore dissolved. Judge Adams, however, in announcing its dissolution, expressed the earnest wish that the differences might be settled by mutual concessions, and that the offer made by the railway company in open court to submit the questions in dispute to a Board of Arbitration might be accepted, and "another instance of rational and intelligent adjustment of a business difficulty be exhibited to an expectant public." Judge Adams's wise counsel has been carried out, and the difficulties which at one time threatened serious disaster to the traveling and mercantile public have been adjusted by conciliation. The temporary injunction and the further consideration of the issues presented have given time for sane counsels among both employers and employed, and the hearing given to the trades-union and the final dissolution of the injunction on the evidence presented have undoubtedly strengthened the hands of the law-abiding leaders among the workingmen who put their confidence in conciliation, arbitration, and judicial proceedings rather than in strikes and boycotts. Under present laws a railway company has a right to fix wages and hours at its discretion, and a railway union has a right to quit work at its discretion. But both the companies and the unions owe it to the public to deal fairly with one another, and not force a prostration of the traffic on which the public depends. Unless they consent to do this voluntarily, the public sooner or later must assume the power to compel both parties to discharge their public duties.

❀

The Epidemic of Strikes

A few years ago "May day" used to give the signal for a general outbreak of strikes, but this year nearly every day in March and April has witnessed a large number of peremptory demands for better conditions on the part of wage-earners. If fewer men have quit work than in the old "May days," it is because the men's demands have so generally been conceded. The threatened strike on the New York, New Haven, and Hartford railroad system, which bade fair to paralyze traffic and interrupt industry in a great section of New England, has happily been averted by the wise decision of the directors to permit all grades of employees to be represented by a joint committee when conferring with the manag[illegible] each

grade to be represented by a different committee and thus making unity of action difficult. The management of the road made a hard fight against granting this concession, but the directors overruled the objection and accepted the principle that the employees had the same right as the stockholders to act as a unit through an organization embracing them all. In conference with the joint committee, the management granted material concessions in the matter of wages, and gave a ten and a half hour day to a large body of men who have heretofore worked eleven hours. The threatened strike on the Manhattan elevated railroad system of New York was averted by concessions still more liberal to the employees. The threatened strike on the Wabash was averted by an advance in wages amounting to twelve or fifteen per cent. Of the strikes in actual progress, the most important is that of employees of the American Bridge Company—now a constituent part of the United States Steel Company. Here, again, is a controversy as to whether the Company—a National organization—shall deal with the National officials of the bridge workers' union or only with its local committees. Upon this point public sentiment would be on the side of the National officers of the union were it not for their apparent disposition to extend the strike by urging sympathetic action on the part of local unions having no local grievances and desiring to remain at work. There is a growing feeling even in labor circles that this sympathetic warfare is being carried too far, and in Chicago important building trades have decided to discipline members who engage in sympathetic strikes not authorized by a two-thirds vote of the responsible organization. In Lowell, Massachusetts, nearly twenty thousand cotton-factory hands are on strike for a ten per cent. advance in wages. In the building trades there are minor strikes going on in nearly all important cities and in many unimportant ones. The New York "Herald" reports that nearly twenty thousand building-trades men are on strike in the suburban district stretching from New York City into Connecticut. At Mount Vernon, it says, the builders' association has decided "that if one contractor gives in to the strikers' demands, he will be blacklisted, so that he will be unable to buy building material." All of these strikes, while a cause of local adversity, are in the main an effect of general prosperity. It is only when business is active, prices high, and competent men nearly all employed, that the unions dare to strike so generally for higher wages and shorter hours. It would seem that they could more effectively strike for shorter hours when work is short, but at such times the unions are often unable to prevent a lengthening of the hours of the men who remain at work. As we go to press the cable despatches announce a strike in Holland covering practically all the transportation industries. This strike is inaugurated, not primarily for an advance in wages, but to prevent the adoption of laws proposed by the Conservative Ministry to prevent strikes upon the railroads. This legislation, the laboring people declare, would take away from them their right to quit work, without laying upon the railroads the obligation to grant them just terms. In Belgium there was a precedent for just such a strike in the united action by which the workingmen of the Kingdom in 1890 secured the adoption of universal suffrage. Whether the present strike will have anything like the success of its predecessor cannot yet be predicted, nor can we now state what measure of justification there is for the laborers' contention.

❀

Rights of Non-Union Labor

The New York "Times" publishes a speech made by Mr. Joseph S. Mundy, a builder of engines in Newark, to his employees, who have demanded a reduction of hours, an increased rate for overtime work, and an agreement by their employer to employ only members of the International Association of Machinists. We wish we could give the whole of this speech to our readers, for its admirable spirit is inadequately represented by an extract. In it Mr. Mundy says:

> We have always got along harmoniously together, and while you may not think it, I have been as much interested in your welfare as I know you have been in mine. In the first place, to come right to the point, a representative of a local labor body of machinists came to my office one day this week and presented an agreement which he asked me to sign. It stated that I should not employ any but union labor, and demanded that I dis-

charge all my non-union men. This I could not sign and never will sign as long as God gives me strength to work, even though I do all my own work. I will enter into no agreement with any organization which prevents honest labor from securing employment, or which takes the bread and butter out of your mouths. If every man has not the right to work without being forced to obey the mandates of an organization, then it is time for us to get out of business.

There is a good deal of complaint on behalf of employers against the despotism of trades-unions. Complaint never yet cured despotism. The only cure for despotism is courageous resistance. Whenever the employers as a body treat their employees in the spirit embodied in this speech of Mr. Mundy, whenever they will take a real interest in the welfare of their men, and give to the men a share in prosperity during prosperous times, and show themselves ready to treat with the men as man to man on all questions of time, wages, and conditions of labor, they will be in condition to stand, as Mr. Mundy has in this speech, for the right of the laborer to belong to the union or not belong to it as he pleases. And whenever they take this stand, having laid a foundation for it by the spirit of justice and fair dealing, and show themselves willing to suffer any ill consequences to themselves rather than to be a party to an act of injustice, they will destroy the despotism of trades-unions. Until they do, some trades-unions will continue to be despotic.

❀

The New York Mortgage Tax

Both branches of the New York Legislature have now adopted, by practically a party vote, Governor Odell's bill increasing excise taxes one-half, and thus adding about six million dollars yearly to the public revenue from this source. The two branches, however—or at least the Republican conferences thereof—have disagreed respecting Governor Odell's more important measure to tax real estate mortgages, and thus secure twelve million dollars yearly from a source which now yields practically nothing except in the rural counties. The Republican conferences in the Assembly, at the instance of the New York City organization, voted last week to abandon this tax and seek for some other means by which to avoid any levy for State expenses upon the local tax duplicates. The protest against the mortgage tax came chiefly from the great cities, where mortgages have nominally been taxable at the rate of about two per cent., but really have not been taxed at all. At the hearing last week two savings bank presidents protested strongly against the proposed four-mill tax—one on the ground that it would compel savings banks to reduce the rate of interest to depositors by half of one per cent., the other on the ground that it would compel them to advance the rate to borrowers by half of one per cent. As the proposed tax was less than half of one per cent., it is evident that both of these declarations were exaggerated. Curiously enough, another objection to the tax came from rural counties, whose revenues their officials declared would be reduced if the present occasional taxation of mortgages at the full rate gave place to the proposed systematic taxation of mortgages at about one-fifth of the full rate. In these rural counties the present law taxing both the mortgage and the property mortgaged at the full rate seems to be generally enforced. In such counties the proposed four-mill rate would be a relief to both the borrowers and the lenders upon mortgaged property; but in the cities it would be a relief only in the exceptional cases where the lender pays the tax legally due from him. The Outlook considers the proposed tax much better than the present system of burdening only the conscientious lender, and letting the unconscientious one go tax free; but it believes that all mortgages should be treated as a part interest in the estate mortgaged, and that this estate should be taxed no more than if it were unmortgaged. The tax upon it should be divided between mortgagor and mortgagee, according to their contract when the loan is made, as in Massachusetts, or according to the respective value of their interests, as in California. The latter method is, of course, the ideal one, as it compels each person to contribute directly in proportion to his property, and avoids even the appearance of injustice.

❀

Political Bandits in Philadelphia

In Philadelphia last week three members of a ward school board in the city, together with a man who acted as go-between, were convicted of extorting

money from teachers in return for promised positions in public schools. The evidence that was given before the court sustained the views expressed in the letter from a Philadelphia teacher printed in The Outlook for March 14, that corruption has entered the administration of the city schools to an almost incredible extent. Teachers testified that they had been made to understand that they could not be appointed unless they handed over money to politicians who controlled the ward school board. One teacher swore that out of a salary of $47 a month she had to pay $40 for three months for her election. In spite of this she did not receive the position, "because there were too many teachers elected." She was again elected, and still she had to pay, although she had received no salary for her "first duties." Within forty-eight hours before the exposure of school conditions was made in the newspapers she received $30 back. By no means all the corruption that exists was revealed; indeed, only so much as could be proved by the indiscretions of these convicted men, who apparently attempted to make money independently of the political machine that is the real corrupting power. The sort of men in control of the schools may be judged by the fact that a daughter of Dr. W. W. Keen, the world-famous surgeon, was compelled, after a specially admirable and self-sacrificing record, to retire as member of a ward school board, and on the eve of her retirement was forced to leave the room in which a meeting was being held, because of the offensive and profane language used, with the purpose of humiliating her, by the boss of the ward, who used autocratic power over the board, though not himself a member of it. The arrogance of the man may be judged by a statement of his which we quote from the Philadelphia "Public Ledger:"

> "Anyway," he said, "a woman must not come into the school board and expect to run things as it suits her. The men know as much about education as Miss Keen does. Nor because she is a woman the men should not be bossed by her. No, sir! I don't want such men on the board. I won't have it. . . . They cannot be run by a woman in this ward. I'll see to that." Mr. Myers was asked: "In your statement you use the word 'I.'" . . . Mr. Myers replied, "I mean 'we,' the administration, the machine, as it is called."

No form of political corruption is worse than that which profits by the defenselessness of underpaid women and the needs of children. This is the most despicable form of political corruption that has yet been exposed in American politics. The conviction of these four men who thus trade on their power over women and children ought to arouse, even in Philadelphia, an outpouring of wrath against the men and the system under whose control venal meanness of that sort can flourish, and should put an end to the system forever.

❀

Philadelphia Water-Works

Philadelphia leased her gas-works for thirty years under terms and conditions that scandalized the country. A few years ago her telephone and street railway franchises were granted to favored politicians in such a way as to arouse local indignation and universal surprise that such conduct could be tolerated for a single day in an American community. Now, it seems, we are likely to be treated to another and still more flagrant illustration of the prostitution of public franchises to corrupt corporate and political ends. It consists of nothing less than an attempt to dispose of the Philadelphia water-works to a private company. The first step has been taken by the introduction at Harrisburg of a bill authorizing municipalities to sell, lease, or "otherwise dispose" of their gas-works, water-works, or electric light plants. This bill contains a most remarkable provision to the effect that "for such periods, not exceeding fifty years, as such municipalities deem advantageous, . . . no other company, corporation, or association, person or persons, shall be permitted . . . to enter upon the streets of any such city, town, or borough to lay pipes, conduits, mains, or wires for the purpose of conducting any such business, the exclusive right to which has been vested in the purchasers of leases." This is a deliberate attempt to give to any lessees or purchasers an absolute monopoly, and is regarded as a necessary preliminary. The bill was introduced, "by request," by Representative Snyder, of Schuylkill County, who professes to know nothing about it. No one seems to know anything about it. At least no one avows any knowledge of it;

but none the less it is progressing step by step toward its enactment. Philadelphia is aroused and the newspapers are opposing the "snake." The Municipal League, which five years ago led the fight against the iniquitous Schuylkill Valley lease and materially aided in its overthrow, is taking an active part in opposition to the present effort, and has mapped out a vigorous plan of campaign. Mayor-elect John Weaver, who has just returned from a month's vacation abroad, declared himself immediately on landing to be unalterably opposed to allowing any private corporation to own or in any wise control the water-works. The country will watch with interest what Philadelphians will permit to be done with this, the last of their great municipal franchises.

❁

Restricted Suffrage on Trial

A North Carolina correspondent sends us a glowing account of the achievements of the recent Legislature—chosen by an almost exclusively white electorate. This Legislature, he writes, pigeonholed all proposals to divide the school fund between the two races according to the amount of taxes contributed by each, and continued the support previously given to two Colleges of Agriculture and Mechanics and two Normal Colleges—one college of each class for members of the negro race. It also enacted a progressive child labor law. It is upon the question of liquor legislation, however, that the most marked advances were recorded. The Legislature, in the first place, passed a bill forbidding the manufacture of liquor except in incorporated towns, thus outlawing the rural distilleries formerly so numerous in the mountain counties. It then extended the provision for local option in a way highly satisfactory to the temperance forces. At local option elections the new Act provides that three questions shall be voted upon: first, the manufacture of liquor; second, its sale in saloons; third, its sale in dispensaries. Upon the third question the temperance forces are divided, but they are completely united upon the first and the second. In Massachusetts license elections the saloon gets the votes of many persons who detest it, but think local prohibition impracticable. In North Carolina it will get the votes of those only who want social tippling-places established. Under the North Carolina Act, if liquor is sold at all in communities even moderately opposed to saloons, it must be by reason of the majority vote for dispensaries, and in these dispensaries liquor cannot be sold at night or be drunk upon the premises. At the local elections, our correspondent writes, the disfranchisement of the negro voters insures anti-saloon victories in many places which have heretofore voted for license. Even while the negroes voted, half the counties in North Carolina prohibited saloons. Of course the satisfactory record of this Legislature representing only one race does not prove that the disfranchisement of the negro will in the end result in the better political education of the whole people of the State or the broader humanity of its laws. The enfranchisement of the poorer classes in Europe has usually been followed by reactionary victories, and disfranchisement in like manner may be followed by liberal victories. "The ethical argument for a wide suffrage," as Professor Woodburn writes in his recent book on "Political Parties and Party Problems," "is that voting is involved in the right of self-government; that it promotes patriotism and leads to an interest in public affairs; that it tends to remove discontent and promote a feeling of partnership and responsibility; . . . that the suffrage is an enlightening and educational agency, and that only by active citizenship can the political virtues be developed." Nearly all the arguments against a restricted suffrage are based upon its ultimate influence, not upon its immediate effects. Nevertheless, the immediate effects of the restriction of the suffrage are to be considered, and the record of the recent Legislature in North Carolina seems to be highly creditable to the experiment of restricted suffrage now on trial.

❁

Macedonia and Albania

Last week was an exciting one in the Turkish provinces of Macedonia and Albania. In the former the promised reforms do not seem to have made much difference with the activity of the Bulgaro-Macedonian brigand bands. These have continued their work of intimidation, pillage, and murder, in order to force the

Turkish troops to act, presumably with their accustomed bestial barbarity, and so call for intervention by the Powers and a new Treaty of Berlin, to erect Macedonia into an autonomous province, as Bulgaria was in 1878. Several instances of Turkish ruthlessness occurred last week; in one case the Turkish regulars discovered a band of thirty insurgents under two Bulgarian officers in a Macedonian village, and, losing many of their own men in the fight which followed, took vengeance by razing every house in the village with artillery and massacring the inhabitants without distinction. The Macedonians are not content with force of arms; they have blown up the bridges of two Turkish railways, and cut the telegraph wires wherever possible. Thousands of men have now taken up arms against the Sultan. He could bear this with comparative equanimity, as far as Macedonia is concerned; but, unfortunately for his personal safety, Albania is now also in a condition of insurrection. The ancient Epirus, now known as Albania, bounds Macedonia to the west. Its population constitutes the bravest of the immediate subjects of Abdul Hamid; and hence the body-guard at his palace, the Yildiz Kiosk, in Constantinople, is composed of Albanian mountaineers, who are apt to sympathize with their brothers at home. Like all mountain peoples, the Albanians resent any sign of control or interference from the outside world, and will hardly continue so fanatically loyal to the Sultan if, forced by the Powers, he imposes reforms upon them which will deprive them of their military tyranny in Macedonia. Hence, last week several thousand of them demanded the surrender of the foreign gendarmes who had been enlisted at a town in northern Albania in accordance with the reform plans for the re-establishment of the Turkish gendarmerie. Unable to make a prolonged resistance, the Governor finally surrendered the foreigners, who were immediately maltreated and expelled. After this, the Albanians surrounded the neighboring town of Mitrovitza, demanding the removal of the recently appointed Russian Consul. Meeting with a refusal, they attacked the town, but were repulsed, with heavy loss, by the three thousand Turkish troops garrisoned there, though not until after long and stubborn fighting. The events of the week indicate that not only in Macedonia, but also in Albania, the Sultan's power will depend upon his ability sternly to put down revolt; otherwise there will be serious ground for intervention by the Powers.

❀

Agrarian and Industrial Ireland

Next in importance to the land question in Ireland is that of industries. Last week, in the House of Commons, Mr. Wyndham, Chief Secretary for Ireland, announced that Lord Iveagh, of Dublin, and Alderman Pirrie, of Belfast, have proposed a plan for the development of farming, trade, and industries through transportation as follows: Central depots would be established to which produce would be conveyed by an extensive system of collecting wagons, drawn by horses, until light railways are built or motor-car services established. The expense of this plan, amounting to several million dollars, is to be met by the two capitalists, whose object is not to make money, but to facilitate enterprise. Mr. Wyndham concluded: "Nothing so hopeful and businesslike has been done in Ireland since the days of its industrial prosperity at the end of the eighteenth century. Two captains of industry from Dublin and Belfast, recognizing Ireland as their country, will devote their wealth and business ability to assist Ireland without regard to political divisions. This is a matter of deep significance, and goes a long way to justify what the Government is attempting to do with public money." This plan may tend in some degree to restore Irish industries, which during the past half-century—the age of steam and coal—have suffered from the country's lack of mineral wealth.

❀

Educational and Political Ireland

With opportunity, unheard of hitherto, to develop agriculture and industries, there still remain questions which, more than anything else, reflect Irish national feeling—the questions of education and of local government. As to the first, Mr. Wyndham announced that a bill is to be introduced into Parliament to bestow upon Ireland, partly for education, nearly a million

dollars annually, or the equivalent of what England is now receiving under the Education Bill recently passed. This announcement will deepen the friendliness with which Irish Roman Catholics, representing a large majority of the population, regard the Balfour Cabinet—for the Premier has been outspoken in his plan for a Roman Catholic University for Ireland. As to local government, there was once a Parliament sitting at Dublin, and Gladstonians have urged that just such another could be established there. It does not seem to have occurred to them, however, that Grattan's Parliament represented both the loyalty and the property of Ireland; at the present time the Parliament desired by the Nationalists would be led mostly by men hating England and having little material stake in Ireland. The question is now being faced anew. Ireland owes its present enlarged system of local government, not to the Gladstonian Liberals, who have vainly tried to bring about Home Rule, but to the Liberal-Unionists and Conservatives, and it is to these that Ireland may owe a marked extension of its present local government, perhaps including the establishment of a Legislative Council in Dublin. As reported by the Dublin "Daily Chronicle," on the authority of a member of the Government, this body may consist of representatives of the Irish County Councils, who would be empowered to control gas and water works, railways and similar essentially local undertakings, and, finally, and most important of all, the police. The customs, post-office, and some other departments would remain under Imperial direction. With such a programme for Irish land, agriculture, industries, education, and local government, the leaders of the Conservative party in England are likely to give new illustration of the fact, already familiar in English history, that the Conservatives are ready to go further than the Liberals when bidding for popular favor begins.

❀

The Election in Japan

One of the Marquis Ito's favorite sayings, at least ten years old, was that Japan's constitutional clothes were too big for her, and that she must have time to grow into them. As a matter of fact, the Constitution of 1889 holds tremendous reserves of power to the Emperor and Government. While not absolutely forbidding, it does not explicitly allow, the principle of parliamentary mandate. The Ministers have always been responsible, not to the Diet, but to the Emperor. Nevertheless, in 1890, after twenty-two years of repression and postponed promises, the Representatives began immediate agitation for an extension of popular power, electoral, budgetary, and legislative. Parties, however, were formed around persons rather than based on principles, until 1902, when Ito, who had long resisted the idea of ministerial responsibility to the Diet, and apparently does so yet, formed the Seiyukai, or Association of the Friends of the Constitution. In the elections of last August his party won the day and had a preponderance in the Lower House. Uniting with their former political rivals, the Progressists under Okuma, they formed a united front (*Min-to*, the people's party) against the Government under Premier Katsura. When, in December, the budget was introduced calling for the enlargement of the navy (with the idea of coping with Russia on the sea, at least, and of withstanding her advance in Korea, Manchuria, and China) and the increase of land tax, the Lower House refused to lay further burdens on the farmers, and vehemently opposed other ministerial methods. Premier Katsura, knowing his power, being backed by the Throne and Upper House, refused to budge an inch. Instead of being a hereditary body, to be "mended or ended," as in England, the Japanese "House of Peers" is largely appointive by the Throne, or elected out of and by the nobility. Therefore its members believe that they creditably represent the nation equally with the elected Lower House. The intervention of the Emperor was called for, the House of Representatives dissolved, and "the country appealed to"—in form, at least. The elections held on March 1 seem only to have emphasized the old situation. Although at this writing the full details are not at hand, yet it is easy to see that the popular vote has again opposed the ministerial plans and that the united parties are supreme in the Lower House, in which 243 of the old members retain their seats, leaving but 132 new ones.

Of the total, 375, over 200 are Seiyu-kai, and over 100 Progressists, leaving the Imperialists less than a score in number and the Independents, Seceders, etc., not enough to influence the situation. The new Diet sits on May 1. Between the extremes of the resignation of the Cabinet and the dissolution of the Lower House is a possible compromise. The unexpected thing, in Japanese politics and the development of constitutional government in Asia, has been the self-assertion of the Upper House. As in Germany and Great Britain, the cry of "constitutional procedure" has been of late raised rather vehemently; so in Japan there are great searchings of heart and questions as to where the blame of "unconstitutionality" rests. Those who support the Government declare that the Cabinet and Upper House have acted in obedience to the country's best interests, and against what is merely parliamentary and popular "sentiment," and that down at the bottom the whole disturbance is "a sentimental squabble." The men of the "People's Party," however, insist that Japan must grow into the full measure of her rights, as expressed in the spirit rather than in the letter of the Constitution, and that these repeated defiances of the popular will by the Government, in invoking the aid of the Emperor by dissolving the House and thus thwarting the people's will, constitute a procedure which does nothing less than shake the stability of the throne. In any event, the parliamentary year of 1902–03 has been largely educative to the nation.

❀

The Japanese Language in China

Peking despatches announce that, owing to sudden hostility shown by the Chinese Government against employing Americans, Europeans, or even natives in carrying out the educational edicts, it has been decided to adopt the Japanese language at the Imperial University, located at the capital. The further announcement is made that only Japanese will be employed as instructors. These facts, involving a policy of financial economy, have excited criticism from foreign teachers and from those who have long endeavored to secure native translations of works on American and European science and government. The Japanese translations of these works are rude, and in any case the Japanese in China present foreign ideas in a somewhat deflected form. As has already been noted in The Outlook, imperial edicts were issued, after the close of the Boxer atrocities, for the establishment of schools and a university in each of the eighteen provinces. The difficulty was found to be, not that students were not ready, but that text-books and teachers were not. To supply these lacks the Government engaged months ago a large staff to translate Japanese text-books into Chinese, and now has engaged Japanese instructors. The Japanese written language is three-fourths Chinese. It may also be noted that the number of Japanese engaged by the Chinese in the army, navy, police force, and in the industries is comparatively large; this is, first, because the Japanese can communicate in writing through Chinese characters common to both countries, and, secondly, because the Japanese will work for a minimum wage. A more encouraging educational sign is the fact that, by the recent reduction of postal charges, foreign newspapers and books can be more widely circulated than before. The first definite step in the direction of modern education in China was taken at the instance of the "Society for the Diffusion of Christian and General Knowledge among the Chinese," by the sanctioning of a university in the province of Shansi, the Government agreeing to pay fifty thousand taels a year for its support. It was only after this that imperial edicts were issued for the establishment of schools and universities in each province. We hope that the pro-Japanese edict (which apparently applies only to the Peking University) will be supplanted before long by a more favorable provision; in any case, in the missionary schools and colleges everywhere in China there is need for a high-class teaching force. The Society, therefore, appeals to university men to enter upon a new sphere of service. China has few resources upon which to draw in order to supply the demand involved by the new awakening evident in the large numbers of students who have applied for instruction. She is almost wholly dependent upon foreign nations for the initiation and direction of scholastic institutions of every grade. Upon the men in American

European universities, therefore, lies responsibility of bearing a true white 's burden.

Dr. Cuthbert Hall Religious Conditions in India

The Rev. Charles Cuthbert Hall, D.D., President of Union ological Seminary, New York City, is spending a year in India as the kell-Barrows Lecturer, in a recent in- iew presents the latest observations of gious conditions in that country from standpoint of one who has enjoyed uliar opportunities for gaining exact owledge. For instance, Dr. Hall's infor- tion concerning any response to Chris- thought among Mohammedans was ained from the Muslims themselves; says that among many educated Mo- mmedans there is a deep longing for the vance of spiritual religion. This should me by the contact of the historic mono- eism of Islâm with the purest and best pes of Christian thought. As to Hindu- n, enthusiasts may be disappointed in r. Hall's judgment that, as an organized stem, it shows no weakening. "The parent tolerance which marks the pres- t time must not be mistaken for a cline of Hinduism. . . . It is true that student circles the study of the physical iences and the influences of Western ulture are undermining Hindu ortho- oxy. . . . But the student circle repre- ents only a small fraction of the Hindu opulation." On the other hand, the nfluence of Christianity grows from day o day; its converts multiply in a ratio hown by no other religion. To the ques- ion, "Have you found that educated Hindus and Mohammedans have been confused by the so-called 'Higher Criti- ism,'" Dr. Hall replied that he had met with no trace of this kind among educated Indians. "I have been asked many thoughtful questions concerning the prog- ress of the critical study of Holy Scripture, and I have been gratified to note the apparently widespread opinion that crit- ical study is not only a privilege but a duty." Regarding the relative value of Christian work, Dr. Hall said that, con- sidering the numerical proportion, he felt the efficiency of Christian effort among the educated classes to be relatively equal to its power over the illiterate. He was sure that the most encouraging of all aspects of Indian missions, however, were the boarding-school and help-for-famine- children features. As an institution for the development in Eastern society of a new type of manhood and womanhood the boarding-schools may be the salvation of Indian social life. Closely related with them is the wonderful opportunity given to missions in the army of famine children now enjoying protection and education in the mission compounds.

> These orphans, whose parents perished in the famine, have been rescued from starvation or from a survival that was worse than death by the Christlike work of missionaries. . . . They are true Indian children, living in ways suited to Indian life; they are not being transformed into poor imitations of children of the West. But they are Indian children unconsciously assimilating the best qualities of the Western spirit. Twenty years hence these tens of thousands of youths shall . . . become a tremendous element in the transformation of India.

Dr. Hall has traveled from one end of India to the other; he has visited missions in every Presidency, representing American and British efforts, and reports that his expectations have been more than realized, and that the result of his observations is an increased respect for missionaries and an increased admiration for their work.

The New President of the American Bible Society

Last week, at the Stated Meeting of the Board of Managers of the American Bible Society, the chair was taken by the new President, Dr. Daniel Coit Gilman, late President of the Johns Hopkins University, and now President of the Carnegie Institution. In expressing appreciation of his new privilege, Dr. Gilman referred to his intimacy with the Bible Society since childhood, especially during the last thirty years, the period of the secretaryship of his brother, the late Rev. Edward W. Gilman, D.D. The new President emphasized three points as prominent in his own thought: (1) The emphasis which is always being put by the Society upon the Authorized Version as the precious heirloom of English-speaking peoples; (2) the world-wide character of the Society's work; and (3) the union of Christian men and women in its service. We may add that the American Bibl been constantly

Of the total, 375, over 200 are Seiyu-kai, and over 100 Progressists, leaving the Imperialists less than a score in number and the Independents, Seceders, etc., not enough to influence the situation. The New President of the American Bible Society

Last week, at the Stated Meeting of the Board of Managers of the American Bible Society, the chair was taken by the new President, Dr. Daniel Coit Gilman, late President of the Johns Hopkins University, and now President of the Carnegie Institution. In expressing appreciation of his new privilege, Dr. Gilman referred to his intimacy with the Bible Society since childhood, especially during the last thirty years, the period of the secretaryship of his brother, the late Rev. Edward W. Gilman, D.D. The new President emphasized three points as prominent in his own thought: (1) The emphasis which is always being put by the Society upon the Authorized Version as the precious heirloom of English-speaking peoples; (2) the world-wide character of the Society's work; and (3) the union of Christian men and women in its service. We may add that the American Bible Society has been constantly

enlarging its field of usefulness, seizing especially the recent openings in China and in the Philippine Islands. In the first country the demand for the Scriptures is unprecedented, and hence we note with satisfaction the approaching completion by Bishop Schereschewsky of his arduous task of twelve years in translating the Scriptures into Wenli, a dialect read anywhere in the Empire. Furthermore, the Gospels have been revised in the Mandarin dalect. In the Philippines the importance of giving the Bible to the people in their native dialects is emphasized by the fact that ninety-five per cent. of the population cannot read Spanish. The Gospels and the Acts have now been translated into the Pampanga dialect, and translations are in progress into the dialects called Visayan de Iloilo and Visayan de Cebu. The total circulation for one year in the islands, according to the last report, was nearly fifty-three thousand volumes, a notable record in view of ecclesiastical opposition, the comparatively small number of men employed, and the great inconveniences and dangers of travel.

❀

Dr. Wayland's Retirement

The formal retirement of Dr. Francis Wayland from the position of Dean of Yale Law School marks the end of thirty years of service characterized throughout by profound personal interest, by incessant work to build up the school, and by ever-widening appreciation. Dr. Wayland became instructor in the Law School in 1871, was advanced to full professorship a year later, and in 1873 became Dean. No sooner had he accepted this position than he made a vigorous endeavor to enlarge the equipment and develop the resources of the Law School. He promptly raised the sum of $25,000 for the enlargement of the law library; the school was reorganized; courses of study were rearranged and largely increased; the faculty was enlarged to include a number of new instructors and lecturers; larger accommodations were secured for the school; and its place and rank in the judgment of the country at large greatly advanced. The establishment of a post-graduate course of two years, with a degree of Master of Laws and Doctor of Civil Law, was one feature of the new programme laid down by the Dean. Twelve years ago the Law School had again outgrown its accommodations. The Corporation of the University provided a piece of ground near the campus, and the law faculty set about raising the amount necessary for the erection of a suitable building. Into this work Dr. Wayland put an immense amount of time and energy, with the result of securing the dignified and extremely convenient building in which the Law School is now lodged. When Dr. Wayland became Dean, the school had about ten pupils and was practically without a faculty, without a library, without permanent quarters, and without endowment; it has now nearly three hundred students, a faculty of about forty professors, instructors, and lecturers, an excellent legal library, and it is admirably housed. The work has been well done; and Dr. Wayland will be followed in his retirement by the affection and grateful remembrance of a host of graduates and of a still larger company of friends.

❀

A State Farm for Women

At the request of the Women's Prison Association of New York City, an act to establish a State Farm for Women has been introduced into the New York Legislature. The object is to provide a reformatory to which women "repeaters" from any part of the State may be sentenced for from one to five years. Under our present absurd system, for minor offenses "repeaters" are sentenced over and over again for short terms, varying from ten days to a month. Such sentences serve none of the supposed purposes of punishment. They have no deterrent effect either on the person sentenced or on other persons of similar character. They serve, of course, no purpose of reformation. In most cases they tend rather to confirm in a life of vagrancy and often of vice, and in many cases they practically sentence to a life of vagrancy and crime young girls who, under a different treatment, might be recovered to a life of industry and virtue. The expense of this absurd system is one of the least of the objections to it, but it is an objection which the taxpayer might be expected to recognize. A statement issued by the Women's Prison Association estimates

that the arrest of over two thousand women (in Kings County alone), each of whom acknowledged from five to two hundred previous arrests, involved an expenditure to the State of $103,800. If the same women were arrested once, and sent to the proposed farm, the cost would be $26,148. The act provides for the appropriation of $100,000 to provide the proposed farm, which would give to the inmates healthful and out-of-door employment in dairy, farm, and garden work. The promoters of this movement expect, though possibly in this they are a little optimistic, that the farm will be practically self-supporting. Certainly the expense to the taxpayers would be very much less than the present futile and extravagant method. In this beginning of the twentieth century no punitive system should be allowed which has not for its definite purpose well-considered plans for the reformation of the offender.

❀

A Jewish Sunday-School

A recent visit to the Sunday-school, or, as it is called, the "School for Religious Instruction," of the children of Temple Emanu-El in Fifth Avenue, New York, found the two things which the Religious Educational Association recently formed at Chicago designs to promote in the churches; viz., a high ideal of religious education, and, pursuant thereto, a thoroughly organized system of instruction. The ideal being to ground and train every Jewish child in the faith and doctrine of the Old Testament, the school is organized in six grades above the kindergarten department. An annex to it is an optional class in Hebrew on Saturday mornings. The lowest grade begins with children of nine years, and the highest grade is followed by the confirmation class for pupils in their fifteenth year. The six years' course is as follows: 1. The Patriarchs; 2. The Making of the Nation; 3. The Making of the Kingdom; 4. The Purification of the Nation; 5. The Dispersion; 6. The Middle Age and Modern Judaism. The topics of instruction in each year's course are in three lines—historical, religious, and ethical, except in the two highest grades, where literary topics take the place of ethical. The work is done in twelve class-rooms, for boys and girls apart. In these rooms, fitted up like those of a public school, an hour and a half is given to the lesson, after which all repair to the assembly-room for the closing exercises, occupying half an hour. An interesting part of these, besides devotional services for which there is a special manual, is the "Bright Side," or charitable service. It is announced that some poor child is in need; the name and the need are specified on a card. Some pupil volunteers to supply the need, and comes forward to take the card, which will be returned on a later day with an indorsement stating that the need has been supplied. A number of these cards are taken every Sunday, no names being mentioned. After the two hours spent in the school comes the morning service in the Temple for an hour and more, and some of the children attend this also. The twelve gentlemen and ladies serving as teachers are all college graduates, some with post-graduate degrees, and receive salaries varying from $100 to $300 a year; this with a view to secure regular service and responsibility to the School Committee of ten. The Principal, as overseer of their work, is also salaried, and the minister holds charge as Superintendent. Teachers' conferences are held fortnightly, at which papers relating to the work are presented and discussed. A post-graduate class completes the organization, and is served by eminent scholars, Jewish and Christian, in lectures upon Biblical subjects. The observable points of contrast with the church Sunday-school are (1) longer time, (2) larger expense, (3) more thorough work. Medals are awarded to the two pupils who pass the best written competitive examinations at the end of the school year. The church may learn something from the synagogue in the religious training of children. It would often be better to spend on the Sunday-school a part of what is spent on the choir. It would also be better for the Christian to imitate the Jew in teaching the post-Biblical as well as the Biblical history of his religion. A point of supreme importance, the connection of the home with the instruction given in the school, receives large emphasis in the year-book of the school, which supplies, with other helps, forms for children to use

Rainsford's orthodoxy. What authority they possess to substitute any other standard than that which is accepted by the priest in the service by which he is consecrated to his office, we do not know. To one not assuming to be an expert in the Episcopal canon law, this standard would appear to be simply the Holy Scriptures—whose infallibility and inerrancy are not affirmed—and especially and pre-eminently the "Doctrine and Sacraments and the Discipline of Christ as the Lord hath commanded and as this Church hath received the same." Perhaps Dr. Rainsford's critics may consider that "as this Church hath received the same" qualifies and determines the preceding words, "As the Lord hath commanded." We should ourselves give to the words a different meaning, and understand that it is the commands of Christ, not the traditions of the Church, that the priest accepts as alone binding on his conscience. Perhaps these clergymen think their statement is an adequate and unquestionable summary of those doctrines and that discipline. It reads as follows:

> We the undersigned, members of both the great historical schools of the Church, do solemnly declare, as in duty bound, that the great doctrines of the Gospel and of the Creed—namely, the Conception of our Lord Jesus Christ by the Holy Ghost and his birth of the Virgin Mary; the fall of man into sin and under the dominion of death; the redemption by our Lord Jesus Christ, who made upon the cross a full, perfect, and sufficient sacrifice, oblation, and satisfaction for the sins of the whole world, without which we should be helpless; and who became thereby and by his intercession for us in heaven a Priest forever, our only Advocate with the Father, and the propitiation for our sins, the One Mediator between God and man—are the very truths of God. And further, so far from considering that the Bible is misleading and full of errors, we believe the Holy Scriptures of the Old and New Testaments to be the Word of God.

If this statement is intended to be taken as a comprehensive and adequate embodiment of Christian doctrine—and this would appear upon its face to be its significance—it seems to us as defective for essentials which it lacks as for non-essentials which it contains. It says nothing about the Sacraments, nothing about the Church, nothing about the life of Christ, on which is founded his one command, "Follow me," nothing about his teaching, which he declared to be spirit and life, nothing about his resurrection, on which historically the Church is founded. On the other hand, it treats as among the essentials his miraculous birth, to which he never referred and which is never referred to in the Book of Acts or in the Epistles; the fall of man, which is never referred to by Christ and is referred to by Paul only incidentally and parenthetically; certain theological phrases such as "oblation" and "satisfaction," which do not appear in the New Testament at all; and, finally, it avers the Scriptures to be, what the Scriptures never declare themselves to be, "the Word of God," a phrase which the Bible reserves to designate the Christ himself. We do not know the history of this extraordinary modern syllabus of doctrine; but we suspect that some Episcopal clergyman sketched it off at a sitting to express the faith of the Church, much as Congregational clergymen are accustomed to sketch at a sitting a liturgy to be the expression of its worship—and with results in nowise superior.

The address of Dr. Rainsford which gave rise to this extraordinary extemporaneous standard of Christian doctrine was not reported in full. The clergy who have signed the criticism of their brother minister have done so on the strength of a newspaper report which they have done nothing to verify. They have shown as childlike and innocent a faith in an unknown reporter as they have a celerity to suspect an honored brother clergyman. Neither the notorious inexactitude of newspaper reports of religious addresses, nor the eminent Christian character and service of Dr. Rainsford, count for anything with his eager accusers.

To the council of the primitive Church at Jerusalem the fruits of Paul's ministry were sufficient evidence that his ministry was approved of God; to the modern heresy-hunter the fruits of a Christian minister signify nothing. For twenty years Dr. Rainsford has been preaching the Gospel in this city, with a fruitage which it is given to very few ministers of Christ in any Church to enjoy. Measured by this very modern creed he may be a heretic; we do not know. But of his candor and courage no one who knows him

has ever entertained a doubt, and we venture to say, from personal and somewhat intimate acquaintance with him, that, whatever he may think of the new creed so extemporaneously framed and so suddenly issued by this self-constituted council, there is no article in the accepted creeds of the Episcopal Church that he does not heartily and sincerely accept, and that the mediatorial work of Christ, which some of his critics have said he denies, is at once the foundation and the inspiration of his ministry.

❀

Prohibition or Temperance—Which?

Our paragraph congratulating the State of Vermont on its action in abolishing prohibition has brought us a number of letters, some of indorsement, some of protest. We give a considerable space to these letters, especially to those of protest. We have also asked Mr. Stewart, one of the ablest representatives of the prohibition movement, to give to our readers the argument in favor of prohibition, which he does in this issue of The Outlook. We here attempt no reply to that argument, or to the protestants whose letters we publish. We simply restate our own position, that our readers may understand the issue as it is presented by advocate and opponent. We may, however, add that neither Mr. Stewart's article nor the letters of the protestants have changed our opinion. We hope that the day is not far distant when Maine, Kansas, and North Dakota will follow the example of Vermont and New Hampshire and abandon the prohibition policy.

There is no question between the prohibitionist and the anti-prohibitionist as to the evils of intemperance. It is hardly possible to overstate them. The question is, How can they best be counteracted? Mohammed believed that the best way to counteract them was by prohibiting to his followers all use of wine. Prohibition is one of the cardinal laws of Mohammedanism; total abstinence is not only commended as a virtue, but commanded as a duty. Christ pursued a different method. He condemned drunkenness, but he did not forbid the use of wine. On the contrary, he drank it himself, made it on one occasion by a miracle, and commended it to his followers in the sacred Supper by which he asked them to commemorate him after he had died. This could not have been because he was indifferent to the evils of intemperance. It was because he thought there was a better way to counteract those evils than the way of prohibition.

That better way is the development of the whole man; such a development that the man will bring all his appetites, passions, and powers under the control of his higher nature. It is by imparting to the individual the power of self-control—of the appetite but no less of the temper, of the palate but no less of the tongue. It is by teaching the individual to see that the body is made to be the servant of the spirit, and by endowing the spirit with such power as will keep the body in subjection. Mohammedanism seeks to keep man innocent by shutting him off from temptation; Christianity seeks to make man virtuous by inspiring in him power to overcome temptation. Prohibition does not prohibit very well in Turkey, but it is probably more effectual in Constantinople than in Portland; it is certainly more effectual than in Bangor. And yet, after centuries of prohibition, required by religion and enforced by law, the Turk is more sensual than the Christian. There are more liquor-shops in London and Paris than in Constantinople, but Constantinople is a far more animal city than either London or Paris. The Outlook believes in the Christian method of dealing with intemperance; it does not believe in the Mohammedan method.

Mr. Stewart asks, Why not prohibit the sale of liquor as we prohibit stealing? The answer is that all stealing is a crime, and all sale of liquor is not a crime. Stealing violates the right of property, and that is one of those primary rights which government is instituted to protect. Selling wine or beer to a man who wishes to purchase wine or beer does not violate a primary right which government is instituted to protect. It is a right of the citizen not to have his property taken from him by violence or fraud; it is not his right not to have a bottle of wine or beer offered to him if he wishes it. We

do not doubt the right of the community to regulate and restrict the liquor traffic. It has the right to regulate and restrict any traffic that is extra-hazardous to the community; and the liquor traffic is extra-hazardous. There is the same justification for putting restraint upon the sale of liquor that there is for putting restraint upon the sale of gunpowder, dynamite, and the more deadly poisons. We do not doubt that the community has a personal character and a quasi-personal will of its own, and that it has a right, in the exercise of that will, to decide that it will have no open saloons. But the local community, the one which the saloon is by some supposed to benefit and by others supposed to injure, is the community to exercise this right of decision. The saloon in New York City neither benefits nor injures, except very indirectly, the people of Buffalo; therefore the people of Buffalo are not to decide whether the people of New York City shall have saloons.

It may not be altogether easy to define with exactitude what are the boundaries of a local community. But it is easy to state the principle, and it is a principle not impossible to apply. State prohibition is the act of one community imposing its will on another community. It cannot be enforced, because it ought not to be enforced. Local option is the act of the community in the exercise of its own will. It is a corporate act of self-control. Where there is a will there is a way; but when a law prohibiting the sale of liquor in the cities is carried by the votes of the rural districts, there is no will in the cities against the saloon, and therefore there is no way to close them. If we had the influence, we would persuade all men to remain out of the saloons; but if we had the power, we would not compel any man to remain out; just as we would persuade all men to go to church, but would not compel any. So, if we had the influence, we would persuade every local community to close its saloons; but, if we had the power, we would not close the saloons in any community against its will. The intelligent reader hardly needs to be told that we speak of sane men of mature age and in normal communities. We affirm the right and duty of teachers, in many cases, to prohibit wine and cigars to their pupils, and to require the attendance of their pupils on church services.

He who is inclined to believe in prohibition may reasonably ask us what alternative remedy we have to propose. Our answer shall not be wanting. The liquor traffic imposes heavy financial burdens on the community. We would, by a tax, transfer as much of these burdens as possible from the community which now bears them to the liquor traffic which produces them. This is the basis of the demand for high license. It is not a contrivance for making the community share the profits of the liquor traffic; it is a contrivance for making the liquor traffic share the losses which it inflicts on the community. We would give to every township, and in the larger cities to every election district, a right to vote on the question, Saloon or no saloon. In some States, perhaps eventually in all, we would have the State assume the exclusive right to manufacture and sell liquor, and so take away the incentive of private profit to push the sale. We would prohibit the Sunday sale in some communities and restrict it in others.

But we place no great reliance on these or any other legal restrictions. The most that law can do is to make vice difficult and virtue easy. Vice must be overcome and virtue promoted by other means. We would depend less upon force and more upon persuasion, less upon law and more upon influence, less upon restrictions and prohibitions of the traffic and more upon the moral and spiritual development of the community. We would rather make one man temperate by influence than ten men total abstainers by compulsion; we would rather develop in one man the power of self-control than control a dozen who could not or would not control themselves. It is to the moral and spiritual development of the individual that the temperance progress made during the nineteenth century is chiefly due. The progress is far more a result of changes in men than of changes in legislation. No man who reads Lecky's account of the drunkenness which prevailed in England in the eighteenth century, or the incidental pictures of the social habits of New England in the same century afforded by American biography, can doubt that such progress has been made. Drinking is more common in

America than it was half a century ago, but drunkenness is less common. Our ultimate remedy for the evils of intemperance, then, is making temperate men. And men are temperate, not when either their food or their drink is regulated for them by law, but when they have acquired the intelligence and the power to regulate both for themselves.

❀

Settlement Work

The valuable statistics recently presented at Albany throwing light on proposed child labor legislation in New York State were the fruits of Settlement work in the metropolis. Neighborhood workers in all parts of the city collected information concerning child labor in factories, stores, homes, and on the streets. In the neighborhood ministered to by the University Settlement, the Nurses' Settlement, the College Settlement, and the Educational Alliance, the blocks are packed with Italians, Russians, Rumanians, and Hungarians, and child labor is found both in the sweat-shops indoors and in the occupations of boot-blacking and selling papers out-of-doors. This district has long been known as the most picturesque and pathetic of all the congested quarters; but the city offers other quarters where thorough settlement work has long been a necessity. Gordon House on Eighth Avenue, and the Union Settlement in East One Hundred and Fourth Street, also minister to populations large, crowded, poor, needy, and ill supplied with educational and remedial agencies. The Union Settlement, for instance, furnishes, with one exception, the only kindergarten in an Assembly District with sixty thousand people; and the library of the Union Settlement is the only free library in a district far larger. The library at the University Settlement is now so influential an institution that its circulation amounts to 75,000 books per year; while its public baths minister to nearly eight hundred people on the warmest days. The East Side branch of the Provident Loan Society, located at the University Settlement, has become so successful that over sixty thousand pledges have been left with it in a single year.

These are but a few instances showing the need for help and the avidity with which it is welcomed. By increasing their size many of the settlements have also increased their ability to work and the range of their influence. Concentration and resultant economies are evident. At the same time there has arisen in the minds of some observers a feeling that the aims of the founders of settlement work were not being realized by so much combination and enlargement; that the personal, intimate, family influence was, to a certain extent, being lost in the institutional idea.

The head worker of the Union Settlement, to which reference has already been made, thus began his labors:

> Our first duty seemed to be to get acquainted with our neighborhood and our neighbors. We began with the janitor's family and one or two other families in No. 202 and the children of the block. . . . As we went about we made friends with the groups of boys playing ball, often taking part with them. The children called each of us "the doctor." After a short time one of the fathers of the children called to see the "doctor," of whom he had heard, to ask him to become chairman of the local branch of the City Vigilance League, which was languishing for lack of a head. Thus the men's work was started, the League being merged into the Club. In this simple, unpretentious way the work began. The head worker and his associate had no preconceived scheme of social reorganization to impose upon their neighbors. It was their desire merely to live their lives as good neighbors, and to let the needs and opportunities determine the lines of effort.

This may be accomplished, however, by the large settlement also. As Mr. Robert Woods, head worker at the South End House, Boston, justly says, the question is not as to whether settlements shall grow large or not, but as to *how* they shall grow large. His own institution has as much of a force and as large a plant as the New York University Settlement; but it is decentralized: in this way, many think, a neighborhood may be more thoroughly leavened, since, first, different social grades are reached from different points of attack, and, secondly, the neighborhood itself in its inherent interests is made a social unit and not the artificial congeries of interests which are developed, ready-made, by the settlement. Mr. Woods has striven to give the institutional growth of his work the form of public institutions; meanwhile, the resident houses remain in their simplicity,

One of these public institutions, for instance, is the protected "South Bay Union," a neighborhood town hall. The building forms a quadrangle, and incloses a garden plot which in the hot days and close evenings of summer makes a quiet bit of greenery in the city wilderness. The building itself is for men's workshops, reading and club rooms, women's noonday rest and coffee rooms, and children's industrial schools and kindergartens, besides the hall proper.

In New York and Chicago, however, there are greater alternating stretches of dismalness than in Boston, and it seems necessary in those cities for settlements to grow large, yet even in New York the Boys' Club in Avenue A, which now numbers over six thousand members and has an average nightly attendance of one thousand, shows by its own success the necessity for the personal, intimate relation which has always existed between the workers and the boys. Mr. Tabor, the Superintendent, knows each regular member by his first name, and devotes his whole time to personal relations with them, playing football and baseball and enjoying track athletics with them, attending to their many indoor clubs, and to the employment bureau. The membership and attendance show what may be obtained by constant, actual work, which does not include the collection of statistics, the writing of pamphlets, and the attending of conferences.

But these latter activities are also necessary. Dr. Blaustein, Superintendent of the Jewish "Educational Alliance," thinks, as do most experienced critics, that the work of large settlements depends upon the kind and number of workers. If the administrative work is attended to by a special staff, the social workers may then personally be in touch with the people of the settlement, even if the latter come in large numbers. In many neighborhoods of a congested city quarter the great need is one large neighborhood enterprise, to which people of various races, creeds, and language shall come, overstepping the divisions which ordinarily keep them apart. "Smaller neighborhoods cannot be compared in this respect with large ones," says Miss Jane Addams, of Hull House, Chicago. "The need of the latter seems to be for a group of university men to reproduce in the slums, not so much the individual home of neighborly relation as a relation expressed from a center, in which men are held together by devotion to the impersonal, the uncommercial, the historical, and the large in life." These latter appear in the buildings of some settlements as well as in their activities. A tenement-house community is, according to Miss Addams, apt to put too much stress upon the personal, the petty, the little differences between different men—as, indeed, we all do. The settlement is an attempt to select the permanent and the typical out of the confusion of the accidental, and, of course, some of this work is best done in the large. While any institutional spirit of dryness and indifference is deprecated by all true workers, it may be found in the individual or a small group as easily as in a large one. The experience of Miss Addams leads her to think that "the larger group living together may more easily be kept generous-hearted and open-minded by the very give-and-take among themselves as well as between them and their neighbors." This is also the opinion of Mr. Robert Hunter, head worker of the University Settlement Society, New York City. Writing to The Outlook on this subject, he says: "Every American influence, good or bad—the saloon and school, the gutter and the art gallery, the Bowery dime museum and the opera—interferes with the ideal of the family—that is, in considering the families of immigrants in a congested community. But the settlement is an institution to which fathers, mothers, and children go. The parents come to see their children at play, to see them at their dances, to meet with their children's friends socially." Mr. Hunter adds: "So far as I know, the settlement is the only social movement which endeavors to keep alive a family-loyalty in the heart of the child."

In this growing work there is need, we think, both for the personal, family, house-to house endeavor and for the large, concentrated, institutional endeavor. Small families must live in neglected districts to do in a neighborly way what cannot be done in a larger way; but the small settlement cannot meet the entire need in tenement districts where multitudes of people have homes in which every room is a bedroom.

The large settlement building becomes the parlor, play-room, study-room, music-room of the neighborhood. It supplements the home. In the rich districts of a great city there is a parlor, music-room, nursery, for each individual family; the large settlement makes just this adjunct to the home for the whole neighborhood, supplying it as the small settlements cannot do.

The fundamental lesson for every one, after all, is that, whether in the family or the institutional endeavor, men and women ought to try to do what they can to *live with* the poor, as well as work for them. Only by combined living and working can there come a true and adequate sense of the rights and claims of others, a realization of what democracy should mean.

The Impressions of a Careless Traveler

XIV.

May 28.

WE arrived at Florence Monday afternoon. Yesterday and today I have spent in the Pitti and Uffizi Galleries, which are really one gallery—at least one can pass from one to the other through a long, covered passageway across the Arno, one gallery being on one bank, the other on the other bank. I have brought away with me only a confused mass of impressions which it is impossible for me to analyze or disentangle. I could not see the pictures for their multitude. Florence is to me more confusing than Rome; perhaps because the interest of Rome is historical and I have studied history, and the interest of Florence is artistic and I have not studied art. I suppose if each picture were hung in a single line there would be, literally, something like a score of miles of them; hung as they are, close together and one row above another, there must be several miles. I wandered through a part of the rooms stopping to look at special pictures which for any reason impressed me; but each picture has expelled its predecessor from my mind or overlaid it, producing a confused impression like that of two photographs on the same film. Then I must confess to myself—I should hardly dare to confess it to any one else—that the uniformity of the themes treated by the various artists wearied me. There was a continual succession of Gospel scenes—the Nativity, the Madonna and Child, the Holy Family, Gethsemane, the Crucifixion, the Descent from the Cross, over and over again. To B—— they were Giottos and Bellinis and Titians and Raphaels; each was noteworthy principally, not as the interpretation of a theme, but as the interpretation of the master. So she saw infinite variety of treatment, while I was oppressed with the monotony of the subjects. I longed for a simple landscape by Corot, or a soldier by Meissonier, or a group of cattle by Rosa Bonheur, or a dog by Landseer, or even a moralizing picture by Hogarth, or a parabolic one by Watts. If I were to hear the Messiah Monday night, and Mozart's Twelfth Mass Tuesday night, and Haydn's Creation Wednesday night, and Bach's Passion Music Thursday night, and Palestrina's—what did Palestrina write?—Friday night, by Saturday night I am sure I should want a comic chorus from Sullivan or a waltz from Strauss. If one is a fairly quick observer and a moderately rapid walker, he can see the Uffizi and Pitti Galleries in two days; but unless he is an artist he cannot see the pictures in either gallery, or, indeed, scarcely any of them, in two days; for that he ought to have at least two weeks.

May 29.

I have had a long talk with an art critic whom I have met at our pension. I could not in the least give her my point of view—that of a mere casual spectator of pictures who is ignorant of art—and I am not sure that I got hers; but at least I classified my own ideas in the endeavor to give them to her. They were foggy before; I will try to fasten them here while they remain clearly defined.

Art appears to me to be one method of giving outward expression to an inward life; philosophy is another method; liter-

ature a third; music a fourth, and so on. The expert is always interested in the manner in which that life is expressed. If he is a musician, he knows the motifs in the opera, recognizes the fugue in the oratorio, delights in the interweaving of the melodies in the canon; if he is a littérateur, he discerns the structure of the novel, perceives the artistic development of the oration, delights in the rhythmical pulse-beats of the poem; if he is a logician, the process by which the philosopher reaches the conclusion interests him, and he rejoices in the strength of the links in the argument as an iron-worker might in those of a chain; if he is an artist, what impresses him is the composition, the tone, the color harmony, and these are equally a delight to him whether the picture is a landscape, or a portrait, or a crucifixion. But the non-expert does not see, or cares little, for these elements; what interests him is the life expressed, not the method of the expression.

The other day in Rome B—— and I were standing before Titian's "Sacred and Profane Love." Presently a friend came up and began to explain its parabolic meaning, and I was very glad to get the explanation and to learn that the picture was misnamed, that it should rather be called "Juvenile and Mature Love;" but B—— moved away. For this meaning of the picture, in which I was chiefly interested, she did not care, and explanation was an intrusion and a disturbance in her enjoyment of the purely artistic qualities of the painting. No doubt the logic of the philosopher, the rhetoric of the writer, the harmonic skill of the composer, the color skill of the painter, are necessary to produce the effect on the inexpert mind, but they are not what the inexpert mind sees. There are two Madonnas in the Pitti Gallery by Raphael—the Granduca Madonna and the Madonna of the Chair. The former appealed most strongly to B——, the latter to me. I could see, after B—— pointed it out to me, that the colors were not so harmoniously blended in the Madonna of the Chair as in other pictures in the same gallery—the Magdalen of Titian, for example; but five minutes were all I wanted before the Magdalen, while I came back again and again to the Madonna of the Chair; because, as I stood before this picture, the purity of the mother's face and her protecting arm, and the trusting repose of the child encircled by it, inspired in me a reverence for motherhood such as no philosopher could have inspired by his argument, nor novelist by his story, nor preacher by his sermon, nor even musician and poet combined by their song.

This quality in a picture is what I believe the art critics call "feeling." I think most of us who are not art critics judge pictures by their "feeling." To both the picture brings a message; but the messages are different: to the art critic it speaks of beauty in form and color; to the layman, through beauty of form and color it speaks of something else. If its only message is beauty in form and color it does not speak to him at all.

May 2.

The Italians have queer ways of celebrating their religious festivals. To-day is *Corpus Christi*, a day which emphasizes the adoration of the body of Christ in the consecrated host. It was celebrated last night by a fine display of fireworks from one of the bridges over the Arno. To-day the celebration was continued by a spectacular representation, in one of the public squares of the city, of the ancient chariot races. The chariots were made in the similitude of the Roman chariots, with one important variation—they were four-wheeled—so that practically all danger of an overset was eliminated. They raced three abreast, and the horses were put on the dead run. The sight was interesting and theatrically exciting, but not so exciting as similar chariot races that I have seen in Barnum's show. Barnum engaged in celebrating *Corpus Christi:* to a New England Congregationalist this seemed a trifle incongruous. It was, however, a great occasion and very popular. Seats were erected all around the square, and the scene was witnessed by thousands of spectators. The arrangements as to tickets and seats were admirable.

June 2.

To-morrow we go to Venice. I have not kept up this diary—why? Perhaps because we have been in a pension and it has involved some social duties—or should I call them pleasures?—I will say pleasurable duty. Perhaps because I had few distinct impressions to record. Perhaps I have been too busy in sightseeing and

too wearied by it to write down my reflections, or even to reflect at all. I have written nothing concerning San Marco, with its frescoes by Fra Angelico, and its cell of Savonarola; nothing of the Duomo and the deservedly famous Baptistry Gates; nothing of the Piazza Signoria, where Savonarola was burnt; nothing of our drive up on to one of the hills adjoining Florence, and of the wonderful view from its top; nothing of our visit to Pisa, and the beauty as well as the strangeness of its Leaning Tower—its strangeness I expected, but its beauty was a surprise to me; nothing of the extraordinary frescoes on the wall of Pisa's Campo Santo—especially that grotesquely materialistic one of the "Last Judgment." It was interesting to note that even in that olden time the artist depicted a priest or two as sent down to be burnt by theatrical-looking demons in hell. Florence even more than Rome needs time. One must be "in residence" to get its educational effects. It is one of the most interesting of cities to visit; it is one of the least satisfactory to "do."

June 3.

We have stopped at Bologna for the night on our road to Venice, and have gotten into the most interesting hotel I have yet seen. The dinner is served in an open courtyard around which the hotel—an old palace, I believe—is built. To-night while we were eating our dinner we were rather startled by seeing a coach and pair drive into our dining-room and a gentleman alight; he had come to the hotel to dine. It is this sort of thing which makes foreign travel always interesting; though I might not like such an interruption as a regular feature of the dinner hour. To-morrow we shall have an hour to drive about the city before taking the train for Venice.

June 4.

Venice! It did not seem so strange to get into a gondola with our baggage piled up in front and be rowed to our hotel from the railroad station, as it did to meet what I might call drays and carts of all descriptions on the water; for example, a boat labeled "American Express Company" and loaded with express packages of all sorts. This is, not, then, a dream city; it is a real one, where modern business is actually carried on. When we reached the Hotel de Rome, we were all made righteously indignant. I had written that week to ask if the hotel could give us rooms on the Grand Canal; had received reply that it could; and had written by return mail engaging them. When I got to the hotel and got my party in the hall and my baggage on the piazza and my gondolier was paid and dismissed, the manager, with smiling face, remarked that he could not give me rooms on the Canal, but could give me rooms just as good facing on the garden. "You wrote me," I said, "that you could give me rooms on the Canal." "What would you have me do?" he replied, with a deprecatory gesture; "would you have me turn my guests out of their rooms?" "I would have you not write me that you can give me what you cannot give me," was my rejoinder. I was glad to find that the ladies preferred to submit to inconvenience rather than to imposition. I left the Matron and the baggage on the hotel piazza and jumped into another gondola to search for another hotel. Fortunately, we found very satisfactory accommodations next door at the Hotel de Milan, all the more satisfactory for us because some dear friends of ours were also stopping there. I have since seen some acquaintances of ours who were at the Hotel de Rome who were treated in much the same fashion as ourselves, but remained and submitted rather than take the trouble to hunt up rooms elsewhere. I suppose that as long as travelers submit to be thus imposed upon there will continue to be hotel managers who will impose upon them. We have certainly fallen on our feet in coming to the Hotel de Milan. It is small, but very well managed. Our rooms look out on the Grand Canal, and all its ceaseless life is continuously before our eyes; our friends have rooms just above us; there is a pretty little garden about which the hotel is built; the food is excellent; we five have a table to ourselves in the dining-room, and a practical monopoly of a terrace or piazza, with the garden on one side and the Grand Canal on the other, where our after-dinner coffee is served, for no one else seems to have discovered it. I am not going to be a student as at Rome, nor a sightseer as at Florence; I revert to my original attitude of a Careless Traveler, and consecrate my days in Venice to idleness.

L. A.

Why Prohibitionists Are Undiscouraged

By Oliver W. Stewart

The following article by Mr. Oliver W. Stewart, Chairman of the National Committee of the Prohibition Party, presents in striking form the reason why two hundred thousand conscientious men go to the polls year after year to vote for the prohibition of the liquor traffic, ignoring all the immediate issues to be decided by the pending elections. Mr. Stewart has a personal record in politics that is quite unusual. Despite his official position in the Prohibition party, and despite the rather marked anti-prohibition tendencies of the city of Chicago, Mr. Stewart was recently elected to the Illinois Legislature from his own city, upon an independent ticket. The force of character which won the confidence of the voters in his own district has distinguished his management of the executive affairs of his party. He knows what he wants, and is not to be discouraged in his efforts to get it. In this article in The Outlook he puts strongly the argument that the failure of State prohibitory laws in most of the cities of Maine and Vermont and some of those of North Dakota and Kansas does not prove that National prohibition is unenforceable, because, he says, all of these prohibition States have been able completely to suppress the manufacture of liquor, and illegal saloons in them have obtained their supplies by importing liquor from other States and other countries. If the National Government, he urges, should prohibit the manufacture and importation of liquor, and if it were under the control of a party as devoted to the suppression of the liquor traffic as the Republican party was to the suppression of slavery, the difficulties of enforcement would disappear. We hardly need to say that this sort of suppression seems to us both impracticable and undesirable. That there is, however, a larger number in favor of this position than the dwellers in our large cities commonly suppose is indicated by the recent vote in Canada in favor of the complete suppression of the liquor traffic, and was shown also by the closeness of the recent election in Vermont which resulted in the overthrow of the prohibitory system. In view of this situation it seems a pity that there should not be adopted some means of registering public sentiment upon the restriction or prohibition of the liquor traffic at our yearly elections without requiring those who believe as Mr. Stewart does to throw away their vote upon all immediate problems in order to register their devotion to a National policy that has no visible chance of success. Such means is available in the political device known as direct legislation. This would allow prohibitionists to remain loyal to their ideals by registering their choice in favor of prohibitory measures, and at the same time would liberate their votes for other political principles. Radical temperance men might therefore well favor the union of all temperance forces in behalf of the principle of direct legislation. The Outlook makes this suggestion, although it dissents from the prohibitory programme and believes that the best legislation in behalf of temperance is coming, and will continue to come, through the increasing adoption of the principle of local option.—THE EDITORS.

IN the politics of the country the prohibitionist stands alone. A few hundred thousand, at the most, vote with him on election day. Nothing daunted, he keeps up the agitation and regularly votes his party ticket. A statement of his reasons for this course, which to many seems singular, may be interesting if not convincing.

Starting with the proposition that drunkenness is harmful and injurious to the individual, to society, and to the State, he assumes that the business of making drunkards is bad. A saloon-keeper may be kind-hearted, he may even prefer that his customers remain sober, yet he is engaged in a bad business, for he takes advantage of the weaknesses and appetites of men to their disadvantage and ruin. To be engaged in such business is wrong.

Governments are instituted, among other reasons, for the purpose of protecting the weak, defenseless, and helpless from the strong, powerful, and greedy. No government can be indifferent to the liquor traffic without stultifying itself. The success of the saloon means the destruction of citizenship, in part at least. Therefore the government must take some action with reference to the saloon business. The first concern of government with respect to any problem is to ascertain what is right. This inquiry must be based upon the fundamental proposition that, whether or not the

right is easily attained, the effort toward it must be made. With reference to other things this seems to be accepted as true. As to thieves, the question is not, Can the government put an end to all stealing? As to murderers, it is not, Can the government stop all murder? As to counterfeiters, it is not, Can the government prevent counterfeiting so completely as to make our circulating medium absolutely safe? As to all these it is recognized that first we must determine the question of right attitude. Shall the government forbid those things and to the fullest extent of its power punish the violators of its law, or shall it make some bargain or compromise with them? The answer is that the government, to be true to itself, must wage relentless warfare upon the enemies of society who violate its laws, and under no circumstance must it lower its standard to one of compromise or partnership. Consequently our law against stealing stands without any attempt to regulate the thief or to license him. Yet stealing goes on, and, if authorities are to be accepted, increases amazingly. So we contend that our Government must first determine whether the liquor traffic is something to be protected and fostered, or to be outlawed and fought, and that the question of our attitude toward it is to be determined by the principles of everlasting right. How soon we can succeed, or whether we can ever triumph completely, is a matter of secondary consideration. It will be accepted without argument that, if we cannot overthrow the liquor traffic by a righteous fight for a righteous principle, we never will kill it by any kind of compromise.

Following this line of reasoning, the party prohibitionist concludes that the license of the liquor traffic is wrong. Under such plan the government shares in the profits of a bad business, the effect of which is to destroy its citizenship. To assume that the purpose that the government has in accepting a money consideration is to punish the saloon-keeper does not change the fact that a portion of his profit in the business has gone to the government which was under obligation to protect its people rather than to strike hands with their enemy. Under any kind of license system the government gives its consent to the business and takes upon itself an obligation to protect it against any who would assail it, and the monetary consideration is no small part of the arrangement.

License, State control, dispensary, and other plans of the kind have failed. It never was claimed for such plans that they would put an end to drunkenness, and the most enthusiastic never for a moment claimed in support of them that the government would not be a partner in the business and a sharer in the profits. Sometimes it has been asserted that drunkenness has decreased where such plans have been established. This is quite generally given up, however, as to license, which but a few years ago was heralded as the real and final solution of the drink problem. And if it were true, as has not been conclusively proved, that State control or the dispensary reduces drunkenness to a small extent, the fact remains that the government is a partner in and responsible for the business, or so much of it as remains.

The party prohibitionist believes and asserts that no government can hope to find a remedy for the evil of intemperance so long as it is willing by legislation to take upon itself obligations to give any kind of protection to those who are engaged in the manufacture or sale of drink. Prohibition of the manufacture, sale, importation, transportation, and exportation is the only righteous policy for the Government to pursue with reference to the traffic. If necessary to have an amendment to the Federal Constitution to make this plan effective, let us have it. The Constitution has been amended; why may it not be amended again? The way to kill the saloon is not to close it at midnight, when men are turning their steps homeward and patronage would be light if not profitless, but to close the distillery and brewery which supply the drink the saloon sells. In such event saloons would go out of business, not so much because the law required it, as on account of lack of supply of the commodity they propose to sell. It is the height of governmental inconsistency to forbid drunkenness and legalize a saloon, or to forbid a saloon and protect the distillery and brewery by the power of legal enactment. If the business should be fought at all, why not fight it in the distillery as well as the saloon?

Fortunately, sufficient effort has been

made at this plan to prove its effectiveness. North Dakota, Kansas, and Vermont are among the States which have adopted prohibition of the manufacture of intoxicating beverages. Sometimes it is claimed that the law is a failure in those States, and attention is directed to the fact that liquor is sold secretly if not openly, and that drunkards are to be found in some places. The fact is overlooked, it would perhaps be improper to say willfully suppressed, that those States have not the slightest difficulty in enforcing the law prohibiting the manufacture. No one claims that the business of manufacturing continued in North Dakota after prohibition went into effect. The same is true of Kansas and of other States where any honest effort has been made to prohibit the manufacture and sale.

It is admitted that any liquor sold in these States is brought in from the outside. If the Federal Government put the same policy into effect, by amendment, if need be, it would be as easy to prohibit the sale in other States as it has been in those where the manufacture is suppressed.

Our point of attack is the distillery and brewery. There are only a few thousand of them in the United States, and the greater part of them are small affairs. As a matter of fact, most of the intoxicating liquor in the United States is made by a few large establishments, or at least by establishments under the control of a few men. It is ridiculous to direct our entire agitation toward two hundred and fifty thousand retailers, when a few thousand distillers and brewers hold the key to the situation.

So far, other reformers—and our party prohibitionists have sometimes joined in the effort—have attempted to combat the liquor traffic with Sunday-closing laws, laws prohibiting the sale to habitual drunkards and to minors, and with laws requiring the closing of saloons at certain hours, and have ignored, to a large extent, the fact that the great source of it all was untouched. Some of the efforts directed against the saloon would be humorous if they were not so pitiful. Some good reformers have directed their efforts toward removing all chairs and benches from saloons, as though a chair was a large cause of drunkenness. Others have proposed to take the free lunches out of saloons. Why not leave the lunches and take the whisky out? Do men get drunk on lunches? Others have proposed to remove screens, as though a screen were a cause of intoxication. It has been proposed to take almost everything out of saloons ever known to be in them, except the whisky which produces drunkenness. We are not unmindful of the fact that lunches, benches, chairs, and screens may have some part in the harm which saloons work; but they are incidents, and to direct one's attack against them comes dangerously near tilting at windmills.

The party prohibitionist has helped many good efforts directed against the saloons; but he never loses sight of the fact that the objective point is the manufacture, and after that the importation, exportation, and transportation, of intoxicating beverages. His plan will prove easy because it is sweeping and complete.

Of course it has never been tried with a real prohibition party back of it. At the best it has been tried in a few States with parties unfriendly, and with politicians to enforce it who were mortgaged in advance to the liquor men. Despite all these handicaps, there was so much merit about the plan that it was and is steadily opposed by the liquor men. If there were any doubt as to whether prohibition is the right policy, that doubt would be removed if one would notice that the men engaged in the saloon business fight with determination and with every means in their power any effort to put that policy into effect. They know their worst enemy, and use their utmost endeavors against it.

The plan of the party prohibitionist is scarcely ever objected to. That is to say, the statement of it invariably brings an admission that, once put into effect, it would be final and complete. A government adopting that plan is able to come into court with clean hands. It has no part or lot in the profits of the business. It places the men who are engaged in an effort the result of which must be the ruin and destruction of citizenship, on a plane with thieves and murderers, counterfeiters, and others who are recognized as foes to peace and happiness. A government so armed is ready for a battle with its foes.

It is the rule with those who criticise the Prohibition party never to state its real plan and purpose, which, I presume, is because our friends who write and speak

about us have not taken time to ascertain what we are trying to do. Ordinarily it is claimed that we propose to make men sober by law; that we expect to cure drunkenness by legal enactment, and so on. The truth is, our contention always has been that prohibition takes the government out of partnership with the business, and is the recognized rule of government with reference to evil things that destroy or interfere with the happiness of the citizen. We have advanced only the well-worn and long-recognized doctrine that it is better to do right than to resort to any kind of compromise or makeshift.

We believe that every citizen owes it to himself to vote for this policy; hence the Prohibition party, organized and in the field with a ticket at every Presidential election, and in most of the States at every State election and even at the local election. This gives the prohibitionist an opportunity to put himself on record by means of his ballot in favor of the policy in which he believes. The plan could not fail; for a prohibition party in power, pledged to the principle of prohibition, led by men who believe in that principle, with officials in office elected as the result of its advocacy, would close every distillery and brewery in the United States. That act would give the beverage liquor traffic a death-blow. Possibly drunkenness would continue in a way. Perhaps it would continue for all time to come; but the government at least would have assumed a right attitude toward it, and with the liquor traffic outlawed we would have a clear field for handling the problem. The key to the solution is prohibition with a prohibition party back of it.

We hold it to be little less than sinful to vote the ticket of a political party which stands for the saloon policy. The Republican and Democratic parties do stand for such policy. Proof is found in the fact that where they are in power, with only occasional exceptions, the saloon is legalized, and enjoys the same protection of law which is granted to the church, the home, and the school. If the policies put into effect by these parties do not determine their attitude, then, of course, there is no way to ascertain what their attitude is. If it be fair ever to hold a party committed to the policy which it has put into effect, then it must be true that the Republican and Democratic parties are in favor of the license and legalization of the saloon.

Since it is true that he who votes a party ticket votes for the things for which the party stands, the one who votes a Republican or Democratic ticket votes for the present saloon policy in effect at the hands of those parties. To vote for such policy the prohibitionist insists is wrong.

The Prohibition party came into existence because there was no hope that either of the old parties would become such. The battle which would be necessary in order to carry the Republican or Democratic party over from the liquor column into the prohibition ranks would rend the party to pieces, and make it impossible for it to become an effective political instrument for a victorious campaign. Great as the problem is of building a new party, it is easy by comparison with the greater effort necessary to renovate and clean up political parties which have enjoyed the spoils of office for years as a result of partnership with the worst and meanest of our citizenship.

No man has any right to assert that a new political party cannot be triumphant in the politics of this country. It has happened in the past. The history of political parties proves that they may be expected to rise and fall, to decay and die, and give way to new organizations. The two dominant parties have lost much of the respect in which they were once held. There is political unrest which may easily result in sending men by millions into a new organization.

The saloon problem will not be settled until it becomes an issue in our politics. Our plan, if it were supported at the ballot-box by the good people who are working for the reform along other lines, would make the question the dominant issue in some campaign of the very near future. Many firmly believe, and with good reason too, that half a million to a million votes cast for the prohibition principle in a Presidential election would compel the attention of politicians and statesmen in a most emphatic and decisive way. Ours is an effort to get the issue before the people, and then to get the people to settle it right by outlawing the distillery, brewery, and the saloon. All that is attempted in present-day measures designed to restrict or regulate the traffic would be accom-

plished more easily by striking a direct blow as proposed by the Prohibition party.

The vitality and persistence of that party is accounted for by the directness, simplicity, righteousness, and practicability of its plan. The things that have combined to keep the party in existence against overwhelming odds will, we believe, bring that larger support in the near future which will give the question of the saloon the important position in American politics that it deserves.

Prohibition—Pro and Con

We have received a great number of letters on the subject of prohibition, especially in the States of Maine and Vermont. We have not space for all. To make room for as many as possible, we are compelled to condense by omission those that we do print—omitting chiefly repetitions, or philosophical deductions, or rhetorical expansions. We have tried to give to our readers—especially to those who disagree with our positions—the largest possible space and the best possible opportunity for a free and full expression of their opinions.—THE EDITORS.

LAWBREAKING UNDER PROHIBITION

The Rev. C. Julian Tuthill, Secretary of the York Central Association of Ministers, Maine, has conveyed to The Outlook the information that, in view of a recent statement in our columns, the Association unanimously passed resolutions saying that, so far as they knew, they believed that there was not one in ten of the ministers of the State of Maine who was in favor of high license and local option; and that they knew that the proportion was even less in their own county. Mr. Tuthill adds on his own responsibility:

Maine is not free from drinking. The express companies violate our law daily, if not the inter-State law which overrides the State. Brewers and liquor-dealers outside do not hesitate to seek the patronage of even ministers to mail their circulars. A prominent lumber-dealer five miles away has declared that liquor in Maine means an annual loss of a thousand dollars to him. I have seen jugs and beer-boxes while hunting and fishing in woods and by ponds, and have been permitted once to refuse the whisky-flask myself. Liquor is often left by teams in out-of-the-way places.

And there is a spirit of lawbreaking among us. Strong prohibitionists support the lawbreaking by patronizing Sunday newspapers. Photograph galleries are open Sundays. Dentists work on that day. Mill-owners are not afraid to set an example in that direction. I do not know of a trout brook around Sanford that I would care to fish on Monday. Many a partridge finished his career last fall on the Lord's Day. We do not plead perfection. But we do press forward toward that goal.

The State is aroused for enforcement as no other State has been. The law is being enforced better and better. At the same time the liquor interests are clamoring for re-submission. What does that mean if not that more liquor would be sold if high license and local option could be brought about? Why should men sink money in a campaign for re-submission if they do not expect to gain more money than it costs? And we do not want any more liquor sold in Maine than is sold at present. We have misery and woe enough. If the good people of a town or city are in the majority, and vote to have no liquor sold within their borders, thus hindering the minority, has not a majority in the State the same right?

The prohibition law of Maine is to her everlasting credit. . . . We do not want our children to pass the open saloon on the way to school and to higher life. . . . We believe in taboo. . . . Why not encourage us to work out the problem of enforcement, which we are doing? No other State in the Union has such a splendid temperance sentiment. This sentiment has been fostered and encouraged by the form which it has taken. The spirit of law-enforcement is taking hold everywhere, and is being applied to other matters than temperance.

ADDITIONAL EVIDENCE

To the Editors of The Outlook:

Sensible people, and men who know the world, as well as those who are conversant with the hypocrisy and *intemperance* of the citizens of Vermont and other prohibition States, will thank you for stating frankly and honestly the facts. I say the *intemperance* of the citizens of the State of Vermont, and I say it advisedly, having had considerable medical experience in that State. It is no more difficult for the student to get his beer in Burlington than it is in New Haven. A traveling man may walk into a bar for his whisky, and, while he is drinking it, hear from the church across the way the strident tones of a woman temperance exhorter thanking God that the women have been strong enough to compel the expulsion of liquor and rumsellers from

the State of Vermont. To state that the increase of insanity and morbid mental diseases due to alcoholism and other narcotics has been so marked in Vermont as to call for extensive reports from physicians is only repeating what has appeared in many medical journals. The fact that the great market for patent medicines is found in the prohibition States will explain the reason for this increase of alcoholism. That most, if not all, of these "tonics" contain from fifty to seventy per cent. of alcohol, that but few are free from morphine or cocaine, and that these "tonics" are to be found in almost every farmhouse, is well known to the physician. The amount of laudanum, opium, and morphine consumed in the country towns is enormous—conditions not found in towns where a man is allowed to get his glass of beer at noon or a glass of liquor when his work is over.

Baltimore, Md. WILLIAM LEE HOWARD.

DO THESE FIGURES INDICATE A REAL MORAL REFORM?

To the Editors of The Outlook:

. . . "Stimulants in Forensic Medicine," which appeared in "The Medico-Legal Journal" (the official organ of the New York Medico-Legal Society) in its numbers for September and December, 1901, is the report of a paper read before that Society in April, 1901, by Dr. A. P. Grinnell, of Burlington, Vt. Feeling that the use of stimulant in some form is almost universal, and that abstention from alcohol is made up by the use of tea or coffee, or narcotics and other drugs, he began an investigation of drug-consumption in his State. The result was appalling, and was of especial interest to me, as I had years ago observed that among the most ardent workers for "prohibition" were people who saturated themselves with strongest tea, coffee, and tobacco, or who were perpetually using Jamaica ginger, or "pain-killer," and other patent medicines containing opium in some form.

". . . In 71 towns of Vermont, being the only ones having legally authorized liquor agencies, there was sold during the last fiscal year $251,622.99 worth of liquor, or what was equivalent to $1.38 worth of liquor for every man, woman, and child living in these 71 towns. Burlington, the largest city in the State, and a town the population of which is hardly more temperate or healthy than elsewhere in the State, was not included in the list. All in all, over one quarter of a million dollars' worth of liquor was legally required by a population of 182,356 people for medicinal purposes, and the health reports show no epidemic or undue prevalence of disease."

In addition to this astonishing amount of alcoholic sales, Dr. Grinnell's investigations showed that: "In the regular drug-stores, and in 160 of the 172 general stores, in the State of Vermont they sell every month 3,300,000 doses of opium, besides what they dispense in patent medicines, and besides what the doctors dispense, which gives one and one-half doses of opium to every man and woman in the State of Vermont above the age of twenty-one years, every day in the year." Can any more shocking condition be found in any State where liquors are sold freely? That should be a subject well worth investigation by the advocates of prohibition. I know of no present statistics anywhere showing how it may be.

. . . I am not advocating the habitual use of alcohol in any form, but, assuming that Dr. Grinnell's theory is correct, and that every human being craves some stimulant, it would seem that those who cannot satisfy the demand of nature by the moderate use of tea, coffee, or tobacco had better be allowed to use alcohol openly and legally, rather than be forced to purchase it by stealth, or resort to drugs whose use, under competent medical advice, should be confined strictly to the relief of pain and disease.

PHILIP K. TAYLOR, M.D.

Kingston, R. I.

PROHIBITION WOULD THEN APPEAR TO BE A FORM OF LOCAL OPTION

To the Editors of The Outlook:

Let me preface my correction with the statement that for three and a half years I was Secretary of the Christian Civic League of Maine, and during that time visited and spoke in all parts of the State on good citizenship. The liquor traffic in Maine has been confined to sixty-seven centers, according to the list of United States liquor tax payers in the State. At least eighteen of these taxes were paid for "centers" located in the wilderness

part of the State for the accommodation of sportsmen. Forty-nine municipal centers, then, had liquor-sellers. Recent aroused temperance sentiment has secured the enforcement of the prohibitory liquor laws in eleven of the sixteen counties in Maine, and large portions of the other five counties are free from the traffic. In the election of last September—a State election—11,000 Republican voters, who voted for the Republican candidate for Governor, refused to vote for Republican candidates for Sheriff and County Attorney because these candidates had been or promised to be nullifiers of the liquor laws. This surprisingly large defection among Republican voters, and the consequent election in several counties of Democratic temperance sheriffs, startled politicians, and the Supreme Court has since taken the attitude chronicled in The Outlook, that expresses the recognition of an insistent public sentiment for enforcement, and is a confession of previous judicial remissness. Never in the history of the State has there been such general and vigorous enforcement of prohibition as to-day. This enforcement condition has the hearty indorsement of the people at large throughout the State, and no one but saloon men complains. The growing demand in Maine is for the retention and enforcement of prohibition, and not for a change to any form of license. I speak from a personal knowledge when I say that neither a large proportion nor a majority of the clergy of Maine favor a change from prohibition to any form of license. In their State gatherings and at the meetings of their associations the Baptists, Congregationalists, Free Baptists, Methodists, Universalists, and Friends have repeatedly indorsed prohibition and demanded enforcement. During the past four years I have personally met and conversed with a large majority of the clergymen of Maine, and I have not found a dozen among them who desire the substitution of license for prohibition, and the dozen who entertain such desire are mostly users of wine.

Mr. Cutler's comparison of Bangor, "a prohibition city," with Brockton, Mass., a license city, is ludicrous. . . . Bangor is and has been for years as much of a license city as is Brockton. The local authorities in Bangor have for years authorized, licensed indirectly, the open saloon. Local rules have been adopted for the "regulation" of the saloons, and they are troubled only if they fail to comply with these rules. For this permission to sell liquor the saloon-keeper regularly walks into court and pays the license fee in the shape of a machine fine. Two years ago the chief of the Bangor police detailed Captain Fahey, of the night police force, to show a friend and myself through the Bangor saloons. Liquor was bought, sold, paid for, and drank in the presence of this police captain and ourselves with the utmost freedom and sense of security. I was assured, not only by this concrete example, but also in word, that Bangor saloons which kept the Bangor rules were not troubled by Bangor authorities. Here was a city assuming to locally legislate against the State Constitution and statutes, and authorize the sale of liquor in a prohibition State, and the Rev. Mr. Cutler calls it a city under prohibition! Yes, and proceeds to compare such a city under such a prohibition with a city locally licensed in an adjoining State, and assumes that, if Bangor could have local license, the amount of drunkenness would thereby be lessened! Had he selected Auburn, Maine—a city where the saloon has never been permitted to exist—his comparison would have been just, and the immense advantage of prohibition over license would have been shown.

WILBUR F. BERRY.

Kent's Hill, Maine.

THEN THE MAJORITY DO NOT RULE IN VERMONT

To the Editors of The Outlook:

I am confident that to every sincere temperance man the result of the Vermont election was a bitter disappointment.

Residing in Burlington and doing business in Canada, with a large acquaintance with every State in the Union, I can say from actual observation that the prohibition law in Vermont has worked admirably for fifty years, and has not been violated any more than any other law restraining evil on the statute-book. The radical prohibitionist could at any time hold the State of Vermont up as an example of the beneficent effect of a prohibition law. The fact is that fully ten thousand voters took no part in the election, many feeling it unnecessary, others

from a lack of interest, while all the foreign element in the manufacturing centers, combined with the so-called liberal element and the active liquor interest, turned out in full force and defeated the will of the large majority of the very best citizens of the State. . . . I am confident that were the vote taken again in the next thirty days, prohibition would win. As it is, nothing is settled except the fact of the open saloons in the few larger towns, and a continuation of the fight with its resulting demoralization, as money will be spent freely by those whose interest it is to make an open market for the sale of their wares. The utter impracticability of prohibition in New York, or even in a State like Massachusetts, leaves no alternative for a conservative temperance man to vote for anything but the best regulated license possible, with local option, but I feel that The Outlook is sadly mistaken in its views when applied to the Green Mountain State.

GRANT H. BURROWS.

Brockville, Ontario.

LOCAL OPTION IN A PROHIBITION STATE

To the Editors of The Outlook:

An interesting phase of the relation of liquor selling to the interests of a community is shown in the recent action of the town of Machiasport in Maine. It is well known that, in spite of the State prohibitory law, liquor is sold in a number of places. The toleration of such sale is commonly excused by the officers of the law on the grounds that the prohibitory law is odious and that the local community and not the State should decide the question as to the sale of intoxicating liquors in any place. To this excuse is almost invariably added the statement that the people really want liquor sold.

The town of Machiasport has recently taken a step that, if followed by other towns, may ultimately serve to distinguish between those communities actually desiring "no license" and those whose vote, if the opportunity to vote were given, would be for license.

The Board of Selectmen and the newly organized Machiasport Improvement Society have begun a movement to attract the attention of those wishing summer homes. The importance of freedom from the unpleasant features necessarily attending the sale, especially the illegal sale, of intoxicating liquors is vital to the best interests of a colony of summer cottagers. As one citizen remarked: "No matter how much the business man may demand his wine at his club, the last place he wants his wife and children to spend the summer in is a place where liquor is sold, legally or illegally." The sentiment against any possible infringement of the law was such that in the town meeting of March 2, 1903, the following resolution was unanimously passed as Article 7 of the town warrant:

Resolved, That the best interests of our community would be antagonized by the sale of intoxicating liquors within the limits of our town, and we accordingly assure the officers of the town, and of the law, of our hearty support in the enforcement of the law respecting such sales.

Such an action on the part of a whole community shows a clearness of thought and a foresight that are rare in legislation relating to the liquor traffic. It is perfectly evident that in Machiasport at least the sale of intoxicating liquors is not desired.

It is impossible to foretell at this date the probable effect of an action such as this on would-be infringers of the law. Certainly the sheriff and deputies would have a clear case for the complete repression of the liquor traffic within the limits of the town of Machiasport, should such ever be established. F. G. B.

Middletown, Conn.

CONFIRMING THE LOCAL OPTION IDEA

A correspondent from Springfield, Missouri, writes us in advocacy of prohibition and in protest against local option. It appears to The Outlook that he unintentionally confirms the doctrine of local option when he states that "the Maine law is enforced in many of the counties—*wherever, in fact, the people demand it.*" This is tantamount to saying that prohibition prohibits only on the principles of local option. The substance of this correspondent's letter is as follows:

"I was born and received twenty-three years' training in a prohibition State. At present I am living in a high-license State. I have had opportunity to watch the operation of local option. From my knowl-

edge of these three methods I am led to believe that the prohibition law as on the statute-books of Maine is the best solution of the problem so far. As to the cry, 'Prohibition does not prohibit,' let us consider the facts. In Bangor, often pointed to as an example of prohibition's failure, we find that the 'Bangor plan' has been broken, as a judge and a county attorney have seen fit to enforce the law, and the bars are shutting down and the liquor men are going out of business. Why did the liquor power, both within and outside the State, oppose so desperately the election of Sheriff Pearson in Cumberland County, Maine? They knew that the liquor traffic could be stopped. The struggle in Androscoggin County last spring between the rum power of Lewiston and those representing good government ended in the election of Sheriff Cummin. As a result, the saloons are closed. Their keepers openly gave up the fight, for they knew that they had in Sheriff Cummin a man who would not compromise with lawbreakers.

"It is claimed that the liquor-selling is driven into the low places. Why do the wholesale liquor-dealers fight so persistently the prohibitory law if under it they can sell the same amount? They cannot. Let the business men of Portland and Lewiston testify. They tell us that families who, before the law was enforced, bought no meat, now buy to considerable extent. The Maine law is enforced in many of the counties—wherever, in fact, the people demand it.

"Local option, the compromise measure, is our worst enemy. A town made up of foreigners, as are many of the Massachusetts towns, will vote 'license,' and thus offer a chance, perhaps in the very heart of several 'no-license' towns, for securing liquor and practically thwarting the purposes of the 'no-license' towns.

A READER."

NO RIGHT TO DIFFER WITH THE CONGREGATIONAL MINISTERS OF VERMONT

To the Editors of The Outlook:

. . . It is difficult to keep one's faith in The Outlook's claims to open-mindedness and temperateness after reading in the recent reply to Vermont protestants that the witness to the contrary of "all the Congregational ministers in all the larger towns" "does not in the least modify our convictions." It appears to us that this will strike most men as a most marked example of intemperate dogmatism. What right has any assumed leader of the thought of men to set his convictions concerning methods of dealing with moral questions thus against the testimony of such a body of men as it may be assumed Congregational ministers of Vermont are, and who live on the field and know the conditions at first hand?

ALLAN C. FERRIN,
[A Congregational minister.]

A CONGREGATIONAL MINISTER WHO THINKS OTHERWISE

To the Editors of The Outlook:

The village parson who stays at home attending to his parish duties and his little flock, and sees little of what is going on except about his own "vine and fig-tree," declares, "Vermont is free from drunkenness, lawlessness, blackmail, etc.," "Prohibition prohibits." (Would that it were true.) But the parson who, like Bishop Hall, for example, moves about over the Green Mountain State, with his eyes open, asserts, "Prohibition in Vermont is a farce." And the temperance men of sound judgment who went to the polls at the referendum agreed with the Bishop. If the "temperance people" did not make the change, who did? The fact of the matter is, thousands of temperance men who did not know the taste of liquor, like myself, were sick and tired of the conditions as they existed, and voted to place the question where it belongs, in the hands of the people. I venture to state, after traveling all over the State several times in the past few years, that one could see more drunkenness in any of the larger towns than in towns of similar size in either Massachusetts, New York, Connecticut, or Rhode Island. The Church has paid little, if any, attention to teaching total abstinence. Instead of issuing "protests," let these clerical brethren go to work and fight the liquor habit. Organize "Bands of Hope"—temperance associations—and get the people, young and old, to sign the pledge; it will be more sensible than to fume and rave over a merited defeat at the polling-booth.

A CONGREGATIONAL CLERIC WHO VOTED "YES."

MUST ALL LAWS BE ENFORCEABLE?

To the Editors of The Outlook:

Mr. Hodder's discussion of inadministrable laws, in "A Fight for the City," has raised in my mind a question the solution of which, I believe, causes every thoughtful voter grave doubt.

If I do not misunderstand Mr. Hodder, his view is essentially that a law that cannot be enforced should not remain a law. The contention is not a new one. It is the point where prohibitionist and advocate of license have parted company for years. But if we accept it, what does it mean? That a law to be good must be perfectly enforced? That cannot possibly be, since every law is sometimes broken. That it must not be frequently and flagrantly violated? But how frequently and how flagrantly? Who is to decide? And, again, because a law is not enforced, must we conclude that it cannot be? Would Mr. Hodder hold that whenever a considerable public opinion seems against the enforcement of a law, that law should be repealed? Then why attempt to prohibit polygamy in Salt Lake City? Does not the very fact of commanding majorities sufficient to enact and retain a law give presumptive evidence of a considerable public opinion in favor of that law? Is not the mistake rather in the pernicious belief that law is self-enforcing?

Mount Hermon, Mass. W. E. A.

There is a very vigorous, clear, and uniform public opinion entertained by a great majority of the citizens of the United States concerning polygamy. No such public opinion exists concerning the use of alcoholic beverages.—THE EDITORS.

The Watchers: An Easter Poem

By Mabel Earle

Far in the fading sky the stars are dying.
O Son of God! Thou diest nevermore.
Above the lowly tomb where Thou art lying
The day shall break as never day before
For all on earth whose waiting hearts are sore.
Lo, Lord, they mourn Thee now with bitter weeping,
While through the night in love our vigil keeping
We veil our eyes above Thy sacred sleeping,
O Son of God! Whom all Thy hosts adore.

Far in the east the silver light is breaking.
O Christ our King! Thy broken fetters fall.
The fading stars sing out for Thine awaking,
Beneath Thy tread the walls of Earth are shaking,
Mountain to mountain thunders at Thy call.
Lo, where the quickening rose-light thrills and quivers,
Lo, where the radiance strikes along the rivers,
Till every wave in trembling glory shivers!
O Christ our King! the day has dawned for all.

He is not here, not here, for He is risen.
O Sun arisen with healing in Thy ray!
Behold the rocky walls that were His prison,
Where from the door the stone is rolled away.
Draw near and see the place where once He lay!
Not here, not here! risen while ye were weeping;
Gone forth in triumph from the Shadow's keeping—
O hills of Earth, be glad and praise and pray!
Ye silent vales, break forth, break forth in singing,
While far above the dawn and sunrise winging
We raise the anthem high to heaven ringing—
O Sun arisen forevermore this day!

A Preacher's Story of His Work[1]

BY W. S. RAINSFORD

Rector of St. George's Church, New York City

II.

WHEN I left Cambridge, the question was, "Where shall I go?" I had attained a certain reputation because of my speaking at the East End—such speaking as it was. My father naturally thought it would be a good thing for me to be in London. He had considerable influence; and it would not have been difficult for me to become a curate at St. Margaret's, Westminster, where Canon Conway, of Westminster, a great friend of my father's, was at that time the rector. But I felt that were I to become curate of a great and fashionable London church, I should become worldly and frivolous. Besides, I was not fit for the place; I did not know enough; and, as I look back, I cannot thank God enough that, with all my faults and sins, I was determined from the bottom of my soul to do the best I knew. I think if a man, by God's grace, can keep in that unworldly spirit, it is wonderful how he will pull through without any human help; for I had no help from any one in these matters. I came to the conclusion that London was not the place for me. About this time a man I had never heard of offered me a curacy in Norwich—the Rev. William Nottage Ripley. Norwich was a city of 85,000 people in the center of the shoe trade, at that time in a most depressed condition, being torn between the old and new methods of manufacturing—handwork and machinery. I heard of the unfortunate conditions and of the unsatisfactory religious life in the churches, and I knew there was work to be done; and, as always, jumping before I looked, I accepted the offer.

My father, when he was bidding me good-by, gave me a piece of advice for which I can never be thankful enough, and which I have repeated in hundreds of cases, I hope with profit to all who have heard it. He said:

"You are going to a place where you will probably have a great deal of speaking and teaching to do. You are not prepared to do it; let me give you one bit of advice: Give your whole week, if necessary every single morning in the week, to preparing as thoroughly as you can one discourse; if you do that thoroughly, you will never run utterly dry, even if you have to speak five or ten other times during the week without preparation."

I owe a great deal of my success to following out that one idea. If you enrich your mind on one single subject, honestly and persistently, it gives you a certain sense of security, even if you have to repeat it again and again. I found that by concentrating on one subject, and keeping at it until I had something to say on it that was worth listening to, I was never utterly defeated.

I went to Norwich. I had never seen my rector nor his wife, but found they lived in a beautiful place called Earlham Hall, three miles out of Norwich. There was a trap waiting for me at the depot. I put in my little portmanteau, and said I would walk. After I had been walking some distance, I met a lady walking along with a very sprightly gait; she looked hard at me and said, "You must be our new curate." "Are you Mrs. Ripley?" I asked. "I am," she said; and that was my first meeting with the woman who was afterwards a second mother to me.

The next Sunday evening I preached my first sermon in St. Giles's Church. It was a beautiful church—over four hundred years old—one of forty-eight churches in Norwich, surrounded by a parish composed of the very poorest shoemakers, and a certain element of professional men—lawyers and doctors—belonging to the town. Naturally, that Sunday evening before I spoke was a terrible time for me. I had made the best preparation I could for my first sermon; it was extemporaneous; somehow I felt from the start that I lost power by

[1] Copyright, 1903, by the Outlook Company. All rights reserved.

writing. I have always spoken to people. Sometimes I have written what I really felt to be a good sermon; I have worked over it until not a sentence could be changed with profit, as far as I could see; I have read it, and lost in power. I cannot account for that, but it is so.

Naturally, the whole congregation turned out in Norwich to hear the new curate. When I got into the pulpit, I was full of misery; never have I forgotten the agony of that first sermon. I walked down as into the darkness. I felt that I had made a hopeless failure. And as I stood alone, Mrs. Ripley came up to me and said, "Thank God, my boy, that you have been called to preach."

I began a strenuous life in Norwich. I lived in a tiny house, but I was very comfortable. My rector insisted on my visiting, and visit I did. Before I knew it I was simply overwhelmed with the amount I had to do. It seemed to me I did not seek it; it sought me. If I were to describe to you the religious state of that town, you would scarcely believe it. There were forty-eight old churches—college livings—very poor livings, but enough for a man to live on. The holders of some of these livings did little—some had sunk into a spiritual slough. I did not know them, as a rule; they looked upon me as a wild firebrand, and had nothing to say to me. I think now, on looking back, I was often thoughtless in my dealings with them and hasty in my judgments. One church, a very old church, was held by a don of Cambridge, a remarkable scholar in his day. That man was a curiosity. On certain occasions he used to have, comparatively speaking, a full church, because he introduced certain things into the service that amused people. Among other things, when he came, in the Psalter for the twenty-fourth day, to the tenth verse of Psalm cxvi., where, you remember, it reads, "I said in my haste, All men are liars," he would invariably stop and say, "David, if you had lived in these days, you would have said it at your leisure." And in the lesson for the twenty-first Sunday after Trinity occurs the passage, "At what time ye hear the sound of the cornet, flute, harp, sackbut, psaltery, dulcimer, and all kinds of musick, ye fall down and worship the golden image that Nebuchadnezzar the king hath set up." This list of instruments is repeated, you recall, three times in the course of the chapter. The first time he would read it as it is written, but the other three times he would substitute for it the phrase, "The aforesaid gentlemen with the brass band." He had other eccentricities that he would indulge in on stated occasions. These things came to be known, and on those Sundays the church would be full.

Once a year there was a collection for the choir, and he got some one else in the pulpit to address his people and draw a crowd. After I had been about a year and a half in Norwich, he asked me to preach. The feature of that church was its music. The wife of the old don had a beautiful voice; they had gathered together a good choir. The pulpit was a tiny black-oak box, with a small desk for the Bible or sermon. This desk sloped down; my Bible slipped, and I had to stoop to get it; in stooping I leaned against the pulpit door; it split open, and I nearly fell out of the pulpit! After I had been preaching for a time, I looked down into the choir, which was in a great box pew in front of the pulpit, after the old-fashioned way, shut off from the congregation by a curtain; and I saw one fellow put his arm right around the waist of the girl next to him and draw her head down to his shoulder; and he kept it there; then he looked up straight into my face and winked. It broke me all up. I walked out of the pulpit, went to the rector, and said: "Dr. ——, your choir members are behaving outrageously; I cannot preach until this is stopped." He walked up to the square pew where the choir sat, tore the red baize curtain down with a jerk, and exposed them, disconcerted and ashamed, to the full view of the congregation, and then sat down again. I returned to the pulpit and went on with my sermon. In the midst of it I looked up and saw walking up the middle aisle, in solemn procession, a hen with twelve or fourteen chickens! When the sexton tried to drive them out, he was so drunk that he fell right on top of the hen! The old doctor called out, "Let her alone, John; she is doing no harm."

In Norwich I was face to face with a very poor and very discontented population. The problem that naturally pre-

sented itself to me was, How to reach these people? I started to preach—in the church—on the street. Saturday was always a great day. Then everybody gathered in the beautiful market square in the middle of the town; and I used to stand in the market-place ringing a big bell with all my might. When I got about a thousand people about, I began to preach. That is the way I began my ministry in Norwich. I gathered young men around me—perhaps forty—and gave them certain districts. We preached on the streets, about the love of Jesus and conversion—purely evangelical; I had no qualms or difficulties of any sort intellectually. What I preached was the doctrine of Jesus Christ appealing to men; there was a great deal of hell-fire in it; it dwelt on the imperative need of being born again—people were the children of the devil and not the children of God until they turned back again to their Father! The incongruity of it all had not struck me then. The people there were ready for nothing else; any other preaching would have been absurd; any other preaching would then have been impossible for me; it was the very best thing to give them; it was all I had.

The Church has always had a message from God to the people. If a man only tries to do the best he knows, and talks what he believes, he will have as much power and influence at one point of experience as at another. I never, so far as I know, influenced people more for good than in those green, unripe days when I was simply praying and preaching the best I knew. For four or five months I preached every night in the streets; and met with opposition at first—opposition which naturally would come from vice, ignorance, and brutality. Many were reached and touched; although I did not know whether those who made the disturbance were ever reached. In this way I became known, and was soon bewildered with invitations to preach. We once invited Henry Varley to come to Norwich; he was ahead of most evangelists, and he did great work in Norwich for ten days. We took St. Andrew's Hall, holding about two thousand people, and he filled it every night. When he was about to go he said to me, "Rainsford, you must continue these meetings Sunday nights." "I cannot think of it," I answered. "You've got to; these people are hungry and must be fed." "So help me God, I'll try," I said. The result was that, for two years, every Sunday night I preached in St. Andrew's Hall to congregations varying from one to two thousand people.

In Norwich my Sunday work began early and lasted until late at night. We had early Communion at eight o'clock; Sunday-school at half-past nine; at eleven o'clock, service, when I very often preached, as my rector was not in good health; and every second Sunday I preached anyway; afternoon service and sermon at four, which I took; in the evening I always preached, and we soon began to have crowds; and after the evening service I went to St. Andrew's Hall, and then walked to Earlham Hall and slept until nine o'clock the next morning.

The rector kept insisting that I visit among the poor people, and I visited a good deal every day. My district was comparatively a small one. I usually arose at six, and did two or three hard hours' work before breakfast; after breakfast I studied my Greek Testament, and then worked at my sermon for the next Sunday; for I ran up against pretty strong criticism. You could not find more critical audiences than these people, though they were not intellectual. They did not want new ideas; they resented them; and very often I met with a good deal of protest, though the rector always stuck to me. The home of the rector and his wife was a blessing to me; when I got very tired, I would go out to Earlham Hall, and often stayed a few days. I did a tremendous amount of work in those days, and yet I was seldom tired; I seemed to have superabundant health. Soon the church was jammed every Sunday; other churches filled up too; we opened a tent in Norwich; the whole city was stimulated. The Bishop of Norwich was always kind to me. My friends, however, all looked upon me as strange and unaccountable; they never knew what I was going to do next.

Up to this time I did not have any doubt in my mind at all; no difficulties seemed to come to me until the last year of my stay in Norwich; the change then came suddenly and very painfully.

I began to be aware about that time that my father was not quite holding his own in London. He was more than a Low Churchman; he was a very extreme Low Church type; and when I speak of him, I speak of his school; they had no conception at all of the Church idea. They were Gospel preachers, seeking only to evoke personal experience. That school did not really admit to themselves that religious life was possible except through the definite form of experience. An absolute requirement was a conscious conversion to God, which they called New Birth; there was really no distinction made in their minds between New Birth and Conversion—they were synonymous terms in their minds. They had no conception at all of the Church as an organization; they were individualists of the most marked type. Baptism was entirely a sign; and I may say right here that the question of baptism was the thin edge of the wedge which wrought havoc with my faith; my doubts commenced on this question of baptism.

About that time, Mr. Wilkinson, who afterwards was made Bishop of Truro, was appointed to the vicarage of St. Peter's, Eaton Square, the church next my father's in London; and Wilkinson began to draw to himself the attention of that part of London. He was as zealous and almost as emotional in his appeal as the Evangelical party were; but he had an idea of the relation of the Church to society which the Evangelical party never had. To mention a concrete illustration: There was my father's church, with, I might say, almost one of the strongest clienteles in London, and it never occurred to him, nor to any of the men in half a dozen or more other chapels of the same sort (some of which were livings held by trustees for the Evangelical party under the deed of Lady Huntingdon), to associate these preaching centers with any special work in the great town. For instance, my father's church had no parochial connection whatever. The social idea of the Church's relation to the community, to leaven and lighten it and minister to it, was almost a thing apart from the Evangelical movement of '50 and '60. My father was simply the clergyman in charge of St. John's; there was no district attached to it; it was simply a preaching church; and it is there to-day under precisely the same conditions.

In the meantime, the High Church people had got very distinctly in their minds the relation of the Church to the community. My father, and the others of his party, appealed to men's sense of sin. There were many vivid experiences; his ministry was insistent, his visiting persistent; night and day he went among his people, going from house to house; but the other man, of a different type, a few blocks away, set other people to work, told them what to do and how to do it. In his parish he sought to direct the spiritual life of his people into channels that had good results in the community; and, naturally, work like that was more permanent than that of my father, which was simply based on personal experience. His people came to him Sunday after Sunday; and the sermon was the one mark in their lives from week to week. The rest of the service was very slovenly—all the methods of the church were slovenly; they had no conception at all of worship as we understand it. The sermon was everything. The Nonconformists differed from them in that with them the pulpit was the center of a vast number of organizations. For instance, a Methodist meeting-house would have connected with it a series of organizations and committees, whereas the Evangelical churches had nothing of the sort. They never recognized the opportunity of working in the community. The High Church people came along, saw that opportunity, and stepped into the gap; so they maintained their organization and drew people away from the others. It is of vital importance to remember that in order to understand the downfall of the Evangelical party as a power in England in '60 and '70. I am not now speaking of this country at all.

The change in my father's congregation naturally impressed me, and I tried to account for it in my own mind. I had no idea at that time of any organization in the Church. In my work in East London we had no idea of social service—the idea was simply to preach to the people. Of course, if they were hungry, we gave them bread (unwisely very often); if they were naked, we tried to clothe them, in a purely charitable way; but the appeal was wholly to the soul; the body

was lost sight of. This was more so in West London, where there were no poor to deal with; hence it was purely the indulgence of a deep religious feeling in listening to the man you loved best and who could touch you most deeply. The High Church party added something to that, and gained a strong foothold.

In Norwich I found myself in a community where the spiritual life was at the lowest ebb; and I had no method of reaching the people except by preaching; and this I did, as I have said, in the pulpit, at Sunday-school, in the great City Hall downtown, which was six or seven hundred years old, and on the streets—anywhere—it was preach, preach, preach. We had not yet learned to be interested in the social evolution of the people. All I knew was to preach the Gospel by word of mouth, from the pulpit, on the street—anywhere. I noticed the great falling off in the congregation in my father's church, but I had no means of correcting it, except by more zealous and more persistent preaching, and by naturally developing the gift of associating other young men with me, which my father did not have. He simply preached to the people who came on Sunday; but, as I say, I drew other young men around me and gave them something to do. In my work in Norwich I was encouraged and helped by the Nonconformist churches more than by churches of my own denomination. I had much support and help from the Congregationalists. Norwich was the center of Congregational life. Doctors Barrett and Gould were quite famous in the Congregational ministry—men of considerable intellectuality. In that way I had the privilege and advantage of intellectual companionship, especially with Dr. Barrett, from whom I gained a great deal. In my own Church I had no special intellectual companionship, except with one or two men, especially the Rev. J. W. Nash, a noble man.

I cannot exactly remember how my trouble began; but towards the end of my second year in Norwich I became deeply troubled over the question of infant baptism. It was in that way, I think, that the critical spirit first touched me. I could not make the wording of our service agree with what I was preaching, and I could not alter my preaching. I saw nothing then but simply the appeal to men through Jesus Christ to be converted and turn to God. When they did that, I taught, they became sons of God; and I could not make that agree with the very definite teaching in the service that men by baptism were made children of God.

The next step was that I saw how this might be applied to adult baptism, but I could not see how it applied to infant baptism. Then I began to read very widely in the literature of baptism; I got into correspondence with the best men in the country—Mr. Spurgeon among the rest—he sent me a whole sheaf of books, which I read diligently; I read our own literature on the subject, and at last I went to my rector. He could not help me at all; the stock arguments with which the Evangelical party sought to compromise between the teaching of our baptismal service and their preaching I could not swallow.

To make a long story short, I went to every man I could find whose opinion I could respect on the question of infant baptism; first to my dear rector, then to my dear father, and then to my bishop; and, while most anxious to help me, they could not do anything for me to settle the things that by this time were troubling me most terribly. In fact, I had come to the conclusion that infant baptism was not to be found in the New Testament; I could not satisfy myself that there was any proof that infants had been baptized by Jesus and his disciples; and I do not believe so to-day. You must remember that I was to the backbone a believer in the Scripture as inspired literature, and not only that, but that every word of it was literally true; it was not an inspiration merely, but a divine dictation. An argument by inference would not satisfy me. I had no vision of evolution along the whole line which came to me afterwards. I was consumed with the desire to do the truth and to preach what was true. I could not find in the New Testament that infants had been baptized. I could reconcile the idea perfectly to adult baptism; a man had individual experience, inward experience, he confessed it—that was all right; but a child could have no inward experience; and the whole idea of confession

through some one else, and having somebody else say something over you, was repellent to me. This came because of my intense belief in the very Gospel which the Evangelical party taught—the essential need of the inner voice. I was simply following the Evangelical position; and I was really doing my first bit of Higher Criticism. Nobody helped me, because all the men who might have helped me begged the question of infant baptism. At last I felt I could not compromise with my conscience any more. My rector told me I need not use the baptismal service—he would let me off on that—but I was not satisified, and I went to my bishop. He talked to me, but he could not say much that I did not know on the subject—I had studied and read; and nobody suggested that the idea of infant baptism was a gradual growth of the custom of the Church, following the example of Christ's disciples who baptized adults; and that afterwards the child, having a natural place in the religious community, came to be baptized. That idea had not yet dawned on me. I was a poor, green, ignorant boy struggling with the first tremendous difficulty.

I remember, before going to my bishop, I went to see my father in London. I told him, and he argued and plead with me not to throw up my work, and not to give up my position of influencing others, and so on. With despair in my heart I started off on a long walk, and at last, after much wandering, found myself in front of a low, dirty brick chapel in the south of London beyond the Thames. I saw that it was a Baptist chapel, and I bowed my head and said, "It is a long way that has led to this, but, so help me God, if I cannot see my way out, I will spend the rest of my life in a place like this." And I got peace; I had the feeling that I was willing to do my best. And I want to emphasize right here that any usefulness which afterwards came to me was the result, again and again, by His grace, of getting into that position or state of mind. There was nothing I was not willing to do if only He would show me the way. Then I went to my bishop and said, "I am very sorry, but I must give up my letters of orders;" and then I was blessed with the advice of a wise and good man. He said, "My son, I ordained you. I have watched your work and I have approved it, and I lay my hands on you as an old man and as your bishop, and say to you: Go and earn your bread any way you can; preach the Gospel, if you can, for two years, and at the end of two years come back to me, and if you still feel that you must resign your letters of orders, I will take them. You have promised to obey, and I now lay this command on you." I obeyed his command. I went back to Norwich and stayed. I did not know where to turn or what to do. My people thought I was crazy, very naturally. My good friends were worried to death over me, but they could only pray and show their sympathy. I did not know what to do. I did not find another soul going through a similar experience. Four years later I entered upon a far more formidable struggle; but I will come to that later; that is, my struggle in Canada, which marked my ministry very definitely.

All I could do was to pray. I was terribly upset. I finally told my dear friends and my rector that I must go. He said, "Where?" I did not know. I seemed ungrateful. I had the kindest friend man ever had, and, without exaggeration, I may say I had a great deal of social support, which is invaluable in the Church of England. People wanted to give me work to do which I felt in my heart I was unfit for. They offered me positions, and I knew I was not a big enough man to fill them, and yet I was restless and dissatisfied, and anxious to turn my back on the whole thing.

A few days after I had seen the bishop, I went back to my little lodgings in Norwich, after a day of terrible unrest, and found two letters for me. I suppose every man recalls some instance in his life that he cannot account for. I do not at all accept the theory of "special providences;" but there are some things so remarkable that you cannot account for them logically. Well, on this day, the same mail had brought me two letters which I found on my table; one asking me to undertake an evangelical tour in Australia with Henry Varley for a year; the other asking me to take charge for four months of a church in New York City on Madison Avenue. The rector I had never heard of. I bowed my head again. Here was a way out. I had not the ghost of an

idea where the call from New York came from; but I learned afterwards it came through a friend—a lady—traveling in America. This clergyman was worn out, and wanted some one to take charge of his church for four or five months while he rested. "I know just the man you want," she said. He asked her to write to me. She had said, "He was here in the country for a year and likes it; he's just the one." She had not the slightest idea of the struggle going on in my mind at that time. As I say, some things you cannot explain. New York was a great deal nearer my home than Australia, and so, for no other reason, I wrote back saying I would come. About a week afterwards—on the 2d of June—I took passage on a steamer for New York. I turned my back on the dearest, kindest friends a man ever had. They crowded around me when I left Norwich—the young men—they gave me a watch and their blessing, and I went, the sickest, saddest, loneliest fellow who ever turned his back on his native land.

[TO BE CONTINUED]

THE FOREST[1]

BY STEWART EDWARD WHITE

Author of "The Blazed Trail," "Conjuror's House," etc.

V.—On Lying Awake at Night

"Who hath lain alone to hear the wild goose cry?"

ABOUT once in so often you are due to lie awake at night. Why this is so I have never been able to discover. It apparently comes from no predisposing uneasiness of indigestion, no rashness in the matter of too much tea or tobacco, no excitation of unusual incident or stimulating conversation. In fact, you turn in with the expectation of rather a good night's rest. Almost at once the little noises of the forest grow larger, blend in the hollow bigness of the first drowse; your thoughts drift idly back and forth between reality and dream; when—*snap!*—you are broad awake!

Perhaps the reservoir of your vital forces is full to the overflow of a little waste; or perhaps, more subtly, the great Mother insists thus that you enter the temple of her larger mysteries.

For, unlike mere insomnia, lying awake at night in the woods is pleasant. The eager, nervous straining for sleep gives way to a delicious indifference. You do not care. Your mind is cradled in an exquisite poppy-suspension of judgment and of thought. Impressions slip vaguely into your consciousness and as vaguely out again. Sometimes they stand stark and naked for your inspection; sometimes they lose themselves in the mist of half-sleep. Always they lay soft velvet fingers on the drowsy imagination, so that in their caressing you feel the vaster spaces from which they have come. Peaceful brooding your faculties receive. Hearing, sight, smell—all are preternaturally keen to whatever of sound and sight and woods perfume is abroad through the night; and yet at the same time active appreciation dozes, so these things lie on it sweet and cloying like fallen rose-leaves.

In such circumstance you will hear what the *voyageurs* call the voices of the rapids. Many people never hear them at all. They speak very soft and low and distinct beneath the steady roar and dashing, beneath even the lesser tinklings and gurglings whose quality superimposes them over the louder sounds. They are like the tear-forms swimming across the field of vision, which disappear so quickly when you concentrate your sight to look at them, and which reappear so magically when again your gaze turns vacant. In the stillness of your hazy half-consciousness they speak; when you bend your attention to listen, they are gone, and only the tumults and the tinklings remain.

But in the moments of their audibility they are very distinct. Just as often an odor will wake all a vanished memory, so

[1] Copyright, 1903, by the Outlook Company.

these voices, by the force of a large impressionism, suggest whole scenes. Far off are the cling clang-cling of chimes and the swell-and-fall murmur of a multitude *en fête*, so that subtly you feel the gray old town, with its walls, the crowded market-place, the decent peasant crowd, the booths, the mellow church building with its bells, the warm, dust-moted sun. Or, in the pauses between the swish-dash-dashings of the waters, sound faint and clear voices singing intermittently, calls, distant notes of laughter, as though many canoes were working against the current—only the flotilla never gets any nearer, nor the voices louder. The voyageurs call these mist people the Huntsmen; and look frightened. To each is his vision, according to his experience. The nations of the earth whisper to their exiled sons through the voices of the rapids. Curiously enough, by all reports, they suggest always peaceful scenes—a harvest-field, a street fair, a Sunday morning in a cathedral town, careless travelers—never the turmoils and struggles. Perhaps this is the great Mother's compensation in a harsh mode of life.

Nothing is more fantastically unreal to tell about, nothing more concretely real to experience, than this undernote of the quick water. And when you do lie awake at night, it is always making its unobtrusive appeal. Gradually its hypnotic spell works. The distant chimes ring louder and nearer as you cross the borderland of sleep. And then outside the tent some little woods noise snaps the thread. An owl hoots, a whippoorwill cries, a twig cracks beneath the cautious prowl of some night creature—at once the yellow sunlit French meadows puff away—you are staring at the blurred image of the moon spraying through the texture of your tent.

The voices of the rapids have dropped into the background, as have the dashing noises of the stream. Through the forest is a great silence, but no stillness at all. The whippoorwill swings down and up the short curve of his regular song; over and over an owl says his rapid *whoo, whoo, whoo*. These, with the ceaseless dash of the rapids, are the web on which the night traces her more delicate embroideries of the unexpected. Distant crashes, single and impressive; stealthy footsteps near at hand; the subdued scratching of claws; a faint *sniff! sniff! sniff!* of inquiry; the sudden clear tin-horn *ko-ko-ko-óh* of the little owl; the mournful, long-drawn out cry of the loon, instinct with the spirit of loneliness; the ethereal call-note of the birds of passage high in the air; a *patter, patter, patter* among the dead leaves, immediately stilled; and then, at the last, from the thicket close at hand, the beautiful silver purity of the white-throated sparrow—the nightingale of the North—trembling with the ecstasy of beauty, as though a shimmering moonbeam had turned to sound; and all the while the blurred figure of the moon mounting to the ridge-line of your tent—these things combine subtly, until at last the great Silence of which they are a part overarches the night and draws you forth to contemplation.

No beverage is more grateful than the cup of spring water you drink at such a time; no moment more refreshing than that in which you look about you at the darkened forest. You have cast from you the drowsiness of dreams with the warm blanket. A coolness, physical and spiritual, bathes you from head to foot. All your senses are keyed to the last vibrations. You hear the littler night prowlers; you glimpse the greater. A faint, searching woods-perfume of dampness greets your nostrils. And somehow, mysteriously, in a manner not to be understood, the forces of the world seem in suspense, as though a touch might crystallize infinite possibilities into infinite power and motion. But the touch lacks. The forces hover on the edge of action, unheeding the little noises. In all humbleness and awe, you are a dweller of the Silent Places.

At such a time you will meet with adventures. One night we put fourteen inquisitive porcupines out of camp. Near McGregor's Bay I discovered in the large grass park of my camp site nine deer, cropping the herbage like so many beautiful ghosts. A friend tells me of a fawn that every night used to sleep outside his tent and within a foot of his head, probably by way of protection against wolves. Its mother had in all likelihood been killed. The instant my friend moved toward the tent opening the little creature would disappear, and it was always gone

by earliest daylight. Nocturnal bears in search of pork are not uncommon. But even though your interest meets nothing but the bats and the woods shadows and the stars, that few moments of the sleeping world-forces is a psychical experience to be gained in no other way. You cannot know the night by sitting up; she will sit up with you. Only by coming into her presence from the borders of sleep can you meet her face to face in her intimate mood.

The night wind from the river, or from the open spaces of the wilds, chills you after a time. You begin to think of your blankets. In a few moments you roll yourself in their soft wool. Instantly it is morning.

And, strange to say, you have not to pay by going through the day unrefreshed. You may feel like turning in at eight instead of nine, and you may fall asleep with unusual promptitude, but your journey will begin clear-headedly, proceed springily, and end with much in reserve. No languor, no dull headache, no exhaustion, follows your experience. For this once your two hours of sleep have been as effective as nine.

[TO BE CONTINUED]

A Popular History of the United States[1]

IT is to be regretted that President Wilson did not see fit to furnish with a preface the five sumptuous volumes on which he has expended so many years of labor. It is always interesting to have an author's own point of view with regard to the scope and purposes of his book, and sometimes it is necessary to have it in order to avoid doing him gross injustice. In the present case a preface would doubtless have explained why President Wilson saw no reason for mentioning or treating at any length scores of topics which even a writer of a manual for high schools would omit or slur over at his peril. Such topics, for example, as the Clayton-Bulwer Treaty and the imbroglio with Chili under President Harrison. A preface would also probably have thrown some light on what Dr. Wilson regards as constituting the main features of the history of a "people" as opposed to the history of a country or nation. While he does not neglect them, he does not seem to lay special emphasis upon the details of popular life; he is not particularly strong on manners and customs, on economic, literary, or religious matters, and he is evidently much interested in politics, in the expansion of the State, in other words, in what has formed, time out of mind, the staple materials of the average historian. It is true that in many cases he treats these materials in a fresh and illuminating way, and that it is well to have the National evolution of the United States described with candor and impartiality by a man of Southern antecedents who is almost devoid of sectional prejudice. But we should certainly have understood his purposes and methods as a historian much better if he had told us something about them, and not left us to gather them unassisted from his formidable array of pages and pictures.

When the numerous and admirable illustrations are deducted and the amount of actual text is computed, it becomes apparent that President Wilson has not aimed at enrolling himself with minute and exhaustive historians of the type of Mr. Schouler and Professor McMaster. His five volumes stretch beyond their field of labor down to the end of the nineteenth century, and go back so as to take in the field of Bancroft's toils and John Fiske's harvests. And he covers this great stretch of history from the landing of Columbus to the final loss of Spain's colonial possessions in a space not equal, if our computation be correct, to three of Fiske's average volumes. In the matter of scope it is fitter to compare him with John Richard Green in the latter's famous "Short History of the English People." Whether, if President Wilson's work were put into a thick, closely printed volume, it could be advantageously compared with regard to style and general treatment with Green's masterpiece is a question that is perhaps unnecessary and is certainly premature. The use to which it has already been put in a popular magazine, the complete

[1] *A History of the American People.* By Woodrow Wilson, Ph.D., Litt.D., L.L.D., President of Princeton University. Illustrated with Portraits, Maps, Plans, Facsimiles, Rare Prints, Contemporary Views, etc. In 5 vols. Harper & Brothers, New York.

absence of foot-notes, its author's resolute avoidance of a display of erudition and of the temptation to take sides in scholarly controversies, and, finally, his complete independence in choosing and rejecting what topics he will, all seem to prove that President Wilson's volumes are addressed to the general rather than to the special reader.

The first volume carries the narrative to the close of the seventeenth century; the second finishes the Revolutionary War; the third reaches the first administration of Jackson; the fourth ends with the Civil War; the fifth sketches reconstruction and the modern industrial era. Each chapter ends with a selected list of authorities; there are several useful appendixes; and a full index and copious notes on illustrations facilitate reference.

Of these divisions it seems to us that the fourth is the best, which is what one would naturally expect in view of the fact that it covers much of the period embraced in Dr. Wilson's excellent volume, "Division and Reunion." The portrait he gives of Andrew Jackson is probably the most striking of all that he attempts—his strength seems to lie rather in sketching; and that of ex-President Cleveland perhaps comes next—for reasons, one may opine, of neighborly proximity and of general sympathy. Yet it would be unjust to President Wilson not to add that if his portraits or sketches of other great characters in our history, beginning with Bradford and Roger Williams, including Washington, Jefferson, and Hamilton, and ending with Lincoln and Robert E. Lee, do not strike one as being precisely masterly, they certainly give no evidence of lack of sympathy or intelligent understanding on the part of the author.

In the volumes devoted to the colonies President Wilson succeeds, we think, in imparting distinct life to his pages, and gives an interesting and suggestive although scarcely an adequate account of a period of our history often deemed dull by readers and rendered dull by writers. Both for the seventeenth and for the less attractive eighteenth century before the Revolution he is an interesting historian, though he sometimes secures interest by dilating on topics that attract him and quietly omitting or slighting those he prefers not to treat. If any reader turns to his pages to find out what to believe with regard to the story that Pocahontas saved Captain Smith's life, or to get a good idea of such early Indian struggles as the Pequot and King Philip's Wars, or to learn what manner of men the Mathers were, or to be fairly posted on the colonial squabbles over paper money, he will be doomed to disappointment. Even the persecution of the Salem witches gets only half a page, and picturesque, repentant Judge Sewall and unrepentant Cotton Mather are not summoned before the bar of our historian.

On the other hand, it is fair to maintain that whenever he has occasion to deal with the contemporary conditions in England, Dr. Wilson is very lucid and sufficiently full, that he successfully outlines, in a large way, the growth of the colonies, that he brings out well the chief differences between the settlers in Virginia and in Massachusetts, and that in his discussion of some special topics, such as colonial piracy, he leaves little to be desired. Whether the style of these early volumes is altogether to be praised, or is even as good as that of the later installments of the work, is a question about which tastes may differ. It almost seems as if President Wilson, not sure of the interest of his subject, sought to attract by a heightening of a style naturally full of movement and force. Only thus can we account for a not infrequently strained diction, which is less noticeable as the narrative proceeds. We could well forgive, however, such rhetorical touches as "the quaint and cloistered civilization" of the Aztecs and Incas, if our author had only avoided what seems the affectation of affixing "Mr." to the name of almost every character with whom he deals. To meet Ben Franklin thus equipped suggests a smile, which broadens when one reads of "Mr. Swift" and "M. Montesquieu."

Space is wanting to discuss in detail the account given of the Revolution and of the early years of the Republic. Military details are not Dr. Wilson's strong point—the war of 1812 and that with Mexico are insufficiently treated—but he is very successful in describing the framing and adoption of the Constitution. His treatment of the administrations of Jefferson is sympathetic, but Monroe, as seems to be the fashion, scarcely receives full

justice. As we have already said, the narrative reaches its highest level in the volume that begins with Jackson, and perhaps in the pages dealing with the Webster-Hayne debate and the opposing ideals of the Constitution held by North and South. We do not think that President Wilson maintains the same level in dealing with the decade that preceded the Civil War, or with that great struggle, although his description of the Confederate States and his account of reconstruction have many good features. From 1870 on the narrative suffers not merely from the normal difficulties that beset the contemporary historian, but from omissions that seem to us curiously arbitrary.

We must, in conclusion, expand somewhat upon the matter of these omissions, even at the risk of appearing ungracious. They are, of course, not due to carelessness or to laziness, and we must confess they puzzle us. To enumerate all that we have noted would be tedious, but we may add a few to those that have been cited. We find no mention of St. Clair's defeat, the Yazoo scandal, Hull's surrender of Detroit, the second Missouri Compromise, the Panama Congress, the Lecompton Constitution, the founding of the Mormon Church, Brooks's assault on Sumner, Grant's efforts to annex San Domingo, the career of "Boss" Tweed, the great Chicago fire, Speaker Reed's rulings, or the lynching of the Italians in New Orleans. We may add that, so far as we can discover, the Erie Canal, the laying of the Atlantic cable, the visits of Lafayette and Kossuth, the career of Dennis Kearney, are not mentioned. The fight of the Constitution and the Guerrière, the exploits of Daniel Boone, the murder of Lovejoy, the defeat of the Alabama, are looked for in vain.

As long a list could be made of the topics which, in our judgment, President Wilson has slighted—sometimes it would seem in order to make room for leisurely treatment of the topics that interest him. For example, the Great Awakening, the settlement of Tennessee and Kentucky, the battle of New Orleans, Georgia's defiance of John Quincy Adams in the matter of the Creeks, the nullification movement, the abolitionist agitation under Jackson and Van Buren, the part played by Webster in the Compromise of 1850, the conduct of Buchanan's Cabinet on the eve of the war, Lincoln's policy toward the Border States, are scarcely treated in a manner that will illuminate any reader. Nor will considerations of space account for these and numerous other weak passages in President Wilson's narrative. He must have had some guiding principle in his choice and manipulation of his abundant materials, but he has not explained it and we have not discovered it.

It is almost needless to say that a scholar like President Wilson is not likely to be guilty of many sins of commission, although it is equally obvious that they might easily escape an eye that has grown accustomed, since the first chapters, to be on the lookout for sins of omission. Besides some confusion in his treatment of the navigation laws, we have noticed a few trivial lapses. For example, John Adams and Jefferson are stated to have died on July 4, 1825, the correct date being of course 1826. The editor of Motley's correspondence appears as G. T. Curtis, whereas those delightful letters were edited by the better known George William Curtis. It is equally unimportant to observe that illustrations are sometimes found quite far away from the text they are intended to embellish, and that it is not uncommon to encounter the portrait of a man whose achievements are not thought worthy of a word of description. Such blemishes, and even many of the omissions we have noticed, might have been properly passed over in silence, had it been clear that President Wilson had successfully undertaken to write a philosophical account of our National development. The philosophical elements of his work are not, however, specially profound or novel; its descriptive merits are considerable; but its deficiencies as an orderly and inclusive narrative are, to say the least, perplexing.

Books of the Week

This report of current literature is supplemented by fuller reviews of such books as in the judgment of the editors are of special importance to our readers. Any of these books will be sent by the publishers of The Outlook, postpaid, to any address on receipt of the published price, with postage added when the price is marked "net."

Anthology of Russian Literature from the Earliest Period to the Present Time. By Leo Wiener. In Two Parts. Part II. G. P. Putnam's Sons, New York. 6×9 in. 500 pages. $3, net.

This volume, Part II. of Professor Wiener's work, deals with the writers of the nineteenth century, and presents, therefore, selections from those poets and novelists whom the great reading public outside of Russia has in mind when it speaks of Russian literature; that is to say, Pushkin, Gogol, Tolstoï, Turgenev, Dostoévski. The selection from each author is prefaced by a brief biographical or critical note.

Before the Dawn: A Story of the Fall of Richmond. By Joseph A. Altsheler. Doubleday, Page & Co., New York. 5×8 in. 372 pages. $1.50.

A story of Southern life during the war, written from a Northern point of view, which seeks to be fair, but may not be so accepted by all Southerners. The chapters dealing with the battle in the Wilderness are realistic. Most of the scenes are laid in Richmond.

Beginnings of Rhetoric and Composition, Including Practical Exercises in English. By Adams Sherman Hill. The American Book Co., New York. 5×7½ in. 522 pages. $1.25.

British Political Portraits. By Justin McCarthy. Illustrated. The Outlook Co., New York. 5×8¾ in. 331 pages. $1.50, net.

Mr. Justin McCarthy's latest volume may prove to be one of the most popular of his books, and that is saying not a little when one considers the number of people who are always quoting from "A History of Our Own Times." In this volume Mr. McCarthy does for present politics something of the kind of work which he has already done for past history. With illuminative phrase, giving us information not to be had elsewhere, he describes for us the most distinguished and powerful among English political leaders of the day—Lords Salisbury and Rosebery, Messrs. Balfour, Bryce, Chamberlain, Morley, Sir William Harcourt, Sir Michael Hicks-Beach, and others. As might be expected, if any of these statesmen has pronounced himself for or against Irish Home Rule, the fact finds prominent place; and, indeed, so does the consideration of other interesting Irish matters. This is as it should be, however, for we have no critic of English politics as applied to Irish institutions at once more acute and more genial than is Mr. McCarthy. His long experience as a practical politician, as a writer and as an observer, in and out of Parliament, lend weight to his judgments. The charm of his style consists in its union of precision, clarity, color, atmosphere, and, crowning all, a delicate, sometimes staccato, touch of Celtic causticity and wit. No book better represents Mr. McCarthy than does the present volume—an original, vivacious, picturesque, and thoroughly readable account of contemporaneous statesmen in the United Kingdom.

Comedy of Conscience (A). By S. Weir Mitchell, M.D. Illustrated. The Century Co., New York. 4½×7 in. 129 pages. $1.

A vivacious story in the comedy mood, with a light touch, but very well told.

Complete Pocket-Guide to Europe (The). Edited by Edmund C. Stedman and Thomas L. Stedman. William R. Jenkins, New York. 3½×5 in. 505 pages.

Eskimo Stories. By Mary E. Smith. Illustrated. The Rand & McNally Co., New York. 6×8 in. 189 pages.

Experiments on Animals. By Stephen Paget. (New and Revised Edition.) G. P. Putnam's Sons, New York. (The Science Series.) 5½×8½ in. 387 pages.

This book does not deal directly with the anti-vivisectionist. It is not a plea for vivisection, nor is it offered as an argument for or against anything. It is rather an admirably condensed history, beginning with the second century after Christ, of animal experimentation, and of the influence of these experiments upon our knowledge of physiology and the nature, prevention, and cure of disease. Whether or not all this vivisection has been a useless torture of helpless animals the reader is left wholly to himself to decide. To the reasonably open-minded it would appear, however, that had there been no animal experiments there would be no medical science. The book, though thoroughly scientific, is not too technical for general reading. It contains a chapter entitled "An Act Relating to Experiments on Animals in Great Britain and Ireland," and a complete index.

Fundamental Problem in Monetary Science (The). By Correa Moylan Walsh. The Macmillan Co., New York. 5¼×8 in. 383 pages. $1.50.

Reserved for later notice.

Gates of Silence with Interludes of Song (The). By Robert Loveman. The Knickerbocker Press, New York. 4½×7 in. 65 pages.

Here is a poet who flings his doubts and his faiths at one as if he were impatient of the cautious, timid way in which men habitually deal with life and death.

Gold Wolf (The). By Max Pemberton. Illustrated. Dodd, Mead & Co., New York. 5×7½ in. 311 pages.

The "Gold Wolf" is the passion for speculation, the fever for financial supremacy; and Dudley Hatton, manipulator of stocks and bonds in the London market, when introduced to the reader, is a victim already hunted to the point of exhaustion. Up to and somewhat beyond the point where Dudley's wife dies, the book is one of power, and effective as a lesson for people who overwork; the last half of it is not so good as the beginning.

Homeland of the Bible (The): Travels and Studies in the Holy Land and Egypt. By Rev. J. P. Macphie, M.A. The Fleming H. Revell Co., New York. 4½×7½ in. 313 pages.

There is ever room for one more such book, long as the list of such already is. As John Bright said that he had known London for forty years and yet did not know it fully, so with the Holy Land. Forty books leave room for the forty-first, repeating things either before unmentioned, or observed from a different point of view. Mr. Macphie is a good observer and a good reporter from a field of perennially fresh interest, intent on drawing from the Land a better understanding of the Book and its lessons.

Horace Greeley. By William Alexander Linn. Illustrated. D. Appleton & Co., New York. 5×7½ in. 267 pages. $1, net. (Postage, 10c.)

A remarkably interesting life, recounted with an enthusiasm none the less warm because sanely discriminating. Mr. Greeley was perhaps the greatest of American journalists, in the sense of wielding the widest personal influence, and the account of his career is peculiarly attractive—though most sobering—in these days of impersonal metropolitan journalism, when, as has been said, the responsible heads of great papers back their money with their opinions, instead of, like Greeley, backing their opinions with their money. Some of the opinions which Mr. Greeley backed were fantastic isms, but his readiness to espouse them was one of the most attractive features of his character.

If Not the Saloon—What? The Point of View, and the Point of Contact. By James E. Freeman. The Baker & Taylor Co., New York. 5×7½ in. 117 pages. 50c., net.

An earnest plea for the establishment of substitutes which will seem desirable from the point of view of the men to be reached. Workmen are not more ecclesiastical than philanthropists, and there is no reason, says Mr. Freeman, why they should be attracted to ecclesiastical club-rooms. If, however, club-rooms are provided in which their social life may be free from constraint, the better part of them will prefer such club-rooms to the saloons. This proposition is first stated theoretically and then driven home by a concise account of the practical success of the Hollywood Inn, in Yonkers, New York. This organization recorded a membership of over six hundred men its first year, over eight hundred its second, and over a thousand its third, when it was compelled to find larger quarters. These were provided by the generosity of a single philanthropist, Mr. William F. Cochran, and though his gift has lifted the institution out of the class of those to be duplicated in every town, the members of the club, by their dues ($3 a year) and fees, still furnish half of the running expenses (seven thousand dollars out of fourteen thousand). It is an attractive club-house from every point of view, and the saloons have felt its influence. The author modestly believes that the success achieved is due entirely to the plan and not largely to the enthusiasm and tact of its administrator. The account of the Hollywood Inn is the kernel of the book, its best chapter, however, is the one following, entitled "Co-ordination," which sets forth the religious motive for work outside the church to help men as distinguished from work within the church, or directly aimed for its upbuilding. In a few pages, which are eloquent despite the ponderous words used, the author recalls the uninstitutional character of Christ's work, and urges that the divine character of the church must also be established by the service it renders—not seeking its own life, else it will lose it, but seeking the life of the community.

Irish Sketch Book (The). (Prose Works of William Makepeace Thackeray.) Edited by Walter Jerrold. The Macmillan Company, New York. 5×7½ in. 415 pages. $1.

Italy: Handbook for Travellers. By Karl Baedeker. (Fourteenth Revised Edition.) Charles Scribner's Sons, New York. 4×6¼ in. 444 pages. $1.80, net.

Jewish History: An Essay in the Philosophy of History. By S. M. Dubnow. The Jewish Publishing Society of America, Philadelphia. 5×7½ in. 184 pages.

Lays of Ancient Rome. By Thomas Babington Macaulay. (Temple Classics.) The Macmillan Co., New York. 4×6 in. 192 pages.

Lieutenant-Governor (The). By Guy Wetmore Carryl. Houghton, Mifflin & Co., Boston. 5×8 in. 269 pages. $1.50.

American politics and the complexities of capital and labor questions evidently offer attractive fields for our novelists. The special point of value in this work, as in a number of others recently published, lies in the fact that it sets people who would never read a serious treatise on these subjects to thinking about problems of State and municipal government, and ways that might harmonize the interests of the workingman and his employer. It is too much to expect of an author that he shall show a practical way out of the difficulties he pictures, but really Mr. Carryl leaves matters in a sad case. "Alleghenia" (the fictitious name of a State) is saved only when a patriotic assassin shoots the Governor in order that the Lieutenant-Governor may protect the commonwealth and dispense justice!

Light of China (The): The Tâo Teh King of Lâo Tsze; 604–504 B.C. By I. W. Heysinger, M.A., M.D. Research Publishing Co., Philadelphia. 5×7½ in. 165 pages. $1.25.

Old and the New Renaissance (The): A Group of Studies in Art and Letters. By Edwin Wiley. Publishing House of the Methodist Episcopal Church, South, Nashville, Tenn. 5×8 in. 256 pages. $1.20, net.

Reserved for later notice.

Other Room (The). By Lyman Abbott. The Outlook Co., New York. 6×9 in. 120 pages. $1, net.

A familiar presentation in eight chapters of the various aspects in which the life hereafter is illustrated and expounded in the New Testament, in literature, and in human experience. The title of the book, taken from the profound statement of Christ, "In my Father's house are many dwelling-places; if it were not so, would I have told you that I am going to prepare a room for you?" suggests the point of view of the book, which was written, not for philosophical purposes nor as a contribution to theoretical discussion, but in the hope of clearing the way for the doubtful, consoling

the sorrowful, and helping those who are confused.

Pagan at the Shrine (The). By Paul Gwynne. The Macmillan Co., New York. 5×7¾ in. 478 pages. $1.50, net.

How or when Mr. Gwynne obtained his extraordinary knowledge of southern Spain is a question that the reader constantly asks himself, but the answer is, after all, immaterial. The interesting thing is that the author *has* that intimate knowledge and uses it for fictional purposes with brilliant vividness and effectiveness. He makes us as much at home among his Spanish villagers, fishermen, priests, serving-maids, and romantic señoritas, as Miss Jewett does with the people of a New England town. One feels that here is unquestionably the real thing. Nothing could possibly be more amusing or more human, for instance, than the accounts of the leisurely conclaves over neighborly affairs between the barber, schoolmaster, priest, and alcalde—each a type and an unconscious humorist. Equally amusing and racy is the talk of the Andalusian serving-maids with their young mistress. The story is truly rich in local color, in touches of witty characterization, and in the homely proverbial philosophy of the Spanish common people. The plot of the romance, on the other hand, is intensely tragical, at points almost distasteful, but unquestionably powerful. It deals with the expulsion and return of the Jesuits, and with the personal retribution of one of them who has sinned when a young man, has concealed his error, has risen to be a leader in the order, and finally suffers through the death of his illegitimate son. The book is quite out of the ordinary, and will certainly attract attention and discussion.

Pearl-Maiden (The): A Tale of the Fall of Jerusalem. By H. Rider Haggard. Illustrated. Longmans, Green & Co., New York. 5×7¾ in. 465 pages. $1.50.

The festival at which Herod Agrippa was stricken with the malady that killed him, the struggles between Jews and Romans resulting in the destruction of Jerusalem, the triumphal procession of Titus Cæsar through the streets of Rome in which thousands of captives walked—among them the "Pearl-Maiden"—supply the historical background and atmosphere of this story of the love of a "noble Roman" and a Christian maiden. The life of the Essenes in their village makes, too, attractive chapters. There is not here that touch of realism which made wildest fiction read like truth in "She" and "King Solomon's Mines," but there are vigor, charm, and doubtless historical value in the pictures which Mr. Haggard draws of dramatic events and splendid pageants that will never lose interest and significance to a world yet shaken by their influence.

Political Parties and Party Problems in the United States. By James Albert Woodburn. (American Politics.) G. P. Putnam's Sons, New York. 5½×8¾ in. 314 pages. $2.

An exceptionally clear, interesting, and impartial history of American political parties, a lucid explanation of the workings of party machinery, and a strong statement of the moral evils now debasing our political life, and the remedies which an awakened public conscience may apply. A thoroughly good book for the school and for the study.

Principles of Money (The). By J. Laurence Laughlin. Charles Scribner's Sons, New York. 6×9 in. 550 pages. $3, net.

Reserved for later notice.

Private Papers of Henry Ryecroft (The). By George Gissing. E. P. Dutton & Co., New York. 5×7¾ in. 298 pages. $1.50, net.

Proceedings of the Baptist Congress, 1902, at Boston. The New York Baptist Congress Publishing Co., New York. 222 pages. 30c.

Current questions of social, theological, and religious interest are discussed in this volume, and the views of the conservative and of the progressive side are impartially presented, as, for instance, on the question of the necessity of baptism to church membership.

Putnam Place. By Grace Lathrop Collin. Harper & Bros., New York. 5×7½ in. 262 pages. $1.50.

Delicate in charm and of placid quaintness. It does for a New England village exactly what Mrs. Banks's "Oldfield" did for a Southern town. There is little or no "dialect." The sketches are connected only by the general local thread of interest.

Roderick Taliaferro: A Story of Maximilian's Empire. By George Cram Cook. Illustrated. The Macmillan Co., New York. 5×7¾ in. 482 pages.

Lovers of stories of action will find here much that is thrilling and dramatic. The book distinctly rises above the level of the sensational novel. The ex-Confederate soldier who gives the romance its title is a character having individual force and traits. Moreover, the picture of life and war in Mexico just before the downfall of the ill-fated Maximilian abounds in interest and color. The episode of the bull-fight is alone enough to make the story worth reading. In short, the elements which insure popularity seem to be prominent in this romance, and it is not without good literary workmanship.

Short History of Coins and Currency (A): In Two Parts. By Lord Avebury. Illustrated. E. P. Dutton & Co., New York. 4½×7 in. 138 pages. 60c., net.

Reserved for later notice.

Social Cockatrice (A). By Frederick W. Eldridge. The Lothrop Publishing Co., Boston. 5×7½ in. 412 pages. $1.50.

If the ways of the "four hundred" justify all the nonsensical books that are written about the means people adopt to force entrance into the charmed circle, these ways must be foolish indeed. One is inclined to credit the "four hundred" with more sense. The book is rubbish; it is morbid and has no literary value.

Southerners (The): A Story of the Civil War. By Cyrus Townsend Brady. Illustrated. Charles Scribner's Sons, New York. 5×7¾ in. 408 pages.

Mr. Brady announces in the preface to his novel, with a sincerity beyond question, his purpose to write with equal justice to the Blue and the Gray. His account of the battles of Chickamauga and Mobile Bay, especially of the hours with Farragut on his flagship during the last-mentioned struggle, may be of

enthralling interest to old soldiers on both sides and to others who like stirring war tales. A chapter of peculiar pathos is that describing the death of the boy Confederate in Fort Morgan.

Spoilsman (The). By Elliott Flower. L. C. Page & Co., Boston. 5×7¾ in. 324 pages. $1.50.

This Chicago story of "machine politics" seems to show that it is harder for an honest man to be a successful politician or city official than for a camel to go through the eye of a needle. Many of the incidents related, the author says, are true, and the political methods described are taken from the actual experiences of men who have been servants of the public; he has used them "to demonstrate conditions that exist in some wards in all large cities." The book teaches its intended lesson with power. American voters should read it. It has interest, too, as a love story.

Story of a Bird Lover (The). By William Earl Dodge Scott. The Outlook Co., New York. 5⅛×8 in. 372 pages. $1.50, net.

Readers of The Outlook will remember an interview-article about Mr. Scott and his "laboratory" of birds—six rooms in his own house used as a home for nearly five hundred live birds. As the Introductory Note to this book states, Mr. Scott has brought the life of birds nearer to the life of man, has established personal relationships with the whole bird kingdom. The book is not a scientific treatise nor a formal autobiography; it is a readable account of the observations, travel-experiences, and personal adventures of one who has been a bird-lover and bird-student from boyhood.

Story of My Life (The). By Helen Keller. With Her Letters (1887-1901) and a Supplementary Account of her Education, Including Passages from the Reports and Letters of her Teacher, Anne Mansfield Sullivan. By John Albert Macy. Illustrated. Doubleday, Page & Co., New York. 5¼×8 in. 441 pages.

Reserved for later notice.

Stumbling-Block (The). By Edwin Pugh. Illustrated. A. S. Barnes & Co., New York. 5×7½ in. 313 pages. $1.50.

A love story of some originality and of good literary quality, wit, grace, pathos, and tenderness. It ought to have been better named.

Sunbonnet Babies' Primer (The). By Eulalie Osgood Grover. Illustrated by Bertha L. Corbett. Rand, McNally & Co., New York. 6×8 in. 110 pages. 40c.

Tioba and Other Tales. By Arthur Colton. Henry Holt & Co., New York. 5×7⅛ in. 231 pages. $1.25.

Eleven stories of good literary quality, delicate humor, and subtle comprehension of human nature are comprised in this volume. When one has read them, however, the question rises, Are they not sketches and studies rather than stories?

William Ellery Channing, Minister of Religion. By John White Chadwick. Houghton, Mifflin & Co., Boston. 5×8 in. 463 pages. $1.75, net.

From the time when, as a boy, he noted the inconsistency between the harsh preaching of the Calvinistic Puritans of his day and their cheerful demeanor, the dignity of human [illegible] was the burden of Channing's thoughts; and throughout his whole ministry the dignity of human nature was the burden of his preaching. It is with this message—that the soul of man is not a miserable, weak, worthless thing, but in the sight of God a great thing, instinct with God's own life—that William Ellery Channing will chiefly be remembered. Channing was a conservative, or evangelical, Unitarian; Mr. Chadwick, his biographer, is a radical Unitarian. All interpretations of Channing's religion, and specifically Channing's theology, which are to be found in this book ought to be read in the light of that fact. In this particular, Theodore Parker, whose life also Mr. Chadwick has ably written, was undoubtedly a more congenial subject, for Parker was an early representative of a school in Unitarianism that differs almost if not quite as much from those who may be called "Channing Unitarians" as it does from most men of "liberal evangelical" beliefs. Such classification, of course, is not definite, but it is suggested by the reading of this volume. Of Channing's character, on the other hand, Mr. Chadwick writes with an understanding that brings persuasion to his readers. The spirit of those among New England people who are best typified by the inhabitants of eastern Massachusetts is here well exemplified in both subject and author. It is hardly necessary to say that Mr. Chadwick has written the story of this "Minister of Religion" with clarity and charm of style.

Wind in the Rosebush (The), and Other Stories of the Supernatural. By Mary E. Wilkins. Doubleday, Page & Co., New York. 5×8 in. 217 pages. $1.50.

When Miss Wilkins's first ghost story appeared in a magazine, it attracted much attention as marking a new departure in the work of an exceedingly popular author. In themselves these tales are not equal to her stories of New England life, and they are not "creepy" enough to take high rank as ghost stories; but for fine character-drawing and as studies of human life and motive they are an enlargement of the debt American literature owed the writer before their appearance.

Winter India. By Eliza Ruhamah Scidmore. Illustrated. The Century Co., New York. 5⅛×8½ in. 400 pages. $2, net.

Miss Scidmore's former books on the East have had a wide reading. Here one finds the same qualities—ease of narrative style, a keen sense of the strange and picturesque, excellent descriptive powers. She went everywhere that tourists go, but she saw many things that tourists do not see. Calcutta at Christmas time, Delhi, Simla, the Taj Mahal, each has its own chapter; and it is to the author's credit that she throws so many new lights on topics often before treated. The book can be cordially commended for its entertaining qualities and because it gets away from conventional laudation. There are many pictures from photographs, and a notably handsome cover.

When John Bull Comes A-Courtin' and Other Poems. By Lucien V. Rule. The Caxton Publishing Co., Louisville, Ky. 5⅛×8¾ in. 30 pages. 50c.

Correspondence

A Catholic Protest

To the Editors of The Outlook:

In The Outlook of March 21 the article entitled "The Impressions of a Careless Traveler" has roused me to vigorous protest. Scarce a paragraph can pass unchallenged. Truly has it been said, everything is in the eye of the beholder. If one looks with the eye of a Puritan and Protestant, one perceives only form; the spirit, the meaning of the various symbols, are hidden, not because they do not exist, but because the onlooker—the critic—does not apprehend them. Does one judge of the beauty of a language of which one is ignorant? Is a man competent to judge a ritual he does not understand? Such an attitude is as one standing outside the church—the simile is not new—seeing only the outer form, the dull stained glass, the leaded panes; it is to those inside that the true beauty is revealed. How is one to account for the fervent and lively faith of Catholics the world over, who look upon the Holy Father as the visible head of the Church on earth, if such "petrifaction" as you say exists? As for the attitude and appearance of the priests, there are good, bad, and indifferent in every fold; some who follow the letter while they ignore the spirit of the law, whether it be of God or man. If these priests appeared to you "gross and carnal," it was surely not because they were priests, but in spite of it. It is strange logic that announces, "The same dogmas are taught as in the fourteenth century, because they are taught in precisely the same linguistic forms." Does it not occur to you that they are the same because they are true, and therefore do not change? Should you not, in all fair-mindedness, read the teachings, the dogmas, study the ritual of the Church you so wantonly attack, and in admitted ignorance—not in privately expressed views, but published broadcast?

Most probably you have other Catholic subscribers, and I doubt not that I express, though feebly, their feeling on the foregoing subject.

Washington, D. C. MAY R. MULLAN.

[The article which you criticise gives, as its title declares, "impressions" of a traveler, not conclusions of a student. They are impressions, not of the Roman Catholic Church, but of certain churches and rituals as they were seen in Rome. We think that a Catholic might be glad to know how those churches and that ritual impress a Protestant onlooker, just as, to use your figure, a worshiper inside a cathedral, who was not able to go outside, might be glad to know how the stained-glass windows look to one outside who is not able to get within.—THE EDITORS.]

Thomas Cook & Son Explain

To the Editors of The Outlook:

In the very interesting article entitled "The Impressions of a Careless Traveler," which appeared in your issue of February 14, a statement is made which has given a somewhat widespread impression that we are quite sure the writer never intended, and, as it is calculated to injure our business, we shall be glad of an opportunity to print a word of explanation giving our side of the incident.

The writer of the article says that but very little was seen of Cook's representative in connection with the *contretemps* at Yalta. We submitted the article to our conductor who had charge of the party, and he replies: "The statement of 'L. A.' is correct so far as the details are concerned. While the party was *en route* from Sevastopol to Yalta a letter was sent to me by the first officer of the steamship Prinzessin Luise stating that the passengers could not embark as per programme, and this letter was sent by a lady journalist, who, being a German, immediately advised all her fellow-countrymen who were in the party. There were fifty-two carriages, and I naturally stayed at Sevastopol until all had left, and consequently arrived at Yalta somewhat behind the party. Immediately the letter came into my possession I stood up in one of the carriages and, by reading it aloud, did my best to let everybody know the situation, and it was doubtless owing to there being so many carriages bunched together, and the attendant bustle and noise, that 'L. A.' failed to get the news correctly, and it was that which led to his going to the unsatisfactory hotel he describes in his

article instead of a much better one, the Hotel de Russie, which I recommended, and to which, in company with many of the party, I subsequently went."

The whole trouble arose through what may be fairly described as "an act of God," that is to say, it was raining, the wind was blowing hard, and it raised such a high sea that the captain and officers very properly decided that it would not be quite safe to embark the passengers until the weather moderated. No responsible, reliable, or well-managed firm or company, except through an insurance policy, will make a contract providing against what is usually described all over the world as "an act of God," and in all our public announcements everywhere, including the pamphlet describing the excursion from Sevastopol to Yalta, there will be found in a prominent position the following paragraph, and of course "L. A." and everybody else on the boat were booked subject thereto:

Thomas Cook & Son are not responsible for loss of time or money consequent on the irregularity of steamship or railroad service, sickness, or any calamity or hindrance caused by circumstances over which they have no control; and should delays or alterations occur through such causes, the passengers will have to pay any additional expenses for living and accommodation in hotels or on steamers which may be incurred beyond specified period.

The liability of roads and railroads in the neighborhood of mountains to damage from storms and other influences beyond human control renders it necessary that we should announce that we cannot be responsible for detention or expenses incurred by deviation of routes occasioned by circumstances of this nature, nor for delays or deviation that may be caused through the railways being required for military purposes. The most that companies will do under such circumstances is to repay the value of any ticket, or proportions of ticket, not used for lines thus rendered impassable; and all claims in such cases must be sent in writing, accompanied by the unused tickets, within one month from the date for which such tickets were available.

At that season of the year the weather conditions are usually such that landings and embarkations can be freely made without difficulty, delay, or danger, and it was not an unreasonable thing to expect that the programme would be carried out in its entirety without change.

With regard to the possible refund on account of the party being unable to take the drive and a lunch on the third day, the weather conditions made this impossible, and, as that was no fault of ours, and the carriages and lunch were all contracted, provided, and had to be paid for, we submit that it is not reasonable that we should be expected to lose a considerable sum of money on account of circumstances over which we could have absolutely no control. The whole arrangements for landing and embarkation in the Black Sea were entirely under the control of the captains and officers of the Prinzessin, and the boats required therefor were furnished by the owners of the vessel.

THOMAS COOK & SON,
per GEORGE EADE, Manager.

The Education of the Negro

To the Editors of The Outlook:

Negroes will read Mrs. Hammond's article in a recent number of The Outlook with deep appreciation. The editorial comment upon it, however, is not so satisfying, and I venture to call your attention to one point. You say: "We believe in the higher education for the negro. . . . But this is not its [the race's] first need. Its first need is the capacity to support itself, and the purpose to support itself by honest industry." This does not seem to me a happy statement of what I conceive to be your position. In the first place, your words could be taken to imply that the work of the teacher and physician was not "honest industry," or directly contributive thereto. This, of course, you did not mean. Again, is it just clear as to what you mean by "first" in these sentences? Do you mean that at present the training of teachers and some professional men should be entirely neglected? Or do you simply mean that at present the major part of educational work among negroes must be directed toward the proper equipment of common and industrial schools, while a smaller amount of money and effort must go to the equally important work of higher training?

W. E. BURGHARDT DU BOIS.
Atlanta University, Atlanta, Ga.

[We think our meaning was sufficiently clear, that education fitting for self-support should take the first place in the education especially of a dependent race. We should be glad to think that all those who are interested in educational work for the African race in this country entertain this opinion.—THE EDITORS.]

Libby's Concentrated Soups

are just choice stock soups with nothing but the natural flavor of the beef, chicken, vegetables and seasoning. There's no "Secret Process" about them.

They are delicious and wholesome because of their purity. Made in Libby's spotless kitchens.

Contents of **one can makes six large plates,** ready to serve by adding boiling water.

Send for booklet "How to Make Good Things to Eat." Libby's 164 home Atlas sent anywhere for five 2-cent stamps.

Libby, McNeill & Libby, Chicago

WE RECEIVE LETTERS from housekeepers who have used our Cocoa and Chocolate for many years, stating that lately when they have ordered our goods other goods of greatly inferior quality have been sent to them. We find it necessary, therefore, for the protection of those who want our Cocoa and Chocolate, to warn them emphatically against these fraudulent practices and to ask them specially to look at every package they receive and see that it bears our trade-mark and correct address, as given below. Under the decisions of the United States courts no other cocoa or chocolate is entitled to be labeled or sold as "Baker's Cocoa" or "Baker's Chocolate."

Trade-Mark

If housekeepers will kindly let us know when other goods are substituted for ours, we will take steps promptly to prevent them from being further imposed upon.

By Lillian W. Betts

The Outlook Books

THE STORY OF A BIRD LOVER

By William E. D. Scott

"Replete with information about birds every one knows—not about fanciful and imaginary birds. Mr. Scott is a naturalist and not a romancer. His book is never tiresome, never dull, for it is full of birds, and birds are among the delightful things of life."—*St. Paul Globe.*

$1.50 net (postage 15 cents).

BRITISH POLITICAL PORTRAITS

By Justin McCarthy

Personal sketches of the men who are playing the foremost parts in the government of the United Kingdom—Balfour, Salisbury, Rosebery, Chamberlain, Morley, Bryce, and others. "Justin McCarthy has the rare power of infusing interest into everything he writes. . . . Not only of timely interest, but also of permanent value as the frank and friendly impressions of a contemporary statesman and historian."—*Chicago Record-Herald.*

$1.50 net (postage 15 cents).

A PRAIRIE WINTER

By an Illinois Girl

A series of little essays on the coming of winter on the prairie, its enduring and its passing, written by a girl whose heart is full of joy in Nature and the outdoor world. Its pages are full of color and picturesqueness. $1.00 net (postage 8 cents).

THE OTHER ROOM

By Lyman Abbott

A series of earnest, helpful essays on the themes of Death and Immortality. "Dr. Abbott writes with the thought in his mind of the hopes and fears, the doubts and longings, that confront men as they think of the life beyond death, and such must find helpfulness in the essays."—*New Bedford Evening Standard.*

$1.00 net (postage 9 cents).

PARABLES OF LIFE. By Hamilton Wright Mabie. Dr. Henry van Dyke says: "Poetic in conception, vivid and true in imagery, delicately clear and beautiful in diction, these little pieces belong to Mr. Mabie's finest and strongest work."
$1.00 net (postage 9 cents).

RELIGIOUS LIFE IN AMERICA. By Ernest Hamlin Abbott. "To my mind the book is an interesting and valuable study of a vital subject. It is sincerely written and sincerely felt."—JAMES LANE ALLEN.
$1.00 net (postage 15 cents).

THE OUTLOOK STORY BOOK FOR LITTLE PEOPLE. Edited by Laura Winnington. "One of the most beautiful and interesting of all of the attractive books that have been published in recent years for the children."—*Charleston News and Courier.*
$1.20 net (postage 24 cents).

THE MAN WITHOUT A COUNTRY. By Edward Everett Hale. This special edition of Dr. Hale's greatest story, limited to two thousand and eighty copies, was published on the eightieth birthday of the venerable author. $3.00 net (postage 10 cents).

THE PHILIPPINES. By William H. Taft and Theodore Roosevelt. "Governor Taft's paper gives the reader a better grasp of the Philippine situation than can be secured from any other statement ever made."—*Topeka Capital.* $1.00 net (postage 9 cents).

THE ASCENT OF THE SOUL. By Amory H. Bradford. "I doubt if any richer gift has been made, even by Dr. Bradford, to the illumination and inspiration of our Christian life."—DR. F. W. GUNSAULUS. $1.25 net (postage 14 cents).

FROM GRIEG TO BRAHMS. By Daniel Gregory Mason. "For clarity of exposition and full rich meaning must convince not only thoroughgoing music lovers, but the general reader, of their superior excellence."—*St. Louis Republic.*
$1.50 net (postage 11 cents).

THE TRAGEDY OF PELÉE. By George Kennan. "The most graphic and interesting of all accounts of that terrible devastation."—*St. Paul Dispatch.* Illustrated by George Varian, and with photographs by the author. $1.50 net (postage 13 cents).

FOLK TALES OF NAPOLEON. Translated by George Kennan. HON. THOMAS E. WATSON, author of "The Story of France" and "Napoleon," writes: "This is a most interesting book. . . . Every Napoleonic collection should include this remarkable volume." $1.00 net (postage 10 cents).

SEEN BY THE SPECTATOR. "The Spectator's volume is a rare book, in the reading of which a great deal of solid enjoyment may be taken."—*Boston Transcript.* $1.00 net (postage 12 cents).

Lavender and Old Lace

By MYRTLE REED

Author of "Love Letters of a Musician," "The Spinster Book"

Dainty and full of delicate fancy, this latest work of a favorite writer charms by its manner, pleases by its cleverness, and interests by its tale of true love, which sentiment is treated as the most exalting of emotions, but without the slightest touch of materialism.

A Book to be Enjoyed

"With exquisite skill quite her own, the author individualizes in this gracefully told story, the heart's devotion at its most exalted and exalting emotion. Miss Reed has the rare genius of attuning love to thrilling heights without a touch of coarse materialism. Withal she builds on a practical plane since her characterization is human."—*Chicago Journal*

The Town Beautiful

The Outlook offers prizes of $250 and $100 for the best two illustrated articles on this subject. The articles must not exceed three thousand words in length, and must reach the office of The Outlook on or before September 1, 1903. The competition is open both to subscribers and non-subscribers. The illustrations may be of any kind suitable for reproduction in The Outlook.

The articles relating to "The Town Beautiful" may describe any plan, system, or invention by which a community, large or small, village or city, has been made more attractive or less unsightly. It is not proposed to deal with purely political, municipal, or scientific improvements, such as water or gas systems, drainage, or the erection of public buildings, but rather with that which appeals to the artistic sense, that which gives charm and external beauty to the place, or gives its people opportunity for out-of-door enjoyment, or increases the love of nature and brightens the common life. As concrete instances of what is meant may be cited the design and carrying out of the recreation piers and parks in New York, the home garden plan of Cleveland (described by Mr. Cadwallader in The Outlook of February 1, 1902), the school garden plan of Dayton and other places (described by Mr. Dick in The Outlook of August 2, 1902), or the work of the Village Improvement Society of Stockbridge, Mass., the first society of the kind, we believe. These illustrative examples will suggest others; not merely the extent of the undertaking, but its originality, novelty, and ingenuity, and the relative skill in applying means to an end, are to be most considered; a little village may have done something more suggestive and interesting than the great city with its parks and boulevards. Village Improvement Societies are invited to compete, as well as individuals, and if the prize is gained by a society, it might be applied for some public or memorial purpose. In this connection attention is called to Mr. McFarland's article on "The Great Civic Awakening" in this issue of The Outlook.

The Week

The Northern Pacific Merger Declared Void: The Facts

The United States Circuit Court of Appeals, the four Justices constituting the court concurring, has decided that the Northern Securities Company is an illegal combination in restraint of trade, and has enjoined the Company from voting on the stock or exercising any control over the two parallel roads, the Northern Pacific and the Great Northern Railroad, which were merged by the organization of the Northern Securities Company, and has enjoined the railroads from paying any dividends to the Northern Securities Company. An appeal will be taken to the United States Supreme Court immediately. The facts in this case have heretofore been put before our readers in some detail. In this paragraph we simply restate them in their simplest form, so far as is necessary to an understanding of the principle involved in this decision. The Northern Pacific and the Great Northern Railroad are two lines of road running across the continent from the Mississippi River to Puget Sound, parallel to each other, and heretofore competing with each other. In 1901 certain large and influential stockholders of the two companies, who had actual control of the two roads, conceived the design of practically uniting them, by creating a corporation which should buy a majority of the stock in both of the roads, and thus should become practical owner of them both. For this purpose the Northern Securities Company was organized, under the laws of the State of New Jersey, and shortly thereafter purchased a large majority of the stock of both the competing railroads. The scheme thus consummated led inevitably to the results thus defined by the Court in its opinion:

First—It placed the control of the two roads in the hands of a single person, to wit, the Securities Company, by virtue of its ownership of a large majority of the stock of both companies.

Second—It destroyed every motive for competition between the roads engaged in inter-State traffic, which were natural competitors for business, by pooling the earnings of the two roads for the common benefit of the stockholders of both companies.

The question before the Court was whether such a combination was a violation of the Anti-Trust Law, which forbids all combinations "in restraint of trade or commerce." The defendants held that it was not, on the following among other grounds: (1) That any one can legally hold property unlimitedly, and it is only the use of that property which can be restricted by the Anti-Trust Law; (2) that the combination was accomplished before the legal proceedings were taken, and therefore it is too late to prohibit the combination; (3) that they can be enjoined from doing any act that is in restraint of trade, but not from the mere combination, which is not itself a restraint of trade; (4) that the combination was in fact formed not to restrain but to promote commerce, by enlarging the volume of inter-State traffic, and thus benefiting the public.

The Northern Pacific Merger Declared Illegal: The Principles Involved

The Court unanimously holds that the combination is itself in restraint of trade, and illegal according to the familiar rule that every one is presumed to intend what is the necessary consequence of his own acts; that the agreement between competing railroads, which has the effect to restrict the right of either of them to name such rates of freight or passengers as it pleases, is an agreement in direct restraint of commerce, within the meaning of the act, in that it tends to prevent competition; that Congress has the Constitutional right to forbid such contract or combination; that its power over inter-State commerce is supreme and far-reaching, and acknowledges no limitations other than such as are prescribed in the Constitution itself; that in the exercise of this power it has a right to forbid, and by the Anti-Trust Law it has forbidden, any contract or agreement which tends to the suppression of competition; and, finally, that competition "would not be more effectually restrained under and by force of the existing arrangement, if the two railroads were constructed under a single charter." The defendants in this case include the Northern Securities Company, the two great railway companies, and such capitalists as James J. Hill, D. Willis James, John S. Kennedy, and J. Pierpont Morgan. The capital stock of the Securities Company amounted to four hundred millions of dollars, that

sum being the amount required to purchase the total stock of the two railroad companies at the price agreed to be paid therefor. This case is, therefore, of the first National importance as indicating that financial considerations do not control the courts of the United States, a charge which has sometimes been brought by ill-informed or reckless writers. Enormous pecuniary interests were involved in this case, and there is not the least reason to suspect that the Court in its decision was affected either by the money interests involved on the one hand or by popular prejudice upon the other. It is important as indicating the power which the United States Government already possesses under the Constitution as it now exists. Attorney-General Knox's opinion respecting the extent and effectiveness of these powers has thus received striking confirmation, and the opinion that there is no necessity to amend the Constitution so as to increase the powers of Congress is to a considerable extent sustained. Finally, the Anti-Trust Law itself has received a judicial interpretation which, if confirmed by the Supreme Court of the United States, indicates its far-reaching character. For if the provisions of that law cannot be evaded by a contrivance under which the same persons become practically the owners of two competing roads, it is difficult to see how any plan can be formed successfully to evade the provisions of the law and put an end to competition between parallel lines.

The Northern Pacific Merger: The Trend of History

Even more important than in its direct legal effects is this decision as an indication of the trend of history in the United States. In 1887 the Federal Inter-State Commerce Act was passed, by which, for the first time in the history of this country, Congress made a serious attempt to regulate railroad traffic in the interest of the public. Up to that time the right to exercise any such regulation was vehemently denied. Railroad representatives insisted that a railroad was private property, and that Congress might as well undertake to regulate the price of bread or the size of the loaves as to regulate freight rates or freight conditions. That was twenty-five years ago. Now we have the United States Court deciding that Congress has not merely a right to prohibit unjust and unreasonable rates, but a right to prohibit such an ownership of competing railroads as, by destroying competition, tends to produce unjust and unreasonable rates. And while the decision is received with some criticism in certain quarters, it is generally welcomed by conservative journals and conservative lawyers, and the popular, and we judge the professional, opinion appears to be that it will probably be confirmed by the Supreme Court when it reaches that tribunal. Railroad officials themselves welcome it. The New York "Times" publishes a statement from the President of the Seaboard Air Line Railway which characterizes this decision "as one of the greatest blessings and brightest promises for railroad interests and general business that the country could have," and one that "voices the judgment of probably nine-tenths of the more conservative business men of the country." The courts are naturally and properly the most conservative element in a democracy. They are last to respond to change in public sentiment. They constitute an invaluable check on those sudden revolutions in feeling and opinion to which democracy is always liable. When, therefore, the courts recognize as definitely as they are now doing the right of legislation to enforce, by new methods adapted to our times, the principle, almost as old as Anglo-Saxon jurisprudence, that private rights are always subordinate to the public welfare and always subject to public control, the assurance that the American people will never surrender this principle receives a new confirmation. Twenty-five years ago one might have asked with some foreboding the question, Will the great corporations control the people, or will the people control the great corporations? That can hardly be regarded as a question any longer. It is considerably more than twenty-five years since Senator Booth, of California, put the railroad problem in a nutshell in the saying, Formerly the highways were inconvenient, but they were free; now they are convenient, but they are private property. This decision goes a long way toward modifying that statement, by its recog-

nition of the principle, which previous less noticeable judicial decisions have recognized, that the railroad is a public highway, and the railroad corporation a public servant created to manage this highway for the benefit of the public.

❁

The President on the Philippines

In his speech at Fargo, North Dakota, the President reaffirmed his convictions respecting the results of the occupation of the Philippine Islands by the United States. He quoted the promises of President McKinley three and a half years ago, that Congress would provide for their material interests, advance their people in civilization, not govern them as vassals or serfs, give them a government of liberty regulated by law and honestly administered, and insure them freedom of religious worship and protection in life, liberty, and the pursuit of happiness. These promises, President Roosevelt affirms, have been fulfilled. That some instances of oppression and wrong-doing have occurred he frankly admits, and deplores; but he declares that such offenses have been the exception, not the rule, and that the War Department has taken every step in its power to punish the offenders and prevent a repetition of the offenses. He praises Governor Taft and his associates for the wisdom and efficiency of their administration, and declares that they are "as upright, as conscientious, and as able a group of administrators as ever any country has been blessed with." Associated with them are the best men among the Filipinos, "so that the great majority of the officials, including many of the highest rank, are themselves natives of the islands." He rehearses what Congress has done: it has conferred on the Filipinos the present admirable civil government; has given them an excellent currency; has provided a native constabulary; has reduced the tariff twenty-five per cent. on Filipino articles brought to this country—the President hopes that a further reduction will be made by the next Congress; and has appropriated three million dollars for immediate relief of the people from sudden and unexpected disasters. Finally, the President praises the army, not only for its past service in putting down anarchy, but also for its present service as "one of the instruments through which Governor Taft does his admirable work." The most interesting feature in the President's speech, however, is his quotation from José Rizal, the most honored hero of Philippine history. Shortly before his death, in a message to his countrymen bearing date December 16, 1896, Rizal "condemned unsparingly the insurrection of Aguinaldo . . . and pointed out the path his people should follow to liberty and enlightenment," and declared that the development of the people by means of education and of industry must precede the establishment of independence. "I cannot do less," Rizal says, "than condemn, and I do condemn, this absurd and savage insurrection planned behind my back, which dishonors us before the Filipinos and discredits us with those who otherwise would argue in our behalf. I abominate its cruelties and disavow any kind of connection with it, regretting with all the sorrow of my soul that these reckless men have allowed themselves to be deceived." The Springfield "Republican," probably the strongest anti-administration organ in New England, endeavors to break the force of this testimony by the suggestion that the message may have been forged by the Spaniards, but it offers no evidence whatever in support of this suggestion. The only reason, apparently, for thinking it forged is that the "Republican" cannot question the patriotism of Rizal, and therefore thinks itself compelled to question his authorship of this almost dying message to his people.

❁

The Candidate Without a Party

The most astonishing result of the municipal elections in the West last week was the re-election of Mayor Jones, of Toledo. It is true that this was his third re-election, but the wonder of the situation grows each time it is repeated. This year the press despatches announced that the Republicans (the majority party) were thoroughly united, and it also announced that both wings of the Democratic party were pulling together, but, despite this, Mayor Jones, "the man without a party," was re-elected, receiving nearly as many votes as the Republican and Democratic candidates combined. The newspaper

press of the city was united against him. The "Blade" (Republican), the "Bee" (Democrat), and the "News" (Independent), not only opposed Mayor Jones, but did not recognize the fact that he was in the field. Only one daily paper—and that printed in German—was willing to do so much as publish Mayor Jones's letter of acceptance. In the campaign two years ago one of the stories brought East was that of a Republican who entered the office of the "Blade" and was surprised to find that three employees spoken to all expected to vote for Mayor Jones. When he exclaimed, in amazement, "Why, I thought the 'Blade' was supporting the Republican candidate!" he received the answer, "The 'Blade' is supporting him, but it is the only thing on the premises that is." This year the situation was evidently not dissimilar. One of the results of the attempt of the newspapers to make Mayor Jones appear ridiculous is that they have made themselves appear so. In most cities there is still a superstition that papers representing the different parties are certain to compete with one another in presenting all the news. Toledo has learned—what Detroit learned in Mayor Pingree's day—that newspapers, no matter what their party affiliations, may be and sometimes are owned by members of the same small commercial group, having precisely the same commercial interests and sympathies, and ready to combine to suppress news unwelcome to them. But the repudiation of newspaper leadership in Toledo was less remarkable than the repudiation of party leadership. In the short letter of acceptance which these papers refused to print, Mayor Jones stood for the principle that the guidance of party machines must be repudiated. He said: "As surely as I believe that I live, I believe that we can never know the meaning of democracy and equal brotherhood of all men in government until we abandon political machines, and the people—the sovereign power—select their own candidates through nomination by petition, or some better method yet to be discovered that will take this important duty out of the hands of the political bosses, the aristocracy of our day." This platform appears impracticable to those who know that only through organization, as a rule, have the poorer classes been able to unite upon the candidates expressing their sympathies; yet so thoroughly tired have the people become of the despotism of the machines nominally created for their service, and so completely do the people of Toledo believe in the fidelity of Mayor Jones, that they expressed their weariness of the machines and their belief in Mayor Jones by giving him a third triumphant re-election.

Street Railway Issues in Cleveland and Chicago

Less picturesque but not less important were the results of the city elections in Cleveland and Chicago. In both cities the present Mayors were re-elected mainly because of the uncompromising stand they had taken for city control of city street railways. Mayor Johnson stood for immediate three-cent fares and ultimate public ownership. Mayor Harrison stood for an immediate referendum on franchise extensions and ultimate public ownership. In both cities the Republican candidates—Goulder in Cleveland and Stewart in Chicago—were men of fine personality, who had united parties behind them. But party lines in both cities counted for less than usual, and the Republican candidates lost support at the polls because they were supported in the campaign by interests identified with the traction companies. In Cleveland Mayor Johnson was helped by the relentless fight which the corporation wing of the Republicans had made against his street railway measures—resisting them in the Council, in the courts, and in the Constitutional Convention. In a most striking way, says the Cleveland "Plain Dealer" (Democratic), the measures designed to deprive Mayor Johnson of his power have resulted in making him the master of the whole situation. By overthrowing the charter his enemies took away from him the power to appoint the Board of Public Safety without the concurrence of two-thirds of the City Council. Heretofore the Council has been Republican, but this year the voters elected a Council Democratic by more than a two-thirds majority, thus giving the Mayor a free hand. Another issue which entered into the campaign was that of taxation—not the single tax, for which Mayor Johnson stands theoretically, but

the equal taxation of all property, corporate and individual, for which he stands practically. His plurality was nearly six thousand—or nearly as great as two years ago, when the Hanna Republicans were lukewarm in the support of the party ticket. In Chicago Mayor Harrison's re-election was in like manner largely due to the enemies he had made. His Republican opponent stood upon a platform demanding the public ownership of street railways as unequivocally as did his own; but the fact that the traction interests were on the side of the Republican candidate led large numbers of Republicans to side with Mayor Harrison. The only tangible difference between Mayor Harrison's platform and Mr. Stewart's was that the Mayor demanded that no franchises should be extended by the City Council without being submitted to the voters for their approval, while Mr. Stewart believed this precaution unnecessary to guard the people's interests.

❀

Victories and Defeats for Independent Voters

In all of the cities just named independent voting was conspicuously present. In Chicago the Municipal Voters' League scored an even greater triumph than a year ago in the elections for Councilmen. Twenty-six of the thirty-five newly elected Aldermen had the League's positive indorsement, and two others were guardedly recommended as likely to make good Aldermen. The League, it must be understood, does not give its indorsement to every candidate who subscribes to its articles of faith. Fully half of the candidates it condemned had signed its platform calling for the enforcement of the civil service laws, the limitation of franchise grants to a maximum of twenty years, with a reserved right of the city to institute public ownership at or before their expiration, and the application of the referendum "to the settlement of all important policies with reference to public utilities." To secure the indorsement of the League the professed support of these excellent principles had to be backed by a public record consistent therewith, or by a private record for integrity. In two wards the League supported labor candidates, and in one the Socialist candidate. This last action was exceptional, but the League's statement of the case made it clear that the principles of good government required it. Its report upon the three candidates was in brief as follows:

THIRTY-THIRD WARD.

Unite on Johnson. Credit of ward at stake.

Raleigh I. Dabney—Republican; agent Lackawanna Freight Line; residence, etc. . . . Indicted for perjury in connection with scandalous divorce suit; . . . witness of defense in recent trial of O'Donnell and Brady for jury bribing; evidence contradicted by all reputable witnesses; . . . a most dangerous man to elect to the Council; signed League platform.

Dr. Amos C. Hall—Democrat; physician, 7526 Ellis Avenue; political affiliations bad; unfit and wholly undesirable candidate; signed League platform.

William J. Johnson—Socialist; wood-carver for Pullman Company; secretary of the Chicago branch of the International Carvers' Association of America; lives 346 Fulton Avenue, Pullman; born in Norway; 28 years old; resided in ward fifteen years; studious; well informed; reputation excellent; well qualified for office; represents the conservative element of his party and is very popular; his candidacy affords the voters of a decent ward the only way out of an otherwise hopeless situation.

Mr. Johnson, we may add, was elected by a small plurality, receiving thirty-one hundred votes in a ward where the head of his ticket got but eleven hundred. In the new Council of seventy members (half of whom were elected last year) fifty-three were indorsed by the independent voters' organization. And this in Chicago, where ten years ago many practical men could see no other escape from councilmanic corruption except the abandonment of legislative government and the concentration of municipal authority in the hands of the Mayor! Unfortunately, however, this great victory for independent voters in Chicago was accompanied last week by defeats no less conspicuous in Cincinnati and St. Louis. In Cincinnati the Cox ring candidate, Fleischmann, was re-elected by a large majority, and in St. Louis the candidates for Councilmen recommended by Circuit Attorney Folk were uniformly defeated. In Cincinnati the ring posed as the defenders of the city's good name, charging the critics of corruption with the lack of civic patriotism. In our day as in Dr. Johnson's, patriotism is the last refuge of scoundrels. In St. Louis the machine victory was largely due to the apathy of the voters in a supposedly

unimportant campaign. Hardly half of them came to the polls. A St. Louis correspondent writes us, since the election, that the course pursued by the Democratic city machine toward Mr. Folk has reacted upon itself, and that "if a State Democratic Convention were held now in Missouri, all the efforts of the machine couldn't prevent the nomination of Folk for Governor."

❁

The Strike in Holland Collapses

The general strike in all the transportation industries in Holland, initiated at the beginning of last week to prevent the enactment of the pending anti-strike bills, failed of its object and utterly collapsed before the week had ended. Two of the three bills proposed by the Ministry for the prevention of strikes related only to the formation of a railroad brigade to insure a regular service of trains in case of strikes, and to the establishment of a royal commission to adjudicate the complaints of railroad employees. The third bill, which aroused the intense hostility of the railway employees, made it illegal for them to strike. Upon the roads owned by the State—nearly three-fifths of all—it was prescribed that the refusal of an individual workman to perform his duties might be punished by imprisonment for six months, and the refusal of a group of workmen to perform them might be punished by imprisonment for four years. Collective action to interrupt traffic was thus treated as a criminal conspiracy, and those who instigated it were made liable to the same punishment as those who took part in it. To what extent the provisions of the bill applied to the employees of the private roads is not made clear in the despatches. Those who organized the strike believed that they could at least force the Government to accept a compromise by which disputes should be settled by a board of arbitration. The Government, however, pushed its bills forward in unamended form, and secured their adoption in the Lower House by a majority of six to one and in the Upper House by a unanimous vote. The inability of the strikers to secure a larger adverse vote in the popularly elected House was in part due to the absence of universal suffrage—the poorer half of the people being without the franchise—but was in the main due to the feeling of even the lower middle classes that the interruption of railroad traffic was an offense apart from that of a strike in an ordinary business. The collapse of the strike among the working people in the cities was due in part to the feverish effort to extend it to unaffected trades, and particularly to the bakeries, and in part to the fear that the German Government would seize upon the interruption of traffic on the roads entering the Empire as an occasion for interference in the government of Holland. Thus a patriotic impulse worked against the success of the strike. The collapse of the strike, however, does not mean that the working-class sentiment it expressed has been dissipated, or that the Radical and Socialist parties will give up the fight for a modification of the new laws. The Socialists and the Individualists have in this crisis in Holland changed places; the Socialists have been the champions of "individual liberty," and the Conservatives the champions of the supreme right of the State to require individuals to subserve the general welfare. In Italy the Government was last week confronted with the danger of a general strike at Rome, and took the position that it would not abridge the liberty of any workman to strike, but would insure the liberty of all workmen to work; and the Roman strike collapsed even more speedily than the Dutch.

❁

Servia

Last week's most picturesque news from the Balkan Peninsula came, not from the Turkish provinces, but from the little kingdom of Servia on their border. Alexander I., the young Servian King, has the army on his side, but is opposed by the large body of Radicals, who, in the Skupshtina, or Parliament, have recently caused suffrage laws to be passed obnoxious to the King because calculated to increase Radical power. Accordingly, without warning, one day last week the King suddenly issued a proclamation suspending the Constitution. Then, as absolute monarch, he annulled the objectionable laws, deposed all the judges save one, retired the Senators and Councilors of State, and appointed new ones. Five minutes, so it is reported, after this promulgation, a second procla-

mation was posted, restoring the Constitution to its former validity, and, of course, the youthful despot to his position as constitutional monarch. As a swift, sensational stroke of state nothing could have been more Oriental—indeed, the complete independence of Servia from Turkey only dates from 1878; it recalls the King's previous attempt in the same direction, which was also a subject for comic opera. When only seventeen, he decided that the regency (proclaimed until Alexander should attain his majority by Milan I., his father, abdicating) was no longer necessary; he therefore invited the regents to dinner, and while at table had them all suddenly arrested by the troops and imprisoned, whereupon he at once proclaimed himself King and free from tutelage. Quickly following this, he re-banished his disreputable father, ex-King Milan, who had tried to regain the throne, also kept the beautiful Queen Natalie, his mother, out of Servia, and, defying the wishes of his own court, married a woman very much his senior, the widow of a local doctor. Queen Draga, however, as she is now, is believed to have exercised a restraining influence on her young spouse; at all events, he has not lately been so prominent before the world. The event of last week may have another cause than that of mere personal autocracy. The Servian Radicals do not favor ultra-militarism; the King not only favors it for its own sake, but with peculiar force at the present time, in view of the Balkan unrest.

❀

The Amity Conferences

Lament has been made over the decline of interest in the "monthly concert of prayer for missions," that flourished for a large part of the last century. One could hardly attend the Conference on Missions annually held at Amity Church, New York, without recognizing that the decadent institution has been improved upon in a way that other churches might profitably imitate. Three afternoons and evenings, six sessions in all, occupying about the same time in the aggregate that was given in a year to the "monthly concert," are devoted to various aspects and fields of missionary enterprise. These are presented by men and women familiarized with their subjects by personal experience and warm from their work. Preceding these, each session begins with a brief exposition of some portion of Scripture pertinent to the theme in hand. The thirteenth of these annual Conferences was held during the recent Passion Week. Indicative of the broader conception of missionary interest now gaining hold—illustrated in such a work as Dr. Dennis's "Christian Missions and Social Progress"—was the sociological tinge given to the programme. One session was devoted to Woman's Work, one to China, one to some conditions in Greater New York. While Amity Church is denominationally Baptist, the undenominational character of these Conferences is conspicuous throughout. A delightful feature is the table fellowship, between the afternoons and the evenings, at the supper in Amity Hall, connected with the church. Amity Church is honorably distinguished among the churches of New York for the large and varied institutional work that it carries on with means quite inadequate to needs. In view of these needs, the wisdom and efficiency with which the means at hand have been applied by the pastor, the Rev. Leighton Williams, deserve reinforcement quite independently of denominational considerations.

❀

Leo XIII.'s Encyclical on Cuba

Last week an Encyclical from the Pope in Latin and Spanish was read in all the Cuban Roman Catholic churches, in which Leo XIII. declared that the change of the country into a Republic, accomplished as an incident of war, has exercised an influence on the status of religion. On this account, and by reason of the cessation of the sovereignty of the King of Spain, the Pope regards it as a duty to inform himself exactly as to Cuban spiritual welfare, and hence sent thither Archbishop Chapelle, as Apostolic Delegate. It is understood that the encyclical reflects the conclusions of the Archbishop's report. As the great amount of territory in the dioceses of Santiago and Havana renders episcopal visitations difficult, Cuba is to be divided into four instead of two dioceses, the new ones to be known as the dioceses of Pinar del Rio and Cienfuegos. The diocese of Pinar del Rio comprises the province of the same name; the diocese of Cienfuegos comprises the

province of Santa Clara. Santiago will remain the principal see to which the other Cuban dioceses will be subject, but Porto Rico is to be severed from the see of Santiago and become, for the present, immediately subject to Rome. The encyclical ends with an injunction which Roman Catholic ecclesiastics in France might lay to heart with advantage: "Let everybody in sacred orders wholly abstain from interference in political matters."

❀

Dreyfus Redivivus

Last week in the French Chamber of Deputies M. Jean Jaurès, perhaps the most eloquent orator in France, brought out two new facts concerning Captain Dreyfus, who eight years ago was unjustly degraded from his rank in the army and after suffering cruel indignities was condemned to imprisonment for life on Devil's Island, off the French Guiana coast, where he endured an infamous captivity. When it was discovered that the sentence of the court martial rested on forged documents, the Court of Cassation, or Supreme Court, set aside the sentence, and ordered that Captain Dreyfus should receive a second trial. To this end a court martial was called at Rennes, at which, though the evidence showed the prisoner to be innocent, he was unaccountably adjudged guilty, although this time recommended to mercy! Later he was pardoned, but, unfortunately, never rehabilitated. The members of both courts martial were charged with having been influenced by many incriminatory documents not shown to the accused or to his counsel. One of the documents which helped to convict the prisoner, according to M. Jaurès, was a falsified paper bearing alleged annotations by the German Emperor. A new fact was then disclosed by M. Jaurès—a letter written by General de Pellieux to M. Cavaignac, then Minister of War, asking permission to resign because he had been "duped by men without honor and unable any longer to count upon the confidence of my subordinates . . . and to feel confidence in those of my chiefs who have made me work with forgeries." After this letter had been read, M. Brisson, who had been Premier of the Cabinet in which M. Cavaignac was War Minister, arose and denounced the latter as unworthy to be called a Republican or to be treated as an honest man, pointing out that for sixteen days M. Cavaignac had concealed from his official chief the forgery committed by Colonel Henry (the suicide), and that until the present time M. Cavaignac had suppressed the letter written by General de Pellieux. The attempt of M. Cavaignac to explain this suppression was farcical. The former War Minister's reputation has now descended to a low level compared with that of five years ago, when his speeches were ordered to be published in every French Commune, and when his admirers looked upon him as destined one day to become President. The present War Minister, General André, immediately announced that the Government was ready to open an administrative inquiry and aid in the widest investigation of the truth regarding the Dreyfus case. This bold and gratifying declaration was sufficient cause for the votes of over three to one, first of confidence in the Government, and secondly recording the Chamber's determination not to allow the Dreyfus case to pass from the judicial domain. All friends of France, therefore, should feel a sense of relief that a third court martial will not be permitted to stand in the way of common justice. If the Dreyfus inquiry is confined to the civil tribunals, the prisoner of Devil's Island may ultimately obtain complete rehabilitation.

❀

More Trouble in the Caroline Islands

Interferences with the work of American missionaries in the Caroline Islands, which began when Spain took possession, were supposed to have ceased when Spain sold her title to Germany. At that time the German Government pledged itself to non-interference with the work, which long antedated European occupation. According to a letter just received at the missionary headquarters in Boston, a German naval officer has made himself as vexatious there as the German admiral in 1898 at Manila. The graduating class of the native training-school for teachers and preachers on Ruk Island has been arrested and carried to Ponape, three hundred miles distant, the seat of the colonial government. The arrest was made December 26, and

the prisoners were still in custody February 16. They are charged with disloyal utterances against the Government, and the same charge is laid against the American missionary, the Rev. M. L. Stimson. The American Board of Foreign Missions, with a clean record in this point of nearly a century, regards this charge as preposterous. Mr. Stimson and his wife, both of them college graduates, both having served as missionaries in China, are not alone involved. The charge is laid against all the American missionaries that they "make trouble." The captain of the German war-ship is stated to have behaved toward them with great insolence. The Board has laid this information before the State Department with a request for inquiry and redress, and especially for the fulfillment of the pledge of non-interference with missionary work. Since the Carolines were transferred by Spain to Germany, the Board has been desirous to transfer its mission in Micronesia to any society, British or German, that will accept it. But it is reported that the German Government does not wish any Protestant society to succeed the American missionaries. That Germany will deal fairly with us in this matter, whatever an individual may have done, is not to be doubted.

❀

Protection for the Family

The annual reports of the National League for the Protection of the Family hold deservedly high rank in sociological literature. The twenty-third of the series, just published, notes particulars which go to show that recent legislation on marriage and divorce has been mainly in the right direction. It is surprising that so few of the States collect and publish statistics of these vital facts, though knowledge of the facts is essential to the sound public opinion that prompts the correction of evils. Familiarity with the divorce evil, Secretary Dike believes, has a deadening influence on public opinion. He is informed that the large number of divorces granted in California is approved there in so-called good society. The effort to secure uniform marriage and divorce laws throughout the Union has made no progress during the year. On the other hand, the migratory divorce seekers, whom such legislation would affect, are becoming, through the increase of various restrictions upon divorce, less numerous every year. The report touches on an evil that is now confronting organized charity—the desertion of families by the responsible breadwinner. Deserted wives, mostly with children, constitute about one-tenth of all the new "cases" before the Associated Charities of Boston. The evil is increasing in large cities. It is time to consider whether the desertion of a dependent family should not be made an extraditable offense. The importance of the family as the social unit, the vital cell, on whose soundness depends the soundness of the social organism, cannot be overestimated. While students of social science recognize this, it needs, as Dr. Dike observes, to be more emphasized by the churches, not as if "to do something for the home," but to awaken the right spirit within the home itself. Religious publishing societies may here co-operate with the churches on lines which the report suggests. And business men, who may be supposed to know the economic value to themselves of virtuous homes, may well take a larger interest in the subject. The League for the Protection of the Family is working in their interest and has a claim on their co-operation. For copies of this instructive report address the Secretary, Dr. S. W. Dike, Auburndale, Mass.

❀

The Industrial Work of the Young Men's Christian Association

Senator Proctor, of Proctor, Vermont, recently erected a $30,000 building for the benefit of the Young Men's Christian Association members in the great marble works at that place, and the institution is now in successful operation. It calls attention to the Association's new endeavor in establishing at different industrial centers agencies for its physical, educational, social, and religious propaganda. Such stations have already been located in appropriate buildings at the Westinghouse Air Brake Works, Wilmerding, Pa., at the Johnson Iron Works, Lorain, Ohio, and at the Arkansas Lumber Company's camp in Arkansas. Other agencies in other important industrial centers are now being established on the principle which guides all, namely, that employees are themselves

to commence the work and to maintain it, the employers co-operating with the men in the latter's own organization, and at the request of the men themselves. Workers are never to be patronized, but are to be given every opportunity for initiative and control. For the encouraging part of this movement is that it comes from the men themselves, and is not an effort primarily on the part of the companies nor their employees. This appeals to the independent spirit of the American workingman; it is fundamental in all efforts which are to reach the problem and are to be increasingly successful. During the month in which the Proctor building has been opened the membership has been increased to nearly three hundred and fifty. Two-thirds of the members are foreign-born, many representing nationalities for which Christian work has not always been abundantly fruitful of good results—the Hungarian element, for instance. Of the Hungarians at Proctor forty have already joined the English class taught by a Hungarian. As in the other industrial centers where this particular endeavor is being instituted, so at Proctor (though only about one-half of the membership represents any church affiliation) the Roman Catholic membership amounts to more than that from all the Protestant denominations put together. It is gratifying to record the general sympathy of the priests everywhere with the new movement, even if exceptions to this rule may be noted here and there. In some cases the priests have come to the Association building and have themselves addressed the men, commending the Association's work in strong terms; and there are cases where, at the morning mass, the priest has taken occasion to read the Association's notices in connection with those of the Church. The new venture, therefore, of the Young Men's Christian Association is one of apparently limitless possibilities, not only in the religious world, but also in the domains of physical improvement, of mental attainment, and of social regeneration.

❀

Colony Gardens

In its Colony Gardens Copenhagen has an institution that might profitably be copied by many of our own municipalities. By a colony garden is understood a city square, preferably in the suburbs, where land is cheapest, divided off into gardens about fifteen by twenty feet, each garden having at the front a small summer house with a flagstaff bearing aloft the red and white flag of Denmark. The largest number of gardens in one inclosure is about four hundred, which means ample accommodation for two thousand persons, and the total number is three thousand, with room for fifteen thousand persons, or four per cent. of the population of Copenhagen. All but a few of the Copenhagen colony gardens are under the control of one organization, the secretary of which, Mr. P. Hansen, was the originator of the whole scheme. The purpose of the garden society, as it is called, is to furnish the better class of working people, using that term in its conventional sense, with a satisfactory substitute for the summer homes of the wealthier classes. The company is organized on the mutual plan, with a capital stock of about $7,000, divided into shares of $13.50 and $27 each. Dividends up to five per cent. may be paid. If the profits exceed that amount, one-fifth of the excess is placed in the reserve fund, until a certain amount is reached; the balance is distributed among the stockholders. Some of the inclosures are owned outright by the company, others are rented from the commune for a short term of years. The cost of each inclosure varies from $1,000 to $5,000, and the annual expense to the company runs from $300 to $1,200. The annual rent of the gardens varies according to size, the quality of the soil, the expense of management, etc., the average being $1.50 to $5 per annum. This, of course, represents a larger amount in Denmark than it would in this country. The summer houses are built by the tenants and must be planned in accordance with the general directions of the company. On giving up a garden the tenant is always able to get a fair price for his house. It is claimed that the tendency of newcomers to this summer colony is to engage in vegetable-raising, but that after the first year most of these graduate into the flower class and devote all their space to the purely æsthetic. There is not a little tree-planting, too, both by the company and by the tenants. Prizes are offered

for the finest specimens of fruit, vegetables, and flowers, and at horticultural exhibitions in Copenhagen the gardens take a prominent place. The greatest pride is taken in keeping up the gardens and in making as fine a display as possible. Nobody is allowed to neglect his plot, failure to keep up with the established pace of neatness being followed by a warning or by forfeiture of privileges. It should be noted in conclusion that this is not a charitable scheme, but that it is wholly self-supporting. It reaches a class too often forgotten—the people who are able by wise co-operation to obtain advantages that are otherwise out of their reach.

❀

A Sewer Farm Pasadena, Cal., can boast of a sewer farm which ranks among the largest in the world (containing 300 acres), yields $25,000 a year to the city, besides effecting numerous savings, and demonstrates the fallacy of the argument that American municipalities are unable to conduct business enterprises on a business basis. The farm is fifteen years old, and was established in the first instance to provide a means of disposing of the sewage, but the thrifty officials of the town have made of it a profitable enterprise as well. The argument advanced and followed was: If the sewage can be used by individuals to irrigate the arid lands about the city, it is equally available for the city to convert them into fertile and productive fields. Sixty acres are planted in English walnuts; and alfalfa in large quantities has been raised, sufficient for the city's horses, and many tons over for sale. A recent innovation has been the establishment of a herd of swine. One hundred have been raised, and the number is to be increased to three hundred. They are fed on corn and pumpkins which are raised in large quantities on the farm. It is expected that the swine industry will be as profitable as the English walnuts. The farm also utilizes the horses of the fire and street departments that have become too old for active city work, but can readily be used on the farm. The whole experience of Pasadena with its municipal farm has been an instructive one, from whatever point of view we regard it. It clearly demonstrates that there exists in this country the same sort of business abilities that have made European cities famous. It serves as an answer to the captious critics who maintain that no city can economically and profitably administer a business undertaking. It points the way to a healthful and utilitarian disposition of sewage by other cities, whether situated, like Pasadena, away from natural means, in which case the system is a public necessity, or situated, like other communities, on or near navigable streams capable of carrying away the accumulations of city waste.

❀

Good Friday and the Christian Year

The observance of the Lenten season culminated in the Good Friday services held in all parts of the country last week. In New York City, for instance, services were held in all the more important churches, such as the Roman Catholic, Methodist, Baptist, Episcopalian, Presbyterian, Congregational, Reformed; and in at least one Unitarian and one Universalist church. Although of course these services were varied in form, from pontifical mass and the veneration of "a relic of the true cross" to the simplest of unliturgical meetings, there was a unity in spirit and to a remarkable extent even in form. Among Catholics and Protestants, in churches ritualistic and non-ritualistic, meditative addresses on the story of the Passion were given. In St. George's Episcopal Church, for example, there was held a three-hour service from noon until three o'clock, the period of the crucifixion. Until lately, in England this service was considered peculiarly "popish." At St. George's, however, where the service is far from ritualistic, this service was celebrated in a simple and beautiful way, by means of addresses, moments of prayer, chiefly silent, and hymns, mainly congregational. Almost the same form was used in a Thursday evening service at a Baptist church. The three-hour service was held in only one Roman Catholic Church in the city, the Jesuit Church of St. Francis Xavier; but there it included a sermon in seven separated discourses.

In churches of all names instruction and meditative worship were blended.

The general testimony this year seems to be that never before has there been such serious, spontaneous, and widespread response to the appeal which the season of Lent makes. Within the memory of many who are not yet of middle age the Protestant churches of New England did not recognize even Christmas. The only days—apart from Sunday, or "the Sabbath," as it was called—which had religious significance were Fast Day and Thanksgiving; and both of these were creations of the civil authority. Now, even in remote regions of New England, both Christmas and Easter are observed with quite as much spontaneity as Thanksgiving Day, and with more religious feeling. The reaction from the Puritan dislike of all holy days has not, however, been at once toward the observance of the traditional Christian Year. The lack of such days has been supplied by modern inventions, such as Children's Sunday, Day of Prayer for Colleges, Week of Prayer, and innumerable other celebrations, some of them certainly of a character more or less local or ephemeral. The fact that in many churches of Puritan origin the Week of Prayer is being supplanted by Holy Week, and this in turn expanded into an observance of Lent; that civil Fast Days are becoming almost wholly neglected, that Good Friday is becoming more and more a day of general solemnity, and that other portions of the Christian Year are becoming more and more widely adopted, indicates that the cohesive principle lacking in extempore feasts and fasts is being rediscovered in the life of Christ, upon which the Christian Year is based. Of all outward signs of the growth toward church unity, this one at least corresponds to a principle upon which all inner church unity depends—the power derived from the life of him from whom Christianity takes its name. There is suggestion, too, in the fact that this increase in the common observance of holy days comes at the same time with the growth of liberty in religious thought, and for the most part in the same churches. Both this growth in liberty and this growth in common observance are signs of an emergence from legalism, which presents religion as repressive, into the spirit of the New Testament, which presents religion as impellent.

❀

Greater Germany

The labor troubles in the Low Countries have revived the discussion which arises from time to time as to the desire of Germany to possess itself of Holland—a desire in which the Dutch by no means participate. There is very little probability that Germany will attempt, by forcible means, to make the conquest of Holland, immensely important as the control of the Lower Rhine would be. Holland, like Switzerland, is inhabited by a population of a quality and fiber which might well appall even a great military force. It has behind it, moreover, a moral sentiment which would be overwhelmingly against any attempt forcibly to possess the country. What is more likely is that Germany will wait on events, hoping that some contingency may emphasize the important community of interests between the two countries and minimize the animosity of the Dutch.

Whether Holland and the Dutch colonies are ultimately absorbed or not, the pressure of German expansion is becoming more evident. Germany itself is overcrowded, and only by the annexation of territory beyond sea, or by the establishment of colonies, can Germans supply some of those natural products which they are not able to produce in the Fatherland. This, and a very natural ambition, accounts for the Kaiser's strenuous effort to make of his country a great sea power. He had no sooner succeeded to the throne than he inaugurated this aggressive policy, and showed an eagerness to learn from any quarter how to expand commercially and politically; he welcomed every chance to become acquainted with men of affairs throughout the world, with Krupp and Siemens, Cecil Rhodes and Joseph Chamberlain, Mr. Morgan and Governor Francis.

At the beginning of the nineteenth century, German home expansion began by the forcible acquisition of a part of Poland, a province which to this day is discontented, in sharp contrast with the Polish province absorbed by Austria. The next important German annexation did not

occur until 1864, when the Prussians snatched Schleswig-Holstein from Danish control. In 1871 occurred a third and more notable annexation, that of the French provinces of Alsace and Lorraine. Germany is now ready for further enlargement, and the queries are: Will it be a contiguous territory to the Fatherland? Will be a colony? Will it be a combination of the two? The last question would be affirmatively answered by the annexation of either Holland or Denmark—the Kaiser's recent visit to Copenhagen and his effusive telegrams to Christian IX. have again set afloat the rumor of his possible designs on Denmark and on the Danish islands.

Stronger, however, that any trend towards union with Danes or Dutchmen is that of uniting under one Government all the German-speaking people in Europe. Hence the absorption of German Bohemia, Austria, and the Tyrol has been the steadfast aim of Pan-Germanism. The absorption of German Switzerland is quite another matter; and those who know the republican Swiss will advise the monarchical Pan-Germanists to abandon any notion of such union. Eight millions of Germans live under the scepter of the Hapsburgs. They are increasingly drawn towards Hohenzollern ideals, as was seen by the recent wholesale conversions to Protestantism among Austrian Roman Catholics—an event significant politically rather than religiously, and indicating the cultivation of the sentiment of a common Teutonic origin, which has avoided international complications and fostered an ambition to form a gigantic Germanic federation, which might dominate the European continent and perhaps ultimately become the world's supreme power. The German Austrians are in a position to contribute materially to the growth of Pan-Germanism; for they are dissatisfied with their position at home; they are no longer supreme as they once were, since Bohemia seems marching steadily towards home rule, marking the triumph of the Czech majority over the German minority; and the Trentino is more and more inclined towards the Italian dominion where it properly belongs. Bismarck once warned Italian Irredentists, however, that Germany's sword stretched even to Trieste; though they might hope to regain the Tyrolese Trentino, they would obtain no foot of land on the Adriatic's eastern shore. The port of Trieste would be worth more than a colony to Germany, not only because the road to this port would pass through the rich fields of western Bohemia, Upper Austria, and Carinthia, but because a Mediterranean port would crown the astute colonial propaganda which for some years William II. has been pursuing as regards Asiatic Turkey. If German expansion means that a vast Teutonic Middle Kingdom is ultimately to be erected, the port of Trieste would be of critical importance in its relations to Germany's greatest colony—Asia Minor and Syria. The discovery of the sensitiveness of feeling in this country with regard to German influence in Brazil apparently led the German Government to transfer its energies to Asia Minor and Syria, a region more practicable for colonial conquest. William II. persistently courted the Sultan, and, in consequence, has been able to make German influence permanent in the coveted region; he has outdistanced the Englishmen who for sixty years have been straining to secure the Sultan's consent to the building of a railway from Smyrna to the Persian Gulf; the German road is now partially completed. As the railway is one of the great agents of civilization, for this kind of colonizing and the consequent cessation of Muslim barbarity all the world should be thankful.

Recognition is also due to German pioneering in China. It is now a foregone conclusion that the colony of Kiaochau is to include the entire province of Shantung; indeed, it may ultimately absorb the neighboring provinces of Chili and Honan. After the failures of German colonizing in China under Bismarck, William II. determined that the Chinese colony should succeed, and it has. The Emperor's pronouncement against any interference with the "open door" policy insured England's assistance in securing industrial concessions throughout the province; partly in return for this, perhaps, partly because of the Anglo-German agreement looking towards the further partition of Africa, was due the Kaiser's loyalty to England during the Boer war, in the face of the pro-Boer sympathies of most of his subjects. During the years

which have elapsed since Germany has obtained this sphere of influence in China, her interests have become strikingly important. The German Shantung Railway Company is capitalized at three million dollars, while at Chifu, the principal port of the province, about two hundred and fifty steamers called last year. In Shantung and other provinces there are now over two hundred German warehouses, valued at about forty million dollars, and shipping great cargoes of teas and rice to Germany in return for machinery and iron products. The aggregate German interests in China and Japan are valued at $100,000,000.

From these results it would seem that Greater Germany is being created on the lines of least resistance: in Europe by curtailing the Austrian Empire; and abroad, in the Eastern hemisphere, by curtailing the Turkish and Chinese Empires. In the Western hemisphere we probably have not as much to fear from German aggression as has been sometimes supposed. German subjects may have been buying land on the Venezuelan island of Margarita with a view to its use by the German Government as a coaling station; unofficial German agents may possibly have been active at Bogota and at Copenhagen obstructing our Panama Canal project and the Danish islands annexation. It is certainly true that Germany has settled four hundred thousand subjects in Lower Brazil, and has extended an admirable commercial influence all over South America; it is also true that, for the furtherance of this world-trade, and for the protection of colonies, Germany needs a strong navy. With characteristic far-sightedness and restlessness, William II. has built one, and has encouraged in every way the establishment of a great mercantile marine. The results to Germany's export trade show the value of this large and growing marine; for in the more important groups in the German export list only nine declined last year in comparison with previous years, while there was an increase in no less than thirty-four.

In the modern competition in the open field of the world Germany already holds a foremost position. She is the great competitor that England and the United States have to meet; to meet her, however, in the friendly rivalry of trade, by the matching of brain against brain, industry against industry, training against training. If in that competition Germany can carry the day, the United States will be the first to recognize her success. The time for small international jealousies, growing out of the advantages of other countries, has gone. We need an efficient navy as a police force; we must be able to back up with a strong arm our National policies; but, unless compelled by inimical action, we have no intention of contending with Germany or any other nation in any other field than that of commerce. In that field, if Germany can outstrip us, we shall deserve to be outstripped.

❀

The Meaning of Sacrifice

To the Editors of The Outlook:

Will you tell one who is desirous of light upon the subject what is the essential and vital truth for Christian life underlying the doctrine of the Atonement: the statement made concerning Christ in the creed of the Congregational Church, "who by his death atoned for the sin of the world"? I know that an explanation is given to the effect that we are made at one with God through the knowledge of Him that we gain from Christ's life, his death being the inevitable outcome of his life, and through our faith in and obedience to the principles Christ gave us. But is there not something deeper, some truth concerning the nature of sin, and salvation from it; something that Paul had in his mind when he wrote such sentences as, "We were reconciled to God by the death of his Son," "Having made peace through the blood of his cross," "Ye . . . are made nigh in the blood of Christ," that, if really grasped and accepted by the Christian, would immeasurably deepen and strengthen his faith and purpose? I ask from a sincere desire for information, not from any purpose of obtaining merely a theological statement from you. A READER.

We answer categorically and unhesitatingly, Yes. What is this deeper truth concerning sin, and salvation from sin through sacrifice, which, if really grasped and accepted by the Christian, would immeasurably deepen and strengthen his faith and purpose? That question we do not answer categorically and unhesitatingly. Paul called it a mystery; a mystery it still remains. Theology grows out of experience. The experience of sacrifice in this self-indulgent age is so sporadic, so spasmodic, and withal so feeble, that any statement of the philosophy of sacrifice is

necessarily difficult, certainly imperfect, perhaps impossible.

But this difficulty does not lessen the truth that sacrifice is the central truth of the Christian philosophy, as it is the supremest experience in the Christian life. The religious history of Israel might almost be described as the history of the changing conception of sacrifice: beginning with the simple sacrifices of Cain, Abel, Noah, and Abraham; elaborated in the Levitical code, with, despite its elaboration, the underlying doctrine that the value of the sacrifice depends not on the thing offered but on the sincerity and simplicity of the offerer; illuminated by the oft-repeated prophetic teaching that repentance, consecration, and gratitude are the true sacrifices, of which bullocks, doves, and wheat are but the symbols; leading us to the New Testament teaching that the sacrifice is not offered by man to God to win his forgiveness, but by God to man as the means and instrument of conferring forgiveness; and ending with the picture of the New Jerusalem, descending out of heaven among men, in which there is no Temple, because there is no longer a sacrifice to be offered, because no longer a sin to be atoned for.

To take the teaching of sacrifice from the Bible would take from it the supreme truth which makes it a unique volume in the religious literature of the world, and the central truth which gives it unity. To take faith in sacrifice out of the experience of the Church would be equally disastrous to its life, and would leave it a mere educational and charitable organization. To take the experience which has resulted from faith in sacrifice out of the liturgies of the Church would take from its services the Lord's Supper, and from the hymn-book such hymns as "When I survey the wondrous Cross," "O sacred head now wounded," "Rock of Ages, cleft for me," and leave the hymn-book pallid and bloodless. Life there would still be in it; the life of patriotic sentiment, of social companionship, of gratitude for nature's gifts—but penitence, pardon, peace, forgiveness, burdens removed, remorse banished, the new song "to him who hath redeemed us," which give to the hymnologies and the liturgies of the universal Church their mystic power to quiet and to inspire, would all be wanting.

To take faith in the divine sacrifice out of the experience of the individual Christian would do even more; it would take the supreme example and the supreme incentive to sacrifice out of human life. Self-sacrifice was known before Christ; it is known outside the bounds of Christendom. That is but saying that Christianity interprets the sublimest experiences, as it supplies the deepest needs, of the human race. This it does by showing human virtue to be a manifestation of the divine life. Thermopylæ and the story of Curtius take on a new significance when read in the light of Christ's life and death. These also are revelations of that life of God in the soul of man which is as universal as humanity. But take away from the Bible the historical interpretation of sacrifice, and from the Christian theology the recognition of sacrifice, and from the Christian hymns and liturgies the expression of the Christian faith in the divine sacrifice, and, in that very act, the inspiration to self-sacrifice as the consummate flower of the divinity in man, and the supreme ethical expression of the highest life, would be taken away.

It is true that the New Theology denies the old philosophy of sacrifice. It denies that sacrifice was necessary to induce God to pardon by appeasing his wrath; or to enable him to pardon by satisfying his broken law. It is true that the New Theology is fatal to that form of experience which looked on God as an Awful Judge to be feared and on Christ with love as a Divine Friend who rescues us from the Awful Judge. We can no longer sing Mrs. Browning's verse, or, if we do, it can be only as a beautiful expression in archaic form of our self-contradictory sense of fear and love, of shame and peace:

> How strong thou art! We tremble lest
> The thunders of Thine arm be moved;
> But He is lying on Thy breast,
> And Thou must clasp Thy best beloved.

But gradually a new experience is taking the place of the old—gradually because new experience grows slowly, while a new theology may be framed in a day. This new experience is not less sacred than the one it is supplanting. In it are intermingled the same contradictory elements of struggle and fears, of sorrow for sin and joy in emancipation, of shame in one's self

exaltation in the love of God—the contradiction that appears in the declaration of the Decalogue respecting Jehovah, that he is "a jealous God, visiting the iniquity of the fathers upon the children, and showing mercy unto a thousand generations" to them that love him; in the cry of Peter, "Depart from me, O Lord, for I am a sinful man," in the same hour in which he forsakes all to follow Christ; in Paul's declaration in the same breath, "Who shall deliver me from this body of death? Thanks be to God, who giveth us the victory."

But it is no longer a dread of one Person and a love for another Person. God is one; and the forgiven soul comes to him, as the Prodigal to his Father, holding himself afar off, while the Father himself comes forth to welcome him as a forgiven son—no more worthy to be called a son, but a son notwithstanding, and received into all the sacred privileges and fellowship of sonship. The Passion of Christ is felt to be a revelation of the long-suffering God, who always shares the sins and always bears the burdens of his children in his heart, and, because he bears them and enters into them and makes them his own, enables his children to be at one with him in the beginning of a new life. For sacrifice is God's sorrow for our sins, and repentance is our sorrow for our own sins; and when this sacrifice and this repentance mingle in one sorrow common to both, the twain are one and the new life of God begins to enter into the life of the child and make that life new.

This is atonement as the new theology perceives it; this is the commingled feeling of humiliation in self and exaltation in God, of sorrow for the past and joyful hope in the future, as the modern Christian life expresses it. And from this faith in sacrifice for sin as an eternal fact, of which the Passion of Christ is but the revelation in time and within the horizon of earth, there springs a strong desire to share in that sacrifice, to be crucified with Christ, to fill up, as Paul says, what is lacking in the sufferings of the Christ; and so a new incentive to the life of service and of sacrifice. Never in the history of the world had that spirit more or better exemplifications than it has in this age of a clearer and more unclouded understanding of the love of God revealed in, not evoked by, the Passion of his Son. For the cross of Christ is seen to be no temporary episode, but the supreme revelation of the wisdom and power and glory of God. Reluctantly and tardily we begin to learn that for love to share our ignorance is the supreme wisdom, and for love to share our weakness is the supreme power, and for love to share our shame is the supreme glory. Reluctantly and tardily we begin to aspire for some share in such a wisdom and power and glory of love, to desire that we may be made wise and powerful and glorious by self-sacrifice. Reluctantly and tardily it may be, still really, we begin to follow after, that we may not only know the power of his resurrection in the newness of our life, but may participate in his sufferings, who gave himself for us, and, by laying down our lives for others as he laid down his life for us, may be made conformable to his death.

❀

The Real Success

The number of books which may be put on a shelf by themselves to form a "Library of the Quiet Life" is increasing, probably because an increasing number of men and women are dissatisfied with the hurry and irritation of contemporary conditions and are determined to seek peace if it lies within the range of possible modification of habit and method of life. Charles Wagner's "The Simple Life," which was fortunately brought to the attention of the country by President Roosevelt's commendation, has been a boon, as were his "Youth" and his "Justice," to a host of people who want to live rationally and to develop themselves freely, but who are confused by the complexity and turmoil of the life about them. A companion volume to "The Simple Life," more philosophical in character and more distinctively literary in form, is a little book by Carl Hilty, which bears the attractive title "Happiness," admirably translated by Professor Francis G. Peabody, and with the imprint of the Macmillan Company. The author, like Amiel, is a Swiss professor. He was a student at Göttingen, Heidelberg, London, and Paris, and he is now a member of the faculty of the University of Bern.

Two years ago he was Rector of the University. Unlike Amiel, he deals entirely with the practical side of life; that is to say, with the relations, for purposes of growth and of action, of men and women. His philosophy of life, like all true and deep philosophy of life, is not only profound, but simple; for truth, as Carlyle taught the world in "Sartor Resartus," is always found close at hand, the mastery of life consists in doing the duties which lie next one, and the kingdom of heaven is not at a distance, but within.

Professor Hilty writes of work, habits, the use of time, and the meaning of life as these things bear upon happiness. His interpretation of life is at once simple and profound. It deals with the ultimate ends, and yet it brings those ends within the reach of the most obscure person living in the most limited conditions. It restates in a very persuasive form the old truth that happiness lies within a man and not in his circumstances; that it is to be gained, not in seeking it, but by free and harmonious growth in thought, action, and feeling; and it defines success as the free and true unfolding of a man's life and character. Among the many admirable truths which are freshly presented in this quiet and stimulating book, Professor Hilty has a word to say about success that ought to bring comfort to those who have nobly failed in specific enterprises, and heart searching to those who have secured the external insignia and distinction of success. He quotes Thiers's admirable saying, "Men of principle need not succeed. Success is necessary only to schemers;" and adds: "In other words, a genuine victory over the world is not to be achieved through that kind of success which the French call 'succès,' and which for many men makes the end of effort. He who plays this game of ambition may as well abandon the hope of peace of mind or of peace with others, and in most cases he must forfeit outright his self-respect. Real success in life, then, the attainment of the highest human perfection and of true and fruitful activity, necessarily and repeatedly involves outward failure. Success, to Von Klinger, means an honorable career with victory at its close. The work of life is regarded in its wholeness, as a brave and honorable man should wish and hope it to be. Unbroken success is necessary only for cowards. Indeed, one may go further and say that the secret of the highest success in important affairs often lies in failure. The men who have most completely commanded the admiration of the world and who are most conspicuous in history are not those who have reached the goal of life through success alone. Cæsar and Napoleon would have been remembered only as examples of tyranny if it had not been for Brutus, Waterloo, and St. Helena. The Maid of Orléans would be recalled as a masterful woman like many others had it not been for her martyrdom. Hannibal would be no noble example if Carthage had conquered."

In this country, and in this age, these words are not only searching, but they are also healing. Every man of sound mind enjoys what the world calls success; that is to say, as it is a pleasure to see one's thought put into any kind of adequate form, so it is a pleasure to find one's work returning to one in adequate rewards. But the man who works with absolute integrity of spirit, in obedience to the law of his own nature and not for the sake of external rewards, is the only successful man, whether he secure the material rewards of success or miss them; and he who secures all the rewards of success without the inward and spiritual freedom and power of nature of which, in their best estate, material rewards are the fruits and evidence, disastrously fails. One may live in the stream and rush of life, as did Shakespeare, and be always looking into the secrets of the moral nature and always living in touch with the deepest forces; or one may live, as did Tennyson, in the seclusion of gardens and the retirement of hidden roads and lanes, and be always meditating on the things that make for beauty and righteousness. One may lead, in other words, the quiet life, whether in seclusion or in the storm of the world; for the quiet life is not a matter of conditions, but of temper of mind. One may succeed and have all the outward evidences of success about him in reputation, fortune, friends, and position, and be simple-hearted, true, and sincere; or one may miss all these external rewards and yet achieve the highest of all successes—the free and noble development of one's own nature.

The Impressions of a Careless Traveler

XV.

June 6.

WE have hired a gondola for the week. Giovanni is not as young as he once was, and other gondolas sometimes pass us, though once to-day a young fellow undertook to go by us, and Giovanni at the right moment got by him, got the inside track, and turned the corner into the Canal to which we were both bound ahead of him. Last night, as we were taking our after-dinner coffee on the terrace overlooking the Grand Canal, a boat-load of musicians, perhaps a dozen in number, men and women, with guitar, mandolin, and violin, rowed up to the piazza of our hotel, moored there, and began an Italian song. It was a pleasant accompaniment to the after-dinner coffee, and was well worth one franc I dropped into the hat of the treasurer when he came around for a collection. Later the boat moved out into the middle of the Grand Canal; three other boats moved out from the hotels into neighboring positions; all were illumined with Chinese lanterns; all were provided with the ten or fifteen players and singers; and the different groups sang simultaneously different music. It was a very pretty sight—the lantern-lighted boats, the private gondolas with their lights, some of them grouped around one of these floating orchestras, others gliding back and forth between them; and the orchestras fortunately far enough away from the hotel to make the discords of their unharmonizing choruses not disagreeable. They were still singing at eleven o'clock at night, and then the discords became more noticeable, and were not altogether conducive to sleep.

June 7.

There are in Venice no such art galleries as the Uffizi or the Pitti. There are fine collections—though not so large—in the Doge's Palace and the Academy, and almost every church in Venice has some fine pictures, which one does not want to miss. Perhaps it is because I am not so distracted by the multiplicity of pictures in this city as in Florence, perhaps because the Venetian painters are the greater colorists, perhaps because before I came here I had been to Florence and had made there a beginning of looking at pictures, perhaps because I read on my way here Berenson's "Venetian Painters of the Renaissance," perhaps because here I have been more passive than I was either at Rome or Florence, neither a student as at Rome, nor a sightseer as at Florence—perhaps it is for all these reasons combined that art in Venice has been more interesting to me than it was at Florence. I am inclined to think that the last reason has a great deal to do with it; that a certain wise passivity is necessary to get the best benefit from either music or painting. We have spent a morning in the Academy, and have visited half a dozen or more of the churches; we have yet to see the pictures in the Doge's Palace. I distinctly dislike the representations of the crucifixion which I have seen in Italy, with two exceptions. There is a picture by Guido Reni in one of the churches in Rome, which portrays the single figure, the head upturned, and the expression one of spiritual, not physical, anguish; one can almost hear from the parted lips the cry, "My God, my God, why hast thou forsaken me?" There is a sculptured representation by Donatello in the Santa Croce in Florence, in which the aspect is one of dignity, not of anguish, and Christ is seen conqueror over death, not conquered by it. But, with these exceptions, the artists seem to me to have endeavored to make the tragedy as tragic as possible, with the purpose of awakening a pity for the Divine Sufferer; and I cannot look at them without recalling his warning words, "Weep not for me." Christ never should be the object of our compassion; and it is a false art, as it is a false rhetoric, which would make him so. The particular picture which suggests this reflection to me now is Tintoretto's Crucifixion in the Scuola di San Rocco. In character, conception, and interpretation, as a purely spectacular scene, it is a wonderful picture; but it is simply impossible for me to regard the Crucifixion from any other than the relig-

ious point of view. On the other hand, there are some wonderful pictures of scenes in the legendary life of the Virgin with which I have no such difficulty. Such are the Assumption of the Virgin and the Presentation of the Virgin, both by Titian, in the Academy—the former is the more famous picture, the latter appealed to me more. Why? I think it is because pictures appeal to me more as interpretations of life than as interpretations of beauty. The Assumption of the Virgin is a wonderful piece of coloring—but that is all; in the Presentation of the Virgin she is going up the Temple steps to the High Priest, who is waiting at the top to receive her, and in the groups at the foot of the steps every variety of human experience—that of pure indifference, idle curiosity, admiration of her beauty, affectionate interest in her person, conventional regard for the ceremony, devout spiritual participation in it—is portrayed in the faces and attitudes by the artist. I suppose that my interest in the painting is not artistic, but dramatic—essentially identical with my interest in a drama or a story.

June 7.

Before coming here the Matron and I read Marion Crawford's "Marietta," and it inspired us with a desire to see Murano. Yesterday we were rowed over there by Giovanni, and to-day he got an assistant and together they rowed us over to Torcello and Burano. The former island is about a mile and a half from Venice, the two latter about six miles. Murano is the center of the glass industry, Burano of the lace industry; Torcello is chiefly interesting as the site of a very old church erected in the seventh century, rebuilt in the ninth, and partly in the eleventh. I believe that nothing has been done since to it except to keep it in repair. It might well be, from its general aspect, the oldest church in use that I have ever seen. The lace-work was very interesting because, like the Queen's Workshop in Athens, the shop we visited was supported in part by the Queen, and afforded an interesting illustration of a very practical industrial work conducted under the auspices of the Roman Catholic Church, for the teachers are Sisters and the Queen is a very devout member of the Roman Church. I am no judge of lace, but the ladies of our party, who are, decide that the best Venetian lace we saw does not equal the best of Brussels in quality. I think all the glass-factories of Murano could be put in the glass-factory at Corning and leave room to spare. Moreover, it did not seem to me that any glass I saw in Venice—and we went through one of the best show-rooms—compared with the best glass work of the United States.

June

We spent yesterday in the Doge's Palace and St. Mark's Church. The interior of the latter is Oriental in its splendid coloring; and yet—or should I say for this very reason?—its atmosphere is not to me conducive to devotion. Perhaps that is because I am Northern and Anglo-Saxon and Protestant and Puritan. To me, at all events, there is a certain solemnity in the Gothic cathedral which I do not find in any of the Italian churches. St. Mark's is marvelously beautiful; I can think of nothing I have ever seen with which I can even compare it; but to my imagination it is not a church. In the Doge's Palace I got from one picture—Tintoretto's Bacchus and Ariadne—better than from any other picture I have seen, an idea of the purely artistic interest in art. It was not interpretative; I do not care a jot for the story it tells; the legend is very dim in my mind, and the picture does not make me care to recall the legend; but I found myself coming back again and again to this picture, charmed by the beauty of color and by the aerial lightness of the figures. Perhaps with study I might become an art-lover after all. There are two other pictures which have attracted me in the same way: a Bellini Madonna and the Pisano Madonna of Titian in the Church of the Frari. Neither of them appealed to me at all as did Raphael's Madonna of the Chair at Florence; there was no vision of either motherhood or womanhood afforded by either. I could not escape a certain feeling of the incongruity of the Pisano Madonna, in which the Madonna seems to be painted as an excuse for the portraits of members of the Pisano family who are adoring her. It was in both cases the simple beauty of the pictures, not their meaning, not anything which they told, not any interpretation of life which they afforded, not even any emotion of human

ity or of reverence which they awakened, that attracted me. Quite as much as the pictures in the Doge's Palace I was interested in the revelation the palace afforded of the strange contrasts of the olden time. On one story the Ducal apartments—reception-room, ball-room, bedroom, dining-room; underneath, the dungeons where prisoners were confined; above, in an upper story, a torture-chamber, from which the shrieks of the tortured might at any time issue to mingle with the mirth of the meal or the music of the ball. That at least would be impossible in this "age of skepticism."

June 12.

To-morrow morning we leave Venice and Italy. The impression which Venice has left on my mind is, I suppose, identical with that left on the mind of every other visitor. It may be best expressed by the Italian phrase *dolce far niente*. Our mental attitude is one of passivity; our life one of luxurious idleness. Venice is the only city I have ever seen which promotes meditation; *per contra*, I hardly think it would be possible for me to do any serious work here. It is a land of the Lotus-eaters; strenuous life becomes impossible; cares disappear; problems cease to interest. There is none of the dirt which the street traffic of a great city necessarily brings with it; there is none of the roar of the distant wheels and the rattle of the nearer ones which are the last things you hear as you fall asleep at night and the first you hear when you awake in the morning in Paris or London or New York. Save for the inharmonious quartette of floating orchestras near our hotel in the evenings, Venice is the quietest of quiet places; quieter than the country, for there is no lowing of cattle, nor barking of dogs, nor crowing of cocks, nor even singing of birds. The only sound to be heard is the swash of the water on our hotel piazza and the occasional voices of passing gondoliers. There is no activity of commerce or manufacture to impress upon you, by its contrast, your own idleness; the only apparent industry of Venice is taking care of the tourists. We rise late, take a leisurely breakfast, by ten o'clock are in our gondola and are gliding along the Grand Canal, or in and out through some of the tortuous smaller canals which intersect it. The only sound we hear is the ripple of the water as the long oar is plied in it, or the call of Giovanni, "*Sa stai, sa premi, pongo eh*," as he comes to some turn in the canal, to give notice to any boatman coming in the opposite direction. Presently we get out and go into a church to look at some famous picture. It is quiet; perhaps there is not another sightseer in the church; there is certainly no such concourse of them as in the great picture-galleries. Then we go out, reembark, perhaps lie at half-length on a cushioned floor and resume our gliding softly, quietly, by almost imperceptible motion through the water again; by picturesque palaces; by other gondolas as leisurely in their movements as ourselves. We eat, we sleep, we sail, we look at a picture or two, we sail again. It is the perfection of pleasurable idleness, with nothing to suggest duty, nothing to call us to activity. And yet, withal, there is in the atmosphere a pathos, indefinable, inexpressible, unescapable. The city is not merely old, it is decrepit. Once Mistress of the Mediterranean, there is no longer any political life here; once the chief commercial city of Europe, there is hardly a shred of commerce here; once a city of palaces, they are now crumbling to decay. One would not be surprised to awaken any morning to learn that one of these palaces had slipped from its foundations into the canal which borders it. It is the one city I have seen in Italy where there is absolutely no sign of the new Italy. Milan is essentially a modern city. In Genoa are seen old and new Italy in contrast, but the new is unmistakably at once supplanting and revivifying the old. Naples, despite its play-day atmosphere, is characterized by a nineteenth-century industry. Rome, despite its mediæval garments, has in its veins the blood of lusty youth. Florence is the repository of an art which is serenely superior to time; and its edifices, old as many of them are, show no signs of decay. But Venice is only a shadow of its former self; pathetically beautiful; the memory of a city, without a future, without a present, with only a past; for this reason best of all cities for a busy man's brief holiday; for this reason last of all cities for an active man's permanent residence.

[THE END] L. A.

A PREACHER'S STORY OF HIS WORK[1]

BY W. S. RAINSFORD

Rector of St. George's Church, New York City

III.

I ARRIVED in this country on the 10th of June, in the fiercest kind of heat—103 in the shade; I remember it very well. There was a layman waiting for me when the steamer landed, and he took me out to a New Jersey suburb, where, in his country house, I found Dr. ——, with his wife and one of their children. He welcomed me very kindly, told me he was going to rest for four months, and that he wanted me to take charge of the church; and then he said: "In addition, I have a tent on Thirty-fourth Street and Broadway, and I want you to preach in that tent every evening." I sat back with a gasp, and said: "My dear sir, I came over understanding I was to preach twice on Sunday; that will give me all I can manage. I am not a man to stand up in a great city and preach every night. I am only twenty-six; I am nothing of a preacher; it will be all I can do to prepare for preaching twice on Sunday." "Oh, there are men who will help you in the tent," he replied, "and, anyway, you've got to do it." I had lived a hand-to-mouth life, as it were, among poor people—the ignorant factory-folk, the working people, in the city of Norwich, with its 85,000 inhabitants, and in the East of London. But never was a man less fitted to deal with the complex questions that a city like New York develops. But there I was, and there was nothing for me to do but to begin. The next Sunday came, and I preached, and a vilely bad sermon it was. Sometimes even now I get all in a sweat when I am in the pulpit, and almost lose my head; but at that time I lost my head continually. I stammered, stuttered, and floundered about, trying to get my bearings. Everything was new and strange; and in front sat this man—the Doctor—listening critically. I knew when I got through that I had preached as bad a sermon as I had ever preached in my life. The Doctor was deeply disappointed; in fact, he as much as told me that he was disappointed. He was very frank, and said: "I have got to get away and take a rest, and you must do the best you can." And so I entered upon my work in New York.

Those were days of depression. I had a room in a Broadway hotel, where I boarded, and I had a study in the tower of the church; and from the 10th of June to the 14th of September I preached twice every Sunday in church, and every single night in the tent on Thirty-fourth Street. I had to get up early in the mornings, and in the boiling heat of the tower room sit and grind until I had worked out something I could say to those people. All that time I met no one but one family who knew me and helped me. I was lonely, and engaged in a mental struggle the painfulness of which no man can conceive who has not been through it himself, and praying daily, "Give me this day my daily bread to give to these people!" My difficulties were very great. Every evening I preached in the tent as well as I could. I remember when I got through a man got up—a good man—he was a butcher—and said some things that, even in my immaturity, I knew undid everything I had said; and then another man in the same rank in life got up and said something; it was more of a jumble than I was prepared for, and I saw it would not do; low as my own standards were, I felt that this was worse. I stood it about a week, and then I made up my mind that, poorly fitted as I was to talk to the congregations that gathered, these men were much less fitted. So I telegraphed to the rector saying I had come to the decision that if I were to do the work, I must have absolute control. He wrote back that I was working with men with whom he had been working for years, and that I must continue to work with them. Then I sent word: "If that

[1] Copyright, 1903, by the Outlook Company. All rights reserved.

is so, you must accept my resignation." He could not do that, because he did not want to come back; and so it went at that, and I had the power given into my hands, but in that unwelcome way.

Of course these people went away growling and grumbling, and I was lonelier than ever; but the congregations began to grow. This was not because my preaching had any special value; for, looking back, I cannot but feel that it was made up of the most hastily constructed, unconsidered, extemporaneous utterances that a boy with a certain volubility and doing the very best he could was capable of. It was Centennial year—a fearful summer; during July and August the thermometer in New York averaged 84, night and day. I suppose there was not another church open on Fifth Avenue during that summer; people were crowding the city on their way to the Centennial, and so after a time the tent was almost full. On Sundays the church was quite full, and I began to taste for the first time the sense of being able to put things through, and it thrilled me. It was sweet beyond words. I was sick and tired; I could not sleep at night; I do not think I averaged more than four hours' sleep every night during that summer; and the mosquitoes, which I had known nothing of before, worried me; but I began to feel that I had plunged into the midst of things. I felt that I had a message for these people in New York, as I had had a message for the people in Norwich.

I had a good many discouragements. For instance, the rector came back before the four months were over. I had a definite engagement with him, so he could not put me out; but he advertised himself to preach at the same hour in the church opposite, and I had much to contend with.

I finished my work on the 15th of September. I had carefully made a list of all the people who came to me; I took names and addresses; and so, when my work was done, I had a list of over two hundred names of people who said they wished to join this church in which I had been laboring. When my time was up, I handed the list to the rector, and said I had done the best I could. I might say right here that about this time Mr. Aiken, famous in America as well as in England, had asked me to associate myself with him to take up mission service in England; but I did not want to go back to England just then. His invitation, however, gave me the idea to take up missions in the States, for then I could get away from my troubles about baptism. I also had an invitation from a large Presbyterian church here to accept the pastorate of that church, but I did not want to accept the pastorate of any church. I wanted to be free until I could see my way clear and go back in peace to my own land. So, having about decided to take up mission work in the States, when the time came for me to go from New York, I asked the rector for letters of introduction. It was a blow when he refused to give me letters. I pressed for reasons. I said, "I have worked hard here, and of the result of my work I think you are fully aware; why will you not give me letters?" "Well," he said, "if I give you letters to different churches, you will go there and unsettle the rector; the people may want you, not him, after a fortnight." "But," I said, "I am not seeking a place in the Episcopal Church; I am not seeking your place or any one's. Here is the list of two hundred people who have come to me as a result of my work. All I want is a chance to earn my bread so that I will not be obliged to go home until I can see my way and know what to do."

He would not give me any letters, and I was almost in despair. I had no money, and I was on the point of cabling to my father for funds to take me back again. (I might say incidentally that I owed a dentist's bill of $14, which I was not able to pay for a long time.) I had never taken money from my father after leaving Cambridge, and I did not want to begin. In my quandary I went to Bishop Horatio Potter. I took my letters of orders out of my pocket and said: "Sir, I am a clergyman in good standing. I have been preaching every Sunday for four months in the church at —— Street, and every evening in the tent on Thirty-fourth Street and Broadway. I want to take up mission work in the Episcopal Church in this country, and I cannot get letters commendatory to the clergy from the rector. I want to know whether you will give me a letter." I shall never

Let me say that I am speaking now of the year 1878. There had been no movement in Canada such as Moody had been associated with in this country; the people were ready for a serious religious movement. They were church-going people, well grounded in the Bible. They were a moral community—very moral, as I look back and think how they compared with others; but there had been no distinct religious awakening at that time. The time was ripe when I went into Canada. I was not responsible for the wave that came; I only happened to come with that movement, as it were.

I went to Toronto, and I had from the start the evidence there of the presence of God moving on the consciences of men as I have never had at any other time in my life; from the start the crowds were perfectly enormous.

It was midwinter, and I had been preaching ten days. As I say, the crowds were immense—crowds outside the church waiting to get in; I do not exaggerate; there would be thousands turned away each night; I have seen four hundred and eighty people stand, with perfect reverence, inside the chancel rails. The people came there to hear. You could hear a pin drop. It was like the things you read of in Finney's life. The people were fired. I did not attempt to have after-meetings in the church. There was a Sunday-school room that would seat perhaps six hundred people at the other side of the church, across a plot of ground; and in order to restrain and prevent mere emotionalism I had my first after-meeting there, not in the church. I said, one evening, after I had preached, "If there are any present who would like to talk with me on matters of personal religion, if they will go to the Sunday-school room, I will be glad to speak with them." I waited a short time, and when I went into the Sunday-school house, I found not less than five hundred people on their knees. I grappled with them as best I could.

I might say in passing that the effects of that work were largely permanent. Men of first-rate position in the city confessed conversion; lived up to their confession for many years—are living so

" Multitudes of young men came l to join the church; and at the

end of three weeks I had administered Holy Communion to such crowds as had never been seen before in St. James's; nothing approaching it had ever been seen before in Canada. I prolonged my mission; but at the end of three weeks I was about played out. I had preached nearly every sermon I had; but people came to me and said:

"You must not go; it is absolutely essential for you to stay longer; stay four months, and preach twice on Sunday and once during the week."

It seemed to be God's call, and I had to stay. The Dean went to England. I lived in the deanery, and preached twice on Sunday and once in the week; and the crowds were almost as big and as eager at the end of four months as when I commenced.

You will understand that at the end of the four months I was absolutely preached out. I was spiritually exhausted, not physically exhausted, because I was young and strong, but I had a feeling as though I never could preach a good sermon again. I felt as if I had put the last thing I ever knew into my last sermon; I was preached out.

It was a tremendous wave of religious excitement at that time; I could not get away from it. I preached against dancing; we all did; I told people they should not go to the theater; they did not go; dances were broken up. People who came to dance remained to pray, and all that sort of thing.

There is a completeness about the mission sermons that a missioner preaches that makes them better in a way than sermons preached from Sunday to Sunday; for this reason. In three years a mission preacher addresses himself to certain topics, and approaches those topics from all sides. He listens to confessions of faith, he picks up different illustrations of an idea, and, if he is methodical, as I was, he puts all down. He works, he reworks, he polishes; and there is no excuse for him if, after three or four years of that work, he cannot produce a couple of dozen of such sermons as are about perfect of their sort. The sort may be very poor; but as instruments to produce what a man is after, they ought to be very good. The point that I am coming to is, that their effect on a congregation is marked and

apparent, but the effect on the mind of the man who preaches them is not so favorable, if he does not supplement the work with other things. The mind gets into a rut. It is working and reworking in a circle, and it may become a vicious circle. This is my judgment; and I am quite certain that the experiences of others verify what I say. I do not want to quote names, but I can think of several good men who have, in my judgment, greatly deteriorated by constant mission preaching.

I parted with the people of Toronto at the end of four months, my heart wrung. Kindness is no word to use for what I received. I cannot describe the effect on myself when I quit preaching, except as a general let-down. I went to England to take a six months' rest and to be married. I was still in a quandary as to my future. I did not feel that I could be a curate in the Church of England, and I was upset and unsettled. Then an appeal which I could not resist came again from Toronto:

"The Dean is getting very old; the doctors say he cannot live long; there are signs of brain trouble. You have built up the whole community; they look to you. Come back and be assistant rector. We give you both our hands, as you know you have our hearts, and our universal pledge that, on his death, you shall be our rector."

That pledge was given with most absolute assurance on their part of good faith. I laid the matter before my wife, asked her if she was ready to go with me for some years to Canada, she said "Yes," and we went.

[TO BE CONTINUED]

The Great Civic Awakening

By J. Horace McFarland

President American League for Civic Improvement

SOME of the larger centers of population in the United States show spectacular evidences of a desire for better conditions, in certain great upheavals. New York turns out Tammany, St. Louis partially sustains the heroic fight of her District Attorney in hunting down boodlers, Minneapolis brings to trial her unspeakable ex-Mayor, Boston scores a victory for the people in a battle with the trolley companies, Baltimore elects a Mayor who puts its city business in a businesslike shape, Chicago introduces the novelty of honest Councilmen. This pronounced and somewhat spasmodic movement shows the deep unrest of the people, and evidences their growing interest in the things which have to do with their rights and duties. It is, however, largely in respect to these more notable evidences of a discontent with political misgovernment that the forward movement has been described. The turning out of the rascals is but indirectly, though very importantly, connected with another movement for cleaning up, beautifying, and making the city or the hamlet more sightly and more comfortable for its citizens.

This latter movement, which is often but slightly related to political conditions, is of unrealized extent and force, and it pervades the entire country. Little towns, small cities, the great metropolitan centers, all seem actuated, aside from political reformation, with a desire for civic righteousness, for a return to that natural beauty which is the heritage of many American towns.

The feeling is aptly expressed in the constitution of the St. Louis League for Civic Improvement, organized "to unite the efforts of all citizens who want to make St. Louis a good place to come to and a better place to live in." The distinction between the political regenerative work and this absolutely unpolitical movement is well pointed in this case of St. Louis, also; for while this League, organized by an energetic woman vice-president of the American League for Civic Improvement, is proceeding energetically to live up to its constitution, with the aid of some 1,400 members, it has no connection whatever with the superb work of Mr. Folk.

The American League for Civic Improvement, a National organization, is the result of this insistent bubbling and uprising of the desire for better things. Three years ago it was a National League

of Improvement Associations, and it took form in Springfield, Ohio, by reason of the philanthropic work of a publisher who simply responded to the cry of his correspondents. Changing its name to the broader form, the American League has held two successful National conventions, and for a more central location has removed its offices to Chicago.

This organization has a line of effort not crossing that of any other of the great National societies with which it joins in its uplifting work. The National Municipal League deals with the administrative and political problems of the greater cities; the League of American Municipalities unites the elected and appointed officers of the cities; the American Park and Outdoor Art Association is primarily concerned with decorative and artistic features. There are, as well, excellent organizations that seek to give form and unity to municipal architecture.

It remains, then, for the American League for Civic Improvement to give aid and comfort, form and substance, to the desire of the cities and towns of the country for better living conditions. Just what it does do only those conversant with the vast mass of appealing correspondence that comes to it can tell.

The need varies widely with locality and conditions. From Shreveport, Louisiana, comes a request for an organizer, for "we want to enthuse this town of 22,000, many of whom are negroes." Barre, Massachusetts, already a beautiful hill town, asks for further literature and suggestions. A good woman—indeed, it is notable that seven-eighths of all this work is done or inspired by women—in Geneva, Illinois, says: "I am to give an afternoon talk on civic progress, and am in hopes of starting town improvement."

Here is a cry from Chipley, Florida, where they have had a law prohibiting the running at large of swine, but "a certain gang of local politicians, wishing to get possession of the town offices, promised to give the 'razorbacks' free range if they were elected. This caught the vote of the shiftless and the unprogressive, and the gang got in. Now we must again submit to the pest of the town razorback and the town flea, unless we can do something to stop it. Can you frame a petition that will stir the civic pride of the citizen and convert the Mayor and the Council?" Is not this practical, and almost pathetic?

But others make the same plea. Calvert, Texas, writes that "the hog law is not enforced, and we have no 'stock' law [meaning that horses and cattle may roam at large]; sidewalks are used for dumping ashes, tin cans, etc. . . . We have beautiful trees; . . . we want to take up the work of improvement."

Just the same desire is expressed, though there are no "razorbacks" to be disposed of, in a letter from the University town of Ann Arbor, Michigan: "We are starting upon the work of organization, and want light from outside." Even our Canadian neighbors ask help, for here is a letter from the Deputy Minister of Agriculture of Ontario, who asks for literature; and a little later the organization, in Cobourg, Ontario, near Toronto, of a strong society affiliated to the American League, has followed.

The Far West speaks the same need. Here is Seattle, with "fifteen improvement clubs, and I want to excite general interest and enthusiasm." San Francisco sends a request for plans for the federation of local effort, and surely the present farthest West in civic desire is marked in this plaint from Wahiawa, Oahu, Hawaiian Islands: "Would the League in the 'States' encourage a branch here in these far-away islands?"

A State Senator in Illinois wants "to be posted, so I may talk on improvement work to a women's club." A board of park commissioners in Chattanooga, Tennessee, asks for literature on civic improvement, and the same day comes a letter from Racine, Wisconsin, asking help, and saying: "Our first step is circulating a petition to have enacted an ordinance for the removal of garbage."

Again the awakening South, with its infinite possibilities, in a letter from Wilmore, Kentucky: "No walks, no street lamps, no stock law, no anything beautiful. It seems unendurable!" Of course it is, but this active worker will make conditions change! This from Bessemer, Alabama: "Could a young woman with some influence and a wide local acquaintance do anything practical toward the formation of a village improvement society?" And from Batesville, Arkansas, this: "We are

very anxious to better things. . . . We send a Macedonian cry to you!" From Florence, South Carolina, is this practical note: "We wish to get to work, but feel the need of a little advice." The Mayor of Atlanta, Georgia, asks for suggestions as to the formation of a civic improvement league.

The newest of our inland territories is alive, for Oklahoma City is the date-line on this letter: "Are thinking of forming a city federation for the promotion of public beauty."

Detroit has always been quoted as a show place, but what does this mean? "The club women want to improve the alleys and back areas, and then the entire town. We are helpless and ignorant, and therefore seek knowledge."

In Flushing, New York, some citizens "have decided to undertake some civic improvements in our own vicinity, for, although a part of the city of New York, we do not receive proper help."

Let not New England, the home of the pioneer village improvement society, be neglected. Here is Attleboro asking for speakers to help organize; and Dennis, a village on Cape Cod, whose "residents are desirous of improving the surroundings," asks assistance.

These extracts might be extended almost indefinitely. From Frederick, Maryland, to Portland, Oregon; from Grand Rapids, Michigan, to Glastonbury, Connecticut; from New Jersey to Montana, from Kansas to West Virginia, the call is identical in spirit, though varying in details. It is a call for help at the very beginning of the desire for improvement, and, if rightly guided, it means, obviously, a united uplift, the importance of which cannot be overestimated. To the citizens with "razorbacks" running at large, the higher problems of government are a little hazy as yet! That self-respect which comes to a community when it has roused to a sense of its civic sins, and has Methodistically shown by repentance a desire for regeneration, is of great present power and pregnant with vast potentialities. In Harrisburg the vote for improvement changed more things than simply the direction of the city's expenditures. I may be wrong, but I will venture the statement that the cure for many of our ills of misgovernment lies right in the movement evidenced in the quotations above. With practical interest aroused in his own door-yard, his own street, his own town, the citizen will almost surely think aright on larger questions.

I am setting forth the reason for and the work of the American League for Civic Improvement. Much of this work is in embryo. All the correspondence quoted above is of the past few months. Yet there have been concrete accomplishments out of all proportion to the stinted support we have had—stinted only, I am glad to believe, because the needs and the importance of this basal movement for concrete civic righteousness have not yet been fully made known to the great American heart, always beating close to the equally great American pocketbook which generously sustains all good movements.

But let me mention just a few actual achievements of the League. From Emlenton, Pennsylvania, there came such an application as I have quoted. The reply and the stimulus caused an organization, and this work followed: "We have already raised over a hundred dollars, have cleaned the town hall, cut the grass in the yard, sowed clover-seed, planted two beds of flowers, secured space in our two newspapers for anything we wish to publish, have one churchyard in good order and are slowly approaching the others, have seen the school directors about the school grounds, have written to see about securing wire baskets for holding waste-paper on Main Street."

Thomasville, Georgia, was one of the first towns to feel the impulse, and the result has been a cleaning up which has made it a most popular place of winter resort for Northern people.

In Chicago there is a great movement, as all know, but it has been somewhat ineffective by reason of diffusion. The good offices of the American League have resulted in a practical federation of Cook County Improvement Societies, including 342 organizations, each now working harmoniously and not at cross purposes.

Portland, Oregon, is to have in 1905 an exposition celebrating the Lewis and Clark expedition to the great Northwest. The impulse given by the American League has resulted in an active local improvement league.

The St. Louis League, to which I have

alluded briefly, has already, among other achievements, organized the women of the slums, and is regenerating them by stimulating their civic pride. A woman inspector is maintained, and a monthly bulletin is issued. A three-day civic celebration, with—think of it!—improvement services in all the churches, has just been held. The three open-air playgrounds for poor children, provided last summer, are to be increased to five in the summer of 1903.

Mr. Albert Kelsey's admirable plan of a model city for the 1904 St. Louis Exposition has been fostered and supported by the American League, and in connection with it a central bureau of civic information is planned for maintenance during the Exposition. No more educative or important work than this can be undertaken, and if proper support appears, hundreds of thousands of citizens will be reached and stirred up.

A lively and active affiliated league has been brought into existence in Dallas, Texas, and is maintaining work for making that city a better place to live in. An organization has been fostered in Richmond, Virginia, and another is being revivified in Wilkesbarre, Pennsylvania.

In Ohio the State Federation of Women's Clubs has been visited and awakened along lines of civic effort, and in Pennsylvania an equivalent visit will be made while these words are being read. Scores of organizations in various parts of the country have been induced to take up the work of civic improvement incidentally.

The great Chautauqua Assembly has looked upon the American League as an exponent of civic progress, and, under its suggestion, has committed the entire regeneration of its grounds to Mr. Albert Kelsey. The summer of 1903, beginning July 13, will witness a great civic progress week at Chautauqua, on the occasion of the League's annual meeting, from which will radiate lines of interest and awakening throughout the whole country.

But, after all, I think the achievement of which this National organization can be most justly proud is its work in reaching into and arousing the little towns and villages, whence come appeals such as those I have cited. To get right down to the needs of the "plain people," to help keep the cattle off the street, to tear away the fences, to induce the planting of trees and shrubbery, to make for good and clean highways, to clear up dark corners, to organize effort even in the very slums of a great city, to cause the button of civic pride to be proudly worn—all this is that patient work with the smaller things that makes true greatness of result. It takes a snowball to start an avalanche, and we have a thousand such snowballs gathering force in a thousand communities! With a little help we can have these associated avalanches roll in whitening purity over ten thousand dirt spots in America.

It is cheering to note at this time the projection of a plan for an efficient federation of all civic effort. A clearing-house organization, to be known as the Civic Alliance, will shortly assume concrete form by the voluntary affiliation of various societies. A central bureau of information will be maintained, with a capable secretary in charge. The constituent societies will continue effort, each in its own field, and each referring matters out of its specialty to the Alliance clearing-house.

In some way, in some place—ofttimes in several ways and places—it is the duty of every man and woman who believes that God has set America in the forefront of human progress, and who wants to make this great, growing, powerful country the very best place in the world for the best people, to join hands with those who are trying to hasten the day. Combination, federation, unity of effort, mean power and efficiency, in philanthropy as well as in business.

The American League for Civic Improvement is a proved agency for good, whose measure of further accomplishment rests with those whose hearts and minds are turned toward the greater America. The need for funds is great, and every dollar does much in extending the work and in making that work more helpful and complete. The Corresponding Secretary, Professor Charles Zueblin, of the University of Chicago, can be addressed at the office of the League, 5711 Kimbark Avenue, Chicago. Checks may be drawn to the order of the Treasurer, Mr. Morton D. Hull, 1303 Chamber of Commerce Building, Chicago, and will be promptly acknowledged.

Child Labor in Shops and Homes

By Lillian W. Betts

THE conditions under which clothing is manufactured in the city of New York, the center and general distributing depot of ready-made clothing for the whole country, demand the attention of the people of the whole Nation, because of the vital connection between these conditions and every home into which ready-made garments enter.

The labor of children and the laws regulating their employment in these industries are of as much importance to the State politically as are the sanitary conditions to the home into which the product enters. The labor of children in the home is not controlled by the labor laws. The school laws of the city compel the attendance of the children at school between the ages of eight and fourteen. Nothing short of daily inspection of the tenement homes could control wholly this class of child labor. As for the work certificate required for factories and mercantile establishments, the word of the parents is the final standard as to the age of the child employed. The heads of the "families" might claim as their own all the children found working for them. Unless the lie were self-evident, who could dispute them?—the license is for the family.

Under the laws of 1901 of the State of New York, a Department of Labor was created, of which the Factory Inspection Department is one division. For fifteen years previous this was an independent department. The method of investigating and licensing shops and homes for the carrying on of the clothing industry will be best shown by a description of an investigation made by the department.

On one of the East Side streets, in the region known as the sweat-shop district, is a brick building fifty feet front, one hundred feet deep, and six stories high. The first two stories are used as a livery stable. The remaining stories are shops for the manufacture of men's clothing. Each floor is divided by light pine partitions, making rooms or shops of varying dimensions. On the floor of an empty shop were piles of ashes, rags, paper, excelsior, and an old mattress. One front window in each front shop opened on the fire-escape. This window was nailed fast. Not one window in any shop had a window cord; the nails were necessary to keep the upper sash in place and to hold the lower sash tight. The iron shutters at back windows, required by law because the rear end of the building was less than fifteen feet distant from the building on the other street, closed against the ladders of the fire-escape and completely shut off the opening to the ladder leading below. The bar across the windows, to which the iron shutters fastened when closed, crossed the window slightly above the middle of the lower sash. Not one drop of water was in this building, nor had there been for a week; all the pipes were frozen solid; the waste-pipes had burst. Over four hundred men are employed in these shops, all but one of which was occupied. The sanitary conditions were shocking. Two of the shops were broom clean. The others, with the hall and stairs, were disgustingly dirty. Evidences of diseased lungs were everywhere. Hundreds of garments are made in these shops and distributed for finishing to the tenement dwellers in the region.

The men employed appeared to be without any interest in life; they scarcely raised their eyes from their machines, except those who sat next to the window, who complained of the cold because the window would not close tightly. The bosses directly, or through interpreters, complained of the neglect of the building, the dirt, the impossibility of securing repairs. The janitor, who spoke but a few words of English, was ordered to remove the dirt from the empty shop. He did this by raising a window in the hall and throwing the dirt on the roof of the adjoining building. He cooked for a number of the men who worked in the building, living in a barn-like room in the front of one floor with his family. The lessee of the building was proceeded against by the Factory Inspection Department through a deputy. Every tenant appeared in defense of the lessee the first time the case was called in court. It was

a race war at once. The second time the defendant was alone in court with his counsel. After a hearing he was committed to the Court of Special Sessions under bail. Two days' loss of work went beyond the allegiance of race affiliation.

Two small boys and one girl, each protected by the affidavit of parents before a notary public, were at work in these shops. They were not sixteen, but the only test the laws of the State demand had been met. In one shop three street musicians were playing Hungarian music, on violins out of tune. The men worked on. The musicians were as hopeless-looking as the men at the machines. When, as happened now and then, the adjustment of work caused all the machines to stop at once, the faces of the workers would brighten as some remembered melody flooded the dreary, dirty workroom.

This class of buildings was found over and over again, differing only in the degree of darkness and dirt.

Nearer the river a rear shop was found, the lower floor of which was a rag-sorting shop. The yard was the depository for manure, push-carts, the general refuse of the neighborhood, while the front shop was over a stable. Both were dirty, crowded with workmen, and goods piled everywhere.

It must be remembered that the machine work only is done in the shops. The finishing is done in the tenements. It is unnecessary to say that the workers, with rare exceptions, were not clean. The shops at the lunch hour were most dreary. Bread without butter, with black coffee or cheap wine, constituted the midday meal. Wives left their machines to eat with husbands, sons or daughters to eat with father or mother. They ate in silence; met without greeting. Rarely was English spoken. It was amazing, the number of manufacturers and heads of shops who did not speak English, to be found throughout the whole city.

The condition of the shops varies as greatly as do the homes of the people.

Four or five years ago there was an exodus of people from the East Side to an outlying section of Brooklyn. Scores of cheap houses were built; sometimes whole blocks in a region where there were no sewers, no streets paved, merely streets marked out. The then Commissioner of Health in Brooklyn made an investigation and reported on the conditions with a view to rousing the people of Brooklyn and getting the streets sewered and paved. The report was sickening. The necessary appropriations were secured, water-pipes and sewers laid, streets and walks asphalted and paved. The whole region was made habitable. This improvement has gone on steadily until the broad, sunny streets are now being lined with good tenements, few over three stories high.

Here is developed a community composed of two races, each withdrawn to its own section. At least eighty per cent. of this community are engaged in the industries connected with the making of ready-made clothing. Many of the shops are lighted by windows on four sides and have large skylights. Few of the shops are over two stories in height. Now the building of four or five stories is found in which motive-power for the machines is provided. Many of the small shops use electricity for motive-power, and heat the irons for pressing with electricity, as well as light the shops. The result is pure air and cleanliness. This represents the aristocracy of the clothing industry.

Gas engines for running the machines were found in many shops. Only in the poorest and least cleanly of the shops was foot-power used. The men shrug their shoulders and say, "Foot-power doesn't pay." One small shop in which men's suspenders were made had a beautiful little gas engine in the corner. The shop was crowded and dirty; four children at work on vacation certificates were found here.

The whole region, in the character of the houses and shops, has responded to the improvements made by the city. Shops and homes are well lighted. Of course dirty shops, dirty workers, dirty homes, were found, but they were in the minority.

As has been stated, the hand work is done in the home. Very few hand-sewers were found in the shops. That would mean more rent for the employer. He would have to hire more space for them.

The laws governing the distribution of these unfinished garments to the tenement workers were intended to protect worker and consumer. That the laws fail to do either is not surprising, because of the

complications and the division of authority. When a man or woman wishes to take work home from a shop or factory, application must be made to the factory inspection department of the Department of Labor, a State department with headquarters in Albany, with a sub-office in the city of New York. This application must give the name and address of the applicant, the number of persons who will work under the license, the number in family, and the nationality of the applicant.

The application is made out in due form and placed in the hands of a deputy inspector, who visits the premises and reports, after investigation, to the chief inspector. If this report is conclusive and satisfactory, the applicant receives the license, which the law says must be framed and hung in the room in which the work is done. With this license a card is given, which is shown to the employer as a guarantee that the holder has complied with the law. The holders receive instructions from the Department not to surrender this card to the employer. But many do. The result is a form of slavery. The employer keeps the card, and the worker cannot secure work elsewhere without it. Most of the workers are women, ignorant of the language, the law, or their own rights. The employers rarely put their names or addresses in the account-book of the workers, who say nine times out of ten that they do not know the boss's name or address. They can go to the shop, but cannot tell the street. It took a half-day to trace one shop where the employer was violating the law, and then he was found by accident, in a shop so dirty that his license was revoked.

Every time the holder of a license moves, the Department should be notified. This means another inspection and a week's time for issuing the new license. Of course the workers try to avoid this. In one house five licenses issued for other houses were found.

The first rooms visited with the inspector were in one of the worst types of tenements on the East Side. The only outside light or air came from the two windows in the room fronting on the street. This held three sewing-machines and a long table used for cutting the men's drawers manufactured in this room. The table was high enough to permit the sewing-machines to be pushed under it at night, when a folding bed and mattress are placed on the floor. This provided part of the sleeping accommodations of the family. The kitchen back of this room was lighted by a window in the partition wall between the two rooms. Back of this was an absolutely dark bedroom, in which were a bed and two mattresses. These rooms were the home and workshop of a man, his wife, and six children. The three workers running the machines the man claimed as his children; the youngest, he said, was sixteen. They all worked, according to the man's account, as many hours as they wished. Material for the garments, cut and uncut, was piled to the ceiling. No one in the family spoke English but the father, who said the family had been here twelve years. The man had a license; the Department could recommend another workroom, and did. The man conceded that his family needed all the space now occupied by day as a workroom for living purposes. The family looked well nourished; a dinner was cooking at the time of the visit. The rooms were dirty. How could they be otherwise?—there was not room to sweep. This license was suspended until some changes were made as to the workroom and the halls.

The next application was from a house in the Italian center. The day was bright and clear. The rooms for which the license was wanted were on the third floor in the back. The light in the room where the work, finishing trousers, was to be done was that of bright twilight, the rear building, two stories higher than the front, excluding the light, making the so-called yard between the two a damp, dirty court, far more objectionable than one within the limits of a building. In this rear building were the closets for forty families, with refuse, débris, and ashes.

The halls and stairs were vilely dirty, and so dark that one found the turns only by keeping one's hand on the broken banister. Water was in each hall. For the two rooms, the bedroom absolutely dark, the applicant, a woman with four children, paid $8.50 per month. Her own rooms were as clean as a broom and cloth could make them. The walls had not been kalsomined in years. The license was

refused until such time as the house was thoroughly cleaned, but the tenants denied a license to work because of the unsanitary condition of the house must pay rent or move.

The next application came from a near-by house. This house was an old residence into which as many people as could crowd in lived. The tenant occupied a room and bedroom in the rear on the first floor above the street. The inspector knocked several times, receiving no answer. One of the tenants, a man, seemed interested in the inspector's efforts and waited on the next landing of the stairs to see what would happen. At last there was a cautious movement behind the closed door, which was followed by the sliding of the bolt. The door opened, revealing a young Italian woman. The woman understood the errand, opened the door, and graciously invited the waiting visitors in. A pine box having a cover with leather hinges was against the wall. On this was a tiny baby four weeks old. The room was clean, but very, very bare. The sunshine poured into the room, there being no rear building on the lots facing on either street. The yards were filled with rubbish and débris. It became necessary to have an interpreter, who appeared in the person of the interested spectator from the stair landing.

In reply to questions the woman answered without the slightest hesitancy or attempts at concealment.

Two people, herself and her husband, and the baby lived there; no one else. "No room," with a sweet smile and a bewitching shrug of the shoulders. No, she never worked before; she could not get work; she had no license. No boss would give her work. Rolled tightly and pushed back against the wall under the bed was discovered an extremely dirty mattress, from the ends of which protruded still more dirty bedding. A slight flush came as the woman answered, "Who sleeps on that?" "Her brother, nineteen years old, sleeps on that." The inspector went into the bedroom and took from behind the bed, covered by the bedding, two dozen pairs of unfinished trousers. For one minute the revelation appeared brutal. The woman grew old and ashen. Snatching the shawl that covered the [illegible] darted through the door without speaking. One rejoiced that the river was so far away. Before the trousers had been tagged, she returned with an older woman who said she was the sister. The trousers were hers. She had come to wash for her sister, and was going to sew on them in the afternoon. She had just gone out a minute. "Yes, she had a license;" she hurried out and returned with it. "Where is the card?" All the assurance and confidence died out of her face. There was an exciting consultation in Italian. The mother of the baby snatched it up, raised the cover, and produced the card. The inspector put the license and card in his pocket. At once consternation settled on every face. By this time the room was crowded with other tenants. The older woman, who claimed the license and card, almost dropped on her knees as she begged for their return. The license and card were another lady's, she pleaded. The secret was out. The license belonged to a third woman, not present, who performed the office of neighbor and friend by lending her card to her needy neighbors to secure work. When all love, all sympathy, all friendship, have been driven out of the hearts of men and women will this particular violation of the law cease, and not till then. A frightened, weeping group were left in the barren, sunlit room. No work, an angry boss, probably bosses, to be faced, who would find a means of punishing the workers for being found out, if they were parties to the violation of law.

The law says the employer must keep in English a register of the names and addresses of all persons to whom he gives work outside his shop. If these three women took work from the same shop, then the employer was a party to the violation. As the license was granted for a room in which only one person could be employed, the employer would be a party to the violation if he gave work enough for three women to one. If the shop card was used in three shops, then the employer was deceived. This work could not be removed from the room, nor the bundle untied, until the Department of Labor was satisfied as to the facts, and reached a decision in regard to each violation. One fact the workers faced: No work, or possibility of work, until these goods were released; even then there was the possi-

bility of their being blacklisted by the better class of bosses, who try to live up to the complicated law.

Sadly, with sympathies wholly, for the time, with the criminals, the next would-be worker was sought.

This application was for a transfer. The house was one of the best of the tenements. Halls of stone set in cement; iron and stone staircases, well lighted; sanitary arrangements up to the latest requirements. The mother applied for the license which would allow two people—members of her family—to work with her. The family consisted of the applicant, her husband, six children, her married sister, her husband and two children, one a baby but three weeks old. The rent for the three rooms occupied by this family, all with large windows opening directly into the outer air, was $18 per month. A pretty, bright little girl, who said she would be fourteen this month, was the only member of the family who used English. She had come to this country when she was two years old; she had never attended school, nor had her older brothers, who worked. She could not remember when she had not worked on trousers. Her mother would not let her work in a shop. The mother of the three-weeks-old baby sat with it on her lap, asleep, sewing on trousers. On the bare table beside her was a loaf of stale rye bread from which a piece had been broken, and a rusty tin cup half filled with what the writer thought was beef tea; the little girl said it was wine. Several bottles of the kind used for the Italian vintage were on the mantel. The rooms were comfortably warm, though there was no fire. The young mother, her husband, and two children occupied the bedroom. The remaining members of this family, numbering eight, lived in the other two rooms, so filled with beds and mattresses that only an aisle the width of a sewing-machine was clear. In this space four little children were playing with spools. The family appeared loving and wholly satisfied with their condition and environment. The rooms, children, and women were dirty, yet one felt sure that it was not poverty that forced these people to live as they were living. Of course no license would be granted for these rooms, and the work there was tagged for violations. The work was given on the license for another house.

Through a long, dark hallway, into a stone-flagged yard used for sorting rags, we searched for the next worker. In the yard, cold and damp, worked four women and three men, wretched, ragged themselves, and blue with the cold. At the hydrant in the yard a little girl of about twelve was rinsing clothes. Her teeth chattered; her bony, thin arms were blue. In the rear building and up one flight lived the woman who asked for a license. A boy of ten was taking care of three children younger then himself. The rooms, the children, and the house were dangerously dirty. The water-pipes had burst in the sink on the landing, and saturated the ceiling and everything in the dark bedroom. The boy said his mother was working in a shop; she wanted to work at home and let him go to school and sell papers after school. But she could not unless she could get a license. He looked hopefully into the faces of his visitors. He was at last to be free to go to school and to work after school. The thin baby in his arms called "Mamma;" the younger children showed fear of the strangers. If they lived in the depths of the woods they could not have feared a strange face more than in this crowded tenement.

A glimpse from the window showed one of the rag-sorters lifting the tub, in which were the clothes, to the head of the little girl at the hydrant. She staggered off to the dark hallway, appearing later at the fourth-floor back window, from which she leaned as she hung the clothes on the pulley-line.

The little father, with the baby's face pressed close to his cheek, answered the questions. No; the man would not clean; his mother had asked. Seven dollars and a half was the rent. He followed the inspector into the hall, asking anxiously, "Can my mother work home? She's clean." Who would have the courage to answer "No!" There was silence.

This scene, with but slight change, was witnessed many times. The next house visited was in such a condition of dirt and degradation that the marvel was that one could work who lived in it. It was a front house, with entrance through an alley. The stairs opened directly with a

acquitted by a jury on both charges. Thereupon William Ashford, the brother of the dead girl, brought an appeal of murder against him. It was in such accusations of crime that the right of battle existed, and on March 16, 1818, Thornton pleaded to the appeal, "Not guilty, and I am ready to defend the same by my body," and thereupon, taking off his glove, he threw it upon the floor of the court. The prosecution was surprised. They expected another trial by jury. A discussion followed, in which counsel for Ashford undertook to show that the right of trial by battle was not allowable in the case; but the court decided unanimously that it was.

Lord Ellenboro, the Lord Chief Justice of England, said, in delivering the opinion: "The general law of the land is in favor of wager of battle, and it is our duty to pronounce the law as it is, not as we may wish it to be. Whatever prejudice may exist against this mode of trial, still, as it is the law of the land, the court must pronounce judgment for it." Ashford's counsel took time to consider, and a few days later notified the court that Ashford would not accept the wager. Thereupon, on Monday, April 20, 1818, the case was dismissed and Thornton released. He came to America and was lost sight of. William Ashford, one of the parties to this suit, lived until 1867.

This trial and this ending of it created a great stir in England. The people were amazed to find that they still had a right to try some questions by battle, and at the next session of Parliament an act was passed abolishing trial by battle. If it seems a dishonor to our ancestors that they authorized this mode of trial by their laws and clung to it for more than seven hundred years after the better mode was established, it may help us to judge the matter justly by remembering that the nation to which we belong even now clings to the right to try every dispute which may arise between us and another nation by this method, which has been rejected as unfit to be used in any case between individuals. When, in 1819, the English people were destroying the last remnant of trial by battle in matters local to England and her people, they expressed the sense of the people of England in words: "Trial by battle in any suit is a mode of trial unfit to be used, and it is expedient that the same be wholly abolished." When the people of the nations were establishing a court instead of war for the trial of questions between nations, they said, in Title 3, Article 9, of the Hague Treaty: "In differences of an international nature involving neither honor nor vital interests, and arising from difference of opinion on a question of fact, the signatory powers recommend that the parties who have not been able to come to an agreement by means of diplomacy should, as far as circumstances allow, institute an International Commission of Inquiry to facilitate a solution of these differences by elucidating the fact by means of an impartial and conscientious investigation."

By Title 4, Article 16, the nations said: "In questions of a legal nature, and especially in the interpretation or application of International Conventions, arbitration is recognized by the signatory powers as the most effective and at the same time the most equitable means of settling disputes which diplomacy has failed to settle."

Both these statements in the Hague Treaty mean simply that the Court for trying questions of law and the Commission of Inquiry for trying questions of fact are recommended by the nations to one another as a better mode of trial and proof than war. But the nations refused to bind themselves to make use of these better modes of proof in any case, reserving the right to use the ancient mode of trial in every question.

Nevertheless, this is not a cause for discouragement to lovers of arbitration. For citizens of England clung for seven centuries to the right to try by battle after trial by court and jury was authorized, and yet they did, in fact, resort more and more to the courts, until a day came when they were amazed to find that they were still free to prove their contentions by personal encounter. This is one of the facts in all history most significant to the people of the twentieth century. For the nations, though unwilling to bind themselves to give up trial by battle, have instituted the Court which holds out to them the alternative mode of trial by court or jury in all cases; and the Hague Court will some day take the place of the battlefield between nations, as the courts

of England took the place of the battlefields in which citizens of England undertook to prove their contentions. The forces in man which have caused the one will cause the other. One of the instruments through which they will operate internationally has been instituted, and their work has already begun to manifest itself. The ultimate outcome is not doubtful. Wager of battle between nations will go the way that wager of battle between individuals went. The question is, How much war and devastation will occur in the meantime?

The next step forward will be agreements to arbitrate certain kinds of controversies. Why should not the United States propose to the other nations to enter into an agreement with any or all of them to submit every question to arbitration? If this seems more than the people could stand up to when roused by the causes of controversy, why not agree to submit every question to arbitration in the first instance, reserving for the people the right to appeal to war from the decision of the Court in questions as regards which the people cannot abide a decision by the Court?

Recent Books of Verse[1]

AMONG the younger poets in this country none has revealed a more genuine poetic imagination or a truer lyrical quality than Mr. Bliss Carman. His work is somewhat uneven—rather, one feels, from a touch of willfulness than from carelessness; but it is never commonplace. To him come those happy accidents which befall those only whose imaginations have original and not purely imitative force. When he goes afield or into the depths of the woods, things happen which have not happened before. In a word, Mr. Carman has an individual and personal relation to nature and to life, sees things from the standpoint of the poetic temperament, and has his own way of reporting what he sees. He has small regard either for the conventions of his art or of popular belief, and he is not averse to shocking the average commonplace view of things. His humor is original and audacious, and he gives it free play. The delightful bit of fun which he calls "The Sceptics" is an excellent example of his detached, semi-humorous way of looking at matters that are generally conventionally treated. Mr. Carman has a fresh, natural, wholly sane enjoyment of nature, which has given rise to the suspicion that there is a pagan element in him. If by paganism is meant delight in nature as abounding life, movement, variety, and beauty, every real poet is a pagan. Fortunately, definition is not confided solely to the purely conventional.

In the "Pipes of Pan" Mr. Carman's surrender to nature, his power of interpretation, and the fresh and free movement of his imagination are shown at their best. It would not be easy to find in recent poetry a more beautiful or penetrating vision of the significance of one of the most striking fables of the older imagination, or a more suggestive treatment of one of the subtlest phases of the life of nature, than "A Young Pan's Prayer," with its fresh note, its deep, broad movement of imagination, its large and free fancy:

O pipes of Pan,
Whose music ran
Through the world ere our very age began,
When I set my lip
To your woodland lip
I pray some draft of your virtue slip

From each mellow throat
As note by note,
A learner, I try for the secret rote,—
The rhythm and theme
That shall blend man's dream
Of perfection with nature's imperfect scheme!
. . . . . .
Then give me the slow
Large will to grow,
As your fellows down by the brookside grow.
Ah, blow, and breed
In my manhood's need
The long sweet patience of flower and seed!

When Mr. Thayer published a modest collection of songs a number of years ago,

[1] *Pipes of Pan. No. I. From the Book of Myths.* By Bliss Carman. L. C. Page & Co., Boston.
Songs from Edgewood. By Stephen Henry Thayer. G. P. Putnam's Sons, New York.
Later Lyrics. By John B. Tabb. John Lane, New York.
A Voice on the Wind and Other Poems. By Madison Cawein. J. P. Morton & Co., Louisville.
Message and Melody. By Richard Burton. Lothrop Publishing Company, Boston, Mass.

under the title "Songs from Sleepy Hollow," The Outlook commented on the love of flower and wood, the vein of quiet sentiment, the refinement of feeling, which gave interest and promise to the volume. In "Songs from Edgewood," recently issued, these qualities are disclosed with a truer hand and in a more exact and careful workmanship. Mr. Thayer has made a distinct advance on his earlier work. He has gained in knowledge of art, in knowledge of self, and in skill in versification. His interest in wholly in lyrical poetry, and the best of his verse is emotional, charged with sentiment, touched at times with deep feeling. His attitude towards nature reflects his own moods, and is more intimate if less joyful than before. The personal note is dominant throughout, and it is evident that the writer's view of both nature and art is colored by his own experience. This is the characteristic of the writer of songs; it is at once his limitation and the secret of his charm. Mr. Thayer is at his best when he surrenders himself to a simple emotion, to the interpretation of a single experience. This song is an example of his best manner:

I watched her read a song of mine;
She paused, then scanned it line by line;
A smile suffused her face, I guessed
Of irony than interest;
Than this—she gave no other sign.

Whatever thought she might enshrine
I lacked the vision to divine;
And yet with still lips closely pressed
I watched her read.

There seemed unconsciously to shine,
Through softer eyes, a spell benign;
And secretly, as some strange guest
Intruding on her silent quest,
A tear fell; with what joy divine
I watched her read!

The critical reader of this collection will find in it much unevenness of workmanship and of thought; but he will recognize, as compared with the earlier work from the same hand, marked gain in breadth of experience and felicity of expression. There are lines of true poetic feeling throughout the volume.

The little volumes which come from time to time from the hands of Father Tabb are always welcome to the lovers of poetry as distinguished from the lovers of verse; for Father Tabb's lyrical gift is beyond question. His work shows unevenness both of expression and of execution, but it is rarely commonplace. The rivulet of song may be slight, but it is a rivulet of poetry, and not simply a quiet little trickle of verse. Father Tabb has two great interests, which may be broadly described as a passion for God and a passion for nature. Many of the little poems which bear his name are unaffected and beautiful lyrical prayers. They often rise like a breath of incense; they are aids to the devotional life; for he is one of the few religious poets of our time. His transcriptions of nature are noticeable for delicacy of perception and refinement of imagery. All his work shows a singular purity, and his lyrics, always very condensed and at times almost teasingly abbreviated, are, for the most part, perfect in form, suggesting or outlining with definiteness and with the most delicate art a feeling, a thought, or a perception, without the waste of a word or the use of a superfluous line. The element of mysticism which belongs to a poet of Father Tabb's temperament often finds expression in his verse, and is illustrated in two selections made from "Later Lyrics:"

DAYBREAK

Thou hast not looked on Yesterday,
Nor shall To-morrow see;
Upon thy solitary way
Is none to pilot thee—
Thou comest to thine own
A stranger and alone.

And yet, alas! thy countenance
To us familiar seems;
The wonder of thy wakening glance,
The vanishing of dreams,
Is like an old refrain
From silence come again.

IN THE NEST OF THE LARK

Here the silentest of things
Lowliest lies;
Where with palpitating wings,
Swift to rise,
Wakes the soul that sweetest sings,
And the loftiest anthem brings
From the skies.

Mr. Cawein has had the good fortune to find in Mr. Gosse a sympathetic editor, and a small but carefully chosen collection of his verse has been presented to the English public during the past winter, and republished in this country in an attractive form and with a very appreciative comment by the editor. This collec-

tion serves as an admirable introduction to Mr. Cawein's work to those who are not familiar with it. Americans who care for poetry, however, have been long familiar with the Kentucky poet's sensitive imagination and fervid style. Mr. Howells said, not many months ago, of his verse, that it "interprets the very soul of what we call the inarticulate things, though they seem to have enunciated themselves so distinctly to this poet." Mr. Cawein rejoices in the affluence and richness of nature as he sees her in his own section, and has given us most sympathetic transcriptions of scenery and aspects of tree and flower and sky. In his latest volume, "A Voice on the Wind," he is sometimes lacking in restraint, and his touch is at times somewhat too emphatic; but he is often singularly felicitous in enveloping his subject with atmosphere and suffusing it with poetic feeling. Witness these verses from "In the Lane:"

When fields smell moist with the dewy hay,
And woods are cool and wan,
And a path for dreams is the Milky-way,
And the summer is nearly gone—
It's—Oh, for the rock and the woodland lane
And the silence and stars and her lips again.

When the weight of the apples breaks down the bough,
And muskmelons split with sweet,
And the moon is abloom in the Heaven's house,
And summer has spent its heat—
It's—Oh, for the lane, the trysting lane,
And the deep-mooned night and her love again.

Mr. Burton has now published his fourth volume of verse, and the characteristics of his work have defined themselves with increasing distinctness. The little book, "Dumb in June," with which Mr. Burton made his first appeal to the public, was somewhat irregular in workmanship; but it disclosed a touch at once tender and rugged. It had a tang like that of a fruit not quite ripe, but pungent and with a certain tonic element. As he has worked Mr. Burton has grown, finding increasing freedom in expression, and touching his various themes with more ease. He is essentially a lyric poet. He does not elaborate; he rarely attempts to express more than one feeling, or to describe more than one series of emotions. His charm lies in his perfect sincerity, his unaffected tenderness, and a certain directness and honesty which give his work an out-of-door flavor. It is by no means lacking in literary allusion, and it reveals a trained and ripe mind, but it is free from literary affectation; there is no smell of the lamp about it. This volume begins with one of the most vigorous and popular of Mr. Burton's poems, "Song of the Unsuccessful," which first appeared in the columns of The Outlook. It contains a group of poems interpretative of musical themes, and a larger group of nature pieces, and it closes with songs about childhood and with a little group of reveries and prayers. The quality of the volume is illustrated by two short poems, chosen almost at random:

THEN

You cannot understand, my little one,
Why tears of tenderness make blind my eyes,
In looking on your face that, like the sun,
Sheds gladness like a morn of sweet sunrise.

Perplext, you touch me with a wondering hand;
Thank God, 'tis so—for when long years are fled—
Then will you know, remember, understand—
Then, in the dream-like years when I am dead.

REVERY

Evening

Dim grows the wood; the amber evening tints
Merge into opal skies and stars just seen;
Down vistas gloomed and winding there are hints
Of elves and gnomes along the mosses green.

Midnight

A holy song the thrush has distant sung:
The tree-tops murmur like some dreaming sea;
Hark! far away a silvern bell has rung
Twelve strokes, slow tolled, that faint and fade from me.

Books of the Week

This report of current literature is supplemented by fuller reviews of such books as in the judgment of the editors are of special importance to our readers. Any of these books will be sent by the publishers of The Outlook, postpaid, to any address on receipt of the published price, with postage added when the price is marked "net."

Angevin Empire (The); or, The Three Reigns of Henry II., Richard, and John (A.D. 1154-1216). By Sir James H. Ramsay, M.A. With Maps and Illustrations. The Macmillan Company, New York. 5½×9 in. 556 pages. $3.25, net.

The title of this work, though novel, is congruous with fact. Henry II. of England was sovereign also of the western half of France, and the most powerful monarch of his time. He was, however, a Frenchman, and the ruling classes of England were essentially French. Little was there in the England of his time that was English, except the villeins. The language was not yet fixed. What Miss Norgate has done in her spirited work, "John Lackland," Sir James Ramsay has done for the reigns of Henry and his weaker sons, Richard and John. The reign of Henry was of enduring significance, especially in determining the future relations of Church and State, in changing feudalism from a system of government to a system of land tenure, and in supplanting the chaos of local codes by the introduction of uniform law. Large space is given here to the conflict between the Church and the Crown, in which Becket perished. Strangely contrasted with Henry's success as a legislator and administrator was his failure to get on well with his sons, his warfare with whom smacks more of Asiatic than European life. Less interest attaches to the reigns of Richard and John, save for the picturesque adventures of the former as a Crusader, and the Great Charter of English rights that was extorted from the tyranny of the latter. The sixty years covered by the author are of importance in history as a transitional period, in which the fusion of races was going on in England and social order was being established on permanent foundations. His work, based on an independent use of original authorities in conjunction with the studies of recent writers, is both valuable and interesting.

Archierey of Samara (The): A Semi-Historic Romance of Russian Life. By Henry Iliowizi. Henry T. Coates & Co., Philadelphia. 5×7½ in. 337 pages.

Russian persecution of the Hebrews under Nicholas I. forms the warp and woof of this romance, through which the loves of Isaiah and Athaliah run like golden threads. Life in the "Pale of the Jewish Settlement," its pathos, humor, tenderness, tragedy, is drawn with force and picturesque effect. The conscription of the boys while of so tender an age that they could be the more easily induced—even forced—into the Greek Church, was the climax of tortures which the inhabitants suffered helplessly. Once a synagogue in which a wedding was going on was surrounded and the bridegroom was torn from his bride to be made a soldier of the Czar, his attendants sharing his fate. Isaiah became a bishop of the Greek Church, but remained a Jew at heart, secretly leading Jews in Hebrew forms of worship.

At the Beautiful Gate: A Book of Poems for the Heart. By I. Mench Chambers. Illustrated. The Henry Altemus Co., Philadelphia. 4½×7 in. 141 pages. $1.

Beyond Death. By Hugh Johnston, D.D. Eaton & Mains, New York. 5×8 in. 330 pages. $1.25.

Various allusions in the preface and elsewhere indicate that Dr. Johnston has been moved to write this book by apprehension of the "dangerous" tendency of that book on "The Last Things" which brought upon Professor Beet such trouble from his fellow-Wesleyans in England. If it were deemed desirable to refute Professor Beet, a more formidable champion should have stepped into the ring. He can hardly regard as a foeman worthy of his steel a writer who argues that "the reanimation of the once dead body" is what is meant by resurrection, and, referring to our care for burial-places, asks, "Why this care for the body, if it is never to be wanted again by the owner?" The author modestly confesses to far less learning and ability than belong to some other men who have written on "these obscure and difficult subjects," else it would be inexcusable, in the present diffusion of geological knowledge, to speak of mankind as living on top of "seven thousand six hundred miles of liquid fire," that may at any time burn through the top of the oven.

Biblical Quotations in Old English Prose Writers. (Second Series.) Edited by Albert S. Cook, Ph.D., L.H.D. (Yale Centennial Publications.) Charles Scribner's Sons, New York. 6×9 in. 397 pages. $6, net.

Five years ago the Macmillan Company published the first installment of this work, in which for the first time was a "distinct practical recognition" "that Old English Biblical translations might be recovered from Old English writers as the original Scriptures are recoverable from quotations in Patristic literature." The present work is the complement to the former, so that the quotations from the chief Old English texts are now before the reader; these are so numerous and so various that only four books of the Old Testament are not represented (Ruth, Nehemiah, Obadiah, and Nahum), and only 2d and 3d John of the New Testament. Owing to the scanty remains of Old English (or Anglo-Saxon) Biblical translations, these volumes will go far in throwing light on the Biblical instruction of the Old English church. Professor Cook also suggests their usefulness for synonymic study, by comparison of the different versions of the same text. It is the work of supererogation to speak of the completeness and accuracy of Professor Cook's volume, in its quoting

of the (proximate) Latin originals, in its references to text and passage both of the Old English and of the Latin, and in its careful indexing.

Blue Flower of Methodism (The). By Claudius B. Spencer, D.D., Litt.D. Jennings & Pye, Cincinnati. 4½×6½ in. 42 pages. 25c., net.

Borough (The): A Poem By the Rev. George Crabbe. (The Temple Classics.) The Macmillan Co., New York. 4×6 in. 339 pages. 50c.

Next after "Tales in the Hall" this volume contains probably the most representative work of George Crabbe, the poet who was born in Suffolk County, England, in 1754, and died in 1832, and whose work is agreeable chiefly for its exact fidelity to life. Crabbe is very little read in these days; far less than he deserves. It would be well if more students of English poetry gave more attention to him.

Business and Love. By Hugues Le Roux. Dodd, Mead & Co., New York. 4¾×7½ in. 302 pages. $1.20, net.

M. Le Roux seeks to be more kind than the gods in letting us see ourselves as others see us. After a lecture-tour in this country he sets down his "impressions" of things American. They constitute from first to last an arraignment of the American home, American educational methods, our social system, and, above all, of the American women. France, he says, is the center of all the domestic virtues—and he refers us to that country as furnishing models by which we may mend our ways. This is really amusing; one wonders if M. Le Roux is joking! The American woman, he avers, is a spendthrift, will not marry, will not keep house, will not bear children—in all of which respects the Frenchwoman is an example of perfection! The American woman "has reduced man to just where she wanted him to be," and then does not like him. After declaring man's intellectual superiority a recognized fact everywhere, he rails at the American woman because the American man is her intellectual inferior. The American man will hardly be grateful for this. In spite of glaring absurdities and ludicrous contradictions, the book gives us food for thought in calling attention to defects in our social system, of which we are self-informed, but of which we cannot think too much.

Catechism of General Information about the Bible for Use in Sunday-Schools and Elsewhere. Prepared by Theodore P. Prudden. Alfred Mudge & Son, Boston. 5×8 in. 73 pages. Paper bound.

An outline summary, at once frank and conservative, of the facts about the Bible that have been established by enlightened modern scholarship. Its use will tend to make popular study of the Bible intelligent.

Cavalier (The). By George W. Cable. (The Julia Marlowe Edition.) Illustrated. Charles Scribner's Sons, New York. 5×7¾ in. 311 pages. $1.50.

A new edition called out by the dramatization of Mr. Cable's novel, with pictures of Miss Marlowe and others of the cast.

Cliveden. By Kenyon West. The Lothrop Publishing Co., Boston. 5×7¾ in. 473 pages. $1.50.

A story of the Revolution, opening just before the battle of Germantown and in the vicinity of that village. The fierce fight made by a British regiment in the old Chew residence against "Mad Anthony Wayne" and his men supplies stirring chapters. The heroine is, of course, an American girl in love with a British soldier, since she is not a British girl in love with an American. In the first paragraph she looks out of a window and sees two horsemen riding up to the house; their identity is not disclosed for so many pages that the reader has almost forgotten them; this is not the only instance in which good rules of construction are violated, and situations, instead of being led up to, are explained backward. Washington, Howe, and other famous characters figure in the romance.

Child's Garden of Verses (A). By Robert Louis Stevenson. Illustrated. Rand & McNally Co., New York. 6×8 in. 93 pages.

David and Bathshua: A Drama in Five Acts. By Charles Whitworth Wynne. The Knickerbocker Press, New York. 5½×8½ in. 100 pages.

Down North and Up Along. By Margaret Warner Morley. Illustrated. Dodd, Mead & Co., New York. 5×8 in. 304 pages. $1.

The next best thing to going one's self to Nova Scotia is to read this book; to people who have visited the country it will recall pleasant memories; those contemplating a visit may find in its perusal happy preparation. Over one hundred miles of the journey which the author and her companion took "Down North" were made in a wagon drawn by Dan, an entertaining horse. The style is healthy and breezy; solid information about cod-fisheries and other practical matters is given with wit and grace; and pathos is not wanting in the tale of simple and earnest lives with which the travelers came in touch.

Emphasised Bible (The): A New Translation Designed to Set Forth the Exact Meaning, the Proper Terminology, and the Graphic Style of the Sacred Originals: Arranged to Show at a Glance Narrative, Speech, Parallelism, and Logical Analysis, also to Enable the Student Readily to Distinguish the Several Divine Names, and Emphasised Throughout after the Idioms of the Hebrew and Greek Tongues. By Joseph Bryant Rotherham. Vols. I.-III. The Fleming H. Revell Co., New York. 7½×10 in.

Mr. Rotherham's "New Testament Critically Emphasised" has brought him commendation. These three volumes of the Old Testament, a much more laborious work, will add to it. The marks of thorough scholarship and painstaking care are everywhere conspicuous. The law of parsimony in the use of artificial signs of emphasis and of varieties of type, so liable to perplex and weary the reader, has been judiciously observed. Apart from the use of signs, the emphasis of the original is well sustained by preserving the original emphatic arrangement of the words; *e.g.*, Psalm xv. 5,

> He that putteth not out his money to usury,
> Nor taketh reward against the innocent,

is thus arranged, closely following the Hebrew:

> His silver hath he not put out on interest,
> Nor a bribe against the innocent hath he taken.

The Hebrew text followed is the revised Massoretic recently edited by Dr. Ginsburg. The foot-notes and various readings are helpful to the scholar, and not perplexing to the English reader. The new translation is as

meritorious as any single-handed work of the sort is likely to be, though for an individual work we should accord preference to that of the late Professor Noyes, of Harvard. In Psalm xv. 5, for instance, Mr. Rotherham's translation,

> He that doeth these things shall not be shaken unto *times age-abiding*,

where the italicized words stand for *l'olam*, usually rendered "forever," they are a needlessly literal substitute for the uniform rendering of our current versions, "shall never be moved." In Psalm xvi. 2, 3, where the Revised Version is more luminous than the Authorized, Mr. Rotherham prefers a rendering closely similar to the latter. In Proverbs xxv. 2, where both versions compare him who sings songs to a heavy heart to "one that taketh off a garment on a cold day," Mr. Rotherham prefers to translate "as splendor on a cold day." In the poetical books of the Old Testament the best Hebrew scholars are sometimes widely apart in their renderings, and individual translators for the general reader do well to heed the consensus of opinion. The work is published in fine typographical form, attractive to the eye and convenient for use.

Ethics of the Body. By George Dana Boardman. The J. B. Lippincott Co., Philadelphia. 4×6¾ in. 154 pages.

Filigree Ball (The): Being a Full and True Account of the Solution of the Jeffrey-Moore Affair. By Anna Katharine Green. Illustrated. The Bobbs-Merrill Co., Indianapolis. 5×7½ in. 418 pages.

This detective story has the exciting quality characteristic of Anna Katharine Green's work.

Gap in the Garden (The). By Vanda Wathen-Bartlett. John Lane, New York. 5×7½ in. 358 pages. $1.50.

If it were not for the cheerful and wholesome "Biddy" who is not the heroine, this book might be disposed of in the one word "morbid." The strange spiritual affinity and bodily resemblance between the crippled heroine and the invalid Kelwin, his queer power of knowing what is happening at a distance, the scraps of philosophy that fall from his lips, and the sharp, bright sayings which the girl utters, will doubtless possess a strong sort of fascination for people who like stories dealing with the "occult;" those who do not may be inclined to set down almost everybody in the book as "crazy," and the book itself as having good title to the same descriptive adjective.

Genetic Psychology for Teachers. By Charles Hubbard Judd, Ph.D. (The International Education Series.) D. Appleton & Co., New York. 4½×7¼ in. 329 pages. $1.20, net.

Finding that the results of child-study have thus far been rather meager, Professor Judd recommends more teacher-study as the still lacking preliminary. The fundamental pedagogical principle he holds to be this: "that the teacher should first understand the inner nature of his own mental processes, and seek in his own understanding of these processes the methods of teaching." To this the discussions here presented are a directory, both of principles and of applications, that has been found to work well in practice with a group of teacher-pupils. As specimens of the thoroughness recommended by Professor Judd in teacher-study, his chapters on "The Teacher's Writing Habit" and on the inner nature of "The Process of Reading" will command general attention. His entire work is fresh and stimulating. He is an impartial critic both of traditional mechanism and of modern illusions, and the new ideals of development are effectively presented.

Girl of Ideas (A). By Annie Flint. Charles Scribner's Sons, New York. 5×7¾ in. 349 pages.

The struggles of an author to dispose of her manuscripts; the disappointments, heartaches, and cold cash which her efforts cost her, reduce her to a desperate strait. It occurs to her that the thing to do is to open an office and sell her ideas to writers who have none. She drives a thriving trade, keeps ideas in a ledger and retails them offhand to writers who drop five and ten dollar bills on her desk in exchange for a joke, a poem, or some other little thing. She has a nice love affair as well as bright "ideas," and the book is amusing and enjoyable.

Glimpses of Colonial Society and the Life at Princeton College, 1766-1773. By One of the Class of 1763. Edited by W. Jay Mills. Illustrated. The J. B. Lippincott Co., Philadelphia. 5½×8½ in. 182 pages. $2, net.

It is a satisfaction to note the increasing number of small volumes giving intimate glimpses of American Colonial society. The journals of Maria Bayard and of Sally Wister, recently published, are such books. The present volume is worthy of a place alongside them. Mr. Mills, the author of "Historic Houses of New Jersey," has edited these reminiscences so as to give to us great variety in the chapters; for instance, we have some pertinent reflections on "The Study of Law," on "A Philadelphia Actor," on "A Picture of Perfect Friendship," on "The Charms of Miss Rebecca Redmond," on "Commencement at Princeton," and on "College Frolics." The author of these papers was William Paterson, who was graduated at Princeton in 1763, and later succeeded William Livingston as Governor of New Jersey. It is indeed a pleasant and profitable thing, after having studied the outlines of American history through the ordinary text-books and reference-books, to transfer ourselves into the real atmosphere of olden time by such a volume as that which Mr. Mills has so well edited—a transfer otherwise impossible.

Greater Russia: The Continental Empire of the Old World. By Wirt Gerrare. Illustrated. The Macmillan Co., New York. 5½×9 in. 337 pages. $3, net.

Like Gaul, Greater Russia is divided into three parts, of which the most interesting, Mr. Gerrare thinks, is that to the east of Lake Baikal. More than any other part of the Russian Empire, it is swayed by British and American influence. While eastern Siberians are bound to recognize the Government at St. Petersburg and to admit it as supreme, what really interests them, the author affirms, is the English and American view of matters commercial, industrial, and political. In the Pacific ports and on the Amur River the Siberian

merchants get into touch with the new rivals from the West; the result is that fresh ideas and different aspirations are instilled among the people. Mr. Gerrare's observations are similar to those of Mr. Shoemaker in the latter's book published a fortnight ago. Both writers conclude that the Russians are bound to succeed in colonizing Siberia and Manchuria, and give abundant reasons for so thinking. In both books we find statements surprising to those who have not made an actual study of the Russian Empire on the ground; for instance, Mr. Gerrare tells us that during these later years Moscow is outdistancing St. Petersburg as a commercial center—the ordinary reader is apt to think of Moscow very much as Mr. Gerrare himself pictured it in his delightful "Story of Moscow," published some time ago, as to a great extent a mediæval city. Again, it would seem that Poland has immediately been benefited by recent industrial developments more than Russia. Mr. Gerrare tells us that the Poles possess greater practical knowledge than the Russians, and have established factories whose products find a market in Russia at remunerative prices. But the Poles in the west and the Mongols in the east have nothing in common as sons of the Russian Empire, save an admitted allegiance to their Russian conquerors. A coalition of non-Russians against the State, the author asserts, would result in an absolute shattering of the Empire into many antagonistic fragments. The present volume, therefore, is of peculiar interest in showing that the heterogeneity of its subjects is at once the Russian Empire's weakness and strength.

Greek Composition for Schools, with Exercises Based on Anabasis I-III, College Entrance Papers, and Original Selections. By Robert J. Bonner. Scott, Foresman & Co., Chicago. 5×7½ in. 248 pages.

Her Lord and Master. By Martha Morton. Illustrated. Drexel Biddle, Philadelphia. 5×7½ in. 475 pages. $1.50.

There have been many instances of novels turned into plays; here is a play turned into a novel. The millionaire American father who gives his daughter everything she wants, and who obeys her, is, next to the girl herself, the central figure. She marries an Englishman; he convinces her that he is head of his house, by measures that to the reader if not to his wife must put him at sad disadvantage with American husbands and fathers, if comparisons are to be drawn and this writer to be believed.

How to Make Money: Eighty Novel and Practical Suggestions for Untrained Women's Work, Based on Actual Experience. Edited by Katharine Newbold Birdsall. Doubleday, Page & Co., New York. 5×7½ in. 249 pages. $1, net.

House Building and Furnishing: Being a Combined New Edition of "Model Houses for Little Money," by William L. Price, and "Inside of 100 Homes," by W. M. Johnson. Doubleday, Page & Co., New York. 5×7½ in. 140 pages. $1, net.

How to secure beauty and convenience in a home at moderate cost is the theme of this book, which gathers into one volume a series of articles that have appeared in the "Ladies' Home Journal." Building plans of houses ranging in cost from $1,000 to $4,500, and of churches costing from $1,800 to $3,200, and economic schemes for furnishing the former, are given, with full illustrations and architects' drawings.

India's Problem: Krishna or Christ. By John P. Jones, D.D. Illustrated. The Fleming H. Revell Co., New York. 5½×8½ in. 369 pages. $1.50, net.

This problem has been gradually working toward its issue for a hundred years. Nearly a century since, the Directors of the East India Company pronounced the sending of Christian missionaries to India "the maddest, most expensive, most unwarranted project ever proposed by a lunatic enthusiast." Quite recently the Lieutenant-Governor of Bengal spoke otherwise: "Christian missionaries have done more real and lasting good to the people of India than all other agencies combined." The final issue is not reached yet, but present conditions, as exhibited in this volume, furnish ground for the most hopeful forecast. The leaven of Christianity is slowly but surely transforming Hinduism. The Hindu conception of Christ has changed from antipathy to sympathy. In a lecture to Hindus an orthodox Hindu asks, "How can we be blind to the greatness, the unrivaled splendor of Jesus Christ?" The addresses of Dr. Jones produced a deep impression during his recent visit home, and his book, issued since his return to India, will deepen and confirm that impression by its sketch of the conditions and results of the work advancing there. Not least among the grounds of a hopeful forecast of its issue is the fact that the problem is better understood now than in the earlier stages of the work. The rule of give and take has its application even as between Hinduism and Christianity, though in unequal measure. Of this Dr. Jones, who shows himself thoroughly open-minded, is quite convinced.

Jewish Forerunners of Christianity. By Adolph Danziger. E. P. Dutton & Co., New York. 5¼×7½ in. 326 pages. $1.50, net.

One only of the nine great Rabbis here commemorated can be strictly called a forerunner of Christianity—Hillel, whom Dean Stanley has called "the morning star of the bright dawn that was rising in the hills of Galilee," a man whose temper was singularly congenial to that of Jesus. The rest are of later date during the first and second centuries. All great men, unknown to-day outside of a narrow circle, they all deserve to be known for the part they bore in developing a cosmopolitan character in Judaism, and its firm center of nationality in its rabbinic literature.

Jugendliebe. By Adolf Wilbrandt. Edited by Theodore Henckels. Henry Holt & Co., New York. 4¼×6½ in. 87 pages. 30c.

Keys of the Kingdom and Other Sermons (The). By R. J. Campbell, M.A. The Fleming H. Revell Co., New York. 5×7¾ in. 121 pages.

Kindergarten Stories for the Sunday-School and Home. By Laura Ella Cragin. Illustrated. The New Era Publishing Co., Chicago. 5¼×8 in. 316 pages. $1.25, net.

An intelligent and, on the whole, successful attempt to convey to the child the incidents

and events in the life of Christ in the form of familiar stories, told with the simplicity and fullness of illustration which are characteristic of the best work in the kindergarten. There are few stories in the world so difficult to translate into still simpler forms as those which enrich the pages of the New Testament; but in order to arouse the attention of little children, these stories may in some cases be amplified to advantage. This is what has been done in this volume; the details have been expanded and filled in, the treatment being throughout reverential and in excellent taste.

Legatee (The). By Alice Prescott Smith. Houghton, Mifflin & Co., Boston. 5×8 in. 324 pages. $1.50.

A story of the troubles of a "legatee" who comes into ownership of a lumber-mill in Wisconsin, and is disliked by some of the people of the town because he is a Southerner, by others because he is not a prohibitionist, by still others because he is a capitalist. The raw material is good, and there are genuine local color and special knowledge, but in the writing the book has not been clearly or strongly worked out.

Life of Bret Harte (The). By T. Edgar Pemberton. Illustrated. Dodd, Mead & Co., New York. 5½×9 in. 358 pages. $3.50, net. (Postage, 20c.)

The plain truth about this Life is that, in so far as it is made up of Bret Harte's letters, reports of his talks, and quotations from his books, it is thoroughly enjoyable; but if one looks to it for a critical estimate or for a well-written memoir he will be sadly disappointed. Here is a specimen of Mr. Pemberton's critical style: "Many tear-laden eyes, many quivering lips have been soothed by the verses of Bret Harte. They have done more than this. They have brought the tear and the lip tremble to thousands of readers who have felt their chastening influence and thus been softened." And equally inflated is his concluding remark after a long (and quite unnecessary) discussion as to whether Harte did or did not pay his bills promptly: "In face of such evidence as this, surely the viper—slander—may be ruthlessly trodden under foot." To any one who knows how books may be made mechanically, there is much unconscious humor in the pages devoted to gazetteer information about Albany, where Harte lived as a boy, interspersed with eloquent remarks as to what the budding genius must have felt and thought when he learned that Albany was foundcd in such a year, and that its name was once changed, and so on, and so on. In every way the book is hastily made, and those who love Bret Harte will hope for a more adequate work. Fortunately, however, the author has had access to many letters, and these simply sparkle with humor and keen bits of comment. In them are found most welcome and acceptable side-lights on Bret Harte's life, methods of working, and tastes.

Lyrics of Love and Laughter. By Paul Laurence Dunbar. Dodd, Mead & Co. New York. 4¼×6½ in. 180 pages. $1, net.

This little volume is in Mr. Dunbar's best vein. He is a poet of song, whose gift lies in the expression of a simple emotion or the description of a common experience. His work is characterized by breadth, directness, and, at its best, sound emotional quality, rather than by range of interests, intellectual curiosity, or skill in the use of varied forms of verse. His gift of humor is, next to his gift of sentiment, his most characteristic quality. He is best in dialect verse, because in that verse he is dealing at first hand with emotions and experiences which lie behind him in the history of his race. The freshness of his feeling, his genial humor, and his unaffected sentiment are well illustrated in this little poem:

THE LOOKING-GLASS

Dinah stan' befo' de glass,
Lookin' moughty neat,
An' huh purty shadder sass
At huh haid an' feet.
While she sasshay 'roun' an' bow,
Smilin' den an' poutin' now,
An' de lookin'-glass, I 'low
Say, "Now, ain't she sweet?"

All she do, de glass it see,
Hit des see, no mo',
Seems to me, hit ought to be
Drappin' on de flo'.
She go w'en huh time git slack,
Kissin' han's an' smilin' back,
Lawsy, how my lips go smack,
Watchin' at de do'.

Wisht I was huh lookin'-glass,
W'en she kissed huh han';
Does you t'ink I'd let it pass,
Settin' on de stan'?
No; I'd des' fall down an' break,
Kin' o' glad 'tuz fu' huh sake;
But de diffunce, dat whut make
Lookin'-glass an' man.

Light in Dark Places: A Spiritual Imagination. By Newman Smyth. Thomas Y. Crowell & Co., New York. 5×7 in. 26 pages. 35c.

Mary North. By Lucy Rider Meyer. The Fleming H. Revell Co., New York. 5¼×8 in. 339 pages. $1.50.

Though in plot and construction this novel is crude, yet it was worth writing and it is worth reading—indeed, every one ought to read it, if the conditions surrounding working-girls in great cities are as portrayed. Deaconess Meyer will be considered good authority, and many will feel that, even though this is fiction, she has not overdrawn her picture of the temptations and perils besetting girl toilers in the world markets. The measure by which she proposes to correct evils described is good as a surface remedy, doubtless, and has much in various ways to recommend it, but it is a surface remedy merely; by raising domestic service to the dignity of a profession she hopes to draw girls out of shops.

Philippine Islands, 1493-1803 (The): Translated from the Originals. Edited and Annotated by Emma Helen Blair and James Alexander Robertson, with Historical Introduction and Additional Notes by Edward Gaylord Bourne. Illustrated. Vol. I. 1493-1529. The Arthur H. Clark Co., Cleveland, Ohio. 6¼×9⅛ in. 357 pages.

This is the first volume of an important historical undertaking. The editors have selected from a vast mass of manuscripts and books documents which form the sources of Philippine history. The present volume covers the period from 1493, when Pope Alexander laid

down the limits between Spanish and Portuguese rule, to 1529, about which time Transylvanus wrote his singular and picturesque letters, "De Moluccis Insulis." Naturally, such a work appeals to the scholar rather than to the general reader, but it must be added that the editors have found not a few passages of dramatic human interest. We shall speak further of the work when it has progressed further.

Personal Salvation: A Treatment of the Doctrines of Conversion and Christian Experience. By Edward N. Cantwell, B.D. Eaton & Mains, New York. 4½×7 in. 216 pages. 75c.

Physical Chemistry for Physicians and Biologists. By Dr. Ernst Cohen. Translated by Martin H. Fischer, M.D. Henry Holt & Co., New York. 5×7½ in. 343 pages. $1.75.

Position of the Laity in the Church (The). By Alfred Barry, D.D., D.C.L. (The Church's Outlook.) E. P. Dutton & Co., New York. 5×7½ in. 155 pages. $1, net.

This book is meant for those readers who are interested in the concerns of the Church of England. The author, who was formerly Primate of Australia, holds that the authority of the Church from Apostolic times has been reposed, not in the clergy, but in the whole body. He traces historically the varying power of the laity, and concludes by saying that this power ought to be given constitutional recognition in the Church. A recent Act of Parliament has, by the way, granted such recognition in one respect—that of discipline. The difficulty involved in the inconsistency between the theory that "every baptized Englishman" is within the fold of the Church and the fact that many baptized Englishmen prefer "some other denomination," the author first clearly states and then undertakes to meet.

Prairie Winter (A). By an Illinois Girl. The Outlook Co., New York. 4½×7 in. 64 pages. $1, net.

There are some very simple and sincere bits of word-painting in this record of experiences and thoughts. It was evidently written, not for the world to read, but because the writer felt the need of expression. There are shrewd and gently humorous glances at human nature, and everywhere is a deep and true appreciation of out-of-door nature.

Private Life of the Romans (The). By Harold Whetstone Johnston. (The Lake Classical Series.) Scott, Foresman & Co., Chicago. 5¼×8 in. 344 pages.

This is an entertaining as well as instructive book, whether for the college student or for the general reader. The shadowy forms that people ancient history seem to be brought nearer as the telescope is turned upon them that reveals them in all the detail of real life, whether in business or amusement, in their travels and their correspondence, giving us the menu of the feast and the tariff of the lodging-house, the playthings and pets of children, their games and schools. It is profusely illustrated and well indexed.

Richard Roony. By Maxwell Gray. D. Appleton & Co., New York. 5×7½ in. 507 pages.

There is some similarity between this book and "The Silence of Dean Maitland," inasmuch as the situation upon which the interest of the story turns in each case is crime concealed. In working out conclusions, however, the author sounds a new note; the deed is condoned, the concealment justified. The slayer, instead of surrendering himself to the law, takes up the dead man's burden himself, risks his own life to save other lives, and betters the conditions of all about him to the fullness of his power, confessing his sin only when another is imperiled by his silence. The book's lesson seems this: expiation in service involving sacrifice is to be preferred to sacrifice that is not service.

Representative Art of Our Time, with Original Etchings and Lithographs and Reproductions of Oil and Water-Colour Paintings, Pastels, etc. Edited by Charles Holme. Published by the International Studio, 67 Fifth Avenue, New York. 11×15 in. Part III. Complete in 8 Parts, each $1, net.

To this installment Mr. Percy Bate contributes an article on the future development of oil painting. The most interesting part of Mr. Bate's essay is his consideration of the imaginative element, as shown in the work of Watts and Rossetti—the phase of art that sets off the achievements of to-day from those of a century ago. In conclusion, the author emphasizes sanity and individuality as the essentials to the greatest growth. The six illustrations are well selected and admirably reproduced. The best picture is a colored sketch by Sir E. A. Waterlaw, entitled "October Evening, Picardy."

Sermons. By Rev. Jacob S. Shipman, D.D. E. P. Dutton & Co., New York. 5×7¾ in. 177 pages.

The author of these sermons was one of the most thoughtful men who has spoken from a New York pulpit during the last two decades; a preacher of very quiet manner, but of extraordinary clearness of thought, soundness of judgment, and power of lucid statement; a preacher pre-eminently to thoughtful men and women. This volume is entirely apart from the great mass of books of sermons. It is characterized by a simplicity of statement, a freshness of treatment, and a lucidity of style which make it extremely easy to read and extremely refreshing. It deals almost entirely with the general subject of the resurrection and the immortality of the spiritual life, both here and hereafter. Its approach to this great and difficult theme is direct and thoroughly rational; the treatment is pre-eminently suggestive; and the book wins and persuades by its dispassionateness and its common sense. It is a book which will clear up many difficult things for many minds, and which no one can read without stimulus and profit.

Spanish Grammar. By Professor Schilling. Translated and Edited by Frederick Zagel. Henry Holt & Co., New York. 5×7½ in. 340 pages.

Spinners of Life. By Vance Thompson. Illustrated. J. B. Lippincott Co., Philadelphia. 5×7¾ in. 294 pages. $1.50.

The esoteric contrivances worked into this novel are clumsy. The bit of political life is hardly worth while. The love story does not hold one with any strong human interest. But the book has just one point of value—

shows forcibly, though by allegory, the power and peril of the passion for money. The story is prefaced by this quotation from Rousseau: "If, in order that you might inherit a great fortune from a Mandarin . . . whom you had never seen or heard of, you had merely to touch a spot on your wall—would you touch it and kill the Mandarin?" "What a confounded silly question!" says the hero; "any fellow would!" The spot appears on his wall; and he touches it.

Study of Poetry (The): A Guide to English Literature. By Matthew Arnold. The Macmillan Co., New York. 4×5½ in. 121 pages. 75c.

This little volume contains two very characteristic and eminently helpful literary studies: the first on "The Study of Poetry," which appeared as a general introduction to Mr. Ward's admirable anthology, "The English Poets," and the second, "A Guide to English Literature," which is a note of the most reminiscent kind on Mr. Stopford Brooke's "Primer of English Literature."

Talks to Boys and Girls: Kite Talks, Random Talks, the Life I Ought to Live. By Rev. Sydney Strong. The Fleming H. Revell Co., New York. 5×7½ in. 128 pages.

Traitors (The). By E. Phillips Oppenheim. Illustrated. Dodd, Mead & Co., New York. 5×7¾ in. 344 pages. $1.50.

The kind of fiction-construction which Anthony Hope popularized in "The Prisoner of Zenda" is followed, and perhaps too closely, in the saving resemblance between the King of Theos and a newspaper correspondent who personates him. However, the story has some delightful qualities all its own, because the heroine is an American girl with a "typical" American father. She sends her sweetheart, the king, a whole battery of Maxim guns for a little present. When the pinch comes, her father foots the bills of the war with Turkey and Russia.

Triumphs of Science. (Youth's Companion Series.) Edited by M. A. L. Lane. Illustrated. Ginn & Co., Boston. 5×7 in. 154 pages.

True Tales of Mountain Adventure for Non-Climbers, Young and Old. By Mrs. Aubrey Le Blond (Mrs. Main). Illustrated. E. P. Dutton & Co., New York. 5¾×9 in. 299 pages. $3, net.

There could not be more thrilling narratives than these accounts of the conquering of mountains. Some relate to famous deeds of the past, others to recent experiences. While every one will concur with the author's encomiums on mountaineering as a manly sport, exhilarating and full of joy, the book also brings out so vividly the tragedies of the sport that one wishes that law or common sense might limit the ambition of climbers. There are many really fine reproductions of photographs.

Walda. By Mary Holland Kinkaid. Harper & Bros., New York. 5×7½ in. 312 pages. $1.50.

Walda, the prophetess of "Zanah," an American religious community which puts a ban on love and marriage, finds her heart besieged by a worldly visitor. The community schoolmaster, who is likewise an elder and of course pledged to celibacy, loves her, though unconsciously, until jealousy of the intruder reveals his secret to himself. The gossip of the "sisters," the avarice of the elders, the wisdom of the "fool," the quaint customs of the community, compose an atmosphere of blended piety and vanity, humor and pathos, which gives color to the book. The field chosen is not so overworked as some others that keep novelists busy.

Wheeler's Graded Readers: A First Reader. By Gail Calmerton and William H. Wheeler. W. H. Wheeler & Co., Chicago. 6×8 in. 125 pages.

Wheeler's Graded Readers: A Primer. By Gail Calmerton and William H. Wheeler. Illustrated. W. H. Wheeler & Co., Chicago. 6×8 in. 127 pages.

When Angels Came to Men. By Margaret E. Sangster. The Fleming H. Revell Co., New York. 5¾×8 in. 156 pages. $1, net.

Mrs. Sangster has gathered into the compass of this volume accounts of the visitation of angels to men, with the Bible as the basis of her record; the angel at the gate of Eden, angels by tent door and desert path, angels ascending and descending Jacob's ladder, angels of rescue and defense, of service (as that angel who seemed to have cooked food for Elijah), and of annunciation, appear in her story, their missions so interpreted that the lessons drawn may be helpfully applied to daily life. Angels in soft raiment or in laborers' garments still come to men; and our own kindred or the passing stranger may be the messenger or helper divinely commissioned.

When Patty Went to College. By Jean Webster. Illustrated. The Century Co., New York. 5×7¾ in. 280 pages. $1.50.

An unusually well-written collection of Vassar stories, distinctly one of the most entertaining books of its kind that has appeared, descriptive in a very amusing way of the doings and sayings of a group of clever college girls; the material is handled with more skill and maturity of judgment than usual, and the incidents selected are unusually free from the evidences of extreme youthfulness which books of this class usually reveal.

Works of Shakespeare (The): The Tragedy of Othello. Edited by H. C. Hart. (The Arden Shakespeare.) Methuen & Co., London. 6×8¾ in. 256 pages.

World and its Peoples (The): Book XI. The Story of the Philippines. By Adeline Knapp. Illustrated. Silver, Burdett & Co., New York. 5×7 in. 295 pages. 60c.

Young People's History of Holland. By William Elliot Griffis. Illustrated. Houghton, Mifflin & Co., Boston. 5×7½ in. 342 pages. $1.50 net.

Mr. Griffis always writes graphically and clearly; often he adds the salt of wit and the zest of apt anecdote. This history of Holland from the time of the Frisians to the reign of Wilhelmina is well adapted for children's reading; it is also admirably adapted for older readers who wish a brief but not arid account of the history of this wonderful people. It may well be read in connection with Mr. Griffis's well-known little book, "Brave Little Holland." Great pains have evidently been taken with the illustration of the present history, which includes some interesting double-page and many single-page pictures.

"WHAT DID WE QUOTE THEM?"

Carbon-copy inaccuracy and letter-press mussiness should have no place in the modern business organization. Any failure to make the same corrections on the carbon - copy which were made in the original letter leaves you completely at a loss to know the exact contents of the original.

Get a "Y and E" Rapid Roller Letter Copier.

It is a simple, speedy machine which shows every alteration in the original paper. Your stenographer can operate it as easily as can a husky office boy, and it will copy a letter faster than it could be folded for mailing. Used by Wells-Fargo Ex. and a host of other big corporations.

Lavender and Old Lace

By MYRTLE REED

Author of "Love Letters of a Musician," "The Spinster Book"

Dainty and full of delicate fancy, this latest work of a favorite writer charms by its manner, pleases by its cleverness, and interests by its tale of true love, which sentiment is treated as the most exalting of emotions, but without the slightest touch of materialism.

A Book to be Enjoyed

"With exquisite skill quite her own, the author individualizes in this gracefully told story, the heart's devotion as the most exalted and exalting emotion. Miss Reed has the rare genius of attuning love to thrilling heights without a touch of coarse materialism. Withal she builds on a practical plane, since her characterization is human."—*Chicago Journal.*

The Race Question: Points of Agreement

A meeting to promote the industrial education of the negro was held under the auspices of the Armstrong Association at the Madison Square Garden Concert Hall, New York City, on April 14. Ex-President Cleveland was chairman of the meeting. Mayor Low, in introducing the chairman, stated tersely the motive that actuated those who are interested in such institutions as Hampton and Tuskegee by recalling "the ancient truth that the divinest help to any man is helping him to help himself." The speakers of the evening, Mr. Cleveland, Edgar Gardner Murphy, of Alabama, Secretary of the Southern Education Board, Dr. Lyman Abbott, William H. Baldwin, Jr., President of the Long Island Railroad and Treasurer of Tuskegee Institute, and Booker T. Washington, represented different sections of the country, different political parties, and different races. Their substantial and wholly unpremeditated agreement concerning the principles involved in the solution of the race problem was therefore the more remarkable. These were, in brief: that though, in Mr. Cleveland's phrase, "those who do the lifting of the weight must be those who stand next to it," the whole Nation must share in the burden, the people of the North in particular doing what they can to give strength to those on whom the burden rests directly; that political privileges cannot be bestowed upon the negroes, but can only be achieved by them; that their political freedom must wait upon their economic freedom, as in the case of any other race; that the negroes have already amply proved that both morally and industrially they were capable of elevation; and that their elevation must come primarily by means of an education that will give them industrial self-reliance. Two statements made at the meeting substantiating these principles are worthy of special mention. One was that of Mr. Baldwin, who said of Tuskegee, an institution established and maintained by negroes, that "its accounts are kept as carefully as any banker's;" the other was that by Mr. Washington, who said that in Virginia alone negroes had accumulated $17,000,000, assessed value, of taxable property—negroes who forty years ago did not own even themselves. Hampton and Tuskegee are strategical points in the battle for the education of the negro; both of them are well established; but it involves waste of energy on the part of Mr. Frissell and Mr. Washington to keep them provided with supplies; these two points at least ought to be permanently occupied and made centers from which forces for the education of the negro should get recruits. This means adequate endowment.

❀

The Voter's Assistant Law in Delaware

If there were any doubt that Governor Hunn, of Delaware, is in league with J. Edward Addicks and intends to support the latter in his fight for the United States Senatorship, such doubt would be removed by the Governor's "pocket veto" of the bill repealing the Voter's Assistant Law, which was passed by the Delaware Legislature just before its adjournment. Nobody denies that the law was intended to facilitate the purchase of votes by Mr. Addicks and his workers, and that the voter's assistants acted as tally-clerks to check up the votes that Mr. Addicks bought and insure the "delivery of the goods" for which he paid. When the so-called "repealer" was under discussion in the Legislature, Senator Conner, one of Mr. Addicks's stanchest adherents, boldly defended the law, and opposed its repeal, on the ground that, as he frankly said, "It insures delivery of the goods.

ago, when he was Labor Commissioner of Connecticut, leads not only to extravagant purchases and uncollectable debts, but also to higher prices to all careful and honest purchasers. Freedom of contract is no more an unlimited right than freedom of conduct. Indiana, for example, forbids contracts calling for more than eight per cent. interest, on the ground that they are injurious to the borrower. If the State may forbid such contracts, how much more should it be able to forbid contracts by which the wages of laborers shall not be promptly paid them. As a rule, such contracts are not made by laborers when they are free to reject them, and it naturally seems to the laborers a mockery of their freedom to declare that the State is not free to prevent contracts hurtful not only to themselves but to storekeepers and to the general public.

❀

A Plumbers' Combination Dissolved

The Circuit Court of Missouri has issued an order dissolving the Association of Master Plumbers of St. Louis. It was proven in court that the Association had prevented the sale of plumbers' supplies by local companies to any plumbers not members of the Association. The Court held that this was plainly a combination in restraint of trade, having for its object the monopolizing of the plumbing business in St. Louis. The Court made a sharp and valid distinction between the rights of an individual to do certain things and the rights of an association to do them. An individual plumbing supply concern, it held, may refuse to sell supplies to any individual plumber; but a combination of concerns to keep him from buying supplies is a conspiracy in restraint of trade. The doctrine is as old as the common law, but it has been boldly ignored of late years both by combinations of employers and combinations of employees. In Chicago, for example, it has been simultaneously ignored by both these combinations in agreements between them to prevent the use of building materials prepared by concerns outside the city. Any individual employer may buy materials where he pleases, and any individual workman may limit himself to the use of any materials he pleases, but the combination of ten thousand employers and employees to limit the use of materials may be as dangerous to the prosperity of the community as the combination of ten thousand men to go armed through the streets may be to its peace. The combinations in the building trades to prevent purchases from outside the city are plainly aimed to create a monopoly and force the community to pay prices fixed thereby. The right to combine, whether of labor or capital, must be restricted to the right to combine for ends consistent with the public welfare.

❀

The Irish National Convention

The Convention held last week at Dublin was as truly representative a meeting of the Irish National League as has yet taken place. The speeches were full of Celtic rhetorical exuberance, with the exception of the notably restrained statements made by Mr. John Redmond, who presided. He kept order impassively, and "like Parnell," as an old Nationalist said. He strongly urged on the Convention the acceptance of the Land Bill now before the British Parliament; and, after a number of amendments had been offered, the Convention, by a unanimous vote, accepted the bill in principle, intrusting to Mr. Redmond and the other Irish Nationalists in the House of Commons the task of securing that "serious amendment in various points of vital importance" which the Convention considered essential. It is unlikely that all of the amendments will be accepted by the Government; but some of them may be incorporated in legislation, especially as the Convention is to be succeeded by a conference to consider them, at which both landlords and tenants will be represented. The chief conferees are to be Lords Dunraven and Mayo, Messrs. Shawe-Taylor, Russell, Redmond, and O'Brien. To Americans the most interesting of the amendments proposed was that brought forward by Mr. Michael Davitt, who has sometimes been called the most irreconcilable of all irreconcilables, providing that the principle of the American Homestead Law be introduced into the Land Bill "to safeguard the peasants from the results of improvident borrowing and from the operation of land-grabbers and land-jobbers." Mr. Davitt's adherence to the

principle of the Land Bill was particularly fortunate, since he had the power to divide the delegates into two bitterly opposing camps. Instead of fomenting opposition, Mr. Davitt made an impassioned address, in which he voiced his undying hatred of Irish landlords, and also his doubt as to whether they would settle down and help in the development of Ireland after the passage of the Land Bill. Even as amended, he maintained that the bill would not put an end to the land struggle. He may be right, but if it should put an end to only half the struggle it would be well worth passing.

❀

Balkan Unrest Last week's events in the Turkish provinces of Macedonia and Albania were of an extremely disquieting nature. In the first province there were several desperate attempts on the part of the Bulgaro-Macedonian brigand bands to surround isolated and small groups of Turkish soldiers, in return for which the Turks blotted out whole villages, massacring the men and violating the women. In Albania the Commission sent by the Sultan to appease the wild mountaineers failed to secure their adhesion to the reform scheme of the Powers, except on the condition that the Albanians be allowed to choose their own Governors and civil officials, and that other minor concessions be granted to them. As an indication of the Sultan's fear of the Albanians (his personal body-guard at Constantinople is composed of them), the murderer of the Russian Consul stationed at Mitrovitsa, in North Albania, was condemned to an imprisonment of but fifteen years; on Russia's protest, however, he has now been condemned to capital punishment. The Porte has concentrated large bodies of troops in both Macedonia and Albania, and it would seem, from appearances, that there may be some desire to carry out the reforms insisted on by the Powers as to the police, tax officials, and the proper use of tax funds. Appearances, however, are deceitful; at all events, the outrages, whether due to Turkey or Bulgaria, which have occurred in the disturbed regions since the Sultan's acceptance of the programme imposed upon him, have now been sufficient to convince Russia and Austria that new joint notes are necessary. Accordingly, on Saturday of last week they were presented at Constantinople and at Sofia, the Bulgarian capital. Turkey was informed that the Albanian disturbances must be effectively and speedily suppressed, while Bulgaria was warned not to encourage in any way the Macedonian movement. Though the Russian and Austrian notes acknowledge that Turkey is endeavoring to carry out the administrative part of the reforms, they declare that sufficiently prompt and energetic measures against the Albanians have not been adopted. Regarding Bulgaria, the note asserts that the old connection between the Government at Sofia and the revolutionary bands has not ceased. Hence the notes are intended as a warning to both Governments to take a more serious view of their responsibilities.

❀

The Attitude of Russia and Austria As the Constantinople note is directed against the Albanians, for whom the Russian newspapers not unnaturally accuse Austria of entertaining friendliness, it is important as furnishing Austria with an opportunity to show a regard for Russia which has not been evident since 1878, when, with the help of the other Powers, particularly England, the Russo-Turkish treaty of San Stefano was torn up by the International Congress at Berlin, and a new agreement, now known as the Treaty of Berlin, was substituted. The Treaty of San Stefano guaranteed autonomy and practical freedom to Macedonia, a freedom similar to that now enjoyed by Bulgaria. San Stefano is a little place only fifteen miles from Constantinople, and the Russo-Turkish war of 1877 had brought the victors within easy striking distance of the city founded by Constantine. Russian resources had, however, been somewhat exhausted, and the Powers, Austria and England in particular, jealous of Russia's sudden acquirement of a sphere of influence extending over most of the Balkan Peninsula, decided that some of that influence must be curtailed. For this curtailment the Macedonians have unjustly suffered. It is not to be denied that Bulgarian civilization leaves much to be desired; but, at all events, it is a great improvement on Muslim tyranny. For the present

condition of unrest, therefore, among the Macedonians (the large majority of whom are Bulgarians, the rest being Servians, Albanians, Greeks, and Turks), the European Powers, save Russia, are directly responsible. Whatever Austria might win out of a possible Balkan conflagration, she could hardly win the love of the Macedonians as would Russia, even if the Turkish province were for the most part Teuton instead of being mostly Slav in race, speech, and religion. Macedonia, therefore, naturally gravitates towards Bulgaria, and, with Bulgaria, towards Russia. As to Albania, its future would lie more naturally in an absorption into the neighboring principality of Montenegro than into the Austrian Empire. If Austria is permitted to advance through the narrow province of Novi-Bazar and gain the long-coveted port of Salonika, on the Ægean Sea, her ambition will have been perhaps sufficiently gratified.

❀

The Trouble in the Carolines

Light is thrown upon the cause of the recent interference of the German authorities in the Caroline Islands with our missionary work there by the letter of the missionary Mr. Stimson, the full text of which we have received from the Board at Boston. It confirms our statements made last week, and blames the colonial Government for subserviency to the policy of a German trading company intent on the exploitation of the islands. Mr. Stimson says: "The Jaluit Gesellschaft, which has the trade monopoly, is practically the soul and object of the Government; they are jealous of every acre of land that it shall be put to bearing cocoanuts. Their agent at Ponape, when here, rebuked me for not planting our land to nuts. But I told him that we must have cows, and could not have both nuts and cows." The same letter reports serious indications of a purpose to dispossess our mission of its valid title to permanent occupancy, viz.: "This property was purchased, and the deed indorsed and stamped by the Spanish Government at Ponape. But when the Government posted its order in Ponape that all deeds should be presented there for acknowledgment of the German Government, it was carefully withheld from Ruk [Mr. Stimson's island, 300 miles distant], and it is said no one here knew of it. Governor Habel himself told me that he personally wrote to Kusaic, warning them to get their deeds in. When I asked him why he did not notify us at Ruk, he replied he 'did not have to; the notice was posted at Ponape.' I asked him if the deed as stamped by the Spanish was not valid. He laughed and said, 'Oh, that will make a good site for the Government when it moves from Ponape.'" The question, Why this interference with the mission at Ruk and not at Ponape and Kusaic? is answered by observing that at Ruk and the neighboring group of the Mortlocks the population is several times larger than that of all the rest of the eastern Carolines. If the Jaluit Gesellschaft can secure enforcement of its insistence on no cows but all cocoanuts, large profits are in sight. Meanwhile, Mr. Stimson reports that "everything is being done that can be thought of to harass our work." The fears of the natives are being played upon, and finally the arrest of the class in the mission school, reported last week, was made on the charge of a German trader. Mr. Stimson adds: "It is my judgment that the Germans will put every possible obstacle in the way of either continuing your work or any one else succeeding to it." The colonial authorities are thought to prefer Catholic missionaries to Protestants, and the arrival of priests is expected shortly.

❀

Bishop Brent on Christian Unity

The first Pastoral Letter from Bishop Brent, the first Episcopal Bishop in the Philippine Islands, presents the convictions of a man of the deepest religious nature, thoroughly consecrated to his work, and of exceptional ability; and it is noticeable as revealing the breadth of view which dealing with actual conditions on the frontier of civilization, so to speak, brings to an open-minded man. Bishop Brent belongs to what is known as the High Church wing of the Episcopal Church, and takes strong ground as to the authority of the priesthood and the sacraments. The catholicity of his letter is therefore the more significant because, as a rule, men who hold his view of Church authority are not tolerant of differences of opinion, nor are they fraternal in their expressions

to people of other religious affiliations. Bishop Brent's Pastoral is an enforcement of the text, "Peace among men in whom God is well pleased." After interpreting at some length the quality of the peace, he declares that the Church is the foremost opportunity given by God to men. "Every time our Lord calls disciples to himself, he calls them to one another. . . . It is impossible to get away from Church unity if the personal life is in union with our Lord. . . . Distinctions and separations are near, if not on, the surface; the deep thing, the enduring thing, which God sees and acts upon even when man ignores it, is the unity." It is Bishop Brent's interpretation of this spirit of unity in his attitude towards Roman Catholics and Protestants that gives his letter unusual interest and significance. "Proselytism from other Christian Churches as a fixed purpose becomes an impossibility. . . . The coming of the American Nation to these fair islands of the sea has necessitated an ecclesiastical revolution. Where there was once an ironclad religious monopoly, there is now the diversity which is commonplace in other countries." Bishop Brent says that he did not go to the Philippines to array himself in battle against the Roman Catholic faith, and that, for his part, he can see no more justification for trying to win men away on doctrinal grounds from allegiance to the Roman Catholic Church than for one part of Protestantism to prey upon another and find satisfaction in it. He makes one exception to this statement, and that is the case of a community in which the clergy have so abandoned the laws of morality as to make their position a cloak for sin. He declares that, fortunately, unity of life in Christ does not depend upon ecclesiastical unity; and he says that in common dealings of every-day life we can abjure the spirit of aloofness and act with that disposition of good will and sense of kinship and tenderness which a right-minded man entertains towards an estranged brother.

❀

Towards Protestant Churches

What Bishop Brent says about Protestant churches may be regarded as prophetic of the inevitable influence of spirituality: "Sooner or later logic and the irresistible force of the indwelling spirit will lead us to share mutually and without hesitancy the spiritual wealth of consecrated life and intellect, which we severally enjoy. Is there any reason, beyond that of precedent, why great teachers who have risen above the partisan, but who belong to another communion, should not be asked to contribute of their riches by word of mouth to our people? As I have often said, we put into the hands of our congregations and use in our sermons the works of such men as Bruce, Luthardt, Milligan, Dale, Fairbairn, McLaren, Adam Smith, Van Dyke—I have run my eye haphazard across my bookshelves—and yet we have not come to the point where we could lawfully and in accord with the canons invite the greatest of them to preach from our pulpits. But the future will take care of itself in this matter without any present disregard for law." Bishop Brent makes an admirable suggestion when he says that it would be a blessing if missionary boards at home were to suppress all publications of statistics professing to indicate the spiritual status of various communions. The spirit of competition, when churches are working side by side in the same place, does not make for Christian unity or peace. "I am not particularly concerned in trying to impress the Filipino people with the unity of Protestantism only, but I am anxious to stand for the deep, imperishable unity of the whole Christian Church that some day will break forth into a visible and permanent form." This noble and notable utterance of Bishop Brent ought to be taken to heart by all Catholic-minded people; for it is true Catholic doctrine.

❀

Monsignor Alcocer's Pastoral Letter

Strikingly different in its spirit is the Pastoral Letter of Monsignor Martin Garcia Alcocer, the Roman Catholic Bishop of Cebu and Administrator Apostolic of Manila. Some allowance must be made for the polemic attitude of Monsignor Alcocer, because of the schism in the Roman Church itself in the Archipelago. In truth, his Pastoral Letter leads us to think that this schism is more important than we had supposed it to be. One or two quotations, taken almost at haphazard from this letter,

must suffice to indicate the extent and limit of its charity for Protestants:

If we compare the sanctity of the Church with the customs which predominate among the followers of heresy and schism, we shall notice a lively contrast, similar to that existing between light and darkness, between good and evil, between order and chaos. In the Church, examples and maxims of humility, obedience, and noble submission to legitimate authority and to just laws, both divine and human; among the sects, pride, insubordination to lawful authority, and a servile slavery to the caprices of certain leaders. In the Church, the spirit of evangelical truth, justice, and charity; among the sects, thirst for novelty, oppression, and refined egoism. In the Church, purity of sentiment and principles, the sanctity of matrimony, and love for original purity; in the heresies, a disordered appetite for sensual pleasures, divorce, license, and riotousness.

Or again:

Another common trait of the Protestant sects is that of playing the part of reformers, presenting themselves as immaculate, irreprehensible, and modest in the extreme. In their public words and actions they appear gentle and sweet; all their exterior deportment appears the model of modesty, humility, and devotion. . . . But if we examine closely, we shall soon find that all this outside demonstration is a ridiculous farce, a comedy, an astute mockery of true religion, to better deceive the unwary. . . . A soul faithless, without charity, without submission to religious law or authority, hides itself under an appearance of sanctity. And all in them is pretended, violent, and false, and when the crisis comes, not a single martyr for religion is found, not a single hero for the sake of virtue, not a single example of sanctity.

If we compare the Pastoral Letters of Bishop Brent and Monsignor Alcocer, it is very evident that it is the Catholic who is not catholic and the non-Catholic who is catholic. It is alike well for the people of the Philippine Archipelago and for the interests of the Roman Catholic Church in the Archipelago that the Vatican has decided—at least it is so reported—to substitute American clergy for Spanish clergy in those islands. It would take only one generation of education in common schools to teach the Filipinos that such wholesale denunciations of Protestant Christians as are contained in these extracts are untrue; and, losing their faith in their religious leaders, it would be quite in accordance with the course of past history if, as a result, they lost their faith in religion. Doubtless there are bigots in the American churches; but the clergy of all the various communions in America, with diminishing exceptions, look on one another, not merely with tolerance, but with mutual respect and esteem, and have learned that the best way to commend their own religious faith is to exercise toward those of a different faith that charity which "thinketh no evil." If the Roman Catholic Church of the Philippines is put under the American hierarchy, and if the Protestant missionaries go to the Philippines in the spirit of Bishop Brent, it is not unreasonable to hope that Catholics and Protestants will teach the Filipinos a lesson of good will, by a kindly competition which will have no other effect on either than to provoke both to good works.

❀

Further Prayer-Book Revision

Similar in the catholicity of its spirit to Bishop Brent's Pastoral Letter is a tract reprinted from the "Churchman," on Further Prayer-Book Revision, written by the Rev. Edward Abbott, D.D., the rector of St. James's Church, Cambridge, Mass. The essential principle involved in this paper is expressed by the resolution which the author would like to see introduced into the next General Convention, providing for a committee to consider "what modification, if any, of existing constitutional, canonical, and rubrical provisions for the Church's public worship is needed to bring the conditions of such worship into accord with the basis declared by the bishops of the Church for the unity of all Christian people." That basis, our readers will remember, consisted of four elements, and only four: Acceptance of the Scriptures, the two creeds (the Apostles' and the Nicene), the two sacraments (Baptism and the Lord's Supper), and the historic episcopal ministry in its threefold order. Dr. Abbott justly says that if these are the sole elements essential to Christian unity, then "the Prayer-Book, vestments, and some other things are accidents, incidentals, variable, optional, not at all the essentials which some among us, and some outside of us, seem to think they are." In order to square the liturgy to the declaration of the Bishops, four elements, and only four, ought to be made obligatory and inviolable: Authoritative Lessons from the Scriptures; the habitual

declaration of the two creeds; the faithful use of the two sacraments; and, if we understand Dr. Abbott aright, the retention of the present consecration services for deacons, priests, and bishops as a threefold order. These features made obligatory, he would provide for large liberty in other respects—including the right to use the Revised Version of the Bible, the right to abbreviate the Lessons or to omit one of the two Lessons, a reconstruction of the Psalter, liberty to use extemporaneous prayers and to use other than the designated hymnal, and a "modification of the Confirmation Office so as to meet the case of Christian adults of other communions desiring to be received into our own," etc. One suggestion which he makes is worth considering by ministers of other communions: "In most communities, on most occasions, and under ordinary circumstances, one hour is the extreme limit to which any one service, including sacrament and sermon, should be prolonged. Better . . . six short services of half or three-quarters of an hour each . . . than two of an hour and a half each." We suspect that Dr. Abbott's suggestion of such revision of the Prayer-Book will be looked at with suspicion by two classes in the Episcopal Church—the Protestant and the anti-Protestant. The first will object to it because it would open the way to what they regard as a Romish ritual, the other because it would open the way to services simpler than those of the Church's past traditions. But if the Church is to be Catholic, in reality and not in name merely, its services must be so adjusted that within its communion, though possibly in different local churches and certainly in different services, all devout souls can find liberty for their spiritual edification and enjoyment, alike those who are most enamored of an elaborate symbolism and those who are most indifferent to symbols. The question what symbols shall be used in a church service is far more a question of taste or sentiment than it is of religion. Church unity can never be secured by a process which denies to devout souls of different temperaments the right to express their spiritual life by differing methods in accordance with their different temperaments. Uniformity of worship and catholicity of spirit are absolutely inconsistent.

Rabbi Gottheil There was a National interest attached to the life and work of Rabbi Gustav Gottheil, who died in this city last week, not merely because he was at the head of the largest and richest synagogue in the United States, but because he was a man of eminent scholarly attainments, of liberal ideas, and of broad human sympathies. He was a Prussian by birth, and was educated to be a rabbi from his earliest childhood. In his university days he first came under the influence of the famous Rabbi Plessner, and later listened to several of the progressive leaders among the Jews in what was then beginning to be called Reformed Judaism. Dr. Gottheil held pastorates in Berlin and in Manchester, England, and was a delegate from the English Jews to the famous Leipzig Synod, which adopted strong resolutions in favor of reform ideas. He had been pastor of the Temple Emanu-El for twenty-five years, and the congregation over which he presided was noteworthy for its intellectual and social character. Dr. Gottheil was a really extraordinary linguist, and his scholarship in this direction has been repeated by his son, who now holds the chair of Semitic Languages in Columbia University. Among other services in connection with which Dr. Gottheil's name will be remembered was that of arranging the first Jewish hymn-book with music which was printed in this country, and of representing his people at the Congress of Religions held in connection with the Chicago World's Fair. He was an interesting speaker, and has often held in close attention audiences composed of men of all races and creeds. At the funeral services Dr. Silverman paid an eloquent tribute to Dr. Gottheil's memory when he said:

> Dr. Gottheil was a reformer in every sense of the word—a reformer of creed, of ritual, of ceremonies, but pre-eminently of men. His religion was subordinated to the needs of men. He loved men better in their working clothes than in holiday attire, and preferred a religion that smelled of the shop, the counting-room, the factory; a faith that could be used as a working tool wherewith to smooth off the rough edges of human nature, to curb the impassioned spirit, to check the turbulent lust, to reverse the whole trend of men's evil ways. Dr. Gottheil believed in a progressive Judaism. He believed and taught a Judaism that vibrated with the life of the present day, that was abreast of modern science and philosop[h]

Dr. Gottheil was a Zionist, an ardent lover of Palestine, with all its cherished memorials. He voiced the sentiments of many thousands who believed like himself that Israel must prove its strength before the world and demonstrate its ability to govern itself. He was a Zionist, but still an American. He was a fervent Jew, yet cosmopolitan. He was an ardent defender of his faith, yet ever ready to recognize the good in other faiths.

❀

Dean Robbins The General Theological Seminary of the Episcopal Church in this city is governed by an unusually large body of trustees, which includes those Bishops of the Church who officially accept the trusteeship, and fifty other persons, one-half elected by the House of Deputies of the General Convention and one-half by certain dioceses. The late Dean Hoffman, by his unusual executive ability and his great personal gifts, housed the Seminary in a very admirable and impressive way; but there has been a widespread feeling that the work in some departments of the Seminary was lacking in freshness and force, and that it had a priestly rather than prophetic stamp. Great interest was therefore attached to the election of a Dean in succession to Dr. Hoffman; and a number of names of prominent clergymen have been before the trustees. On Thursday of last week the matter was settled by the election, on the second ballot, of the Rev. Dr. Wilford L. Robbins, Dean of All Saints' Cathedral, in Albany. Dean Robbins is a Bostonian by birth, received his college education at Amherst, graduating from that institution in the class of 1881, and studied theology in the Episcopal Theological School at Cambridge, Mass. He was ordained a deacon in 1884, and advanced to the priesthood in the following year. From 1884 to 1887 he was rector in Lexington, Mass., and in 1887 he was called to the position of Dean of All Saints' Cathedral in Albany, where he has shown marked executive and pulpit ability, and has been eminently successful in interesting young men. Dean Robbins belongs with the High Churchmen in his view of the authority of the Church, and with Broad Churchmen in his theological point of view. His recent work, "A Christian Apologetic," was characterized by The Outlook as "a blending of the progressive and the conservative which characterizes some of the best minds in the present period of transition from old to new thought."

❀

The Blind Chaplain The death of Chaplain Milburn, at Santa Barbara, Cal., removes a National figure who for nearly two generations has endeared himself to public men from every part of the country. He was first elected chaplain to Congress in 1845, was twice re-elected to the same position in the fifties, was chaplain of the House without interruption from 1885 to 1893, and since that date had been without interruption chaplain of the Senate. Last December, because of failing health, he sent in his resignation, but it was never acted upon. He was born in Philadelphia eighty years ago, at the age of five met with the accident which nearly blinded him at once and which twenty years later completely destroyed his sight; and at the age of twenty, having pursued his studies with extreme difficulty, entered the Methodist ministry in Illinois, taking a circuit which required him to ride two hundred miles a month. A natural orator, he soon made his personal power felt. It was not, however, his eloquence alone which caused his election as chaplain of Congress at the age of twenty-two, but a characteristic bit of courage. He was invited to preach to a group of Congressmen whom he met on a journey, and, accepting the invitation, delivered a ringing rebuke to them for their gambling, drinking, and profanity. Instead of being offended by his readiness to preach what he thought they needed to hear, they admired his courage, and rewarded it by getting Congress to elect him its chaplain. The incident has its moral for these days also, as the power of innumerable pulpits is weakened by efforts to please hearers instead of to stir their consciences. There are innumerable seemingly worldly men who instinctively indorse the recent remark of one of their number: "It is a poor sermon that doesn't hit me somewhere." Shortly after Mr. Milburn's first term as chaplain of Congress, while serving as the pastor of a church in Mobile, he was tried for heresy, and, though acquitted, he left the Methodist ministry for a time, taking orders in the Episcopal Church. A few

years later he returned to Methodism. He was popular in the lecture field and was the writer of several books upon pioneer life and religious work in what is now the Middle West.

❀

Vacation Camps The Camp Conference held in Boston last week was divided as to the purpose of the summer vacation. Dr. C. H. Henderson advocated a rather stiff three hours a day for definite work; Dr. E. E. Hale pleaded for yet longer vacations, that the children might be brought closer to nature; while Colonel Higginson thought there ought to be a vacation from the vacation, so that there should be a chance for the exercise of that freedom which the individual boy does not get when he is held to a rigid programme the rest of the summer. During the entire discussion there was no allusion to the teachers' side. If Dr. Hale's suggestion that the vacations should be made longer should be carried out, the teachers might hail it with delight, for the best of them would spend the time in fitting themselves to do even better work than heretofore. But the experts who spoke from actual and long-continued experience in dealing with boys in summer camps were of one mind that the vacation should be made useful to the children and youth of the country. There is certainly no reason why boys, while their teachers are resting, recuperating, traveling, or studying, that they may acquire new mental and physical vigor for work in September, should not be employed under other instructors. In Germany the school-boy has about a month's vacation, with eleven months of study, and longer hours than the American children have. The result is that at corresponding ages the German lad has acquired much more Latin, Greek, or history than the Yankee boy. It is idle to suggest the adoption of that system here. It would not be tolerated, even were it by some considered desirable. But a wise occupation of the time during a larger part of the year is imperative. Vacation is a dangerous time for city boys especially, but for country boys as well, unless they have employment. Camp life is one of the best ways of meeting this difficulty. There must be as many different kinds of camps as there are demands. For the little folks they may be mixed, boys and girls, with a sprinkling of adults to guide and teach and mother them. Nature studies are peculiarly adapted to such children up to the age of twelve or fourteen. From fourteen to sixteen, botany, entomology, and bird study are very alluring under the proper teachers. Boys of the next stage, if they are behind in fitting for college and must make up their work in summer, should go off into tutorial camps by themselves. It is a mistake to divide the same camp into groups of boys who are making up work and those who are free from such terrors. They chafe one another. It is a pity, indeed, to drive any boy to extra-academic work in summer. The studies taken up then should be those that round out the ordinary school curriculum. There may be art talks and singing lessons and French conversation, good reading, not to help a boy to get through that nightmare of school life, the "midyear" or the "final," but things that make life more beautiful and the individual more attractive. Above all, the physical side should have its training. Analytical geometry may be taught in camp so that a boy will learn to love it, as Professor Hollis maintained at one session; but of much more importance to the average boy is it that he shall learn to walk, to run, to row, to swim, and to make himself a cheerful and useful member of a camp. No vacation is long enough that does not afford time for these things. One of the most hopeful signs of the times is that every summer more and more camps are opened for lads who have never before had any good of a vacation.

❀

Mothers of Churches The function of Sunday-schools as mothers of churches in missionary fields is strikingly apparent in the report of the Congregational Sunday-School and Publishing Society for the past year. Of the one hundred and thirty-one new churches reported in the Congregational Year-Book for 1902, over forty-six per cent. of the whole number had their beginnings in Sunday-schools planted by the superintendents or missionaries of that society. Its schools are organized mostly in places

entirely destitute of Christian institutions; comparatively few in large towns and cities where room appears for more. Special care is taken not to intrude on ground occupied by other religious bodies. This work of patriotic as well as religious concern is carried on in forty States, but the most pressing demand for its increase, limited only by the lack of means, comes from the Northwest and Southwest. The Society favors the old device of "circuit-riders," giving a county or two in charge to one man, as desirable in many regions. The profits of the publishing and book-selling business of the Society, which for the last year have been the largest in its record, contribute to its missionary work, for which comparatively little is given by the Congregational churches. Forty per cent. of the entire contributions of the year came from the offerings on Children's Day—nearly twenty-three thousand dollars. The religious pioneer work done by this and similar societies of other denominations is of inestimable value, and deserves liberal support. It may also be said that the Sunday-school literature supplied by the Congregational Society is of unsurpassed excellence.

❀

A National Problem

What we call the race problem is a National problem. The acts which imposed it upon us were National acts. The responsibility for it is a National responsibility. It must be assumed as a National obligation. It must be solved by National co-operation.

I. The responsibility for the race problem is a National responsibility. North and South co-operated in bringing the African race to this country. The negroes did not come, as other immigrants have come, of their own free will. They were not, like the North American Indians, found here on our arrival. They were not imported by the Southern colonies against the will and protest of the Northern. The whole community, North and South, united in the slave trade. And the African race grew in numbers in the South, and the social and industrial fabric was revolutionized by their presence, partly because of climate, partly because of agricultural and industrial conditions, partly for political reasons, only in a very minor degree because the moral sense of the two communities was different.

The original secessionists—that is, the abolitionists of the North—demanded that the Northern States withdraw from the Union, and so from all responsibility for the slave. "No union with slaveholders," was the fundamental plank of the Garrison abolitionists. The conscience of the North said, No! It is true that this conscience was reinforced by the commercial interests and still more by the National pride and patriotism. But all these—conscience, interest, patriotism—united to say to the Garrison abolitionists, We will not dissolve the Union, and so escape from our share of responsibility for slavery. It belongs to the Nation, and in the Nation we will stay until we can find a way first to limit and eventually to destroy slavery altogether. Then the secondary secessionists—those of the South—said: We of the South and you of the North cannot agree as to what should be done with this African race. You want to free him; we want to keep him a slave. You want to educate him; we believe that education will unfit him for the place for which nature intended him. You believe that he is a man and a brother; we believe that he is but a higher animal, fitted only to be a hewer of wood and a drawer of water. Let us separate. We will establish a new empire whose corner-stone shall be slavery. Let us go in peace, and we will take the entire responsibility for this African race. And we of the North replied: We will not let you go; we will not consent that you take the responsibility; it is ours as well as yours; in the sight of God and of humanity we are our brother's keeper. The obligation is ours, and we neither can nor will be rid of it. For four years we fought to retain the right and power to determine what should be the destiny of this African race. We won. We had our way. We emancipated the negro in spite of protest and heroic resistance by our Southern fellow-citizens; we gave him the suffrage in spite of the protests of a no longer resisting South. We cannot now escape the consequences of our own acts. He is our problem—the problem of New York as truly as of Louisiana, of New England as truly as of the Black

Belt. Appomattox Court-House established our authority to deal with the race problem of the United States. But authority always carries with it responsibility. We insisted on the authority; we cannot now escape the obligation.

II. As the race problem is a National problem, so it must be solved by National co-operation, Southerner and Northerner sharing the responsibility and co-operating to the desired result. We cannot force our ideas as to the best method of dealing with this problem by Force Bills and United States marshals. The sword can strike the manacle from a slave; the sword cannot make a man of him. Nor can we impose our ideas on the South by an aggressive moral propaganda. The South is not missionary ground. We of the North are not to go there in a "I am holier than thou spirit," to convert them to our ideal of brotherhood; nor in a "I am wiser than thou spirit," to teach them how to solve the race problem. The problem is our problem, but it is also theirs. We are to assume that they are at least as eager to solve it as we are, that they understand it at least as well as we do; that their patriotism is not less real, their philanthropy is not less genuine. No doubt the South can learn something from the North on this subject. It is even more certain that the North can learn something from the South.

Never did a people more nobly attest their readiness to adapt themselves to new conditions, never did a people show more heroism in building a new civilization on the ruins of an old industrial order, than the South has done. And until recently the North has given to its Southern brethren but scant honor for its honorable course. The South has opened the way for the landless negro to buy land. It has paid out of its poverty millions in school taxes for the negroes' education. It has set an example to Northern prejudice by the extent to which it has opened the door of various honorable vocations to the negro. It patiently submitted to the experiment imposed upon it, against its will, of universal suffrage, until the conditions which that suffrage involved became intolerable to white and black alike. Against the splendid history of its open mind and ready co-operation in bringing in the new day, the episodes of cruel lynchings appear as an evidence what popular prejudice in the white and what vice and brutality in the blacks had to be overcome in order to the progress already made. Not by a spirit of suspicion and sectional antagonism, not by fanning into new flames the still smoldering embers of the Civil War, not by insisting that we care for the negro and the Southern white man does not, shall we solve or approach a solution of the race problem. Pharisaism never converted a single individual; it will not transform a community nor elevate a race. It will be solved only as Northern and Southern philanthropists and patriots unite, in a spirit of mutual confidence and good will, in the one great purpose to solve the race problem, by the only method by which it can be solved—the education and elevation of the feebler and less developed race, by every practicable method and to the largest possible degree.

This is not a lately born conviction. At the end of the war the present editor-in-chief of The Outlook resigned his pastorate to give himself, in company with other and able men in the North, to the work of aiding the South to rehabilitate itself, and especially to initiate that system of public-school instruction which history has demonstrated to be the basis of every successful system of self-government. A little later The Outlook, then The Christian Union, urged the policy of National aid to public education in the Southern States, a policy approved by Presidents Grant, Hayes, and Garfield, but defeated, partly by popular prejudice, partly by a causeless fear of centralization. We believed then and we believe now that such a policy was both wise and just. That issue has passed; we do not seek here to revive it. But the principle of National responsibility and National co-operation in the education of the negro we reaffirm. We lay on the North the duty of co-operation with the South in this work, not merely as an act of charity to a feeble and imperfectly developed race; not merely as an act of generosity toward a still impoverished section of a common country; not merely as an act of missionary service called for by Christian loyalty; not merely as an act of patriotism seeking to serve the highest ends in the Nation by the highest means; but as an act of justice, in curing an evil which the North

has helped to cause and in completing a work which the North has insisted that it was its duty to commence.

❀

The St. Louis Fair

The three Expositions held in this country have celebrated in a very impressive way events of the greatest historical significance in the New World, and have exerted the most definite and beneficial educational influence. The Philadelphia Fair commemorated a century of independent life as a nation, and taught the whole country, by the beauty and completeness of its exhibits, the much-needed lesson of combining utility and art. It was the beginning of a movement, partly educational and partly artistic, which has been of the highest moment in the life of the American people. The Chicago Fair commemorated four centuries of European life in the New World; and by the breadth and nobility of its architectural design and lines, combined with the extraordinary beauty of its landscape features, was a revelation to hundreds of thousands of people of what could be done to reinforce nature with art. The Fair at Buffalo commemorated the development of industrial and artistic life in the New World at the hands of many races; and in its architecture suggested the composite richness of racial activity and achievement on this side the ocean.

The Fair which will be dedicated at St. Louis on Thursday of next week will commemorate the acquisition of that great section of country, now become an interior empire, which was known as the Louisiana Purchase; a vast territory, of which St. Louis is the natural capital, the products of which have never yet been adequately brought together and arranged. The great Southwest will find its opportunity at St. Louis, as the Central West found its opportunity at Chicago.

It is interesting to note the progression of these fairs. At Philadelphia it was the Old World which furnished the most striking exhibits; and the chief function of that fair was to reveal to the New World the superiority, in fineness of fiber and design, of many Old World products. At Chicago it was the Central West that was seen in a magnificent exhibition for the inspection of the whole world, for the first time giving an adequate impression of American development along many lines. At St. Louis the Southwest will find its opportunity, and the rest of the country will have a chance to form the acquaintance of a section with the most picturesque and dramatic history, in which great communities are rapidly growing, and which is destined to exercise a notable influence in the history of the country and the making of the American people of the future. The Louisiana Purchase will remind us that the Latin races are not without permanent witnesses of their influence on this continent. It will recall the heroic story of the penetration of the continent by French explorers, soldiers, priests, and traders, who entered it by the St. Lawrence River, traversed the wilderness between the Great Lakes and the Mississippi River, and passed down the Mississippi to the Gulf of Mexico, leaving at Quebec, at Detroit, at St. Louis, and at other points groups of settlers whose descendants are among the foremost citizens in those communities, and leaving also a tradition of good breeding, a touch of sentiment and love of the beautiful, which are sorely needed in our Anglo-Saxon civilization. The St. Louis Fair will recall the vigor of the French and Spanish discoverers, explorers, priests, and traders, who, at the Far North and the Far South, have left a record of adventure rich in all the elements of romance.

It is too soon to describe in detail the characteristic features of the St. Louis Fair, but in several respects it will reveal marked individuality. Its landscape setting will differ from that of its predecessors. Instead of being placed on a level plain, there will be two groups of hills bordering the plateau on which the principal buildings will be set. From the principal gateway there will be an avenue of magnificent proportions leading to the Palace of Art, which will be on an elevated site with a grove of pine-trees as a background. On the hill at the west of the grounds will stand the administration building, the agricultural buildings, and other structures of lesser importance. The color scheme will be a soft shade of white.

The constructive idea, so to speak, of

the whole Exposition will be to exhibit, not products, but processes; in other words, to show methods of production in operation. Various industries will exhibit their work precisely as it is carried on in factories. A ribbon manufacturer, for instance, proposes to set up a working ribbon-loom and to carry on the entire process of manufacturing precisely as it is done in his own factory. In the same way a newspaper and magazine will be set up, printed, bound, and distributed, not simply as experimental or souvenir work, but in the regular course of business. A complete agricultural experiment station and weather bureau will be in operation, which will conduct experiments precisely as they are conducted at regular stations, and in which the work will be conducted by professors and students from different agricultural colleges. There will also be a life-saving station, with complete apparatus and crew, where the drill will be carried on every day and illustrations given of all the uses of the lifeboat in all possible emergencies. To hundreds of thousands of people living in the very heart of the continent, and who have never seen the sea, the interest of such an exposition will be very great. Educational processes will also be illus trated by a school for mutes, a school for the blind, and a manual-training school. Every endeavor will be made, in a word, to make plain to the eye the processes by which many of the most important kinds of work in the country are carried forward. This will be the keynote of the Exposition, and will render it memorable and unique among all World's Fairs.

By a very happy prevision, the work done for the World's Fair is to inure to the permanent benefit of Washington University. All the permanent buildings in use at the Exposition will be planned for their ultimate adaptation to the uses of the University. The temporary use of the buildings and grounds now occupied by the University has been secured, and the officers of the Exposition will be housed in these buildings before and during the Fair. At the close of the Fair three or four fine structures of a permanent character will be handed over to the University.

The Exposition will take an important step in the right direction by exhibiting the work of women with the work of men in the same lines. There will be no distinctive Women's Building. Women architects and women sculptors are to be represented in the construction of the buildings of the Exposition, and the work of women will be placed, as it ought to be, beside the work of men.

The country will be interested in the announcement that every effort will be made to make the Midway amusing and entertaining, and at the same time to keep out of it those offensive and revolting forms of immorality which have disgraced the World's Fairs of the last twenty years. A decent Midway would be a novelty which would give the St. Louis Fair distinction; and it is very much to be hoped that the endeavor to provide amusement without indecency may succeed.

❀

Mediævalism Not the Gospel

Persons of nearly all shades of belief in the immortality of the human soul agree in a hope that it is a fact. How is it possible for any one thus to hope if he either believes in hell, or if he is not absolutely certain that there is no such place for any one? I cannot understand how any judicial mind can hold that the New Testament writers did not believe in a hell of a pretty orthodox type. Christ's own sayings bristle with references which can hardly be taken otherwise. With a little ingenuity they may be explained away separately, but hardly when taken in conjunction. The statements of the Apocalypse are vividly graphic, but that book does not seem to carry much weight in these days, and if we waive all but the words of Jesus on earth we shall have plenty to consider. While, on the whole, we may incline to some one of the softer eschatological theories, how can we deny the substantial possibility that his assertions mean what they seem to mean? Does not this contingency logically necessitate a feeling of frantic desperation?

E. P. B.

The doctrine that any of God's creatures are reserved for a life of endless sin and suffering was imported into the New Testament in the Middle Ages. It belongs to a doctrine of punishment which was in that epoch equally adopted by Church and State. That doctrine is, in brief, that the object of punishment is to deter men from wrong-doing, by connecting wrong-doing with suffering, and so making men afraid to do wrong. Very naturally, it was supposed that the greater the suffering

the greater would be the deterrent effect of the punishment. So the State flayed men alive, boiled them in oil, disemboweled them, and broke them on the wheel, for disobeying the laws of the State; and the Church burned them at the stake for disobeying the laws of the Church, and taught that the burning would continue after death at the hands of God.

Christ's treatment of sin and its cure was radically different. He treated sin as a disease; and he taught that the virtuous should endeavor to cure it: "They that are sick," he said, "need a physician." He did not propose to leave men sinful and prevent them from sinning by inciting in them a fear of the consequences; he proposed to change their character, so that they would spontaneously live virtuously: "Make the tree good," he said, "and his fruit good." The creative forces on which he relied were faith, or an awakened appreciation of virtue, and hope, or an inspiring expectation that the virtue thus appreciated could be realized, and love, or trust and confidence in a Father who not only demanded virtue of his children, but helped them by his spirit and presence to be virtuous. He never threatened, he warned. A magistrate threatens; a physician warns. He told men that certain causes led, naturally and necessarily, down to death; as a physician warns a patient that persistence in the violation of laws of health will end in death. But the burden of his teaching was faith and hope and love. He called it, therefore, and his disciples called it, the Glad Tidings. "The Glad Tidings," said Paul, "are the power of God unto salvation." It is difficult to understand how any one ever supposed that he, whose whole teaching concerning the nature, consequences, and cure of sin was summed up in the Parable of the Prodigal Son, taught that the Father had provided a lake of fire in which his sinful children would burn forever; or that he taught the more modern but even more awful doctrine that the Father will keep alive his sinful children forever in a sinfulness ever growing more and more degrading, and in a remorse ever growing more and more poignant. Such a doctrine directly contradicts the whole scope and spirit of the doctrine of Jesus Christ. The one teaching is founded on the deterrent power of fear to make sinful men abstain from doing sinful things; the other teaching is founded on the inspiring power of faith and hope and love to change sinful men into men full of goodness.

This general character of the teachings of Jesus Christ is not to be set aside by reason of certain specific utterances, to some of which certainly, if not to all, an interpretation has been given which it is quite clear they do not justly bear. An instance of this is afforded by Christ's use of the terms hell and hell fire. To the modern reader these phrases call up a mediæval picture of torment; but it is absolutely certain that to the hearers of Jesus Christ they called up a very different picture. Hell is Gehenna; hell fire the fire burning in Gehenna. Gehenna was a valley outside Jerusalem, to which the offal of the city was carried to be thrown upon a fire always kept burning there that the offal might be destroyed. It was the ancient analogue of the modern sewer. When Christ says to the Pharisees, "How can ye escape the damnation of hell?" what he really said was, "How can ye escape the condemnation of Gehenna?"—that is, if you keep on in your present course, how can you escape being cast out as the offal of God's universe to be destroyed? It is parallel to that other saying of his, If the salt have lost his savor, it is thenceforth good for nothing, but to be cast out, and to be trodden under foot of men. Except in the parable of the rich man and Lazarus, fire, as Christ uses it, is a symbol of destruction, never of torment; and in that parable Christ uses the common pictures of his time, not to teach the nature of the future life, but to teach that the judgment of God is based, not on conventional standards—as of creed, ritual, or race—but on a practical standard of righteousness.

Mediævalism destroys the Gospel. There is no good news in the message that a large part of the human race has been created to live in sin and suffering forever. The good news is that there is a power in the world by which the sick may be made well, the sinful may be made virtuous, the exiles from home may return to their Father, their home, and their own true selves.

The Spectator

It is a sad fact, but one upon which all mankind are agreed, that troubles never come singly. The Spectator happened to be down upon the Susquehanna River in shad-fishing time last spring, and heard the fisherman lament the fact that just when the Beef Trust had furnished a fine opening for shad, the fish hung back unaccountably, and refused to fill it. Such a poor season had seldom been known upon the Delaware and the Susquehanna; the fishermen suffered, the public suffered, and still the shad refused to run in anything like the usual numbers. Time was when the second or principal run of shad in the spring used to bring something like two million shad into the Delaware, and ten thousand have been taken in one haul of the seine. Nowadays a catch of five hundred is good, and one of a thousand is phenomenal. But last year the Spectator saw great nets hauled in with but half a dozen or so of silvery fish in them. Prices were up to a high notch, it is true; but, as it is estimated that each day's lowering of the nets costs a hundred dollars, a few forty-cent fish could not reimburse the fishermen, and gloom hung like a pall over the wide reaches of the Susquehanna.

❀

The Spectator found shad-fishing very different from what he had supposed. He had thought of a race of hardy fishermen, such as he saw a few years back upon the bars of the Columbia, where a man catches salmon as his father did before him. But the Susquehanna fisher is like the Delaware peach-pluck—a genus painfully akin to the tramp, appearing in numbers in the season, working for a daily wage, and vanishing into space by way of the freight train when the shad cease to run. The man who employs them, even, is not a fisherman by trade. He is often a farmer, who has saved a little money, and hopes to double it by lucky catches. Alone, or in combination with others, he secures a shad-float—a great wooden raft large enough to contain quarters for perhaps fifty men, with salting-vats, packing-sheds, and a steam-engine. This float is moored out in main stream, by the side of a channel which the shad are known to use. The channel is carefully cleared beforehand of drift-logs, snags, and anything and everything that may tear the nets. The Spectator was told that, as this preparation is arduous and expensive, it gives the fisherman who clears the channel a proprietary right in it as long as he chooses to fish it.

❀

The shad-fisher gathers up his men from the roving tide brought by the first spring days. The earliest run of shad begins about the middle of March, but this advance guard is small in numbers and poor in quality, consisting mainly of the despised "hickory shad," concerning which the fishermen have an irreverent legend that at the creation there were a great many small bones left over, and that the hickory shad was made in order to use them up. Some days after these pioneers pass up the river, the second or main run begins in earnest, and lasts three or four weeks. The third run is small in number but good in quality, and lasts into June. The men are kept busy enough in a good season, and their lot is not a luxurious one. They are a rough set, and the accommodations are as rough as they. Wooden bunks, without a sign of mattress or pillow, tin plates and cups, and whatever rude fare the one who is chosen as cook sees fit to prepare—these are the portion of the shad-fisher. The Spectator cannot say that the men looked above their surroundings. Some were gray-headed, some young; few appeared to be of foreign birth. They were not a prepossessing lot, and it seemed rather a blessing to society at large to have them safely moored out in midstream, for a few weeks at any rate. The floats are not near together, but usually two or three miles apart, wherever a suitable channel is found.

❀

The shad has fixed habits, much to his disadvantage. At certain times of the day and states of the tide he passes up these particular waterways, and the fisherman lies in wait for him. At a given signal, the "laying-out" boat, with the seine piled up in its stern, moved off across the river, paying out the huge folds of the net as it went, until the barrier

of stout meshes stretched in a straight line from the float far out across the channel. Then, sharply, the bow of the seine-boat turned, and the oarsmen, aided by the current, carried their end of the net around the segment of a circle of which the corner of the float was the center. Back they rowed, slowly inclosing the fish, which, at any of the early stages of the proceeding, could have easily escaped by turning and swimming downstream. This, however, the shad can be counted on not to do. He will try to poke through the meshes of the net and escape upstream, but, unlike the proverbial worm, he will not turn in any event. Thus the seine was brought, without losing a fish, to the other end of the sloping platform, and made fast; and soon the steam-winch, in a most prosaic way, began hauling it in, the men wading out on the inclined plane to guide things smoothly and permit no escape under the bottom of the net.

❀

The Spectator thrilled with as much excitement as any one to see the great bag of dripping meshes come up; but, alas! it held only seven shad, and barely a half-barrel of herring. The cast had failed; it was not a lucky throw this time. It was the last catch of the season, too, for that float; and the men had hoped for better luck to end with. The farmer who employed them, looking down at the empty net, seemed almost ready to burst into tears. It was really a pathetic scene —for fishers as well as shad.

❀

The men set to work at once upon the herring, much in the way that Kipling describes so vividly in "Captains Courageous"—slitting, cleaning, salting, and throwing them into the barrels. The herring may be called the consolation prize of the shad-fisher. Indeed, they often pay better than the shad. A hundred barrels are sometimes caught at one throw of the net, and they keep the venture from being a total loss. They made the float, however, anything but a pleasant spot, for they flavored it from end to end. Whatever romance may elsewhere cling about the gentle sport, even Izaak Walton could not have stood a shad-fishing float long, the Spectator is assured. And what would the Compleat Angler have thought of using a steam-winch? It is as bad as the fish-wheels of the Columbia, which scoop the salmon up mechanically by the hundred, and make fishing as prosaic as carpet-beating.

❀

The Spectator visited two other floats, further up the river, and found the same conditions, but more cheerfulness, born of better fortune. At the third float the men were just hauling in a good catch of shining shad. Two hundred and seventy-three were in the seine, besides many barrels of herring. Shad were selling, on the river, at from twenty-five to forty cents apiece, which meant perhaps ninety dollars for the catch, and the herring added materially to this. It costs about one hundred dollars a day to keep up each float, and not more than three or four casts of the net can be made in a day, the Spectator was told. The business, therefore, is a lottery—in which, perhaps, part of its perennial attraction lies.

❀

The shad were not treated in the same cavalier manner as the herring. A boat was launched at once, and off the glittering beauties went, at the top speed of the rowers, to make the next train from Havre de Gras, and reach the city markets before the gleam had fairly faded from their scales. Even the fishing-float cannot mar the poetic freshness of the shad. The Spectator has never been particularly partial to herring, and his visit to the Susquehanna has made him less so than ever. But the shad remains as alluring as of old. The broad silver tide of the river, the spring green of its low banks, the breeze that rippled the water under the cloudless blue sky, are memories that cling round his gleaming form. What if he is taken with a steam-winch? Izaak Walton would have loved him none the less for it, after having once tasted him planked. What if he is "as full of bones as Westminster Abbey"? Nobody objects to Westminster Abbey for that—or to the shad, either. Long may the Susquehanna farmer continue to invest his little all in the shad-fisheries!

THE FOREST[1]

BY STEWART EDWARD WHITE

Author of "The Blazed Trail," "Conjuror's House," etc.

Chapter VI.—The 'Lunge

"Do you know the chosen water where the ouananiche is waiting?"

DICK and I traveled in a fifteen-foot wooden canoe, with grub, duffel, tent, and Deuce, the black-and-white setter dog. As a consequence we were pretty well down toward the water line, for we had not realized that a wooden canoe would carry so little weight for its length in comparison with a birch-bark. A good heavy sea we could ride—with proper management and a little bailing; but sloppy waves kept us busy.

Deuce did not like it at all. He was a dog old in the wisdom of experience. It had taken him just twenty minutes to learn all about canoes. After a single tentative trial he jumped lightly to the very center of his place, with the lithe caution of a cat. Then, if the water happened to be smooth, he would sit gravely on his haunches, or would rest his chin on the gunwale to contemplate the passing landscape. But in rough weather he crouched directly over the keel, his nose between his paws, and tried not to dodge when the cold water dashed in on him. Deuce was a true woodsman in that respect. Discomfort he always bore with equanimity, and he must often have been very cold and very cramped.

For just over a week we had been traveling in open water, and the elements had not been kind to us at all. We had crept up under rock-cliff points; had weathered the rips of white water to shelter on the other side; had struggled across open spaces where each wave was singly a problem to fail in whose solution meant instant swamping; had bailed, and schemed, and figured, and carried, and sworn, and tried again, and succeeded with about two cupfuls to spare, until we as well as Deuce had grown a little tired of it. For the lust of travel was on us.

The lust of travel is a very real disease. It usually takes you when you have made up your mind that there is no hurry. Its predisposing cause is a chart or map, and its main symptom is the feverish delight with which you check off the landmarks of your journey. A fair wind of some force is absolutely fatal. With that at your back you cannot stop. Good fishing, fine scenery, interesting bays, reputed game, even camps where friends might be visited—all pass swiftly astern. Hardly do you pause for lunch at noon. The mad joy of putting country behind you eats all other interests. You recover only when you have come to your journey's end a week too early, and must then search out new voyages to fill in the time.

All this morning we had been bucking a strong north wind. Fortunately, the shelter of a string of islands had given us smooth water enough, but the heavy gusts sometimes stopped us as effectively as though we had butted solid land. Now about noon we came to the last island, and looked out on a five-mile stretch of tumbling seas. We landed the canoe and mounted a high rock.

"Can't make it like this," said I. "I'll take the outfit over and land it, and come back for you and the dog. Let's see that chart."

We hid behind the rock and spread out the map.

"Four miles," measured Dick. "It's going to be a terror."

We looked at each other vaguely, suddenly tired.

"We can't camp here—at this time of day," objected Dick, to our unspoken thoughts.

And then the map gave him an inspiration. "Here's a little river," ruminated Dick, "that goes to a little lake, and then there's another little river that flows from the lake, and comes out about ten miles above here."

"It's a good thirty miles," I objected.

[1] Copyright, 1903, by the Outlook Company.

"What of it?" asked Dick, calmly.

So the fever-lust of travel broke. We turned to the right behind the last island, searched out the reed grown opening to the stream, and paddled serenely and philosophically against the current. Deuce sat up and yawned with a mighty satisfaction.

We had been bending our heads to the demon of wind; our ears had been filled with his shoutings, our eyes blinded with tears, our breath caught away from us, our muscles strung to the fiercest endeavor. Suddenly we found ourselves between the ranks of tall forest trees, bathed in a warm sunlight, gliding like a feather from one grassy bend to another of the laziest little stream that ever hesitated as to which way the grasses of its bed should float. As for the wind, it was lost somewhere away up high, where we could hear it muttering to itself about something.

The woods leaned over the fringe of bushes cool and green and silent. Occasionally through tiny openings we caught instant impressions of straight column-trunks and transparent shadows. Miniature grass marshes jutted out from the bends of the little river. We idled along as with a homely rustic companion through the aloofness of patrician multitudes.

Every bend offered us charming surprises. Sometimes a muskrat swam hastily in a pointed furrow of ripple; vanishing wings, barely sensed in the flash, left us staring; stealthy withdrawals of creatures whose presence we realized only in the fact of those withdrawals snared our eager interest; porcupines rattled and rustled importantly and regally from the water's edge to the woods; herons, ravens, an occasional duck, croaked away at our approach; thrice we surprised eagles, once a tassel-eared Canada lynx. Or, if all else lacked, we still experienced the little thrill of pleased novelty over the disclosure of a group of silvery birches on a knoll; a magnificent white pine towering over the beech and maple forest; the unexpected aisle of a long, straight stretch of the little river.

Deuce approved thoroughly. He stretched himself and yawned and shook off the water, and glanced at me open-mouthed with doggy good-nature, and set himself to acquiring a conscientious olfactory knowledge of both banks of the river. I do not doubt he knew a great deal more about it than we did. Porcupines aroused his especial enthusiasm. Incidentally, two days later he returned to camp after an expedition of his own, bristling as to the face with that animal's barbed weapons. Thenceforward his interest waned.

We ascended the charming little river two or three miles. At a sharp bend to the east a huge sheet of rock sloped directly down into a pool and up to a round grass knoll sparsely planted with birches. Two or three tree-trunks jammed directly opposite had formed a sort of half dam under which the water lay dark. A tiny grass meadow forty feet in diameter narrowed the stream to half its width.

We landed. Dick seated himself on the shelving rock. I unjointed my fish-rod. Deuce disappeared.

Deuce always disappeared whenever we landed. With nose down, hind-quarters well tucked under him, ears flying, he quartered the forest at high speed, investigating every nook and cranny of it for the radius of a quarter of a mile. When he had quite satisfied himself that we were safe for the moment, he would return to the fire, where he would lie, six inches of pink tongue vibrating with breathlessness, beautiful in the consciousness of virtue. Dick generally sat on a rock and thought. I generally fished.

After a time Deuce returned. I gave up flies, spoons, phantom minnows, artificial frogs and crayfish. As Dick continued to sit on the rock and think, we both joined him. The sun was very warm and grateful, and I am sure we both acquired an added respect for Dick's judgment.

Just when it happened neither of us was afterwards able to decide. Perhaps Deuce knew. But suddenly, as often a figure appears in a cinematograph, the diminutive meadow thirty feet away contained two deer. They stood knee-deep in the grass, wagging their little tails in impatience of the flies.

"Look'a there!" stammered Dick aloud.

Deuce sat up on his haunches.

I started for my camera.

The deer did not seem to be in the slightest degree alarmed. They pointed four big ears in our direction, ate a few leisurely mouthfuls of grass, sauntered

to the stream for a drink of water, wagged their little tails some more, and quietly faded into the cool shadows of the forest.

An hour later we ran out into reeds, and so to the lake. It was a pretty lake, forest-girt. Across the distance we made out a moving object which shortly resolved itself into a birch canoe. The canoe proved to contain an Indian, an Indian boy of about ten years, a black dog, and a bundle. When within a few rods of each other we ceased paddling and drifted by with the momentum. The Indian was a fine-looking man of about forty, his hair bound with a red fillet, his feet incased in silk-worked moccasins, but otherwise dressed in white men's garments. He smoked a short pipe, and contemplated us gravely.

"Bo' jou', bo' jou'," we called in the usual double-barreled North-country salutation.

"Bo' jou', bo' jou'," he replied.

"Kée-gons?" we inquired as to the fishing in the lake.

"Áh-hah," he assented.

We drifted by each other without further speech. When the decent distance of etiquette separated us, we resumed our paddles.

I produced a young cable terminated by a tremendous spoon and a solid brass snell as thick as a telegraph wire. We had laid in this formidable implement in hopes of a big muscallunge. It had been trailed for days at a time. We had become used to its vibration, which actually seemed to communicate itself to every fiber of the light canoe. Every once in a while we would stop with a jerk that would nearly snap our heads off. Then we would know we had hooked the American continent. We had become used to that also. It generally happened when we attempted a little burst of speed. So when the canoe brought up so violently that all our tinware rolled on Deuce, Dick was merely disgusted.

"There she goes again," he grumbled. "You've hooked Canada."

Canada held quiescent for about three seconds. Then it started due south.

"Suffering serpents!" shrieked Dick.

"Paddle, you sulphurated idiot!" yelled I.

It was most interesting. All I had to do was to hang on and try to stay in the boat. Dick paddled and fumed and splashed water and got more excited. Canada dragged us bodily backward.

Then Canada changed his mind and started in our direction. I was plenty busy taking in slack, so I did not notice Dick. Dick was absolutely demented. His mind automatically reacted in the direction of paddling. He paddled, blindly, frantically. Canada came surging in, his mouth open, his wicked eyes flaming, a tremendous indistinct body lashing foam. Dick glanced once over his shoulder, and let out a frantic howl.

"You've got the sea serpent!" he shrieked.

I turned to fumble for the pistol. We were headed directly for a log stranded on shore, and about ten feet from it.

"Dick!" I yelled in warning.

He thrust his paddle out forward just in time. The stout maple bent and cracked. The canoe hit with a bump that threw us forward. I returned to the young cable. It came in limp and slack.

We looked at each other sadly.

"No use," said Dick at last. "They've never invented the words, and we'd upset if we kicked the dog."

I had the end of the line in my hands.

"Look here!" I cried. That thick brass wire had been as cleanly bitten through as though it had been cut with clippers. "He must have caught sight of you," said I.

Dick lifted up his voice in lamentation. "You had four feet of him out of water," he wailed, "and there was a lot more."

"If you had kept cool," said I, severely, "we shouldn't have lost him. You don't want to get rattled in an emergency. There's no sense in it."

"What were you going to do with that?" asked Dick, pointing to where I had laid the pistol.

"I was going to shoot him in the head," I replied, with dignity. "It's the best way to land them."

Dick laughed disagreeably. I looked down. At my side lay our largest iron spoon.

We skirted the left-hand side of the lake in silence. Far out from shore the water was ruffled where the wind swept down, but with us it was as still and calm as the forest trees that looked over into it. After a time we turned short to the

left through a very narrow passage between two marshy shores, and so, after a sharp bend of but a few hundred feet, came into the other river.

This was a wide stream, smoothly hurrying, without rapids or tumult. The forest had drawn to either side to let us pass. Here were the wilder reaches after the intimacies of the little river. Across stretches of marsh we could see an occasional great blue heron standing mid-leg deep. Long strings of ducks struggled quacking from invisible pools. The faint marsh odor saluted our nostrils from the point where the lily-pads flashed broadly, ruffling in the wind. We dropped out the smaller spoon and masterfully landed a five-pound pickerel. Even Deuce brightened. He cared nothing for raw fish, but he knew their possibilities. Towards evening we entered the hilly country, and so at the last turned to the left into a sand cove where grew maples and birches in beautiful park order under a hill. There we pitched camp, and, as the flies lacked, built a friendship-fire about which to foregather when the day was done.

Dick still vocally regretted the muscallunge as the largest fish since Jonah. So I told him of my big bear.

One day, late in the summer, I was engaged in packing some supplies along an old fur trail north of Lake Superior. I had accomplished one back-load, and with empty straps was returning to the cache for another. The trail at one point emerged into and crossed an open park some hundreds of feet in diameter, in which the grass grew to the height of the knee. When I was about half-way across, a black bear arose to his hind legs not ten feet from me and remarked *Woof!* in a loud tone of voice. Now, if a man were to say *woof* to you unexpectedly, even in the formality of an Italian garden or the accustomedness of a city street, you would be somewhat startled. So I went to camp. There I told them about the bear. I tried to be conservative in my description, because I did not wish to be accused of exaggeration. My impression of the animal was that he and a spruce-tree that grew near enough for ready comparison were approximately of the same stature. We returned to the grass park. After some difficulty we found a clear footprint. It was about the size of that made by a good-sized coon.

"So, you see," I admonished, didactically, "that 'lunge probably was not quite so large as you thought."

"It may have been a Chinese bear," said Dick, dreamily—"a Chinese lady bear, of high degree."

I gave him up.

[TO BE CONTINUED]

The Forsaken

By Duncan Campbell Scott

I.

ONCE in the winter,
Out on a lake
In the heart of the
north-land,
Far from the Fort
And far from the hunters,
A Chippewa woman,
With her sick baby,
Crouched in the last hours
Of a great storm.
Frozen and hungry,
She fished through the ice
With a line of the twisted
Bark of the cedar,
And a rabbit-bone hook
Polished and barbed;
Fished with the bare hook
All through the wild day,
Fished and caught nothing;
While the young chieftain
Tugged at her breasts,
Or slept in the lacings
Of the warm *tikanagan.*
All the lake-surface
Streamed with the hissing
Of millions of ice-flakes,
Hurled by the wind;
Behind her the round
Of a lonely island
Roared like a fire
With the voice of the storm
In the deeps of the cedars.
Valiant, unshaken,
She took of her own flesh,

Baited the fish-hook,
Drew in a gray-trout,
Drew in his fellow,
Heaped them beside her,
Dead in the snow.
Valiant, unshaken,
She faced the long distance,
Wolf-haunted and lonely,
Sure of her goal
And the life of her dear one;
Tramped for two days,
On the third in the morning
Saw the strong bulk
Of the Fort by the river,
Saw the wood-smoke
Hang soft in the spruces,
Heard the keen yelp
Of the ravenous 'huskies
Fighting for whitefish:
Then she had rest.

II.

Years and years after,
When she was old and withered,
When her son was an old man
And his children filled with vigor,
They came in their northern tour on the verge of winter
To an island in a lonely lake.
There one night they camped, and on the morrow
Gathered their kettles and birch-bark,
Their rabbit-skin robes and their mink-traps,
Launched their canoes and slunk away through the islands,
Left her alone forever,
Without a word of farewell,
Because she was old and useless,
Like a paddle broken and warped,
Or a pole that was splintered.
Then, without a sigh,
Valiant, unshaken,
She smoothed her dark locks under her kerchief,
Composed her shawl in state,
Then folded her hands ridged with sinews and corded with veins,
Folded them across her breasts spent with the nourishing of children,
Gazed at the sky past the tops of the cedars,
Saw two spangled nights arise out of the twilight,
Saw two days go by filled with the tranquil sunshine,
Saw, without pain, or dread, or even a moment of longing:
Then on the third great night there came thronging and thronging
Millions of snowflakes out of a windless cloud;
They covered her close with a beautiful crystal shroud,
Covered her deep and silent.
But in the frost of the dawn,
Up from the life below,
Rose a column of breath
Through a tiny cleft in the snow,
Fragile, delicately drawn,
Wavering with its own weakness,
In the wilderness a sign of the spirit,
Persisting still in the sight of the sun
Till day was done.
Then all light was gathered up by the hand of God and hid in his breast
Then there was born a silence deeper than silence,
Then she had rest.

A PREACHER'S STORY OF HIS WORK[1]

BY W. S. RAINSFORD

Rector of St. George's Church, New York City

IV.

MY intellectual trouble began with my return to the Cathedral Church of St. James, Toronto. I had taken absolute rest during the six months; I had read nothing to speak of; and when I got back to Toronto I found enormous crowds waiting to hear me; the church jammed and people waiting outside. I set to, and did the best I could to preach to these people.[2] Scarcely had I commenced when I found myself confronted with a terrible difficulty. I felt as if I had already preached every single thing I knew; I had nothing new to give them. I began to read, but my reading did not fit in with what I had been preaching; I could do nothing but pray. The only thing that saved me was the conviction that, step by step, I had been honest in trying to do God's will; that each step had been taken, so far as I knew, for his glory and not for my own advancement. Night after night on my knees I said, "I am prepared to do Thy will. I cannot preach what I do not believe." It would be perfectly impossible for me to describe the struggle I went through for two years. My wife's health failed in the meantime—failed utterly; I had anxiety at home; and people came to me and said: "You are undoing the good you did before; what do you mean?" My oldest friends plead with me, "We love you, but what are you doing? You are not preaching as you used to preach!" And I knew I was not preaching as I used to preach. I had no liberty, no sense of power. There was not a man in town to help me. All I could do was to pray to God for help and light, and pledge myself again and again that I would not express an emotion that I did not feel, or preach something I did not believe to be absolutely true. I had got past the baptism question by that time; I had run up against something bigger. How could I tell men that, if they believed in Jesus Christ, they would be children of God? If they were not children of God to begin with, believing on Jesus Christ would not make them children of God. And yet—did not the Bible say they had to be born again before they were children of God? Very simple; but it came to me with appalling insistence as an unanswerable intellectual problem. I could not for the life of me believe that a man could become a child of God if he had not been antecedently a child of God. A child of God is always a child of God, whether or not he believes that God is his Father; but if God were not already his Father, believing it would not make Him his Father. That is, if God were not antecedently his Father, believing so would not make Him so. I had not a soul to speak to in my inward strife, except that I once went to Phillips Brooks for help. I went to Boston solely to see him. He was a dear friend of mine; but Phillips Brooks could not help an individual at all. What he said was: "I cannot help you; you must fight it out yourself." Very wise advice, but terribly hard for me at the time. That was the only appeal I made. I remember what was troubling me terribly then was the impossibility of believing in transferred righteousness, and Brooks had not a word to say. I suppose his big soul drew a gasp when I

[2] The following is an extract from one of Dr. Rainsford's sermons delivered during the mission which he conducted in Toronto. It may give an idea of some of the beliefs which he held and preached at this time. This sermon is on the Second Coming of Christ. After stating what he declares to be two certitudes, that "there are two comings of Christ and two resurrections of the dead"—the first coming of Christ being for his saints only, the second coming being the great day of judgment; the first resurrection being that of the "dead in Christ," the second being that of all other men for judgment—he continues: "We don't know but that the very next soul called to Christ in Toronto may make up the great number of God's elect—His elect Bride—and just so soon as the number is made up, and the Bride has made herself ready, so soon shall this mighty shout be heard, and the dead in Christ shall rise first, and shall be rapt away to meet Him in the clouds and be with the Lord forever—'and so shall we ever be with the Lord.' 'Wherefore,' says the Apostle, 'comfort one another with these words.' I want to-night, briefly, to dwell on the consequences of this first coming. The first object will be to manifest who are God's children, and who are not."—THE EDITORS.

came to him; but all he said was, "You've got to fight it out yourself."

In the meantime, the congregation had very perceptibly fallen away; the great crowds were gone; I had to preach three times to get four hundred dollars missionary money. People did not know what to make of me; my friends would come to me and say, "Why don't you preach against dancing and the theater and worldliness as you used to? why don't you come out with your old assurance?"

No one can realize what this gradual failure in Toronto meant who has not felt the intoxication of gathering together thousands of people, the stimulus, and spiritual elation, and the joy which comes from leading and swaying a mass of people eager to hear, and the pleasure in the ties of friendship that are formed, and then seen it seemingly all go—melt away; the church get less and less crowded, collections melt away, friends look doubtfully at you, and enemies jeer. It seems all a long time ago now—but it was a searching fire then. What saved me from defeat was just this, that through it all I could and did keep saying to myself, "I must act as my heart tells me; I won't speak until I have the light, by God's help I won't." A man who has gone through that cannot be beaten. I could not exaggerate, if I spoke for a week, the effect of that experience on my life. Although I would not wish to duplicate that experience in the life of any one I loved, yet I do think an enormous gain and blessing will come to the man who is prepared to fail, at all cost to himself, rather than say what he cannot truthfully say.

I shall never forget my sense of relief when the first gleam of light came to me. It seems so simple now. Why had it not come before? I remember I had been praying late one night, and suddenly the fifteenth chapter of St. Luke came to me with new light. One of the most effective sermons I used to preach was based on that chapter; the sermon I always reserved for the end of my mission work—a dagger for the fifth rib of a man who had not given in before. And now I discovered this—a new discovery all for myself. If the son had not been his father's son before he went into the far country, he would certainly not have come back; he came back *because he was a son.* His coming back was coming to his true self. His smothered self, but his real self all the same.

I got up in the pulpit and preached that sermon all over again. He came back because he was a son; a man turned back to God because God *was* his Father; we were to live as the children of God because we *were* his children; I found new light in the things I had been repeating over and over. People began to come back to the church; collections increased; joy and peace returned to my soul.

I was worried, and still uncertain about lots of things, but I had got my feet on the Rock. I felt I had something to say once more. It was then I found Robertson—Frederick W. Robertson; he came to me like a voice from high heaven. I drank him down as a man shriveled with thirst alone can drink. I read and re-read him. I preached him. Unconsciously, almost, I began to feel how things should go. Spiritual truth was an evolution; God had spoken, but He was speaking still. I began to read Fiske; I began to get a grip on the great idea of evolution; but it was Robertson who was the messenger of God to me.

Just about when I got well on my feet again in Toronto, the call came from St. George's, New York. I then refused it. I should like to say that, during the first three years in Toronto, I had not been able to take one holiday. The people were kind to me; backed me up loyally; but there was a certain party in the church by this time who wanted me to resign. The old Dean, whose health was failing very fast, and to whom all these things came dimly as to a very old and fading man, said to me: "Mr. Rainsford, if you respect yourself, you will resign." I was torn and upset, but I felt that, before God, I could not resign. I had responsibility for these people. I had led them to a certain point, and if I were to leave them there, I had absolutely failed; I had led them nowhere. I was bound to preach nothing except what I believed. I was bound to get light from God, and so fill up the hiatus between my preaching in '78 and in '81. I had to hold on; I could not resign.

I took my sick wife and our little baby to Gloucester, and left them there by the

sea, and took the train back to Toronto the next morning. I dared not leave; I did not know what would happen if I left. But when I began to see light and get on my feet again, I went off for a glorious holiday of nine weeks in the Rocky Mountains; and while I was away the call came from St. George's. Some one, no doubt, had heard me preach occasionally in the tent, and at intervals I spoke in some church in the States, but rarely. The St. George's people did not know anything about the condition of my church in Toronto; and if they had investigated towards the end, they would have found an immensely successful church. The outside world knew nothing of my struggles. I had not spoken of them to one single friend but Phillips Brooks, and to him I had said but little. I knew something about St. George's, having stayed with Dr. Williams, who succeeded Dr. Tyng, senior, right here in St. George's Square; and Williams had thrown up his hands in despair at the condition of affairs.

When the call came from St. George's, Mrs. Rainsford could not find me—I was off in the Rocky Mountains; but when I got home she told me about it; and I said, "I cannot take it; I cannot go anywhere; I must not leave here."

Then suddenly the Dean died. I had refused St. George's; and my way seemed perfectly plain. I had the pledge of my wardens that I should be rector, and I had the hearty support of my people. I expected, as a matter of course, to be elected rector, and I was elected rector with practical unanimity. But, some little time before, a new Bishop had been elected to the Diocese of Toronto, and he, standing for the letter of the canon, which had not been at all rigorously applied in Canada, said that he would not confirm my appointment because the vestry had not consulted him before electing me. So here was everything changed again. The people were almost unanimously for me, but the Bishop took a firm stand, and refused to confirm the appointment. Nothing could be done. The deadlock was maintained for several months, a very strong feeling being developed against the Bishop in the church. I felt that there was nothing to be gained by staying under such conditions. It was a terrible disappointment to me; I longed to stay there. My mind by this time was perfectly clear; it seemed to sprout, so to speak, in every direction; I could see things. In a few months I conceived the whole idea of what a city parish ought to be. I longed to make St. James's such a parish, and I was certain I could do it. Almost everything that I later carried out in St. George's Church was born in my mind in that year.

I believe that the seizing of a fundamental idea will change everything. I was not then entirely out of the maze, but I had the thread in my hand that led to the maze's center. The whole thing came to me with marvelous continuity; and, as I say, the whole idea of what a great city parish ought to be blossomed in my mind—a staff of young clergy being educated to teach the people; above all, helped to learn to preach; frequent services suitable to the special needs of the people. I felt that we could have jammed St. James's with thousands of people in the way people used to throng Trinity Church, New York, in Lent, when they were given a good preacher.

I did not say a word to a soul, but kept on working the thing out in my mind. No one knew about my struggles but God; there was only one man in Toronto I spoke at all freely with—Dr. J. D. McDonnell, a Presbyterian. He had his own troubles, and passed for a heretic, though I fancy no single man in Toronto wielded more influence for good in those days. He was a man who comforted and helped me.

In the midst of this deadlock came the second call from St. George's. Here I was; my life mission was broken up; the Bishop had set his teeth and would not confirm my nomination—I could see that. My friends felt bitterly about it; but I felt that the call from St. George's might be a way out. About this time I also had a call to return to England; and if it had not been for the Athanasian Creed, I might perhaps have gone; I did not believe I could repeat that creed; and, besides, I had a taste of the new wine in a new country, and I began to want to stay. I received word that Mr. Morgan and Mr. Stearns would come up and talk with me, but I telegraphed back that I would come to see them. On the way down to New York I turned the situation over in my mind. Dr. Williams had told me he had been beaten; that the Roman Catholics would not even take St. George's

as a mission; the only chance to do anything with it was to move uptown; but he also had said that there was an immense population here that the church had never touched. I knew the neighborhood a little, and by that time I had absolutely fixed in my mind that the only church worth serving was a church that served the people, not one set or class of people chiefly, and the people in the neighborhood of St. George's were the ones I had made up my mind to work for. My church in Toronto was a pew church; but the tremendous wave of religious fervor had swept the pew idea out of the people's minds altogether; that is, the spirit diffused throughout the church was so real that the people did not bother about their pews very much; so the fact of its being a pew church did not bar my way.

I want you to understand that the plans I have made and carried out here at St. George's were not suddenly formulated. Many, nearly all indeed, of the ideas came to me during my last year in Toronto.

On the train coming down I made up my mind that a few conditions were absolutely essential to success in the work at St. George's, and I determined to propose those conditions to the vestry. I had very little hope that they would agree to them. However, I also made up my mind that if they would not agree I would not accept the rectorship.

I arrived in New York, and was most kindly received. I met the vestry in Mr. Morgan's study, and they asked me to become rector of St. George's Church. I said: "I think the church has gone too far to be pulled up; I do not think I have the strength or the capacity to pull it up; but," I said, "I will undertake the work on three conditions."

"Name your conditions," said Mr. Morgan; and I did:

"First, you must make the church absolutely free—buy out all those who will not surrender their pews; next, abolish all committees in the church except the vestry; and, third, I must have $10,000 for three years, apart from my salary, to spend as I see fit; my salary I leave to you."

"Done," said Mr. Morgan.

That which I did not expect had come to me. But it was none of my seeking.

I bowed my head and thanked God.

Collegeville—A Community in Miniature

By Ernest Hamlin Abbott

ON a recent evening I was present at a reception given by the officials of a city within a city. The hall was decorated with American flags; the guests were assembled; a cornet sounded; and in came some thirty or forty young men who were the hosts of the occasion—the Mayor and other officials of Collegeville, Lincoln County, N. Y. This was the last meeting for the year of a class in municipal government.

The method by which the class is conducted is picturesque and unique; it was devised by Mr. W. H. Sherman, Educational Director of the Twenty-third Street Branch of the Young Men's Christian Association in New York City. As a result of his wide acquaintance with young men he has become convinced that there is very little knowledge among young American citizens, as well as among the young foreigners, concerning the principles of government; that, indeed, the young man who has come from a foreign land to the United States is likely to have acquired some understanding of the principles of democratic government by reason of the very novelty of his surroundings; and that what passes for such understanding among young American citizens is usually only an acquaintance with the machinery, rather than with the principles, of democracy. He has, therefore, formed classes or clubs of young men in different branches of the Association, and, instead of giving them lectures on what is commonly considered a rather dry subject, he has trained them in establishing for themselves forms of civil government. The members of these classes are about the same age as college undergraduates. Among their number have been graduates of important American colleges.

The pre-assumption in the course un-

dertaken by these classes is that emotional patriotism, however indispensable, is not the force that will develop intelligence in performing civic duties; but that it is interest engendered by holding property that most simply and directly leads to interest in the principles of government. It is in order to make clear the partnership that exists between property and government that the first problems presented are those involved in the ownership of property, in particular the ownership of land.

Let it be supposed, for example, that there is a club of thirty-five young men, ranging from eighteen to twenty-two years of age, among them Italians, Irish, Germans, possibly a Swede or Dane, and some natives of America. They meet in a room at the Association, and are informed that they are going to settle a township in New York as a Western township on the public domain. The map, imaginary, of the township is put before them, with its sections and quarter-sections marked out, and to each man is assigned a homestead.

As soon as these men find themselves there in fancy, they meet with some very pressing problems: Who is going to build the highways? how are they going to get across the river? Some one will have to make roads and construct bridges or establish ferries; so they meet together and organize. Thereupon is established the regular New England town meeting. This form of government is adopted because it is the simplest, most elemental, and most natural way in which democratic government appears. Some committee has to be formed, and so they select their selectmen. Highway Surveyors are chosen. There has to be a school established (a section they already find allotted by the Federal Government for the school purposes), and so a School Committee is elected. To one of the men falls the lot of being storekeeper, and after that the room in which they meet in the Association is in the second story of his store. Gradually roads are constructed, buildings put up, dogs licensed.

Up to this time they have been perfectly equal in their opportunities, but one night upon assembling they find bank-books spread about on the table, and as each man picks one of them up he finds that he has fallen heir to a sum of money—it may be five thousand dollars or a hundred thousand dollars, or some sum between the two. Hereupon suddenly these men find the new problems that arise with inequality of station and power. They have to find some way of getting at their money, and so a bank is established, each man subscribing what he feels he can afford for some share of stock in the enterprise. News is announced of the hope of a railroad, and a committee is chosen to see that the town of Collegeville, as it is called, is not overlooked in the selection of the route. Money is subscribed by each according to his means for shares in the railroad, and at last the citizens have the satisfaction of seeing the line appear on the map of their town. The section which has been voted for the benefit of the railroad is laid off in lots. The store moves up near the station.

The cluster of houses about the station is called Collegeville Center. Village life begins. A hotel is erected. This now becomes the meeting-place. Churches are organized, and funds are subscribed for their maintenance. A church organization in order to be valid must have at least three adherents. Denominational enthusiasm, mingled with considerable emulation, develops new groups among the citizens. Men owning land around the station divide their land in lots and offer it for sale. Some opportunity for speculation and investment appears in the life of the town, and new problems evolved in all this growth have to be decided in town meeting. Questions of county government are also brought up by the necessity of transferring deeds and by the general growth occasioned by the railroad. At last, one evening, as the citizens assemble, they are informed that a "boom" has struck the town and a city government must be formed.

With the alteration of Collegeville from a town to a city, the distinctive problems of municipal government as they arise in American cities begin to appear. The election of Mayor is among the first. Party politics shows its head. When party caucuses are called for, the Republicans start in one direction and the Democrats in another, and some uncertain ones waver in the middle of the room until they see where their companions go, and distribute themselves accordingly. Nominations are

made; and then the question is asked, What is the use of having an election? They can see for themselves how the question is decided. In this concrete way they see that if all Democrats always voted as Democrats and all Republicans always as Republicans, there would never be any need of election. The power and indispensableness of the independent vote thus appear.

After that the municipal voting is for the best man, irrespective of party preference. Heads of departments are appointed. Parks are established. Questions of lighting and water supply are dealt with. As it is no longer possible for all the citizens to meet together—for Collegeville now boasts a population of two hundred thousand!—a Board of Aldermen is established. Each man finds that he is called upon to defend before the citizens his conduct of the department with which he is connected. Consequently, a Commissioner of Charities, for instance, finds that he is under the necessity of knowing something about what the experience of city governments has established as to the care of the sick, poor, and dependent portion of the population. So with the Police Commissioner, the Fire Commissioner, the Corporation Council, the Superintendent of Schools, and the others; each finds an especial subject of study in his own department.

The last meeting in the Young Men's Christian Association Building on Fourth Avenue and Twenty-third Street—before its final abandonment by the Association for other quarters—was the reception, to which I have referred, given on April 8, 1903, by his Honor the Mayor and the Aldermen and other officials of the city of Collegeville to a large number of invited guests. The floor of the hall was filled with desks for the various officials, and their designation indicated by placards hung above them. After an address of welcome by the Mayor, admirable speeches, marked by a real, intimate, and lively knowledge of the subjects, and with a considerable amount of wit, were made by certain of the officials selected for the occasion. The Superintendent of Schools was a young Dane who had been in this country a year or less. His command of the English language and of the real principles underlying the most enlightened methods of municipal schools was remarkable. Each of the other addresses had in its way something striking and interesting that gave it real distinction.

The impression made upon more than one guest was that these men had a practical knowledge of the subject of municipal government that could be obtained otherwise only by experience in the government of an actual and not imaginary city, and that in their intelligent understanding of the problems of city government, as well as in their ideal of what city government should be, they were more than the equals of many experienced city officials. If these men, whose interest in municipal government has been so quickened and whose enthusiasm for the subject was indubitable, keep clear the ideals that they have received in their picturesque course, it will be by no means surprising if they are heard from in the future as participating in the government of some American cities where high ideals of municipal government are sorely needed. In any event, they are certainly better able by reason of their training to perform the function of citizenship and to contribute their share to enlightened public opinion.

To the Hepatica

By May Morgan

The earth all winter sleeping lies,
Then wakes from dreams of blue
To find above her April skies
And on her bosom—you!

The Bohemian in America

By Edward A. Steiner

DURING the counter reformation under Ferdinand II., Austria sent her Protestants to the gallows or to America, and among the large number of those who preferred giving up their homes to their faith were many Bohemians—the best and stanchest from that historic kingdom. In Baltimore the churches they founded still stand, and a sort of Forefathers' Day is observed by their descendants, who, though they have lost the speech of their fathers, still cling to the historic date which binds them to a band of noble pioneers—close comrades in spirit to the Pilgrims of New England. Under Austrian rule Bohemia became impoverished physically, mentally, and spiritually, and after the misgovernment of Church and State had done its worst, the flood-tide of emigration set in anew toward this country.

Bohemia grew to be in the last century an industrial State, and the emigrants who came here were half-starved weavers and tailors, who naturally flocked to the large cities. In New York nearly the whole Bohemian population turned itself to the making of cigars, and the East Side, from Fiftieth to about Sixty-fifth Streets, is the center. In Cleveland, Ohio, 45,000 Bohemians live together, while Chicago boasts of a Bohemian population of over 100,000, who nearly all live in one district, which begins on Twelfth and Halstead Streets, and stretches southward almost to the stockyards, with a constant tendency to enlarge its boundary toward the better portions of the city. The large tenement-house is almost altogether absent from this locality, the little frame house of the cigar-box style being the prevailing type of dwelling, and most of the homes are owned by their tenants. This part of the city is as clean as the people can make it in a place where street-cleaning is a lost or never learned art, and the prevailing dirt is clean dirt, with here and there an inexcusable morass which offends both the eye and the nostril. The whole district is typical of Chicago rather than of Bohemia, and if it were not for the business signs in a strange and unphonetic language, and occasionally a sentence in the same queer speech, one might imagine himself anywhere among any American people of the working class; nor is there a trace of the native country in the interiors, where one finds stuffed parlor furniture, plush albums, lace curtains, ingrain carpets, and a piano or organ—all true and sure indications of American conquest over inherited foreign tastes and habits. Yet the conquest is only on the surface, for it takes more than a carpet-sweeper to wipe out the love of that language for which Bohemia has suffered untold agony, to which it has clung in spite of the pressure brought to bear upon it by a strong and autocratic government, and which it is trying to preserve in this new home in which the English language is more powerful to stop foreign speech than is the German in Austria, though backed by force of law and force of arms. With five Bohemian daily newspapers, with publishing houses printing new books each day, with preaching in the native tongue, and with societies in which Bohemian history is taught, the Czechish language will not soon disappear from the streets of Chicago; and language to the Bohemian, as, indeed, to all the Slavs, is history, religion, and life.

The Bohemian emigrant comes to us burdened by rather unenviable characteristics, which his American neighbor soon discovers, and the love between them is not great. Coming from a country which has been at war for centuries and in which to-day a fierce struggle between different nationalities is disrupting a great empire and clogging the wheels of popular government, he is apt to be quarrelsome, suspicious, jealous, clannish and yet factious; he hates quickly and long, and is unreasoning in his prejudices; yet that for which a people is hated, and which we call characteristic of race or nation, soon disappears under new environment, and the miracle which America works upon the Bohemians is more remarkable than any of our National achievements. The downcast look so characteristic of them in Prague is altogether gone, the surliness

and unfriendliness disappear, and the young Bohemian of the second or third generation is as frank and open as his neighbor with his Anglo-Saxon heritage. I rather pride myself upon my power to detect racial and national marks of even closely related peoples, but in Chicago I was severely tested and failed. In Bethlehem Church I addressed a Bohemian audience to which I could pay this compliment, that it looked and listened like Americans; but what thousands of years have plowed into a people cannot be altogether eradicated, and the Bohemian, with all of us, carries his burden of good and evil buried in his bones. Among all our foreign population he is the most irreligious, more than two-thirds of the 100,000 in Chicago having forsaken the Roman Catholic Church and drifted into the old-fashioned infidelity of Thomas Paine and Robert Ingersoll. Nowhere else have I heard their doctrines so boldly preached or seen their conclusions so readily accepted, and I have it on the authority of Mr. Geringer, the editor of the "Svornost," that there are in Chicago alone three hundred Bohemian societies which teach infidelity, which carry on active propaganda for their unbelief, and also maintain Sunday-schools in which the attendance ranges from thirty to three thousand. One of the most painful and pathetic sights is this attempt to crush God out of the child nature by means of an infidel catechism, the nature of whose teaching is shown by one of the first questions: "What duty do we owe to God?" The answer is, "Inasmuch as there is no God, we owe him no duty."

Mr. Geringer is one of the leaders in this movement, and his paper, in common with two others, pursues this same course and daily preaches its destructive creed. Calling at the office of the "Svornost," I found Mr. Geringer, a Bohemian of the second generation, frank and open in acknowledging his leadership and the tendency of his paper, although he was less extreme than the statements about him by priests and preachers had led me to suppose. He certainly was much more willing to talk about his people than were the priests upon whom I had called, and I found that his views have not been without change in the fifteen years since I last read his paper. "We are fighting Catholicism rather than religion," he said; and I added, "A Catholicism in Austria, with its back toward the throne and its face toward the Austrian eagle;" to which he replied, "You have hit the nail on the head."

In reality, this hatred extends unreasonably to all religion, and among the less educated it amounts to a fanaticism which does not stop short of persecution and personal abuse. Blasphemous expressions and old musty arguments against the Bible are the common topics of conversation among many Bohemian workingmen who hate the sight of a priest, never enter a church, and are thoroughly eaten through by infidelity. They read infidel books about which they argue during the working hour, and the influence of Robert Ingersoll is nowhere more felt than among them. His "Mistakes of Moses" has taken the place of the usual newspaper story, and the editorials are charged by hatred toward the Church and toward Christianity as a whole. The unusual number of suicides among the Bohemians is said to be due to the fact that their secret societies encourage suicide. The books published in Chicago are of a rather low type, and among them are many whose sole purpose it is to vilify the Church. This I felt to be true, that an unusually coarse materialism pervades Chicago's Bohemian colony; and Professor Massarik, of the University of Prague, who lectured this summer at the University of Chicago, makes this the chief note of his complaint against them. They have singing and Turner societies after the manner of the Germans, but the ideals they foster are really the causes of their materialism and infidelity. The Roman Catholic Church is fighting that spirit by maintaining strong parochial schools, encouraging the organization of lodges under its protection, and it now publishes a daily paper, the success of which I could not judge, although the reports I have from various sources are not flattering. The Protestants cannot boast of more than one per cent. of members among them, and the three small churches in Chicago are but vaguely felt and are practically no factors in the life of this large population. "We don't know that they are here," said one of the infidel leaders, and the Catholics take no notice of them at all. A little paper,

"Pravda," published by Dr. George T. Adams, the pastor of one of these churches, had to be given up on account of lack of means.

Chicago is as much a Bohemian center for America as is Prague for the old Bohemia, and the type of thought found there is duplicated in all the Bohemian centers that I visited; everywhere there is a battle between free thought and Catholicism, and many a household is divided between the "Svornost" and the "Catholic," yet I have good reason to believe that this infidelity is only a desire for a more liberal type of religion, only a strong reaction and not a permanent thing, and I found signs of weakening at every point. The little village of New Prague in southwestern Minnesota is a good example. It is the center of a large Bohemian agricultural community, and has the reputation of being a "tough" town and quite a nest of infidelity. I found it a clean and prosperous place of 1,500 inhabitants, outwardly neater and better cared for than the ordinary Western village. It has a clean and wholesome-looking hotel, a little Protestant and a big Catholic church, and the usual variety of stores. I was surprised to find the hotel without the customary bar, and to my question about it the hotel-keeper replied, "I have no use for bars; I ain't no drinking man and I don't want nobody else to drink."

The editor of the New Prague "Times" had been pointed out to me as the chief infidel, yet I found him an interested reader of The Outlook, and a rather fine type of the liberal Christian. While, of course, the Chicago "Svornost" and its kind find a great many readers, the infidels are all those who have refused to go to confession and who wanted a public school, and who are now erecting a fine structure. From the banker, the physician, the druggist, and the photographer, I received additional proof that my conjecture was correct, and the only one who had little to say in praise of these people and much to blame was the village priest, a true type of the Austrian Catholic who would rule with an iron hand if he could, and who misses the strong support of government. Typical of him was the answer to my question as to his touch with the people in comparison with that of the Austrian priest at home. "You know in Austria the State pays us, and we don't need to come in close touch with the people, but here it is different; here the people pay, and that alone brings us in closer touch."

My impression of New Prague is that it is neither "tough" nor infidel; it is true that it has saloons and too many of them, that the Continental Sabbath is the type of its rest-day, but in outward decency and in the degree of intelligence among its professional and business men it rivals any other town of its size with which I am acquainted. It is surrounded by Irish and American settlements, the first of which it surpasses in order and decency, and is not far from the other in enterprise and an unexpressed desire to bring the kingdom of God upon the earth.

Among these people who offer such a promising field the efforts of Protestants have been successful, though they are entirely inadequate when one considers that fully seventy-five per cent. are alienated from the Mother Church, are in a condition of semi-infidelity, and are in reality waiting for a faith more in keeping with their ideas of religion. The most successful work among them is that carried on by the Congregational Home Missionary Society, under the supervision of the Rev. H. A. Schauffler, who was a foreign missionary in Bohemia, and who brought with him to this country a thorough knowledge of their language and an insight into their character which have been of great help to him. Oberlin Theological Seminary maintains a Slavic Department in which men are trained for this work. In the same atmosphere of this community, in close touch with the best that college life affords, they are trained for Christian leadership, and they bring with them an intellectual hunger which is almost unappeasable, and they draw in the new life through every fiber of their beings. Most of them must first learn to speak their own language correctly; then they have to wrestle with English, and finally they must struggle through rudimentary subjects to theology. Professor Miskowszky, the Dean of this department, and a graduate of Columbia University, has the difficult task of preparing these men for their life-work, and one who has seen them together in the class-room realizes

what a difficult task it is for both teacher and students, and wonders at the marvelous results.

In Cleveland a Bible Readers' School prepares young women for the difficult task of visiting the homes and teaching and exemplifying the Gospel. This work has its stories of marvelous conversions among men and women of mature years, and my acquaintance of over thirteen years with its preachers and leaders, as well as my visits among its churches and mission stations, leads me to believe that its work is genuine and destined to be a great factor in the evangelization of these Slavic people. One of its little churches at Silver Lake, Minn., leads the churches of the State in its gifts to benevolent objects, and the whole town is a model of intelligence, sobriety, and true piety; but in the cities its work is too circumscribed, and to be felt at all it must at least tenfold its activities.

The saloon holds an abnormally large place in the social life of the Bohemians, and beer works its havoc among them socially and politically. The lodges, of which there are legion, are above or beneath saloons, and all societies down to the building and loan associations are in close touch with them. It is the pride of Bohemian Chicago that two of its greatest breweries are in the hands of its countrymen, and brewers and saloonkeepers control much of the Bohemian vote. I asked one of the politicians whether that element was active in politics, and he replied, "Oh, yes; we have five aldermen and the city clerk." The fact is that they have given Chicago a poor class of officials and have placed their worst infidels in the City Council and on the School Board. There is not a little avowed Anarchy among them, and a great deal more of Marxian Socialism, one of the daily papers advocating the latter political faith. Just as there is much dangerous half-knowledge of religious subjects, so there is much of it about politics, and the worst and yet the most eloquent arguments on Socialism I have heard from these agitators, of whom there are many.

Though the Bohemian is very pugnacious, he is easily led, or rather easily influenced, and in times of political excitement I should say that he would need a great deal of watching. He is much more tenacious of his language and customs than the German, and I have found children of the third generation who spoke English like foreigners. An appeal to his history, to the achievements of his people, awakens in him a great deal of pride, which he easily implants into the hearts of his children. This does not make him a worse American, and in the Bohemian heart George Washington soon has his place by the side of John Huss, and ere long is "first in the hearts of his countrymen."

The Bohemian is intelligent enough to know what he escaped in Austria, and values his opportunities in America, although too often he confuses liberty with license; in this, however, he is not a sinner above others. His greatest sin is his materialism, and he stunts every part of his finer nature to own a house and to have a bank account. Children are robbed of their youth and of the opportunity to obtain a higher education by this parental hunger after money, and parental authority among the Bohemians has all the rigor of the Austrian absolutism which they have transplanted, but which they cannot maintain very long, for young Bohemia is quickly infected by young America, and a small-sized revolution is soon started in every household; it is then that the first generation thinks its bitterest thonghts about this country and its baleful influence upon the young. In fact, the second generation is rather profligate in "sowing its wild oats," which are reaped in the police courts in the shape of fines for drunkenness, disorderly conduct, and assault and battery.

The Bohemian is among the best of our immigrants, and yet may easily be the worst, for when I have watched him in political riots in Prague and Pilsen or during strikes in our own country I have found him easily inflamed, bitter and relentless in his hate, and destructive in his wild passion. He has lacked sane leaders in his own country, as he lacks well-balanced leaders in this. The settlement and missionary workers in Chicago find him rather poor material to work with, for he is unapproachable, not easily handled, and repels them by his suspicious nature and outward unloveliness, although he is better than he seems and not quite so good as he thinks himself to be, for humility is not one of his virtues. He develops best where he has the best

example, and upon the farms of Minnesota and Nebraska he is second only to the German, whose close neighbor he is and with whom he lives in peace, strange as it may seem. The Bohemian is here to stay, and scarcely any of those who come will ever stand again upon St. Charles bridge and watch their native Moldava as it winds itself along the ancient battlements of "Golden Prague," as they love to call their capital. America is their home, "for better or for worse;" they love it passionately; and yet one who knows their history, every page of it aflame from war, need not wonder that they turn often to their past and dwell on it, lingering there with fond regret.

Last year, while I was in Prague, Antonin Dvořák, the composer, celebrated his sixtieth birthday, and the National Opera-House was the scene of a gala performance and a great demonstration in his honor. They gave his National Dances in the form of a grand ballet, and to the notes of those wild and melancholy strains of the Mazurka, the Kolo, and the Krakoviak, came all the Slavic tribes in their picturesque garb, and all were greeted by thunderous applause as they planted their national banners; at last came a stranger from across the sea, and in his hand was a flag, the Stars and Stripes, while to greet him came Bohemia, with Bohemia's colors waving in her hands; and these two received the greatest applause of that memorable evening. These two are in the heart of this stranger; he is faithful to the old, and will ever be loyal to the new. How to be loyal to this flag in times of peace, at the ballot-box, on the streets of Cleveland during a strike, as a citizen and alderman in Chicago, is the great lesson which he needs to learn, and we need to learn it with him. He will remain a Bohemian longest in the agricultural districts of Minnesota and Nebraska, where he holds tenaciously to the speech of his forefathers; but, in spite of that, I consider him a better American than his brother in the city. He needs to find here a Christianity which will satisfy his spiritual nature and which will become the law of his life, a religion which binds him and yet will make him truly free; and that we all need to find. Above all, he has to resist the temptation to make bread out of stone, to use all his powers to make a living and none of them to make a life; and that is a temptation which we must all learn to resist, for neither men nor nations can "live by bread alone."

Some Modern Interpretations of Christianity[1]

WHAT is Christianity? The centuries have been seeking an answer to this question; not because Christianity is indefinite, but because it is larger than the mind of man has been able fully to grasp. Dr. Brown's book is an attempt to trace the movement toward an adequate answer, and it shows a wide knowledge of the field, a clear, discriminating mind, and an experienced hand in the art of writing. It is an attempt to trace, as he says, "the rise and progress of the effort to conceive Christianity scientifically." In the first chapter, which is admirable for its terse, clear, easy style, he states the problem. This he shows to be ultimately dependent upon the conception of the Absolute. When the Absolute is conceived of as that which is in contrast with the finite, then arises a theology, be it that of the Vatican or that of dogmatic Protestantism, which makes the essence of Christianity consist in what is extraordinary and miraculous. When the Absolute is conceived of as that which is beyond the boundary of knowledge, then arises a philosophy, it cannot be called a theology, which denies the possibility of an absolute religion or

[1] *The Essence of Christianity: A Study in Definition.* By William Adams Brown, Ph.D., D.D. Charles Scribner's Sons, New York.

An Introduction to Protestant Dogmatics. By Dr. P. Lobstein, Professor of Theology in the University of Strassburg. Authorized Translation from the Original French Edition by Arthur Maxson Smith, Ph.D. Published by the Translator. Printed at the University of Chicago Press.

Theology and the Social Consciousness: A Study of the Relations of Social Consciousness to Theology. By Henry Churchill King. The Macmillan Company, New York.

Reason and Revelation: An Essay in Christian Apology. By J. R. Illingworth, D.D. The Macmillan Company, New York.

The Spiritual Outlook: A Survey of the Religious Life of Our Time as Related to Progress. By Willard Chamberlain Selleck. Little, Brown & Co., Boston.

Jesus' Way: An Appreciation of the Teaching in the Synoptic Gospels. By William De Witt Hyde, President of Bowdoin College. Houghton, Mifflin & Co., Boston.

that there is anything essential and therefore permanent in Christianity. When the Absolute is conceived of as that which is the ultimate reality of all life—neither contrasted with the finite nor separated from it—then arises a theology which finds God in his world and makes the essence of Christianity—so far as it is an absolute religion—to consist in its meeting the universal religious needs, because it is "valid for man as man." While contrasting these three conceptions, Dr. Brown takes occasion to point out the fact that the first, which makes faith dependent upon some external sanction, be it church, creed, or book, is, in spite of common opinion to the contrary, vague and ambiguous. It is the last of these conceptions, the one which he terms the psychological, which he accepts as prerequisite to any reasonable attempt to discover the elements of absoluteness in Christianity.

To the question, What is Christianity? Dr. Brown finds in the very beginnings of the Church two contradictory answers. One, in part given by Paul, in part by the Epistle to the Hebrews, is that Christianity consists in a new principle, partly in contrast to Judaism, partly in development out of it. The other answer, given by the Epistle of Barnabas, is that Christianity is primarily law—precisely the same law as that revealed in the Old Testament, but disobeyed, and therefore misunderstood, by the Jews. It is this second answer which is found to be overwhelmingly prevalent throughout the ancient and mediæval Church, and but little modified in the leaders of the Reformation. It is not until the philosophy of Kant and the rise of the historical spirit began to upset the complacent certainties of Catholic and Protestant theologians alike, that the way was opened for Schleiermacher, Hegel, and Ritschl to develop the answer first given by Paul and the Epistle to the Hebrews. In a final chapter, "Retrospect and Prospect," Dr. Brown reaches his definition of Christianity, which centers about Jesus Christ, as one who not only reveals truth but imparts life.

With all its compactness and its scholarship, this book has a distinct literary quality. It not only gives valuable information, but it also stimulates thought. Those who wish to have at hand a wide survey of the great historical currents of the philosophy of Christianity and the present trend of theological thought will find it in this volume.

One cause of the slow progress of the world, which sometimes seems slowest of all in the Church, is the tendency of men, even of the more thoughtful character, to read mainly books which confirm their previous impressions. Comparatively few men are open-minded enough to read, with appreciation and assimilation, books which present a point of view to which they are unaccustomed; or, if they do not absolutely taboo such books as dangerous, they read them only to criticise or condemn.

We wish that Dr. Lobstein's book might be read by two classes of thinkers of our time, both of whom might, by perusing it, be enabled better to comprehend the theological transition through which some certainly are passing. These two classes, the egoistical rationalist and the traditional dogmatist, confirm each the other by reason of the polemical temper, which always assumes — generally erroneously — that whatever is the opposite of an error is the truth. The egoistical rationalist will not look for sources of religious truth beyond his own ideas and ideals, and so measures all affirmations by the way they strike his reason or perhaps his fancy. Of this type James Martineau is probably the most notable and noble illustration among English writers. The traditional dogmatician, beginning with the assumption that the Bible is the only infallible rule of faith and practice, and going on to affirm that the creeds are the only authoritative interpreters of the Bible, should—though he does not always or even generally—go on still further, into the Church of Rome; for an infallible book, if it is to be an infallible guide, requires an infallible church to be its infallible interpreter. Professor Lobstein accepts neither the postulate of the egoist nor of the traditionalist. He insists that dogma is necessary. We must think out our faith in rational forms for our own sake, else it remains a mere vague and formless sentiment. We must think it out for the sake of others, else in communicating it we communicate simply an evanescent imagination or a still more evanescent emotion. But the material for a scientific statement of religious truth

is not to be found in the creeds nor yet in the Bible, though both are to be used as a part of the material; still less in the egoistic and purely personal experience of the individual. The material for a rational philosophy of the life of faith is to be found in the life itself—that life which, having its historic origin in and its actual inspiration from the life, death, and resurrection of Christ, and by its vital efficiency transforming the thought, the experience, and the ethical principles and practices of humanity, we call Christian life. This we understand is what Professor Lobstein means by the Gospel: for it is quite clear that he does not mean the four Gospels, that is, the mere historic biography of Jesus, still less any philosophy drawn from and based alone on that biography. The most serious defect in his volume is a certain vagueness, if not contradictoriness, in his definitions, or rather description, of the Gospel which he declares to be the material for Protestant theology. His best definition is contained in the following sentence, which seems, standing by itself, to be entirely clear:

> The experience which the dogmatician attempts to analyze and translate is the collective experience of the Christian community, the experience of which the consciousness of Jesus is at once the source, the material, and the norm.

We shall not undertake to indicate the working out of this fundamental principle, the effect of which on Protestant theology Professor Lobstein indicates, but only indicates, in his last chapter. We hope that he may fulfill the intimation of his closing sentence, and hereafter elaborate the programme which here he only traces. It will be clear, however, to the thoughtful reader, even from this mere hint as to the contents of this book, that its teaching involves some important and radical results as to the material for Protestant theology, the nature of Protestant theology, and the authority of Protestant theology. The material is not a Book; the scientist cannot construct a scientific theology by proof texts deftly woven together. He must study Christian life, and the whole Christian life, and learn, in the complex phenomena of Christian consciousness as seen in history, to distinguish the Christian from the pagan with which it is intermingled, and which it is gradually supplanting. The nature of a true theology is not metaphysical; it can deal only with vital experiences, not with ideas unverifiable by experience. Thus its doctrine of the Trinity cannot be a metaphysical conception of the tri-personality of God; it can only be a truthful explanation of the threefold experience of God in Christian consciousness. And the authority of a true theology cannot be ecclesiastical—neither the authority of the living Church, nor of the ancient Church, Apostolic or Hebrew, nor of the records of these churches; it must be the same authority as that of art, science, and philosophy namely, the actual consciousness of men testifying to the facts of spiritual life as that consciousness testifies to the facts of the æsthetic, the physical, and the intellectual life. It is not to be supposed that the traditionalist will look upon this book as safe; and yet we should think, if he is but reasonably open-minded, that it might serve to convince him that the men of the school whom Professor Lobstein so admirably represents are not infidels, and that "the programme which he believes is already on the way to progressive realization" is not a programme of unbelief or irreligion.

Dr. King's book, "Theology and the Social Consciousness," we regard as a valuable contribution to current discussion, which because of its value it is difficult to report to our readers. For that value consists partly in its conciseness, and further condensation is well-nigh impossible. It might almost be said to consist of a series of theses. The author states rather than argues, and leaves his statements to carry conviction by their own reasonableness. He amplifies very little, illustrates practically not at all. His book is therefore one for thinkers; it does not belong to the quasi-periodical and wholly popular literature of which we have so much. And yet it is not scholastic; it is not phrased in the technical language of the schools; the thoughtful layman will readily understand it; its style is unconnected but lucid, as clear and as colorless as spring water; one looks through it to the truth beneath.

Social consciousness the author defines as "a growing sense of the real brotherhood of man;" but this social consciousness is capable of analysis; it includes

deepening sense (1) of the likeness or kemindedness of men, (2) of their mu- ual influence, (3) of the value and sacred- ess of the person, (4) of mutual obli- ation, and (5) of love. Sustained by atural science, psychology, philosophy, nd Christianity, the conviction is growing nd deepening that "mutual influence is nevitable, isolation impossible." Com- nercial, industrial, social, religious organ- zation is compelled, not only by natural orces working from without, but by this rowing social consciousness working from vithin. It is based on and has its ground nd reason in the immanence of God in uman experience; it is therefore a divine, n irresistible force, not to be resisted, ut to be welcomed, accepted, guided, in t true sense obeyed. And its effect is nd will be against the falsely mystical which disowns and denies personality, or this social consciousness is a con- sciousness of individuals united by a common bond and to a common end; oward a true mysticism, namely, a con- scious personal relation with God as the basis of our conscious personal relation with one another; toward a greater em- phasis on the ethical in religion, because it emphasizes human brotherhood and mutual duties; and, finally, toward the con- cretely, historically Christian in religion, because it calls for and emphasizes the need of the revelation of a living God in living relation to men, which is exactly what historical Christianity gives. The latter half of the volume is devoted to a consideration of the influence which this social consciousness will have upon theo- logical doctrine.

Dr. Illingworth's preceding works have brought him recognition as an eminent theologian of the Anglican Church, and the present volume is likely to add to his reputation. It is, as he says, primarily concerned with some permanent principles that underlie the grand argument of Christianity. In many parts it is admi- rably strong. If at all weak, it is in some fundamental misconceptions. In its care- fully reasoned defense of Trinitarian doctrine there are also points which one, however attached to the Trinitarian idea, must in any impartially critical estimate pronounce ill sustained.

It is doubtless true, as stated, that all controversies about the Gospels turn upon our presuppositions; and these, says Dr. Illingworth, are either Christian or non-Christian. But his sharp parting between the sheep and the goats is not quite accord- ant with facts. Among the doubters of the Johannine authorship of the Fourth Gospel are some evangelical Christian scholars. To assert that men take sides on this question according to their belief or non- belief in the Incarnation is more loose than exact.

Dr. Illingworth rightly holds that one who would understand any part of a book must understand its full context. The context of the Gospel story of the Incar- nation is the whole of Christian experience in its communion with God and conflict with sin. Christian belief in that "stu- pendous event" consequently rests, not on tradition only, but on the congruity of the tradition with the innermost conscience of mankind, which needs and seeks just such divine assistance. The logical fal- lacy here is that of the "undistributed term." Because divine assistance in some way is needed, is therefore divine assist- ance in this miraculous way likeliest? Dr. Illingworth accepts the doctrine of the divine immanence, and yet does not enter- tain its implicate of a divine incarnation in the race of which the Christ as "the son of Abraham" is the flower.

The question, What is Revelation? he thus answers: "Briefly, that God is Love, and that this is possible, because there is a Trinity of persons within the Godhead, between whom the reciprocity of love can exist, a divine society." If this is so, then, unless there is a Trinity, there is no divine love. Against this conclusion Dr. Illing- worth's criterion of "the context" in Chris- tian experience protests—many genuine Christians rejoicing in the divine love, while they discard as tritheism the notion of a divine society within the Godhead.

The central doctrine of Christianity, says Dr. Illingworth, is "that Jesus Christ was God incarnate," and "rests on the claim that Jesus Christ made for himself." This uncritical way of identifying certain statements of Jesus with certain interpreta- tions of them ought by this time to be obsolete. It is notorious that Christian scholars variously understand such a say- ing as, "I and my Father are one." And when Dr. Illingworth declares it "beyond controversy the belief of St. Paul and St.

John" "that God incarnate had Himself revealed the existence of a Trinity in the Godhead," it seems beyond controversy that he has read into the Apostolic writings the ideas of a later age.

What is Revelation? is a question variously answered. Traditional theology, with its overemphasis on the divine transcendence, conceives of Revelation as coming down into the world from an opened heaven. Modern theology, recognizing the transcendent Deity as immanent in his world, conceives of Revelation as a divine unfolding within the world, the welling up of feeling and thought in seekers after God from his life in the roots of their being. The conception of Revelation underlying Dr. Illingworth's argument is the older of these two. It is an element of weakness in a work whose noble purpose, Christian spirit, intellectual power, and literary finish no dissent should leave without full recognition.

Mr. Selleck's survey of present religious life as related to progress has been adequately characterized, though briefly, in our notices of current publications. It is deserving of special mention here as among the books of formative power, contributing to the change of emphasis now going on in the religious world from ancient affirmations to present obligations, and redeeming the social and ethical interests of religion from long neglect. With a generous appraisal of religious forces now organized, and with a generally hopeful outlook, Mr. Selleck affirms a wide deficiency in ethical sensitiveness and vigor that requires an ethical revival in the churches as the way out of serious perils. Of this the increasing number of such voices, now no longer crying in a wilderness, is a hopeful presage.

President Hyde's little book, "Jesus' Way," both supplements and simplifies its valuable predecessor, "God's Education of Man." While the age of dogmatic theology is not yet past, with the skepticism that its exaggerations provoke, the simplicity of Christianity, as not a dogma but a life, needs all the prominence it can obtain. The emphasis given to this by the Revised Version, representing Christianity in its earliest period as simply "the Way," Dr. Hyde sustains in his exhibition of all the cardinal truths of Christianity: the Fatherhood of God is the central principle of the Way; following the Way is imitating Jesus' translation into human life of the Father's character; the kingdom of heaven is the community of these followers of the Way; faith is the grasp of the Way; repentance, the entrance to it; forgiveness, restoration to it; love, its law; loyalty, its witness; sacrifice, the cost of it; etc. The Christian life is simply the Way in successful operation; it is an experience; to it there is no valid intellectual objection. "If a man is not a Christian, he cannot, in these days of the supremacy of the empirical method, throw the blame on anything so respectable as intellectual difficulties, or conscientious scruples, or theological doubts." He either misunderstands Jesus' way, or prefers some other. Those who inquire for books helpful to friends entangled in mental confusion or prejudice on the subject of religion will hardly find one more satisfactory than this.

Books of the Week

This report of current literature is supplemented by fuller reviews of such books as in the judgment of the editors are of special importance to our readers. Any of these books will be sent by the publishers of The Outlook, postpaid, to any address on receipt of the published price, with postage added when the price is marked "net."

Advent and Ascension. By D. W. Faunce, D.D. Eaton & Mains, Cincinnati. 5×7¼ in. 215 pages. 75c.

The cardinal thought of this latest of the author's works is the miraculous character of Christianity, viewed as "a series of events belonging to the earthly career of Jesus Christ." The miraculous character of the beginning and the end of that career, "if duly proved," carry in harmony therewith a miraculous life. This is the point, therefore, to the proof of which the volume is devoted. Dr. Faunce shows vigor and acuteness in his argument for the virgin birth and the corporeal resurrection and ascension, the two latter regarded as constituting one event. The argument may be criticised as resting too much on *a priori* considerations, such as what we might expect God to do, etc.

Canterbury Pilgrims (The): A Comedy. By Percy Mackaye. The Macmillan Company, New York. 5⅛×8 in. 210 pages.

Reserved for later notice.

Care and Feeding of Children (The): A Catechism for the Use of Mothers and Children's Nurses. By L. Emmett Holt, M.D., LL.D. (Third Edition, Revised and Enlarged.) D. Appleton & Co., New York. 5×7 in. 149 pages. 75c.

Cartells et Trusts. By Martin Saint-Léon, Librairie Victor Lecoffre, Paris, France. 4½×7¼ in. 248 pages.

The author's clear account of the European "cartells" through which producers combine to maintain prices makes his work exceptionally valuable to American students of the trust problem. He discusses, of course, our own trust problem, and his work here also is excellent in temper and in execution. As a factor in the production of wealth the author's judgment is in favor of the trusts, but as a factor in the distribution of wealth he condemns them, and urges strict public control.

Christopher Columbus: His Life, His Work, His Remains, as Revealed by Original Printed and Manuscript Records. By John Boyd Thacher. In 3 vols. Illustrated. Vol. I. G. P. Putnam's Sons, New York. 8×11⅛ in. Orders taken for sets only. Per vol., $9.

This work is the result of long-continued study of manuscripts and early printed volumes, and is printed and published in an exterior form worthy of the subject. On the completion of the three volumes we shall review the work as a whole with some care.

David and Bathshua: A Drama in Five Acts. By Charles Whitworth Wynne. The Knickerbocker Press, New York. 5⅛×8⅛ in. 100 pages.

Discourses of Keidansky. By Bernard G. Richards. The Scott-Thaw Co., New York. 5×7¾ in. 228 pages. $1.25, net.

The smart epigrams and paradoxes of a disillusionized radical of the Ghetto—a mere jester, however, without either the wit or the seriousness of a true satirist.

Electric Wiring: A Primer for the Use of Wiremen and Students. By W. C. Clinton, B.Sc. Illustrated. E. P. Dutton & Co., New York. 4½×7 in. 179 pages. 60c., net.

Teaches how to put in lamp and bell circuits. The practical problems involved are worked out for the benefit of the student, and a good index is added.

Ethics of the Body. By George Dana Boardman. The J. B. Lippincott Co., Philadelphia. 4½×6¾ in. 154 pages. $1, net.

Evelina, or the History of a Young Lady's Entrance into the World. By Frances Burney. In 2 vols. (The Temple Classics.) The Macmillan Co., New York. 4×6 in.

A very fine edition of one of the earliest English novels of classical quality.

Everyman: A Moral Play. Fox, Duffield & Co., New York. 5⅛×8 in. 43 pages.

"Everyman" in book form will be welcomed by the large number of people whose attention has been called to this ancient morality play by its admirable presentation in different cities. This is said to be the fourth reprint since the sixteenth century, and is an admirable piece of work; well printed, on strong paper, from clear type, and with reproductions of old woodcuts. The publication is noteworthy as the initial volume of the new publishing house of Fox, Duffield & Co. The members of this firm are young men, graduates of Harvard University, and men of literary knowledge and taste. Mr. Duffield was for some time instructor of literature at Harvard; and Mr. Fox is a brother of John Fox, Jr., the well-known Kentucky novelist.

Felicitas. By Felix Dahn. Translated from the German by Mary J. Safford. A. C. McClurg & Co., Chicago. 5⅛×8 in. 341 pages. $1.50.

A tale of a little Roman outpost town at what is now Salzburg. The plot is slight, has little originality, but there is considerable charm in the telling of the story, which is excellently translated.

First Course of Practical Science, with Full Directions for Experiments and Numerous Exercises. By J. H. Leonard, B.Sc. (Home and School Library.) E. P. Dutton & Co., New York. 4⅝×7 in. 138 pages. 60c., net.

This manual, prepared for British schools, deals with a few fundamental subjects, such as solids, liquids, the air, heat, filtration, distillation, etc.

French Impressionists (The), 1860-1900. By Camille Mauclair. Illustrated. E. P. Dutton & Co., New York. 4×6 in. 211 pages. 75c., net.

Reserved for later notice.

Impeachment and Trial of Andrew Johnson (The). By David Miller Dewitt. The Macmillan Co., New York. 6×8½ in. 646 pages. $3, net.

Another valuable addition to the now rapidly growing literature of the reconstruction epoch. The author is a warm defender of the impeached President, and finds in his subsequent re-election to the United States Senate, the collapse of the Republican party at the South, and the growing antagonism to negro suffrage, a complete vindication of Mr. Johnson's policy.

In Argolis. By George Horton. Illustrated. A. C. McClurg & Co., Chicago. 5⅛×7½ in. 226 pages.

A new, handsomely made edition of a delightful book, upon which The Outlook commented at length a year ago; one of those rare books which deal with modern Greece, with a happy blending of reverence for its past and an intimate knowledge of its present. This book has a delightful quality of humor, and has the interest of a story. In fact, Mr. Horton has interwoven a story element into his description of life, manners, and people in this little Greek town. The volume is furnished with the most generous margins, there are a number of interesting illustrations, and the book is handsomely and substantially bound.

"International" Christian Worker's New Testament (The): Indexed and Marked by the Best Methods of Bible Marking on All Subjects Connected with the Theme of Salvation. The John C. Winston Co., Philadelphia. 4×5 in. 432 pages.

Marked with red lines and letters; an attempt to do for evangelists and mission "workers" what, if they do it at all, they ought to do for themselves. Another crutch.

Keswick Movement (The): In Precept and Practise. The Funk & Wagnalls Co., New York. 3½×6½ in. 124 pages. 50c., net.

A concise history of this influential religious movement, with an exposition of its characteristic principles and practices. A critique of it, "The Highest Life," was recently published by Armstrong & Son, New York, which

any one desiring to make a thorough study of the subject may find it profitable to consult after reading the present volume.

Leaders of Public Opinion in Ireland. By William Edward Hartpole Lecky. In 2 vols. (New Edition.) Longmans, Green & Co., New York. 5×7½ in. $4.

The new edition of this work brings it to the level of its distinguished author's later knowledge and into harmony with his matured opinion. Many years out of print, Mr. Lecky's "Leaders of Public Opinion in Ireland" now stands enlarged, revised, and in a great measure rewritten. It was first published anonymously forty-odd years ago. In 1871 Mr. Lecky published a revised edition under his own name. This attracted attention, not only because of the author's repute, but also because the disestablishment and disendowment of the Irish Church, and the Land Act of 1870, had been recent events. The great popularity of the book, however, was not evident until after Mr. Gladstone's conversion to Home Rule. The Liberal Premier and several members of his Cabinet appealed to Mr. Lecky's work as justifying their policy. Some use, no doubt, might have been plausibly made of Mr. Lecky's persuasion that a distinct national feeling caused a large amount of the Irish discontent. We are not surprised, however, to read Mr. Lecky's protest against the Gladstonian argument that there was any real analogy between the Parliament of 1800 and the Land League Parliament proposed by the Gladstonians—a Parliament morally sure to begin legislation by the plunder of the very classes of which Grattan's Parliament really consisted. The most striking change from the previous edition is in the omission of the sketch of Swift which once began the work. Mr. Lecky has replaced it by an illuminative essay on phases of Irish life during the first half of the eighteenth century. The introduction to the present edition furnishes, however, the most interesting reading of the entire work. Looking back over the past thirty years, Mr. Lecky admits that his forecast in 1871 has been in some respects lamentably falsified. The aspect of Irish politics has totally changed (1) because of the close alliance between Fenianism and Home Rule, once altogether distinct, and (2) because of the success of Parnell and Davitt in combining with these a great agrarian movement. We trust that Mr. Lecky will publish another volume, to contain appreciations of such men as Isaac Butt, Parnell, McCarthy, Redmond, and Russell. We could well spare some of the entire volume devoted to O'Connell to a consideration of these latter-day leaders; but it must be admitted that the student of history, and especially the student of the accurate history which Mr. Lecky writes, will take great satisfaction in the work in its present shape, reflecting as it does the ripe judgment of a great scholar.

Life and Letters of Edgar Allan Poe. By James A. Harrison. In 2 vols. Illustrated. Thomas Y. Crowell & Co., New York. 5×7½ in. Per set, $2.50, net.

These two attractively made volumes present in a separate form Professor Harrison's biography of Poe, with the collection of letters which appeared in two volumes in the Virginia Edition of Poe, published last autumn.

Major's Niece (The). By Sara Van Buren Brugiere and Adeline Brady. The Abbey Press, New York. 5½×8½ in. 263 pages. $1.25.

Mannerings (The). By Alice Brown. Houghton, Mifflin & Co., Boston. 5×8 in. 382 pages. $1.50.

An unusually well-written story, dealing with some rather morbid types of New England character, but full of insight, of discrimination, of sensitive feeling of nature, and stamped throughout by a high degree of refinement both of thought and of manner; a story which has little in common with the average novel of the day, so superior is it in point of workmanship.

Maria Stuart. By Friedrich Schiller. Edited by Carl Edgar Eggert, Ph.D. (The Lake German Classics.) Scott, Foresman & Co., Chicago. 4⅝×7½ in. 276 pages.

Mission Methods in Manchuria. By John Ross, D.D. The Fleming H. Revell Co., New York. 5×8 in. 251 pages. $1, net.

Reserved for later notice.

Mr. Brodrick's Army. By Winston Spencer Churchill, M.P. Arthur L. Humphreys, London, England. 6×9 in. 102 pages. 25c.

New America (The): A Study of the Imperial Republic. By Beckles Willson. E. P. Dutton & Co., New York. 5⅛×8½ in. 268 pages. $2.50, net.

This is not literature, nor philosophy, nor political economy, nor history. It is journalism. There are evident signs that it has been thought out in haste, written in haste, and some indications that it has been printed in haste. The author imputes to the President autocratic powers, saying that he might be called "Emperor Theodore of the Empire of America." He bases this on the assumption that the President's command of the administrative system, including control of the offices, is absolute and unqualified, and gives him control over the distribution of a total fund of eighty millions of dollars during his term of office. Of course this entirely ignores the fact that his appointments to office are subject to the approval of the Senate, and that in point of fact they are to a large extent dictated by the Senate. The author misinterprets the insular decisions of the Supreme Court, erroneously stating that the Court ruled that instantly upon the cession of Porto Rico by Spain to the United States that island became part of America, whereas what the Court ruled was that Porto Rico became a *possession* of America, and not a part of it. He assumes that the Constitution is violated because an Electoral Commission was created in 1887 for the purpose of determining a disputed Presidential election by arbitration, instead of settling it by war; violated by the exclusion from the House of the member elected from Utah, though the Constitution explicitly makes the House sole judge of the qualification of its members; violated by the treaty made by the Senate agreeing to give Spain the sum of twenty million dollars for the Philippine Islands without the consent of the lower house, a treaty which could not have gone into effect until the House appro-

priated the money for the fulfillment of the treaty obligation. He declares that the Anti-Trust Law is almost a dead letter, in curious ignorance of the variety of decisions which have already enforced it. He declares that in our universities "the teaching staff is ruled despotically by the President, who acts as the vizier of the millionaire benefactor, or 'regents,' 'trustees,' etc., who rarely interfere with his decisions," a description of university administration which he must have evolved wholly out of his own consciousness. The book is bright, readable, lucid, suggestive, but chiefly valuable as indicating how modern America appears to a Canadian who accepts as conclusions his first impressions, without cross-examining them to see whether they are correct or not.

New Letters and Memorials of Jane Welsh Carlyle. Annotated by Thomas Carlyle, and Edited by Alexander Carlyle, with an Introduction by Sir James Crichton-Browne, M.D., L.L.D., F.R.S. In 2 vols. John Lane, New York. 5⅛×9 in.

Reserved for later notice.

Nonjurors (The): Their Lives, Principles, and Writings. By J. H. Overton, D.D. Thomas Whittaker, New York. 5⅛×9 in. 503 pages. $3.60, net

The peculiar doctrine of the Church of England during the reigns of the Stuart kings, that the sovereign, however tyrannical, had an indefeasible right to at least the passive obedience of his subjects, had for its sequel the hundred years' schism created by the Revolution of 1688. Those of the clergy who refused to take the oath of allegiance to William and Mary, because of the conscientious scruple that they were bound by their oath to the dethroned James II., "nonjurors," as they were called, were in consequence deprived of their livings. They had, however, some following, and so formed a small body which regarded itself as the true Church of England, until, after a century and more, disintegrated by internal discords, it disappeared. Their story is at once heroic and pathetic; martyrs they were, but martyrs to a fallacy. Among them were some of the best men in the Church, as Bishop Ken, whose morning and evening hymns are still in use, and William Law, whose writings powerfully influenced the spiritual development of John Wesley. For their character, at least, they deserve the appreciative commemoration they receive in this volume. One of their cardinal principles survives to-day—a curious principle for any Church that cleaves to a close alliance with the State, viz., the Church's entire independence of the State in the exercise of her spiritual authority—a true principle, but, for a State Church, burdened with inconsistency.

Pictorial Composition and the Critical Judgment of Pictures. By H. R. Poore, A.N.A. The Baker & Taylor Co., New York. 6⅛×10 in. 255 pages. $1.50, net.

This is too interesting a book to be disfigured by certain misprints, for instance, Chevannes, Rosetti, Madrazzo. The work will supply an aid to pictorial composition; there has been little written on this subject in comparison with that on decorative art. Mr. Poore proceeds from the various technical points in the making of a picture to a discussion of the æsthetics of composition, and, finally, of the critical judgment of pictures. A wealth of illustration doubles the value of his text. Perhaps his most striking judgments are those concerning the evolution of a picture; they acutely point out that an artist either goes forth and finds his picture, or he creates it. In the former case, the artist goes to nature; she supplies the material and he the experience; in the latter case the work is deliberate and the artist assumes responsibility. In his introduction Mr. Poore warns us that some of his pages may prove iconoclastic, shattering the images created of superstitious reverence; and in truth they are. For instance, "If fifty persons were asked who was the greatest painter, forty-nine would say Raphael; . . . the fiftieth might have observed, what all painters know, that Raphael was not a great painter, either as colorist or technician. . . . As a painter and draughtsman, Raphael is indeed outclassed by Bouguereau, Cabanel, or Lefevre (!) . . . But the work of Raphael possesses the loving unction of real conviction, and nothing to which he put his well-trained hand failed of the baptism of genius. Through this mark, therefore, it will live forever." Nor is this all. "It will be a surprise to the average man in that realm of perfect truth which lies beyond to mark . . . that Raphael will grasp the hand of Abbott Thayer, saying to him, . . . 'Oh that I had had thy glorious quality of technical subtlety in place of the mechanical directness in which I labored!'" Some old-fashioned folk may think that iconoclasm could do no more.

Poems of Philip Freneau, Poet of the American Revolution (The). Edited for the Princeton Historical Association by Fred Lewis Pattee. Vol. I. The University Library, Princeton, N. J. 6×9⅛ in. 294 pages.

The first volume of an important and somewhat extensive semi-historical, semi-literary work; for Freneau's poems belong, not only to the early history of American literature, but to Revolutionary history as well. Many of them are historical documents of importance; a few of them betray the earliest touches of literary feeling and the earliest expression of the literary spirit on this continent. On account of the fierceness of the political feeling of his time and the excessive partisanship of Freneau, many men of his own time and of the succeeding generation were filled with an unreasoning hatred of the man and of his work. That, however, has long since passed away; and it is a mistake to assume that Freneau's comparative obscurity has been due to political prejudice. It has been due chiefly to the fact that only now and again did his work bear the impress of spontaneity and charm, and that for the most part it is distinctly uninspired. Students of our literature, however, cannot fail to honor the patient and thorough scholarship which has sifted all the evidence, examined all the sources, and brought Freneau's work together in so substantial and accurate a form. Much of the material gathered from the early newspapers and periodicals would soon have been beyond reach but for the zeal of Professor Pattee, who has left no corner of the field unexplored, and who

seems to have brought to his work, not only the instinct of a man who loves literature, but the instinct of the antiquarian as well. All the previous editions of Freneau's works have been compared, and a text collated which will be accepted as standard. The first volume contains a biography of Freneau, his early poems which appeared between 1768–1775, and the work of his first mature poetic period, 1775–1781.

Reciprocity. By J. Laurence Laughlin, Ph.D., and H. Parker Willis, Ph.D. The Baker & Taylor Co., New York. 5½×8½ in. 583 pages. $2, net.

A comprehensive history of reciprocity in this country and a keen criticism of the reciprocity treaties now pending before Congress. The authors find little in either the past or the present to justify the belief that reciprocity opens the way to freer and larger commerce with the rest of the world. Though free-traders having no sympathy with National subsidies to the beet-sugar growers, they are extremely critical of the proposed reciprocity treaty with Cuba, and not only point out that the reduction in the duty on Cuban sugar will probably reduce our public revenues without in the least reducing the price of sugar to American consumers, but declare that the lost public revenues will go probably into the pockets of the American sugar trust rather than those of the Cuban planters. "Should we," say the authors, "admit Cuban sugar subject to a reduction of twenty per cent. or any other per cent., there is no reason to suppose that the price of sugar at Havana would be better than it now is." . . . "Sugar prices," it is urged, "are determined in the world's market and not in that of the United States. Why should the American refiner of raw sugar pay more for Cuban sugar than for raw sugar from Europe?" The answer to this argument is that the American sugar refiner would not pay more for Cuban sugar than for European, but would pay exactly the same, and the reduction of the duty would enable the Cuban planter to get his sugar through our custom-houses for seven dollars a ton less than his European rival is charged. As the American refiner pays both the same, the Cuban planter plainly pockets the seven dollars which his European rival must give to the customs officials. However, the extreme position which the authors take upon this point is not typical. The book as a whole is closely reasoned, and it is invaluable as a book of reference to workers and speakers upon reciprocity problems.

Red-Headed Gill. By Rye Owen. Henry Holt & Co., New York. 5×7½ in. 347 pages. $1.50.

Resurrection. By Leo Tolstoy. Translated by Mrs. Louise Maude. (Players Edition.) Dodd, Mead & Co., New York. 5×7½ in. 519 pages. $1.50, net. (Postage, 12c.)

The features of this new edition of Tolstoï's powerful drama, which was written a number of years ago, founded upon an actual occurrence, rewritten later, and the proceeds of which have been devoted by the author to aid ing the Doukhobors, are illustrations from the dramatic presentation of the story now being made in this city.

Sea Drift, or Tribute to the Ocean. By Antoinette Brown Blackwell. James T. White & Co., New York. 5×7½ in. 204 pages.

Songs and Stories from Tennessee. By John Trotwood Moore. Illustrated. Henry T. Coates & Co., Philadelphia. 4½×7 in. 358 pages.

The stories are good; the poems are not. The description of the horse-race in the first narrative is a fine bit of writing which may win tributes of tears and smiles for "Ole Mistis" and "Little Jake," whose picture is the frontispiece. The dialect in some of the other stories is strained in places. "Uncle Wash" lapses into expressions that savor of Greek scholarship.

Story of the Conquest Flag (The). By Rev. S. M. Johnson. The New Era Publishing Co., Chicago. 5×7¼ in. 124 pages.

Triumph of Count Ostermann (The). By Graham Hope. Henry Holt & Co., New York. 5×7½ in. 333 pages. $1.50.

The Court of Peter the Great is the scene of this romance, in which Count Ostermann, Peter's Prime Minister, and others talk surprisingly like people of to-day. Emancipation of women (Peter brought Russian women out of a seclusion like that of the Orient), elevation of the peasant class (then serfs whose liberation was already under consideration), and kindred topics were themes which the Czar and thoughtful folk around him discussed. The story of how Count Ostermann won his wife's heart makes a pretty love tale.

True Theory of Christianity (The): A Commentary on the Bible, and Especially on Things that Men Should Know Concerning the Teachings of Christ. By Andrew W. Madison, A.M. (Second Edition.) Published by the Author, 20 Fourth Avenue, New York. 5×6¾ in. 86 pages. 40c.

Trusts (The): What Can We Do with Them? What Can They Do for Us? By William Miller Collier. The Baker & Taylor Co., New York. 5×7½ in. 338 pages. 50c.

This volume was reviewed in these columns in 1900, when the first edition appeared. In the main the author is a defender of industrial combinations, magnifying the economies effected thereby and minimizing the economies and inventiveness promoted by competition. He recognizes, however, the dangers of over-capitalization and at least temporary extortion, when monopolies are not regulated by law, and urges the removal of unfair advantages, the prohibition of unfair methods of strangling competitors, and, above all, the requirement of publicity. This new edition of the work has been issued on the occasion of the author's appointment as Solicitor of the Department of Commerce and Labor, to assist in the enforcement of anti-trust laws.

Wee Macgreegor. By J. J. Bell. Harper & Bros., New York. 4½×7 in. 172 pages. $1.

We are told that this book has "taken England by storm." This seems rather a strong expression for any possible effect of these slight sketches about a little Scottish boy, his tricks and teasing, the whole expressed in the hardest kind of rough dialect. But it is true that there is plenty of human nature in the lad and his doting parents, and the humor, if not very refined, is perfectly genuine.

Correspondence

A Correction

To the Editors of The Outlook:

In your note preceding my article on "Why Prohibitionists are Undiscouraged," in The Outlook for April 11, you make the statement that I ran for the Legislature upon an independent ticket, which is incorrect. I was urged to run as an independent, and was assured by men in whose judgment I had confidence that I would certainly be elected if I would so run; but I declined, as I was the regular nominee of the Prohibition party, and I made the race as such and was elected as such.

OLIVER W. STEWART.

Are There, Then, No Local Communities?

To the Editors of The Outlook:

I have just read the editorial in The Outlook of April 11, "Prohibition or Temperance—Which?" May I venture to say that there is a point of difficulty to me in the line of argument followed in the editorial. It is said there that "State prohibition is the act of one community imposing its will on another community," "local option is the act of the community in the exercise of its own will." I doubt whether the distinction is real. Suppose we scale "communities" as follows: the apartment-house, the block, the voting precinct, the ward, the town or city, the county, the State, the Nation. Choose any one you please to call it "a local community" (which is a purely relative term), and if it votes to prohibit the sale of liquors within its own limits, it is in any case "a corporate act of self-control" from one point of view, and from another it is "the act of one community imposing its will on another community." If the lowest unit named be taken—the apartment-house—a vote for prohibition within its limits would mean very probably one group of people forcing their will on another. I cannot see, therefore, that the point made in the article is defensible.

I have lived in prohibition, high-license, and low-license States, and my judgment is that no liquor law can be enforced satisfactorily. For, no matter what concessions are made to sympathizers with the liquor interests, they will demand more, and meantime will violate the most liberal laws. It may clear matters up somewhat if we abandon the hope of trying to satisfy everybody with our temperance laws.

JOSEPH DUNN BURRELL.

Brooklyn, N. Y.

How? As in New York or Massachusetts

To the Editors of The Outlook:

If your favoring of local option and objection to prohibition were purely upon practical grounds, I could understand the consistency; but the principle of prohibition is as much at the basis of municipal as of State prohibitive legislation. If "the people of Buffalo are not to decide whether the people of New York City shall have saloons," why are the people of the West End to be allowed, under local option, to interfere with saloons in the East End, or the people on Twenty-second Street to interfere with the liquor of Twenty-third Street, or the man in No. 10 with the man in No. 12? You say, "It is a principle not impossible to apply." Not on practical grounds, I grant you, but in your argument on the principle of prohibition, have you not gone beside the mark? What is a "community"? What is a State? Are these decided by population or area? Texas and Rhode Island are each States. The "community" being smaller than the State seems to be sufficient, to your mind, to override the Christian principle of temperance in favor of the Mohammedan principle of prohibition. Small Rhode Island would, therefore, be more justified in passing a prohibitory law than enormous Texas? It is the same principle. "It is not impossible to apply it," you say. Will you kindly tell us how?

A. E. L.

Prohibition—The Other Side

A correspondent sends us this clipping from the Burlington "Free Press," which he regards as "the ablest and most reliable newspaper in Vermont:"

We had hoped that the change from prohibition, so called, to license-local option in this State would at least put an end to the vilification of the Vermonters as a community of hypocrites, soaked in rum and opium. But The Outlook continues to print communications reiterating such false and slanderous charges. The slanderers and the paper which

welcomes them to its columns do not seem to perceive the contradictory character of the two main propositions so advanced—viz., that liquor has been virtually free, and intemperance the besetting vice of the Vermonters, as a class, under the prohibitory law; and that the Vermonters, as a class, have been driven to the use of opium to an extent unknown in license States, because they could not obtain alcoholic beverages. Neither charge is true. Both cannot be true. But it is of no use to show up their falsity. They will still be believed by those who wish to believe them; and the citizens of Vermont may as well become resigned first as last to the blackened character thus widely and abusively fastened upon them.

The New York School Situation

To the Editors of The Outlook:

Realizing that the present discussions of educational matters in the State of New York are of great and far-reaching importance, I make bold to assert my views on the various bills now before the Legislature, relative to and emanating from the friction existing between the two State departments of education.

While unification should be enacted, both as a remedy for prevailing ills and a method of securing still higher standards in our school system, the Stevens bill is not a proper measure to bring this about. This bill is contrary to all well-recognized principles of American economics. It seeks to throw the management of a great and far-reaching system, the system nearest the social life and the future welfare of the State, into the hands of a body of men elected by the Legislature to life positions—an election which makes them, in the political sense, responsible to no one. While certain ideals might have justified the formation of this bureau, in the manner indicated, early in the history of the State, the business ideas of to-day, and the development of our system of government, and the general notion of that system in the minds of its founders, all serve as arguments, if not against the retention of a bureau so organized, at least against the extension of its powers. To place into the hands of this bureau the extensive functions of the department of public instruction would be a most dangerous proceeding, since it would turn over to an irresponsible agent the total discharge of the duties contingent upon the education of the generations to come. A more serious error could not be made than this. Political and economic history shows us that in the discharge of executive function by officers whose accession to or tenure of office does not depend upon the will of the people, there is seldom growth and often decay. The ideal condition has not been reached, or, having been reached, has been passed, in the development of the race, where the government may be exercised by life officials who gain their positions without regard to the voice of the governed. Human nature to-day demands that government be directly responsible to the people. The United States may have to learn this lesson severely some day, through its Senate.

This should not be construed into an attack upon the Regents. The work they have done must be recognized; the high standing of our secondary school system must be credited in large measure to their department, and to certain persons connected with that department. They have not abused the power placed in their hands by the illogical measure to which they owe their official existence. There are on the board men of learning and observation and wisdom, who have high ideals and are capable of deep philosophical thought. The absence of practical school men from the Board, however, is painfully apparent, as is the absence of activity in official lines on the part of the more active business and professional men who find places thereon; and in the management of school affairs we must have men of practical experience in life. The abstruse theorizing in the matters of education should be left to men outside of the school-room and executive office; there is no place for it there. The learned psychologist cannot be a successful teacher; neither can the doctrinaire. Each has his place, from which he may reach the practical school man through speech and writing; and the latter will separate the silver from the lead in the crucible of his experience.

The argument that the transfer of the functions of the Department to the Board of Regents would remove them from politics is specious. The present Board is, with one exception, I believe, wholly Republican. The present executive head of the Board is a former Republican school commissioner. Politics can find

its way as easily into this Board as into any other bureau of our State government: first, because the great bulk of the work is delegated to one man; secondly, because the Board itself is partisan in its composition; thirdly, because it is impossible to remove politics from the discharge of any functions of government the executives of which are created in any partisan manner whatever. The cry of "no politics" should be too old to catch any one; it has served its time, yet will probably go on serving it until there is no more politics. It is not a question of no politics, but a question of politics honestly met and administered; and as to a single-headed bureau or one governed by a board, there is little difference in this matter.

Again, the Stevens bill provides for the immediate swallowing of one department, with all its machinery, by the other. This must at any time be disastrous; and particularly so when the two departments affected are at war, and the annihilation of one is desired by the other; and more particularly so when the one that survives is far separated from the other in method, theory, and tradition. The absorption of one bureau by another should be attended by peaceful relations, by full sympathy, and by a large share of the time element, that the absorption may be complete and beneficial in every way.

Such absorption seems to be aimed at by the bill introduced by Senator E. R. Brown. In providing that two years shall elapse before the two departments go together, it seeks to gain the sympathy and the peaceful relations necessary, and makes provision for that preparation essential to the easy transfer desired. It does not seek to legislate any person or persons out of office, or to disturb any of the methods of either party; nor does it savor of the rancor of strife. It merely provides for the establishment of a State school system like that recommended for and found in our cities and villages, where a board of citizens administer the affairs of the schools through an expert school man acting as superintendent or principal. It is a business plan, and seems to meet the demand for a peaceful and beneficial settlement of this vexatious question.

It must be evident to every observer that a unification of the two departments is necessary to the future welfare of the schools of the State. At present the conditions are anomalous. It is impossible to find where the functions of one department cease and those of the other begin. They overlap and conflict in their duties, and the inevitable result is friction. There can be no harmonious administration of the school affairs until one of two remedies is used; viz., a new and clear line of demarcation made, or unification.

The first of these is provided for by the bills fathered by Senator W. L. Brown and Assemblyman McNair, which seek to separate the functions of the two bureaus on the lines of the public and private schools. While that condition would be preferable to that of the present, it seems that the result of such action would be the production of an unfortunate rivalry between the public and private school systems that would of itself be injurious to the best interests of both. Our present system of secondary education is the best known, and we should do nothing to destroy it; nor has its development been accompanied by any hostility to the old-time private schools, which have been gradually forced to give way before the superior growth of the public institutions and the establishment of the free school system, until but few are left. To separate these from the public schools in the matter of State supervision and to place them under the same bureau with the colleges, particularly at this time of hostile feeling, would be unwise.

The second remedy noted is sought by the bill introduced by the Senator from the Jefferson district, already discussed. It has been suggested that the measure is unconstitutional, in that the Constitution provides for a Board of Regents; but it seems that this has been taken into account by the framer of the bill, which provides in section five that "the members of the State board of education shall be regents of the university." The writer earnestly hopes that this bill, or one very similar to it, may become law.

CHARLES E. SNYDER.

Hempstead, N. Y.

Labor and Tariff

To the Editors of The Outlook:

Mr. Boulton's interesting article on the economy of high wages was not intended as a free-trade argument. But it shows

inferentially, what Schoenhof showed accurately years ago in his book on that subject, that the labor cost of most articles manufactured in this country is less than that of similar articles manufactured abroad. American high-paid labor, when using our ingenious machinery, is the most efficient in the world, and needs no tariff for its protection.

EVERETT P. WHEELER.

New York City.

German Women and the Higher Education

To the Editors of The Outlook:

In The Outlook of January 3 is an article on "The Woman Question in Germany," which is unfortunately incorrect in its principal statements. It is true that the number of women attending the Berlin University has greatly decreased. But this is the result of a petition presented to the University by Helene Lange, and other women prominent in the movement for higher education, requesting that only those should be enrolled who had at least a certificate from a Seminary, as the majority, up to that time, had been either young girls, or others, with the poorest training for the University, and a large number of Russians. The petition, at once granted, reduced the number of students, but made up in quality for lack of quantity, and saved the reputation of German women for earnest work.

There are at present *two gymnasiums* for girls alone in Charlottenberg and Schöneberg, two suburbs of Berlin, which are entirely *public*, supported by the city, and have exactly the same standard as the gymnasiums for boys.

One of my friends here in Dresden is President of the Women Teachers' Association of the Kingdom of Saxony. This Association presented, over a year ago, a petition to the University of Leipzig asking that young women who had passed the Seminary examination with honor should have the same privileges as the men who had passed this examination, *i.e.*, matriculation for Pedagogy, Philology, and Philosophy. This petition was also granted. Young women who have the *gymnasium* certificate, from either a private or a public gymnasium, can be matriculated for Medicine and Law in Leipzig.

At the General Congress of Women Teachers, which meets in Dresden next May, a petition is to be drawn up and presented to all the different States of the German Empire, demanding that women shall have a place on the city School Boards. This is a long stride, and of course will not lead to anything at first, but it goes to show how much the women dare attempt.

M. I. R.

[The writer of the letter from which an extract is here presented is an American woman, whose long residence in Germany enables her to speak with full knowledge of the facts.—THE EDITORS.]

Christodora House

To the Editors of The Outlook:

If any readers of The Outlook care to make a good investment for the summer, Christodora House can afford this opportunity. Many young business women connected with this organization want a place where they can spend their summer vacation, paying $2.50 per week for board. Many children need from one to six weeks in the country, most of whose parents can afford to pay nothing. We need a summer home, either large or small, to meet this demand, and would be glad of a permanent home or one for this season only. It should be near New York, on account of the railroad fares.

One child was sent last summer to a private home. The query was raised, after reaching the spacious yard and house, "Who lives under you?" "No one," was the reply. "Who lives over you?" "No one." Pointing into the front room, she said, "Who lives in there?" "Why, no one." "But who's your landlord?" she inquired in a surprised tone. "We have none," the young woman replied. "Well, kin I holler, then, and won't a policeman catch me?" Upon the ready consent of the young woman, she lifted up her voice and ran from the front yard to the back as though free for the first time.

We who live in this crowded city long for that freedom from restraint and people which only the country can give. Will not some one secure for us a place where we may have it?

This Unique Quality of

Royal Baking Powder

is as valuable at home as it is abroad

New York, August 6 - 1894.

Royal Baking Powder Co.
New York

Gentlemen:— It is a pleasure to report the complete success of Royal Baking Powder in our missions in the tropics. Climatic changes, so fatal to most baking preparations, do not affect the properties of this powder, and so unfailing are the results of its use in all food preparations that our missionaries are supplied with it exclusively.

Very truly yours (Rev.) Ross Taylor

Supply Agent, So. African Missions.

Royal Baking Powder is specially prepared to retain its strength and freshness under the variable temperature and humidity of every climate. This great quality is absolutely essential to the production of uniformly light, sweet and wholesome cake, bread and rolls.

It is due to the higher quality, to the absolute purity, of the ingredients of the Royal, and to the scientific method of their combination.

Royal may always be relied upon to the last spoonful in the can.

ROYAL BAKING POWDER CO., NEW YORK.

THE FOURTH EDITION

THE de WET BOOK

is everywhere hailed, on publication, a remarkable narrative

The N. Y. Tribune:

"For REAL, RED-BLOODED interest, commend us to THREE YEARS' WAR, written by CHRISTIAAN RUDOLF DE WET . . . it is the frank outpouring of the mind of the man whom we may call THE NOBLEST ROMAN OF THEM ALL."

In a column editorial, the *New York Evening Post* likens this book to GRANT'S MEMOIRS and compares its author with CROMWELL.

The Associated Press

in a London cablegram declares:

"It is perhaps the MOST REMARKABLE BOOK by the MOST REMARKABLE LEADER that any recent war has produced."

"UNIQUE IN MODERN LITERATURE. . . . ONLY A CLASSICAL COMPARISON can do it justice."—*Brooklyn Eagle.*

THREE YEARS' WAR. By CHRISTIAAN RUDOLF DE WET

With frontispiece portrait by Sargent, plans, map, etc. $2.50 *net.* (Postage 28 cents.)

The Rubber Industry in South America

By ELLIOT WEATHERBY

RUBBER is the elastic material that ties the world together. Those who first discovered a commercial use for rubber, two hundred years ago in India—hence the name India rubber—little thought that there would come a time which historians would chronicle as the rubber age. That age is the present time; for rubber is unquestionably foremost in importance, in a certain sense, in the commercial progress of the world. This is called also the electrical age, but it is rubber that makes possible the manifold applications of electricity. For example, if the Pacific cable were to be built within the present year, its construction would consume the entire available supply of rubber in the United States to-day.

Comparatively little use was made of rubber before Goodyear was led by his genius to the discovery of a scientific treatment of the crude product, which gave to the world a new commercially available product of extraordinary value in advancing the arts of modern civilization. Rubber has now become a vital necessity, its production assuming vast proportions and its consumption a dominant factor in a great number of industries.

Every day a new use is found for rubber. Manufacturers separate these products into five divisions: (1) Footwear; (2) Mechanical Goods; (3) Clothing; (4) Druggists' Sundries; (5) Hard Rubber. Over thirty per cent. of all these manufactured rubber goods is represented by boots and shoes, this branch of the industry giving employment to twenty thousand workmen, who produce annually forty million dollars' worth of rubber foot-wear. Altogether the rubber factories of the United States use yearly over sixty million pounds of rubber, turning it out again in thousands of different useful articles. Horses and human beings alike are clothed with rubber, and wire is covered with it. The carriage wheel is tired with it, and the vehicle that has not a rubber tire is called old-fashioned. Miles of rubber hose are used in gardens, railroad cars, and a hundred other places where water, steam, and gas are used. Then comes rubber belting and matting. Notice the rubber mats on floors and stairs, and aboard ship, and the mats under ice-pitchers, the mats on the cigar-stand for change! Typewriter manufacturers need rubber in immense quantities for the rollers; a quarter of a million dollars is put in billiard-tables, and there is one hundred thousand dollars' worth of rubber used in the carpet-sweepers made annually. The tiny pieces of rubber sunk into lead pencils for erasers would weigh tons if collected in one pile. The rubber rings on preserve jars represent a huge fortune, one company alone using several hundred thousand pounds of rubber a year in such rings. There are immense values in rubber in the shape of rubber stamps, atomizers, air-cushions, water-bottles, harness trimmings, ink-wells, rulers, penholders, and fittings for pipes. Base ball and football players alone use a million dollars' worth of rubber every year.

The manufacture of all these rubber commodities has created a demand for rubber that is simply insatiable. Rubber, indeed, ranks third among American imports, being exceeded in quality and value only by sugar and coffee. Whence comes this vast quantity of crude rubber? What are the facts relating to the world's rubber supply?

Rubber comes from South America, from the Central American States, from western Africa, India, and the Indian Archipelago. The best rubber, however, as all the world knows, comes from just one region—and that is the region of the Amazonas, embracing a certain part of southern Venezuela and the borders of the Amazon in Brazil. In his book on South America, Mr. Frank G. Carpenter, the distinguished traveler who made a twenty-five-thousand-mile journey in search of industrial information, says: "Ama-

zon rubber is the best of all rubber; it furnishes the bulk of the product." Seventy-five per cent. of all the rubber produced in the world is shipped via Para and Manaos, from either one of which ships leaving for New York often carry cargoes of rubber valued at two million dollars or more. Manaos has gained its importance as a rubber port because of its nearness to that section of the Amazonas which scientists have discovered to be the world's greatest rubber country. The country referred to is a certain strip between the Rio Orinoco and the Rio Negro in Venezuela—all of which territory has been acquired by a company of American capitalists—but that is a story that will keep until later on.

It is a significant fact that the greatest of rubber regions is now conceded to be within the borders of a country toward which the whole world is looking as the great new industrial Eldorado—Venezuela. At this present moment England and Germany are engaged in a dispute with that country. A dispute over what? Our own Monroe Doctrine would not permit England or Germany to acquire territory in Venezuela; hence is it not obvious that that which these two European nations wish most of all of Venezuela is a commercial foothold? The natural resources of that South American Republic, indeed, have aroused the cupidity of European commercial nations, and this is the real cause of the presence of the fleets of two great nations to-day off the coast of Venezuela.

As United States Minister to Venezuela, Francis B. Loomis said: "The resources of Venezuela are by no means confined to gold. Within a few months capitalists in command of large fortunes have been making a close study of possibilities in Venezuela. They are also seeking to acquire large tracts of land for the purpose of exploiting the rubber products which they contain."

According to ex-Minister Loomis, then, rubber is one of the greatest natural resources of Venezuela, and it is the valuable rubber forests of that country that have been acquired by the American capitalists before referred to—a circumstance which forms the theme of this story.

Before giving the reader a glimpse of this rubber region, however, it is necessary to state one or two facts concerning other rubber regions. In the Central American States, for example, and in Peru, and even in Brazil, the natives cut down the rubber trees ruthlessly, instead of merely tapping them, with no regard for the future; but rubber in its crude state is a sap, and should be gathered, as is maple-sugar sap, by tapping the tree, not by destroying it.

As the future production of rubber in the tropics is threatened by the excessive tapping, as well as the felling of the wild rubber trees by the rubber hunters, American rubber manufacturers sometimes anxiously inquire how it will be possible to supply the enormous demand in the immediate future. It is claimed that one remedy for the destruction of the wild tree is the fostering of the natural rubber tree. Those who have traveled in the rubber country, however, and have studied conditions there, dispute this claim. Mr. Carpenter, the traveler before referred to, says: "It takes from fifteen to twenty years after the planting before rubber trees will produce enough sap to pay for gathering it." Scientists who have studied the conditions add that it is not possible to plant and cultivate rubber trees here, there, or anywhere, with any degree of commercial success, any more than it is possible to raise oranges in Maine or coffee in Montana. The fact remains, then, that the rubber industry for many years to come must depend entirely upon the wild trees.

These wild trees grow along the borders of rivers, and the particular series of streams involved in the rubber industry are the Amazonas before mentioned, the greatest rubber-producing section of this greatest of rubber regions being that bordering both sides of the Rio Casiquiare, between the Rio Orinoco and the Rio Negro in Venezuela—the region, in short, acquired by the Para Rubber Plantation Company. The territory thus acquired is larger than the State of Rhode Island. It is one hundred and seventy-five miles long and eight miles wide, with the Rio Casiquiare forming a natural canal flowing almost directly through its center. The total area is fourteen hundred square miles, an area greater than that of Rhode Island by more than two hundred square miles. To put these figures in another

IN THE HEART OF THE RUBBER FOREST

way, the property embraces one million acres, the number of rubber trees averaging six to an acre, making at least six million wild rubber trees now matured and ready to yield their valuable sap.

Let us journey into this region and see what the greatest of rubber countries looks like. Tracing the location first of all on the map, we come to Para and later to Manaos, the two rubber shipping centers of the world. In these towns live the proprietors of many of the rubber forests in the Amazon region and officials representing companies who have capital of millions, and who manage their rubber properties after modern business methods. In these cities also live many other individuals interested in the gathering and selling of rubber. It is said, indeed, that the whole of the great South American rubber region is owned by the companies represented by the chief citizens of these cities. Para itself is a city of one hundred thousand people, many of the inhabitants having grown rich either by actually dealing in rubber or in supplying necessaries to the camps.

In both Para and Manaos the most prominent feature of industrial life is the shipment of rubber, just as the shipment of tobacco is most prominent in Havana. All the exporting sections of the cities are occupied by packing-houses where the rubber is packed for export. To these packing-houses the crude rubber is brought in lumps that very much resemble hams, though if you happen to drop one of these lumps of rubber you will realize that it is not the ham it seems to be, but a very elastic substance, since as soon as it touches the ground it bounces up and down after the manner of a heavy rubber ball. In the warehouses each lump of

rubber is carefully weighed, and is then packed in boxes, three hundred pounds in each box, ready for shipment.

The traveler will be welcomed as a passenger on one of the boats that bring the crude rubber to the warehouses of the Para Rubber Plantation Co. at Manaos, and after a short sail the boat will land the passenger in the heart of the rubber country. The territory was purchased in fee simple by the Company from the Venezuelan Government. This is the region that is destined to supply not only the best but the bulk of the rubber used throughout the world for many years to come.

Scientific men explain that rubber is a product obtained by proper treatment of the milky sap or "latex" of such tropical trees as *siphonia elastica* and *siphonia braziliensis*, belonging to the genus distributed throughout the section of South America now under discussion. The last United States Census report says that although rubber may be produced from any plant, such as common milkweed, having a milky sap, still it can be obtained in commercial quantities only from tropical countries and from rubber trees. The census expert adds that, like other vegetable products, rubber differs in quality according to the place of derivation; and that the best rubber is shipped from Para and Manaos in South America. We have, then, the fact of Government recognition of the superiority of rubber coming from the territory here brought to the attention of the reader.

Let us see how operations in this rubber country are conducted; let us see how the Indians, native to the region, gather the rubber. In the first place, the rubber tree resembles ordinary forest trees, such as the English ash. The reader probably supposes that rubber comes from the rubber plant which ornaments his home, or which he has seen in conservatories; but that plant produces gutta-percha, and not rubber.

In the rubber forest the rubber hunter does most of his work in the forenoon, when the sap runs most freely. He begins by tapping the tree as high up from the ground as he can reach, neither boring the tree with an auger, as we do our maple trees, nor scarifying the tree as we do our turpentine pine trees of the South. The rubber gatherer taps the tree with a tomahawk or hatchet which has an inch-wide blade. He makes only a slight gash in the bark with his hatchet, taking care not to cut the wood beneath the bark. Immediately a fluid, as thin and as white as milk, oozes forth. The gatherer now fastens a small cup into another cut made below the gash, thus catching the fluid as it runs down. He makes three or four similar gashes in each tree, fastening a cup under each gash. About noontime he goes from tree to tree and empties the milk from the cups into a bucket. He has only a certain number of trees allotted to him, and as there is a tablespoonful of fluid in each cup when he gathers it at noontime, each tapper has about a gallon of sap to show for his morning's work.

The rubber forests are divided into what are known in the rubber regions as paths. These consist of from sixty to one hundred trees each, the paths leading in and out of the woods and crossing streams. One such path is allotted to each of the native workers who tap the trees and gather the rubber. The size of a plantation is known by the number of paths that it contains. Hence, the size of the plantation owned by the Para Rubber Plantation Company is about 75,000 paths, making it of a size that renders even our great cotton plantations or wheat farms insignificant by comparison. As two thousand laborers will soon be at work, over eleven hundred now being actually employed on the Company's property, the reader will understand that eleven hundred paths are being worked. The Company expects to add extra workers at the rate of at least two thousand a year.

After the gathering the next process is that of smoking, referred to in a previous paragraph. As the sap coagulates on exposure to the air, it is necessary to smoke it the day it is gathered. By following this rule the best rubber is obtained. Under the influence of the smoke the sap hardens. The fuel that makes the fire that makes the smoke is covered with ordinary palm nuts, which, when fired, give forth a dense smoke. In this smoke the worker holds the lump of sap or rubber on a kind of wooden paddle, turning it round and round until the operation is finished.

The lump of rubber is accumulated upon the end of the wooden paddle by first dipping it in the sap or milk, and then holding it in the smoke. After turning it round and round rapidly as described for a minute, the milk hardens. The worker again thrusts the paddle into the bowl of milk, and again he holds it in the smoke, repeating this process until a ball of crude rubber of the regulation size has been gathered. The Para Rubber Plantation Company will ship thousands of these rubber hams, as we may call them, from Manaos daily. On the Company's property every tree is scrupulously cared for, and it is a fact known to science that if a rubber tree is not abused it will produce milk in abundance continuously for thirty or forty years.

RUBBER FOREST ON THE RIO CASIQUIARE

The purposes of this Company are those of exploitation, trade, and the opening up of their rubber lands. In the matter of exploitation it is impossible to prophesy, for who can say what will be the limit of the natural resources of this vast tract of virgin rubber forest? In the matter of trade, the Company has this twofold advantage. It has the opportunity to pay for labor in commodities, and for making a large profit on those commodities. This, of course, will result in lowering the cost of production. Even after labor is paid, it is a known fact that the cost of production of rubber is less than that of any other product save gold. Trading conditions are such, therefore, that the Rubber Company now under consideration can make handsome profits. Let one of the Company's ships take down, for example, ten thousand dollars' worth of commodities, consisting of calicoes, flour, jewelry, beads, and factory-made clothing. This cargo of ten thousand dollars' worth of commodities can be traded for many times the amount in rubber or labor. The natives, indeed, would rather be paid in this way than in cash, as it suits them better, for of what avail is money in a region where there is nothing for the laborer to buy? The Company is establishing stores for trading purposes, and at these stores the rubber-gatherers will do their trading. Thus, while the laborer will receive a fair recompense, taking his pay in supplies purchased from the Company's stores,

the system will afford a large profit for the Company, as no other traders can come within a competing distance. This is precisely the system that made the great Hudson Bay Trading Company the richest fur company in the world; it was just this method of trading that laid the foundation of the great Astor fortune when John Jacob Astor, the first, established himself at Astoria.

What are the other conditions that promise a great future and profit for all interested in the rubber industry? First of all, there is a market for every pound of rubber that can be brought into this country or into Europe. Rubber never has to go a-begging. A million pounds, arriving unexpectedly any day, would find immediate sale without lowering the market price. Para rubber sells for 88 cents a pound, with immediate prospect of further advance, and by Para rubber is meant the product that comes from the rubber forests of Venezuela as well as the rubber regions adjoining; and while Para rubber sells for 88 cents a pound, Central American and all other rubber brings only 50 cents. To produce this rubber it costs the Para Rubber Plantation Company less than 35 cents, so that the profit on each pound may be estimated at about 100 per cent. As already stated, the Company owns about six million trees. Each of these produces about five pounds of rubber, which would make for the entire property thirty million pounds a year—all of which facts convey some idea of the future for all who are interested in rubber, when that interest comes through a Company whose plans are on lines similar to those of the great Hudson Bay Trading Company. As for markets, even if the demand of American manufacturers should be entirely supplied at any time, the manufacturers of Europe would at once outbid each other to secure the raw material. And as for the profits on rubber, made through European channels, there is no better known instance of a fortune made than that accumulated by the King of the Belgians through his ownership of rubber forests in the Congo region in Africa.

With the foregoing outline of what the rubber industry is, and what relation the Para Rubber Plantation Company bears to the rubber industry, it is the purpose of this article to inform the readers of The Outlook that a fortune has been spent in the preliminary operations by the Company. This money has been spent in the acquiring of the property and the establishment of camps and trading posts, and it is now the purpose of the Company to sell a limited amount of its treasury stock for further exploitation. The capital stock of the Company is $5,000,000, of which only a limited amount will be sold to the public. The stock will be sold at its par value of $10.00 a share, and application will be made to list it on the exchanges.

In view of the foregoing the officers of the Company feel that they are very conservative in assuring investors that present prospects warrant their looking forward to a dividend of at least 6 per cent. from the first year's earnings, and it will be seen at a glance that the natural available resources of the Company are such that this dividend should be immediately and largely increased.

We desire to emphasize that the above calculation of a 6 per cent. dividend is based on the employment of but two thousand men, but this number can be doubled and trebled, and the Company owns sufficient territory for the employment of forty thousand laborers. Two thousand laborers net 6 per cent., and there is room for the constant employment of forty thousand. The forty thousand are available. It is unnecessary to say more. The great immediate prospective value of the stock is apparent at a glance.

The officers of the Company are:

PRESIDENT, JOHN CUDAHY, of the John Cudahy Company, Chicago.

VICE-PRESIDENT, ALLEN T. HAIGHT, President Manhattan Terrace Company of New York.

TREASURER, ELMER B. MARTIN, S. K. Martin Lumber Co., Chicago.

SECRETARY, F. M. CRAWFORD, Exchange Court Building, New York City.

For further information and prospectus, giving full particulars relative to the Company, address the Para Rubber Plantation Co., Main Office, Exchange Court Building, New York City.

The Pianola was Made so Every One Could Play the Piano

THE PIANOLA is a perfect substitute for human fingers upon the piano-keys. The musical effects produced with its aid are not distinguishable from a gifted pianist's performance.

If the Pianola were purely mechanical and went no further than striking the right notes correctly, this could not be truthfully said. But mere technical accuracy, while important, is the least part of the Pianola's work. Its capacity for transmitting the player's emotions to the piano and imparting human warmth and individuality to the music is its greatest claim for consideration. This ability and its splendid simplicity are the factors which have made the Pianola so successful and so popular. An absolute stranger to the art can almost at once produce charming musical effects with the Pianola. At the same time a skilled musician finds pleasure in its use, as perfect freedom is allowed for individual interpretation.

The Pianola is every one's instrument and is appreciated by musician and layman alike. It has long since passed the probationary period. The Pianola is unquestionably to-day the greatest and most widely popular instrument within the sphere of music.

The Pianola can be seen and played at our new exposition-rooms, Fifth Avenue and Thirty-fourth Street, New York, and at the warerooms of any of our agents throughout the country, and a personal opinion formed by both the novice and the skilled musician upon the benefits to be derived from its assistance.

A handsomely illustrated and descriptive brochure (catalog (X) will be sent to those desiring information by mail, and all questions answered through our correspondence department.

The price of the Pianola is **$250.** Purchasable by monthly payments if desired.

THE CECILIAN THE PERFECT PIANO PLAYER.

IF a manufacturing concern of established reputation and high standing makes a positive statement in regard to their instruments, and offers to demonstrate the truth of that statement to your satisfaction, is it not worth your while to investigate the matter? We believe that it is, and that if you are interested in the subject of piano players you *will* investigate; therefore, we state positively and emphatically that the Cecilian is the best piano player in the market today. It is just what we claim it is, **THE PERFECT PIANO PLAYER,** because, its touch is non-mechanical; it is the easiest to pump; it gives the operator perfect control of *both* bass and treble; it admits of emphasis being placed on any note; it permits an instant change from pianissimo to fortissimo and vice versa; its possibilities in tone shading are unlimited; its powers of expression are bounded only by the feelings of the operator. These facts we are ready to prove, if you will give us an opportunity. The price of the Cecilian is $250.00. It is sold on easy payments. For further information address:

"NEWSPAPER ROW"

— The "King's Choice" —

The daily life of the King of England, what he wears, what he uses, to a large extent sets the fashion for the civilized world. The reason for this is that all inventions and appliances which, in any way, conduce to the comfort or convenience of domestic life are thoroughly investigated and most carefully compared with others of their kind, and the best article for any special purpose is selected for use in the King's household; thus the "King's Choice" always means the survival of the fittest—the very best procurable anywhere. When, therefore, after careful test and comparison of all forms and methods of supplying water, King Edward installed in his favorite palace at Sandringham the little machine shown at the foot of this page, by such selection it was pronounced *the best available source of domestic water supply*. And yet, though the **Hot-Air Pump** is a "King's Choice" and already in use in many thousand homes of America's leading citizens, it is by no means an expensive luxury,

Sandringham Palace

but is really the most economical source of water supply for a man of moderate means occupying a country cottage. It will give him his daily bath; a fresh, green lawn and growing garden; protection from fire, and all the comforts of a *constant* and abundant water supply—the same as are supplied in the palace of the King. A Hot-Air Pump is automatic in action, *independent* of *wind* or *weather*; any intelligent child can start and stop it as required.

One of these pumps, representing a permanent investment which will outlast a generation, can now be bought at the very low price of $108. Descriptive Catalogue "D" sent free on application.

True Elegance

Within Reach

We carry a large stock of top-grade, elegant, massive beds and furniture to please the most genteel, refined tastes—the same qualities or better than sold by "art" dealers and minus only their fancy profits. In our business of many million dollars a year, large profits on single sales are not necessary. Our mammoth purchases direct from manufacturers at spot cash figures, and our large sales direct to consumers, saving agents' and dealers' profits, make possible our extremely low prices for first quality goods.

We offer here a massive, heavy post brass bed made from solid brass tubing (not covered iron tubing ordinarily used in this pattern of bed). It is finished in a superior manner with English lacquer and with the proper care will last a life time. Has 2-in. post, filling ⅝-in., top rods ¾-in., knobs 3½-in. Height at head 63 in., height at foot 43 in. Is carefully wrapped in flannel and boxed for shipment so as to insure perfect delivery. Can be furnished in four widths: 3 ft., 3½ ft., 4 ft., and 4½ ft. Is 6½ ft. in length. Weight, boxed for shipment, 220 lbs.

Retail Price, $35.00. Our Price (Order No. R56), **$22.75**

WRITE TODAY for our Special RT Catalogue, showing a very large assortment of brass beds and other furniture of handsome design. You will be surprised at our uniformly low prices on fine goods dealers would ordinarily charge you almost double for. Send at once before you forget.

ESTABLISHED 1872.

Every Dollar Invested in an Artistic Mantel Adds a Hundred Dollars to a House as an Investment or as a Home

ARTISTIC MANTELS $12.00 and UP

The newest and most artistic **Fireplace Mantels** are made of **Ornamental Brick** in Colonial, Elizabethan, Renaissance, Empire, and other styles. There's no other kind so good. They are extremely artistic and decorative as well as useful. Leading architects consider them superior to other kinds. They look the best—last longest—are not too costly. Any capable brick mason can set them with our plans. We make six colors of the brick: viz., Red, Buff, Cream, Pink, Brown, and Gray. When you build or remodel, send for Sketch Book of 59 designs of mantels costing from $12 up.

Fire Insurance

like charity, begins at home. Putting hot furnace ashes into open barrels or cans is unsafe, and uncleanly. **Witt's Corrugated Can** is fire-proof, has close-fitting lid. Made of steel, galvanized. The only safe can for furnace ashes.

Sold by house furnishing and hardware dealers and
The Witt Cornice Co., Dept. O, Cincinnati, O.

R&G

NEW MODEL

R&G Corset No 837

IS PRESENTED AS THE LEADING STYLE FOR 1903

It is a straight front, moderately low bust, moderately deep-hip corset. Of correct and artistic lines, in full accord with the present vogue, but without the outré eccentricity of the more pronounced models.

It is designed not alone for snappy style and real beauty, but for comfort and wear—two distinct R & G characteristics, and it will, we believe, meet the requirements of a greater number of stylish women than any other corset. We expect it to be the most popular corset of the year. **"837"** is sold by dealers everywhere at **$1.50.** Other models, including the extremely low-bust, deep-hip styles, the Empire and other specialties, are sold at prices ranging from **$1** to **$2.50** and upward.

The
R & G CORSET COMPANY
395 Broadway, New York

$1.00 PER SECTION (without doors) and upwards buys the **"Macey" SECTIONAL BOOKCASE**

the only kind having absolutely "Non-binding, Self-disappearing doors." (Patented.)

ON APPROVAL—There is never any risk in buying genuine "Macey" goods—we ship every article "On Approval" subject to return at our expense if not found at our **factory price** & is 30 per cent. greater value than is obtainable anywhere at retail. **We prepay freight** to all points east of the Mississippi and north of Tennessee and North Carolina (Freight equalized to points beyond). *Ask for Catalogue No. "CC 1."*

GOLD MEDALS—HIGHEST AWARDS

For superiority of design, material, construction, workmanship, finish, and perfect operation of "Non-binding, Self-receding doors," the "Macey" Sectional Bookcase received the Gold Medal—the highest award at both the Pan-American and Charleston Expositions.

CAUTION—Do not be misled by the deceiving advertisements of imitators. **No other** sectional bookcase has a **self-receding door** that is **absolutely non-binding and automatic**—the basic patents completely covering these features are owned by this company exclusively and no other bookcase can embrace the same valuable features. In the law suit concerning which a competitor has maliciously advertised "Warning to the Public," the United States Circuit Court rendered a **sweeping decision in our favor.**

THE INTERNAL BATH

MORE IMPORTANT THAN THE EXTERNAL

If external cleanliness is essential to health, how much more important is internal cleanliness! Every disease arises from the retention of waste and foreign matter in the system—Nature's drainage being clogged. In the vast majority of cases the clogging is in the colon or large intestine. Positively the one harmless and efficient means of clearing away this waste is the internal bath given with the

"J. B. L. CASCADE"

the only appliance specially made for the successful practice of the Internal Bath. It is simple in construction, absolutely safe—invariably effective, and can be applied by any person.

This treatment is a sovereign remedy for and prevention of 90 per cent. of all Digestive derangements. It is hygienic, scientific, and logical. It is a perfect tonic with no after depression. Its action

PREVENTS and CURES APPENDICITIS, Biliousness, Dyspepsia, Obesity, Headaches, Constipation, and all Malarial Diseases

Have you read of the wonderful cures made by the Internal Bath? Do you know that it goes to the root of all disease and eradicates the cause? Do you know that many of the greatest physicians of the world endorse and prescribe this treatment? Do you know that such eminent people as the following use the Internal Bath: U. S. Senator A. P. Gorman, Maryland; Ex-Governor Goodell, Vermont; Admiral Tyrtoff, St. Petersburg, Russia; Col. A. O. Granger, Girard Building, Philadelphia, Pa.; Gen. T. S Peck, G. A. R.; Miles Devine, Chicago, Ill.; Marguerite Sylva, and a host of others?

Were it possible to reproduce here our file of voluntary letters of commendation received from prominent people who do not ordinarily permit the use of their names in advertisements, no doubt could exist in one's mind as to the extraordinary merit of the "J. B. L. CASCADE" treatment. As proof of what the Cascade treatment will do we call your attention to the following letter from Mr. H. A. Joyce, one of the prominent merchants of Cambridge, Md.

The Ralston Health Club, which as an organization has had the greatest growth of this or any age, having almost Ten Million Members Throughout the World, authorizes us to say: "Our Cascade is not endorsed by the Ralston Health Club of America, as that Club never endorses anything, no matter how good, but IT HAS BEEN OFFICIALLY ADOPTED BY THE CLUB FOR ITS USE IN THE INWARD BATH TREATMENT, which is one of its many systems of natural cure."

We want to send free to every person, sick or well, a simple statement setting forth this treatment. It contains matter which must interest every thinking person. If you live in New York you are earnestly invited to call, but if you cannot call, write for our pamphlet, "THE WHAT, THE WHY, THE WAY," which will be sent free on application, together with our great special offer for this month only.

TYRRELL'S HYGIENIC INSTITUTE

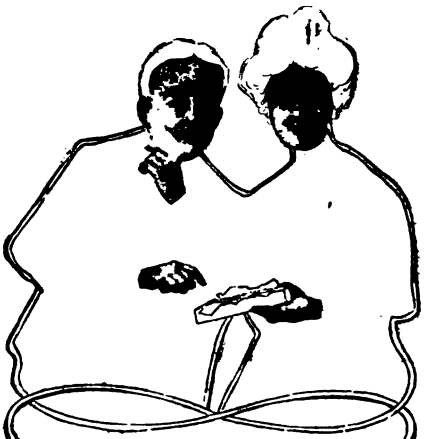
Clerk 38 V, 1562 Broadway, New York

Mr. H. A. JOYCE

CAMBRIDGE, MD.
Aug. 7, 1900.

PROF. CHAS. A. TYRRELL:

Dear Sir—I deem it a duty I owe you, as well as my fellow man, to say I have been restored to perfect health by the use of the flushing treatment so successfully accomplished by the "J. B. L. Cascade." Previous to its use I was in very bad health, suffering from dyspepsia, nervousness, constipation, insomnia and, in fact, was almost in despair of ever getting well. But thanks to you and your wonderful invention, and the loving kindness of a merciful God, I am now in splendid health.



Gratefully yours,
H. A. JOYCE.

"The Star" Asbestos Pad For Dining Tables.

The only absolute protection to the most highly polished surface against injury from moisture and hot dishes.

Easy to handle; **made to fold** to convenient size to lay away in drawer when not in use. Made of specially prepared asbestos, covered with double-faced Cotton Flannel to make it soft and noiseless.

Recommended to Friends by every Woman who tries it.

When ordering, give shape of table—round, square or oblong. Measure top surface, width and length correctly, as pad covers top only and does not overhang. If extension table, give width of leaves and number wanted, as pads for extension tables are made in two halves and the leaves and fillings added for any length desired.

Doily, Chafing Dish and Platter Mats of same material for tables when cloth is not used—round, square or oblong, 5 to 18 inches in size.

Write for booklet of illustrations and prices.

L. W. KERNEY, 600 W. 61st Place, Chicago, Illinois.

STOP FORGETTING!

SEND FOR THE DICKSON SCHOOL OF MEMORY'S MAIL COURSE

YOUR earning capacity will be increased by the vigorous, tenacious memory developed by The Dickson School of Memory. You will be enabled to recall business details instantly. A poor memory is simply a lack of system. The Dickson Method is a scientific system for cultivating and developing the memory and will. It has long since passed the experimental stage—thousands of pupils from all over the United States and Europe testify to its truly wonderful power. It is to the brain what physical culture is to the body. Students write that it enables them to recall instantly names, faces, business details; to speak without notes, to concentrate, think, converse well, memorize readily—accomplish results that they did not dream were possible.

W. H. LORIMER, formerly of Oxford, England, and University of Chicago, says: "Your method is all that you claim and my advancement has been most satisfactory. It is sound in psychology and practical in the highest degree. In a word, it is invaluable."

Thousands of like commendatory letters have been received from pupils in all walks of life. Prof. Dickson gives each pupil his personal attention. He is widely known as a most successful educator, being Director of the Oratorical and Dramatic Department of the Chicago Auditorium Conservatory, also Professor of Oratory and Elocution in the University of Notre Dame, Notre Dame, Ind.

Simple, easy to acquire, inexpensive. Just a few moments' daily practice is required. Improvement begins at once.

WINTER RESORTS EVERYWHERE

The Outlook Recreation Department is now ready to furnish to intending travelers information and printed matter describing any of the numerous winter resorts. We are glad to furnish, without charge, information pertaining to routes of travel and places at which to stay, to any reader of The Outlook writing and stating the trip proposed, or the kind of house or location desired. We shall be pleased to have Outlook readers make free use of these facilities when planning a trip of any kind. Do not hesitate to ask for what you want, addressing THE OUTLOOK RECREATION DEPARTMENT, 287 Fourth Avenue, New York.

"Greatest success of its age."

THE FOUR-TRACK NEWS

AN ILLUSTRATED MAGAZINE OF TRAVEL AND EDUCATION

Published Monthly by the Passenger Department of the

NEW YORK CENTRAL & HUDSON RIVER R. R.

The Four-Track News will be sent free to any address for a year on receipt of 50 cents. Single copies, 5 cents. Address George H. Daniels, General Passenger Agent, Grand Central Station, New York.

It is understood that the railway companies are making thorough preparations for the meeting of the Presbyterian General Assembly at Los Angeles, in May, and a most enthusiastic reception is to be given to the assembly by the citizens of Los Angeles. The rate as announced by the Chicago & North-Western some time since is to be $50 round trip from Chicago. Low rates from all points will be announced by the Eastern lines.

The great attraction of California scenery and its delightful climate, together with the wonderfully increasing importance of Pacific coast points in the commercial expansion of our nation, has created a notable increase in the amount of travel to the Western coast. To effectively meet the increasing demands of the traveling public the transcontinental railways have been active in supplying the most complete and luxurious service, and the North-Western Line has ever been in the lead.

Wabash Railroad Company

On your contemplated trip to the West see that your tickets read over the above-named road. Its service is unsurpassed in the way of equipment, having solid vestibuled trains with through sleepers to Chicago, St. Louis, and Kansas City. It is the only line having Free Reclining Chair Cars between New York and Chicago. For information in regard to rates, etc., apply to H. B. McClellan, General Eastern Agent, 387 Broadway, New York.

Lehigh Valley Calendar for 1903

The usual fine steel-plate engraved work is continued in the Lehigh Valley Railroad's calendar for 1903. These calendars are becoming exceedingly popular all over the country, as they are high-class in workmanship and design, and an acceptable ornament to any office or house. One of the calendars may be obtained by mailing four cents in stamps, to cover postage, to the Passenger Department of the Lehigh Valley Railroad, New York.

NEW BOOKS OF IMPORTANCE JUST PUBLISHED BY

THE MACMILLAN COMPANY

A vitally important book which carries with it all the force and delightfulness of the author's personal contact with both sides of the great labor disputes of recent years. He has studied on the spot every important strike in the anthracite coal regions during the last eighteen years.

By JOHN GRAHAM BROOKS — **The Social Unrest**

STUDIES IN LABOR AND SOCIALIST MOVEMENTS

"It is the most searching description and criticism yet penned of our whole social and industrial situation . . . it may be classed after Bryce's "American Commonwealth" for its fund of information about our country." Boston *Herald*. *Cloth, 12mo, $1.50 net (postage 13c.).*

By CARL HILTY, *Professor of Constitutional Law, University of Bern, translated* **by FRANCIS G. PEABODY,** *Professor of Christian Morals in Harvard University*

Happiness: Essays on the Meaning of Life

Essays on The Art of Work; How to Fight the Battles of Life; Good Habits; The Children of this World are Wiser than the Children of Light; The Art of Having Time; Happiness; The Meaning of Life. *Cloth, 12mo. Just ready.*

Sir WALTER BESANT'S London in the Eighteenth Century

A social picture of the London of that time, a profusely illustrated, handsome, demy quarto volume. *Cloth, 680 pp., gilt tops, $7.50 net (carriage extra).*

By SIDNEY LEE — **Victoria: A Biography**

"The most truthful life of a great Queen and the most impartial history of the Victorian age that has yet been issued from the press." *The Spectator*, London. *611 pp., Cloth, 8vo, $3.00.*

By ELWOOD MEAD — **Irrigation Institutions**

"A practical discussion of the all-important water questions of the West," "the economic and legal questions created by the growth of irrigated agriculture," by the Chief of Irrigation Investigations in the Department of Agriculture. *Citizen's Library. Half leather, $1.25 net (postage 9c.).*

By ERNEST A. GARDNER — **Ancient Athens**

"We may cordially testify," says The New York *Tribune*, "to the value and interest of the book as a broad survey of its subject, clear, practical, and vivid, and altogether a sound guide." *Cloth, 8vo, gilt top, profusely illustrated, $5.00 net (postage 30c.).*

By M. OSTROGORSKI. Translated by FREDERICK CLARKE

Democracy and the Organization of Political Parties

"A contribution of unique importance . . . few if any students of political history have exhibited equal appreciation of the problems which modern democracy has to solve, or have brought more useful materials or more acute criticism to the discussion of these problems." M. W. H. in *The Sunday Sun*, N. Y. *Cloth, 8vo, 2 vols., $6.00 net (expressage extra).*

The CAMBRIDGE MODERN HISTORY. Vol. I. The Renaissance

Planned by the late Lord Acton, written by the most eminent English historical writers, this is "The opening volume of what promises to be one of the most important books of our time." London *Times*.

"There can be no question about the great value of the work, in fact it is invaluable to every historical student." *The Public Ledger*, Phila. *Cloth, 8vo, 927 pp., $3.75 net (postage 20c.).*

By JOHN FISKE — **Essays: Historical and Literary**

"These two volumes show him from many sides. His vast knowledge, his power of saying things persuasively, the play of his wit, the large catholicity of his mind, are on every page . . . they must rank among the biggest books of the year." Pittsburg *Gazette*. *Cloth, 8vo, two vols., $4.00 net (postage 40c.).*

THE SATURDAY EVENING POST

EVERY WEEK

From Now to July 1, 1903

Only 50 cents

Old Gorgon Graham

By the author of Letters from a Self-Made Merchant to His Son. A new series of papers in which Old Man Graham preaches the gospel of good business and tells some of his characteristic stories. This Life Story of a Self-Made Merchant, by George Horace Lorimer, will be one of the features of coming issues of the magazine. The Letters from a Self-Made Merchant to His Son met with universal favor, and there is every reason to believe that the new series by the same author will be equally popular. In the new series old Graham tells the story of his own business career: how he began life as a farmer's boy, worked his way to the front and became the biggest pork packer in the West.

Try the NEW POST to July

New features, more of them, greatly improved. A handsomely printed and beautifully illustrated weekly magazine. Established 175 years and circulating nearly half a million copies every week.

THE CURTIS PUBLISHING COMPANY

PHILADELPHIA, PA.

BEACON LIGHTS OF HISTORY

by John Lord LL.D.

HOW many readers have as comprehensive an idea of the great stories in the world's history as they have of the tales of their favorite author—Dickens, for instance? If they are in the minority is it not because thus far History has been synonymous with study with most of us? Is it not the few who read historical works for pleasure?

This is all to be changed. There is a new era opening up to the reading public.

It is because over half a century ago a man with a brain and a pen commenced to use both, and added to them an unswerving will that carried him through a life labor of fifty years, searching, proving, sifting, and finally shaping the whole into a connected series of separate pictures of the world's life that hang in the reader's memory like pictures.

¶ *Imagine yourself in the visitors' gallery of a huge panorama, which has for its background a continuous picture of the customs, religions and arts of all time. Place in front the central figures of their times, the leaders in thought, in war, in science, in literature, in statesmanship—then imbue with life these figures, with their contemporaries around them, and have them act their great lives before you, always surrounded by the atmosphere of their own era, and so near to you that you seem to live with, while you watch them.*

That is BEACON LIGHTS.

BEACON LIGHTS OF HISTORY is not only a complete and comprehensive story of the world and its leaders, from the thousands of years before Christ to the present year—but while each lecture is a necessary link in the great chain, *it is of itself complete.* This makes of the work a series of *entertainments* from which the reader can choose his favorite subject for a quiet half hour, or can settle himself by his study lamp for a whole evening of uninterrupted pleasure and profit.

A few moments' examination of the descriptive pamphlets sent to inquirers will show this clearly.

¶ *It is this packet of descriptive matter that we are hopeful you will ask us to send you.*

If you don't want to be tempted better not ask us for it, because the only way out of SUCH *temptation is to yield to it.*

The coupon below will bring the booklet, the pictures, etc., to you—without cost.

There is not a reader who, under the terms of this introductory offer, cannot afford to place in his own library, *this week*, this newly completed edition of Dr. Lord's lectures.

The owner of a set needs no other work on History or Biography. Its range is as wide as the world's life, and in itself it takes the place of a great library

The set consists of fifteen volumes, which are sent, expressage paid by us, on receipt of

ONE DOLLAR

the balance payable in small amounts monthly if preferred. ***The prices during the term of this introductory offer are but a little over half the regular!***

RELIGIOUS LIFE IN AMERICA

A RECORD OF PERSONAL OBSERVATION

By

Ernest Hamlin Abbott

12mo, 382 pages, $1.00 net

(Postage 15 cents)

IN a tour of observation extending over eighteen States, men and ministers of all denominations, and men of no religious faith, were talked with, and the book gives in a singularly clear and first-hand way the experience and conclusions of an open-minded, unprejudiced observer. The personal experiences of the author and the varied circumstances of the different communities and religious organizations visited give the book an extremely readable quality, apart from the deep interest of the subject-matter.

"To my mind the book is an interesting and valuable study of a vital subject. It is sincerely written and sincerely felt; and it should serve to refix attention upon various phases of religious evolution in this country—which, in turn, necessarily connect themselves with the future of our entire national well-being." JAMES LANE ALLEN.

"It is a fresh and unconventional view of religious phenomena which many of us fail to understand simply because we are so near them. . . . Christianity in the twentieth century must find new modes of expression, and this book is most helpful in showing this need, and the various attempts now being made to supply it." W. H. P. FAUNCE.
President Brown University.

"The information that book contains I think of utmost value. Even those who are pretty well informed among us as to the progress of religion in the country are first to admit that we cannot form a judgment that is worth much outside the limited scope of our personal activities. Will you furthermore allow me to say that I think you have displayed very unusual judgment, open-mindedness, and acumen in the studies which you present to us." W. T. RAINSFORD.
Pastor St. George's Church, New York.

A copy of "Religious Life in America" will be sent to any reader of The Outlook on approval on receipt of a postal-card order.

287 FOURTH AVE. **The Outlook Company** NEW YORK

The Wanamaker Method and a Wanamaker Offer—

that is worth reading all through because it's to the point and to YOU!

We believe
that it is good for people to trade with the Wanamaker Stores; good for themselves and good for their pocketbooks.

We believe
that you would be *profitably* impressed if you would send us the coupon in the lower corner and thus give us an opportunity of putting before you the details of the Wanamaker Method as evidenced in the underpriced sale of

THE CENTURY DICTIONARY & CYCLOPEDIA & ATLAS

which has opened accounts for the Wanamaker Stores with thinking people, in every State in the Union, and in nearly every country on the globe.

Three Million Dollars' worth
have been sold already—for it is an ideal example of Wanamaker value-giving; a modern necessity, wanted almost universally, priced within anybody's limits and paid for conveniently.

The satisfaction it gives
is the main reason we chose it to offer to far-away people—and to the others.

It costs less than you think
and costs nothing to know all about it. There's no reason, now, why *You* should not own The Century! Other people with less money to spend for wise purchases have bought their sets some time since. Send the coupon. ☞

Frank Moore Colby, M.A.
Late Professor in New York University

ASSISTED BY NEARLY 200 EMINENT EDITORS AND CONTRIBUTORS

You Ought to Know and Own

the only New Encyclopædia in English. New census figures, new inventions, new discoveries, new facts in the sciences and arts, new classification, abundant cross-references, the perfection of methods for convenience, the highest standard of accuracy. **New in Its Entirety.**

Dr. R. S. MacArthur, Pastor Calvary Baptist Church, New York City, writes:
"I have examined with great interest the NEW INTERNATIONAL ENCYCLOPÆDIA. Without going into details specifying its points of excellence, I may say that for all the purposes of the average man or family there is no Encyclopædia now offered to the public superior to the NEW INTERNATIONAL ENCYCLOPÆDIA. I am a dictionary and cyclopædia fiend and this is my deliberate testimony."

Profusely Illustrated

Thousands of illustrations in the text, and hundreds of full-page plates in black-and-white and in colors form an invaluable feature, putting the NEW INTERNATIONAL on a par with the great German Encyclopædias. Maps showing latest data, statistical charts and tables, supplement the text fully.

FLORIDA

PINE KNOT CAMP

A Winter School for Boys in Southern Florida

Established to enable boys who, through rapid growth or recent illness, have outstripped their strength or impaired their vitality to obtain the benefit of a healthful, out-door life in a genial climate during the winter months without the loss of time ordinarily incurred in their withdrawal from school. Classes to meet the needs of individual pupils will be formed in the subjects ordinarily required for admission to college; the aim being to carry on the work of each boy as would be done at his school, so as to return him to his class in the spring without loss of ground. The number of pupils taken is small, and the number of teachers relatively large, insuring every boy a large share of individual attention. Boys suffering from disease and boys under twelve years of age cannot be received. Satisfactory references as to moral character required. Camp will open January 8, and close between April 15 and May 1. Particulars furnished upon application to
PAUL C. RANSOM, Cocoanut Grove, Florida.

MASSACHUSETTS

Lasell Seminary

STOP FORGETTING!

You can by taking the Dickson Method by Mail

Would a quick and ready memory of names, faces, and details be valuable to you in your business or social life? You can develop such a memory by spending just a few minutes daily under Prof. Dickson's direction. We shall be only too happy for the opportunity to prove conclusively to you the truth of this statement.

Prof. Dickson gives every pupil his close personal attention. He is widely known as a successful educator, being Director of the Oratorical and Dramatic Department of the Chicago Auditorium Conservatory, also Professor of Oratory and Elocution in the University of Notre Dame, Notre Dame, Ind.

We have thousands of such expressions of commendation as the following:

Rev. J. P. Brushingham, Pastor First M. E. Church, Chicago:
"Results have been very gratifying. Your years of experience and standing in Chicago will be a further commendation."

Mrs. Mary Dye, Paola, Kas.:
"It is the ideal of self-knowledge, self-mastery, and control. The busiest man or woman can profit by it."

The Outlook Life-Insurance Club

MR. WANAMAKER'S REASONS

IN previous announcements we have told you about the plan and purpose of THE OUTLOOK CLUB; we have given you an idea of the tremendous growth and National popularity of insurance investment; we have outlined our efforts to place insurance benefits within your easy reach. We have arranged with one of the largest and strongest Companies in the world to issue the best 20-year endowment policies to our members, the first year's premium being cared for by a small cash deposit and easy monthly amounts. We have undertaken to look after all necessary details in the interest of members, and we are gratified to state that our efforts have been widely appreciated, for applications have come in from nearly every State and Territory, and from people in about every walk in life. We want all OUTLOOK subscribers who are mindful of their best personal interests and of the welfare of their families, to participate in Club benefits. We do not *urge* those who are hesitating or delaying; we simply *afford the opportunity;* we make it *easy* and *simple* to solve the problem of the best investment for savings large or small.

Two weeks ago we told you how Mr. William W. Appleton (at the head of D. Appleton & Company), insuring in the same Company and on the same plan which we commend to our Club members, got his insurance free and received in addition 3½ compound interest on all of his premium deposits. Last week we printed the views of Mr. John P. Gockes, an enterprising young business man who considers it the part of wisdom to put one-third of his earnings in Endowment insurance, and now we ask you to hear what a great merchant and financier has to say:

HON. JOHN WANAMAKER

During his business life Mr. Wanamaker has taken out sixty-two policies of insurance, amounting to $1,525,000. He has made insurance an *important item* in his investment calculations, and gives the following reasons:

"*I simply worked out five conclusions as the result of my own thinking*, without any moving cause, except my own judgment.

"First—That at that time I knew I was insurable and I could not be certain of accident or ill health, and it might be that at some future time *I would not be insurable.* That was the first step to the building of sixty-two policies.

"Second—That life-insurance was one of the best forms of investment, because from the moment it was made it was good for all it cost and carried with it a guarantee that there was a *protection in that investment that I could not get in any other.*

"Third—That life-insurance in the long run was a saving fund, that not only saved, but took average care of my deposits *and took me into partnership in possible profits*, that not infrequently returned principal and interest and profit.

"Fourth—That life-insurance, regarded from the standpoint of quick determination, was *more profitable than any other investment I could make.*

"Fifth—That it enabled a man to give away all he wished during his lifetime and still make *such an estate as he cared to leave.*"

Mr. Wanamaker is said to have more life-insurance than any man in the United States—possibly in the world. Few of us can vie with him, but it is pretty safe to follow where he leads. Each one can invest according to his means. If a million and a half is good for this shrewd and successful business man, a thousand, or two thousand, or five thousand, or ten thousand, is certainly good for any OUTLOOK reader who is eligible. If you are an OUTLOOK subscriber our Club points the way—for yourself and other members of your family. *See how easy it is.*

Members in Class A have Policies for $1,000—requiring a deposit of only $5.00 with application. Members in Class B have Policies for $2,000, requiring a deposit of only $10.00 with application. Members in Class C have Policies for larger amounts with proportionate monthly deposits. *Write for Membership Application Blank at once, for Club Membership is necessarily limited.*

In order that we may be able to send you complete and personal information concerning the exceptional advantages afforded by our Club plan, please answer the following questions *in your first letter:*

1—What is your occupation?
2—What is the exact date of your birth?
3—Which Class do you *think* you might like to be in?

If other members of your family wish to apply for membership you may also answer the above questions in their behalf, giving names and addresses. While the Club offer remains open, this ought to be taken up as a *family matter* in every OUTLOOK home. We have already received as many as five applications from one household. As the Club is rapidly forming, you will do well to apply promptly. *Men, women, and young people are eligible.*

THE OUTLOOK LIFE-INSURANCE CLUB

RICHARD WIGHTMAN, Secretary 287 Fourth Avenue, New York

The American Church in Berlin

AMBASSADOR WHITE writes as follows:

"BERLIN, November 27, 1902.

"Rev. Dr. Dickie is making the American Church in this Capital a centre of good influence among the members of the very large American Colony, and especially among the great concourse of American students, who come in ever increasing numbers to the Berlin University, the Schools of Science, and the Conservatories of Art.

"His success thus far has been most gratifying, and he ought to be generously assisted to place his Church and the building connected with it on a footing worthy of our country. I commend the work to all Christian and patriotic Americans."

ANDREW D. WHITE, Ambassador.

REV. DR. KNOX, formerly of Lafayette College, says:

"I have been much impressed by the efforts made to meet the spiritual needs of the very many young men and women speaking the English language who visit the Continent to study. Especially, however, was I impressed by what I saw in Berlin. The preaching by Rev. Dr. Dickie was excellent; the singing most inspiring. The audience almost filled the room. I suppose 250 were present, and so bright and intelligent. Our Ambassador, Mr. White, formerly President of Cornell, was present, as I am told he always is, when in the city."

REV. DR. THEO. L. CUYLER writes:

"The American Church in Berlin is one of the most important *lighthouses to be kept burning* on the Continent of Europe. Its influence will be felt over Germany as a standing and splendid witness for evangelical religion. How our 2,000 American students need it!"

What the American Church desires:

The new church on Nollendorf Platz is admirably located and, as the first American public building erected in Berlin, has attracted a great deal of attention. It is erected in accordance with good architectural traditions. It is the pride of the American Colony and a credit to our country. The funds in hand suffice to build the church, but not to furnish it. To do this without debt, $10,000 is needed. As no debt has been and no debt will be incurred, we must raise this fund before we can open our doors. We make our appeal to the large-hearted generosity of all Christian and patriotic Americans. The Berlin Church has much cause to thank those who have already responded. The gifts of these friends have been most thankfully received and most conscientiously administered.

What the American Church in Berlin proposes:

The new building possesses an audience-room for worship, a library and reading-room, a lecture-room and tea-room. If our generous friends enable us to finish and furnish the church, they will enable the Church to carry on its work with all the advantage that comes from its own building, and thus provide a church home for our own young people. We desire to have its doors open the whole week through. Help us into that larger life and work for the students to which as a church we feel called.

Gifts will be gratefully received, and may be sent to

REV. J. F. DICKIE, St. Denis Hotel, New York City

Packer's Tar Soap

A CHAIN OF EVIDENCE

"PACKER'S TAR SOAP is the best soap we know of for washing babies."—
New Eng Med Journal

"No mother who has ever used PACKER'S TAR SOAP for her babies would willingly do without it."
Cradle and Nursery

The health-giving influence of the pine forest permeates PACKER'S TAR SOAP. This, with emollient and luxurious cleansing qualities, has made it a standard toilet requisite for dainty women.

NO WOMAN IS BEAUTIFUL unless she possesses a softly tinted complexion of unblemished texture and a luxuriant growth of hair—
BEAUTY PROBLEMS SOLVED BY THE USE OF
Packer's Tar Soap

PHYSICIANS TELL US THAT The chief requirement of the hair is cleanliness—thorough shampooing for women once a fortnight, and for men once a week—and that the best agent for the purpose is PACKER'S TAR SOAP.

PACKER'S TAR SOAP is an efficient adjunct to whatever strictly medical treatment is adopted in those diseases of the scalp which produce premature baldness"—
Cyclopædia of Medicine

THE PACKER MFG. CO. 81 FULTON ST. NEW YORK.

Hang On.

Coffee Topers as Bad as Others.

"A friend who lived with us a short time was a great coffee drinker and a continual sufferer with dyspepsia. He admitted that coffee disagreed with him, but you know how the coffee drinker will hold on to his coffee, even if he knows it causes dyspepsia.

"One day he said POSTUM FOOD COFFEE had been recommended and suggested that he would like to try it. I secured a package and made it strictly according to directions. He was delighted with the new beverage, as was every one of our family. He became very fond of it and in a short time his dyspepsia disappeared. He continued using the POSTUM and in about three months gained twelve pounds.

"My husband is a practising physician and regards Postum as the healthiest of all beverages. He never drinks coffee, but is very fond of Postum. In fact, all of our family are, and we never think of drinking coffee any more."

Written by the wife of a physician of Waterford, Va. Name given by Postum Co., Battle Creek, Mich.

Registered Trade-Mark

Shirt Waist Materials.

The indispensable separate blouse is more in vogue than ever, and our new stock of washable fabrics affords an unusually wide range for individual preference in weight, design, and color combinations. Among the most popular goods for shirtings are:

New Styles in Spring Suits and Skirts

IN the Spring a woman's fancy turns to thoughts of Summer garb. Turns to pretty, long-wearing, sensible garb, if she be a wise woman. In other words, turns to us.

Spring and Summer Dresses and Skirts for ordinary or extraordinary wear, pretty as pretty can be, stylish, shapely, lasting, and at the very least prices for which the best materials can be made up in the best styles. This is what you will find in our catalogue—is it food for thought?

New Suits, well tailored, showing many variations of the prevailing fashions, from Paris models, $8 up.

Etamine Costumes, in styles to prevail during the coming Season, $12 up.

New Skirts, well fashioned, in Spring and Summer weight materials, look cool and feel cool too, $4 up.

Rainy-Day and Walking Suits, Jaunty Jackets, Traveling Dresses, etc.

WE PAY EXPRESS CHARGES EVERYWHERE

The catalogue and samples will tell you the rest—will tell you more than we possibly can say in an advertisement. They will be sent *free* upon request. Every garment you choose therefrom will be made to your measure and guaranteed to fit and please you. If it does not, send it back promptly and we will refund your money. It's your good will we want most.

NATIONAL CLOAK and SUIT COMPANY

119 and 121 West 23d Street, New York

"WAIT a moment, girls, and let me play the piano for you before you go. I want you to hear what artistic effects I can obtain. With the aid of my new Angelus I can play with the same wonderful power as the greatest pianists. See how I can phrase and shade and how I can accent a note whenever required, but, most astonishing of all, how *I can subdue the accompaniment and bring out clearly the melody either in the treble or in the bass.*"

"IF YOU HAVE AN ANGELUS you can play anything, from a Chopin Nocturne to 'Mr. Dooley,' and it is so delightful to be able to sit down and play a piece of music as it ought to be played. You know that the technique will be perfect and the expression you give yourself, just as you would if you were playing with your own fingers and had your foot on the pedal."

"The Angelus costs only $250.00, and if I could not obtain another I would not part with mine for anything in the world, for it has made music more real to me than I could ever have imagined."

Illustrated book given to inquirers.

"THE LAST STAND"

COPYRIGHT, 1906, BY SMITH & WESSON

AFTER exhaustive tests the United States Government has put Smith & Wesson Revolvers in the hands of its soldiers. Soldier and civilian alike meet dangerous needs with the confidence that no other revolver but a Smith & Wesson gives.

All Smith & Wesson Revolvers have this monogram trade-mark stamped on the frame. None others are genuine

For Smoking Room or Den we have published a limited number of copies in exact reproduction of Frederic Remington's stirring picture, "THE LAST STAND," on heavy plate paper, 14 x 15 inches in size, ready for framing. We will send, prepaid, a copy to any address for ten cents in silver, together with small reproductions of the pictures which have appeared previously. In the March Pearson's, Collier's, Munsey, Country Life and Town and Country we will reproduce "HOSTILES," an Indian picture by Dan Smith.

30 Nights' Free Trial

you do not find the Ostermoor Patent Elastic Felt Mattress even all you have *hoped for*, if you don't believe it to be the equal in cleanliness, durability and comfort of any $50 hair mattress ever made.

OUR BOOK FREE

Advertising space does not permit of our whole story or complete illustrations. We have prepared a handsome 96-page book "The Test of Time," which is probably the handsomest book for advertising purposes ever issued. We mail this free —your name on a postal will do. It illustrates mattresses, cosy corners, window seats, pillows, cushions for boats and carriages, etc. It reproduces the letters of men and women of international reputation who find perfect rest on the Ostermoor mattress.

The hand-laid (*not stuffed*) filling of Ostermoor Patent Elastic Felt remains intact, sweet, pure and clean. Needs nothing but an occasional sun bath to keep in perfect order for an ordinary lifetime. Dust, moth and vermin proof.

BEWARE OF IMITATIONS trading on the name of "felt." It's not **felt** if it's not an **Ostermoor.** Our name and guarantee on every genuine mattress. Send for free book to-day.

Ostermoor & Co., 120 Elizabeth St. New York

We have cushioned 25,000 churches. Send for our book "Church Cushions."

$1.00 PER SECTION (without doors) and upwards buys the **"Macey" SECTIONAL BOOKCASE**

the only kind having absolutely "Non-binding, Self-disappearing doors." (Patented.)

ON APPROVAL—There is never any risk in buying genuine "Macey" goods—we ship every article "On Approval" subject to return at our expense if not found at our **factory price** 40 to 60 per cent. greater value than is obtainable anywhere at retail. **We prepay freight** to all points east of the Mississippi and north of Tennessee and North Carolina (Freight equalized to points beyond). *Ask for Catalogue No. "CC 1."*

GOLD MEDALS—HIGHEST AWARDS

For superiority of design, material, construction, workmanship, finish, and perfect operation of "Non-binding, Self-receding doors," the "Macey" Sectional Bookcase received the Gold Medal—the highest award at both the Pan-American and Charleston Expositions.

CAUTION—Do not be misled by the deceiving advertisements of imitators. No other sectional bookcase has a **self-receding door** that is **absolutely non-binding and automatic**—the basic patents completely covering these features are owned by this company exclusively and no other bookcase can embrace the same valuable features. In the law suit concerning which a competitor has maliciously advertised "Warning to the Public," the United States Circuit Court rendered a **sweeping decision in our favor.**

Cincinnati, Ohio.

Upright and Desk Top Filing Cabinets

The most convenient device for filing and classifying clippings, illustrations, manuscripts, etc. It is the acme of simplicity and ready reference and a stimulus to the busy man by reason of the accuracy and facility with which memoranda are preserved and referred to.

The Card Index Rerum gives a valuable cross reference to your library or manuscript and permits use of any known method of classification.

A Mental Savings Bank

Elbert Hubbard, The "Roycrofters," E. Aurora, N. Y.
"I think that your cabinet has added several years to my earth life by enabling me to find the thing without wear and tear on my temper and vocabulary."

Geo. H. Daniels, Gen. Pass. Agent, N. Y. C. & H. R. Ry. Co.
"I find them indispensable to me in my work."

Desk Top or Upright Cabinets furnished in all sizes and styles. Specially arranged Cabinets for clergymen, physicians and other professional men.

Prices $7.50 and upwards, shipped prepaid on approval. Return at our expense if not satisfactory. Send for catalogue, prices and literature.

THE LIBRARY FILING CABINET COMPANY, 109 Washington St., Chicago.

The Comfort Age

Comes to every woman—the day when she longs for the perfect ease and comfort afforded by the EQUIPOISE WAIST. A soft, hygienic garment in keeping with the laws of nature; that supports the body and bust without pressure, and forms a pleasing outline for the dress. Every mother should send for the **free** book giving sizes, prices and description of the

Equipoise Waist

The reading of this book is the first step toward the **perfect health** of womanhood.

The Equipoise Waist is sold by leading retailers or will be sent prepaid **BY MAIL.**

Made of fine wash material that will last for years. Send your corset size and bust measurement when ordering.

THE FERRIS BROS. COMPANY, 341 Broadway, New York.

NEW MODEL

R&G

CORSET No. 837

Is Presented as the Leading Style for 1903

It is a straight front, moderately low bust, moderately deep-hip corset. Of correct and artistic lines, in full accord with the present vogue, but without the outré eccentricity of the more pronounced models.

It is designed not alone for snappy style and real beauty, but for comfort and wear—two distinct R & G characteristics, and it will, we believe, meet the requirements of a greater number of stylish women than any other corset. We expect it to be the most popular corset of the year.

"873" is sold by dealers everywhere at **$1.50.** Other models, including the extremely low-bust, deep-hip styles, the Empire, and other specialties, are sold at prices ranging from **$1** to **$10.**

R & G CORSET COMPANY

398 Broadway, New York

HAIR HEALTH

KEEPS YOU LOOKING YOUNG

This Elegant Dressing for men and women stripped all rivals and stands to-day foremost hair preparations, the only **HAIR HEALTH** **fails to restore youthful color and beauty** or faded hair. Feeds the roots, heals the scalp, effectively removes dandruff, stops hair falling and promotes luxuriant growth. It is not greasy or sticky, and will not stain skin or linen.

Satisfy yourself at once. Send for a Sample Bottle FREE

Enclose five cents to cover postage, and we will send to anyone who has not had a sample HAIR HEALTH, a cake of HARFINA SOAP and books with beautiful engravings, 32 pages, treatment for Scalp, Hair, Skin, and Blood. Address Hay Specialties Co., 211 H Lafayette St., Newark, N. J.

Large 50c. Bottles at all Leading Druggists. Ask for Hay's Hair Health. Refuse all substitutes.

RHEUMATISM

Relieved Through the Feet

Don't Take Medicine, External Remedy Brings Quick Relief. FREE on Approval. TRY IT.

We want everyone who has rheumatism to send us his or her name. We will send by return mail a pair of Magic Foot Drafts, the wonderful external cure which has brought more comfort into the United States than any internal remedy ever made. If they give relief, send us One Dollar; if not, don't send us a cent.

Magic Foot Drafts are worn on the soles of the feet and cure by absorbing the poisonous acids in the blood through the large pores. They cure rheumatism in every part of the body. It must be evident to you that we couldn't afford to send the drafts on approval if they didn't cure. Write to-day to the Magic Foot Draft Co., R F 7 Oliver Bldg., Jackson, Mich., for a trial pair of drafts on approval. We send also a valuable booklet on rheumatism.

Bright's Disease

AND DIABETES

CAN BE PERMANENTLY RELIEVED

The above is a startling statement in view of the generally accepted theories which should demand investigation from every afflicted reader of this magazine.

This investigation we sincerely invite, and we devote our entire attention to the maladies above named.

The remedies for these diseases are entirely distinct, and the fact that we are specialists in these diseases *only*, should be sufficient to you to overcome your past prejudice, where others cannot do, and investigate for yourself or some afflicted friend. *Not* patent medicines and *not* found at drug stores but prescribed after analysis.

Note Send your name and address and we will forward instructions, etc., and will make analysis *absolutely* without cost to you or obligation to commence our treatment.

Professional etiquette strictly observed. Your letters are never published without consent. Consultation physician always in attendance.

TOMPKINS-CORBIN CO.

27 West 24th St. (Suite 10) New York City

BINSON'S BATH CABINET

GUARANTEED TO CURE RHEUMATISM

Gives new life and vigor to every organ of the human body. Thousands of people are daily sufferers because they continue to clog the circulation with poison, in place of eliminating the uric acid from the blood by Hot Air Baths. Every intelligent person ought to know by this time that heat is the only sure cure for disease. Below is but a sample of scores of letters we receive every day.

"I loaned my cabinet to an old friend all crippled up with rheumatism, last May. Feet legs, and hands badly swollen. He had spent some time at different Hot Springs without relief. A week ago he started in to use the cabinet, taking the steam heat in the morning and the dry heat at night, before going to bed. He kept this up a week, and yesterday and to-day he was as well as ever."

GEO. A. FREEMAN, Mgr. Temptation Mining and Milling Co., Silverton, Colo.

Write for **descriptive matter** and **special 1903 proposition. Good** inducements offered to **reliable men** and **women,** on both **commission** and **salary basis.**

Factory prices made to one person in each town, where we have no agents.

OBINSON THERMAL BATH CO. - - 708 Jefferson St., TOLEDO, OHIO

"The Star" Asbestos Pad For Dining Tables.

The only absolute protection to the most highly polished surface against injury from moisture and hot dishes.

Easy to handle; **made to fold** to convenient size to lay away in drawer when not in use. Made of specially prepared asbestos, covered with double-faced Cotton Flannel to make it soft and noiseless.

Recommended to Friends by every Woman who tries it.

When ordering, give shape of table—round, square or oblong. Measure top surface, width and length correctly, as pad covers top only and does not overhang. If extension table, give width of leaves and number wanted, as pads for extension tables are made in two halves and the leaves and fillings added for any length desired.

Dolly, Chafing Dish and Platter Mats of same material for tables when cloth is not used—round, square or oblong, 5 to 18 inches in size.

Write for booklet of illustrations and prices.

L. W. KERNEY, 600 W. 61st Place, Chicago, Illinois.

The Cost of Repairs

is reduced to a minimum when a **Jas. Boss Watch Case** protects the works of the watch from dust and dampness, jolt and jar.

Everything for the Garden

Is the title of **Our New Catalogue for 1903**—the most superb and instructive horticultural publication of the day—**190 pages—700 engravings—8 superb colored plates of vegetables and flowers.**

To give this Catalogue the largest possible distribution, we make the following liberal offer:

Every Empty Envelope

Counts as Cash.

To every one who will state where this advertisement was seen, and who incloses **10 Cents** (in stamps), we will mail the Catalogue, and also send **free of charge**, our famous **50-Cent "Henderson" Collection** of seeds, containing one packet each of *Sweet Peas, Large Mixed Hybrids; Pansies, Giant Fancy Mixed; Asters, Giant Victoria Mixed; Big Boston Lettuce; Early Ruby Tomato and Cardinal Radish*, **in a coupon envelope**, which, when emptied and returned, will be **accepted as a 25-cent cash payment** on any order of goods selected from Catalogue to the amount of $1.00 and upward.

PETER HENDERSON & CO.,

35 & 37 Cortlandt Street, New York.

FLORAL BUTTERFLY PLANT

No plant possesses so many good points as do these two glorious new Commelinas. Of graceful trailing habit, superb for carpet bedding or for hanging pots. *In pots they bloom every day in the year.* In the garden from May until frost, showing *daily* scores of large winged butterfly-like blossoms. Color (No. 1) the most beautiful blue to be found in any flower. A shade so exquisitely lovely as to baffle description. Thrives in sun or shade, wet or dry, rich or poor soil; as easily raised as a weed from seed or cuttings, grows rapidly, flowers at once, and propagates so easily that plants are very cheap. Blooms in 50 days from seed.

No. 1—Exquisite Blue, like tropical Butterflies.
No. 2—Rosy Pink, in other respects like No. 1.

Strong plants for blooming at once, by mail guaranteed to grow, **20c.** each; the **2** for **30c.**, **5** for **60c.**

Seed of both colors mixed, 25 cts. per packet.

FREE OUR GREAT CATALOGUE of Flower and Vegetable Seeds, Bulbs, Plants, and Rare New Fruits. Profusely Illustrated, Large Colored Plates—136 pages. Do not miss our great Novelties, Emperor Asparagus (crop in 11 months from seed), Early Lima, Perpetual Rhubarb, Pineapple Onion, Climbing Currant and Blackberry, Everblooming Wistaria, Tree and Double Lilacs, etc. We have the finest Asters, Pansies, Peas, Stocks, Verbenas, Geraniums, Azaleas, Roses, Palms, Ferns, Begonias, Gloxinias, Violets, Phloxes, Gladiolus, Cannas, Dahlias, Lilies, Caladiums, Shrubs, Vines, New Fruits, and all Vegetables.

JOHN LEWIS CHILDS, Floral Park, N.Y.

Whereas: It is evident that the use of old-fashioned Curtains fastened by Tacks is productive of Dissatisfaction, Injury to property and Person, and much Profanity, the same are hereby Abolished, and notice given that hereafter all Window Curtains shall be equipped with Patent Holders, obviating the use of Tacks, and that these may be Identified by the Autograph Signature of

Stewart Hartshorn

WOOD ROLLERS — TIN ROLLERS

ABOUT 75% OF THE MEN

in mercantile and professional life owe something of their success to personal appearance. The leisure class owes still more to the same cause. The few genuine geniuses succeed in spite of it. Personal appearance is largely a matter of dress. Dress is largely a matter of the Cravat. This was understood by some as far back as the days of Beau Brummel, but it is only the later section of the present generation of men who have fully grasped it. The well-groomed man of today, even when he must economize on other articles of apparel, buys ten Cravats where his daddy bought one.

There is a 36-page text book called "THE CRAVAT." It tells of the What, Where, When, and How of a Man's Cravat—Its Names and Shapes, Its Tying, Its Care, Its Selection, Its Various Forms for Special Occasions and Functions, Its Color Scheme, Its Adjuncts: Pins, Fasteners, etc., Its Don'ts, in fact,

All About a Man's Cravat

It is profusely and sumptuously illustrated by one of the foremost artists of America. The first edition cost the publishers over $15,000, but you can have a copy for the asking, by sending this Adv't with your address and 6 cents in stamps to the Publisher, James R. Keiser, 122-124 Fifth Avenue, New York. If you prefer a bound copy, de Luxe edition, send 15 cents in stamps.

If Rheumatic use

TARRANT'S SELTZER APERIENT. TRADE MARK REGISTERED.

"Not a tastes worse than it smells remedy," but a pleasant, common sense treatment for *Rheumatic Aches and Pains.* Warranted to contain no narcotic or dangerous drugs. It removes *Gouty and Rheumatic Poisons* from the system by its action on the pores, kidneys and bowels. Used by American physicians for over 58 years.

At druggists, 50c. and $1, or by mail from THE TARRANT CO. (Inc. Est. 1834), New York

Cod Liver Oil is a food

and the greatest care should be exercised in its selection.

Peter Moller's Cod Liver Oil

is the best oil that over fifty years of continued scientific research has produced. By the process employed the oil is kept from contact with the atmosphere from the beginning of the process of manufacture until it is safely corked up in bottles, thus preventing contamination of any kind and excluding all impurities.

Ask for Peter Moller's Oil, and see that the bottle—a flat, oval one—bears our name as agents.

Health, Clear Skin AND A Good Figure

I wish I could put sufficient emphasis into these words to induce every woman who sees this advertisement to at least write to me.

I have spent 12 years in prescribing **reducing, developing,** and **curative** exercises for women in person, and my marvelous success in my work and my desire to reach and help more women induced me to take up the course of physical culture by mail. I can take only a limited number of pupils, because I give each one my personal attention, and no two lessons are exactly alike; each woman receives just the work adapted to her individual needs—no more.

I know that I can give you Health, Strength, and a Good Figure; relieve you from **Nervousness, Constipation, Headaches, Indigestion, Torpid Liver, Obesity, Leanness,** and all so-called chronic ailments, and build up women who are run down.

I prefer to let my students speak for me, and the following extracts are from letters from my pupils:

"I am not nearly **so nervous.** My chest expansion is four inches and the best of all I am gaining in weight."

"My **height** is **increased** a **good inch.** My hip measurement has **reduced** from 44 to 38 inches."

"It seems wonderful that the exercises could have helped me so much in a short time—the exercises for the **eyes** are so good, as are all your other exercises."

"My husband, who has been away for six weeks, was so surprised and delighted over my **reduction** and my **improved figure.**"

"**I never felt or looked as well as at the present time.** I have not had an attack of **indigestion** and but one **headache** in six weeks and compared with the previous weeks it is a miracle."

"My **constipation is entirely relieved.** I only wish I had known of your physical culture years ago. I should have been saved 10 or 12 years of suffering. Your **breathing exercises** are helping me greatly."

"I feel better in every way—**lighter, brighter** and a **desire to live.** My **nerves** are better and my general health improved. My **carriage** is very materially better."

"Since I began working with you I have **increased my chest expansion 3 inches,** my diaphragm expansion from 2 to 5 inches, my **bust measurement** from 32 to 36. I have lengthened my front waist line 3 inches."

"My **deep breathing** has given my **skin** a new **life** and **color.**"

"Never in my life have I been as well as I am now, and I am indeed grateful to you. My sister who had not seen me for three months was surprised at my changed appearance."

Hon. Wm. T. Harris, LL.D., U. S. Commissioner of Education, says: "It is the glory of the present revival of physical exercises that it is led by educated physicians. It is a new movement of the highest importance. It means the end of the era of quackery in hygiene."

Dr. Frank W. Gunsaulus, D.D., LL.D., writes me: "Your thorough preparation for your work and your high aim must surely give you a worthy success."

My exercises cultivate the distinguished carriage and bearing which at once bespeaks culture and refinement. Men cannot do this work for women. They do not understand our conditions nor limitations. Write to me. For 10 cents I will send you full information regarding my system, and testimonial letters from numbers of women who have worked with me; and an instructive and interesting booklet, with a card for your dressing-table showing the correct lines of the woman's figure.

Yours for a body expressing perfect health, perfect grace, and perfect womanhood,

SUSANNA COCROFT, Dept. 167, 57 Washington St., CHICAGO

NOTE: Miss Cocroft is President of the Physical Culture Extension work in America. She needs no further introduction to the Public.

Winter Resorts Everywhere

The Outlook Recreation Department is now ready to furnish to intending travelers information and printed matter describing any of the numerous winter resorts. We are glad to furnish, without charge, information pertaining to routes of travel and places at which to stay, to any reader of The Outlook writing and stating the trip proposed, or the kind of house or location desired. We shall be pleased to have Outlook readers make free use of these facilities when planning a trip of any kind. Do not hesitate to ask for what you want, addressing THE OUTLOOK RECREATION DEPARTMENT, 287 Fourth Avenue, New York.

Winter in California

Sunshine and summer, fruit and flowers all winter long in California. The quick way to get there is via the Chicago, Milwaukee & St. Paul and Union Pacific line. Three through trains, Chicago to San Francisco, every day. If you're interested drop me a card. W. S. Howell, General Eastern Agent, 381 Broadway, New York City.

TO BE RELIEVED OF CARE, I desire a **Manager** for summer resort, open three months, 100 guests, 40 servants. Good opening for man and wife of ability, some experience, and accustomed to meet and deal with refined patrons. New York City residence preferred. Address, with references, PROPRIETOR, No. 1,959, The Outlook.

The Golden State Limited.

Established less than three months ago, the Golden State Limited is already recognized as queen of transcontinental trains.

Innumerable letters of commendation have been received from passengers. Extracts from some of these letters appear below:

"Nothing could be more perfect."

"The service is first-class."

"The meals are as nicely prepared and served as in any of the large hotels in New York or Chicago."

"The traveling public is lucky in securing such fine service."

"The Golden State Limited has been on time at every stop."

"We are glad we were passengers on the Golden State Limited."

Rock Island System

SOUTHERN PACIFIC COMPANY · SUNSET ROUTE ·

The Golden State Limited leaves Chicago at 7:45 P.M. and Kansas City at 10:40 A.M. daily and runs through to Pasadena, Los Angeles, Santa Barbara, and San Francisco. Route: Rock Island and El Paso–Northeastern Systems, Chicago to El Paso; Southern Pacific, El Paso to Los Angeles and San Francisco. No other train to Southern California makes faster time. No other train is so luxuriously equipped—electric lights, electric fans, barber shop, bathroom, Book-lovers Library, compartment and standard sleepers, dining, buffet-library, and observation cars.

Tickets and full information at all railroad ticket offices in the United States and Canada. Beautifully illustrated literature descriptive of California sent on receipt of six cents in stamps.

Watering the Herds

WITH the fencing of the ranges has come the need for an artificial water supply upon the great stock farms of the West. That cattle may thrive and fatten for the market, it is absolutely essential that this supply be both *constant* and *abundant*. The picture shows a typical scene upon many of the largest ranches, where the **HOT AIR PUMP** is delivering its supply into the storage tank, whence it is drawn off daily as required, in any volume up to 100,000 gallons. No driving of the herds to some distant river is required, thus much expense is saved and the cattle drink quietly, as nature dictates, at an *ever ready* and *abundant* supply. Descriptive Catalogue "**D**" sent free on application.

The Latest New Books

PUBLISHED THIS WEEK

Mr. ZANGWILL'S *new book* **The Grey Wig**

Illustrates the characteristic range of pathos, humor, keen sarcasm and wit of a writer who holds a curiously individual place in English literature.
By ISRAEL ZANGWILL, Author of "Children of the Ghetto," etc. Cloth, $1.50.

Mr. LAWSON'S *new novel* **From the Unvarying Star**

A novel of a country parish with touches of such tragedy as now and then underlies the quiet of country life; a passionate love story on a spiritual level which suggests George Macdonald's "Annals of a Quiet Neighborhood."
By ELSWORTH LAWSON, Author of "Euphrosyne and Her Golden Book." Cloth, $1.50.

GERTRUDE ATHERTON'S *selection of* **A Few of Hamilton's Letters**

Including his description of the great West Indian Hurricane of 1772, the famous André letter, and other papers of great interest to readers of the masterly delineation in "The Conqueror."
Selected by GERTRUDE ATHERTON, Author of "The Conqueror," etc. Cloth, $1.50, *net*. (Postage 13c.)

Mrs. ELY'S *charming book on* **A Woman's Hardy Garden**

"By the wisest and most winning teacher of the fascinating art of gardening that we have met in modern print."—*The New York Tribune.*
By HELENA RUTHERFURD ELY. *Second Edition in press.* Cloth, profusely illustrated, $1.75 *net*. (Postage 13c.)

CARL HILTY'S *Essays translated by Prof. F. G. PEABODY* **Happiness: Essays on the Meaning of Life**

"An amazingly successful attempt to interpret with engaging directness the modern world to the end of achieving a happy, rational, and useful life."—*Boston Herald.* Cloth, 16mo. $1.25 *net*. (Postage 7c.)

Mr. BROOKS' *full and fair study of* **The Social Unrest**

"No one interested in industrial problems can afford to miss it." "A mine of vital information."

Published by **THE MACMILLAN COMPANY** 66 Fifth Ave. N. Y.

The Outlook Company's Spring Announcement include the following books, to be ready March 2

The Other Room

LYMAN ABBOTT

$1.00 net (postage 10 cents)

DR. ABBOTT, in this book, which is companion volume to Mr. Mabie "Parables of Life," considers the theme of Death and Immortality. The aim the book is practical, not scholastic; seeks to give spiritual comfort. It stat simply and clearly the personal, firm beli of an earnest and thoughtful man.

British Political Portraits

JUSTIN McCARTHY

$1.50 net (postage 15 cents)

PERSONAL sketches of the men who are playing the foremost parts in the government of the United Kingdom—A. J. Balfour, Lord Salisbury, Lord Rosebery, Joseph Chamberlain, John Burns, John Redmond, and others. Mr. McCarthy not only has an intimate knowledge of the careers of these political leaders, but in most cases has had a long personal association with them. His well-known ability as an observer of men and events and as a writer has been nowhere shown to better advantage than in these sketches. The book is illustrated with portraits.

The Story of a Bird Lover

W. E. D. SCOTT

$1.50 net (postage 15 cents)

MR. SCOTT, who is Curator of Ornithology at Princeton University, is recognized by ornithologists as one of the foremost experts in America as regards the life and habits of birds. It is an absorbing story that he tells of his life, of the beginning and growth of his love for birds, of the studies and investigations by which he acquired his extensive knowledge of bird life, of his travels into many not well known parts of the country, where his experiences, personal and scientific, have been curious and interesting.

A Prairie Winter

By AN ILLINOIS GIRL

$1.00 net (postage 10 cents)

A SERIES of little essays on the coming of winter on the prairie, its enduring and its passing, written by a girl whose heart is full of joy in Nature and the outdoor world. The pages are full of color and picturesqueness, with charming descriptions of the beauties of her garden, the fields and meadows and woods. She writes with delightful simplicity and quiet humor.

THE OUTLOOK COMPANY, PUBLISHERS

287 FOURTH AVENUE **NEW YORK**

THE FOREST

A New Serial by

STEWART EDWARD WHITE

Author of "The Westerners," "The Blazed Trail," "Conjuror's House," etc.

THIS notable series of articles on the life of a man in the woods will begin in THE OUTLOOK for March 21, and will run through seventeen numbers. The background of these articles is furnished by the incidents and experiences of a thousand-mile canoe trip which the author made last summer through the waters of Northern Michigan and Canada. Mr. White is a thorough woodsman and an ardent lover of the great forests of the Northwest, where he has tramped and camped, fished and hunted. He intermingles with the story of adventures and experiences on "the long trail," practical advice and genial philosophizing. Some of his chapters are, "The Calling," "On Making Camp," "Open Water Canoeing," "Night in the Woods," "On Walking Through the Woods," "The Man Who Walks by Moonlight." The chapters that appear in the Magazine Numbers will be richly illustrated with drawings by Thomas Fogarty, who accompanied the author on his long canoe trip.

MR. WHITE AND "DEUCE"
His constant companion on tramps and canoe trips.

Three Dollars a Year **Ten Cents a Copy**

THE OUTLOOK COMPANY, Publishers

287 Fourth Avenue **New York**

BICENTENARY EDITION, 1703-1903

The Heart of John Wesley's Journal

By PERCY LIVINGSTONE PARKER. Introduction by HUGH PRICE HUGHES. Appreciation by AUGUSTINE BIRRELL.

There is no book in existence that gives so exact and vivid a picture of the Eighteenth Century England as this record Wesley kept of his daily experiences. It is a work of astonishing interest, ranking in permanent historic value with Pepys' Diary or Newman's Apologia. The Journal heretofore filled four volumes, a prohibitive bulk that Mr. Parker has condensed in a single cover. **Illustrated, 8vo, cloth, $1.50, net.**

By HIS LIFE-LONG FRIEND

THE LIFE OF JOSEPH PARKER

By WILLIAM ADAMSON, Author of "Life of Principal Morrison," "Knowledge and Faith," etc.

"Like Beecher and Spurgeon, Joseph Parker swayed men by the genius of eloquence. His life is replete with incident and covers an amazing energy and industry. Mr. Adamson is a sympathetic biographer, and the prodigious labor Dr. Parker accomplished will amaze every one who reads the record here faithfully set down." —Commercial Advertiser.

Illustrated, $1.75 net.

India's Problem: KRISHNA OR CHRIST

By JOHN P. JONES, D.D.

A result of twenty-five years' experience in India. Dr. Jones' book is noteworthy for its comprehensiveness, breadth of view, and multiplicity of detail. It speaks with authority on the country and the people, the religions, the women, missionary organizations, resources, problems, and conquests.

Illustrated, $1.50 net.

LOST and RECLAIMED

MARY NORTH

By LUCY RIDER MEYER

Fresh from the innocence of a country home only to fall a victim to the snares of metropolitan life is the pathetic story oft told to Mrs. Meyer during her many years of work among her sex. "Mary North" combines the actual occurrences from the experience of many, and the awful conditions are squarely faced and fought. It is full of most thrilling, touching, and enthralling incidents, and is a message of hope as well as a powerful argument.

Cloth, $1.50.

Studies in Christian Character, WORK AND EXPERIENCE

By WILLIAM L. WATKINSON, Author of "The Blind Spot," "The Bane and the Antidote," etc.

"This author has what this poor world needs—vision."—*Newell Dwight Hillis.*

"Mr. Watkinson excels in apt illustration of his themes, and shows an uncommon power of drawing high and instructive lessons from familiar texts."—*The Outlook.*

2 Vols. Cloth, gilt top, each $1.00, net.

American Barbarism and Chinese Hospitality.

Two Heroes of Cathay

Edited by LUELLA MINER

The unique experience of two cultured Chinese students whose effort to enter the United States as students has recently attracted so much public attention. The barbarous treatment of them affords an unpleasant and unflattering contrast, for these boys repeatedly risked their lives for Americans on Chinese soil during the Boxer uprising.

Illustrated, $1.00 net.

By SIR ROBERT ANDERSON, author of "Daniel in the Critic's Den."

The Bible and Modern Criticism

Sir Robert Anderson brings legal training and acumen to bear on problems of Biblical research. With keen vision and cool logic he dissects the results of critical inquiry and takes the stand that the METHODS of the critics are fundamentally fallacious. The style is singularly lucid, and the argument relieved with telling anecdotes that are fully as cogent as the logic.

Cloth, $1.50 net.

A NEW SCOTTISH FOLK

DWELLERS IN THE MIST

By NORMAN MACLEAN

Margaret E. Sangster says:

"These people of whom he tells us are islanders, getting their bread from the sea that beats on the shores of the Hebrides. They are a simple, poor illiterate, but intensely conscientious folk, fast bound by an iron creed. (In a primitive society, in strange contrast with our busy twentieth century world, Norman Maclean has done what 'Ralph Connor' is doing in another field."

Cloth, $1.25.

A Mind's-E

World's

Its Heroes an

THE world is so old, and so many things have happened that it is a wonder most of us are hazy as to history. Its annals have the most part been of the dry-as-dust sort, and it is no wonder few of us have read history except to study.

¶ Some of its chief events have been graphically painted in famous pict or fascinatingly recounted with more or less accuracy in the form of histo romances—and it is no wonder that these remain firmly fixed in the mem without effort, nor that they constitute the sum of remembered history many of us.

¶ But now there has come a gallery of *all* the world's great portraits, *all* the world's st rring scenes, of *all* the world's intensely interesting stories—not ideal word-paintings, not half-true romances, but the re history of the great people and the great events of 7,000 years.

¶ Now history can be read like fiction—now its legion of leaders stand clearly and distinctly as if present—now it can be remembered at a s reading without confusion.

¶ Such is the service Dr. John Lord has rendered by a life-long devotio a single work, a work unique among the world's writings, a work already mous wherever English is spoken, and destined to rank among the cla which do not die—" Beacon Lights of History."

¶ *There is a brief opportunity of securing a few of the choice sets from the edition at a great reduction from the regular price. Details of this plan will sent you on receipt of the request-coupon on the opposite page, which will also b you a specimen lecture, illustrations in photogravure and half-tone, a wi descriptive summary of the work itself, with over 100 portraits.*

James Clarke & Compan

ew of the

History

aster-Minds

BEACON LIGHTS OF HISTORY is the one work that tells the world's story in such a way as to hold the interest of every class of readers. To the Family, especially, it is a library in itself. In le it is as simple, clear and forcible as a picture, and the young boy or girl o pores over its pages, absorbed in the action and romance of these "true ries," will get a far better idea of the real record of the past than could be tained by the laborious process of history-study.

Clergymen and Speakers use it as a veritable storehouse of profound anal- is of character, of keen comparison of the men and events of all times, of tire, wit and brilliant oratory.

Busy People who have time to read only the vital things, find here neither mbering of trivial detail nor omission of any important matter of real portance.

And the Man or Woman with Leisure to read and enjoy, to them is given e chief charm of these wonderful pages. They beckon one to the evening rmchair and tempt the reader into disregard of time.

The new edition consists of 15 volumes, and presents for the first time the m of Dr. Lord's life-work, embracing as it does a period beginning 5000 . C., and ending with the year just closed.

Preparing for Greater Opportunities

A Few of the Many Contributors

Joseph H. Choate,
Mark Twain,
Frederick Coudert,
Horace Porter,
George William Curtis,
Chauncey M. Depew,
Chas. A. Dana,
Sir Edwin Arnold,
James Russell Lowell,

Etc., Etc., Etc.

HOW often, in speaking of a man who has achieved conspicuous success, do we hear the remark, "Ah, well! He was fortunate: his opportunities were greater than mine"? True, his opportunities may have been greater, but this should not be attributed to fortune. **The successful man prepares for and makes his own opportunities.** He leaves nothing to chance. What may seem to others his good fortune is the certain result of his long nights of preparation. Depend upon it, the man who becomes famous in a single night has spent years in preparing for the event.

There is no doubt that a broad, liberal education—a knowledge of men and affairs—is the best preparation for the highest success. It fosters self-confidence and develops ability to direct and control. Men realize this as they never realized it before. The great corporations, the financial enterprises of today, are calling for men who possess these qualifications. "We have more $10,000-a-year positions than we can find men for," says Charles M. Schwab. In every city and town in this country, in every field of activity, there is a place waiting for the man who is prepared. When Russell Sage was asked if he considered the opportunities for the young men of today as great as they were fifty years ago, he replied: "They are far greater. Never before was there such a demand for broad-minded, level-headed men; the poor boy of today, with proper educational training, will quickly rise to the height of success."

MODERN ELOQUENCE AS A "GUIDE TO SUCCESS"

The Honorable Thomas B. Reed and a corps of distinguished editors have given to the young men of this country the great

JOHN D. MORRIS AND COMPANY, Pub-

est successward help of the Twentieth Century, **Modern Eloquence.** It is a library in ten volumes of brilliant After-Dinner Speeches, inspiring Lectures and Addresses, the greatest spoken thoughts of our greatest men. As a guide to the highest success, this work has no equal. Here such men as Theodore Roosevelt, Carnegie and Depew, Bok and Cyrus Field, President Eliot and Gladstone, and hundreds of prominent men in every calling who have won distinction and fame, give their counsel and advice, the outgrowth of a life's work, observation and experience. They point out, straight as a mile-post, the pathway to success.

INSPIRATION IS CONTAGIOUS

The work is inspiring, because it shows how others have succeeded. It is the best cure for mental inertia, because it sharpens the intellect and stimulates thought. It is a most liberal educator, because it gathers within its pages the most eloquent discussions of national, political, historical and social events—subjects which are of premier importance to all true Americans. If you would become broad-minded in every sense which the word implies—if you would obtain a thorough knowledge of men and affairs—if you would prepare for greater opportunities—you should read Modern Eloquence. It is the most fascinating set of books ever published. After a day of fatigue, it entertains with a refreshing After-Dinner Speech or inspiring Address; it transports one to the banquet hall or lecture room, where he sees the speaker, animated and eloquent, hears the applause of delighted auditors, and succumbs to the subtle influence. Business cares and worries are forgotten, but the great thoughts gathered from an evening's companionship with these masters of oratory become a permanent inspiration and stimulus.

WHAT WE WOULD LIKE TO DO

If you are interested, we would like to send you, post free, a portfolio of specimen pages of some of these brilliant After-Dinner Speeches, Lectures and Addresses, together with fine photogravures, chromatic plates, and other interesting material, and to submit a proposition that will easily place this work in your library. We do not know your name and address. Will you not kindly send us these, using the attached coupon?

Thomas Y. Crowell & Co., New York

One Side of the "Century"

that is responsible for the tremendous sale it has had, is that it is a work that takes the place of all other reference works, and which is instantly appreciated and constantly used by *all the members of the family.*

How often is any other encyclopedia you know of consulted in the family owning it? Once a week? More likely not as often. Ask any Century owner and you will find that the volumes are in *daily* use by nearly *every member* of the family.

The reason is simple. We can send you a pamphlet that will make this difference clear to you at a glance — if you will mail us the coupon in the corner below.

JOHN WANAMAKER NEW YORK

The Other Side

is the price, which now is different also.

For years the work in its earlier editions sold at prices so high as to permit of only the well-to-do owning it (necessarily so, for over $1,000,000.00 was expended before the first set was produced).

Since then two things have happened. First, its complete revision and the general bringing down to the present time of all its store of facts — and then the forming of The Wanamaker Century Club, with its tens-of-thousands of members in every country on the globe.

This last was the tremendous buying force which has cut the price squarely in two, and brought the work within the reach of everyone by reason of the easy payment terms.

"The Century" is no longer a luxury for the rich only. It is a necessity in every home and office. *You* will want a set as soon as you really know how much it will help you.

As to the purchase part, send us the coupon below and we will explain to *your* satisfaction that you can own a set at once, without feeling the payments.

At least *look into this opportunity* for the inquiry binds you to nothing, costs you nothing, and will, we believe, make you a Century owner, and every owner is an educator, not only of himself, but of every one within the daily reach of these volumes.

BETTER SUNDAY-SCHOOL LESSONS

The action of the Denver Convention, followed by that of the Chicago Convention, in deciding not to provide new courses of study has greatly increased the demand for

THE BIBLE STUDY UNION (BLAKESLEE) LESSONS

These lessons embody correct educational principles. They are carefully graded, give connected views of Scripture, stimulate personal study of the Bible, increase interest and attendance, are thoroughly evangelical, and secure the best spiritual results. Their superiority is generally acknowledged.

Twelve years' experience proves that they can be used successfully in any Sunday-school, large or small. Why not try them for a quarter in a class or two, if not in the whole school? Specimen copies free.

The Outlook Life-Insurance Club

HOW TO BUILD AN ESTATE

Letters from some people who are doing it with ease.

An estate is a temporal possession involving comfort and independence. If honestly gotten and wisely administered it is a very good thing to have. The *right kind* of an insurance policy is an estate of the most satisfactory kind. That is why well-to-do American men and women insure often and largely. There is at least one successful business man in New York who builds $10,000 of the *right kind* of insurance into his estate on the first of January *each year*.

But this sort of an estate is rather of an exclusive proposition. Comparatively speaking, *only a few people* can get it. It is not tossed unconditionally into every outreaching hand. One must have good health, good morals, good sense, and good dollars—and be ready to *act promptly when the right opportunity beckons*.

The function of THE OUTLOOK CLUB is to help OUTLOOK readers who are thus qualified to start to build this kind of an estate for themselves, and *do it with unparalleled ease*, even though they have but moderate means.

If you are an OUTLOOK reader, and are accepted as a member of our Club, you may have *at once* an unexcelled endowment policy in the great insurance Company which we have selected to issue our Club policies, and have the privilege of making your first-year premium deposits in *small monthly installments*—an opportunity never before offered to the readers of any magazine.

If other members of your family also desire to apply for membership we shall be glad to give them every consideration and service *so long as there are any memberships unsubscribed*.

Just think a minute. Apart from yourself, can you not think of a relative or friend to whom Club membership *now* would mean much *in the years to come?*

We shall be glad to send full and interesting information on request. Don't stop to ask *yourself* a lot of technical questions about Company, rates, conditions, etc. Ask *us*. Our Club has been organized to render just this service, and you need not feel that your inquiries are at all burdensome, or that your communication to us will obligate you in the least.

But kindly observe the following facts and directions:

MEMBERSHIP IN THE OUTLOOK CLUB IS LIMITED

OUTLOOK readers—men, women, and young people—are eligible.

Members in Class A have Policies for $1,000—requiring a deposit of only $5.00 with application, and then $5.00 monthly.

Members in Class B have Policies for $2,000—requiring a deposit of only $10.00 with application, and then $10.00 monthly.

Members in Class C have Policies for larger amounts with proportionate monthly deposits.

WRITE FOR MEMBERSHIP APPLICATION BLANK

In order that we may be able to send you complete and personal information concerning the exceptional advantages afforded by our Club plan, please answer the following questions in *your first letter:*

1—What is your occupation?

2—What is the exact date of your birth?

3—Which Class do you *think* you might like to be in?

(See opposite page.)

Are not these letters from our Club members convincing?

"The policy came to-night. It is a very delightful affair. Your Club ught to be a great success." Mrs. L. V., Belleville, N. Y.

"The policy which you have made it possible for me to obtain has been eceived with its attractive cover. I thank you for your kindly interest and o-operation." H. W. P., Washington, D. C.

"Your favor of the 26th is at hand, also my policy. I think you are o be congratulated on the very handsome manner in which you deliver these olicies. In fact you are to be congratulated on originating the entire plan." Mr. G. M. L., N. Y. City.

"Enclosed find check for $5.00, my second monthly installment. May take this opportunity to personally thank you for interesting me in life-nsurance, and for attending to the details of obtaining my policy?" Miss E. M. L., Philadelphia.

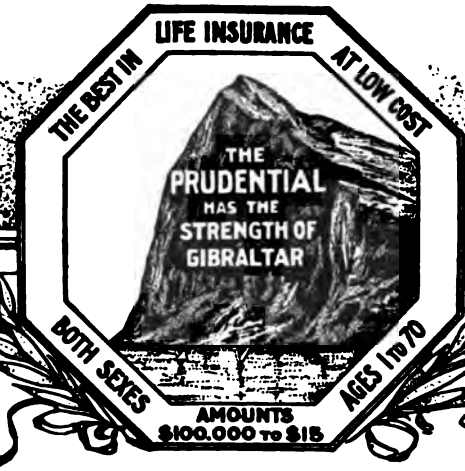
"My policy has been duly received and is fully satisfactory. I wish to hank you for the kindness and courtesy shown in procuring it, and I greatly ppreciate your thoughtfulness in making life-insurance easy for members of The Outlook Club." M. W. M., Washington, D. C.

"I am very much pleased with the policy just received. Its *specifications re clearer* than those in any other policy I have, and it is issued by one of he greatest Companies in existence.

The manner of depositing the first year's premium is so easy that all readers of The Outlook can and should avail themselves of this opportunity.

The formation of The Outlook Life-Insurance Club is a splendid idea and very reader should become a member.

Thanking you for attending to all the details, and wishing you great success, I remain, Yours truly,



L. R. R., N. Y. City."

Do You not desire to apply for membership before our Club closes?

THE OUTLOOK LIFE-INSURANCE CLUB

287 Fourth Avenue, New York

JOHN F. DRYDEN, President.

The PIANOLA METHOD

IT IS a conservative statement to say that no system of piano instruction ever invented can show the results obtained by the Pianola method of playing.

Aside from the fact that in all other methods, days and years are required to perfect technique (which the Pianola supplies at once) their accomplishment is insignificant compared to the Pianola's.

Unlike that of even the most skilful pianist the Pianola-player's repertoire is practically unlimited.

Beethoven's works, arranged for the Pianola, alone form a collection greater than the whole repertoire of most players.

Add to these the compositions of practically every other composer who ever lived, of all schools, from classic to lightest popular, and the result is an enormous collection of 8,908 pieces, all instantly available for the Pianola.

When it is realized that the Pianola can be played by absolutely every one, and that its playing can not be distinguished from that of the best pianists, the tremendous advantages of the Pianola method are apparent.

To the great class of people who could never learn anything of music except by listening to the performances of others, the Pianola appeals as one of the greatest gifts science has ever conferred upon mankind.

The Pianola can be seen and played at our exposition-rooms or at the warerooms of any of our agents, and a personal opinion formed by both the novice and the skilled musician upon the benefit to be derived from its assistance.

A handsomely illustrated and descriptive brochure (Catalog X) will be sent to those desiring information by mail, and all questions answered through our correspondence department.

The price of the Pianola is **$250.** May be purchased by monthly payments if desired.

Agents in all principal cities

20 years service in the sanitation of sick-rooms and households has established the value of

Platt's Chlorides,

The Odorless Disinfectant.

It is a colorless liquid without any objectionable feature, which instantly destroys mal-odors and disease germs. Each quart bottle will last an average family a month, and it can be obtained at all druggists and high-class grocers.

Registered Trade-Mark

Dress Linens

At "The Linen Store."

For Separate Blouses, Outing and Shirt Waist Suits, and Summer Gowns, fashion promises for Linens a greater vogue than ever.

"The Linen Store" has always been the headquarters for flaxen fabrics, and our stock to-day is richer and more comprehensive than ever, including everything in woven, printed, and embroidered Linens.

Among these we mention:—

White & Printed Linen Lawn, 40c. to $1.50 yd.
Butcher's Linen, 45c. to $1.25.
White Embroidered Linen, $1.20.
Linen Crash, 35 and 50c. yd.
Linen Ducks, 50 to 75c.
German & Irish Linens, 45c. to $1.25.
Old Bleach Linens, 75c. yd.

In our wash goods department we also display Cheviots, Piqués, Dimities, Swisses, and Fancy Cottons of all kinds.

Mail orders have prompt attention.

James McCutcheon & Co.
14 West 23d St., N. Y.

A Bright Face

is a delight whether animate or inanimate, brilliancy of mind or metal is always admired. You can see yours in your Silverware after cleaning with

ELECTRO *Silver Polish* SILICON

and it's a pleasant reflection to know that it's done without detriment to metal or muscle. It's the easy way, the pleasant way, the saving way.

Made in form of Powder and Soap.

Trial quantity of Powder for the asking. Simply send your address on a postal, or 15 cts. in stamps for either Powder or Soap post-paid. At grocers and druggists.

The Electro Silicon Co., 90 Cliff St., New York.

"The Star" Asbestos Pad For Dining Tables.

The only absolute protection to the most highly polished surface against injury from moisture and hot dishes.

Easy to handle; **made to fold** to convenient size to lay away in drawer when not in use. Made of specially prepared asbestos, covered with double-faced Cotton Flannel to make it soft and noiseless.

Recommended to Friends by every Woman who tries it.

When ordering, give shape of table—round, square or oblong. Measure top surface, width and length correctly, as pad covers top only and does not overhang. If extension table, give width of leaves and number wanted, as pads for extension tables are made in two halves and the leaves and fillings added for any length desired.

Doily, Chafing Dish and Platter Mats of same material for tables when cloth is not used—round, square or oblong, 5 to 18 inches in size.

Write for booklet of illustrations and prices.

L. W. KERNEY, 600 W. 61st Place, Chicago, Illinois.

We have no agents or branch stores.
All orders should be sent direct to us.

The Easter Styles are Now Ready

OUR fashion book of new styles for Spring and Summer is now ready. We wish to place it, together with a line of our new Spring and Summer Samples, in the hands of every lady who wishes to dress well at moderate cost. Here are a few of the advantages of dealing with us:

First—We keep no ready-made garments, but make every garment especially to order, thus insuring the perfection of fit and finish.

Second—We thoroughly sponge and shrink all of our woolens.

Third—Our prices are much lower than those charged by retail stores.

Fourth—We pay express charges everywhere.

Fifth—You take no risk in dealing with us. If what you get fails to give satisfaction, send it back promptly, *and we will refund your money.*

Our Fashion Book illustrates:

New Suits, well-tailored, showing many variations of the prevailing fashions, from Paris models, $8 to $35.

Etamine Costumes in styles to prevail during the coming Season, the most fashionable costumes for dress occasions, $12 to $35.

New Skirts, well fashioned, in Spring and Summer weight materials, look cool and feel cool too, $4 to $20.

Rainy Day and Walking Suits and Skirts, Jaunty Jackets, Traveling Dresses, Golf Suits and Skirts, Visiting Costumes, etc.

Write for Fashion Book and Samples of the materials from which we make our garments; you will get them *free* by return mail. A postal will bring them. It would be advisable to write to-day before the first edition is exhausted.

NATIONAL CLOAK AND SUIT COMPANY

119 and 121 West 23d Street, New York

Mortgages Net 5% In North Dakota

A Typical Farm Scene in North Dakota—It is Upon Such Farms as These That Our Loans are Made

A 5% investment, if it is safe and prompt in its returns, is considered gilt edged nowadays.

All the favorable conditions—low and steadily advancing prices on land, absolute security, and the certainty of returns—obtain in North Dakota.

These gilt-edged investments can be had here under the most satisfying conditions.

The time to take advantage of them is now. This is the day of your opportunity.

I can furnish them to you, together with the most satisfying evidence that they are absolutely trustworthy.

I would be glad to have you make the most careful and scrutinizing search of my record, find out whether I will do just as I agree to or not, and then find out if the mortgage securities I offer for sale are the kind described as gilt edged or not.

If you find them gilt edged, as you are bound to, I will be glad to sell them to you, collect the interest and forward it and personally look after the investments.

You will find me safe, honorable, reliable, and responsible. I will see to it that you do not regret making an investment in North Dakota.

Interest and principal collected without expense. Remittances in New York exchange. For further information address

WALTER L. WILLIAMSON, Investment Banker

LISBON, NORTH DAKOTA

The Ostermoor

PATENT ELASTIC FELT

Mattress

TRADE MARK

$15.

DON'T make mistakes about sleeping; between a sleepless rest and a restful sleep there's a world of difference.

DON'T sleep on a hair mattress. It packs and lumps into a bag sooner or later, and you wake up tired and cross from dosing on the lumps.

DON'T sleep on an "imitation felt" mattress—it is a tick *stuffed* with cotton waste. Uncomfortable at first—useless in a year.

DON'T hesitate to try the Ostermoor Mattress. It is constructed, not stuffed. It cannot lump or pack or bunch. It is sanitary and vermin-proof. Needs no overhauling—will last a lifetime without repairs.

DON'T let a dealer force another on you. He can't sell you a substitute for the Ostermoor, *without your consent.* It's not "felt" if it's not an Ostermoor.

DON'T fail to look for our name and trade mark which appears on the end of every genuine mattress.

DON'T forget that we make any size you desire, and prepay express charges to any point, and *return* charges also, if after sleeping on it thirty nights you do not believe it equal in cleanliness, durability and comfort to any $50 hair mattress ever made.

STANDARD SIZES AND PRICES:

2 ft. 6 in. wide,	25 lbs.	-	$ 8.35	All 6 ft 3 in. long
3 ft. wide,	30 lbs.	-	10.00	
3 ft. 6 in. wide,	35 lbs.	-	11.70	
4 ft. wide,	40 lbs.	-	13.35	
4 ft. 6 in. wide,	45 lbs.	-	15.00	

Made in two parts, 50c. extra. Special sizes, special prices.

Don't Fail to Send for FREE BOOK

We have prepared a valuable 96-page book, "The Test of Time," which is probably the handsomest book for advertising purposes ever issued. We mail this free—your name on a postal will do. It illustrates mattresses, cosy corners, window seats, pillows, cushions for boats and carriages, etc. It reproduces the letters of men and women of international reputation who find perfect rest on the Ostermoor mattress. Send for it NOW, before you forget.

OSTERMOOR & CO., 120 Elizabeth St., NEW YORK.

We have cushioned 25,000 churches. Send for our book "Church Cushions."

FARRAND ORGAN CO., Dept. "G" Detroit, Mich.

LACQUERET

—The next complete dictionary will include the word "Lacqueret" as a verb, meaning "to rejuvenate, to freshen, to brighten floors, furniture, and woodwork by applying a thin coat of superior Lacquers."

Is the finish of your furniture or woodwork marred or scratched or dimmed by the wear and tear of years? Lacqueret is a veritable panacea for all such woodwork ailments. It gives a new lease of useful life to old furniture, puts a new finish on dingy floors, and covers up the scars of use and abuse alike. You can apply Lacqueret yourself, and it will dry overnight. It is a translucent lacquer and does not cloud or disfigure the natural grain of the wood.

Put up in cans from one gallon to half-pint in Rich Red Rosewood, Moss Green, Light Oak, Dark Oak, Mahogany, Walnut, Cherry, and Clear.

You can get Lacqueret at any good store that handles paints and varnishes. If you have any difficulty, let us know.

Our interesting book, "The Dainty Decorator," gives many useful suggestions for home decoration. "Little Miss Lacqueret's Drawing Book" will delight the children. Sent free on receipt of stamp. Address Dept. 17.

STANDARD VARNISH WORKS

CHICAGO NEW YORK LONDON

LINEN UNDERWEAR

Helps Make Life Pleasant

"Sold Under Binding Guarantee."

Warm in Winter, cool in Summer—comfortable always. The ideal underwear.

Linen is cleanly; boiling water doesn't shrink it. That's one comfort. Not so with wool.

The mesh weave encloses a layer of air, and air is a non-conductor of heat; keeps the outside heat out in Summer, and the body heat in in Winter. Another comfort.

Belfast Mesh Linen Underwear instantly absorbs perspiration and dries quickly—that keeps the bodily temperature even. With an even temperature, **there's no danger of "taking cold."** Colds are *not* comfortable.

Our fabric is made with "Natural" linen and "White." We recommend the "Natural." It is more durable and absorbent and equally grateful to the skin.

Send for Samples of the Fabric and our Free Book

It is handsome and convincing. It goes into the subject thoroughly and explodes the "wool for warmth" theory in short order. It is designed for **thinking** people who desire comfort with health. The only forcible objection to the other mesh underwears has been that they "wear out bought dry." **We guarantee** that **Belfast Mesh** will wear to the satisfaction of the purchaser or refund money.

Sold by all dealers, or sent direct by mail if your dealer won't supply it.

How to Paint a House Cheap

And Have it Guaranteed to Look Better, Wear Longer and Cost Less Than the Best White Lead Paints

Never Fades, Cracks, Chalks, Peels, or Blisters, and is Not Affected by Gases
Fifty Sample Colors and Illustrated Booklet Prepaid to Any Address Absolutely Free

The cost of painting the house and barn, outbuildings and fences is a heavy burden. Cheap paints soon fade, peel, or scrape off and white lead and oil costs so much and has to be replaced so often that it is a constant expense to keep the bright, clean appearance so desirable in the cozy cottage home or the elegant mansion. The following are a few of the large users of Carrara Paint: The Waldorf-Astoria, New York, one of the most magnificent hotels in the world, has used tons and tons of the world-famous Carrara Paint; Pennsylvania R. R. Co.; Pullman Palace Car Co.; Chicago Telephone Co.; Central Union Telephone Co., Field Museum, Chicago; Kenwood Club, Chicago; Cincinnati Southern; C. & E. I. R. R. Co.; Denver & Rio Grande R. R.; Wellington Hotel, Chicago.

Carrara is used because it lasts longer, never fades, never cracks, never blisters, never peels, covers more surface than the highest priced paints and costs less than the cheap mixed paints that injure instead of protect. There is but one Carrara. It is made by the Carrara Paint Agency, General Offices, 858 Carrara Bldg., Cincinnati, Ohio, and anyone having a house to paint should send for 50 free sample colors and our handsome booklet, showing many buildings reproduced in all the colors just as they are painted from the great paint that has stood the most rigid tests for 25 years, and, bear in mind, that it is the only paint ever manufactured that is backed by a positive guarantee in every case. Distributing depots in all principal cities. Write to-day and save half your paint bills in the future.

e Hot-Air Pump.

The **"Cold-Air Pump"** is a very familiar sight in the country about now; the lower picture shows one. Intelligent owners, however, are beginning to understand that their blooded horses and graded stock will not thrive on ice and snow; in fact, nothing is so necessary to a healthy condition of live stock in winter, from the horse down to the chickens, as an abundance of fresh running water, right in the barn or stable, where they can reach it without exposure to the inclement weather. Then, too, can you always trust your stableman, on cold days, to chop out the icy trough and carry by hand *enough* water for all your stock?

Let a **Hot-Air Pump** carry it in abundance the year round.

Remember, the Hot-Air Pump is the cheapest form of *constant* water supply now known. A permanent investment, which will outlast a generation of users, can now be bought for $108. Descriptive Catalogue "D" sent free on application.

As the mother rocks the cradle, love transforms it to a kind of loom whereon her fond fancy weaves a bright-colored future for her child. As the child grows the wise mother feeds his mind with precepts of integrity and industry; his brain and body with all-nourishing food in order that he may be strong for life's battle and find an honored place with men.

SHREDDED WHOLE WHEAT BISCUIT

is the Natural Food—the food whose each integral part has an exact counterpart in the human body—the food that builds the perfect whole because it builds the perfect parts. **The perfect food to *perfect* man. SHREDDED WHOLE WHEAT BISCUIT is more porous than any other food—that means more digestible.** It is quickly transformed into rich blood, firm flesh, hardy muscles and an active brain. **Sold by all grocers.**

Send for "The Vital Question" (Cook Book, illustrated in colors) **FREE.** Address **THE NATURAL FOOD CO.,** **NIAGARA FALLS, N. Y.**

When Our Grandparents Were Young

electro-silver plated spoons and forks—at that time a marvelous invention—were first offered for sale by the makers, *Rogers Bros.* Although their business was established in the year *1847*, people were skeptical as to the merits of the goods, and they had extreme difficulty in first introducing them. Such sales as they made, however, brought new orders, and in a short time

"1847 ROGERS BROS."

Spoons, Forks, Etc.

were famous in the eyes of all silver users. Their little shop was soon exchanged for larger quarters, and one of the brothers devoted his entire time to selling, while another superintended the making. To-day the business has grown to immense proportions, and the goods now made, shown in catalogue No. 61 (W) sent free) will interest any person who desires *"Silver Plate that Wears."* Made only by the successors to Rogers Bros.

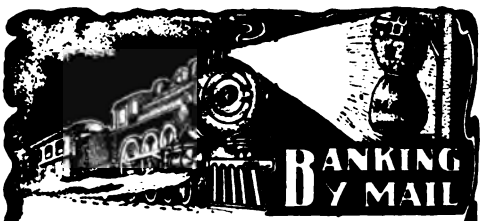
A Conservative, Dividend—Paying Investment.



Is offered by a Corporation engaged in the textile manufacturing business, having a paid up capital of $250,000.00 and superlative credit rating,

At a late meeting, the Stockholders authorized the Treasurer to offer for sale a limited amount of this Company's Treasury Stock, to provide for the extension of its market and field of operations. This Corporation was established in 1889, and is paying semi-annual dividends. The product of its several Mills has been extensively advertised for the past 5 yrs. The proceeds of the sale of this Treasury Stock, will be devoted to increasing its production and sales.

This Company has no bonded indebtedness, no preferred stock, and offers its shares at par. This will appeal to all who desire an absolutely safe, dividend-paying investment for amounts ranging from $50.00 up.

For full particulars, illustration of properties, and complete information, address—

FIRST MORTGAGE GOLD NOTES

We will send you free, on request, our booklet entitled "First Mortgage Bond and Trust Company Investment Methods." It explains the organization of this company, how it is conducted, who compose it, its distinctive branches, which are for the buying and selling of high grade bonds and Chicago real estate mortgages; how we invest for ourselves and sell such securities to others; it tells of the care exercised by our finance committee, composed of five of our directors, in the selection of securities to be offered; how we handle, care for and protect the interests of investors, men, women, trustees, guardians, institutions or companies, having trust funds. We allow interest, better than any savings bank rate, on partial payments, while you accumulate to fully pay for any specific bond or mortgage selected.

We buy entire bond issues, corporation and municipal. Correspondence invited from parties knowing of contemplated issues of high grade bonds.

We have for distribution a small, Russian leather covered, card case and security register which can be carried in a vest pocket. You wont have to go to your vault or safe to see when your interest or principal on any bond or mortgage matures if you have one of them. They will be sent upon receipt of twenty cents in stamps to cover cost and mailing.

CORRESPONDENTS Responsible parties commanding the confidence of investors can make snug sums by devoting a portion of their leisure time offering such securities as we buy and sell. Those only who favor security before high rate and who are in sympathy with our conservative methods will be selected.

First-Mortgage Bond and Trust Company

A State Institution organized and conducted by conservative men for the convenience of the people.

SHUSHINE A Perfect Shoe Polish in Paste Form,

And a Complete Shoe Polishing Outfit for 25c. Sufficient for 100 shines. It is in a tube. You can't spill it. Shoes wear one-third longer where Shushine is used exclusively, as it never hardens or crackles the leather. It is easy to apply and quick to polish.

If your local dealer cannot supply you will send by mail on receipt of 25c. Canvassers wanted for every County in every State.

SMIC CHEMICAL CO., Dept. O, Brockton, Mass.

BRAINS REPAIRED HERE

Brains rule the world. Americans have brains. They think big things. They think money. The brain is the tool that does the big things and makes the money.

Brain must be fed on the proper food or it will grow sluggish and dull. Can't work with dull tools. **GRAPE-NUTS,** the most scientific food in the world (ask any physician), will strengthen and sharpen the brain.

No stomach is so delicate it will not accept Grape-Nuts.

Give the brain a chance. Feed it on Grape-Nuts—

THE FOOD FOR THOUGHT

THE FLIGHT OF THE HEBREWS

By Calvin Dill Wilson and James Knapp Reeve

The old story of the Hebrews is not only made new because of the manner in which it is told, but its truths are well established by laying at the reader's feet relics recently recovered from their long hiding-places amid the ruins of their ancient cities. It is that wonderful, **that dramatic story** of a great and good people so modernized and so told as to charm the reader and greatly aid in understanding these people. The difficulty will not be a want of interest in this book when once opened for perusal, but in an effort to lay it down or close before it is finished.

188 Pages. Cloth Bound. Price, $1.00.

RESINOL SOAP

for skin and scalp, produces a wealth of hair by the same virtues it produces such marvelous beauty of the skin—by the restoration of perfectly healthy conditions. Resinol Soap is a derivative of the famous Resinol Ointment. It *cleanses* the pores thoroughly—then *corrects* all affections, imparting a tonic influence to the roots of the hair, and

Produces a Wealthy Growth

Its efficacy in removing dandruff, tetter; for scald head, itching scalp, falling hair, eczema, etc., has earned the unstinted endorsement of hundreds of prominent physicians. It is delightfully pleasant and *beneficial* for toilet, nursery, and bath. A *safe* soap to use. Sold everywhere. Sample sent free.

RESINOL CHEMICAL CO., Baltimore, Md., U. S. A.

THE INTERNAL BATH

MORE IMPORTANT THAN THE EXTERNAL

If external cleanliness is essential to health, how much more important is internal cleanliness! Every disease arises from the retention of waste and foreign matter in the system—Nature's drainage being clogged. In the vast majority of cases the clogging is in the colon or large intestine. Positively the one harmless and efficient means of clearing away this waste is the internal bath given with the

"J. B. L. CASCADE"

the only appliance specially made for the successful practice of the Internal Bath. It is simple in construction, absolutely safe—invariably effective, and can be applied by any person.

This treatment is a sovereign remedy for and prevention of 90 per cent. of all Digestive derangements. It is hygienic, scientific, and logical. It is a perfect tonic with no after depression. Its action

PREVENTS and CURES APPENDICITIS, Biliousness, Dyspepsia, Obesity, Headaches, Constipation, and all Malarial Diseases

Have you read of the wonderful cures made by the Internal Bath? Do you know that it goes to the root of all disease and eradicates the cause? Do you know that many of the greatest physicians of the world endorse and prescribe this treatment? Do you know that such eminent people as the following use the Internal Bath: U. S. Senator A. P. Gorman, Maryland; Ex-Governor Goodell, Vermont; Admiral Tyrtoff, St. Petersburg, Russia; Col. A. O. Granger, Girard Building, Philadelphia, Pa.; Gen. T. S. Peck, G. A. R.; Miles Devine, Chicago, Ill.; Marguerite Sylva, and a host of others?

Were it possible to reproduce here our file of voluntary letters of commendation received from prominent people who do not ordinarily permit the use of their names in advertisements, no doubt could exist in one's mind as to the extraordinary merit of the "J. B. L. CASCADE" treatment. As proof of what the Cascade treatment will do we call your attention to the following letter from Mr. H. A. Joyce, one of the prominent merchants of Cambridge, Md.

The Ralston Health Club, which as an organization has had the greatest growth of this or any age, having almost Ten Million Members Throughout the World, authorizes us to say: "Our Cascade is not endorsed by the Ralston Health Club of America, as that Club never endorses anything, no matter how good, but IT HAS BEEN OFFICIALLY ADOPTED BY THE CLUB FOR ITS USE IN THE INWARD BATH TREATMENT, which is one of its many systems of natural cure."

We want to send free to every person, sick or well, a simple statement setting forth this treatment. It contains matter which must interest every thinking person. If you live in New York you are earnestly invited to call, but if you cannot call, write for our pamphlet, "THE WHAT, THE WHY, THE WAY," which will be sent free on application, together with our great special offer for this month only.

Mr. H. A. JOYCE

CAMBRIDGE, MD.
Aug. 7, 1900.

PROF. CHAS. A. TYRRELL

Dear Sir—I deem it a duty I owe you, as well as my fellowman, to say I have been restored to perfect health by the use of the flushing treatment so easily accomplished by the "J. B. L. Cascade." Previous to its use I was in very bad health, suffering from dyspepsia, nervousness, constipation, insomnia, and, in fact, was almost in despair of ever getting well, but thanks to you and your wonderful invention, and the loving kindness of a merciful God, I am now in splendid health.

Gratefully yours,
H. A. JOYCE.

RHEUMATISM

Relieved Without Medicine

9,000 Persons Permanently Relieved by Magic Foot Drafts Last Year They Will Cure You

Trial Pair FREE on Approval to Anybody. Try Them

The Drafts cured Mrs. W. D. Harriman, wife of Judge Harriman, of Ann Arbor, Mich.

They cured Carl C. Pope, U. S. Commissioner at Black River Falls, Wis., of Rheumatic Gout.

They cured severe rheumatism of the arms, neck and back for T. C. Pendleton, Jackson, Mich.

Mrs. Casper Yahrsdorfer, Jackson, Mich., 70 years old, was cured in a few weeks, after suffering for 30 years.

The Drafts cured James Gilbert, Locomotive Dept., Mich. Cent. R. R., Jackson, Mich., after 27 years of pain.

They cured Dr. Van Vleck, Jackson, Mich., and he is now using them in his practice.

Letters from these persons and many others are reproduced in our new booklet on rheumatism—also sent free with the trial pair of Drafts.

Send no money—we only ask your name—and we will send you, prepaid, a pair of Magic Foot Drafts. If you are satisfied with the relief they give you, then send us One Dollar. If not, don't send us a cent. We know there's comfort and happiness in every pair, and we want you to have them; that's why we are willing to take our pay after the work is done.

The drafts are worn on the soles of the feet, but they cure rheumatism in every part of the body by drawing out and absorbing the poison from the system, besides greatly benefiting the general health. Try them—**Free.** Write to-day to Magic Foot Draft Co, R F 7 Oliver Building, Jackson, Mich.

ROSES

D. & C. Roses

have a reputation backed by an experience of 50 years. We sell plants only, and always on their own roots. Sent, safe arrival guaranteed, to any point in the United States. Grown by our own special methods, they have vigor and vitality. Any one can succeed with them. Send for the

New Guide to Rose Culture

for 1903, a superbly illustrated book of 172 pages, 5 beautiful colored plates, the *Leading Rose Catalogue of America*. It describes nearly 1000 varieties. Tells you all we have learned in 50 years about growing Roses and about all other flowers worth growing. **Flower and Vegetable Seeds a Specialty.** This great book **free** for the asking. Grand premium offers.

Greenhouses. Established 1850.

Bright's Disease AND DIABETES

CAN BE PERMANENTLY RELIEVED

The above is a startling statement (in view of the generally accepted theories), which should demand investigation from every afflicted reader of this magazine.

This investigation we sincerely invite, since we devote our entire attention to the two maladies above named.

The remedies for these diseases are entirely distinct, and the fact that we are specialists in these diseases *only*, should be sufficient for you to overcome your past prejudice, or what others cannot do, and investigate for yourself or some afflicted friend. *Not* patent medicines and *not* found at drug stores and only prescribed after analysis.

Note Send your name and address and we will forward instructions, etc., and will make analysis *absolutely without cost to you*, or obligation to commence our treatment.

Professional etiquette strictly observed. Names or letters are never published without consent. Consulting physician always in attendance.

TOMPKINS-CORBIN CO.

Health, Strength, and a Good Figure

ARE MORE TO BE DESIRED THAN A PRETTY FACE

It is just one year since I began to teach physical culture by mail, after 12 years of personal experience in prescribing individual work for women. I have never broken faith with my pupils, but have myself dictated every lesson. Were it not that pupils are finishing their courses daily, I could take no new ones. Fully one-third of the pupils who have worked with me this winter have been recommended to me by pupils who worked with me last year. If your vitality is at a low ebb, if you are troubled with any of the so-called chronic ailments—Constipation, Indigestion, Torpid Liver, Sick Headaches, Nervousness, Sleeplessness; if you are **overly large** and wish to be reduced (and increase your vitality in reducing); if you are thin and want to put on flesh, you can do so by no better means than a course in scientific physical culture. The experience of hundreds of my pupils would bear me out in this. My work is not physical exercise alone. Women do not wish an athlete's strength, but that roundness and symmetry which has made woman's form a model for sculptures and painters, and they want that vivacity and force born of a healthful spirit, which Emerson calls "the ecstasy of life." They want perfect health to make them cheerful wives, helpful companions, and better friends.

The following extracts from letters from my pupils are on my desk as I write:

"I believe that my lessons are the best investment I have ever made."

"I just read your last advertisement in a January magazine, and from my own experience I know that you claim no more than you accomplish."

"Have **left off my glasses**, and my eyes seem to be all right."

"My **neck** and **chest** are developing finely. I can scarcely believe it is my own neck."

"Have been using my fourth lesson for a week. Abdominal measurement reduced 4½ inches, waist 3 inches."

"If you could have seen me when I first began and see me now, you would not think me the same person."

"I used to be so stoop shouldered. now I carry myself as well as my friends."

"I have not had a **headache** for four weeks. Menstruation painless and I can apply myself to mental work all day long and not feel tired and nervous. I think I know how to **breathe** now."

"I **sleep all night**, for which I cannot adequately express my thanks."

"Have not had a **cold** this winter. Have lost 20 pounds in flesh. My friends all note the difference in my size."

"My mother has been taking the exercises with me and has lost entirely the **rheumatism** which troubled her for so long."

"My **constipation** is entirely relieved"

"My **indigestion** has all gone. I can sit down and eat as I have not done for years."

"My **complexion** is very decidedly clearer and my eyes brighter."

"If the remaining three lessons do me as much good as the first three lessons, you will have done wonders. I am **never tired now**."

"I wish that more women would wake up and see what could be done for them. I cannot be thankful enough that I have made a start."

"I am still **well** in the **literal sense** of the word. Not a cold have I had, and never did I enjoy such wonderful health."

Letters similar to the above come to me from my pupils every day.

If you will write me I will furnish you with names and addresses of women who have been helped with my work, and for 10 cents I will send you a little booklet, showing you correct lines of the body in poise and movement. If you need me, or wish to know more of my work, I will cheerfully give you all information I can.

SUSANNA COCROFT, Dept. 185, 57 Washington St., CHICAGO

NOTE: Miss Cocroft is President of the Extension work in physical culture. This position has given her a wide experience in personal work.

When Weaning Baby there is one "DO" and many "DONT'S"

¶ Don't use cow's milk alone. Baby cannot thoroughly digest it. Add Imperial Granum.

¶ Don't think of using a so-called "breakfast" or ready-to-serve food. They are not intended for that purpose.

¶ Don't give baby "tastes" from the table.

¶ Don't give regular table diet too soon.

¶ Don't use too much sugar or any malt, but "DO" use the

STANDARD
FOOD

IMPERIAL GRANUM

It always nourishes, is unsweetened, and builds hard, firm flesh, good bone and muscle.

A very generous sample is **FREE** if you send your druggist's name with your own; also our weight chart and descriptive book.

Jno. Carle & Sons, Dept. O, 153 Water Street, New York City

New Trial size IMPERIL GRANUM, 25 cents of your druggist or direct from us

A Book about Colorado for 6 cents.

A COUNTRY anywhere from 6,000 to 15,000 feet above sea level, where the air is light and dry and easy to breathe — that is why so many persons in ill health go there. A country more delighful than Switzerland in scenic attractions, an ideal place to rest, with a number of golf courses, plenty of the best trout fishing, and with large and small game in abundance. A country filled with really good hotels, boarding-houses and ranch houses, where you can live and enjoy life for very little money.

Burlington Route

That is what Colorado is. It is not an expensive place to visit, indeed there are few places where you can get so much for so little, and it only takes two nights on the road to get there from the Atlantic Coast, only one night from Chicago or St. Louis.

Our book on Colorado tells all about the country in an interesting way. It is full of illustrations and maps. It will tell you all about Colorado. The price is six cents in postage stamps. Will you not send to me for a copy and read it carefully to find out whether that is not just the place for you to go next summer to spend your vacation?

P. S. EUSTIS, Passenger Traffic Manager, C. B. & Q. Ry., CHICAGO

81

There is no more delightful holiday than a trip to California.

And the best time to go is now—in March or April. California is at its best then. The hills and valleys are clothed in green; millions upon millions of wild-flowers are in bloom, and the air is as invigorating as a tonic. Best of all, the Yosemite Valley opens April 1. You can visit it after you have seen southern and central California. The five day stage ride through this valley of wonders is a fitting culmination to the California pilgrimage.

The way to go to California is via the

Golden State Limited.

Newest, handsomest and most luxuriously equipped of trans-continental trains.

Leaves Chicago daily at 7.45 P.M., Kansas City at 10.40 A.M. Less than three days to Los Angeles. Through cars to Pasadena, Los Angeles, Santa Barbara, and San Francisco. Lowest altitudes and most southerly course of any line across the continent. Compartment and standard sleeping cars; dining, buffet-library and observation cars. Electric lights; electric fans; bath; barber.

Route: Rock Island and El Paso-Northeastern Systems, Chicago to El Paso; Southern Pacific Company, El Paso to Los Angeles and San Francisco.

Tickets and full information at all railroad ticket offices in the United States and Canada. Beautifully illustrated literature descriptive of California sent on receipt of six cents in stamps.

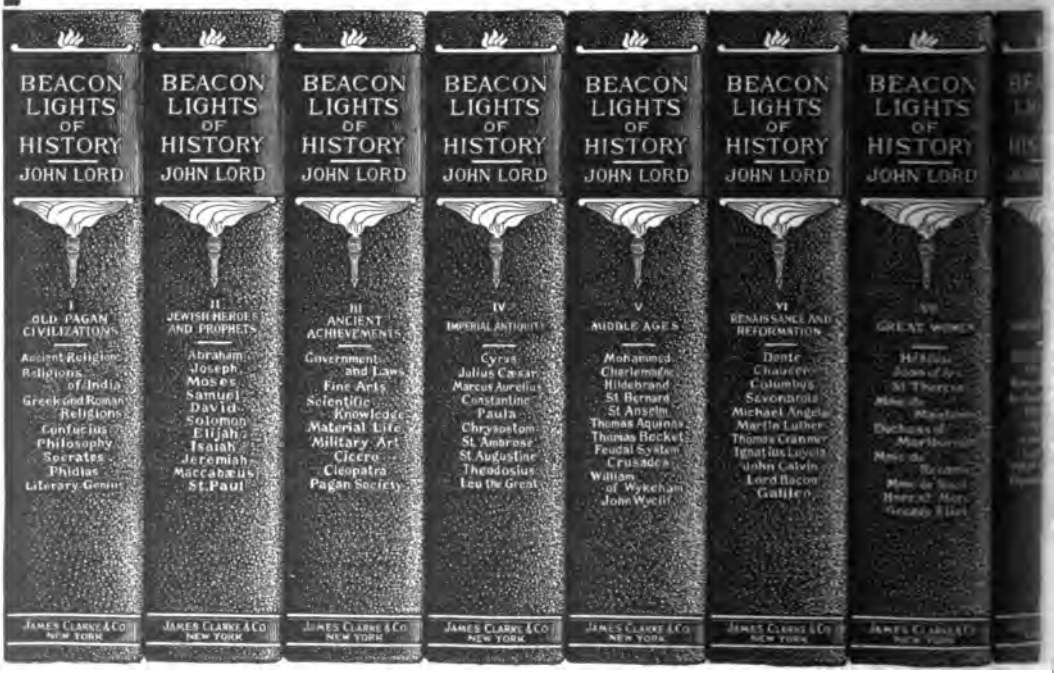
A Specimen Lecture, with
will be Mailed Free on receipt

There is so much one would like to know

about the world and its history that the immensity of the task keeps many from attempting it. It has been pleasanter for most of us to spend an evening with our favorite author, and to follow the adventures of his heroes of fiction, than to travel over the flat expanse of chronological records which characterizes the worthy old-fashioned "Histories."



Dr. Lord in his "Beacon Lights of History" has given to the world its own history in an entirely new form — as accurate and complete as the driest text-book, and as interesting as the most fascinating novel — the real biography of the world's great people, full of that intense interest which attaches to real-life stories when told with the sparkling brilliance of this greatest of lecturers and ablest of historians.

The volumes are shown below. From the brief summary of contents on the backs you may gain some idea of the scope of the work, and how it covers every period of civilization, from 5,000 B. C. to the present year.

We want you to give us an opportunity to show also the delightful style that characterizes Dr. Lord's writings—the keen perception of the master-historian, who has sifted the wheat from the chaff and presents only the vital points without cumbering of unnecessary detail, presenting his characters so graphically that they seem to live and carry the reader with them through the scenes of their stirring lives, giving unconsciously a series of never-to-be-forgotten pictures of their deeds, their customs and their countries.

Such reading is not history-study. It is acquiring the most profitable kind of knowledge with no more effort than one expends in reading current magazines and with far greater interest.

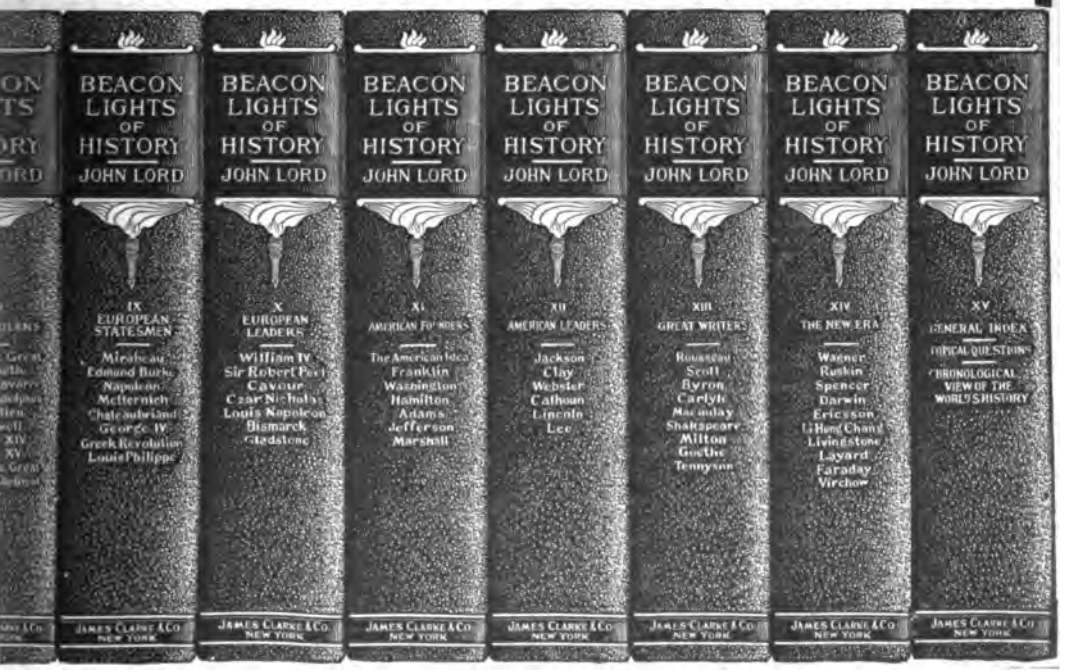
without cost to me, a Specimen Lecture from "Beacon Lights of History," together with complete table of contents, description of bindings, samples of illustrations and details of your special offer.

OUT. AP.



There is only one way

to really appreciate a work so different from all others as Dr. Lord's "Beacon Lights of History." When a thing is unique, description fails for lack of comparison. The simple way is to read the work itself, or a part of it.

We will send a specimen lecture from "Beacon Lights of History," with illustrations — Free, on receipt of the coupon above. It will come to you *by mail*, and will not in any way obligate you to purchase the work. It is by no means an inexpensive piece of literature to give away, but we are so confident of the attraction of Dr. Lord's writings that we believe few who have an opportunity of judging for themselves will wish to do without a work of such unusual character.

There is a considerable price-saving on these first sets from the new edition that will also help in interesting you. That will be explained *by mail* also. Simply write name and address plainly on the coupon above and mail it to us promptly.

". . . Require and repay careful reading and will make an epoch, we believe, in the thinking of many. It clears away by its inductive study and statement in terms of psychology many difficulties of thought."—*Congregationalist and Christian World*, Boston.

AMERICAN CITIZEN SERIES—New Volume

FINANCIAL HISTORY OF THE UNITED STATES

By DAVIS RICH DEWEY, Ph.D., Professor of Economics and Statistics, Massachusetts Institute of Technology. With Charts, Bibliographies, Chapter References, Index, etc. Large crown octavo, 568 pages, cloth, $2.00.

NEW EDITION, REVISED

OUTLINE OF PRACTICAL SOCIOLOGY

With Special Reference to American Conditions

By CARROLL D. WRIGHT, LL.D., U. S. Commissioner of Labor, President of Clark College. Large crown octavo, pages xxviii-431, cloth, $2.00.

The Revision comprehends changes made necessary by the publication of the reports of the Twelfth United States Census. . . . Some of the charts and diagrams appearing in previous editions, reproduced from the reports of the Eleventh Census, do not appear in the reports of the Twelfth, but the improved forms of the latter census have been substituted for the old forms, with the kind consent of Hon. WILLIAM R. MERRIAM, Director of the Twelfth Census. The Bibliographies and References at the heads of chapters have been brought down to date.

LONGMANS, GREEN & CO., 93 Fifth Ave., N. Y.

IMPORTANT BOOKS OF THE SPRING SEASON

The Blue Goose

By FRANK L. NASON

A rattling novel of Western mining life, by one who knows every inch of the ground. It is a love story with a most bewitching slip of a French girl as heroine.

"A novel of the Colorado mining district as rugged and as full of real gold as any of the rich ore about which the drama of its action turns."
N. Y. Commercial Advertiser.

"A worthy companion to such books as 'The Blazed Trail,' as standing for the most representative inspiration of American fiction."
Brooklyn Eagle.

$1.50

Conjuror's House

A Romance of the Free Forest

By STEWART EDWARD WHITE

Author of "The Blazed Trail," etc.

A dramatic story of the Hudson Bay Country, its picturesque voyageurs and daring Free Traders, by the master of woodland fiction.

Illustrated by Charles S. Chapman. $1.25.

A Brilliant Picture of the manners and customs of the Rich American.

Golden Fleece

By DAVID GRAHAM PHILLIPS

A strikingly faithful picture of that which calls itself "Society" as it exists in our large cities. The career of a fortune-hunting Earl furnishes a bright and amusing central plot.

Illustrated by Harrison Fisher. $1.50.

Companion Volume to "The Simple Life."

The Better Way

By CHARLES WAGNER

This new book indicates how the doctrines of the author's "Simple Life" can be applied to our every-day existence. Its aim is to show how peace and calm can be preserved through all the moods of doubt and despair that harass us. It is filled with the same warm love of nature and of human kind that pervades the first book, but its counsel to the heart is even more intimate and kindly.

$1.00 net; postpaid, $1.07.

Anna of the Five Towns

By ARNOLD BENNETT

A remarkable novel, portraying with great realism the development of a sincere girl's character amid the cant and hypocrisy of a nonconformist community in Staffordshire, England.

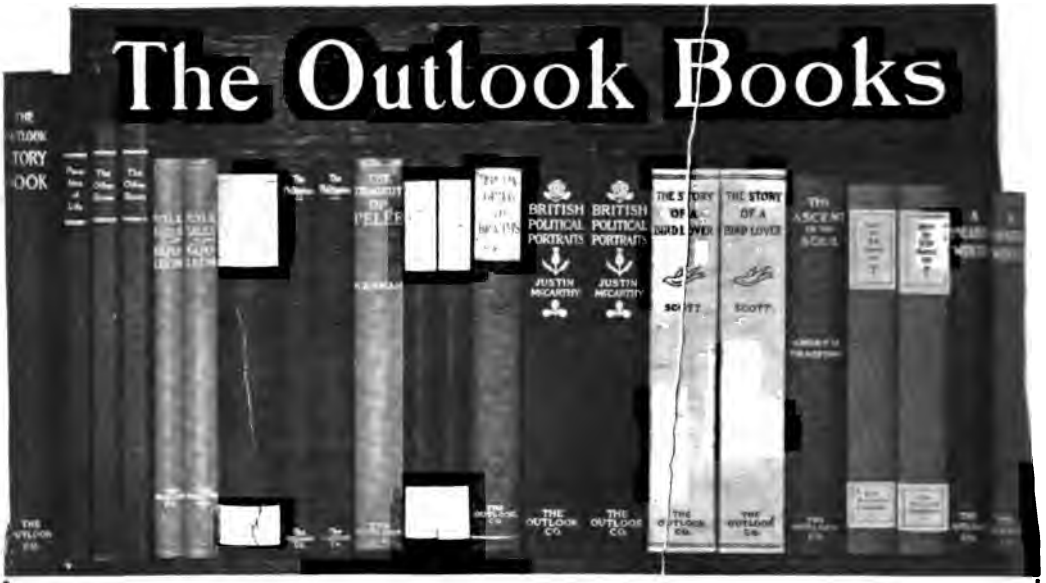
"The most artistic story of the year."
N. Y. Times Saturday Review.

$1.50. Second Edition.

JOSEPH CONRAD'S

New Book

Youth



Three Adventurous Tales of the World's Waterways.

The first work in several years from the greatest English writer of imaginative fiction, one who is recognized as the unchallenged master in his own field—the sea. He has produced nothing else like these stories.

"Sufficient to place Conrad in rank with the foremost writers of fiction in any language."
N. Y. Times Saturday Review.

$1.50. Second Edition.

McCLURE, PHILLIPS & CO., NEW YORK

JUST PUBLISHED

The Story of a Bird Lover

BY WILLIAM EARL DODGE SCOTT

With a frontispiece from a drawing by Bruce Horsfall. 12mo, 384 pages, $1.50 net (postage 14 cts)

THE interest of this book lies not merely in the fact that the author is recognized by ornithologists as one of the foremost experts in America as regards the life and habits of birds. It is chiefly because Mr. Scott in quite an unusual, perhaps even unique, degree has brought the life of the birds nearer to the life of man—has established, so to speak, personal relationships with the whole bird kingdom. He has a "laboratory" at Princeton, where he keeps for purposes of study and investigation about five hundred live birds, native and foreign.

It is an absorbing story that Mr. Scott tells of his life, of the beginning and growth of his love for birds, of the studies and investigations by which he acquired his extensive knowledge of bird life, of his travels into many not well known parts of the country, where his experiences, personal and scientific, have been curious and interesting.

THE OUTLOOK COMPANY, 287 Fourth Avenue, NEW YORK

JUST PUBLISHED

British Political Portraits

BY JUSTIN McCARTHY

Illustrated with portraits. 12mo, 320 pages, $1.50 net (postage 14 cts.)

PERSONAL sketches of the men who are playing the foremost parts in the government of the United Kingdom, including A. J. Balfour, Lord Salisbury, Lord Rosebery, Joseph Chamberlain, Henry Labouchere, and John Burns. Mr. McCarthy not only has an intimate knowledge of the careers of these political leaders, but in most cases has had a long personal association with them. His well-known ability as an observer of men and events and as a writer has been nowhere shown to better advantage than in these sketches.

The Other Room

BY LYMAN ABBOTT

12mo, 150 pages, $1.00 net (postage 9 cts.)

"THE universe is God's house. This world is not the only habitat for the living. In his house are many rooms. Death is only pushing aside the portière and passing from one room to another." This is the idea upon which rest these practical and helpful chapters on Immortality. Dr. Abbott expresses in simple form the feeling of the present age regarding the life of the world to come. He profoundly believes that immortality is not a future condition, but a kind of life, which is essentially the same whether before or after death; and he clears away many perplexities by indicating how immortality may be, indeed ought to be, a present achievement. The book is uniform in typography and binding with Mr. Mabie's "Parables of Life."

A Prairie Winter

BY AN ILLINOIS GIRL

12mo, 180 pages, $1.00 net (postage 8 cts.)

A SERIES of little essays on the coming of winter on the prairie, its enduring and its passing, written by a girl whose heart is full of joy in Nature and the outdoor world. Its pages are full of color and pictur esqueness.

AN EASTER GIFT-BOOK

A Symphony of the Spirit

By GEORGE S. MERRIAM

A selection and arrangement of poems by such authors as Tennyson, Browning, Emerson, Lowell, Wordsworth, Michael Angelo, with others less familiar. The central idea is expressed in the opening passage from "In Memoriam," beginning

"How pure at heart and sound in head,
With what divine affections bold
Should be the man whose thought would hold
An hour's communion with the dead."

This initial and recurring theme—the interplay of the earthly with the heavenly life—broadens by an irregular progression, ranging from unconsoled grief to deep serenity, and from the personal or dual standpoint to world-wide sympathies.

Bound in white with cover-design of Easter lilies

This Page *will prove to be the one best worth reading of all this magazine* — if you reply to it!!

BEFORE "The Century" came there were encyclopedias and dictionaries, just as there used to be stage coaches. The worthiest of these old-line reference works was compiled before the Chicago fire, and in its construction copied the methods, the mistakes and the omissions of still earlier times.

After the telegraph, the telephone and the typewriter, came The Century Dictionary & Cyclopedia & Atlas.

And just as the steam railroad has opened up vast territories to civilization and commerce, so "The Century" has rendered easily accessible the hitherto generally unknown realms of knowledge to which one may now travel in express time.

Nowadays one may know without study—settle doubts without research.
To understand this fully it is only necessary to consider

How "The Century" Was Made

All knowledge was in print before—much of it contained in those very encyclopedias, which kept their stores of information so carefully hidden away in long and learned chapters and ponderous treatises; the rest was, for the most part, in text-books of one sort or another—technical or general.

The work of collecting the existing records of things, of words, of people and of countries, consumed many years. Proving the true from the false took many more.

Then came the task of separating each item and putting it in its own place, where it could be found without reading through something else to get at it.

When this was done "The Century" was finished.

Being the newest and greatest work of its kind, and having had the successes and the mistakes of its predecessors to profit by, it possesses naturally many unique features, but chief among them all is this separating of each individual item of fact and placing it in its own alphabetical niche in this vast indexed summary of the whole world's knowledge.

In brief, "The Century" is a cyclopedia built like our City Directory—where it is necessary only to know the first few letters of the subject in question in order to find out instantly all there is to know about it.

These separated items may easily be linked together again when desired, by the perfect system of cross-references.

"The Century" has no competitor.

It becomes a real necessity to every one who can read—just as soon as he or she learns what it really is and how it differs from every other work.

We have a book about "The Century" that was printed to show how *you* would use the work—if you had it.

We will send you a copy free on receipt of the request-form below.

With it we will also send a letter telling you how you can buy a set on practically your own terms—*very* easily.

May we lay the matter before you?

The Outlook Life-Insurance Club

BETTER THAN A SAVINGS BANK
BETTER THAN A GOVERNMENT BOND

And Very, Very Easy

It is quite difficult to state in a single page of THE OUTLOOK all the advantages which arise from membership in THE OUTLOOK CLUB. They are all set forth in our explanatory literature, which we have tried to make more than usually attractive, and which we will be glad to send you on request. In it you will find the evidence that the insurance policy which we have selected as most desirable for our Club members is better—as an investment—than a savings bank—better than a government bond. By a special arrangement our Club members are enabled to make this wise investment, not in a lump sum—which would prove burdensome to many—but in small monthly installments of $5 or $10. The policy thus put within your easy reach is written by one of the greatest companies, and contains many provisions for helping you financially in case of sickness, business reverses, or loss of position.

Will you not let us send you the facts and figures bearing on your particular case?

MEMBERSHIP IN THE OUTLOOK CLUB IS LIMITED.

OUTLOOK readers—men, women, and young people—are eligible.

Members in Class A have Policies for $1,000—requiring a deposit of only $5.00 with application,—then $5.00 monthly.

Members in Class B have Policies for $2,000, requiring a deposit of only $10.00 with application,—then $10.00 monthly.

Members in Class C have Policies for larger amounts with proportionate monthly deposits.

Write for Membership Application Blank.

In order that we may be able to send you complete and personal information concerning the exceptional advantages afforded by our Club plan, please answer the following questions *in your first letter:*

1—What is your occupation?
2—What is the exact date of your birth?
3—Which Class do you *think* you might like to be in?

LETTERS FROM MEMBERS

"My policy came to-night. I am grateful for the announcement in The Outlook which resulted in my application for life-insurance, and wish to thank The Outlook Club for kindness shown me."—Miss F. H., Chamberlain, S. D.

"The Outlook Life Insurance Club appealed to me at once, as I was thinking of taking out insurance, but did not have time to look up the merits of the policies offered by the different Companies. All this had been investigated by you, and nothing remained for me to do except to state the amount of insurance I desired.

"The monthly deposit plan is certainly advantageous. You can put me down, not only as a warm supporter of the Club idea, but also of the Company in which the policies are written."
—E. J. D., Rochester, N. Y.

In some instances whole families have been enrolled as members of THE OUTLOOK CLUB—father, mother, children. If you would like to consider making this helpful Club relation *a household affair*, please send name, occupation, and exact birth-date of each interested person. Address

THE OUTLOOK LIFE-INSURANCE CLUB

287 Fourth Avenue, New York

RICHARD WIGHTMAN, Secretary.

THE BOOKLOVERS LIBRARY

A Two-Minute Talk

TO INVESTORS

The Shares of THE BOOKLOVERS LIBRARY *Corporation* have had an unparalleled record. The stock is held in the United States, Canada, and England by widely known literary, professional, and business people. Among the library's shareholders are hundreds of names familiar to almost every cultured home. No broker, or banker, or underwriter has had a hand in the sales. The sole backing of the concern has been its enterprise, its continuous push, and its far-seeing business policy. Every dollar invested shows a hundred cents' worth of extended and established earning capacity.

The plans outlined from time to time have been carried forward in the most aggressive sort of way. We have done what we said we would do. We planned to extend the *Booklovers* to every important city of the United States; the libraries are there. We promised to include Canada; the two successful centers of Montreal and Toronto are the result; from these cities the service extends to outlying Canadian cities and towns. We made arrangements for extending the work to England; to-day the *Booklovers* is the talk of London; it is delivering books throughout Great Britain and includes among its patrons scores of the most distinguished families. We promised an auxiliary library to take care of the field not occupied by the *Booklovers;* the *Tabard Inn*, with its revolving book-cases and five-cent exchanges, is extending the library privileges to thousands of country towns; the earnings of **this one department** at the present time exceed one thousand dollars a day with only one-twentieth of the field covered. This new library department was started only

a year ago. In another year it will have earning capacity largely in excess even of the *Booklovers*. Last fall we announced the preparation of a monthly magazine to round out our publicity plans; to-day *The Booklovers Magazine* sells out its complete edition by the fifteenth of each month; it is owned independently by shareholders of the parent company, and presents all the elements of an excellent property.

We are building into the future; the whole book and publishing trade is undergoing rapid and far-reaching changes; there is a new book published in the United States every hour, day and night, and this enormous output must have its distributing machinery. Millions invested in central storehouses of granite or marble can never change the popular current. The American people want an up-to-date service in books as well as in newspapers, and they are willing to pay for it with their own cash. There is no denying the fact that the *Booklovers* is already a tremendous power among the book interests of the country; it has battled its way to the front, where it means to stay.

We need a central library and office building of our own, and we intend to build one just as soon as a desirable central property in Philadelphia can be secured. This is the next important thing to be done. The block of 50,000 Shares of Stock referred to on the next page has been set aside largely for this purpose.

In connection with this public offer of a comparatively small block of *Booklovers* stock there are four inside facts which I want to make public over my own signature: 1. The *Booklovers* earnings during the three months ending February 28th were **the largest in the history of the enterprise;** 2. The operating expenses per library member were never smaller than at the present time; 3. The "used books" are wholly taken care of at good prices by auxiliary library departments; 4. The Corporation pays cash, and has no debts other than its current monthly accounts.

No additional capital is needed for the *Booklovers;* the increased capital is being used at the present time to extend the *Tabard Inn* and other departments; these auxiliary libraries are necessary to round out the best interests of the enterprise at large; they are the "by-products" of the business and they offer opportunity for very large profits.

The Corporation is capitalized for **$2,600,000** (260,000 Shares at $10 each). Of this amount **190,000 Shares** have already been subscribed and paid for at the par value of **$10**, making the present cash capital **$1,900,000.** There remain in the Treasury only **70,000 Shares.** Of this remaining block the Directors have

authorized the Treasurer to set aside 50,000 Shares to be offered for sale on May 15th next, at $12 a Share. The remainder, consisting of **20,000 Shares,** is now offered to the public in lots of Ten Shares or more at **$10 a Share.** The terms are 10 per cent. with the application and the balance in sixty days. Stock applied for by telegraph will be held five days to await deposit and formal application. (See form of application below.) The sale of this block of 20,000 Shares at $10 and of the remaining block of 50,000 Shares on May 15th at $12 will give the Company **a completely paid-up Capital.** This announcement gives investors the last opportunity they will have of buying Booklovers at $10 a share.

The *Booklovers Corporation* has paid dividends at the rate of **10 per cent.** per year since August 1, 1900. The last half-yearly dividend was paid on February 20th. The half-yearly dividend periods end June 30th and December 31st, respectively. The Corporation has no bonded debts, and its stock when fully paid is non-assessable. All Shares become dividend-bearing from the date of final payment. Dividends are payable in February and August.

R&G Corsets

New Model 837

The new model R & G Corset, Number **837,** combines the good points of the straight-front, low-bust design, with sufficient length over the hip to conform with the present dress styles and yet remain easy and comfortable.

There are many variations in figures, and R & G Corsets are made in many models to fit them. But there are more of the normal, average figure than of all the rest combined, and the beautiful, graceful lines of Model **837** are designed to fit this normal or average figure.

No. **837** is a dollar and a half corset. Other numbers are from $1 to $10.

The costume shown herewith is fitted over No. 837.

The New Summer Styles

Are Now Ready

As soon as anything new appears, either in styles or fabrics, we add it to our line. Since our Spring Fashion Book was issued a few weeks ago we have added to our line of samples some new effects in Etamines, Twine Cloths, and other materials for Summer wear.

Are you ready for your Summer outfit? Is a Traveling Suit needed? An extra Skirt required? A Tailor Suit, a pretty Etamine Costume for dress occasions, a Walking Skirt, a Jaunty Jacket for cool evenings at mountain or seashore? We can be of service to you and at such low prices you will be agreeably surprised.

We make every garment to order according to your individual measurements, and no matter where you live *we pay the express charges*.

All letters of inquiry are answered by women fashion experts who are in a position to make many helpful suggestions in the way of styles or combinations to suit the taste or figure of those who do not wish to rely solely on their own judgment.

Our Fashion Book illustrates:

New Suits, well tailored, showing many variations of the prevailing fashions, from Paris models, $8 to $35.

Etamine Costumes in styles to prevail during the coming Season, the most fashionable costumes for dress occasions, $12 to $35.

New Skirts, well-fashioned in Summer-weight materials, look cool and feel cool too, $4 to $20.

Rainy-Day and Walking Suits and Skirts, Jaunty Jackets, Traveling Dresses, etc.

A postal will bring *free* by return mail our Fashion Book and a line of samples of materials from which to make selections. Write to-day before the first edition is exhausted.

You take absolutely no risk in dealing with us, because any garment that is not perfectly satisfactory may be returned promptly and your money will be cheerfully refunded. We have thousands of permanent customers. May we have the pleasure of serving you?

NATIONAL CLOAK AND SUIT CO. 119 and 121 West 23d St. NEW YORK

THE MONROE PORCELAIN REFRIGERATORS.

SOLD BY MAIL DIRECT.

From Factory to You

The MONROE is a high-grade refrigerator for family use. Unlike, and better than others, its food compartments are molded, single pieces of solid white porcelain ware—without joint or seam—strictly sanitary.

An order will bring the MONROE at once to your nearest railway station, freight paid. You can have the satisfaction of examining and proving it in your home. If after a reasonable time it is not satisfactory in every respect, write us and we will take it back and refund your money.

The only way to obtain a MONROE is to order it direct from us. We have no agents. Write for Catalogue "H." It is free.

Monroe Refrigerator Co.

New York Office, 42 Cortlandt St. **Lockland, Ohio**

Filing Cabinets for Memos., Clippings, & Mss.

The most convenient device for filing and classifying clippings, illustrations, manuscripts, etc. It is the acme of simplicity and ready reference and a treasure to the busy man by reason of the accuracy and facility with which memoranda are preserved and referred to.

The Card Index Rerum gives a valuable cross reference to your library or manuscript and permits use of any known method of classification.

A Mental Savings Bank

Elbert Hubbard, The "Roycrofters," E. Aurora, N. Y.
"I think that your cabinet has added several years to my earth life by enabling me to find the thing without wear and tear on my temper and vocabulary."

Geo. H. Daniels, Gen. Pass. Agent, N. Y. C. & H. R. R. Ry. Co.
"I find them indispensable to me in my work."

Desk Top or Upright Cabinets furnished in all sizes and styles. Specially arranged Cabinets for clergymen, physicians and other professional men.

Prices $7.50 and upwards, shipped prepaid on approval. Returns at our expense if not satisfactory. Send for catalogue, prices and literature.

THE LIBRARY FILING CABINET COMPANY, 109 Washington St. Chicago

HAIR MATTRESS—A Tick Stuffed

Every hair mattress is a tick stuffed with animal hair, often warming with disease germs. Our advertising has driven the old-time makers to claim "sterilized" hair, which is absurd; for the only process that would be effective destroys the value of the hair—makes it brittle and lifeless.

The hair-stuffed tick gets lumpy—has to be "made over" every three or four years, at a greater expense each time.

THE "OSTERMOOR"—Built, Not Stuffed

Each Ostermoor mattress is built—not stuffed. Hand-laid sheets of snowy whiteness, each the full size, are carefully compressed into the tick. The Ostermoor Patent Elastic Felt is purity itself, germ-free and vermin-proof.

Ostermoor mattresses *cannot* get lumpy; never need renewing; an occasional sun-bath is all they require. The tick can be taken off and washed whenever soiled.

The Ostermoor Patent Elastic Felt Mattress, $15.

has met with success so great that dozens of would-be rivals have flattered themselves and us by unsuccessful attempts to imitate it. Do not be fooled! *There is but one* Ostermoor! It is not FELT if it is not an OSTERMOOR. Our name and guarantee on the end of every genuine mattress.

Send for Our Handsome 96-Page Book FREE

whether you want a mattress or not. There is no other mattress as good as the "Ostermoor" and we want you to know why—*we challenge comparison.* Our book "The Test of Time," gives testimonials from such men as Rev. Dr. MacArthur and George H. Daniels, whom you *must* believe—*even if you think* WE *exaggerate.* It illustrates the various uses to which the Patent Elastic Felt is put—Pillows, Window Seat Cushions, Boat Cushions and Church Cushions, etc.

Sleep On It Thirty Nights Free

and if it is not even all you have hoped for, if you don't believe it to be the equal in cleanliness, durability and comfort of any $50 hair mattress ever made, you can get your money back by return mail—"no questions asked."

That "Stale Smell"

The ordinary damp, stale smelling zinc lined refigerator is as dangerous as a sewer That stale smell is a danger signal to warn you that the zinc is corroding and the oxide poisoning milk and food.

McCray Refrigerators

ARE LINED WITH PORCELAIN TILE, OPAL GLASS OR ODORLESS WOOD

For residences, clubs, hotels, hospitals, groce-s, markets, florists etc,. and are so absolutely dry that you can keep salt or matches in them without becoming damp. You can leave a box of matches in a McCray Refrigerator for days and then light them on the inside walls. Try this on the inside of your refrigerator.

The McCray patent system of refrigeration insures a dry, clean, sanitary refrigerator

because it gives a perfect circulation of absolutely dry, pure cold air. No dampness to breed microbes; no zinc lining to corrode and poison your food. Saves ice—every refrigerator guaranteed.

McCRAY REFRIGERATORS are also built to order. All sizes—catalogues and estimates free

Catalogue No 38 for residences, No. 45 for hotels, public institutions, clubs etc., No. 56 for meat markets, No. 63 for grocers, No. 70 for florists. Mention this magazine and we will send you free a valuable book "How to use a Refrigerator."

OF course you want to know which piano player is really and truly THE BEST before you buy one. If you will give us the opportunity we will prove to your satisfaction that the musical performance of the CECILIAN *surpasses* anything of which any other instrument of the kind is capable, and *equals* in every respect the work of the most finished human pianist. New features peculiar to the Cecilian make it in truth THE PERFECT PIANO PLAYER. Its cost is $250.00, and it can be bought on monthly payments. We will gladly give you full particulars.

FARRAND ORGAN COMPANY, Dept. G, Detroit, Mich.

IVERS & POND PIANOS.

Model "Classique," Style 309.

A faultless mechanical construction, remarkable durability, exteriors which, viewed merely as furniture, are real masterpieces of design, but after all it is the **tone** which distinguishes the Ivers & Pond from hundreds of other pianos, good, bad and indifferent. It is the **tone**; that surpassingly beautiful, liquid quality; that depth of warm coloring; that sustained vibration; that nice relation of each note to the other—all these it is which make of the Ivers & Pond Piano something different — better.

The result is easily appreciated. But the half-century of patient effort; the endless experiments; the final success — it is a long story. And the recognition — how over three hundred leading American Educational Institutions have come to purchase and recommend Ivers & Pond Pianos — well, that's another story. Send for our new catalogue just off the press, picturing the most up-to-date ideas in piano cases.

HOW TO BUY. Wherever in the United States no dealer sells them, we send Ivers & Pond Pianos on trial at our risk. If the Piano fails to please, it returns at our expense for railway freights both ways. May we send you our catalogue (free), quote lowest prices, and explain our unique easy-pay plans? We can thus practically bring Boston's largest piano establishment to your door, though it be in the smallest and most remote village in the country. Write us to-day.

OFFICE USE

LACQUERET

—The next complete dictionary will include the word "Lacqueret" as a verb, meaning "to rejuvenate, to freshen, to brighten floors, furniture, and woodwork by applying a thin coat of superior Lacqueret."

Brightens up your old furniture, covers the scratches and bruises, and brings back anew the lustrous finish of the wood. Chairs, tables, floors, every bit of woodwork in the house needs Lacqueret to keep it fresh and bright. You throw away only broken things when you have Lacqueret—the rest you keep as beautiful as new. There is no substitute, nothing but Lacqueret will do the work to your satisfaction. It does not peel, crack, or fade. You apply it yourself and it dries over night.

In convenient cans from one gallon to half pint in Rich Red, Rosewood, Moss Green, Light Oak, Dark Oak, Mahogany, Walnut, Cherry and Clear.

You can get Lacqueret at any good store that handles paints and varnishes. If you have any difficulty, let us know.

Our interesting book, "The Dainty Decorator," gives many useful suggestions for home decoration. "Little Miss Lacqueret's Drawing Book" will delight the children.

SENT FREE on receipt of stamp. Address Dept. 17.

EASTMAN KODAK CO.
Rochester, N. Y.

$24.00 BUYS THIS GENUINE OAK "MACEY"

desk, No. 27A, *exactly as illustrated*, direct from our factory at Grand Rapids, Mich., **Freight Prepa'd** east of the Mississippi and north of Tennessee (points beyond equalized), sent "On Approval," to be returned at our expense if it is not the best roll-top desk ever sold at the price. (Ask for complete description.)

THIS DESK is 50 inches long, 30 inches wide, and 48 inches high; it has quartered oak front, closed back, front base mould, 22 pigeon holes, 9 oak front file boxes, 2 arm rests, large center drawer (with lock), *ball-bearing* casters, 2 ink wells, 5 large *anti-friction* pedestal drawers, 2 pen racks, 2 stamp drawers, **1 card index drawer, 8 letter files** with indexes *complete* (with lock)—Macey-Pascal patent curtain lock, mouse and dust-proof bottoms. It is made with our **sectional** construction by which it can be quickly taken apart and put together, and the entire desk has our special **velvet polish finish**. It is strictly high-grade in every respect.

NOTE—We make these desks in large quantities and can ship promptly.

Never in the history of the entire desk business has a HIGH roll-top desk *so complete*, of *equal size*, and *strictly* **high grade** in every detail, both of *material* and *finish*, been sold direct to the user by a factory at any time, on such **liberal terms** and at **so low a price.** This is a strong statement but the desk itself merits it.

Evans' Vacuum Cap

WILL MAKE HAIR GROW

This Appliance will massage the scalp, and force a healthful circulation. It will stop hair from falling out and restore a normal growth where live follicles exist. It is used about ten minutes each night before retiring. Price $35.00, which will be refunded in full if it does not give satisfaction within thirty days. For full particulars address

EVANS VACUUM CAP CO., Fullerton Building, **St. Louis**

DIRECT FROM THE FACTORY

The new way of dealing direct with the factory for carriages and harness has come to stay. It is foolish to pay three or four profits on a carriage. The only question is—which factory? Try ours. We are not agents. We don't buy parts and put them together. We make carriages complete, of honest materials. Ours is a large, complete and independent factory.

Our illustrated catalogue is our salesman. We will send it to you *free*. It shows you our immense stock, and explains our liberal guarantee. If you are not entirely satisfied with a purchase, we will refund your money and pay freight both ways.

THE INTERNAL BATH

MORE IMPORTANT THAN THE EXTERNAL

If external cleanliness is essential to health, how much more important is internal cleanliness! Every disease arises from the retention of waste and foreign matter in the system—Nature's drainage being clogged. In the vast majority of cases the clogging is in the colon or large intestine. Positively the one harmless and efficient means of clearing away this waste is the internal bath given with the

"J. B. L. CASCADE"

the only appliance specially made for the successful practice of the Internal Bath. It is simple in construction, absolutely safe—invariably effective, and can be applied by any person.

This treatment is a sovereign remedy for and prevention of 90 per cent. of all Digestive derangements. It is hygienic, scientific, and logical. It is a perfect tonic with no after depression. Its action

PREVENTS and CURES APPENDICITIS, Biliousness, Dyspepsia, Obesity, Headaches, Constipation, and all Malarial Diseases

Have you read of the wonderful cures made by the Internal Bath? Do you know that it goes to the root of all disease and eradicates the cause? Do you know that many of the greatest physicians of the world endorse and prescribe this treatment? Do you know that such eminent people as the following use the Internal Bath: U. S. Senator A. P. Gorman, Maryland; Ex-Governor Goodell, Vermont; Admiral Tyrtoff, St. Petersburg, Russia; Col. A. O. Granger, Girard Building, Philadelphia, Pa.; Gen. T. S. Peck, G. A. R.; Miles Devine, Chicago, Ill.; Marguerite Sylva, and a host of others?

Were it possible to reproduce here our file of voluntary letters of commendation received from prominent people who do not ordinarily permit the use of their names in advertisements, no doubt could exist in one's mind as to the extraordinary merit of the "J. B. L. CASCADE" treatment. As proof of what the Cascade treatment will do we call your attention to the following letter from Mr. H. A. Joyce, one of the prominent merchants of Cambridge, Md.

The Ralston Health Club, which as an organization has had the greatest growth of this or any age, having almost Ten Million Members Throughout the World, authorizes us to say: "Our Cascade is not endorsed by the Ralston Health Club of America, as that Club never endorses anything, no matter how good, but IT HAS BEEN OFFICIALLY ADOPTED BY THE CLUB FOR ITS USE IN THE INWARD BATH TREATMENT, which is one of its many systems of natural cure."

We want to send free to every person, sick or well, a simple statement setting forth this treatment. It contains matter which must interest every thinking person. If you live in New York you are earnestly invited to call, but if you cannot call, write for our pamphlet, "THE WHAT, THE WHY, THE WAY," which will be sent free on application, together with our great special offer for this month only.

TYRRELL'S HYGIENIC INSTITUTE

Clerk 38 X, 1562 Broadway, New York

Mr. H. A. JOYCE

CAMBRIDGE, MD.,
Aug. 7, 1900.

PROF. CHAS. A. TYRRELL:

Dear Sir—I deem it a duty I owe you, as well as my fellowman, to say I have been restored to perfect health by the use of the flushing treatment so easily accomplished by the "J. B. L. Cascade." Previous to its use I was in very bad health, suffering from dyspepsia, nervousness, constipation, insomnia and, in fact, was almost in despair of ever getting well, but thanks to you and your wonderful invention, and the loving kindness of a merciful God, I am now in splendid health.

Gratefully yours,
H. A. JOYCE.

FLORAL BUTTERFLY PLANT

No plant possesses so many good points as do these two glorious new Commelinas. Of graceful trailing habit, superb for carpet bedding or for hanging pots. *In pots they bloom every day in the year.* In the garden from May until frost, showing *daily* scores of large winged butterfly-like blossoms. Color (No. 1) the most beautiful blue to be found in any flower. A shade so exquisitely lovely as to baffle description. Thrives in sun or shade, wet or dry, rich or poor soil; as easily raised as a weed from seed or cuttings, grows rapidly, flowers at once, and propagates so easily that plants are very cheap. Blooms in 50 days from seed.

No. 1—Exquisite Blue, like tropical Butterflies.
No. 2—Rosy Pink, in other respects like No. 1.

Strong plants for blooming at once, by mail guaranteed to grow, **20c.** each; the **2** for **30c.**, **5** for **60c.**
Seed of both colors mixed, 25 cts. per packet.

FREE **OUR GREAT CATALOGUE** of Flower and Vegetable Seeds, Bulbs, Plants, and Rare New Fruits. Profusely Illustrated, Large Colored Plates—136 pages. Bright's Disease
AND DIABETES
CAN BE PERMANENTLY RELIEVED

The above is a startling statement (in view of the generally accepted theories), which should demand investigation from every afflicted reader of this magazine.

This investigation we sincerely invite, since we devote our entire attention to the two maladies above named.

The remedies for these diseases are entirely distinct, and the fact that we are specialists in these diseases *only*, should be sufficient for you to overcome your past prejudice, or what others cannot do, and investigate for yourself or some afflicted friend. *Not* patent medicines and *not* found at drug stores and only prescribed after analysis.

Note Send your name and address and we will forward instructions, etc., and will make analysis *absolutely without cost to you*, or obligation to commence our treatment.

Professional etiquette strictly observed. Names or letters are never published without consent. Consulting physician always in attendance.

French Hypnotism
Dr. Berillon makes Patients leave off Coffee Entirely.

In Paris the clinique of Dr. Berillon, the famous French hypnotist of the Rue St. Andre-des-Arts, where hypnotism is employed in the cure of various diseases, is one of the interesting sights of the modern world of Science.

Some of the cures smack of the miraculous and the ordinary observer can comprehend nothing of the why and wherefore.

It is noticeable that Dr. Berillon instructs his patients to "leave off coffee entirely"—a most important step in the cure of any disease. Many people are steadily and surely forced into disease by coffee.

POSTUM FOOD COFFEE has made the way easy for those who would break away from coffee. When boiled full fifteen minutes it is delicious, heavy with food value, a powerful rebuilding agent. It knocks down the ills coffee has set up. If you would be well it is worth your thought.

There is a reason.

Mr. T. H. SINCOCK, Scales Mound, Ill., writes:
I have used the Strength-Giver, Jayne's Tonic Vermifuge, in my family for years, and think it ONE OF THE BEST TONICS known. It is especially good in cases of debility and feebleness.
The Cough Cure of the century—
JAYNE'S EXPECTORANT.

F. O. MARTIN, Prop.

Jamaica Nature's Great Sanitarium

A restful five-day ocean voyage takes you from the blazing, sultry heat and chilling frosts and winds of the North to Jamaica, an ideal land of rest, health, and comfort. In the "Golden Caribbean Sea," with the Gulf Stream flowing about it, the trade winds constantly blowing over it, and a lofty range of mountains extending its entire length; the atmosphere laden with spices and sparkling with pure mountain ozone, constantly in motion, the thermometer varying only from 70° to 88° the year around. Hay fever, colds, grip, and pneumonia cannot exist there, while nervous ills, cares, and worries fly away. On every hand, from mountain tops to the white, sandy beaches, is spread a beautiful carpet of emerald green, decorated with a riotous growth of flowers, fruits, and ferns. There are well-kept riding and driving roads in every direction. The sea bathing is unexcelled on this continent; the mountain views are the most magnificent on earth; flies, mosquitoes, snakes, fogs, fevers, are practically unknown. There are elegant hotels, good clean boarding-houses, golf links, croquet grounds, broad piazzas, and interesting novel foreign sights and scenes everywhere. All these features combine to make Jamaica nature's greatest health sanitarium for either summer or winter resting. The elegant twin-screw "Admiral" steamers leave Boston every Wednesday and Friday. Round trip tickets, $60.00, including meals and stateroom berths, good from May 1st to Oct. 1st. Write for free booklet, "Tropical Holiday." Address

A Book about Colorado for 6 cents.

A COUNTRY anywhere from 6,000 to 15,000 feet above sea level, where the air is light and dry and easy to breathe — that is why so many persons in ill health go there. A country more delighful than Switzerland in scenic attractions, an ideal place to rest, with a number of golf courses, plenty of the best trout fishing, and with large and small game in abundance. A country filled with really good hotels, boarding-houses and ranch houses, where you can live and enjoy life for very little money.

Burlington Route

That is what Colorado is. It is not an expensive place to visit, indeed there are few places where you can get so much for so little, and it only takes two nights on the road to get there from the Atlantic Coast, only one night from Chicago or St. Louis.

Our book on Colorado tells all about the country in an interesting way. It is full of illustrations and maps. It will tell you all about Colorado. The price is six cents in postage stamps. Will you not send to me for a copy and read it carefully to find out whether that is not just the place for you to go next summer to spend your vacation?

P. S. EUSTIS, Passenger Traffic Manager, C. B. & Q. Ry., CHICAGO

To North Pacific Coast points you have the choice of the above route or that via St. Paul and Minneapolis, with double daily train service.

Only $33 Chicago to San Francisco, Los Angeles, Portland, Seattle, Tacoma and many other Pacific Coast points. Only $30.50 Chicago to Spokane. Only $30 Chicago to Salt Lake City, Butte or Helena.

Above rates are called colonist second-class rates. Tickets are good in tourist sleepers, in which the rate for a double berth, Chicago to San Francisco, is $6. Tourist sleepers are clean, comfortable and economical.

A postal card will bring you complete information.

BANFF

Banff, and the other Rocky Mountain resorts along the line of the Canadian Pacific Railway, were so well patronized last year that it was found necessary to add largely to the accommodation of all the Company's hotels and châlets. This season visitors will find the capacity of these famous resorts more than doubled. Additions have been made to Banff Springs Hotel, Lake Louise châlet, Mount Stephen House, Field, Glacier House, and Emerald Lake châlet.

There will be no lack of guides, ponies, tents, and the usual requisites of Rocky Mountain travel. The Swiss guides are to be at their stations early in May.

It is perhaps hardly necessary, now that these resorts have become world famous, to claim for them unequaled scenery, climate, and comfort, but it is certain these assertions will hardly be disputed by those who have visited the wonderful mountain resorts of the Canadian Rockies.

Grand Opera on Talking Machines

In Your Own Home

The Columbia Phonograph Company Announces a Most Extraordinary Achievement

EDOUARD DE RESZKE

$15
$20 and
$30

Marking an Epoch in the Art of Recording and Reproducing Sound

For the first time in the history of the Talking Machine Art

SUCCESSFUL RECORDS

have been made of the voices of the

WORLD-RENOWNED SINGERS

EDOUARD De RESZKE (The Greatest Living Bass) **SCOTTI and CAMPANARI** (The Greatest Baritones)

and many other members of the

METROPOLITAN OPERA COMPANY

This result has been secured through the earnest co-operation of these artists and after long experiment and vast expenditures of time and money. Each record bears the personal signature of the singer. They are in the form of 10-inch discs (Flat Indestructible Records), adapted to all disc talking machines, and the extraordinary **LIFE-LIKE QUALITY** obtained **realizes** what has heretofore been **THE DREAM OF TALKING MACHINE ENTHUSIASTS.**

SIGNOR MANCINELLI, Musical Director of the Metropolitan Opera House, says of these records:—
"I have listened with great pleasure to your remarkable reproductions of the voices of the artists of the Metropolitan Opera Company. They are true to life."

GRAND OPERA RECORDS, PRICE $2.00 EACH

ANGELUS PIANO PLAYER

WHAT more exquisite enjoyment than the music you can produce from your own piano—*if you have an Angelus?* Ever since 1897 this most remarkable instrument has brought unbounded pleasure to thousands of persons to whom music in the home was a rarity. Now, with the aid of an Angelus, you can play on your own piano anything you like—the dear old songs, the popular music of the day, or the classical compositions. Any or all of these are within your scope, and you do not need to know one note of music from another, for the Angelus reads the notes and strikes the proper keys for you.

The expression devices are so very ingenious and complete that you can obtain effects equal to the best pianists—the delicate shading, the phrasing, the accenting of notes or chords, the sustaining or emphasizing of the theme or melody while subduing the accompaniment. The sweet-toned reeds in the style 66 are a most delightful feature. With these you can enhance to a marked degree the beauty of many compositions.

We put the question straight to you—why don't you buy an Angelus and make your piano worth something to you as a musical instrument? Price only $250.00.

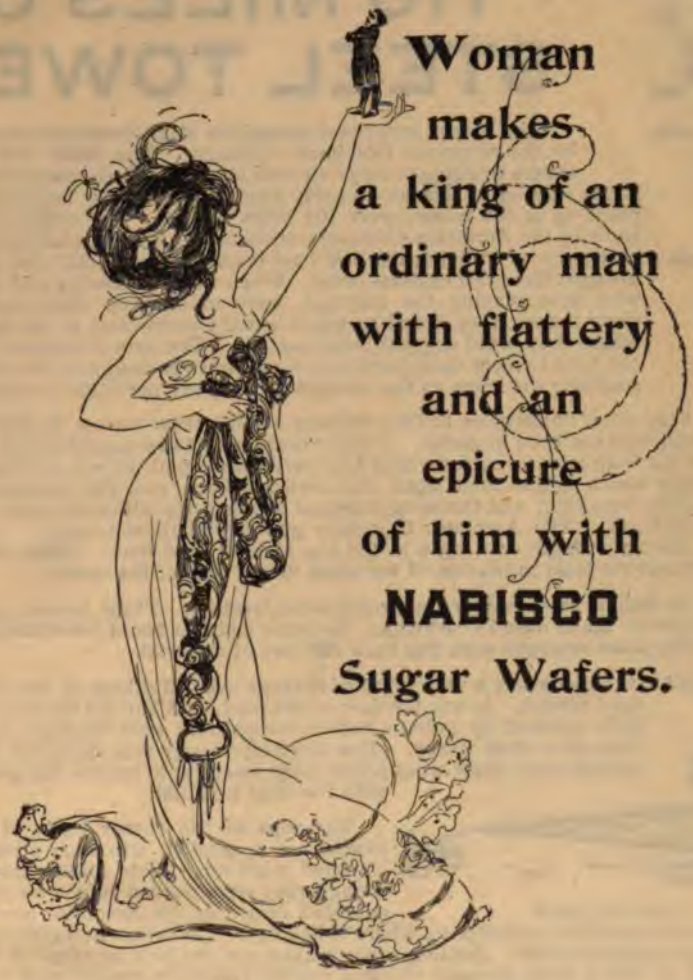
"April Fool's Day"

comes every day in the year to him who still employs old and expensive ways of getting water. Methods have changed since old colonial times with the "Well Sweep." Look around your place and see how much time you or your servants spend daily, in conveying water by hand, for the laundry, the live stock, the garden, and every household use. The cheapest man you can hire will cost you, in two or three months, more than a

Hot-Air Pump,

which lasts a lifetime, and does the work of many servants, far better, too, than they can ever do it. It gives you water in abundance and also insures you against fire. It is the greatest labor saver that any household can employ, and supplies more comforts than any other appliance obtainable.



Remember, the Hot-Air Pump is the cheapest form of *constant* water supply now known. A permanent investment, which will outlast a generation of users, can now be bought for $108. Descriptive Catalogue "D" sent free on application.

The Hot-Air Pump.

National Biscuit Company

Nabisco Sugar Wafers, a symphony of delight, harmonizing with any beverage or dessert. A Fairy Sandwich, flavored with your choice of Cherry, Chocolate, Vanilla, Lemon, Orange, Raspberry, Strawberry or Mint.

Festino

A series of new confections in the guise of favorite fruits and nuts. The first one being an Almond—an exquisite deception, with a shell that dissolves on your tongue and surprises you with an almond-flavored kernel of cream.

NATIONAL BISCUIT COMPANY

110 MILES OF STEEL TOWERS

The largest order ever placed for steel towers has just been executed by the Aermotor Company, Chicago. The order was for 1200 steel towers to support large electric cables. These towers are to be erected in the interior of Mexico, to carry electricity from an immense water power plant up to the mines, over 100 miles distant. The order for these towers came to the Aermotor Company unsolicited. The reputation of the Aermotor Company for building the best steel towers, for windmill and other purposes, brought them this unusual order. When the engineering and mining experts, who were placing the contract, were making up their specifications for these towers, they found no place in the construction of the Aermotor tower where they could suggest improvement. The sizes of some of the parts were changed to meet their particular needs, but the design of the towers remained precisely the same as the Aermotor Company perfected it years ago.

It was of very great importance to the company buying these towers to secure the greatest possible strength with the least material. These towers were to be placed about 500 feet apart. The weight of the long span of cables would be a very heavy load, to say nothing of the enormous side strain which might come upon the towers. Then, too, the contingency of one or more of the cables breaking, and throwing unequal strain upon different parts of the towers, had to be considered. The Aermotor Company guaranteed these towers to stand until the 3-inch, extra strong wrought iron pipe in the top should bend over. They stood this very severe test without the least indication of buckling in any part of the tower.

The item of freight was another important consideration. These towers, as built by the Aermotor Company, made over 75 carloads. No other concern could have furnished towers of anything like the same strength with less than 100 cars of material.

The Aermotor Company has a very great advantage over all others in the manufacture of steel towers. It was the first in the field, and had all the most vital features fully covered by patents before competitors were through laughing at the idea of a steel tower. The Aermotor tower was designed by mechanical experts who knew what points were essential to secure the greatest strength with the least material.

Testing the Towers.

The tops of the corner posts of the Aermotor towers are dovetailed into each other and securely clamped together. This makes them as solid as though they were welded into a single piece. This patented device in the Aermotor tower brings all of the strain directly upon the corner posts where it belongs. The braces and girts have nothing to do but hold the corners in line. Because other makers are not able to adopt this feature, they are compelled to use a large amount of extra material in their towers, and even then their towers are not so strong. Weight often indicates weakness rather than strength. All the weight not needed serves only to bring additional strain upon the parts which must bear it.

The best steel tower, like the best bicycle, is the one which secures the greatest strength with the least possible material. The Aermotor tower is strong, safe and durable. Every pound of steel which is put into it is used to the best advantage. A tower twice as heavy, but poorly constructed, would be weaker.

The tower is a very important consideration in buying a windmill outfit. If the tower goes down, the best windmill will be worthless.

WRITE FOR OUR WINDMILL BOOK

We have a book that tells all about windmills. It begins with the Dutch windmills of 1400 and ends with the Aermotor of 1903. It contains 125 pictures to show you what windmills should do and what they should be. It tells all that invention has done for them. When you read this book you will know all that anyone knows about windmills. You will know the right kind from the wrong kind and know all the differences. To avoid a mistake don't buy without reading it. The book is free. Simply write for it.
